Individual duct lines, in approaches to manholes, can be splayed and separated. The four outer sides are scarified lengthwise to provide anchorage for bedding mortar. Inner edges of duct entrances are beveled and smoothed to eliminate projections and make pulling of cables safe and easy.

Certain shapes of square bore single duct have through dowel holes in corners for use of steel dowel pins for assembling, centering and aligning duct lines.

Prices on application.

Natco Standard Multiple Duct Conduit

For telephone, telegraph, railway signal, fire alarm and low tension light and power service.

Provides longer lengths and multiplicity of duct holes — economical and quickly installed.

The 3 1/4 in. is the standard bore; 3 1/2 in. bore is for certain municipal installment; 4 1/4 in. bore is the over-size type for most telephone service and certain low tension power and lighting systems.

Natco Factory Split Clay Conduit

Before Reassembly

After Reassembly

This new split conduit is now available already split apart and reassembled at the factory and securely banded and held together in its original position by means of steel straps until ready for use. Has diagonal marking on one side of each piece to insure reassembly in their original position.

Saves labor and breakage and loss in splitting by inexperienced workmen. In convenient lengths for easy installation.

Natco Mitered Conduit

Single Rd. Single Sq. 2-Way Flat 2-Way Edge

This shape provides a simple and flexible means of constructing perfect curves in underground lines of clay conduit. It is made in one segmental form — in all single and multiple duct shapes and in either flat or edge positions.

Can be used to construct simple or reverse curves in either horizontal or vertical planes.

Only one mitered shape is required for any curve from 10-ft. radius up. The radius is varied simply by interposing straight short pieces between the mitered pieces. The arc or angle of the curve, from 3 degrees up, is governed by the total number of pieces used. Joints are all uniformly even and tight fitting and cables can be easily pulled through the true, easy curves thus formed.

Eliminates the need of manholes at bends or turns and especially at approaches to central offices from street or alley.

Minimum radius 10 ft. Angle of section 3°. Requires 30 pieces to a 90° curve. Approximate length 6 x 6 5/8 in.

Single Duct — Round and Square Bore

6	Flat	4850	4950	5250
6	Edge	4860	4960	5260
9	4890	5290

Note — Mitered conduit in smaller or larger radii made special to order.

Natco Branch Conduits

One end of this conduit is the same shape and size as standard conduit, while at the other end the individual ducts are more widely separated by means of double webs which permit alignment with abutting branch lines.

This conduit permits the division of multiple duct main lines into two or more branch lines, each having a smaller number of ducts than the main line.

Such a division is highly advantageous in splaying main duct lines for entrance to central office buildings or to manholes, or in straddling pipe lines or other underground obstructions, or for crossing viaducts or bridges where shallow duct lines are required.

Main duct lines may be splayed vertically so that duct will enter cable vault of a central office building approximately in line with the cable racks.

Correct alignment of duct openings and tight joints are provided — no cutting, fitting, or breaking into main lines, and all accomplished without the necessity of expensive manholes.

Length over all 24 In.

No. Duct Holes	Type	For Branching Into: Ducts	Nominal Bore In.		
			3 1/4 No.	3 1/2 No.	4 1/4 No.
2	1-1	2 single	5400	5500	5800

6	3-3	2 3-way	5460	5560	5860
9	3-6	1 3-way and 1 6-way	5490	5890

Note — Also available scored for splitting apart. Prices on application.

Natco Transposition Conduit

Transposition conduit solves construction problems presented by underground street obstructions and facilitates changing the position of cables on approaching manholes, cable vaults, viaducts, bridges or other crossings. Also provides a means of changing the overall height of conduit lines without interruption thereto and without the necessity of expensive manholes.

The position of ducts and cables in a multiple duct conduit line can be transposed either a quarter turn of 90° or a half turn of 180°. Direction of twist may be either right or left hand or a combination of both.

Natco Conduit No. 106

This illustration shows the conversion of a 4-way multiple duct line into two 2-way multiple duct in an edge position, one of which is flexed or curved

to one side in the direction of a pole and terminated in two riser iron pipe lines, ascending the pole, while the other 2-way line is transposed or twisted 90° from an edge to a flat position in a distance of 8 ft. and then continued straight on in the form of a standard 2-way multiple duct conduit — in a flat position.

(B) One-piece 4-way type 2-2 branch conduit 2 ft. long (for dividing the 4-way line onto two 2-way lines).

(E) Six pieces of 2-way mitered conduit — edge position — 3° 10-ft. radius, 6¼ in. long (for flexing or curving one of the 2-way lines to one side in the direction of the pole. The angle of flexure shown is 18°, but any angle of flexure divisible by three may be attained by varying the number of mitered pieces).

(H) One-piece 2-way standard conduit 2 ft. long (laid in edge position to extend the flexed 2-way line on toward the pole).

(R) One cast iron 2-way connector for 3-in. wrought iron pipe.

(P) Four pieces of 2-way left-hand transposition conduit 2 ft. long, 22½° (for transposing the other 2-way line 90° from an edge to a flat position).

Natco Dowel Pins

Generally used for joining and aligning individual sections of conduit.

All multiple duct and some single duct conduit is made with not less than two continuous dowel holes large enough to accommodate these pins. Two pins are used at each joint or for each piece of conduit, regardless of size.

Pressed steel pin, with integral center flange.

No. 9050 Size ½ x 3-in.

Natco Wrapping Tape

A special prepared tape which is frequently used for wrapping joints before applying the joint mortar.

It adheres closely and firmly to the conduit surfaces, and aids in waterproofing the joints.

Made of paper with a water-proof paraffin coating.

Especially valuable when installing conduit duct in trench, subway or masonry structures before pouring concrete encasement.

In Rolls of 100 Linear Yards

No. 9060 — Width 4 in. Weight per roll 8 lbs.

No. 9061 — Width 6 in. Weight per roll 12 lbs.

When ordering specify total number of yards required.

Prices on application.

Orangeburg Fibre Conduit

This Fibre Conduit has been used for many years for underground communications and power circuits, and has demonstrated its ability to give maximum, permanent, low-maintenance service under conditions that expose ducts to attack from ground waters and chemical wastes, both acid and alkaline.

Its first cost is low; it is light in weight, yet amply strong to resist breakage; can be transported to the job in large truck loads; one man can carry several lengths at one time.

The material is easy to cut and work. Angle couplings, bends and other useful fittings are available to make installation simple and economical.

Taper Sleeve Joint

The uniformly long sections and readily assembled taper sleeve joints make for labor saving and low installed cost.

Protection from Cable Sheath Abrasion — The smooth bore and absence of any harsh materials in the composition of Orangeburg Fibre Conduit offers better protection against abrasion or scoring of cable sheath.

Protection from Pulling Tension — The coefficient of friction is lower in this conduit than in other types of duct material so that pulling tensions are kept at a minimum.

Published data made by one of the large utilities, reveal the following coefficients of friction for a large actual installation recently made in which oil-filled cable was used:

	Size of Cable	Size of Duct	Coefficient
300,000CM	2 1/4-In. O.D.	3 1/2-In.	.25— .30
650,000CM	2 1/2-In. O.D.	4-In.	.25— .30

Protection from Cable Sheath Corrosion — The tight taper sleeve joint and the impermeable wall of Orangeburg Fibre Conduit protect the cable by preventing infiltration or corrosive ground waters through the duct structure.

General Properties — Composed of 25% wood fibre and 75% of coal tar pitch. Wall sections are homogeneous and impregnation is uniform throughout.

Specifications:

Orangeburg Standard Conduit — Type I

For Installation with Concrete Encasement

For main distribution, high tension, and downtown locations.

How to lay Type I Standard Conduit:

Tier-By-Tier Method—A foundation of concrete is first placed on the bottom of the trench which has been graded. The thickness of this base is gauged by grade stakes which have been placed in the center of the trench. On this concrete base the bottom tier of ducts is laid, the horizontal separation of ducts being maintained by wooden or metal combs placed 3 to 5 ft. apart. The space between the ducts of this first tier is then filled with concrete and the ducts covered to the top of the comb separators which are then removed and used on succeeding tiers.

Built-up or Monolithic Method: This method utilizes plastic or precast concrete separators which are used to erect a self-supporting structure with the conduit in position before the concrete is poured. For spacers (Bridge separators) see following pages. For more detailed information contact Graybar.

Orangeburg Nocrete Conduit — Type II

For Installation without Concrete Encasement

For house connections, laterals and extensions; airport, street and parkway lighting, fire alarm and signal systems; industrial and institutional grounds.

This conduit has three prime characteristics; (A) mechanical strength; (B) ability to endure permanently, and (C) give lasting cable protection. It is also immune to soil corrosion and electrolysis.

How to Lay Orangeburg NOCRETE Conduit:

Trenching:

Dig not less than 4-in. below desired grade. Use template to detect high spots and holes. Fill holes and depressions, tamping thoroughly.

Place about 4-in. selected backfill, free from stones, and tamp lightly.

Bed the Nocrete conduit in the selected backfill 1/4 to 1/2 of the conduit diameter. Under no circumstances should bricks or other supports be used to bring conduit to grade.

After conduit is bedded and checked for grade, additional selected backfill is placed by shovel at sides of conduit and tamped. By careful tamping at this point, the conduit can support a much greater load, and is less likely to be subsequently disturbed or shifted. More selected backfill is now placed, and lightly compacted by tamping with shovel or walking over it, compacting the soil so that subsequent back-filling will not allow stones to damage conduit. (No large boulders should be put back into the trench.)

The trench may now be backfilled by any conventional means—bulldozer—loader—etc., and the Nocrete conduit is protected.

Prices on application.

Orangeburg Conduit Fittings

For STANDARD and NOCRETE Fibre Conduit

Orangeburg Bend Sections

5°—36 in. Radius

For special radius applications — cross-unders, transformations, obstructions. Offset male and female tapered joints tooled at an angle of 2½°, resulting in a bend section of 5°. Various degrees and length bends, offsets and spirals can be assembled in the field.

For Orangeburg STANDARD conduit only

Size	Dimensions, Inches.				
	2	3	4	4½	5
P Min.	2.97	3.80	5.12	5.60	6.40
O	3.00	2.97	2.94	2.90	2.85
L	1.05	1.25	1.65	1.85	2.00
F	1.00	1.20	1.60	1.80	1.95

Orangeburg Conduit Reducers

For reducing from one size fibre conduit to another. Available in all combinations from 2 to 6 in., inclusive. The standard reducer is taper sleeve joint at both ends.

When ordering specify whether for Standard or Nocrete conduit and sizes involved.

Orangeburg Conduit Adapters

Adapters from metal pipe to fibre conduit are available in all combinations from 2 to 6 in., inclusive.

The standard adapter is taper sleeve joint at the fibre end and threaded for metal pipe size specified. Can be supplied straight bore for unthreaded metal pipe.

When ordering specify sizes and types.

Orangeburg Conduit Field Tooling Lathes

For 2 to 6 in. STANDARD AND NOCRETE Conduit

Orangeburg Conduit Bell Ends

For use at conduit terminals in manholes, at substations, etc.

For Standard Conduit — Type I

Size	Dimensions, Inches.

	3	4
P Min.	4.49	5.60
D Max.	3.15	4.15
M	4.12	5.2
O	3.5	4.25

Fibre Conduit Plugs — For temporarily closing ends of ducts during concreting, etc. Available for 2 to 6 in. size conduits, inclusive.

Fibre Conduit Bushings — Solid and split bushings available for all conduit sizes 2 to 5 inches, inclusive.

Fibre Conduit Caps — For sealing spare ducts or exposed conduit ends, etc. Available for taper or plain end.

When ordering be sure to specify size and kind wanted.

Specially designed for tooling fibre conduit in the field easily and quickly.

Well constructed of fine material by expert mechanics; Made of hardened alloy steel, with needle bearings; With reasonable care and under normal conditions they will give years of accurate service.

Conduit Field Tooling Lathes

No.	Description
0904	For 2" STANDARD Conduit
0930	For 3" STANDARD Conduit only
0940	For 4" STANDARD Conduit only
0943	For 3" and 4" STANDARD Conduit only
0905	For 3" to 6" sizes, inclusive, both STANDARD and NOCRETE Conduit

All tapering tools are furnished with necessary cutter blades and packed in fibre carrying cases.

Cutter Blades for Conduit Field Tooling Lathes

No.	For Conduit Sizes
2820-2	2-In. and 3-In. Standard
2820-3	4-In. and 4½-In. Standard and 4-In. Nocrete
2820-4	5-In. and 6-In. Standard
2820-6	3-In. Nocrete

Prices on application.

Orangeburg Spacers

For Orangeburg Standard Conduit (Type I) Only

Plastic Spacers

For building duct formations, preparatory to concreting, lightweight interlocking plastic spacers are available.

Intermediate spacers provide vertical and horizontal separation of 1, 1½, 2 or 3 in. between outside walls of adjacent conduits. Base spacers provide a 3 in. separation between bottom row of ducts and trench bottom with 1, 1½, 2 or 3 in. horizontal separation.

Spacers are made as a one-way unit with interlocking lugs, as illustrated, which permit assembly to the desired combination in the field.

If specified, spacers will be shipped already assembled in 2, 3, or 4-way combinations.

These plastic spacers are molded at high pressures and temperatures to produce a tough, lightweight spacer which withstands rough handling in transportation and installation.

One-half to one-fifth the weight of other types, the skeletonized structure provides "locked-in" construction. The

interlocking feature allows quick adaptation to field requirements and eliminates multiplicity of combinations in ordering.

Each spacer is marked to indicate conduit size and separation.

Spacer Links

A horizontal separation greater than 3 in. is occasionally required to separate ducts carrying power and communication cables. To provide this additional separation, 2 in. spacer links are available. They are inserted between base or intermediate spacers in multiples required to produce desired separation, and are assembled with interlocking lugs in the same manner as regular spacers.

Concrete Spacers

Where specifications require, concrete spacers for 2 to 5 in. conduit sizes, inclusive, may be supplied with 1, 1½, 2, or 3 in. separation. However, transportation costs may make it more practical for the large user to make his own spacers. Information as to mix employed will be furnished upon request.

Shipping Weights and Data

On Orangeburg Fibre Conduit

Economical Transportation

Orangeburg Conduit is transported most economically because it combines light weight with ample strength to resist breakage. The largest truck bodies can be loaded to maximum cubic carrying capacity, reducing trips and hourly costs to an almost negligible cost per foot.

Price Schedules

Orangeburg price schedules are based on total weight of material, including bends, elbows and items classified as fittings (both STANDARD and NOCRETE); excluding items classified as accessories, such as spacers, etc.

Shorts

The manufacturer reserves the right to include 15% lengths shorter than standard. Shorts are cut to even lengths—each piece is tooled and coupling is furnished. All are packed separately in any shipment to facilitate identification and easy count.

Class A Orders—30,000 lbs. (Minimum car) or over.

Class B Orders—10,000 to 29,999 lbs.

Class C Orders—9,999 lbs. or less.

Packaging and Bundling

There is an extra charge for bundling Class A and B orders, if so specified. Class C orders are usually packaged for less than carload handling.

The weights listed are used for pricing computations only (approx. shipping weights).

Approximate Shipping Weights

Orangeburg Standard Conduit

Conduit Size, In.	Wt. Per 100 Ft. Lbs.	Min. No. of Feet to 30,000 Lbs.	Min. No. of Feet to 10,000 Lbs.
2	115	26,100	8,700
3	140	21,430	7,144
4	200	15,000	5,000
4½	240	12,500	4,167
5	300	10,000	3,334
6	425	7,059	2,353

Orangeburg Nocrete Conduit

3	270	11,112	3,704
4	360	8,333	2,778

Weights of bends and other fibre items are included in figuring minimum weights—such items on an order will decrease footage in the conduit weight tables.

Crouse-Hinds Traffic Signals

Front View

Design

The Crouse-Hinds Company is offering a complete new line of traffic signals incorporating a really dust-tight optical system. Reflector and lens assemblies will stay clean resulting in a more brilliant signal indication. This new optical system will retain its peak efficiency for the life of the signal.

Every detail in the design of these new signals has been carefully considered not only from an operational and maintenance standpoint but for appearance as well. Hinges and catches are concealed not only improving the appearance of the signal but eliminating protruding lugs which are easily broken.

Materials

The casing, door, and hood are made of special silicon aluminum alloy, cast in steel dies under great pressure. Such construction insures a uniform and homogeneous casting of great strength, capable of resisting corrosive atmospheres, including salt air. Castings are extremely accurate and similar parts are interchangeable on all signals.

The red, amber, and green lenses are selected especially for purity of color and high transmission. The outer surface of the lens is smooth, which makes cleaning easy, while on the inner surface there are prisms for distributing the light downward and to the sides.

Rear View

Dust-Tight Optical System

Signals are equipped with a complete optical unit for each signal indication. Each optical unit consisting of a receptacle, reflector, lens and door, is kept free from dust by the use of specially designed gaskets between the component parts. Beam candle power is maintained at high levels indefinitely.

The reflector used is an extremely accurate parabolic reflector made of polished glass, silvered to form the reflecting surface. The silvering is protected by electrolytically deposited copper over which is placed a backing of baked enamel. High efficiency Alzak finished aluminum reflectors can be furnished when specified.

The reflector is mounted in an aluminum spider which also holds the lamp receptacle. The left side of the reflector support ring is hinged to the casing, and one catch on the right accurately positions the assembly behind the lens. In a normal position, the reflector assembly is rigidly fastened to the casing and does not have to be disturbed for relamping. When access to the rear is wanted, it is only necessary to loosen the single catch and swing the reflector outward on its hinges.

The optical system is designed to take the standard 60-watt traffic signal lamp mounted in an A-21 clear bulb. Traffic signal lamps of 25, 40, or 100-watt sizes may also be used.

View Showing
Optical System

Body Construction

The bodies of the new Crouse-Hinds signals are of unit sectional construction, which features an individual body casting for each optional system. This insures a rigid, compact casing which is dust-tight and water-tight. Signals of two, three, four, or five sections may be built up as desired.

Unit construction, with complete interchangeability of parts, is of great benefit to cities using any quantity of signals, since any desired combination and arrangement of signal bodies can be made up locally.

Type H and Type K Adjustable Highway Traffic Signals

The new Type H highway signals equipped with 12-in. lenses, in contrast to the 8-in. lenses used in conventional signals, meet the need for a more brilliant signal on major highways and other thoroughfares where the faster moving

traffic requires longer stopping distances. Type K signals combine the brilliant Type H 12-in. red section with the lower const. conventional 8-in. amber and green sections.

Crouse-Hinds One Section, One-Way Beacons and Signals

Without Motor Flashing Switch

†**With Amber Unlettered I.T.E. or Special Lenses**

Crouse-Hinds one-way, one section beacons and signals are similar in all respects to standard traffic signals, except that they have only one section instead of the usual three.

All beacons except TSE-111DT are regularly equipped with amber, unlettered I.T.E. lenses.

Type TSE-111DT is equipped with WALK or ARROW lenses and is used for mounting beneath existing signals. They are furnished complete with 1¼ inch diameter pipe nipple, lead gasket, and check nuts.

Type TST-111DT beacons are equipped with an auxiliary reflector and receptacle for illuminating an information or warning sign mounted on the supporting standard immediately below. Auxiliary reflector is designed to take any lamp not exceeding 3⅛ inches in diameter or 6⅛ inches in length. A standard 100-watt lamp is recommended. On the bottom of the type TST-111DT beacon, there is a slip fitter for 2-inch pipe, cast as part of the beacon base. Set-screws are provided for fastening it to the 2-inch supporting pipe.

Type	No.	Mounting	Lens	Each

TSE -111DT	50474	1¼-Inch Nipple in Top with Hood.....	Left Arrow	51.00
TST -111DT UG	50475	2-Inch Post with Sign Reflector and Glass Door.....	Amber	87.50

Prices do not include incandescent lamps, motor flashing switches, or radio interference suppressors.

Beacons are furnished with KL9 removable sheet aluminum hoods. There is no deduction in price for the omission of hoods.

†Lenses of any standard color can be obtained without extra charge. Lettered lenses can be furnished at an advance of \$2.50 per lens in the price. For each lens omitted, deduct \$2.50 from the prices.

▲Price does not include pole clamps.

Crouse-Hinds Automatic Synchronous Controllers Jack Mounted—Weatherproof Cabinets

**With Gear-Shift—Adjustable Time-Cycle, 40, 50, 60, 70, and 80 Seconds
10 Amperes, 115 Volts, 60 Cycles A.C.—6 to 15 Color Circuits, 16 Intervals**

**Type KS-2
Mounted in Size 16 Cabinet**

**Type GS-5
Mounted in Size 22 Cabinet**

Types KS-2 and GS-5 Non-Interconnected Synchronous

The non-interconnected type is for use at adjacent or isolated intersections. They will keep in step with each other and provide limited progressive traffic movement. They can run 24 hours a day, be shut down, or turned to flashing, by means of time switches. All are equipped with reset circuits. At time of installation of controllers, if there is the possibility of future interconnection, the future-interconnected type should be purchased as the small additional cost would easily be justified.

Type GS-5 Future-Interconnected Synchronous

This future-interconnected controller meets the immediate problem for cities desiring to install a signal system, but lacking sufficient money to purchase cable. The signals and controllers may be installed and the interconnecting cable purchased and installed later. These controllers are similar to the non-interconnected type except they are designed and wired for interconnection later.

The terminal board is designed for interconnection; fuse clips for the interconnecting cable are furnished and the remote-control relay subbases for signal shut-down and flashing are installed and wired complete. The automatic reset circuit is also added.

Remote-controlled relays are not supplied with future interconnected controllers. They may be purchased at time of interconnection and mounted on the relay subbases.

Type GS-5 Interconnected Synchronous

Type GS interconnected controller is the one generally used in congested portions of cities and on long thoroughfares. This system permits progressive signal operation and provides all of the necessary control features except control of the time-cycle from the master.

The following features may be incorporated in the system by running an interconnecting cable between the controllers, automatic reset, remote shut-down, remote flashing, and remote emergency all-red. One positive wire in the cable for each remote-control feature, in addition to the common wire.

Prices include brackets for wood-pole mounting or adjustable pole bands for steel-pole mounting. Standard 4-inch pedestal adapter, \$25.00 additional.

*May be furnished with gears for other time-cycles.

†Controllers are furnished for 110 to 125-volt, 60 cycle operation. For any other frequency, add \$50.00, and for any other voltage, add \$50.00 to the above prices.

Type TSS-20 Crouse-Hinds Motor Flashing Switches

20 to 60 Flashes per Minute

***10 Amperes, 115 Volts, 60 Cycles A.C.**

Switch Only

**Switch in Size 12 Cabinet
(Door Open)**

**Size 12 Cabinet
Steel-Pole Mounting
With
Adjustable Pole Bands**

**Size 12 Cabinets
Wood-Pole Mounting
With Wood Pole Brackets**

Type TSS-20 has large diameter, widebreak, non-corrosive metal contacts and will handle an incandescent lamp load of 10 amperes. It is driven by a variable speed induction—disc motor, the magnetic circuit of which is laminated throughout, thus giving high torque at low wattage input.

The speed of flash may be varied between 20 times a minute and 60 times a minute.

In addition to the motor flashing switch itself, a terminal block with properly identified terminals for all field connections is provided. A set of fuse clips for the hot side of the power line is mounted on the terminal block.

The entire switch assembly may be removed as a unit from the cabinet to facilitate installation.

Cabinet: Type TSS-20 motor flashing switch is mounted in a cast aluminum, weatherproof cabinet, equipped with a heavy duty brass lock. The hinged door of the cabinet is equipped with a gasket to exclude dust and moisture.

Radio Interference Suppressor: Type TSS-20 motor flashing switches are listed below with and without radio interference suppressors.

	Single-Circuit No.	†Each	Two-Circuit No.	†Each

**Green Prismatic
Diffusing Lens
I.T.E. Arrow**

Clear WAIT Lens

*Can be furnished for 230-volt, 60 cycle operation without extra charge. Contact GRAYBAR for information on other voltages and frequencies.

†Prices include brackets for wood-pole mounting or adjustable pole bands for steel-pole mounting.

Crouse-Hinds Super-Trafflex Controllers Jack Mounted—Weatherproof Cabinets

*40 to 120 Seconds Time Cycle
†10 Amperes, 115 Volts, 60 Cycles A.C.—6 to 15 Color Circuits, 16 Intervals

Type GFM-3 Super-Trafflex Master Controller
With Time Switch in Size 28 Cabinet

Type GF Super-Trafflex Secondary Controller

Type GF Super-Trafflex Secondary Controller in Size 22 Cabinet

Full Flexible—Progressive Control of Traffic

Crouse-Hinds Trafflex Control system provides for a full flexible-progressive movement of traffic, in which the operation of the signals is determined by the traffic requirements at individual intersections. The time relationship between adjacent controllers permits a smooth, uninterrupted flow of traffic in all directions at varying speeds.

Trafflex Control System

The Trafflex control system consists of a Super-Trafflex master controller located at control headquarters, within or near the control area, and a Super-Trafflex secondary at each of the controlled intersections.

The Type GF Super-Trafflex controller is driven by the Crouse-Hinds standard Trafflex motor which employs both driving and bucking coils and provides for remote control of the time-cycle.

The Super-Trafflex master, which controls the speed at which traffic may flow, acts upon the Super-Trafflex secondaries, slowing them down or speeding them up as may be required, and keeps the secondaries in their proper time relationship with respect to each other.

When the time-cycle regulator of the master is adjusted to give a different time-cycle, the secondaries respond instantly to any change in speed control, always keeping in step. No synchronization by the master is required when the time-cycle is changed.

This system provides for remote control of the time-cycle, shut-down, flashing, emergency all-red, control of the offset from zero time, division of the time-cycle into the correct number of intervals, and automatic supervision of all secondaries.

Crouse-Hinds Trafflex system places in the hands of the traffic engineer means for controlling all phases of vehicular and pedestrian traffic.

This flexible-progressive control of traffic is the only method of traffic control which is entirely satisfactory for large interlocked areas. The system is simple to install, easy to maintain, inexpensive to operate, requires little maintenance expense, and may be readily extended as traffic conditions warrant.

Type GFM-3 Super-Trafflex Master Controllers

40 to 120 Seconds Time Cycle
With Manually-Operated Switch for Shutdown or Flashing
★Capacity—50 Secondary Controllers

Prices include brackets for wood-pole mounting or adjustable pole bands for steel-pole mounting.

Standard 4-inch pedestal adapter, \$25.00 additional.

*These controllers may be furnished with time-cycle ranges of 30-90 seconds or 20-60 seconds, without extra charge.

†Controllers are furnished for 110 to 125-volt, 60 cycle operation. For any other frequency, add \$50.00, and for any other voltage, add \$50.00 to the above prices.

Crouse-Hinds Synchronous Traffic Signal Controllers

Type LS

Type LS - Three-dial

Type LS Controllers can be supplied with one, two, or three dial-units. Each dial-unit can be set for a different time-cycle, a different timing-split and a different offset. All controllers are provided with jacks and wiring for three dial-units regardless of the number originally purchased. Therefore it is ideal for use where a single-dial controller is sufficient at the time of installation but where future needs may call for additional dials.

Type LS controllers have separate dial-units each complete in itself. A complete controller consists of from one to three dial-units mounted on a sliding shelf, a face plate, a rear panel and a cabinet housing the assembly.

These controllers are available for non-interconnected and interconnected operation. These types are essentially the same and differ only in the auxiliary features for interconnection.

Type LS1-SD Controller for Non-Interconnected Operation

With One Single-Reset Dial-Unit

With Hand Reset Switch

KL461	Motor-Brake Relay	30.00

Crouse-Hinds Semi-Vehicle-Actuated Controllers

Type SVA

**Type SVA-2 Controller
in Size 22 Cabinet**

**Interior View, Type SVA-2 Controller
with MNA-1 Amplifier**

The intersections of heavily-traveled major streets with minor streets on which traffic is relatively light present a special traffic problem. Traffic signals are required at such intersections to interrupt main street traffic flow so that vehicles on the cross street may enter the intersection in safety. However, cross street traffic is usually intermittent at these intersections, and conventional fixed-time controllers do not always provide efficient operation.

Type SVA controller is especially designed for use at such intersections. It is of the semi-vehicle-actuated type and requires the use of vehicle detectors placed in the cross street. The controller is so designed that the signal indications are green to main street traffic until a detector is actuated. Such actuation causes the main street green indication.

Pedestrian Operation

In some instances there is considerable pedestrian traffic at intersections where SVA controllers are required. To provide protection for pedestrians wishing to cross the major street, the controller may be actuated by pedestrian pushbuttons.

Interconnected Operation

When provided with the proper auxiliary equipment, type SVA controllers may be installed in interconnected systems. Such controllers are equipped with automatic reset circuits so that the offset relationship of the actuated cycle may be coordinated with the operation of other controllers in the system for progressive traffic movement. Type SVA controllers can be furnished for installation in type GS or LS interconnected synchronous systems. They are also available for use in Super-Trafflex control systems.

For information and prices on type SVA controllers arranged for interconnected operation, contact GRAYBAR.

**Complete Jack-Mounted Controllers in Size 22 Weatherproof Cabinets

*All mounting attachments are furnished complete with gaskets and screws.

†Signals should be supported by arms at both top and bottom. Pole clamps are not included in catalog numbers and prices.

‡When signals are to be mounted one above the other, select proper mounting attachments from figures 4 to 10 above.

Crouse-Hinds Pedestals and Poles

Poles and pedestals on this page have an ornamental cast Feraloy base and a shaft of tubular steel.

The 34-inch pedestal has a shaft of either 3 or 4 inch diameter pipe, and is designed for mounting control cabinets. The longer poles, for mounting signals, have a tubular steel shaft of 4-inch pipe with an overall height of from 5 to 10 feet.

Poles and pedestals should be mounted on concrete foundations. They require four foundation bolts, 3/4 inch in diameter, 16 to 18 inches long. Foundation bolts are not included in the catalog numbers listed below.

There is a door in the ornamental base which is fastened to the base with machine screws. The opening of this door is 8 1/16 inches high, 2 1/2 inches wide at the top and 10 3/4 inches wide at the bottom. This large opening provides ample room for making splices.

G-E Fluorescent Street Lighting Luminaires

Form 202S

Form 202S (2880 lumens) is designed for lighting residential and suburban streets. The soft, diffused fluorescent source scatters light in broad IES Type I distribution pattern which illuminate streets, sidewalks, and adjacent bushes and trees. Long-life lamps with low power consumption provide the economical operation so necessary in suburban areas.

Application of units over roadway is now possible by means of slip-fitter mounting. Applied over the roadway, unit provides excellent pavement brightness and, hence, improved silhouette visibility.

Form 202S consists of aluminum hood; clear, acrylic-plastic side-hinged globe; hinged aluminum reflector, and integral-mounted ballast wired to terminal board. Unit operates two two-foot, rapid-start lamps that generate a total of 2880 lumens. Approximate projected area, 2 sq. ft.

Form 204S

Form 204S (7200 lumens) is designed for lighting residential and light-traffic streets. Elongated fluorescent source can be effectively mounted over the roadway to produce excellent pavement brightness and, hence, improved visibility. Luminaire produces broad IES Type I distribution pattern. Low luminaire brightness means minimum glare.

Where mounting heights are restricted by pole height or overlapping trees, Form 204S provides a convenient and attractive solution.

Form 204S consists of aluminum hood; clear, side-hinged, acrylic-plastic globe; hinged aluminum reflector, and integral-mounted ballast wired to terminal board. Unit operates two four-foot, rapid-start lamps which generate a total of 7200 lumens. Approximate projected area, 3.75 sq. ft.

Form 206S

Form 206S (11,500 lumens) is designed for lighting primary traffic areas. This versatile unit, however, is ideally suited for other applications, such as medium business and shopping areas.

Easy to install and maintain, Form 206S provides soft, diffused light with virtually no glare. Exceptional uniformity of pavement brightness, even under wet weather conditions, is afforded by this unit.

Form 206S consists of aluminum hood; clear, acrylic-plastic globe; hinged aluminum reflector, and integral-mounted ballast wired to terminal board. Unit operates two six-foot, rapid-start lamps which generate a total output of 11,500 lumens.

Luminaire is slip-fitter-mounted and globe is one-piece and side-hinged. Resilient gasketing material is used between hood and globe as weather seal. Recessed double-contact-base lamps are easily installed in spring-loaded sockets. Approximate projected area, 5.8 sq. ft.

For further information contact Graybar.

Form 406S

Form 406S (23,000 lumens) is designed for lighting highways and expressways, primary and secondary traffic and business streets, interchanges, parking lots, service areas, and other areas requiring a relatively high level of illumination.

This four-lamp unit provides soft, diffused light with virtually no glare and exceptional uniformity of pavement brightness which improves the overall appearance of street or area illuminated. Form 406S is slip-fitter-mounted luminaire with aluminum hood, side-hinged clear acrylic-plastic globe, and hinged aluminum reflector. Available with integral-mounted multiple or series ballasts wired to terminal board, or series external ballast for pole-base mounting. (For series circuits over 5000 volts OCV, external ballasts are required.)

Form 406S houses four six-foot, rapid-start, recessed double-contact-base lamps which generate a total of 23,000 lumens. Approximate projected area, 8 sq. ft.

Form 106U

Form 106U is a luminaire specially designed for use at the relatively low mounting heights of underpasses and tunnels. At such limited mounting heights, optimum visibility can be produced only by the combined low brightness factor (and high light output) of the Form 106U luminaire. Properly installed, the units minimize brightness contrast, thus reducing eye fatigue and increasing visual comfort.

Correct application of this luminaire assures uniform light distribution over the pavement and especially over side walls and ceiling of the tunnel or underpass. Designed primarily for mounting: (a) at the junction of ceiling and side walls; or (b) along the center of an arched ceiling. Where desired, a continuous line-of-light effect can be achieved with end-to-end positioning. Maintenance and operating costs are minimized by the long life and low energy consumption of the fluorescent lamp.

Consists of an aluminum hood, specular-finished aluminum reflector, and a scalloped acrylic-plastic globe for improved light diffusion. Easy servicing and relamping is assured by a side-hinged globe secured to the hood by three sturdy toggle-latches. To prevent entrance of moisture, dirt, and insects, globe is gasketed and firmly clamped to the hood. Adjustable mounting brackets permit adjustment of luminaire at various angles to the roadway.

An outstanding increase in performance of fluorescent street lighting is provided by luminaires utilizing the newest development in lighting—the Power Groove fluorescent lamp. Lumen output provided by the Power Groove lamp is shown in table.

With Power Groove Lamps

Luminaire	High Output Lamp Lumens	Power Groove Lamp Lumens	Percent Increase
Form 204S	7200	12000	67

G-E Filament Street Lighting Luminaires

Form 101RV

Form 101VR

Form 101R
101D
101S

Form 101FR

Form 110SO

Type I Light Distribution

Forms 101RV and 101VR

Type RV is a high-efficiency optical assembly producing a two-way light distribution (IES Type I) intended for center-of-street (or near-center) mounting. Most effective for lighting relatively narrow residential and light-traffic streets where the economy of 4000 and 6000-lumen filament lamps at longer spacings, is desired. Affords very good house-side and street-side shielding, and generally is recommended for illumination levels from 0.2 to 0.4 foot-candle.

The 101RV luminaire consists of a 1¼-in. slip-fitter, die-cast aluminum hood for internal wiring, an aluminum reflector, and a refractor. Available in spun-sealed, roller-latch, and clamp-band optical assemblies.

Type VR is a high-efficiency optical assembly producing two-way light distribution (IES Type I) and intended for center-of-street (or near-center) mounting. Designed for long spacing on residential and very light-traffic streets using from 4000 to 10,000-lumen filament lamps. Lamp is high in reflector providing excellent shielding on both house-side and street-side of luminaire. Recommended where illumination from 0.2 to 0.4 ft.-candle is required.

The 101VR luminaire consists of a 1¼-in. slip-fitter, die-cast aluminum hood for internal wiring, an aluminum reflector, and a refractor.

Types II and III Light Distributions

Forms 101R, 101FR, 110SO

The Type R optical assembly, utilizing a specially designed refractor, produces an IES Type II light distribution particularly suited for narrow streets, with luminaire mounted at side of roadway and overhanging pavement three to four ft. Filament lamps ranging from 2500 to 10,000 lumens can be used in this optical assembly which is also ideally suited for all applications requiring use of IES Type III distribution on medium-width light-to-heavy-traffic streets, arteries, and highways.

The 101R luminaire consists of a 1¼-in. slip-fitter, die-cast aluminum hood for internal wiring, an aluminum reflector, and a refractor. Available with spun-sealed, roller-latch, and clamp-band optical assemblies.

The Type SO is a modern, open reflector having an IES Type II light distribution. Specially designed for use with

2500-lumen lamps, at spacings normally used for residential streets (1000-lumen lamps may be used by changing socket position). Mounting should be near side of roadway with three to five-ft. overhang. Shields used in suburban areas to minimize objectional light toward residences. Shields redirect stray light into two major beams. The 110SO luminaire has die-cast aluminum hood with integrally cast 1¼-in. slip-fitter, internal wiring, plug-in photoelectric control unit, and an aluminum reflector. The 110 hood is available with all other optical assemblies.

Type FR is a high-frequency optical assembly which accommodates filament lamps up to 15,000 lumens and with appropriate reflectors can produce IES Type II or III distribution patterns. Luminaires with FR optical assembly provide excellent uniformity of pavement brightness and are effective where high illumination levels are desired. Mounting at or near side of street is recommended.

The 101FR luminaire consists of a 1¼-in. slip-fitter, die-cast aluminum hood with internal binding posts, an aluminum housing with internal aluminum reflector, hinged roller-latch holder and a refractor.

Type IV Light Distribution

Form 101D

Type D optical assembly produces an IES Type IV light distribution and is best-suited for wide pavements, intersections, and area lighting. Side-of-street mounting is recommended; and lamps from 2500 to 10,000 lumens can be used. Reduced luminaire brightness renders this unit advantageous for streets and areas having considerable pedestrian traffic.

The 101D luminaire consists of a 1¼-in. slip-fitter, die-cast aluminum hood for internal wiring, an aluminum reflector and deflector, and a rippled globe. Available with spun-sealed, roller-latch, and clamp-band optical assemblies.

Type V Light Distribution

Form 101S

Type S optical assembly produces symmetrical, or circular, light distribution (IES Type V). Accommodates filament lamps ranging from 2500 to 10,000 lumens; and has its main application at street intersections, auto parking lots, and in institutional or campus areas.

The 101S luminaire consists of a 1¼-in. slip-fitter, die-cast aluminum hood for internal wiring, an aluminum reflector and a globe. Available with spun-sealed, roller-latch, and clamp-band optical assemblies.

G-E Mercury Street Lighting Luminaires

Constructed with distinctive tilted design which is functional as well as attractive, improving optical performance and making the luminaire unusually easy to service.

Glassware, lamp, and reflector are tilted to put more light on the street and to provide greater accessibility for servicing. Hinged glassware swings open when the roller latch is lifted, making interior of luminaire completely accessible. Reflector and glassware can be detached from unit without using tools.

Can operate on either conventional circuits with ballasts, or in series on the new Ballastless Mercury circuit. Type 2 and Type 3 distribution patterns available to permit various spacing arrangements on different width streets.

Form 400

A high-efficiency mercury luminaire producing either an IES Type II or Type III distribution with proper selection of reflector. The 400 uses H250-A5, H400-A1, or H400-E1 mercury lamps (or their color improved versions) and is designed for use where high level of illumination is required, as on high-speed expressways, heavily traveled main urban traffic areas, and downtown "whiteway" lighting.

Consists of an aluminum housing and slip-fitter with provision for internal wiring, hinged detachable glass reflector, and an aluminum snap-in reflector.

Two reflectors available: one for IES Type II and the other IES Type III light-distribution patterns.

Form 402

Designed for use with the new 700 or 1000 watt mercury-vapor lamps. Principal application is in large-area lighting, primary retail-traffic streets, and expressways.

Has high level of illumination produced in IES Type IV pattern. Application of Form 402 may be either single- or twin-mounted, and both luminaire and lamp size may justify a mounting height in the 30-35 ft. range.

Designed for the 700 or 1000-watt mercury lamps. The luminaire consists of a roller-latch, hinged detachable glassware, aluminum internal reflector, and mogul multiple socket for use with either clear or color improved lamps.

G-E Constant-Current Transformers

Type RO-2 and ROC-2

Type RO-2 Pole-Type

Type RO-2 constant-current transformer provides constant current to series street-lighting circuits with normal power factor.

Type ROC-2 is similar to the RO-2 but has outdoor-type capacitors for high-power-factor operation. The ROC-2 is recommended for long or heavily loaded distribution feeders where it is desirable to limit voltage drop and losses through minimum kva demand.

Mechanism designed with moving coil which automatically adjusts to various load factors. Provides a source of constant-current output which is necessary in series street-lighting circuits.

Designed to supply a variety of loads, regardless of whether they are incandescent, mercury, or fluorescent.

The weight of the Type RO-2 and ROC-2 transformers has been reduced. Less oil is used, and the internal mechanism weighs less than on previous models.

How the Constant-Current Transformer Operates

The moving-coil, constant-current transformer is a variable-impedance device for regulating output current to a constant value through a large range of load impedance and with limited variation in primary supply voltage.

Its equivalent circuit may be considered as a conventional, low-reactance distribution transformer with external, self-adjusting variable series reactance.

This reactance is magnetic-leakage reactance and always adjusts itself to a value which, when added to the load impedance, permits constant current to flow. The amount of reactance is determined by the moving-coil position, which in turn is maintained by the force of repulsion between the coils.

The desired output current sets up a definite corresponding force of repulsion which floats the moving coil in the position that produces this current. For any given set of conditions, a state of mechanical equilibrium is attained whereby the force of repulsion exactly balances the weight of the moving coil.

Where the transformer is fully loaded and minimum series reactance is needed, the moving coil floats near the bottom of the core window. As load is removed and more reactance is required to regulate current, the coil floats higher.

Changes of load tend to unbalance the equilibrium of forces by increasing or decreasing the force of repulsion. In a freely moving, well-balanced mechanism, these are immediately counteracted by the movement of the floating coil to a new position, which restores the mechanical-electrical balance.

G-E Types IL and ILH Transformers
Pole-base and Aerial Types

Type IL transformer with tapping sleeves for pole-base mounting

Type IL transformer with satchel handles for aerial mounting

Type IL is a series-to-series incandescent single-lamp transformer designed for use in constant-current series circuits. Provides a means of reducing high circuit voltage and permits the use of low-voltage cable from transformer to luminaire. Eliminates system outages otherwise caused by breakdowns between the main circuit and the luminaire. Adequate insulation is provided for luminaries mounted on metal poles, and high-current, high-efficiency, concentrated-filament series lamps may be used. Protects lamps from line surges.

Type ILH transformers are designed to provide the correct starting and operating voltage for mercury lamps. High-power-factor multiple lag-type ballasts have capacitance added so that more lamps and ballasts may be used on a circuit. Series transformers are designed to isolate series circuits from the luminaire and provide the necessary starting and running characteristics for mercury lamps.

Construction of aerial and pole-base units is the same, except for the addition of a satchel handle for mounting the aerial type. Leads are brought out through rubber tapping sleeves in the cover.

Core is made of carefully annealed, high-permeability, nonageing, cold-rolled silicon steel. High and low-voltage windings are wound and insulated separately, then impregnated under vacuum before assembling to the core. Entire casing is filled with high-quality insulating compound. Case is constructed of a cast-aluminum cover spun-sealed to a one-piece drawn-aluminum can.

G-E Film Cutouts

Rolled metal edge makes cutout strong and easy to install.

Smooth flat surfaces insure good electrical contact.

Stiff fiber insulation, securely clamped, makes cutout mechanically sturdy; it will not fall apart.

Enlarged View of Film Cutout

Fiber insulation excludes moisture; colored for identification of rating.

Oxidized copper disk gives excellent uniformity of dielectric value.

Indentation centers copper insert.

"All-round" contact makes cutout pressureproof.

An enclosed copper-oxide film cutout designed for use with individual lamps in series circuits to provide circuit continuity when the lamp fails. These cutouts are recognized for dependable operation and sturdy construction.

The dielectric value of copper oxide is carefully controlled for uniformity, and the film is not affected by heat or pressure. Oxidizing disk is securely enclosed in moistureproof aluminum and fiber casing which resists damage and will not separate.

G-E Electric Protectors

Type J-1A protector for multiple control circuit

Developed to operate in conjunction with a primary control switch, and its function is to open this primary switch as soon as an open circuit occurs.

Consists of two small transformers, a thermal switch, a relay, a set of disconnecting contacts, and a timing resistor. One of the two small transformers is energized by the control circuit and the other by the load circuit to be protected. Under normal operating conditions, the disconnecting contacts are closed on the multiple-control type, and open on the series-control type.

When an open circuit occurs in the load circuit, the relay becomes de-energized, closes, and completes circuit. Then the thermal switch will operate and open the disconnecting contacts on the multiple type (close on the series type) to de-energize the controller operating coil. This allows the controller contacts to open and de-energize the primary of the constant-current transformer.

After the open circuit in the load circuit has been repaired, the protector can be reset (reconnecting the transformer to the main system) by means of a reset lever conveniently located in the bottom of the casing.

This protector operates entirely in air and is housed in an attractive drawn-steel case. Operation is unaffected by changes in ambient temperature.

G-E Photoelectric Controls

Type P

Strap-Mounted

Meter-Socket-Mounted

Turns streetlights on when needed, regardless of the time of day. Provides sensitive, low cost control of either series or multiple circuits.

Automatically actuated by changes in daylight intensity, these controls provide either high-level or low-level illumination with six different units available. These simple-to-install, reliable, and easy-to-maintain units are particularly suited for outlying districts not served by series circuits. When applied in this manner, they effectively control individual luminaries from existing multiple circuits. Also used to control primary switch on series street-lighting circuits.

Jefferson Mercury Lamp Ballasts For Outdoor Lighting

Series Circuit Transformers

No. 340-702

Aerial and pole base type transformers are available for series circuit street lighting. Standard units are designed for a 6.6 amp. circuit, but can be furnished to operate on 7.5, 10, 15 or 20 amp. circuits. All units are completely weatherproofed, having a 300-minimum open circuit secondary voltage to insure starting in cold weather.

These transformers are insulated for series circuits up to 10,500 volts. A 22,000 volt test applied to every unit insures against failure in the field.

No. 236-311

Made of special Core Steel with high silicon content. Heavy steel hot-dipped galvanized both inside and out prevents moisture damage—insures long, low cost maintenance-free performance.

Transformers are furnished for every type of Mercury lighting. There are standard multiple circuit types (normal or high power factor) for 115, 230 and 460 volt line operation (units can be furnished for other voltages.)

American Concrete Lighting Standards

Prestressed Stress-Spun concrete standards are made by the centrifugal process and should not be confused with concrete posts made by other methods.

The Hy-Lite combination of prestressed steel reinforcement and spun pressure-dense concrete, produces a standard of great durability — highly resistant to damage in handling and severe exposure in service. Following a specially developed moist steam curing process, the standards are wet-ground and polished to expose the sparkling aggregate and produce a beautiful, lasting granite finish.

Precast butt foundations eliminate the need for cast in the field foundations and anchor rods, saving time, material and money. Painting is never required.

For Twin Brackets Specify Twin after Catalog Number.

4"x6" handhole with reinforcing frame and cover furnished extra upon request on Type No. 1 poles.

All poles furnished with nominal wall thickness of .188" unless otherwise requested.

All poles furnished complete with anchor bolts, nuts and washers.

Bracket arm supplied with 1 1/4" slipfitter end unless otherwise specified.

For bracket, arm and base details, see page 1027.

*For Type 1-T Poles—the mounting height includes 20" high transformer base.

Luminaires not included.

**Mounting heights are for poles with 6 ft. bracket. For 4 ft. brackets deduct 6 in. from mounting height and for 8 ft. brackets add 6 in.

Prices on application.

Union Metal Steel Monotube Poles

For Power Distribution

Fluted Pole

Monotube Power Distribution Poles are used for the same purpose as wood, structural steel, or sectional tubular poles. They are the product of more than 50 years of experience in manufacturing steel poles, and their construction is based on this practical experience plus sound engineering principles.

These poles taper uniformly from top to bottom, with the largest diameter at the ground line where the maximum strength is needed.

Monotube poles are of continuous one-piece construction made from the highest grade, open hearth steel. The exclusive cold-rolling process used in fabricating Union Metal Monotubes greatly increases the yield point and ultimate strength of the original metal. Monotubes combine great strength with flexibility. This feature of flexibility is doubly important in overhead wiring installations where ice, wind, and dead-end load conditions are present.

The Monotube pole achieves maximum ability to withstand shock and impact. Even when the yield strength has been exceeded, the pole bends rather than breaks.

Monotubes are made in two designs, round and fluted. A steel base, arranged to accommodate the foundation bolts, is securely welded to the lower end of the tube. The round design can also be furnished for embedment directly into concrete. Poles are available in 11 gage, 7 gage, 3 gage, and 0 gage steel, and ground line diameters range from 6 to 14 inches.

Monotube power distribution poles can also be used in combination with other municipal services, carrying combinations of two or more power and lighting circuits, street lighting circuits and luminaires, trolley span wire suspension, fire and police alarm circuits, etc.

No matter how specialized the requirements, Union Metal Monotube poles can be built to meet them, and with the added advantages of economy of installation and maintenance, great strength with light weight, attractive appearance with exceptional utility.

Contact your nearest Graybar Office or warehouse for complete information on prices and delivery.

Printed information on various types of Monotube poles is available.

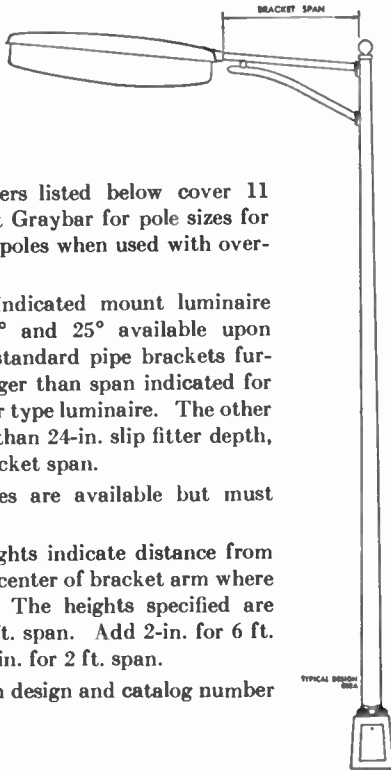

Round Pole

Union Metal Steel Poles

For Slip Fitter Type Fluorescent Luminaires

These poles are recommended for use with 2" slip fitter type luminaires, each having a maximum weight of 110# and a maximum projected area of 8.5 sq. ft., or an equivalent drag force of no more than 225#, at 100 m.p.h. (101.6) winds in accordance with the National Bureau of Standards Handbook H 43, dated 1949 (National Electrical Safety Code). In hurricane areas pole sizes will be increased to meet local conditions.

No. 802-A

The catalog numbers listed below cover 11 gauge steel. Contact Graybar for pole sizes for corner and dead end poles when used with overhead wiring.

The brackets as indicated mount luminaire at 5°. Tilts of 15° and 25° available upon request. The 2-in. standard pipe brackets furnished are 24-in. longer than span indicated for mounting of slip fitter type luminaire. The other luminaires with less than 24-in. slip fitter depth, add difference to bracket span.

Twin bracket poles are available but must be specified.

The mounting heights indicate distance from top of foundation to center of bracket arm where luminaire attaches. The heights specified are for brackets with 4 ft. span. Add 2-in. for 6 ft. span and subtract 2-in. for 2 ft. span.

Please specify both design and catalog number when ordering.

50054-Y35	220 Ft.	101 to 200	12 x 7.52 x 32 Ft.	0	10.0

Note: Template prints showing spacing and projection of anchor rods are mailed upon receipt of order.

Poles are of such length as to allow for maximum clearance of 16 ft. with maximum signal height of 4 ft. and still maintain minimum sag of 5 per cent of span in span wire.

Poles chosen on basis of maximum total weight of span wire and control cable equal to 0.8 lbs. per ft. over entire span. Sag in span wire was assumed to be minimum of 5% of span in all cases.

Where signal is less than maximum allowed weight, pole rake may be cut down proportionally.

These poles are adequate to meet heavy loading district requirements.

Contact GRAYBAR for additional information and prices.

Catalog numbers listed cover 11-ga. steel poles. Heavier gauges can be furnished, quotations on request.

Handhole with reinforcing frame and cover are not included as regular equipment. Must be specified if wanted.

Designs indicated include a Fabricated Steel Transformer Base. Ornamental transformer bases in cast iron or cast steel are available and will be quoted on request.

Bracket ends are arranged to accommodate a 1¼-inch Slip Fitter Type Luminaire. A 2-inch Slip Fitter arrangement or an End Knob with Plumbizer is also available.

Mounting heights given indicate distance from top of foundation to center of bracket arm where luminaire attaches. Heights specified are for brackets with 4-ft. spread. Add 7 inches for 6-ft. spread and 9 inches for 8-ft. spread.

Bracket Arm is 2-inch pipe.

★When ordering, specify both Design and Catalog Number.

Prices on application.

No. 406

Hubbard Upsweep Street Lighting Brackets
Hot Galvanized

Municipal Type

Hubbard Upsweeps allow the maximum heights in luminaire mounting. There is no pole space "wasted" by under or overhead braces. They can be mounted at the pole top if desired. Actual mounting space on the pole is normally less than 10-inches.

Ease of installation, graceful design, one-piece construction, and the absence of attendant accessories which demand warehousing or handling, are a few of the advantages enjoyed by Hubbard Upsweep Brackets. All sizes more than meet the strength requirements demanded by the most severe conditions. Furnished with either threaded ends for Levelite attachment, or plain ends for slip-fitter attachment. Specify when ordering.

Round Brace Type

Both Municipal Type and Round Brace Brackets have the "Keyhole" features. These Brackets are similar except that the latter has a ¾-inch round brace welded underneath for additional strength. The Round Brace Type requires no more mounting space than the Municipal type.

Municipal Type

Method of Mounting Hubbard Upsweep Brackets on

Wood Poles

Simply "hang" the Bracket over the head of the bolt by means of the key-hole slot.

Then draw nut tight. Lag screws (1/2-inch) are used in the lower attachment holes.

Metal Poles

For metal pole attachment, there is no change in the design of the arm. The same arm may be mounted on either metal or wood poles. Bands are, as shown, constructed to attach to the top fastening of the arm and, utilizing two angle bolts, to attach to the bottom fastening.

**Hubbard Pole Bands
For Upsweep
Street Lighting Brackets**

Detail of a Bracket Mounted on a 4-Inch Pole—Lower Band

All bolts are included, consisting of two standard 1/2-inch machine bolts for the upper band, two special 1/2-inch stud bolts for the lower band and one 1/2 by 3 1/2-inch machine bolt with lock washer for attaching the bracket.

Hubbard Attachment Bands are designed exclusively for installation of Hubbard Upsweep Brackets on metal poles.

Hubbard Upsweep Street Lighting Brackets

**Hot Galvanized
Tie Rod Type**

In the longer arms, more strength is needed to withstand both vertical and side loading. For this reason, Mast Arms of the No. 23108 series are installed with tie rods fastened to the side of the pole. These rods are an effective brace against side sway and, of course, make possible an extremely heavy vertical load. Conventional, key-hole type mounting is used as the lower attachment, similar to the Hubbard One-Piece type mounting.

The rise from the top of the lower attachment plate to the center of the pipe at its outer end is 28 5/8 inches. Nominal Pipe Diameter 1 1/4 inches. Also furnished in aluminum alloy.

Threaded End	Number	Plain End	Nominal Length of Arm—Feet	Approx. Ship. Wt. Lbs., 100 Pcs.
23108	23108-P		8	3300
23110	23110-P		10	3900
23112	23112-P		12	4500
23114	23114-P		14	5100
23116	23116-P		16	5700

Truss Type

Hubbard Truss Type Arms are designed to meet requirements for lengths beyond 8 feet, while at the same time embodying all the features of the Hubbard Line. This arm offers the same simplicity of design as the shorter arms. It rates much higher in all lengths than the strength requirements demanded by the most severe loading, either vertical or horizontal. It is easy to install and is adaptable to either internal or external wiring.

As the illustration shows, this Truss Type Arm is supported by two 5/8-inch double arming bolts (not included).

Rise, lower pole mounting bolt to pipe center at outer end, 37 inches. Nominal pipe diameter, 1 1/4 inches. Also furnished in aluminum alloy.

Threaded End	Number	Plain End	Nominal Length of Arm—Feet	Approx. Ship. Wt. Lbs., 100 Pcs.

¶ Western zone prices; eastern prices lower.

Hubbard Street Lighting Brackets For Fluorescent Luminaires Galvanized Steel

Supporting the weight of a heavier fixture is only one of three important requirements for fluorescent luminaire brackets. The design must also be able to withstand 100-mile per hour wind velocities applied over a larger projected luminaire area as well as support the added seasonal weight of an increased snow-and ice-loading area.

"Heavied-up" models of brackets designed for mercury vapor and filament type fixtures do not make satisfactory supports for fluorescent luminaires. As a result, a new design of brackets for fluorescent luminaires has been developed.

No. 23022 for use with luminaires with a maximum projected area not to exceed 4 square feet and total weight not to exceed 40 pounds.

No. 23032 for use with luminaires with a maximum projected area not to exceed 8 square feet and total weight not to exceed 110 pounds.

The brackets shown above are a few of the additional styles of brackets manufactured by Hubbard and Company. For many years, Hubbard and Company has offered an outstanding service in the design and manufacture of material made to the customers' specifications and requirements. We respectfully request that you allow us to be of service to you in any street lighting situation involving special material.

For complete information and prices contact your nearest Graybar Office.

**Hubbard Pole Plates
Standard Type**

No. 3701

Standard Type Pole Plates are generally used on Brackets of 4 foot lengths. They are formed of pressed steel with a clamping arrangement which eliminates the necessity for threading on pipes.

For Wood Pole Mounting

No.	Pipe Size In.	Mtg. Hole Diam. In.	Shp. Wt. Lbs., 100
3701	3/4	9/16	225
3703	1 1/4	1 1/16	365

One Piece Type-Pressed Steel

No. 3901

These plates, designed for 1 1/4-inch pipe Street Hood Brackets, are of one piece construction which insures the maximum strength of the No. 7 gauge steel from which they are formed. The 9 1/2-inch horizontal pole bearing surface is especially effective in eliminating side sway. No. 3933 is similar to No. 3901 except that the bracket pipe is held at a 45° angle to the pole.

Approx. weight lbs., 100.....480.

No. 3901.....

No. 3933—1 1/4" pipe—Wt.—450.....

No. 3907

**One Piece Type
With Porcelain
Bushing**

The No. 3907 Pole Plate is similar in appearance to the No. 3901 style shown above. The difference is that the No. 3907 plate is furnished with a No. 3751 porcelain bushing for internal wiring. Clamping arrangement accommodates a 1 1/4-inch pipe arm.

Approx. Ship. wt., lbs., 100.....550.

No. 3907.....

Oval Back Type

Oval back type Pole Plates are made from certified Malleable Iron. No. 4728, with a flat back, is threaded for 3/4-inch pipe. No. 4730, with back curved to fit the pole, is threaded for 1 1/4-inch pipe.

No. 4731 is similar to No. 4728 in that it has a flat back. It is, however, unthreaded and is furnished with a set screw for 1 1/4-inch pipe arm attachment.

All three sizes have a convenient opening at the base of the plate to permit internal wiring of the arm.

No.	Style of Back	Pipe Size	Dimensions — Inches			Approx. Wt. Lbs., 100 Pcs.
			Mtg. Hole Top	Mtg. Hole Side	Diams.	
4728	Flat	3/4	9/16	9/16	245	
4730	Curved	1 1/4	1 1/16	1 1/16	320	

Hubbard Levelite End Fittings

No. 3279

The Hubbard Levelite has been designed to provide a much needed flexibility on street lighting installations. Luminaires may be leveled or purposely tilted in any direction, and permanently locked in that position. Under special conditions such as building obstructions, landscaping consisting of trees which it is preferred not to trim, and instances where unforeseen changes occur after lines are in service, the lighting can be handled in a practical manner by Levelite flexibility.

No.	For Pipe Arm Nominal Size—Inches	Luminaire Attachment Thread—Inches	Approx. Ship. Wt. Lbs., 100 Pcs.
3279	1 1/4	1 1/4 (Pipe)	563
3281	2	1 1/4 (Pipe)	900
3282	2	2 (Pipe)	944

Hubbard Pole Plates

Wood Pole Bushing Type

Nos. 4752-4755

These malleable iron clamp type Pole Plates are designed for 1 1/4 and 2-inch pipe, forged on the pole end to meet the insertion requirements of the clamping arrangement. Used for internal wiring. One 5/8-in. and two 1/2-in. mounting bolts are required for installation and must be ordered separately.

No.	Pipe Size	Dimensions—Inches		Approx. Wt. Lbs., 100 Pcs.

Benjamin "General Line" Industrial Fluorescent Equipment

Listed By Underwriters' Laboratories, Inc.

"Twin-Flo SD-1", 25% Up Units
For T-12, 48" 40-W R.S.; 48" and 96" Slimline
and 800ma Rapid-Start Lamps

These individual units and continuous line systems are of heavy gauge steel construction with open end reflectors finished in "Lifetime" porcelain enamel; white inside and out. Reflectors have apertured tops directing 25% (nominal) of the light upward to reduce undesirable ceiling contrasts. Reflector and center shield are of one-piece construction. Reflectors for 8 ft. units are two-piece for easier handling. Reflector may be easily removed from channel by releasing two "Lok-Latch" fasteners. Lamps are held in place by a pair of Benjamin patented "Springlox" metal-clad lampholders.

Continuous lines are made by joining two or more channel-sections with a channel coupling. 8 ft. channel-sections are normally supplied with a 4 ft. section at end of line if necessary. Units may be installed using knockouts on top of channel or coupling. Sliding hangers are also available. Shielding angle is 27°; reflection factor is 85% or higher. All units listed, except 800ma, meet RLM standard SD-1. Units are wired with 6 in. leads; channel-sections are finished in baked gray paint enamel.

Individual Units and Continuous Line Systems Including Couplings and End Caps With Open-End, Apertured Top Reflectors

Effective Over-all Length	2-48" or 2-96" T-12 Slim-line Lamps: Series Ballast		2-48" or 2-96" 800ma T-12 Rapid-Start Lamp

Lamps are not included with units on this page.
*For 2-lamp units only. †Not for 15% up-light refl.

Benjamin Protected Fluorescent Units

General Specifications—Benjamin Protected lighting units are available in either the standard high quality construction or an unusually durable corrosion-resisting construction. All units have a one-piece steel housing finished in "lifetime" porcelain enamel; outside finish of housing is gray. Flat reflector plate in top of housing is removable for convenient access to control equipment; reflection factor is 85% or higher. All units have two weatherproof flanges on top of housing for suspension and entrance of wiring. Flanges are spaced on 47½ in. centers and tapped ½ in. I.P. size standard; ¼ in. when specified. Covers attach to one side of housing by three spring metal hinges. Three spring clamps securely and tightly lock other side of cover. TX units not available with covers.

Standard construction includes Benjamin SPRINGLOX steel body, lampholders and steel cover frames. Both are finished in baked paint enamel. Corrosion-resisting units are supplied with monel metal SPRINGLOX lampholders and a steel cover frame finished in porcelain enamel; with cover hardware of monel metal or stainless steel. Monel metal lampholders not available for starter type units with pre-heat ballasts. Units are supplied with 6 in. wire leads; metal-to-metal bonds ground unit to conduit system.

"Type II-G Sealed-Flo" Units

Listed By Underwriters' Laboratories, Inc.

For Class II, Groups F and G Hazardous Locations
Also Suitable for Class III Hazardous Locations

Completely enclosed unit. Asbestos gasket seals cover to housing. Double strength clear glass cover units listed; for wire reinforced glass, replace "CL" suffix with "WG" and add \$19.40 to price; for Tempered Plate Glass use suffix "TP" and add \$19.40. Standard construction units listed; for units with corrosion-resisting construction, prefix cat. no. with "CR-" and add \$10.65 for twin-lamp and \$12.85 for 3-lamp units. Length 53¼ in., width 13½ in., and depth 7¾ in.

"Sealed-Flo 40"

Smithcraft Industrial Units

Smithcraft A.L.S. Factory Lighting

Wherever the Smithcraft A.L.S. is installed, many favorable production factors result: improved quality, greater accuracy, less fatigue, improved safety conditions, less employee turnover and absenteeism. The following quality lighting characteristics explain why the A.L.S. is "Lighting for production" and why the unit provides today's most comfortable factory seeing.

High over-all efficiency.

30° crosswise shielding.

Transverse uplighting* . . . lights ceiling without "hot spots." (*Patent Reissue No. 23,485.) 19% of the fixture output is in uplighting.

The A.L.S. is more than 16-in. wide; lamps are spaced 8-in. apart . . . results in extremely comfortable low brightness.

Continuous lines of light . . . all light from end to end . . . no dark areas between fixtures—lampholders are back to back.

In addition to these outstanding lighting characteristics, the A.L.S. is easy and economical to install and maintain and has several important safety features.

Lamps are roofed over for protection against falling dust.

Stays clean longer. Airflow construction minimizes accumulation of dust.

Reflectors are removed simply by pressing conveniently located release buttons.

Reflectors cannot vibrate loose. Lamps are double-held . . . by lamp socket . . . by reflector.

Reflectors are rolled sections with box-like construction at both edges providing new strength and rigidity.

The A.L.S. is extremely easy and simple to install by any of the usual methods (rod, conduit, stem set, chain, messenger cable, etc.). The Smithcraft A.L.S. is finished in White Supercoat Baked Enamel with a reflectance of 86%.

Smithcraft Tech

No. TEC2-40SRS

No. TEC2-48S

Engineered in accordance with today's most advanced factory lighting practice, the Smithcraft Tech provides approximately 10% uplighting through openings in the top of the reflectors. The smooth sides of the housing are constructed on an angle for maximum uplighting efficiency. Reflectors provide a shielding of 13° and have a V-center construction that results in comfortable low-brightness and a shallow, compact unit. Finish of the Tech is all white with reflectors of either porcelain or white baked enamel. Through an exclusive new Smithcraft mounting arrangement, hangers are simply slid into the flanged channel which is the top of the housing, saving hours of installation time. Rods, chain or messenger cable clamps are easily attached to the hangers. Large grip, spring-mounted loops are given a simple quarter turn to release the reflectors.

Tech units are packed one complete unit to a carton, if so specified. Drop shipments packed bulk.

**Smithcraft Industrial Units
Monitor Series**

Monitor 10

Monitor V-25

Strong, durable, beautifully constructed industrial fixtures designed for top value and very long-term use in today's factories.

The Monitor V-25 provides approximately 25% uplighting—the Monitor 10 provides approximately 10% uplighting—through scientifically designed apertures which are collared for extra strength. Reflectors are ribbed for strength and rigidity.

Monitor units may be mounted individually or in continuous rows by any conventional method—rod, chain, messenger cable, etc.

Reflectors are quickly released by easy-to-grasp, unobtrusive captive catches. Plastic inserts act as reflector couplings to prevent light leaks and align units. Housing is a flanged channel for added strength and to receive slideable hangers, substantially reducing installation costs. Newest type turret lamp holders provide trouble-free service and securely lock lamps in place.

Both the Monitor 10 and V-25 are available with Supercoat Baked Enamel or Lifetime Porcelain Enamel reflectors.

A louver assembly providing 30° x 30° shielding is available at extra cost. Louver releases by a simple swivel catch.

Note: When ordering please specify how units are to be hung, length of rows and number of rows. The correct quantity of accessories required can then be furnished.

Above reflectors available for 800-MA Rapid-Start Bi-Pin Lamps. Prices on request.

Day-Brite Industrial Fluorescent Lighting Fixtures

Smart looking and rugged, designed and built to deliver lifetime visual comfort for today's modern working areas. Two and three-lamp units for 4-ft. Rapid-Start and 8-ft. Slimline lamps, and for two-lamp 8-ft. High-Output Rapid-Start lamps. All steel, reinforced construction. Truss-type channel, finished in Hot-Bonded gray enamel, rust inhibited. Channel top designed to permit use of sliding clamp hanger. Plenty of knockouts for feed and mounting.

All-White Vitreous Porcelain Enamel one-piece open-end reflectors. Embossed reinforcing ribs add strength. Wiped edges eliminate chipping and crazing. Reflection factor 85% or more, with 13° lateral shielding.

Provides 10% upward lighting component through die-embossed apertures reduces contrast between fixture and surrounding ceiling area. Updraft action of air through apertures keeps dust from settling, reduces operating temperature and increases lamp efficiency. Reflectors fasten to channel studs by 2-in diameter captive wing-nuts. These large adhering surfaces assure rigid, fool-proof fastening. Can be taken off and put on in less than a minute with no tools required.

Push-type metal clad sockets for secure lamp support. Complete units ready to install, by chain, pipe or rod. IHPF Certified CBM ballasts for 118 volt, 60 cycle a-c operation.

Approved by Underwriters' Laboratories

For Rapid-Start Lamps

Two-lamp units for 4-ft. Rapid-Start, 8-ft. Slimline and 8-ft. High-Output Rapid-Start lamps. Same rugged construction features as above with deep center "V" louver, providing a 30° lateral shielding, and larger reflector apertures which provide 25% upward lighting.

All-White Vitreous Porcelain Enamel reflector, with embossed ribs for added strength. Has wiped edges. Updraft action of air through apertures increases lamp efficiency by lowering operating temperature.

Push-type reinforced sockets for positive spacing, alignment and secure lamp support.

IHPF Certified CBM ballasts for 118 volt, 60 cycle a-c operation. Individually wired.

Wheeler Industrial Fluorescent Lighting Fixtures

“D” Line Slimline—RLM Turret

“Industri-Line” Diffusers

For Slimline T-12 Single-Pin

Designed to provide an upward component of light (approximately 12%) to relieve the severe brightness contrast of an otherwise dark overhead, producing more light per foot of lamp length.

Has instant starting—no starters required.

Turred lampholders permit quick and positive lamp insertion and removal. Depressable action holds lamps firmly and compensates for any variation in lamp length.

Listings below include ETL Certified Series Sequence Ballasts.

Lead Lag Ballasts will be supplied on any of the above fixtures, in place of Series Sequence, at added costs. To order, drop letters “SER” from number and specify “with Lead Lag.”

Solid-Top Reflectors are available at same prices shown for fixtures with Diffuser Type Reflectors. To order, delete letters “DIF” from number. All white finish unless otherwise specified.

Porcelain Enameled Top Channels are available for any of the fixtures, listed with porcelain reflectors, at added costs. To order, insert in number the letters “CT,” “CT-1,” or “CT-2,” depending on number and arrangement of mounting flanges desired.

RLM “D 8000” Turret Line Diffusers

Rapid Start Ballasts are supplied as standard equipment, to provide instant operation of lamps at no increase in cost. Reflectors are porcelain enameled white. Channels are finished in baked white enamel. Fixtures provide approximately 12% uplight.

Turret Lampholders permit quick and positive lamp insertion and removal.

Preheat Ballasts with FS-1 Starters are available at same prices shown for fixtures with Rapid Start Ballasts. To order, drop RS suffix. FS-40 No-Blink Starters available at added cost.

Solid-Top Reflectors are available at same prices shown for fixtures with Diffuser Type Reflectors. To order, delete letters “DIF” from number. All white finish unless otherwise specified.

Porcelain Enameled Top Channels are available for any of the fixtures, listed with porcelain reflectors, at added costs. To order, insert in number the letters “CT,” “CT-1,” or “CT-2,” depending on number and arrangement of mounting flanges desired.

**Wheeler Industrial Fluorescent Fixtures
RLM Bi-Flo Upliter**

Unique Wheeler construction incorporates center V channel, deep shielding side reflectors, with continuous openings above lamps. Provides 28% upward component, 30° cross-wise shielding.

Design permits a constant flow of air to circulate through fixture, reducing dust accumulation.

Heavy ribbing at bottom, side panels are permanently fastened, one-piece center side panel support bridges entire fixture.

Improved spring-type latch, operated from either side with one hand, releases reflector quickly, positively, without use of tools.

Depressable type lampholders provide push-pull lamp insertion.

Lampholder supports are heavy gauge steel. Lampholder mounting plates have sloping skirt to pick up light and minimize dark ends.

All units interlock at ends for quick and easy continuous mounting and accurate fixture spacing.

† No existing RLM standard.

"D-8500 Line" Diffusers

Single Length for Two 100 Watt, 96-In., T-12 Hi-Output Lamps

Designed for use with the 100-Watt rapid-start lamp. Provides more light per fixture, with a small component of light (approximately 12%).

Diffuser apertures also provide for necessary heat dissipation.

Ideally suited for medium to high mounting applications. Instant starting—no starters required.

Has special depressible individual sockets. Lampholders are constructed of white Urea. Reflectors are porcelain enameled white outside and inside. Channel is finished in white baked enamel.

**Wheeler Commercial Fluorescent Lighting
Fixtures
"Flo-Liner"**

Combines high efficiency and smart styling with great maintenance ease and economy.

When detached, louver assembly is automatically suspended below channel by supporting chains for quick, easy access to operating equipment.

2 lamp and 4 lamp units available for both single pin and bi-pin lamps.

Translucent plastic side panels and center panel give 85% efficiency with low brightness.

For more seeing comfort, 51% of the light is directed above the horizontal and 34% below.

Wheeler Specialized Fixtures
For Hazardous and Non-Hazardous Locations
Vapor-Tight and "Series II" Dust-Tight

All of these fixtures feature a one-piece body, rigidly formed and completely covered with two coats of vitreous porcelain enamel.

Flanges are gasketed to body to seal out dust and moisture. Lampholders are the depressible turret type for positive protection against falling lamps. All parts are adequately grounded.

Vapor-Tight—For Non-Hazardous Locations

Safety engineered units designed for use in locations where extreme dirt conditions, high moisture content, acid or alkaline atmosphere are prevalent.

Wheeler Industrial Incandescent Fixtures
Alzak Aluminum Deep Bowl Units for Incandescent
and Mercury Vapor Lamps

Designed to provide efficient quality lighting performance and a wide range of light distributions for all types of medium and high bay installations.

Reflectors

All reflectors in this listing are aluminum, with a hard oxide coating to preserve the reflecting surface and resist corrosive atmospheres. This superior finish

results in reflectance of between 80% and 90%. A shielding angle of 35° below the horizontal is provided in the incandescent types.

When mercury vapor lamps are used, the shielding angle varies with the lamp type.

To reduce the heat around socket and wiring, all reflectors are designed with ventilating slots, so arranged as to prevent any moisture and dirt from falling onto the lamp.

Steel necks are provided for additional strength, zinc plated for superior corrosion resistance.

Canopies

These reflectors are available in a variety of neck and canopy styles.

Wheeler's Duratach construction permits the removal of lamp and reflector as a unit, without disturbing the canopy or wiring.

Wheeler's Durex style permits the removal of the reflector, after the lamp has been taken out, without disturbing canopy or wiring.

Wheeler's Solid Neck style requires the wiring to be loosened from the socket before the reflector can be removed.

Duratach and Durex units are available with both pendent and outlet box style canopies.

Solid Neck units are equipped for pendant mounting, with an outlet box adaptor available as an accessory.

All pendent types are threaded for 1/2-in. pipe; threads for 3/4-in. pipe supplied when specified.

Accessories

A full line of accessories: wire guards, baffles, plaster and finish rings are available for such applications as store and gymnasium use.

For use with 300-500 watt Incandescent and 400 watt Mercury Vapor Lamps.

Combinations can be supplied as dual units for Incandescent-Mercury Vapor mixtures and for higher intensities. To order, specify numbers of both units desired and add "Dual."

Benjamin "Turnlox" Two-Piece Reflector Units

Listed By Underwriters' Laboratories, Inc.

Two-Piece Bayonet Lock Construction

Units are composed of two separable elements: a hood with a wiring terminal base, and a reflector-lamp holder assembly.

The hood and reflector assembly are locked together by a three point bayonet coupling. Electrical and mechanical connection is made simultaneously with the engagement of the coupling. The terminal base in the hood is backed by a spiral compression spring that maintains the contacts of the hood and reflector in positive electrical contact. Polarization is automatically assured by circular design of contacts which are kept clean by wiping action of engagement and disengagement.

Large, shallow wiring space in hoods allows ample room for easy wiring, no parts to be replaced after completing wiring.

Hoods with porcelain terminal base are available in three styles—pendent, ceiling and angle. Hoods take either a medium or mogul base reflector-lampholder assembly.

Lampholder assemblies consist of a porcelain holder and a steel bayonet attaching plate.

Hoods are cast metal. Reflectors are life-time porcelain enameled steel; finished green outside, reflecting white inside; except "Glassteel" reflectors are white outside.

Rigid, keyless lampholders standard; for optional shock-absorbing lampholder (except on Elliptical Angle) add suffix "SHB" and \$0.28 to price. Pendant and Angle Hood Units tapped 1/2" I.P.S. standard; except mogul base Elliptical Angle Units are tapped 3/4" standard. For 3/4" tapping add suffix "-3/4" to number. Ceiling Hood Units fit 3 1/4" or 4" octagon boxes.

Benjamin Type RR Reflector Units Porcelain Enameled Steel

Listed By Underwriters' Laboratories, Inc.

Meets the lighting and service requirements of locations such as railroad yards, steel mills and industrial plants where equipment is constantly subjected to mechanical strain and the corrosive influences of smoke, fumes, grime, moisture and weather.

Type RR thread consists of a 3/4 in. diameter, rolled metal thread attached to the reflector neck. Any type RR threaded reflector will fit any type RR threaded hood.

The hoods have the lampholder included. Lower portion of the two piece lampholder may be removed for access to the heavy binding screws. Cast hoods are two piece, so the bottom half may be unscrewed for convenience in wiring.

Pendent steel units have a separable "X" type fitting which allows the hood to be slipped back over the conduit for access to the lampholder. Cast hoods have set screw to prevent loosening of reflector.

Cast hoods finished in green paint enamel; steel hoods in green porcelain enamel. Reflectors are finished in life-time porcelain enamel; green outside, reflectors white inside.

Benjamin "Socket-Reflector" Units
Porcelain Enameled Steel

Listed By Underwriters' Laboratories, Inc.

One-Piece Construction With "X" Type Fitting

Weatherproof units for indoor or outdoor use recommended for locations where interchangeability and removal of reflectors are not a prime consideration.

The "X" type separable fitting allows the porcelain enamel steel reflector to be slipped back over the conduit providing convenient access to the easily wired lampholder.

The fitting consists of a threaded lower flange, a threaded cap nut and two gaskets to protect the inside and outside of the reflector top. The lampholder is supported directly by the unit stem, while the reflector is held independently of the lampholder between the lower cast aluminum flange and the cast aluminum cap nut.

Rigid, keyless lampholders standard. For shock-absorbing lampholders (except on elliptical angle), add suffix "SHB" and \$0.28 to price. Units are tapped 1/2-in. I.P.S. standard, except mogul base elliptical angle tapped 3/4-in. standard. For 3/4-in. tapping, add suffix number with "3/4."

Reflectors are green outside, reflecting white inside; except Glassteel reflectors are white outside.

Benjamin "High-Bay" Reflector Units

Hoods, Lampholders and Fittings
Listed By Underwriters' Laboratories, Inc.

General Specifications—These units are for incandescent and mercury vapor lamps with either porcelain enameled steel or Alzak aluminum reflectors. Listings are for vented units. To order non-vented units at the same price drop the "V" from the number. In 400 watt mercury vapor, and all incandescent units, venting is accomplished thru elongated slots in the neck; 1000 watt mercury vapor units have spacers between the neck and reflector.

Socket-Reflector—with a standard separable "X" type fitting and mogul base lampholder. Unit tapped 1/2-in. I.P. size standard, 3/4-in. when specified. (Cat. no. beginning with 5.)

Turnlox—Weatherproof bayonet type construction permits removal of reflector and lamp from hood as a unit for easy maintenance. Includes mogul base lampholder. Cast aluminum hoods. Pendant hood units (Cat no. beginning with 7) tapped 1/2-in. I.P. size standard, 3/4-in. when specified. Ceiling hood units (Cat. no. beginning with 9) fits 3 1/4-in. or 4-in. octagonal outlet boxes.

Mercury vapor lamps will not operate on ordinary lighting circuits unless special transformer or reactor equipment is used. Lamp, wire, transformer, or reactor are not supplied.

Porcelain Enamel Units
Spread Distribution

No. V5481

For general interior lighting. Spacing-to-mounting-height ratio is 1.0; distribution is spread with both incandescent and mercury vapor lamps. Steel reflectors finished in "lifetime" porcelain enamel: green outside, white inside, with a reflection factor of 85% or more. The spun steel neck bolts to the reflector. Std. Pkg. quantity is 4.

20" Porcelain—400 W. Mercury Vapor and 750-1500 W. Incandescent Lamps*

*Shock-absorbing lampholder, for use with incandescent lamps only, available in place of standard rigid type; to order add "SIIB" to number and \$0.28 to price.

**For 3/4 in. tapped "Turnlox" pendant or "Socket-Reflector" units suffix number with 3/4.

Twin-Hanger Suspension

No. 5483

May be used with mercury or incandescent lamp units tapped 1/2 in. I.P. size; consists of Unistrut Channel with snap-in closure strip at bottom. Flange on top is tapped 1/2 in. standard, 3/4 in. when specified. Wiring not furnished; finish is baked aluminum paint over electro-plating.

No.	Description	Each
5483	For 18 in. or 20 in. Reflectors	\$8.82
5479	For 22 in. or 24 in. Reflectors	8.82

**Benjamin "High-Bay" Reflector Units
Aluminum Units
For Mercury Lamps**

No. V7265

For general interior lighting where a greater degree of light concentration is desired than provided by porcelain enameled reflectors. Light distribution varies with the lamp used in the reflector. Spacing-to-mounting-height ratio for specific distribution is as follows: highly concentrating 0.2; concentrating 0.6; medium spread 0.8-1.0; spread 1.0. Made of heavy aluminum with either an etched or polished Alzak reflecting surface.

For Incandescent Lamps

No. V4166

Same lighting applications and same spacing to mounting height ratio as mercury vapor units above of corresponding distribution. Reflector and neck are spun in one piece, from heavy gauge aluminum. Reflectors are finished by Alzak; both outer and inner surfaces are etched. Std. Pkg. quantity is 4.

For shock-absorbing lampholder in place of standard rigid type add suffix "SIIB" and \$0.28 in price.

*For 3/4-in. tapped "Turnlox" pendent or "Socket-Reflector" units suffix number with -3/4.

Benjamin 45° Outlet Box Cover Aligners

Listed By Underwriters' Laboratories, Inc.

No. N-3380

Allows lighting unit to hang plumb when suspended from outlet boxes mounted on surfaces having up to 45° slope. Provides flexible suspension which gives under glancing blow of ladders and similar objects. Consists of steel pipe bushing, tapped 1/2 in. or 3/4 in. I.P. size, which swings forward or back on two pivot studs joining it to a steel cup. Cup is similarly hinged to steel cover of aligner. Finish is aluminum paint, applied over electroplating. Std. Pkg., 10.

No.	Description	Size Tap. In.	Shp. Wt., Lbs.	Each

N3386	Fits 4" Square Box	3/4	5 1/2	1.37

Benjamin Reflector Locking Guards

No. 1393

Fit dome reflector units and many other reflectors having circular openings and beaded edges. Shallow type for use where globe or lamp does not project below bead; deep type for use where lamp does. Constructed of heavy gauge steel wire with welded joints. Guards are arranged for but do not include padlock. Finished bright tin, after welding. Standard package, 10.

Shallow Type Deep Type

Benjamin Pit and Tunnel Lighting Units

No. 5715

Available with either a plain or refractor glass cover which is protected by a guard. Units may be installed in walls, ceilings, floors or across wall corners. When installing units with refractor glass covers in pit side walls, the unit body need be tilted only 5 degrees from the vertical for satisfactory lighting results.

Where it is not possible to install the unit in the wall, ceiling or floor, it may be attached to supporting straps by means of two lugs on the back of the body casting.

Finished in Benjamin "lifetime" porcelain enamel. Reflecting surfaces are reflecting white, acid-resisting, porcelain enamel with a reflection factor of 85% or more. Sealed against dirt and water by neoprene gasket. Std. tapping -1/2" I.P.S. at both ends; other tappings available.

No.	Lamp Size, Watts	Diam., In.	Description	Each
5715	100, 150	12 5/8 x 8 3/4 x 6 1/2	Refractor Glass	\$33.75
5720	200	13 x 8 3/8 x 7 1/2	Refractor Glass	38.05
5710	100, 150	12 5/8 x 8 3/8 x 6 1/2	Plain Glass	33.75
5717	200	13 x 8 3/8 x 7 1/2	Plain Glass	38.05

Units listed as Vapor-tight by Underwriters' Laboratories. Where other than water vapors are present, installation is subject to rules of local inspection authorities having jurisdiction.

Wheeler Industrial Light Reflectors

Durex

Listed by Underwriters' Laboratories

RLM Standard Dome

Shallow Dome

RLM Deep Bowl

RLM 30° Angle Type

Recommended for industrial plant lighting, railroad lighting, garage lighting and wherever rugged, serviceable lighting fixtures are required.

Fixtures consist of a canopy, socket and porcelain enameled reflector.

Canopies have aluminum screw ring which provides a cushion grip on the porcelain enameled threaded neck of reflector. Canopies are short to allow exposure of socket for easy wiring when reflector is removed. Finished in baked green enamel.

All reflectors are interchangeable in all canopies and are designed to meet all mechanical and wiring requirements.

Finish: Porcelain Enamel Green outside, White inside.

The four types listed below will fill the needs of the most difficult and unusual lighting conditions.

RLM Standard — For general industrial lighting.

Shallow Dome — For platform, shed, warehouse and yard lighting.

RLM Deep Bowl — For work benches and other locations where concentrated light is desired.

RLM 30° Angle — For side lighting installations.

The high quality of material used in construction and the first grade porcelain enamel used in finishing assures long, uninterrupted service.

Wheeler Improved Industrial Reflectors

Duratach

Modern, rugged construction, incorporating many new features for amazingly easy, low-cost maintenance, plus complete interchangeability.

To mount reflector assembly, simply push up into canopy and twist slightly. All mechanical and electrical connections are made simultaneously by this one simple operation.

Any Duratach Reflector Assembly can be inserted into any Duratach Canopy without disturbing the wiring of the original installation.

Reflectors are durable porcelain enamel. Normally supplied green outside, white inside. They are also available white outside and inside on request.

Canopy and socket assemblies include die-cast aluminum canopy, porcelain socket cap and socket body, medium or mogul base, a steel coupling, and attaching nuts and screws.

Once in position, the reflector assembly is kept from loosening by downward pressure of a unique retainer ring backed by a large coil spring within the canopy.

Wheeler Reflector Canopies

Reflector with Pendant Canopy

Canopy tapped 1/2-in. standard, 3/4-in. if specified, at no increase in price.

Reflector with Outlet Box Canopy

Canopy fits standard 4-in. Outlet Box.

Reflector with Side Outlet Canopy

Canopy tapped 1/2-in. standard.

Note: Provision is made to convert standard pendant units to outlet box and side outlet mounting as shown above. Simply specify with "Outlet Box" canopy or "Side Outlet" canopy.

Wheeler Vapor-Tight Pendent and Ceiling Fixtures

Designed to resist the deteriorating effects of vaporous and other adverse atmospheric conditions, for use where ordinary fixtures fail.

Units consist of a cast aluminum canopy cap and body, with choice of pendent or ceiling top, socket, vapor-proof glass globe, and an acid-resisting porcelain enameled steel reflector.

All reflectors are interchangeable throughout the medium base and mogul base range. Reflector is securely fastened to the canopy for added safety. Unique gasket between globe and canopy insures a tight, sealed unit.

Easy to wire and maintain. Simply remove the canopy cap from the canopy body to fully expose the socket. This

permits easy access to socket terminals for wiring and maintenance.

Canopy for ceiling or pendent mountings. All aluminum canopy bodies supplied with pendent caps for standard 1/2-in. conduit, or with ceiling caps drilled with two holes to fit any standard 4-in. outlet box. Conduit system is effectively sealed off from dirt, moisture or gases by stuffing gland built into fixtures.

Sockets furnished in medium base or mogul base. All sockets are heavy porcelain with large heads on contact screws for easy wiring to terminals. A Wheeler "shock absorber" can be supplied at extra cost when specified.

Wheeler Industrial Reflectors

One-Piece Solid Neck

Time-proven line of sturdy, attractive one-piece reflectors. Expertly designed for quality illumination at low initial cost.

Incorporates the Wheeler standard two-piece socket which is attached to a die-cast aluminum yoke, keyed for positive engagement to the top of the reflector neck.

Reflectors are porcelain enameled green outside, white inside.

Benjamin Lampholder Extensions and Reducers

Listed By Underwriters' Laboratories, Inc.

Medium Base Extension

No. 91

Permits use of 75, 100 and 150 watt lamps in reflectors designed for the next larger size lamp. It lowers filament of the lamps 7/8 in., bringing the filament close to the proper position in the reflector to obtain maximum light output and correct distribution.

No. 91 Each \$0.59

Mogul Base Extension

No. 4396

Allows lampholder to be extended 2 1/2 in. and the lamp filament to be lowered correspondingly. 750 and 1500 watt incandescent lamp units may be converted for use with 300 and 500 watt lamps by addition of this extension. Body is porcelain with brass and copper contact parts.

No. 4396 Each \$2.06

Mogul to Medium Reducer

No. 98

Adapts mogul screw base lampholders for use with medium screw base lamps. When attached, the center contact is lowered 1/16 in. Both threaded shells are made of copper.

No. 98 Each \$0.69

Benjamin Accessories For Reflector Equipment

Strain Relief Cord Grip

Attaches to any lampholder tapped for 1/2 in. I.P. size, and accommodates any cord from 3/8 in. to 1 1/2 in. diameter. Two steel straps attached by machine screws to aluminum bushing.

No. 1261 Each \$0.39

Strain Relief Watertight Cord Grip

Serves also as a watertight cord bushing for outdoor installations. Attaches to any reflector fitting tapped 1/2 in. I.P. size, and accommodates any cord from 3/8 in. to 1/2 in.

No. 1263 Each \$1.96

Benjamin Shock-Absorbing Suspension Fittings

Outlet Box Cover Aligners

Flexible joint allows unit to hang plumb from surfaces having up to 12 1/2° slope. Fitting supported by steel cover which fastens to outlet box. Tapped 1/2" I.P.S.

No. 3366 Each \$1.67

Canopy Type Aligners

Supported by a strap with slots to slip over the screws on the ears of 3 1/4 in. and 4 in. octagonal outlet boxes. Steel canopy is attached to the outer edge of the straps by a quarter turn to the right.

Finish is aluminum paint over electroplating. Tapped 1/2" I.P.S.

No. 3355 Each \$2.25

Looped-Top Suspension Fitting

Cast metal housing, steel stirrup and a shock-absorbing steel wire spring. Finished in aluminum paint applied over electroplating. Tapped 1/2" I.P.S. (Female).

No. 6030 Each \$1.57

Steberlites

Cast Aluminum For PAR-38, R-40 and PAR-56 Lamps

Listed by Underwriters' Laboratories, Inc.

S-300

S-350

S-400

No. S-300 medium base and S-350 mogul base Steberlites are furnished with Silicone lamp gaskets for a weatherproof seal between lamp and socket housing. Universally adjusted mounting arms are threaded 1/2-in. and have locknuts. Porcelain sockets have spring-loaded center contacts.

S-400 is for PAR-56 lamp. Has finned construction for cooler operation and longer lamp life. Supplied with clear heat-resisting protective lens.

No.	Description	Each
S-300	For PAR-38 or R-40 lamps	\$ 3.00
S-350	For R-40 Mogul lamps	6.00
S-400	For PAR-56 lamp	15.00
S-401	Same as above but without lens	12.90

Steberlite Cast Aluminum Fittings

S-301 S-302 S-303 S-316 S-328

S-318

Provide quickly and easily assembled concentrated light sources of any number of lamps. Have 1/2-in. tap to take any Steberlite.

No.	Description	Each
S-301	Adapter box, 6 tapped openings, 3 plug closures.	\$ 3.00
S-302	Pole Slip Fitter, 1 1/2 to 2-in. pipe.	1.90
S-303	4-in. outlet box adapter, 1 tapped opening.	.60
S-316	4-in. adapter fitting box, 6 tapped openings.	2.90
S-328	Acorn adapter fitting, 4 tapped openings.	2.00
S-318	Trough, 12 1/2 x 1 1/2 x 1 1/2-in., 9 tapped openings.	4.25

Chrome Plated Steberlites

S-5001

Fixtures listed include chrome plated S-500 Steberlite, packaged with special single, two or three lamp fittings for surface or outlet box mounting. Fittings are cast aluminum and finished in rich black.

Listed by Underwriters' Laboratories, Inc.

No. S-5011 Single Lamp

For wall or pole mounting. Flange equipped with 2-porcelain bushings. For open wiring, 2-screw holes.

No. S-5011.....Each \$2.50

S-5001 Single-Lamp

All purpose mounting flange fits 3 1/4 or 4-in. outlet box or may be mounted directly to wall or pole.

No. S-5001.....Each \$2.95

No. S-5002 Two-Lamp

Same as S-5001 but has two S-500 chrome plated Steberlites.

No. S-5002.....Each \$5.30

No. S-5003 Three-Lamp

Same as S-5001 and S-5002 but has three S-500 Steberlites.

No. S-5003.....Each \$7.80

S-5002

S-5003

Steber Coverlites and Extension Reflectors

C-112-PC

C-10-X

Coverlites have pull chain socket contained entirely in neck of reflector. Mtg. holes to fit 3 1/4 or 4-in. outlet box. 6-in. leads. Coverlites and socket extension reflectors finished in Graytone Ultramel, white inside. U/L Listed.

C-10-X	10	60	1.20
C-12-X	12	100	1.50

Benjamin Stock-Bin-Lite Reflector Units

No. T-1878

Provides uniformity of illumination from top to bottom of the shelf or bin tiers in stock rooms, tool cribs and book stacks. Prevents direct glare from the filament when looking down the aisles.

Reflector may be removed from hood by loosening two adjusting screws on side of hood and pulling down on reflector.

Deep-trough shape, steel reflectors finished in "lifetime" porcelain enamel, reflecting white inside and outside with a reflection factor of 85% or more. A V-shaped deflector bar is suspended below reflector.

Reflectors available in four mounting styles: pendent, angle, outlet-box and feed-thru hoods.

Reflectors available in four mounting styles: pendent, angle, outlet-box and feed-thru hoods.

No.	Lamp Size, Watts	Diam., In.	Std. Pkg.	Shp. Wt., Lbs. Std. Pkg.	Each
1875	50, 75	11 3/8 x 7 1/4	10	29	\$5.48

Benjamin Master Sign Reflector Units

No. 5570

No. 5576

Used for lighting of standard and three sheet poster panels, store and highway bulletins, roof and wall signs. Available in one-piece socket-reflector construction or two-piece angle hood separable construction. Reflectors are porcelain enameled steel, green outside; also available white outside at same price.

Side outlet type of construction permits conduit to be led straight into reflector neck. Separable "X"-type fitting of Socket-Reflectors allows reflector to be slipped back out of the way for access to the lampholder. Regularly supplied with Underwriters' listed one-piece porcelain medium-base rigid lampholder, with lamp grip to retard loosening of lamps under vibration.

Two-piece angle hood arranged for base-up burning position making it possible to service from the ground. Reflector quickly removed by loosening two screws at top of the cast-iron hood. A set screw at conduit entrance locks reflector in position; also useful for attaching guy wire. All units tapped 1/2" I.P.S. Std.; for 3/4" tapping (same price) add suffix "3/4".

Socket-Reflector Units

No.	Lamp Size, Watts	Diam., In.	Std. Pkg.	Shp. Wt., Lbs. Std. Pkg.	Each

Benjamin Explosion-Proof Units

Listed By Underwriters' Laboratories, Inc.

For Class I, Groups C and D Hazardous Locations

No. 7613

No. 7629

Units possess strength in every part to withstand the pressures of internal explosions without breaking down or permitting flame, hot gases or sparks to escape and ignite surrounding atmosphere.

Porcelain enamel steel reflectors attach to body of unit and are held in place by an aluminum retaining band. Inner auxiliary reflectors of aluminum, to prevent loss of light, are provided around neck of lamp. Hoods have removable inspection plug for access to wiring terminals. Wiring connections are made to conventional binder-screw terminals of lampholder, which can be slipped out of the removable hood for easy wiring. The one-piece lampholder provides a barrier between the globe and hood so that explosions originating in either space cannot be transmitted to the other.

Lampholder and enclosing-globe have metal gaskets formed on to them to seal effectively the unit at the hood and globe joints. All joints are close fitting, deep flanged and threaded to sufficient depth to prevent escape of flame.

Reflectors are porcelain enamel steel, reflecting white inside, green outside. Inner reflectors are aluminum, securely attached within unit bodies; polished reflecting surface on 100 w. units, oxidized on 150, 200, and 300 w. medium base units. Unit bodies are cast aluminum, threaded at top for hood and bottom for guard. Guards are cast aluminum.

Heat-resisting glass globes of clear glass, designed to withstand hydrostatic pressure of 380 lbs. per sq. in. minimum. Globe has formed-on metal gasket.

Less Reflector

Type VLJ Junction Box Fixtures***

No. 5045

*Regularly furnished with cast iron junction boxes: No. 333 for medium base and No. 2401 for mogul base fixtures. Can be furnished with cast brass boxes: No. 332 for medium base fixtures, No. 2403 for mogul base fixtures at additional cost, if specified on order.

Finish—Cast iron, corrosion resisting baked enamel finish. Cast brass and aluminum, natural finish.

Benjamin "II-G 600 Series" Dust-Tight Units

Listed by Underwriters' Laboratories, Inc. For Class II, Groups E, F and G Hazardous Locations Also Suitable for Class III Locations

No. 657

Dust-tight, weather- and moisture-proof and suitable for installation in exposed or damp locations.

Units have one-piece, weather-proof copper casing tapped for 1/2 in. conduit. Fitted with removable, one-piece, easily-wired, medium base porcelain lampholder with lamp grip. The glass globe threads into the copper casing and seats against an impregnated asbestos gasket. There is a choice of globes—plain clear, heat-resistant clear, and opal. Finish is natural copper. Guard-type units have removable heavy steel wire guards, welded and finished bright tin. Std. Pkg 10.

Units Without Globe Guards

Benjamin Type M Junction Vapolets

Listed By Underwriters' Laboratories, Inc.

No. 6701

Water-tight outlet boxes for use in marine and seaboard duty and in non-hazardous atmospheric industrial locations where acids, vapors, dust, smoke and/or moisture is present. Box is cast iron finished in baked aluminum paint over electroplating; tapped for four No. 10-24 brass screws furnished to fasten cover. Cover is plain type made of heavy gauge steel; finish is baked aluminum paint applied over surfaces treated to insure paint adhesion and inhibit corrosion. Outside diameter is 4 1/2".

Outside depth, including cover and rubber gasket is 2 9/16".

Vapolets without Lugs

Benjamin "6500 Series" Vapor-Tight Units

Listed As Vapor-Tight By Underwriters' Laboratories, Inc.

No. 6501

For use in locations where units are exposed to the deteriorating effects of non-combustible atmospheres containing corrosive fumes, vapors, dust, smoke and/or moisture. Lamp is enclosed in heavy glass screw globe. Single asbestos gasket between the hood and globe, and a gasket between the two sections of the hood assures a tight lamp closure. Plain clear, heat-

resisting clear or opal glass globes are available.

Hoods are aluminum castings of two-piece construction designed to accommodate the non-corroding, threaded aluminum neck of the heavy gauge steel reflectors. Reflectors are finished in acid-resisting porcelain enamel, green outside and reflecting white inside. Std. Pkg. is ten on medium and five on mogul base units.

*Listings for plain clear globes; when ordering opal globes suffix the Cat. No. with "OP". Prices on request.

Pendent hoods tapped 1/2" I.P.S. std.; units also available with hoods for Benjamin "Type M" Junction Vapolet Boxes.

Benjamin Lighting "Vapolets"

Listed As Vapor-Tight By Underwriters' Laboratories, Inc.

No. 7113X

For use in indoor and outdoor atmospheric locations where the lighting equipment is subjected to rough handling and exposed to the deteriorating effects of non-combustible atmospheres containing corrosive fumes, vapors, dust, smoke and/or moisture.

Available in pendent, ceiling and angle-body styles with steel wire globe guards. Bodies are formed of cast iron alloy with built-in conduit stops; threaded on the outside and the inside; finished in baked aluminum paint over electroplating.

Lamps are not included with units.

Benjamin "II-G 8500 Series" Dust-Tight Units

▲Listed By Underwriters' Laboratories, Inc. For Class II, Groups E, F and G Hazardous Locations Also Suitable for Class III Hazardous Locations

No. 8500

Individually packaged, enclosed equipment for locations requiring dust-tight lighting equipment. Weather- and moisture-proof, and due to the protection of the lamp afforded by the glass screw globe, are valuable in food industries where there is danger of spoilage from breakage of uncovered lamps.

Acid-resisting, porcelain enamel steel reflector threads into the cast aluminum hood and is locked in place by a set screw. Inner auxiliary reflector of aluminum, to prevent loss of light, is provided around neck of lamp. Glass globe screws into the reflector and is sealed to the hood by an impregnated asbestos gasket. A spring device prevents the globe from loosening. Cast hood separable for easy access to lampholder. Wiring simple. Unit tapped 1/2" I.P.S. Std. Pkg. 10.

Listings are for units with plain globes; when ordering units with heat resisting globes add the suffix HIR to the Cat. No. Listings are also for pendent type units only. Ceiling units are available complete with dust-tight outlet boxes. Lamps not included.

Holophane Industrial Lighting Units

Approved by Underwriters' Laboratories, Inc.

Holophane HIBAY* Units

Holophane HIBAY units are specifically designed to provide high level lighting from mounting heights of over 30-ft. and to mechanically meet the severe operating conditions in heavy industry, steel mills, engine repair shops, foundries, etc.

Holophane HIBAY* Incandescent Units

Prismatic reflector protected by a metal cover spun and sealed over the outside. Tripod support from below rigidly retains reflector. Glare eliminated by proper shielding angle.

Heavy-duty, plated steel parts and ventilated socket.

Porcelain mogul base socket can accommodate 750, 1000, and 1500 watt lamps.

3/4-in. male stem and loop termination.

No.	Max. Spacing Ratio	Diam., In.	Depth, In.	Each
690-AL-HS	0.6	21 3/4	28	\$41.60
691-AL-HS	1.0	19 3/4	26	41.60
692-AL-HS	2.0	19 3/4	26 1/2	41.60

*Holophane Trade Mark.

Holophane HIBAY* Mercury Vapor Units

For 400 watt mercury vapor lamps.

Ventilated socket in cast hood with 3/4-in. conduit tap. Can be wired and installed separate from reflector.

Spun on and sealed metal cover keeps reflecting glass prisms clean.

Reflector and socket assemblies held safely together

by heavy steel brackets hooked over and secured to two steel pins.

Upward draft action of open top and bottom fixture design keeps reflector surface clean. Drip covers available for damp locations.

Deep shielding protects against lamp glare. 3/4-in. female pipe tap termination. Diam.—21 1/2-in. Depth—17 1/4-in.

No. 640..... Each \$34.40

Holophane Industrial Lighting Units

Holophane LOBAY* Units

A virtual standard of industrial lighting because of their high sustained efficiency, mechanical construction, and proper light distribution. The AL numbers in both the incandescent and mercury vapor units denote a spun-on aluminum reflector.

Holophane Lobay Incandescent Units

685 Series, Intensive distribution, for mounting up to 15-ft.; 686 Series, Concentrating Distribution, for 15-20-ft. mountings.
682 Series, Extensive Distribution, for uniform low-level lighting.
†Medium base 6" l.c. lamp.

Holophane LOBAY* Mercury Vapor Unit—No. 635—AL

A newly designed prismatic reflector for achieving the highest output from 400 watt mercury lamps.

Consists of a ventilated socket yoke and a highly efficient prismatic reflector with spun-on aluminum cover. Two brackets with thumb screws hold the socket yoke and reflector.

Efficient—The prismatic reflector delivers over 62% of the E-H11 lamp lumens in the useful 0-45° zone. Over 51% of the J-H11 lamp output is directed into the same zone!

Spacing ratio—1.25. Diameter—15¹/₂-in., Depth—17⁷/₈-in. Terminates in ³/₄-in. female pipe tap. Uses 400 Watt Mercury Lamp—E-H11 or J-H11 (Color corrected).

No. 635-AL.....Each \$25.85

Holophane All Purpose Industrial Luminaires

Vapor Tight and Dust Tight
For Indoor and Outdoor Use

No. 02420

Use wherever high level illumination is needed, indoors or outdoors.

Has a pre-assembled prismatic reflector and refracting plate combination, permanently held together by means of a spun metal cover. A metal hood engages an asbestos gasket for an effective vapor tight and dust tight seal. Latches can not loosen under vibration.

Prismatic glass assembly held by chain to hood while relamping.

Lamp Wattage; 200-300 (Medium base—6-in. light center).
Distribution—Intensive. Maximum Spacing Ratio—1.5.
Dimensions—Diam. 14¹/₈, Depth 14-inches.
Terminates in ³/₄-in. female pipe thread.

No. 02420.....Each \$34.85

*Holophane Trade Marks.

Vapor Tight
For Indoor Use

No. 02423

Essentially the same as No. 02420 in construction and performance except that the aluminum cover is omitted to provide an element of upward light. Prismatic glass is of special composition to assure safe operation under moist or severe conditions.

Total efficiency is over 80% or even in excess of typical open bottom industrial units without vapor-tight construction.

Prismatic glass assembly held by chain while relamping.
Lamp Wattage; 200-300 (Medium base—6-in. light center).
Distribution—Intensive. Maximum Spacing Ratio—1.5.
Dimensions—Diam. 14¹/₈, Depth 14-inches.
Terminates in a ³/₄-in. female pipe thread.

No. 02423.....Each \$34.85

Holophane Industrial Lighting Units

Holophane Incandescent Vapor-Tight, Dust-Tight Lighting Units

Underwriters' Approved Vapor-Tight and Dust-Tight, Class II—Groups E, F, and G

These Holophane units not only meet vapor and dust tight operating requirements safely, but also direct the light to the work areas, producing higher levels of illumination with a reduction in high angle glare.

Nos. 02470, 02472, 02480

No. 02328-V

Nos. 02460-V, 02476-V

Nos. 02368, 02378

Units consist essentially of a threaded metal holder tapped for 3/4-in. conduit entry and a prismatic glass light director. Nos. 02368, 02378 are three-piece Reflector-Reflector* units. No. 832-D is a Wide-spread* refractor in a hinged, hooded, metal fitter.

No. 832-D

No.	Lamp Wattage	Distribution	Max. Spacing Ratio	Dimensions in In.		Each
				Diam.	Depth

832-D	200 (A-25)	Widespread	6.0	10 1/4	12 5/16	29.10

When using a 100 watt lamp in units with lamp wattage of 100-150, use a 5/8-in. socket extension. Wire not furnished with any of above units.

**Underwriters classify as vapor tight only.

Holophane Outdoor Lighting Units

Holophane No. 415 Wall Mounting Outdoor Unit

Ideal for residential, industrial and public area use. Prismatic glass assembly built to direct light downward and outward for wide coverage, produces uniformly lighted appearance.

Die cast hood made to stand all weather conditions, is dust and rust-proof.

Glass assembly hinged.

Wall projection 9 1/2-in.

Depth, 9 3/8-in.

100-150 Watt Lamp.

Flanged for 3 1/4-4-in. outlet box, recessed or exposed.

No. 415..... Each \$17.35

Holophane No. 420 Wall Mounting Outdoor Unit

Actual usage will prove that No. 420 is far better than other outdoor lighting fixtures with the same lamp wattage.

Prismatic construction sends more light over a larger area.

Glass assembly hinged.

Hood weatherproofed.

Wall projection 10 5/8-in.

Depth, 10 3/8-in.

200 A-25 Watt Lamp.

Flanged for 3 1/4-4-in. recessed or exposed outlet box.

No. 420..... Each \$24.75

Holophane Outdoor Lighting Units

Holophane Recessed or Surface Type REFRACTOLENS*

This family of units is designed for illuminating extensive horizontal areas from vertical mounting positions. Light distribution is mostly downward and fan-shaped. Ratio Spacing—4.0.

No. U-818

No. U-818-M

Nos. U-850, U-851

No.	Lamp Wattage	Recessing Depth, In.	Diam., In.	Depth, In.	Each

U-851	400 E-H1 Merc.	6 3/4	26	12 1/2	182.65

Wire not furnished with these units.

U-850, U-851 have 5/8-in. tap mounting holes, all other units, 1/2-in.

For conduit entrance—all units, except U-826 have a 1" tapered pipe thread on top and two in back; U-826 has 3/4" thread on top and 2 1/8" slip fit in back. Entries at bottom or sides on special order.

Holophane Outdoor Sub-Station Lighting Units

Nos. 043386, 043776

No. 0871-T Mounting Bracket

For lighting outdoor sub-stations. Features two basic light distributions, symmetric or asymmetric. Provides effective illumination of vertical surfaces with an absence of glare.

Cast aluminum holder, 2-piece prismatic refractor, blown glass outer globe, mogul socket, and prismatic bottom diffuser.

Main beam is adjustable.

Bracket (0871-T) is high strength cast aluminum with a span of 20 3/8-in. Terminates at fixture end with male thread of 1 1/2-in., opposite end 3/4-in. female pipe thread; for attaching Nos. 830, 832 for additional ground light.

Holophane A-WAY* POSTOP* Outdoor Lighting Unit

Ideal for driveways, campus grounds, gardens, motel approaches, drive-in theaters, garden apartments, etc. Many uses in the industrial field also.

Distributes light in an asymmetric pattern to provide even illumination on wide spacings, up to 3.5 times the mounting height above the ground (usually 8 to 10-ft.).

Unit consists of a 13 7/8-in. cover, a two-piece prismatic glass refractor and a slip fitter. A medium base porcelain socket is positioned for 150 watt lamp (use a 5/8-in. socket extension for 100 watt lamp). The anodized aluminum fitter for No. 04343 slips over any standard 3-in. post; the No. 04344 cast aluminum fitter slips over a 1-in. pipe.

Metal parts are weather-resistant and the glass assembly is gasketed at both top and bottom to retard the entry of moisture and insects. Relamping is accomplished simply by loosening the top nut and removing the cover.

No.	Description	Each
04343	With slip fitter for 3-in. diameter pole.....	\$20.50
04344	With slip fitter for 1-in. diameter pipe.....	22.90

*Holophane Trade Marks.

Woodward Heavy-Duty Adjustable Lighting Fixtures

Reflector Assemblies For Series 8RU, 8U and 9RU

Woodward Heavy-Duty Industrial Lighting Fixtures

Reflectors and shields are cast aluminum with high-temperature white interiors and black wrinkle exteriors. Reflectors equipped with McGill "Levolier" sockets.

Type 1

50-100 watt, pear-shaped reflector. Clamp mounted socket.

Type 2

Same as Type 1, but complete with THERMA-GUARD shield for safety and ease of handling. Will not burn operator.

Type 4

Type 5

Type 4 has 50-100 watt, vertical parabolic reflector. Reflector will accommodate 75 watt reflector-flood lamp.

Type 5 is the same as Type 4 but complete with THERMA-GUARD shield for safety and ease of handling. Will not burn operator.

One of a Series of Low-Cost, Versatile Localized Fixtures

Model B-33

Flex-arm type. For continuous rough duty service. Has overall reach of 26-in.; 32-in. model available.

Complete with 50-100 watt cast aluminum reflectors, 8-ft. oil-proof cord set and key socket.

Type FC clamp-on base optional at extra cost.

Underwriters' Laboratories approved.

Model B-33 Each **\$8.00**

FC Clamp

Additional printed information on these products and other items not listed—including Vapor-Proof, Fluorescent and Portable Units—is available on request to Graybar.

Rugged Adjustable Baskets

For Use with Reflector Assemblies

Swivels, bases and radial arms formed from specially alloyed, heat treated cast iron. Uprights and extension arms constructed of standard conduit tubing permitting "Customizing" where required. Castings finished in black baked enamel. Tubing and hardware heavily plated. Complete with 8-ft. oil-proof cord set and Universal Base for mounting in any position required. Underwriters' Laboratories approved.

Model 8RU-2

Series 8RU

Reach overall 46-in. for reflector types 1 and 2, 40-in. overall for types 4 and 5. Radial arm allows reach to be adjusted without changing height.

Model 8RU-2 Each **\$20.50**

Model 8U-5

Series 8U

Reach overall of 34-in. for reflector types 1 and 2, 28-in. overall for types 4 and 5.

Model 8U-5 Each **\$18.50**

Model 9RU-1

Series 9RU

Reach of 31-in. for all reflector assemblies. Radial arm for adjusting reach without changing height.

Model 9RU-1 Each **\$16.00**

Model number is determined by suffixing the type number of the reflector assembly desired to the series number of the bracket required.

White Adjustable Lighting Fixtures
A Complete Line for Every Working Requirement

Wall Mounting Type

Has three sets of Universal Joints and two 18-in. arms. Finished in gray and cadmium.

No.	Description	Each
R2LAW	Wired complete	\$12.15
2LAW	Less socket, shade and wiring	7.95

Other type mounting bases and shades available.

Office Type Desk Portable

Has telescoping arms. Universal Joint at 8-in. felted base, range 29-in. Finished in statuary bronze.

No.	Description	Each
R7P	Wired complete	\$18.50

Bench Mounting Type

Equipped with 8-in. Crank arm; 18-in. universally adjustable lamp arm, range 34-in. Height 24-in.

Finished in gray and cadmium.

Other type mounting bases and shades available.

No.	Description	Each
R3D	Wired complete	\$12.25
3D	Less socket, shade and wiring	7.65

Bench or Laboratory Portable

Equipped with heavy 1 3/4-in. felted iron base, range 12-in., height overall 8-in. Universal Joint supporting lamp arm. Easily removable as a hand examination lamp. Finished in gray and cadmium.

No.	Description	Each
R4BP	Wired complete	\$11.50

Spring-Balanced Type

Equipped with "Ultra-Flex" arms. Wired complete. Finished in gray or brown.

No.	Description	Each
2MC	Two arms with 40-in. range and clamp on base	\$18.75
2MW	Two arms with 40-in. range and side base...	17.50
2MD	Two arms with 40-in. range and top base...	17.50
3MW	Three arms with 60-in. range and side base...	23.50

Conduit Mounting Type

Equipped with 7-in. Crank arm and 18-in. universally adjustable lamp arm, range 29-in. Finished in gray and cadmium. Specify if for vertical or horizontal conduit and size.

No.	Description	Each
R1DC	Wired complete	\$12.20
1DC	Less socket, shade and wiring	7.80

Office Type Wall Fixture

Universally adjustable telescoping arms, range 32-in. Finished in statuary bronze.

No.	Description	Each
R8F	Wired complete	\$18.90

Dazor Floating-Arm Air-Cooled Incandescent Lamps

**Desk Model
With Yoke-Mounted Reflector**

For the desk occupant who prefers high-intensity incandescent lighting with unrestricted light placement. The air-cooled reflector is always safe to handle. A 60-watt bulb is recommended.

One per case. Approx. ship. wt., 11½ lbs.

Finish is frost - green baked enamel over bonderizing. Optional colors available at no extra charge: frost-tan, statuary-bronze, gray or ebony.

No. 1057

No.	Extension, In.	(West)	Each	(East)
1057	21	\$25.75		\$24.50

**Universal Model
With Side-Mounted Reflector
(Also available with top-mounted reflector)**

No. 1204

The Universal base may be clamped or screwed to any surface—horizontal, vertical, or sloping. Dual-clamp fittings are removable. Screws furnished. A 60-watt bulb is recommended for the air-cooled reflector.

One per case. Approx. ship. wt., 8 lbs.

Finish is statuary-bronze baked enamel over bonderizing. Optional color available at no extra charge: gray.

No.	Extension, In.	(West)	Each	(East)
1204	24	\$17.50		\$16.25
1206	34	17.50		16.25

**Pedestal Model
With Top-Mounted Reflector
(Also available with side-mounted reflector)**

A heavy iron base, 12 in. in diameter, gives stability to this portable, floor-type Dazor. Pedestal measures 39 in. from floor to arm hinge at top of pedestal. A 60-watt bulb is recommended for the air-cooled shade. Caster attachments are available.

One per case. Approx. ship. wt., 34 lbs.

Finish is statuary - bronze baked enamel over bonderizing. Optional colors at no extra charge: white or gray.

No. 604

No.	Extension, In.	(West)	Each	(East)

605	34	31.50		29.00

Dazor Adjustable-Arm Air-Cooled Incandescent Lamps

No. 1102

**Side-Mounted Reflector Model
(Also available with top-mounted reflector)**

These Dazor industrial lamps have the capacity to hold a position despite vibration or shock. Base is stamped steel, L-shaped with holes for bolting to horizontal or vertical surface. -Dual-clamp fittings are removable.

One per case. Approx. ship. wt., 6 lbs.

Finish gray baked enamel over bonderizing.

No.	Extension, In.	(West)	Each	(East)
1102	31	\$13.00		\$11.75
1103	20	13.00		11.75

Dazor Air-Cooled Incandescent Desk And Table Lamps

Swing-Arm Desk Lamp

No. 1056

Executive-type lamp employing indirect lighting. The circular shade, 13 in. in diameter, casts diffused light in volume on the desk surface. A 100-watt bulb should be used.

One per case. Approx. ship. wt., 13½ lbs.

Finished frost-green baked enamel over bonderizing, combined with brass. Optional colors available at no extra charge: frost-tan, statuary-bronze, gray or ebony, combined with brass.

No.	Extension, In.	(West)	Each	(East)
1056	13	\$26.00		\$24.75

A decorative Dazor on its own account or as a companion to the Swing-Arm Lamp. Has same shade, providing diffused indirect light and dissipating heat from the recommended 100-watt bulb. Lamp stands 14½ in. over all.

One per case. Approx. ship. wt., 6 lbs.

Finishes are the same as for the Swing-Arm Lamp above.

No.	(West)	Each	(East)
1055	\$13.75		\$12.50

No. 1055

**Dazor Floating-Arm Fluorescent Lamps
For Operation on 110V-60C Alternating Current**

Model number with prefix "P" indicate high-power-factor units
For Two T8 15-Watt tubes

No. 2124

Universal Model

May be clamped or screwed to any surface — horizontal, vertical or sloping. Dual-clamp fittings are removable. Screws furnished.

One per carton; six cartons per case. Approx. ship. wt. per unit, 10 lbs.

No.	Extension, In.	(Western)	Each	(Eastern)

Thompson Pulleys

For Disconnecting and Lowering Hangers

Pulleys are required for every installation of Thompson Hangers; the types and quantities required of each depends on installation conditions.

Sealttype—Corner

Used only with conduit enclosed horizontal cable runs. The vertical run from the corner pulley to terminal fitting may be open or conduit-enclosed.

Threaded for ¼-in. conduit, with bolt hole

spaced to take U-bolts for 1¼-in. pipe brackets. For use with Sealttype Hangers AL-2390 and AL-4590.

★No. AL-7080—Sealttype, fixed position, aluminum alloy, heat treated. Weight each 1.0 lbs. . . Each **\$6.70**

★Bolt hole spacing for either 1¼" or 1½" pipe size as specified.

Thompson Pulleys

**For Disconnecting and Lowering Hangers
Open Face, Straight Through or Corner**

No. AL-7110

No. AL-7130

No. AL-7150

For use at the wall, column or pole where the direction of the chain or cable from the hanger is changed from inclined or horizontal to vertical and at intermediate locations between hanger and corner locations, as required.

Housings are cast 220-T4 aluminum alloy. Composition wheels have excellent wearing qualities; are highly resistant to oils, acids, alkalis and corrosive gases. Bronze axles.

Pulley wheels have graphite-impregnated hubs to assure smooth operation and eliminate need for lubrication.

No.	Description	Wt. Lbs.	Ea. Each
AL-7110	Transverse Lugs, Fixed Position.....	1.1	\$2.80
AL-7130	Transverse Lugs, Hinged, Bolted Type	1.5	4.40
AL-7150	Transverse Lugs, *Hinged.....	1.6	4.80

*Hinge has ¼-in. male pipe thread stud with locknut for direct attachment to flange plates and beam clamps.

Thompson Combination Suspension Assemblies

These assemblies provide all of the advantages of the beam clamps and the adjustable angle fittings, and offer a solution for many suspension problems.

Beam clamp parts are malleable iron, hot-dip galvanized. Adjustable angle fittings and flange plates, aluminum alloy.

No. 7745

No. 7755

No. 7765

Light Duty

For hand-line operated hangers only, and for fixtures weighing 60 lbs and under.

All have ¼-in. adjustable angle fitting and hanger flange plate. Complete with attaching bolts and nuts.

No.	Description	Each
7745	With I Beam Clamp; Weight each 2.36 lbs...	\$ 8.70
7755	With L Beam Clamp; Weight each 2.45 lbs..	8.80
7765	With Wide Flange Beam Clamp; Weight each 3.92 lbs.....	11.20

Thompson Disconnecting and Lowering Hangers

These hangers provide the necessary accessibility to lighting equipment in all types of lighting installations. They bring the lighting fixture down to the man instead of sending the man up to the fixture.

When the fixture is lowered the electrical circuit is broken—there is no electrical hazard; when the fixture is raised after servicing it is returned to and locked in its original position and the electrical circuit is re-established.

Hanger consists of two members: the upper member carries a pair of contact assemblies to which the current feed wires attach (this member is firmly attached to supporting structure). The lower member carries the engaging lower contact assemblies, wired to the lighting fixture which it supports.

The entire operation of unlatching, disconnecting and lowering, raising, re-positioning, reconnecting and latching is a manual one, by means of the regulated pull and release on the small chain or cable used to lower or raise the fixture.

Thompson hangers are suitable for hand-operated installations only. For safety sake, 60 lbs. is the maximum recommended gross weight per unit.

Thompson Beam and Angle Clamps
For Disconnecting and Lowering Hangers

For quickly and easily attaching hangers and pulleys to structural members of buildings; also applicable to suspension of many other devices. All cast parts are malleable iron, hot-dip galvanized. Provided with $\frac{3}{4}$ -in. pipe connections.

No. 7700

No. 7705

For use with light I and \perp Beams, \perp and \square . Width over flanges, $3\frac{1}{2}$ - to $4\frac{1}{2}$ -in. Flange thickness not over $\frac{3}{8}$ -in. Tapped $\frac{3}{4}$ -in. Pipe thread.

No. 7700—Beam Clamp Only; Wt. Each, 1.13 Lbs. Each **\$2.40**

No. 7705—Beam Clamp with Hanger Flange Plates; With $\frac{5}{16}$ x 1-in. attaching bolts and nuts; Wt. Each 1.76 Lbs. Each **\$4.80**

No. 7710

No. 7715

For use with light L's, flange width 3 to 4-in., Flange thickness not over $\frac{3}{8}$ -in. Tapped $\frac{3}{4}$ -in. pipe thread.

No. 7710—Angle Beam Clamp Only; Wt. Each 1.22 Lbs. Each **\$2.50**

No. 7715—Angle Beam Clamp with Hanger Flange Plate; With $\frac{5}{16}$ x 1-in. attaching bolts and nuts; Wt. Each 1.85 Lbs. Each **\$4.90**

No. 7720

No. 7725

Adjustable; For Wide Heavy Beams. For use with I, \perp and H beams, trusses and girders of \square and \square .

No. 7720—Beam Clamp Only; Width over flanges 4- to 8-in. flange thickness from $\frac{3}{8}$ to $\frac{3}{4}$ -in.; tapped $\frac{3}{4}$ -in. pipe thread. Weight each 2.69 lbs. Each **\$4.90**

No. 7725—Beam Clamp with Hanger Flange Plate; With $\frac{5}{16}$ x 1-in. attaching bolts and nuts. Weight each 3.32 lbs. Each **7.40**

Thompson Terminal Fittings
Locking Hooks

For securing terminal links of operating cables or chains. Drilled for padlock with $\frac{1}{4}$ -in. bail or $\frac{3}{16}$ -in. rod (when mounted in groups).

Constructed of malleable iron, hot-dip galvanized. Mounting holes for $\frac{3}{16}$ -in. bolts.

No.	Description	Each
8135	Weight each .20 lb.	\$0.60

Lock Boxes

Open chain or cable type. For use with Terminal or Connecting Links, or Drawbar Tension Springs.

For bolting to pole, column or wall.

High strength aluminum alloy. Will take padlock with $\frac{1}{4}$ -in. shackle.

No. 8150—Weight each 1.18 lbs. Each **\$2.90**

Conduit-connected, tapped for $\frac{3}{4}$ -in. pipe thread.

For use with terminal links or connecting links.

Aluminum alloy; contains composition pulley wheel so pull on hand line may be at desired angle to pole, column or wall. Will take padlock with $\frac{1}{4}$ -in. shackle.

No. AL-8181—Weight each 1.49 lbs. Each **\$11.80**

We can also furnish Chain, Chain Fittings, Cable and Cable Fittings for use with Thompson Hangers.

Day-Brite Commercial Fluorescent Lighting Fixtures

Semi-direct all-metal shielded fixtures for 8-ft. Slimline or 4-ft. Rapid-Start lamps. For either 8-in. or 24-in. suspension mountings. These fixtures are especially adapted to high-level school and office lighting. Efficiency is 83% or more.

Die-formed and welded construction throughout for uniformity and stability. Interlocking louver assembly—Center wireway cover, longitudinal louvers, supported to wireway by snap catches. One-piece enclosure. Ends, sides, center louver, and lateral louvers completely pre-assembled for maximum strength, forming a rigid one-piece unit that is easily installed. Shielding 35°-25°. Service Chains support enclosure in lowered position for maintenance.

Enclosures and 8-ft. chassis are supplied in double lamp lengths for 4-ft. Rapid-Start. Require less hangers and simplify installation and maintenance.

Plenty of knockouts and mounting holes for installation and feed. Enclosure, chassis and louver assembly finished in Hot-Bonded Super-White enamel, rust inhibited.

Simplified through wiring. Self-bushed holes in ends of chassis. Locknuts, nipples not required.

Twin-Stem Hangers supplied with 4-ft. single units.

“A-J” Adjustable Single Stem Hangers supplied for 8-ft. single units and continuous installations. All hangers have swivel fittings and all parts necessary for complete installation.

11PF certified CBM Rapid-Start or Slimline ballasts for 118-volt, 60-cycle, a-c operation. Individually wired for single unit or continuous suspension mounted runs (thru circuit wires not included).

Approved by Underwriters' Laboratories

Day-Brite Commercial Fluorescent Lighting Fixtures

The Day-Brite Holiday brings the solution to many lighting problems. Designed specifically for low ceiling applications in modern interiors where recessing is not possible. Ideal for schools, offices, stores, under balconies and in modern industrial areas involving critical seeing tasks.

The enclosures are of molded acrylic plastic to assure positive consistency of color, transparency, and dimensional stability. Snap catches release enclosure which is supported by separable hinges in lowered position. Can be completely removed and hinged from either side.

The Holiday is available as 4-ft. and 8-ft. units and fill-in sections . . . all for 2 rows of 4-ft. Rapid-Start lamps.

They are recommended for surface mounting and include ceiling mounting straps.

Simplified servicing features include 2-ft. plastic enclosure sections mounted in 4-ft. concealed type metal frames equipped with separable hinges and snap latches. No tools required for servicing.

All metal parts are rust-inhibited and finished in Hot-Bonded Super-White enamel.

Fixtures are individually wired with CBM, HPF, Rapid-Start Ballasts for 118v. 60 cycle, A. C. operation. A fuse is included with each Ballast to prevent overheating in event of Ballast failure.

U. L. Approved. Surface Mounting Type.

No.	Lamps		Overall Lgth., In.	Width In.	Approx. Shp. Wt. Lbs.	Each

46500-8	4	4 (tandem)	97 1/2	10 5/8	58	93.66

The Parawing-2, a two-lamp surface mounted fixture, is ideal for low ceiling application in schools, offices, and stores where a shallow surface mounted fixture is desired.

The Box-Wing plastic diffusers which form the fixture's sides neatly blend the light into surrounding ceiling areas. These plastic diffusing elements are double-walled and completely sealed to prevent deposits of foreign matter—stay clean longer.

Parabolic profile provides maximum efficiency and brightness control.

One-piece interlocked metal louver assembly. Rigidly formed steel chassis and ends are provided with adequate knockouts for easy installation.

Single units can be installed direct to ceiling or by means of mounting straps included with all fixtures. Can be suspended through use of standard stem hangers.

Continuous runs made up of multiple single units as required for complete run. Self-bushed holes in ends of chassis provided for through wiring. Locknuts, nipples not required. Mounting straps are used at ends and at each coupling point.

All metal parts are rust-inhibited and finished in Hot-Bonded Super-White enamel.

Fixtures are individually wired for single unit or continuous installations, with HPF certified CBM Ballasts for 118 volt, 60 cycle, A. C. operation (through circuit wires not included).

Day-Brite Commercial Rapid-Start Lighting Fixtures

Corralume Corraline Corralouver

Smart and modern looking, these units are designed for lighting corridors, pedestrians' tunnels, book-stacks, bins and similar long narrow traffic areas. They are engineered to provide ceiling and side wall illumination, wiping out gloom and dark shadows normally found in these areas. Their extreme flexibility of application makes them ideally suited for use under balconies, in reception areas, wash rooms, and powder rooms. Louvered units are ideal for bin and stack lighting.

Designed primarily for surface mounting, all fixtures include mounting straps. They can be suspended by the addition of standard hangers.

Self-bushed holes behind knockouts at each end. Units can be mounted end to end for continuous runs as required. Hot-Bonded Super-White enamel finish on all metal parts.

All units have IIPF certified CBM Rapid-Start ballasts for 118 volt, 60 cycle a-c operation. Individually wired for single unit or continuous installations. (through circuit wires not included). All three fixtures have enclosures which can be completely removed or hinged from either side.

Approved by Underwriters' Laboratories

Corralume

One-piece extruded polystyrene plastic enclosure with lamp in center—blending at outer edges to emphasize the modern shape. Snap catches release enclosure which is supported by separable hinges in lowered position. These 4-ft. plastic sections are supported at ends and top edges by die-formed steel end plates and rails.

Corraline

One-piece extruded polystyrene plastic enclosure has smart ribbed sides and diffused bottom to minimize extreme brightness. Also has separable hinges and snap catches. Four ft. enclosure sections are supported by die-formed steel end plates and rails.

Corralouver

All metal louver assembly and longitudinal reflectors on a new and unique design. They are completely interlocked for strength and stability. Has snap catches and separable hinges. Entire assembly is rust-inhibited and finished in Hot-Bonded Super-White Enamel.

Day-Brite Plexoline Lighting Fixtures

The Plexoline is a complete lighting system, simple to install and maintain, efficient, beautiful, engineered and constructed by master craftsmen—and absolutely unequalled in versatility. Used individually, each element is complete in itself.

This fixture's great adaptability makes it ideal for stores and showrooms, offices, schools, libraries, public buildings, banks, utilities, and institutions. Unlimited pattern arrangements can be worked out with the addition of Plexoline fixed or adjustable accent units designed especially for use in combination with these Plexoline series (listed on another page in this catalog).

The entire Plexoline system is quality built and engineered. Wherever the Plexoline can serve you, it delivers its unprecedented versatility with quality performance and economy second to none.

All metal parts finished in Hot-Bonded Super-White enamel. Plenty of knockouts and mounting holes. Self-bushed holes in ends of chassis. Locknuts, nipples not required. Ribbed plastic side panels have low surface brightness and high transmission. IIPF Certified CBM ballasts for 118 volt, 60 cycle a-c operation. All glass and plastic enclosed units are wired with safety fuses to prevent overheating in the event of ballast failure.

Metal Louvered—All steel louver assembly is completely interlocked to prevent twisting or warping. Entire assembly supported by snap latches. Hot-Bonded Super-White enamel, rust inhibited.

Low Brightness Lens—Holographane Controlens designed primarily to give the maximum amount of light with the minimum amount of glare. In hinged frames with separable hinges.

Cleartex Plastic—Exclusive ribbed design in Cleartex provides both brightness control and distinctive appearance. In hinged frames with separable hinges—hinge from either side or completely remove—without tools.

Day-Brite Recessed Mobilex Lighting Fixtures

Mobilex units 24-in wide for two, three and four 4-ft. Rapid-Start lamps.

Designed for flexibility of application, reduced in over-all weight and height. Even with the addition of suspension straps, the minimum overhead clearance required by these fixtures is a mere 5¾-in. Lightweight rigid fixed construction ideally suited for use in new lighter weight suspended ceilings.

Can be mounted singly, end-to-end, side-by-side, or in any combination. Provides unusual versatility in meeting architectural lighting requirements in offices, stores, and institutions.

These units are available with a choice of enclosing elements.

The metal Egg-crate louvers are completely interlocked and supported in rigid die-formed metal frames. Entire assembly is rust-inhibited and finished in Hot-Bonded Super-White enamel, provides 30°-30° shielding.

The new plastic enclosing elements—Cleartex and Daytex—are each an exclusive Day-Brite design, combining beauty of design, low brightness with high transmission, and a significant reduction in weight. Each is rigidly supported in a die-formed metal frame with separable hinges that can be hinged from either side.

Has removable wireway cover for access to control equipment and adequate knockouts for feed in ends and sides. Hot-Bonded Super-White enamel finish, rust-inhibited before painting. Continuous through wiring-locknuts, nipples not required.

High Power Factor certified CBM Rapid-Start ballasts for 118 volts, 60 cycle a-c operation. Individually wired for single unit or continuous installations (through circuit wires not included). Safety fuse is provided to prevent overheating in event of ballast failure.

Due to space limitations only Flange and Grid Type Mobilex are listed here, but Day-Brite Mobilex for all other ceiling types are available.

Day-Brite Recessed Troffers
12-Inch Wide Shallow Troffers

Right with today's trend to Modular planning—reduced in weight, shallower in design, more flexible in application and installation.

Two and three lamp units complete with all mounting accessories required for installation in either flange or grid type ceilings as listed in schedule below.

Die-formed construction throughout for uniformity and stability. Removable wireway cover for access to control equipment. All three enclosing elements illustrated here have die-formed steel frames with separable hinges which can be hinged from either side or completely removed for maintenance. Plenty of knockouts for feed in ends and sides. "No-sag" couplings assure in-line runs. Hot-Bonded Super-White enamel finish, rust inhibited.

11PF Certified CBM Rapid-Start Ballasts for 118 volt, 60 cycle a-c operation. Individually wired for single unit or continuous installations (thru circuit wires not included). Safety fuse provided to prevent overheating in case of ballasts failure.

Approved by Underwriters' Laboratories

Plastic Cleartex enclosing elements are an exclusive Day-Brite design. They provide low-brightness, high transmission and less weight.

White metal Egg-Crate louvers provide 30°-30° shielding.

Low-Brightness Holophane Controlens for super comfort and maximum control of illumination.

Alzak Paralouver Troffers

Exclusive patented Paralouvers for longitudinal shielding (shielding 42°-30°). Surface of each lateral louver is a series of Parabolas which direct light to the working plane. Interlocked louver assembly supported by easy-turn latches. Louvers on chains for service without tools. Diffuse Alzak body. Plenty of knockouts for feed; no-sag couplings.

11PF Certified CBM ballasts for 118 volt, 60 cycle, a-c operation. Individually wired.

Approved by Underwriters' Laboratories

All-White Parabolic Troffers

Die-formed steel construction throughout. Interlocked louver assembly with easy-turn latches and service chains. Shielding, 42°-22°. Entire fixture rust inhibited and finished in Hot-Bonded Super-White enamel 11PF certified CBM ballasts. 118 volt, 60 cycle, a-c. Individually wired.

Approved by Underwriters' Laboratories

Day-Brite Commercial and Industrial Hangers

Commercial Hangers

Twin-Stem Hangers

Can be mounted to fixture stud or direct to ceiling. Has slotted arrangement to accept top swivel fittings of hanger stems. No locknuts required for attachment of stems to strap.

Self-centering of two-hole ceiling canopy is assured thru offset knurled canopy rings. Cannot go up off centered.

Bottom stem fittings machine crimped to stems. Threaded for attachment thru top of fixture

channel. Locknut included. Rust-inhibited and finished in lustre aluminum enamel. Complete with all parts including sufficient fixture wire to reach outlet box connection.

No.	Length In.	Carton	Ship. Wt., Lbs.	Each
3328-A	8	1	4	\$3.36

"A-J" Adjustable Single Stem Hangers

For 8-ft. single units and continuous installations. Provide over one inch vertical adjustment through externally hand operated fittings. All hangers have swivel fittings and all parts necessary for complete installation. Hot-Bonded lustre aluminum finish.

Packed two per carton.

No.	Length In.	Ship. Wt., Lbs.	Each
3318-A	8	3	\$1.86
3312-A	12	4	2.04
3314-A	24	4	2.22

Sliding Clamp

Replaces bottom fitting on "A-J" stem hangers. Sliding action allows positioning of hangers at any location along top of fixture channel when overhead obstructions do not permit standard hanger spacings.

Can be used with fixtures that are provided with acceptable channel formations.

Packed 10 per carton. Approx. wt. 1/2-lb.

No. 3425-A..... Each \$0.60

Industrial Hangers

Hydee Hanger

One-piece steel stamping construction provides receptacle support switch K. O. and all necessary mounting holes for 4-in. and 3 1/4-in. outlet box or plaster ring. Slots 4-in. box attachment allow 15° adjustment. More than adequate support. Self-grounding. Hanger plate

is finished in baked lustre aluminum enamel. "S" hooks and cord clips in rustproof finish. Easy and speedy to install. Simplifies fixture maintenance, in case of trouble the entire fixture can be easily and quickly removed. . . a replacement installed . . . and the defective unit repaired at leisure. Approved by Underwriters' Laboratories.

Approx. ship. wt. 15 lbs.

No. 9988 Hydee Hanger complete..... Each \$1.38

"A-J" Hangers

For 8-ft. single units and continuous installations. Provide over one inch vertical adjustment through externally hand operated fittings. All hangers have swivel fittings. Hot-Bonded lustre aluminum finish.

Fit 1/2-in. pipe K. O.

Approx. ship. wt. 2 lbs.

No.	Length In.	Each
7908-E	7 1/4	\$1.80
7912-E	11 1/4	1.98
7924-E	23 1/4	2.16

Ice Tong Hanger

Can be placed anywhere along channel for rod and pipe hangers. Approx. ship wt. 1/2 lb.

No.	Description	Each
9952-A	For 3/8-in. Rod or Mtg. Screws	\$0.72
9952-B	For 1/2-in. Conduit Pipe Hangers	.72
9952-C	For 3/8-in. Iron Pipe Hangers	.72

Cable Clamp

For use with messenger cable. Fits 1/2-in. pipe K. O. in top of channel. Approx. ship. wt. 1/2 lb.

No. 9953..... Each \$0.96

Chains with "S" Hooks

One pair 5-ft. long with "S" hooks. Approx. ship. wt. 1 lb.

No. 9963..... Pair \$0.84

Wakefield Luminaires

Grenadier

The Grenadier II is a louvered unit with metal-framed translucent white plastic side panels, equipped for use with either two 40-watt fluorescent lamps in each 4-ft. section or two Slimline lamps in each 8-ft. section. Available in three types: Stem, Canopy and On-Ceiling models. Units are interconnectable with standard parts.

The Grenadier IV is equipped for use with either four 40-watt fluorescent lamps in each 4-ft. section or four Slimline lamps in each 8-ft. section. Available in two styles, the Stem and On-Ceiling.

Grenadier II and IV are matched in design and may be used harmoniously in adjacent installations.

Wakefield Luminaires

Pacemaker

The Pacemaker is a good example of how modern engineering and quality construction can be achieved at a moderate price. The heavy gauge steel construction, the excellent craftsmanship, the precision fitting of louvers and other parts make it outstanding in its price class. Its clean, simple, uncluttered design, its pure white infra-red baked enamel finish over a rust-preventive undercoating recommend it for schools, offices, drafting rooms, stores, restaurants and many other areas where a fine but low priced luminaire is desired.

There are three models as illustrated: with slotted side panels and 45° x 45° shielding; with solid side panels and 45° x 45° shielding; and with solid side panels and 25° x 35° shielding. Three mountings also: 6-in. stem, 20-in. stem and on-ceiling. Available in 8-ft. or 4-ft. lengths for continuous runs or as single units, for Rapid Start and Slimline lamps.

With Illuminated Steel Sides, 45° x 45° Shielding

Wakefield Luminaires

The Cavalier

A deluxe suspended luminaire with full length, unframed luminous plastic side panels supported internally by a steel frame. The steel frame is also the internal reflector, keeping side-panel brightness a pleasant 100 footlamberts.

Important feature is a sliding stem plate concealed in the top of the channel which can be moved to support the lu-

minaire at any point, eliminating problems of inline spacing of mounting points. If mounting hole or outlet box doesn't line up with the luminaire, adjustable ceiling straps line it up for you, providing up to 1-in. adjustment.

Special low brightness finish on louvers, side reflectors and channels. Louvers give 45° x 45° shielding. Rapid Start or Slimline lamps. Light distribution about half up, half down.

Wakefield Troffers

The new Wakefield Troffer is a standard packaged unit that offers many combinations. The overall depth of unit is 4 1/8-in. The body is one piece and is the standard Wakefield 20-gauge construction. All units are available for flange, snap-in and lay-in types of ceilings. Modular units do not grow in length when units are used in continuous rows. Seven

types of light control: No. 70 Corning low brightness lens—acrylic and styrene diffusing plastics—vinyl plastic—styrene lens—35 x 35 degree louvers and Alba-Lite diffusing glass.

For Troffer with 277 Volt Ballast (BV) add suffix letter "D" to catalog number.

Wakefield Luminaires

Geometrics—OMEGA—On-Surface Type

A complete unit ready for on-surface mounting on existing ceilings with no required structural changes. The ballasts and lampholders are in an individual metal housing that provides hook-on suspension points for the Wakefield Rigid-Arch diffuser.

The Rigid-Arch diffuser is molded with a sweeping arch, slightly higher in the center than at the edges to give greatly improved rigidity. It has a non-specular, matt finish that minimizes possible reflected glare from outside the building. Omega is also available with louvers.

Units may be used individually or combined in an unlimited variety of lighting designs. Width dimensions are to the exact inch module for precise co-ordination of various Omega sizes and with other building materials.

Wakefield Luminaires

Geometrics—BETA—Recessed Flanged Type

The Beta is a modular flanged unit for mounting in suspended ceilings. It comes with either a Rigid-Arch acrylic plastic diffuser or with 35° x 35° low brightness steel louvers, and uses Rapid Start lamps. Ballasts and lampholders are contained in an individual metal housing. Bodies are equipped with a self-leveling device and are constructed of 20 gauge steel. Infra-red baked white enamel provides an 85% reflectance factor. Flange and diffuser frame are finished in metallic satin. Diffuser frames are designed to eliminate light leaks. Unlighted, the Rigid-Arch plastic diffuser blends with and appears as part of the ceiling. Its matte finish (molded into the diffuser) eliminates reflected glare or brightness from exterior or interior light sources. Its concave arch provides structural strength. Touch-Latch and hinge frame assembly provide ease of maintenance.

Suffix "E" should be used in place of "I" if fixture is mounted as End unit in continuous mounting.

Suffix "M" should be used in place of "I" if fixture is mounted as Intermediate or Middle unit in continuous mounting.

Extra charge for Slimline ballast per pair of four-foot lamps \$2.51—1.88.

*Direct shipment packaging.

Wakefield Magic Ceiling Lighting

You can picture for yourself how easily and inexpensively this classroom was transformed by an 18-ft. x 28-ft. Magic Ceiling.

Auto showrooms are a natural for Magic Ceiling. Cars look their best under large area lighting. An 18-ft. x 24-ft. Magic Ceiling used here.

Two 18-ft. x 24-ft. Magic Ceilings give this restaurant a happy look. Heating and cooling grills are in walls above the ceiling.

You should have seen the old unsightly ceiling of this store before two 24-ft. x 28-ft. Magic Ceilings glamorized and transformed it.

The Magic Ceiling comes in 11 stock sizes which alone or in combination will fit practically any area without having to be attached to the side walls. Simply measure the room, order the proper size and the Magic Ceiling comes to the job as a complete package—straps, channels, grid Wakon diffuser, lamps.

Installation is quick and simple, no attaching to side walls,

perimeter obstacles like ducts, ventilators, etc., may be by-passed. No complicated computations; no ceiling construction work; no dirt, no plaster, no sawdust. Conceals everything above it—pipes, beams, ventilating ducts, sprinkler heads.

Gives shadow-free illumination throughout, transforms old dull interiors into new glamorous interiors.

*Actually footcandles will be considerably higher if installed on reasonably white ceiling and floats free a few inches up to two feet from light side walls. Make sure bare lamps are not visible from all possible viewing angles (e.g. through clear glass partitions, partial partitions, etc.)

Smithcraft Commercial Fluorescent Lighting Fixtures

The Freeway

Plastic-Enclosed Luminaire

Clean, modern, plastic-enclosed luminaire for corridor-lighting in office buildings, schools, and other institutions, airports and rail and bus terminals.

Simple and modern, the Freeway is architecturally very pleasing lighting for corridors or for long narrow areas. Dark corridors and passageways are transformed into pleasantly lighted, comfortable areas with good lighting on walls, ceilings, and floors.

Shielding is a one-piece extruded polystyrene section with high impact strength, break resistance and light stability after prolonged use. It simply snaps in and out of place. Because unit is completely enclosed, maintenance is reduced to a minimum.

Installation, individually or in continuous rows is very simple. Knockouts in the end of each housing are provided for continuous wiring. Fixture end caps fasten together so that straight continuous rows are assured.

The Freeway is generally surface-mounted, but may be pendent-mounted with the SS102 or SS105 Stem Sets.

The Federal

Louvered Unit with Steel or Plastic Sides

A very economical dependable 2-light louvered fixture of steel construction available with steel or plastic side reflectors for schools, stores, offices and similar installations. Steel parts are finished in Supercoat Baked Enamel. Federal may be mounted individually or in continuous rows, surface or pendent. Rigid louver provides shielding of 35° crosswise and 25° lengthwise. If desired, louvers providing additional shielding of 35° crosswise and 45° lengthwise or additional shielding of 45° crosswise and 45° lengthwise may be supplied at additional cost. Louver is released by simple finger action for re-lamping and cleaning and is suspended by chain at a convenient working distance from fixture. Or louver may be completely removed easily and quickly. Side reflectors are easily removed for cleaning.

Smithcraft Commercial Fluorescent Lighting Fixtures

The Civic
Aluminum-Framed Unit

An attractive aluminum-framed unit providing a permanent luxury-look. Absolutely clean and architectural, it is an ideal lighting unit for executive offices, directors' rooms, reception rooms, governmental and institutional installations of all types.

Maintenance on this unit is simple. The shielding is contained in the frame, which is also the sides and ends of the unit. Unit is opened by a swinging, hinging action without tools or loose parts; relamping is easily accomplished, and access to the ballast and electrical components is provided.

The Civic is generally surface mounted and has a completely closed top for 100% downlighting. However, it may be pendent mounted, using the SS102 Stem Set. It may be also mounted in continuous rows with connector provided.

Shielding media available are Corning Pattern No. 70 glass and Acrylic Plastic sand-blasted with a modern architectural pattern.

Canopy and Stem Set

Consists of canopy, single 15-in. steel stem (o.d. 1/2-in.), heavy canopy bar, and fittings. Stem is adjustable after installation. For use with 2-light and 4-light units.

No.	Description	Each
SS102	Canopy and Stem Set	\$2.36

The Executive
All-Steel Louvered Unit

A very shallow, attractive all-steel louvered unit, ideal for use in schools, offices, stores, etc. Particularly suited because of its shallowness for use in today's low-ceilinged schoolrooms and offices.

The metal sides of the unit are illuminated by light from the fixture, reducing contrast. Egg-crate louvers provide a shielding of 30° crosswise and 45° lengthwise. May be purchased with an open top for uplighting or with a top reflector for 100% downlighting.

The unit may be mounted individually or in continuous rows, surface or pendent. The louver is quickly and easily released by gentle fingertip pressure, and replaced by simply placing back in position. When opened, the louver is suspended by chains at a convenient level for relamping and ballasts and electrical components are easily serviced.

Smithcraft Commercial Fluorescent Lighting Fixtures

All Steel Louvered Unit

“The Director”

Through its distinctive appearance and outstanding lighting qualities the Director brings many “plus” values wherever it is installed. The Director is an all-steel, louvered unit finished in white Supercoat baked enamel with end sections in aluminum finish. It may be mounted individually or in continuous rows, surface or pendant. Rigid egg-crate louvers, supplied in the same length as the unit provides a shielding of 25° crosswise, and 35° lengthwise. If desired, a deluxe louver may be supplied to provide increased shielding to 40° crosswise; 35° lengthwise. For relamping or other maintenance the louver is released from either end and is “shelf-suspended.” Top reflectors may be supplied to direct all or part of uplighting downwards.

DIR4-40RS	4	F40T12RS	51	100.50
DIR6-40RS	6	F40T12RS	69	137.40

Due to ballast interference with knockouts, for surface mounting (DIR6-40) two CC503 clamps will be furnished no charge. For pendant mounting, use SS117 at extra cost as listed below.

Available with 800-MA Rapid-Start for 8-ft. lamps.

DeLuxe Louvers

If desired, the Director may be supplied with a Deluxe louver to provide an increased shielding of 40° crosswise, 35° lengthwise. Add the prices shown below to the cost of the fixture.

No.	For Use With	Each
DL24	2-light 48-in. Director	\$ 4.02
DL28	2-light 96-in. Director	7.16
DL34	3-light 48-in. Director	4.80

Top Reflectors

Top reflectors may be supplied at additional cost to direct all of the lighting downwards or they may be supplied for partial downlighting.

Prices on application.

Smithcraft Commercial Fluorescent Lighting Fixtures

The Sheraton

Plastic-Sided Steel Louvered Unit

A very shallow (only 3¼-in. deep) louvered unit with translucent plastic sides. The Sheraton provides excellent illumination where low ceilings prevail and is ideally suited for many of today's 9-foot schoolrooms and offices. Sheraton may be mounted individually or in continuous rows, surface or pendent. Louver is quickly and easily released by gentle fingertip pressure and replaced by simply placing back in position. It is suspended by chain at a convenient level for relamping. Louvers provide a shielding of 30° crosswise and 45° lengthwise. Side panels are easily removed for cleaning. Top reflectors for 100% downlighting are available.

Top reflectors are available for additional downlighting.

Prices on request.

Packed one complete unit to a carton with all fittings for normal continuous row mounting.

The Twosome
With 45° x 45° Compound Shielding

High quality, top value, economical unit, ideal for schools, offices, stores, etc. Has new compound shielding which because of a new design technique, provides 45° x 45° shielding in a very shallow unit (only 3½ in. deep). No. dark center streak. A light spill at end cap reduces contrast.

Bottom shielding is a combination of a strip of extruded polystyrene with white steel baffles on either side. The bottom shielding together with the side shields is a complete assembly which is hinged from either side or easily lifted from the unit.

The unit may be pendent or surface mounted individually or in continuous rows. Top reflectors for 100% downlighting are available.

Note: The twosome is also available with the following shieldings: Plastic louvers, flanged polystyrene, albalite glass, ribbed Skytex glass and corning pattern No. 70 glass.

Packed one complete unit to a carton with all fittings for normal continuous row mounting.

Smithcraft One-Foot Wide Gridex Troffers

Lay-In Troffers for use in inverted "T" grid type suspended ceilings

Units available in 4-ft. lengths for 2 and 3 lamps and provide flexible recessed lighting that integrates architecturally with any interior design.

Easily installed from below by tilting, inserting in ceiling opening and placing in position on ceiling rails.

Louvers are hinged; other shieldings are contained in hinged door frame.

Smithcraft Troffers

Metro Troffers

For Use with Inverted "T" Grid Type Suspended Ceilings

Smithcraft 2-ft. wide Metro troffers have been designed specifically for use with inverted "T" grid type suspended ceilings consisting of interlocked tees spaced 21-in. by 24-in., or 24-in. by 48-in.

Units are easily installed from below by tilting and placing in position or by squeezing the sides of the troffer to clear the ceiling rails, and the troffer is then locked in place.

Doors in door-framed units are instantly and positively contact-closed and instantly released without buttons, screws or other visible catches.

Prices on application.

Templex Troffers

With Attached Hangers for Ceilings Supported by 1½-In. Steel Channel, T-Bars, Wood Framing, Plaster Frame, etc.

Templex 2-ft. wide troffers are similar to the Metro troffers, except they are furnished with hangers attached for automatic positioning on ceiling supporting members. Units are simply placed in the ceiling and hangers position automatically on ceiling supporting members. Leveling is from below by four easily accessible screws.

Troffers with catalog prefix TEM are flanged troffers for use in ceilings supported by 1½-in. steel channel, Pomeroy or other steel supporting members and for wood framed openings and plaster frames.

For Templex troffers without flange, substitute catalog prefix PAN for TEM shown below. The same prices apply.

1. No visible catches, latches, hinges, bolts or screws.
2. Door frame contains glass, lens or plastic, opens or closes by simple pressure upwards with exclusive Smithcraft Pressure-Catch. To remove door frame, simply lift off without tools or loose parts.
3. In louvered units, louvers hinge from either side, close by simple pressure upwards and are removed without tools or loose parts.
4. Architecturally precise modules for exactly 12-in. openings—perfectly straight, trim, in-line rows, whether mounted individually or in continuous rows.
5. No light leaks.
6. Slimly-designed glass frame for better appearance.
7. Wide selection of shielding media, spot boxes, pattern lighting.
8. Troffers available with integral trim flange for finishing ceiling opening.
9. Simple clips adapt troffer to today's ceilings. Troffer-in-plaster frame assures perfectly square openings.
10. No exact positioning required; simple adjustability at every point with the Smithcraft Yoke-Aligner Hanger.

Pittsburgh Universal Troffers and Downlights

Basic Troffer

96-in. long, 72-in. on special order.

Complete with ends. Rigidly constructed to fit an opening 48-in. long and 12-in. wide. Slimline units available 48-in. or

Eggcrate Louver

Provides 30° lengthwise and 45° crosswise shielding. Captive screw latches provide easy access for relamping. (HEC closure.) For eggcrate plastic closure, order PEC closure.

Alba-Lite Glass

Pattern #70 glass (CLB) may also be used.

A highly efficient closure and a decorative element ideal for seeing comfort and refined architectural harmony. (GE closure.) For curved Alba-Lite order CGE closure.

Flat Controlens®

Low brightness closure. For glass order 9016-4 (M) or 9026-4 (M). For plastic order 6016-4 (M).
©Holophane Co., Inc. Registered Trade Mark.

Curved Controlens®

Curved, low-brightness closure. Order 9033-4-A.
©Holophane Co., Inc. Registered Trade Mark.

Acrylic Closure

Curved acrylic plastic closure. DAC closure.

Three-foot closures are available on special order for use with 6-ft. troffer. (Use 2 per troffer.) Twinlens and Corning curved lens closures are also available.

Pittsburgh troffers provide complete flexibility in planning recessed lighting installations. Interchangeable closures provide an easy means to make changes in lighting to suit changes in layout.

Factory mitering of flanges on PF-type troffers is available on special order.

Troffers may be combined with Companion Recessed Downlights fitted in line, at corners, ends, "T" or cross-overs. Adjustable or fixed spots, or hinged closures with Alba-Lite glass or eggcrate louver are available. All are equipped with silvered-mirror glass Permafectors and use general service incandescent lamps.

For installation in metal pan "Clip and T-Bar" ceiling, substitute "AF" for "PF" in catalog number. Ask Graybar for information on troffers for other suspended ceilings.

DL-150 and DL-300 Downlights

DL-300

The DL-150 and DL-300 series Downlights provide high efficiency and controlled brightness with optically mated Permaeffector, lamp and prismatic lens. Their high efficiency makes them outstandingly economical units to operate.

The frame is a one-piece aluminum die-casting of smart modern design and blends beautifully into the ceiling. There are no visible hinges or catches.

No.	Lens	Overall Dimensions			Each
		Length, In.**	Width, In.**	Depth, In.**	
DL-300-C	Concentrating	15 1/2	15 1/2	11 5/8	\$34.00

Pittsburgh Luma-Ceiling

Luma Ceiling No. 10

Luma-Ceiling No. 10 offers quality, plus simplicity of installation and maintenance in a luminous ceiling. A complete installation consists of translucent white vinyl plastic, corrugated for rigidity, supported on extruded aluminum channels, and standard strip fixtures.

Below are shown approximate prices per square foot of Luma-Ceiling No. 10 (not including fixtures) in standard installations, as follows: (1) The longitudinal channel is on 3-ft. centers, (2) The plenum depth is 2 ft. or under from lamp center to upper surface of plastic, (3) The area is one which is rectangular or square with 90° corners, (4) There are no obstructions such as columns or pillars within the wall or area boundaries.

For firm quotations or quotations on irregular rooms or on installations that are not standard, contact your Graybar representative.

Sq. Ft. to be Installed	Estimated Price Per Sq. Ft.
0-299 sq. ft.....	\$1.08
300-599 sq. ft.....	1.00
600-899 sq. ft.....	.92
900 sq. ft. and over.....	.83

Where Pittsburgh strip is not used with Luma-Ceiling No. 10, add 20% to the above prices.

Every request for a quotation or any order on a Luma-Ceiling No. 10 job should be accompanied by as complete information as to dimensions and other installation factors as is possible.

Standard Luma-Ceiling is furnished with rolled corrugated vinyl plastic. For plastic eggcrate, Honeylite, 3x3-ft. vinyl plastic pans, or 3x3-ft. acrylic plastic pans, see Graybar.

Adjustable Downlights

DLC-101-8

Adjustable downlight for individual mounting, equipped with silver-mirrored Permalector.

No.	Wattage	Recessing	Dimensions	Each
DLC-101-8	200	10 ⁷ / ₈	10 ¹ / ₄	\$28.08
DLC-102-8	150	10 ⁷ / ₈	10 ¹ / ₄	27.92

Pittsburgh Presidential Luminaires

The Coolidge

D-7240—(Coolidge)

The Coolidge D-7000 series and the Tyler A-7000 series combine sound lighting engineering with functional design. Side panels are curved Alba-Lite glass, while the bottom is eggcrate louver, hinged for easy maintenance. Louver on A-7000 series is flat, while louvers on the D-7000 series is dropped. Both are distinctive either individually or continuously mounted.

A-7000 series luminaires are available in 4-ft. units only, and they utilize Bipin lamps. D-7000 series models are made in 4-ft. lengths and 8-ft. lengths, and they utilize pairs of Rapid Start lamps mounted in tandem.

A-7000—Rapid Start Lamps

The Grant

A-8240-A

The Grant series are completely glass-enclosed luminaires which are flexible and functional in design . . . outstanding in appearance and style.

Gracefully curved side panels and flat bottom panels are Alba-Lite glass. The metal frame enclosing the bottom panel is securely held in position by hinges and patented spring latches so that it may be opened or removed instantly if desired, without tools. Knockouts provide for service entrances, continuous wiring, pendant mounting, and the locking together of units for continuous runs.

No.	Rapid Start Lamps No.—Watts	Length In.	Width In.	Depth In.	Each

Curtis Sky-Lux Modular Luminaires

4x4 Surface Sky-Lux with Curticell louver-diffuser.

2 x 2 Recessed Sky-Lux with dished concave acrylic diffuser.

2 x 4 Contractible Sky-Lux with Plastic egg crate louver.

Curtis Sky-Lux® series are brand new modularly designed luminaires providing controlled high-level illumination. Designed for use in all ceiling types, Sky-Lux series luminaires make possible a lower, more dramatic ceiling effect for today's commercial interiors.

Sky-Lux series luminaires are available for surface or recessed (flange or flush) mounting or Inverted "T" grid ceilings in 2x2-ft., 2x4-ft., and 4x4-ft. sizes. Bottom closures include flat, concave and dished concave diffuse acrylic plastic panels, and the exclusive new CurtiCell louver-diffuser*.

Concealed latches and hinges provide instant accessibility for lamp replacement and maintenance, and a clean-swept ceiling plane with no distracting hinges, screw heads, nuts or latches. Door gaskets minimize maintenance by sealing the luminaire against dust and foreign particles.

Exclusive Rapidjust** hangers make installation faster and easier, and provide a quick, sure levelling device for final ceiling adjustment.

Construction

Units are fabricated of heavy gauge steel and finished in baked white Fluracite enamel. Sky-Lux 4x4-ft. luminaires have built-in tri-rib construction for extra strength and rigidity.

Hinged door frame is steel and is finished in baked white Fluracite enamel.

Wiring

Units are wired for 110-125 volt a-c circuits and equipped ETL listed components. Underwriters' Laboratories Approved. IBEW labels.

Note: Contractible Sky-Lux also available. 4 x 4-ft. Plaster Frames for above luminaires can be furnished. Sky-Lux also available with: Flat acrylic plastic diffuser, concave acrylic plastic diffuser, alba-lite glass, Hexcel Honeylite, and Corning #70 lens.

Curtis Strato-Lux Luminaires With CurtiCell Louver Diffuser

Approved by Underwriters' Laboratories, Inc.

A complete packaged lighting system, with CurtiCell louver-diffusers create a soft shadowless, glare-free illumination combining complete diffusion and 25° crosswise and lengthwise shielding of the diffusing medium.

Creates a sense of light airiness—the luminaire “floats” or is suspended entirely from the ceiling, with no juncture necessary between the luminaire and the side walls.

Made of two pieces of self-extinguishing vinyl plastic, a flat top sheet and a vacuum formed cellular bottom sheet. CurtiCell is available in 2 x 2 and 2 x 4-ft. panels.

**Values shown are for Frosty CurtiCell elements, with lamps on 24-in. centers, except where noted. See note on white translucent CurtiCell elements below.

***Lamps on 12-in. centers.

Notes

1. Higher intensities can be obtained from the above assemblies by adding more lamps. Use the following adders, and specify the number of (total) lamps desired per unit.

For One Lamp, 72-in. or 96-in., add \$20.80

For Two Lamps, or multiples thereof, add \$25.00

2. CurtiCell louver-diffuser panels are available in two densities—Frosty (order from table above) and White. Strato-Lux assemblies with White CurtiCell louver-diffuser elements produce lower direct brightness and reflected glare, and approximately 20% less transmitted light.

To order White louver diffuser panels, substitute “5” for the third digit (9) in the catalog numbers listed in the table above.

3. Spacing between channels and plastic: Normal distance from the top of the wiring channels to the CurtiCell louver-diffuser elements in 21-in. for 24-in. lamp spacing. With 12-in. lamp spacing, a distance of 13-in. is recommended.

4. Larger room areas can be calculated by combining two or more of the elements shown in column 4 of the table above.

Strato-Lux is available with a variety of diffusing and louvering media. Including Plastic Eggcrate louvers and Hexcel Honeylite in 2x1-ft. Modules; Holophane #6025 Controlens in 2x2-ft. Module.

*Trademark Applied For. #Patent Pending.
Contact Graybar for additional information.

Curtis Fluorescent Troffers

Listed by Underwriters' Laboratories, Inc.

The new Curtis Eye Comfort® troffers feature low brightness quality and L.B.Q. aluminum louver fins for extra durability and brightness control in the critical viewing angles. Also available without louvers, these troffers install into virtually every type ceiling construction including Snap-in, "T" Bar, inverted "T" grid, Burgess-Manning, Acousti-Line and plaster ceilings. Total recessing depth required including Curtis U-Support Straps is less than 6½-in.

Side reflectors are of .040-in. aluminum for maximum efficiency and all aluminum parts are Alzak processed after fabrication for finish permanence. Cast ribs provide perfect reflector alignment in continuous rows without intervening end plates. Also available in steel finished white fluracite enamel.

Eye Comfort Steel Troffers with hinged doors available.

Curtis Fluorescent Luminaires

Edge-Glo

Curtis Edge-Glo luminaires combine high-fashion styling with high quality illumination. Long and shallow, Edge-Glo is just 3½ in. thin. Side panels, illuminated by reflected light, present a soft, glowing effect.

Edge-Glo is available in 2, 4 and 6-lamp sizes, in Alzak* Aluminum, Golden Alzak* Aluminum or baked white Fluracite enamel on aluminum, and a variety of bottom closures.

Dimensions

Curtis Edge-Glo units are 48¾ in. long; 2-lamp units are 12¼ in. wide, 4 and 6-lamp units are 23¼ in. wide; and all units measure 3½ in. in depth.

5600 Series

HP Series—Hinged Plexiglas

Sturdily made fixtures with hinged egg-crate louver, plastic diffuser or glass-panel bottom. Die-formed chassis of 20-gauge steel. Finished baked white enamel. Separable end cover and flange. Two-ft. wide units can be joined in continuous runs.

Egg-crate louvers are completely framed for one-piece rigidity; provide 37° shielding crosswise and lengthwise. Plastic shield is die-formed to special concave no-sag contour. Glass-panel units utilize Corning Alba-Lite glass.

Prices for "FG" Series (for use in aluminum T-Grid ceilings) will be furnished on request. State quantity.

Garcy Speed-Line Fluorescent Fixtures

Speed-Line fixtures have a specially formed wireway, designed for use with a special heavy duty joiner. The wireway and the joiner permit pre-assembly and pre-wiring of continuous runs of fixtures at convenient working level and make it possible to raise the entire run to the ceiling as unit.

Garcy's C12806 clamp-type, adjustable stem hangers add to the time savings. Attached to the continuous wireways at floor level, they hook easily into the pre-installed hickies when the assembly is carried to the ceiling. Spacing flexible.

"Visualier" Series

Two-lamprow units, ideal for school lighting. One-piece shield provides 45° x 45° shielding to prevent glare; illuminated sides for minimum contrast; hinges from either side for cleaning or relamping. Baked white enamel. Slimline or Rapid-Start lamps.

Holophane Fluorescent Lighting Units

Approved by Underwriters' Laboratories, Inc.

Holophane No. 9300 Series . . . Surface Attached HOLOFLUX*

The surface attached Holoflux units afford the highest degree of seeing comfort with the most efficient performance. Their contour and unique prismatic construction are designed to produce the greatest useful output from the fluorescent sources. High levels of illumination are achieved with complete absence of cumulative glare.

Shallow depth. 4½-in. simulates recessed construction without the expense of roughing-in. Units take 2 or 4 lamps of conventional bipin starter type, instant-start single pin lamps and the 4-ft. rapid start lamps.

New, improved hinging and locking assures totally enclosed construction during operation yet allows easy access for relamping. Specified wherever high efficiency lighting with the greatest degree of comfort is desired.

Steel parts bonderized and finished with prime and white enamel coatings. Hinged doors. 18¼-in. wide, 4½-in. deep.

No.	Ft.	Length In.	Lamps	0-60° Output	Each	No.	Ft.	Length In.	Lamps	0-60° Output	Each
9302-4	4	2	2-F40T12	49.8	\$85.90	9322-8	8	2	2-F96T12	49.8	\$160.50

F40T12—starter type; F48T12 and F96T12—slimline; F40T12/RS—Rapid Start. All Holoflux units are wired.

Ballasts: 2 lamp units—1-2 lamp; 4 lamp units—2-2 lamp.

Note: Four ft. and eight ft. additional sections available for making continuous runs.

Holophane No. 9200 Series . . . Recessed HOLOFLUX*

Designed to produce the highest efficiency with complete absence of glare from any direction of view. Units have smooth modern lines, can be installed inexpensively and maintained at low cost. A wide choice of lamp styles is available. A hinged door variety holds lenses securely in a frame, provides an unbroken streamlined appearance, unit ends are integrated smoothly into the ceiling.

Engineered to be as wide as possible to produce maximum efficiency and lowest possible brightness at normal viewing angles. Fourteen-inch width permits installation in practically all types of ceilings including wood joists on 16-in. centers.

Units can be installed with ease in acoustic tile ceilings with a minimum amount of tile cutting. Maximum spacing, 1¼ times the mounting height.

Unhinged Units

No.	Length Rec. Portion, In.	Lamps	Ballasts	Each

9285-4	48½	3-F40T12/RS	1-3 Lamp	96.85

All units 13¾-in. wide at ceiling line. Need 6¾-in. min. recessing space.

Ceiling opening required 14¼-in. x 49-in. for first 4-ft. section, additional section 14¼ x 48-in.

Note: Four ft. and eight ft. additional sections available for making continuous runs.

New Holophane REALITE* With New PRISMALUME* Enclosure

Realite . . . a compact shallow, ceiling attached luminaire offers exceptional light control with Prismalume acrylic plastic enclosure.

Prismalume is not a mere diffuser but a precisely designed optical element. Bends light rays away from direct viewing area.

An exceptional luminaire for low ceiling areas where recessing is not desirable or practicable.

10⅝-in. wide.

4¼-in. deep.

All units wired.

No. 6500-4 49½-in. Long Each \$49.95‡
(2-Lamp—Rapid Start)

No. 6500-8 97½-in. Long Each \$96.95‡
(4-Lamp—Rapid Start)

Units are fused for ballast protection.

*Holophane Trade Marks. ‡Prices slightly higher West of the Rockies.

Note: Eight ft. additional sections available for making continuous runs.

Benjamin Commercial Fluorescent Lighting Units

Listed By Underwriters' Laboratories, Inc.

"Catalina" Series (CT)

Shallow designed units for soft, well diffused illumination in offices, schools, stores and other commercial areas.

Louvers are injection molded, polystyrene with 1/2"x1/2"x1/2" cells which provide 45° shielding. The D-shaped side panels of semi-tubular, translucent extruded plastic are chemically welded to the louver to form the unit enclosure.

Units are supplied pre-wired; finish is white baked paint enamel. Over-all width of twin-lamp unit, 13 1/8"; 4-lamp unit 16 1/16". Over-all depth of unit is 4"; but apparent depth is 3 1/2".

Individually packaged units (less suspensions) are listed; complete lines are also available. For units with a 24" rigid stem canopy suspension add suffix "S" to unit number. Suspensions regularly supplied with "S" suffix units are: on 4' units, a twin-stem type at \$4.06 additional; on 8' units, two single-stem type (with sliding hanger and 2" leveling adjustments) at \$6.08 additional. Suspensions with swivel stems also available, as well as top reflectors for ceiling mounted units. Prices on request.

Special sliding or non-sliding type canopy stem suspensions are available; as are "Top Reflectors" for use in surface mounted units; data on application.

"Officer" Series (VL)

Units listed have one-piece injection molded plastic louver sections, with 1/2"x1/2"x1/2" cells, which provides 45° shielding.

Individual units below are listed with canopy stem suspensions; complete runs also available. Units supplied prewired; finish is white baked paint enamel. Over-all length is 4 ft. 5 3/8 in. for single length 40-W; 8 ft. 7 in. for double length units. Length of 96 in. Slimline unit is 8 ft. 5 1/4 in. Depth is 5 1/2 in. Over-all width is 10 1/4 in. for 2 and 3-lamp; 16 1/4 in. for 4-lamp unit.

Incandescent inserts for highlighting are available.

"Capri" Series (SC)

A luminous indirect, exceptionally shallow unit designed to meet present day school-lighting practice; also provides well diffused light for stores, offices, etc. Designed for pendent mounting. Translucent polystyrene plastic side panels are easily removable for cleaning; bottom is vented to minimize dirt accumulation. Individual units with canopy stem suspension are listed; complete runs also available. Units are supplied prewired; finish is white baked paint enamel.

*Listed for 110-125V. 60 cycles; other voltages available.

†For 40-W preheat units with FS-40 non-blinking, manual reset starters, drop "RS" from number and add suffix "W"; also \$0.65 per starter. For preheat units with standard FS-4 starters, drop "RS" from number and use 40-W R.S. price.

▲Slimline units have "series-type" ballasts. To specify add "lead-lag" to number and \$5.75 to 2 or 3-lamp and \$11.50 to 4-lamp unit price.

Lamps are not included with units on this page. All 8', 40W. R.S. units are two units in tandem.

Benjamin 12-Inch Width Recessed "Trofferlites"

Listed By Underwriters' Laboratories, Inc.

A complete line of recessed troffers—outstanding for their versatility of surface brightness, high light values, efficiency of operation and low maintenance cost. A feature of the Benjamin line is "Multi-Vent" which provides both light and air conditioning from the same unit—see data below. Units may be mounted individually or in continuous rows to form almost any pattern. Individual units with end caps are listed. For continuous runs with necessary fittings change 4 or

8 in suffix (which indicates length of unit in feet) to desired line length in multiples of 4 feet. Price will vary somewhat as compared to equal footage in individual units. Steel housing, reflector, and end caps are finished white baked paint enamel. Reflector may be quickly removed for access to ballast and wiring. Benjamin adjustable or stationary incandescent downlights may be inserted in continuous lines for "high lighting." Lamps are not included with the units.

Standard "Trofferlites"—Louvered, Baffled, Enclosed and Open**

With 45° x 45° Plastic Louver

Units listed have flange trim and two hangers (No. T-102-B), for steel channel furring. Troffer depth is 6".

Open troffers have 45°x45° polystyrene plastic louvers with 1/2"x1/2"x1/2" cells. For troffers with 31°x31° steel louvers, drop "P" from number and deduct \$4.13 and \$8.27 from price of each 4 ft. and 8 ft. unit respectively. For troffers with steel baffles, replace "LP" in number with "B" and deduct \$8.35 and \$16.69 from price of each 4 ft. and 8 ft. unit respectively. For troffers with open housing, replace "LP" in number with

"O" and deduct \$10.30 and \$20.59 from price of 4 ft. and 8 ft. unit respectively.

Enclosed troffers have a deluxe hinge with a concealed depression latch; hinge may be installed on either side of housing. Units with "Reglex" glass covers listed; a wide variety of glass and plastic panels and specialized lenses also available.

"Multi-Vent Trofferlites"—Louvered, Baffled, Enclosed and Open**

With "Reglex" Glass Cover

These troffers provide both light and air conditioning from the same unit. The air diffuser is completely built into and concealed within the fixture and air may be led from the ducts directly into the fixture thru "Multi-Vent" flexible tubing. Uniformity of temperature is assured since the "Multi-Vent" distributes air using the unique pressure displacement principle instead of high velocity injection.

"Multi-Vent" components for these units are supplied by Pyle National Co. and are as follows: Diffuser Pan (No. MVB); Collar (No. MVC-5); and Hose (No. MVII-5). Except for the air-conditioning feature, these troffers are similar in construction to standard Benjamin troffers. Depth is 7 1/16 in. Enclosed units have a vented cover frame for air passage.

Benjamin Translucent Lighting Systems With or Without Acoustical Baffles

Listed By Underwriters' Laboratories & Approved By Factory Mutual Laboratories

Provides modern, attractive lighting for offices, stores and classrooms. Any room can be converted into a visual environment second to none with this wall to wall plastic diffuser. (3 ft. x 3 ft.) plastic sections supported by a framework of standard "V" shaped channels and finishing strips form the basis of the system. The framework is in turn suspended from the ceiling by rod assemblies which may be used with all common ceilings. Panels and louvers are interchangeable, or may be used in combination.

In rooms with dimensions that are not multiples of 3 ft., it is necessary to cut some of the louvers or panels and supporting channels to size. Louvers or panels are easily cut with scissors, and channels with a hacksaw. Finishing strip comes in 6 ft. lengths and is fastened to walls.

Material—Translucent, white vinylite which is odorless, non-toxic and will not distort or shrink due to water absorption. It is highly resistant to most common chemicals and does not support combustion—de-staticized, at the time of manufacture.

Panel-Glo Panels—Panels are either corrugated or Safari design. They are specially constructed for use in rooms using air conditioning and sprinkler systems so as not to affect their operation.

Sky-Glo Louvers—The 2 in. x 2 in. x 2 in. louver vanes provide 45° shielding.

Square-Foot Ordering—Systems with or without lighting equipment can be ordered under one catalog number for square or rectangular areas. The necessary panels, or louvers, lighting equipment (if ordered), and suspension parts are included. The quantity supplied is based upon an installation centered in the room.

Benjamin "Striplites" without reflectors are supplied with each complete system. Where conditions permit, continuous rows of 16 ft. strips spaced on 3 ft. centers are used. For this spacing, the distance from the bottom of the lamp to the top of the panel should be at least 22 in. with "Panel-Glo" and 28 in. with "Sky-Glo." The 16 ft. length is made up of two 8 ft. channels using 96 in. slimline lamps. Lamps operate from a twin lamp ballast located in one of the channels. Where space does not permit 16 ft. lengths, 4, 6, or 8 ft. strips will be supplied.

"Sky-Glo"

Corrugated "Panel-Glo"

"Safari Panel-Glo"

Acoustical Baffle

A perforated, metal housing filled with a sound-absorbent glass fiber for use with either the "Panel-Glo" or "Sky-Glo".

Price Per Square Foot*

	With Lighting	Less Lighting
"Sky-Glo" systems.....	\$2.96	\$2.18
"Panel-Glo" systems.....	1.72	.94

*Multiply adjusted length times width times the price per sq. ft.

**Ordering By The Square Foot
(For Rectangular and Square Rooms)**

This method is based on a 4-part catalog number that includes all necessary ordering information for an entire room-size system, either with or without lighting equipment. This catalog number is easily put together by the person estimating or laying out the installation:

1. First specify the type of ceiling desired by use of the following code letters: "L" for Sky-Glo louver, "P" for Panel-Glo corrugated panel, "P3" for Panel-Glo Safari panel, "FL" for Sky-Glo with Striplite, "FP" for Panel-Glo corrugated with Striplite, "FP3" for Panel-Glo Safari with Striplite.
2. Next give actual room length and width in feet if already multiples of 3 ft.; or actual room length and width raised to next larger multiples of 3 ft. ("adjusted" room dimensions).
3. Next indicate the type of rod support by use of the code letters: "S" for ceiling strap rod suspension, "T" for toggle head rod suspension.
4. Final digits of the number will be the length of the suspension rod required—in inches.

For irregularly shaped room systems or systems with Acoustical Baffles, write and state requirements.

All-Brite Fluorescent Fixtures

Aerolouve — Direct-Indirect

This new luminaire combines high efficiency with adequate shielding. Outer fins of smooth, translucent, extruded polystyrene plastic, are held by slots in lower blades.

Full-length louver provides 30° x 30° shielding, is held in place by self-aligning, captive catches and is secured to the case with chains for ease of servicing.

All parts are precision die formed from heavy cold-rolled steel, primed with All-Brite 57X rust-resistant Crycoat process, and electrostatically finished in high reflectance Formula 44X baked white enamel.

For end-to-end mounting use No. 31-31 wireway joiner.

California — Luminous-Indirect

This luminous indirect fixture is a new contemporary design of singular beauty and high efficiency, yet with low brightness, which makes this unit ideal for highest quality illumination.

Destacised 18-in. wide white plastic panels slide out for easy cleaning or relamping.

Crycoat rust-resistant prime and the electrostatically applied baked white enamel provide a finish that is durable and of the highest reflectance.

Use Joiner No. 31-31 for full wireway coupling.

Unit is designed for suspension mounting only. Standard suspension is 24-in.; minimum is 18-in.

Prices shown do not include hangers.

Corsair — Direct-Indirect

Series 74 (Albalite Bottom) and Series 84 (Louver Bottom)

The standard glass bottom and side panels are Corning Albalite. Bottom enclosures are hinged separately for easy maintenance.

Metal louver has 35° x 30° shielding. To order louvers change Series No. to 84 (i.e. 84248).

Use No. 84-31 joiner for full wireway coupling.

Matching spotlights are available for accent merchandising.

Units are available with 2, 3 or 4 lamps, in 4-, 6- and 8-ft. lengths, in fluorescent, rapid start or slimline.

Constellaire — Direct-Indirect

Series 35 (Albalite Bottom) and Series 45 (Louver Bottom)

Features extruded, internally ribbed, externally smooth, D-shaped, luminous polystyrene plastic side panels.

Metal parts are precision die formed of heavy cold-rolled steel, primed with All-Brite 57X rust-resistant Crycoat process, and electrostatically finished in high reflectance Formula 44X baked white enamel.

Standard glass bottom is Corning Albalite.

Plastic louvers 35° x 30° also available. To order louvers change Series No. to 45 (i.e. 45248).

All-Brite Fluorescent Fixtures

Bare Tube Fluorescent and Slimline Units

Channelite — Direct

Inexpensive series ideally suited for cove, window, show-case valance or other types of strip lighting.

Incorporates many features of higher priced types of units, which result in simplified and more durable installations.

All metal parts are precision die formed of heavy cold-rolled steel, primed with All-Brite 57X Oakite Cryscocast rust resistant treatment and finished in Formula 44X electrostatically applied baked white enamel.

All single lamp units 37-in. and less have three 1/2-in. k.o.'s in the back of case. All other units have two 1/2-in. and two 3/8-in. k.o.'s in back, and a 3-in. k.o. in center of back.

Easily nippedled together for continuous runs.

For rapid start operation on 48-in. units, add suffix RS.

No.	Lamps-In.	Lgth., In.	Width In.	Wt. Lbs.	Each
25118LFP	1-18	19	2 7/8	3	\$ 3.30

25296	2-96	96 1/16	3 1/2	30	26.25

*Two lamps end to end operated by one ballast.

Skipper — Direct-Indirect

Sturdy, functional open-tube lighting unit. Embodies many of the features of higher priced units yet costs very little more than strip lighting.

Completely fabricated from heavy cold-rolled steel with 57X rust-resistant primer and high reflectance baked white enamel.

For continuous runs, use joiner #31-31.

Units may be directly surface mounted by means of 2 All-Brite "speed-easy" flush-mounting brackets #FM-205.

For pendant mounting use single stem hanger #105 or double stem hangers #290.

For rapid start operation on 48-in. units, add suffix RS.

No.	Lamps-In.	Lgth., In.	Width, In.	Wt. Lbs.	Each
41248HFP	2-48	49 9/32	12 1/32	19	\$14.74
41448HFP	4-48	49 9/32	12 1/32	25	24.49

Litemaster — Direct-Indirect

Slim, streamlined, has wide acceptance for general interior application. With lead-lag ballasts (slightly higher prices), may be used beneath service station canopies and similar semi-exposed installations.

Fabricated of heavy cold-rolled steel with rust-resistant primer and high reflectance baked white enamel.

Surface or pendant mounting.

Use All-Brite double stem #290 for 4-ft. units; single stem #105 for 6- and 8-ft. units.

Use joiner #59-31 for full wireway coupling of runs of units.

Single lamp spotlight (#59SP) available for Series 59, both single lamp (#69SP) and double lamp (#269SP) spotlites available for series 69.

Aerolite — Direct-Indirect

New, exceptionally slender design of the slimline open tube units. Features high efficiency and adaptability to a wide range of applications.

Die formed of heavy cold-rolled steel finished in All-Brite Formula 44X baked white enamel, electrostatically deposited over rust-resistant Cryscocast primer.

Joiner #31-31 provides an open wire-way for end-to-end mounting.

Spotlite #21SP, adjustable 30° vertical and 360° horizontal, for end or center of run (specify).

All-Brite Fluorescent Fixtures

Area/Liter — Ceiling Mounted

Area/Liter follows latest trends in good lighting towards selected luminous areas . . . with new comfort, new beauty, and new versatility.

Low-bright luminous areas provide freedom from glare, wide distribution of light and relief from monotony.

Plastic diffusing panel of the Area/Liter is more than twice the usual area, greatly reducing brightness without cutting fixture light output.

Textured, feather-like plastic diffusing panel is matte-finished, does not pick up reflections.

Area/Liter is a self-contained, fully enclosed unit, completely wired, and can be mounted individually or easily joined end to end and side by side to form luminous areas, patterns, or rows.

Simple, rugged die-formed construction throughout, Area/Liter is a standardized fixture with custom-styled appearance.

Grid Modu/Liter

A New Concept in Grid Fixture Construction and Design

One piece roll formed body with clincher type back provides greater rigidity, more efficient distribution of light, less maintenance and greater ease of handling.

Exclusive built-in handles permit easy one man installation.

All fixtures treated with Crysoat rust inhibitive coating prior to painting.

All units approved by Underwriters Laboratories.

The Grid Modu/Liter is available with feather-like textured plastic diffusing panels, Corning Albalite, clear Skytex glass panels, or sturdy 30° x 30° steel louvers.

Basic units furnished in 2- or 4-ft. lengths in 2, 3 or 4 lamp models.

These fixtures are for use with grid type suspended ceiling with rail spacing of 24-in. x 24-in. or 24-in. x 48-in. center to center. Specify ceiling system being used when ordering.

All-Brite Fluorescent Fixtures

Astralouve — Direct-Indirect

This exceptionally shallow fixture combines beauty and economy. Its smooth side panels of translucent polystyrene snap into rigid steel supports. (Metal sides available at same price, add suffix M.)

All parts precision die formed from heavy cold-rolled steel, primed with All-Brite 57X rust-resistant Crysocoat process, and electrostatically finished in high reflectance Formula 44X baked white enamel.

Louver provides 35 x 35 shielding, is held in place by a self-aligning, captive catch, and is suspended with safety chains for ease of relamping.

New Dean — Direct-Indirect

This slender luminaire features illuminated all-metal side panels, low brightness and high efficiency. Particularly adapted to installations requiring thin fixtures and all-metal construction for durability.

Louvers provide 35° x 35° shielding, and are held in place by self aligning captive latches which are suspended on sturdy safety chains.

Units may be surface mounted directly or by means of FM-205. Use #290 double stem hanger for 4-ft. units, and #105 single stem hangers for 6- and 8-ft. units.

For end-to-end mounting use #31-31 wireway joiner to provide full wireway coupling.

For totally direct lighting, add suffix CT.

For rapid start operation, add suffix RS.

Silvray Fluorescent Lighting

Listed by Underwriters' Laboratories, Inc.

Visionaire

No. 41-L

A compact, precision-made fluorescent lighting unit designed for wall mounting, either individually or in continuous rows. Designed to be used either in normal or inverted position in portable or permanent installations. A new lighting concept with 1001 commercial and residential applications including cove lighting, supplementary overhead lighting, beam lighting, work counter lighting, and reception room lighting. Made in three sizes for either 20 watt, 25 watt or 40 watt fluorescent lamps. In its normal position, it provides a semi-indirect light distribution with 70% of the light directed upward and outward from the fixture, and the remainder directed downward through a louvered opening in the bottom of the reflector. Made of heavy gage steel channel containing ballast, lampholders and starter sockets. Units are finished in baked white enamel.

No.	Lamp Size	Length Inches	Width Inches	Height Inches	Each
21-L	20 W	24 ⁵ / ₁₆	6	3 ³ / ₈	\$19.25

41-O*	40 W	48 ³ / ₁₆	6	3 ³ / ₈	21.50

L—Metal slot louvered side panel and furnished with plastic brightness modifier.

O—Opaque metal side panel.

*Rapid Start Ballast available. Designate by suffix "RS" and add \$1.80.

Call Graybar FIRST For ...

Silvray Fluorescent Luminaires

ILC System

For High Output R.S. Rapid-Start Fluorescent Lamps

Uses two separate lampholder channels mounted parallel and joined at their ends by a lateral enclosure which houses the ballast and lampholders and provides connections for the supporting hangers.

Each lampholder channel consists of two roll formed hollow members which serve both as structural members and as a raceway for lampholder leads and line wires.

Provision is made for either individual or continuous row installation. Units have plastic panels.

Has baked white enamel finish.

No.	Lamps	Hanger Spacing In.	Shp. Wt. Lbs.	Each

Hubbell Jackrabbit Fluorescent Starters

No. FS-4

No. FS-40

No. FS4-NA

New ceramic condensers — hard as a rock and just as indestructible — assures longer starter life and uniform top performance under all operating conditions.

Operation unaffected by high humidity at either high or low temperatures. Will not melt, burn, char, or disintegrate. Resists heat and cold. Gives greater uniformity, and is smaller in size.

The Neostart, Nos. FS-2 and FS-4, is a glow discharge type of starter particularly suited to withstand the continued punishment resulting from lamp failure.

The Autoset-Automatic Reset, No. FS-4NA, provides the time-saving economy of automatic reset operation, effective under conditions involving low line voltage, ungrounded fixtures, etc.

-----------------	---------	---------

Ten in a carton; 100 in standard package.

Turret Type

No. 502X92

No. 95X936

These lampholders offer a wide scope for fluorescent applications in industrial or commercial lighting fixtures. Sturdy, all-metal construction. Have built-in starter sockets and holes for guiding leads to connection screws.

Easily mounted on any flat surface with two No. 8 mounting screws (Screws not furnished). Can also be mounted back-to-back for continuous lighting.

New lamps can be inserted and old lamps removed by depressing the face of either Turret lampholder with one end of the lamp until the other end clears the opposite face. Lamps are held securely and will withstand all normal jars, shocks and vibration.

For each twin lamp installation use two each of No. 502X92 or two No. 95X934 or one 95X935 w/one 95X936. For each triple-lamp installation use one 502X8 w/a 504X61 (which has one internal shunt) or use two 502X8 and make external shunt and use a two lamp ballast and a single lamp ballast.

For Lamps:

Watts—14, 15, 20, 25, 30, 40.
Length—15, 18, 24, 33, 36, 48-in.
Diameter—1, 1½-in.

G-E Slimline Lampholders

For Fixture Mounting

No. 502X21 No. 502X22

Butt-On Type

A small, sturdy and compact lampholder set. Designed to accommodate the T-6, T-8, or T-12 slimline lamps. Made of white urea. The protected, but easily accessible terminals permit quick and economical wiring. The sleeve nuts provide square, rigid mounting

not ordinarily found in bracket supported lampholders.

Internal telescoping of the cylinder in the high-voltage end provides additional security in relamping. Sleeve nuts for No. 6-32 screws are rigidly fixed to the sturdy ear mounting flange of the lampholder, to a spacing of 1 5/8 in. This spacing assures a square, permanent alignment on the fixture. Lampholders may be mounted to Lamp length—plus or minus 1/16 of an inch.

For Lamps:

Diameter—3/4, 1, 1 1/2-in.
Type Bulb—T-6, T-8, T-12

Rating: 660 Watts

No.	Description	For Lamp Length, In.	Voltage	Per 100
502X21	Low-Voltage End	42, 48, 64	250	\$56.50
502X22	High-Voltage End	72, 96	1000	79.00

Ten in a carton; 100 in standard package.

No. 502X7

No. 502X6

Twin Turret Type

This lampholder simplifies and speeds relamping. It eliminates the hazard of falling lamps; simplifies fixture design; provides 5-inch center spacing between lamps, and is built to withstand hard usage.

New lamps inserted and old lamps removed by depressing with lamp ends the movable molded parts in face of high-voltage Turret. Opposite end of lamp is then easily swung into position and held securely in place.

All-metal construction; white enamel finish.

Keyhole slots in mounting bracket provide easy mounting on any flat surface. Distance between centers of keyhole slots 4 3/4 inches.

Elongated wire holes guide leads to identified binding screws.

For Lamps:

Length—42, 48, 64, 72, 96-in.
Diameter—3/4, 1, 1 1/2-in.
Type Bulb—T-6, T-8, T-12

Rating: 660 Watts

No.	Description	Voltage	Per 100
502X7	Low-Voltage End	600	\$202.50
502X6	High-Voltage End	1000	226.00
*502X46	Low-Voltage End	600	202.00

*With 4 terminals. No internal shunt.
2 in a carton; 20 in standard package.

Triple Turret Type

No.	Description	Voltage	Per 100
502X47	Low-Voltage End	600	\$215.00
502X48	High-Voltage End	1000	271.00

G-E Slimline Lampholders

For Fixture Mounting

No. 502X63 No. 502X64

Plastic-Large Type

Accommodates all T-6, T-8 and T-12 slimline lamps.

Small and sturdy. Measurements from the lamp center to the bottom of the base are the same as those found on the conventional bi-bin fixture-type lampholder.

Lampholders can be spaced so that the center of one lamp to the center of adjoining lamp is slightly less than 1 1/2 inches.

All molded parts are white urea. Binding screws are located in underside—slots for standard No. 8 nuts are located in the front of the base.

For Lamps:

Length—42, 48, 64, 72, 96-in.
Diameter—3/4, 1, 1 1/2-in.
Type Bulb—T-6, T-8, T-12

Rating: 660 Watts

No.	Description	Volts	Per 100
502X63	Low-Voltage End	250	\$42.00
502X64	High-Voltage End	1000	46.00

Ten in a carton; 100 in standard package.

G-E Fluorescent Lamp Starter Sockets

Medium Base Type

No. 78X769

No. 95X299

For use where starter is located at a distance from lampholder. Height of starter socket can be varied by using spacer No. 78 X 770. No. 95X299 is a companion device to 'butt-on' type

lampholders. No. 78X769 furnished with 1-in. mounting screws. No. 95X299 requires two No. 4 screws (Screws not furnished).

Made of black Texolite.

Rating: 660 Watts, 250 Volts

No.	Description	Per 100
78X769	For 2-Contact Starters.....	\$23.00
95X299	Butt-On Type; With Two 6-in. No. 18 A.W.G. thermo plastic insulated wire leads, stripped 3/4-in. For 2-Contact Starters.....	23.00

Ten in a carton; 100 in standard package.

G-E Fluorescent Lamp Starter Sockets

Mogul Base Type

No. 95X180

For use where starter is located at a distance from lampholder. Two No. 6-32 mounting screws 1 3/8-in. long furnished with each device.
Made of black Texolite.

Rating: 660 Watts, 250 Volts

No.	Description	Per 100
95X180	For 2- and 4-Contact Starters.....	\$39.50

Ten in a carton; 100 in standard package.

G-E Slimline Lampholders

No. 95X671

Showcase Type

Especially adapted for narrow channel lighting.

Sturdy white plastic. Holds lamps securely in position. Has single mounting hole for No. 8 screw (Screw not furnished). Binding screws conveniently located under back cover.

No. 95X683

No. 95X672

No. 95X670

One 95X671 lampholder and one 95X672 or 95X683 should be used for each lamp. Also one 95X670 bracket for each lampholder.

No. 95X670 has trigger ejector for easy lamp removal or insertion, even in extremely narrow channels.

No. 95X670 bracket for mounting holder to reflector meets Underwriters' Laboratories requirements (One should be used with each lampholder).

For Lamps:

Length—42, 64 in.
Diameter— $\frac{3}{4}$ in.
Type Bulb—T-6

		Rating: 660 Watts	
No.	Description	Volts	Per 100
95X671	High-Voltage End.....	1000	\$81.50
95X672	Low-Voltage End, With Lamp Ejector.....	250	110.00
95X683	Low-Voltage End.....	250	88.00
95X670	Bracket Only (one for each Holder).....	11.00

Ten in a carton; 100 in standard package.

*Losses and power factor are given at rated lamp watts input and nominal voltage rating of 118 volts.

†This ballast is not suitable for portable-lamp applications, as the open-circuit voltage (151 volts) is in excess of that

permitted by the National Electric Code for portable devices.

†Operates two lamps in series.

◇Lead-lag.

#Trigger-start ballast, no starter required.

Jefferson Indoor Mercury Lamp Ballasts 60 Cycle

No. 233-901

Mercury lamps are being accepted as the modern way of lighting factories, warehouses, mills, offices, drafting rooms, exteriors, etc., as they give double the luminosity at the same power cost, or give equal intensity at one-half the power cost.

Available for 100, 250, 400, 700 and 1000 watt mercury lamps. Dual lines of transformers are available for 1000 watt mercury lamps. All transformers are equipped with knockouts, have color coded and tagged leads, sturdy mounting brackets and extra roomy wiring compartments which are readily accessible. Heavy gauge steel cases are finished in baked enamel.

Skylike Incandescent Luminaires

No. W5300

No. S5301
Pendent

No. W5301

5300 Line

Designed for either recessed or pendent installation. Surface installations may be accomplished by use of a surface mounting enclosure.

All fixtures in this group employ a basic reflector designed to afford the most effective utilization of silvered bowl lamps. The difference between the three types lies in the shielding and diffusing devices.

The No. 5300 units are equipped with a delicately formed concentric ring louver of five 20 gauge narrow steel bands.

The No. 5301 units consist of a circular panel of bent glass approximately 18-in. in diam. Glass is lightly etched over-all and has superimposed design consisting of concentric enameled bands.

Skylike Lighting Fixtures

Louvered Incandescent Lighting Systems—Prewired

50 Series With Metal Eggcrate Louver

**Type A
24-In. Square Units**

Skylike 50 Series louvered units are for general lighting requirements in stores, offices, classrooms, auditoriums, gymnasiums and all similar applications requiring soft, well diffused light with minimum fixture maintenance.

Standard 24-in. reflector and its accessories permit use of 150, 200, 300 or 500 watt silvered bowl lamps.

Installations may be fully recessed, semi-recessed, surface mounted or suspended.

Reflector is die-formed from 20 gauge electrolytically zinc coated steel. Louver formed from 22 gauge steel in 1-in. grid and enclosed in 20 gauge steel outer frame.

All units wired and include side-connection junction box as an integral part of the mounting yoke. Junction box is Underwriters' Laboratory approved for "feed-thru" connection of low temperature building wires for 150, 200 and 300 watt lamps. For 500 watt lamps, connections to junction box require wire rated at 75° C.

Available with aluminum bulb guard for gymnasium lighting and auxiliary medium base socket accommodating up to 25 watt lamp for night lighting.

Complete Wired Unit with Plaster Frame

No.	Silvered Bowl Lamp Size	Each

RP5002A	200	30.05
RP5003A	300	30.05
RP5005A	500	30.05

Note: For data on recessed acoustical, semi-recessed, or surface mounted assemblies contact GRAYBAR.

50 Series With Plastic Diffusers

**Type B and Type C
24-In. Square Units**

8 Panel Plastic Diffuser

One Piece Plastic Diffuser

Available with two types of plastic diffusers. They are of approximately equivalent lighting characteristics as both are formed from the same material.

May be used with 150, 200 or 300 watt silvered bowl lamps. Reflector is die-formed from 20 gauge electrolytically zinc coated steel.

Type B plastic diffuser consists of 8 panels of injection molded styrene supported in a steel frame forming a grid of 8 panels.

Type C plastic diffusers consists of one piece styrene diffuser dropping slightly below reflector flange and having a concentric square pattern. A metal frame supports the panel.

Installations may be fully recessed, semi-recessed, surface mounted or suspended.

Junior Skylike 70 Series

With Metal Eggcrate Louver or Glass Diffuser

14-In. Square Units

Metal Eggcrate Louver

Glass Diffuser

General purpose lighting unit having both commercial and residential application. Designed for 75, 100 or 150 watt silvered bowl lamps.

Reflector is die-formed from 20 gauge electrolytically zinc coated steel. Louver formed from 22 gauge steel in 1-in. by 1-in. grid and enclosed in 20 gauge steel outer frame.

Standard glass diffuser is lightly stippled high transmission tempered glass enclosed in sturdy steel frame.

Wired complete with 4-ft. flexible conduit and AF wire. Installations may be fully recessed, semi-recessed or surface mounted.

Available with medium base socket accommodating 7½ watt lamp for night lighting.

Litecraft Decorative Lighting

For new buildings, redecorating or remodeling, here are a few decorative lighting designs.

Available in a wide selection of designs to meet almost any requirement. Our custom design department is prepared to

submit drawings and suggestions for special applications.

Functional, fashionable, flexible—suited for almost every residential, commercial and institutional application—modern or traditional. They perform efficiently and relamp quickly.

Litecraft Concentric Rings

Designed for use with silvered-bowl lamps. Assures wide-spread glareless indirect light. Non-twist pendant units have earthquake-proof swivel aligner and stemlok socket cap that saves installation time. Finishes dual-sprayed and baked twice at 375° F. UL Approved. Made and wired by IBEW-AFL craftsmen.

Silvray Lighting Fixtures

Silvered Bowl Incandescent Lighting

No. 1500S/3R/2 and No. 1500/3R/2

Combines unique functional simplicity of design, high efficiency and great flexibility of application. When used with the silvered bowl lamp it is the ideal solution to the critical lighting requirements of schools, offices, libraries, drafting rooms and all other areas in which close visual work is performed. When used with silvered bowl lamps the light distribution is totally indirect.

"1500 Line" Specifications

Ring assembly is formed from 20 gauge steel with seamless weld; bonderized and finished in two coats baked white enamel. Pendant unit suspension has 45° non-twist swivel and threadless husk connection; bonderized and finished in baked Silclad process (satin aluminum). Ceiling units have satin white enamel canopy and Silclad husk. Standard Package — 1 unit.

Silvered Bowl Incandescent Lighting

Nos. 207PL/5 and CPL/5

Distribution Curve No. 207PL

Indirect luminaires with translucent plastic basins designed for use with the silvered bowl lamp. The luminous plastic basin is approximately of the same order of brightness as the lighted ceiling. These fixtures combine high efficiency, balanced brightness and pleasing design. Recommended for schools, offices, libraries, drafting rooms and similar areas where critical and prolonged visual tasks are involved. Fixtures have a "non-twist" locking device which prevents twisting or rotation of stem and wires when inserting or removing lamps. Hangers are finished Silclad Satin Aluminum.

Silvered-Bowl—3500 Line

Totally Indirect or Direct-Indirect Lighting

Two shielding rings are formed from one piece in this compact new design. Spoke-like members connect and join the two shielding rings. When used with silvered bowl lamp, the light distribution is totally indirect.

The addition of a specular aluminum reflector and concentric shielding louver, placed inside the inner ring of the fixture, changes light distribution to direct-indirect.

Both types available in the Silclad finish or in several decorator colors.

Totally Indirect Units

No.	Silvered Bowl Lamp Size	Type of Suspension	Overall Height In.	Overall Diam. In.	Wt. Lbs.	Each

Silvray Incandescent Luminaires

The Pendant Silverspot

Offers a means of providing supplementary or special effect lighting where structural conditions preclude recessed or close ceiling mounted lighting elements.

Color impregnated reflectors in red, blue or daylight blue, or gold may be substituted for the standard polished aluminum reflector.

The part of the pendant unit which encloses lighting element is formed in two parts from aluminum. The standard finish is satin aluminum, but the unit is available in enamel colors in blue, gold, red and black.

Pendant hanger furnished in two sections joined by specially designed coupling.

With Coupled Stem, Canopy and 45° Universtical Swivel Aligner Standard Aluminum Finish

For exterior color finish, add.....\$1.20

Wakefield Incandescent Luminaires

Commodores

Manufactured in a complete series for wattages from 200 to 750 watts. Hangers and reflectors are similarly styled, so that an installation requiring units which utilize various sizes of lamps and reflectors will have complete uniformity of appearance.

Hangers are made of steel with metallic satin finish. Reflectors made in diameters from 15-in. to 23-in. varying in wall thickness to assure uniformity of brightness for various lamp sizes.

Provide excellent semi-indirect or luminous indirect illumination for offices, drafting rooms, classrooms and other interiors where quality incandescent lighting is desired.

Graybar Lighting Fixture Glassware

Direct Lighting

Enclosing Units

Series No. G-830

A well designed Stalactite shape, ideal for high bay, corridor or hallway lighting. Has an unusual lateral distribution of light.

Made of distinctive type of opal glass. Single layer homogeneous construction, with a mere suggestion of bluish pigment to avoid the monotony of a flat white glass.

No.	Depth, In.	Diam. In.	Fitter, In.	Wattage	Std. Pkg.	Approx. Wt. Std. Pkg. Lbs.	Each

†Specify either 6-in. or 8-in. when ordering.

Graybar Lighting Fixture Glassware

Direct Lighting

Enclosing Units

A well-balanced series of enclosing units for direct lighting. Made of an unusual type of opal glass — single layer homogeneous construction, with a mere suggestion of bluish pigment to relieve the monotony of a flat or "chalk-white" glass. Blown to proper weight for maximum transmission of light and elimination of excessive "hot spots".

Alabax Porcelain Lighting Fixtures

Approved by Underwriters' Laboratories, Inc.

Popular for installations in private and public housing projects, hospitals, hotels, schools, residential and all types of buildings. Glistening white glaze. Available in pastel ivory glaze or rich jet black at a small extra cost. Glaze is fired permanently into porcelain, insuring lasting color.

Porcelain stays like new, will not rust, dull, peel, nor change color. Is as easily cleaned as a china plate. Fixtures are safe because porcelain is the best electrical insulation. Lamps are not supplied.

Pittsburgh High-Efficiency, Silver-Mirrored Permafectors

Where to use Pittsburgh Permafectors

Many lighting installations require a "controlled light source." The most practical and versatile light source which meets this requirement is the incandescent lamp. This is true because incandescent lamps are the closest to the ideal "single point" source.

To the desirable qualities of the lamp, add the absolute control of light direction and distribution possible with Pittsburgh silver-mirrored Permafectors and the application possibilities are almost limitless.

Key to Permafecter Catalog Numbers

The suffix numbers on each Permafecter catalog number indicate the use and equipment furnished with the Permafecter unit having that suffix.

The numbering system as illustrated below, is applied to every Pittsburgh Permafecter unit offered on this and the following page:

- Catalog Number only—for surface or pendent mounting.
- No. and suffix, 2 —for recessing with open bottom.
- No. and suffix, 4 —for recessing with hinged roundel.
- No. and suffix, 5 —for recessing with hinged louver.
- No. and suffix, 7 —for recessing with hinged roundel and housing.
- No. and suffix, 8 —for recessing with hinged louver and housing.

E-75

No. E-75 Permafecter

Application: The E-75 is a broadly distributing reflector for direct lighting service where a close spacing of low wattage lamps is employed for relatively low mounting. Combinations are available for various types of mounting and with louver or roundel bottoms.

Bottom Opening: 6 $\frac{3}{4}$ in.

diameter. Lamp size: 60W, A-19 or 75W or 100W, A-21.

No.	Each	No.	Each
E-75-GO	\$ 5.17	E-75-5	\$12.92
E-75-2	8.50	E-75-7	17.75
E-75-4	12.67	E-75-8	18.00

E-150

No. E-150 Permafecter

Application: The E-150 series is a broadly distributing reflector with considerable center concentration for direct lighting where close spacing of lamps is required. Various combinations are available for either louver or roundel bottoms. The E-150 series is also suitable for exposed service.

Recommended Spacing:

Should not exceed distance between reflector bottom and work surface. Bottom Opening: 8 $\frac{1}{2}$ in. diameter. Lamp size: 150W, A-23.

No.	Each	No.	Each
E-150	\$ 7.00	E-150-5	\$14.92
E-150-2	9.25	E-150-7	21.00
E-150-4	14.67	E-150-8	21.25

E-230

No. E-230 Permafecter

Application: Broad distribution with desirable center concentration. It is excellent for down-lighting in stores, gyms, badminton courts and other installations with low headroom.

Combinations are available with louver or roundel bottoms. May be equipped with wire guards for use in industrial plants, hangars, etc.

Recommended Spacing: Not exceeding distance between reflector bottom and working plane. Bottom Opening: 9 $\frac{1}{2}$ in. diameter. Lamp size: 300W, PS-30.

No.	Each	No.	Each
E-230	\$ 7.58	E-230-5	\$16.00
E-230-2	10.00	E-230-7	23.42
E-230-4	16.33	E-230-8	23.08

E-500

No. E-500 Permafecter

Application: A wide-utility reflector which may be ceiling recessed and equipped with concentric louver or hinged ceiling roundel.

This unit may also be enclosed in a metal housing or exposed for industrial and public space illumination. It is excellent for use above skylights.

Recommended Spacing: Should not exceed distance between reflector bottom and work surface. Bottom Opening: 11 $\frac{1}{8}$ in. diameter. Lamp size: 500W, PS-40 or 300W, PS-35.

No.	Each	No.	Each
E-500	\$16.17	E-500-5	\$24.92
E-500-2	18.25	E-500-7	34.67
E-500-4	27.75	E-500-8	31.83

No. C-201 Permafecter

Application: Excellent for ceiling recessing with flush mounting ring and concentric louver in show windows or interior displays.

Ideal for cove lighting where a narrow beam with a long "throw" is required; and for lighting through skylights in art galleries and similar public buildings. Recommended Spacing: Should not exceed $\frac{1}{3}$ the height of

the reflector bottom above the working plane. Bottom Opening: 10-in. diameter. Lamp size: 200W, A-25.

No.	Each	No.	Each
C-201-A	\$ 8.50	C-201-5	\$17.58
C-201-2	11.42	C-201-7	26.25
C-201-4	18.75	C-201-8	25.08

Pittsburgh High-Efficiency, Silver-Mirrored Permafectors

54

No. 54 Permafecto

Application: For shallow windows from 7-ft. to 10-ft. high. Also for rug racks, quotation boards, building fronts and entrances, church choirs and sanctuaries, indoor sports areas, art galleries, indirect cover lighting. This series may be external or recessed mounted and equipped with either louvers or roundels.

Recommended Spacing: 12-in. on centers. Bottom Opening: 9½ in. diameter. Lamp size: 200W, A-25.

No.	Each	No.	Each
54	\$ 7.58	54-5	\$16.33
54-2	10.00	54-7	23.42
54-4	16.33	54-8	23.42

57

No. 57 Permafecto

Application: High and very shallow windows, where the height is from 2 to 3 times the depth, or in windows where display material is placed low. Also excellent for indoor sports areas, indirect cove lighting, and similar applications. This series may be external or recessed mounted and equipped with either louvers or roundels.

Recommended Spacing: 12-in. on centers. Bottom Opening: 8½ in. diameter. Lamp size: 150W, A-23.

No.	Each	No.	Each
57	\$ 6.67	57-5	\$14.67
57-2	8.92	57-7	20.67
57-4	14.33	57-8	21.00

55

No. 55 Permafecto

Application: This series is designed for shallow windows 4-ft. to 9-ft. high, medium trim and island windows. It may also be used in interiors for illuminating racks, quotation boards, walls, fronts, entrances, as well as indoor handball, squash and tennis courts. This series may be external or recessed mounted

and equipped with either louvers or roundels.

Recommended Spacing: 12-in. on centers. Bottom Opening: 8½ in. diameter. Lamp size: 150W, A-23.

No.	Each	No.	Each
55	\$ 6.67	55-5	\$14.67
55-2	8.92	55-7	20.67
55-4	14.33	55-8	21.00

85

No. 85 Permafecto

Application: Installed flush with ceiling, this permafecto illuminates full background height without sharp cut-off. Excellent for indirect lighting from wall urns, coves, columns, and similar mountings. This series may be external or recessed mounted and equipped with either louvers or roundels.

Recommended Spacing: 12-in. on centers. Bottom Opening: 8½ in. diameter. Lamp size: 150W, A-23.

No.	Each	No.	Each
85	\$ 7.42	85-5	\$15.42

56

No. 56 Permafecto

Application: For use in high and very shallow windows, where the height measures from 2 to 3 times the depth; or in windows in which display material is placed low. Also suitable for rug racks, building fronts, church choirs, museums, and similar applications. This series may be external or recessed mounted with either louvers or roundels.

Recommended Spacing: 12-in. on centers. Bottom Opening: 9½ in. diameter. Lamp size: 200W, A-25.

No.	Each	No.	Each
56	\$ 7.58	56-5	\$16.33
56-2	10.00	56-7	23.42
56-4	16.33	56-8	23.42

99

No. 99 Permafecto

Application: The No. 99 Permafecto, when recessed mounted, illuminates the full height of the background without the sharp cut-off of the more concentrating Nos. 54, 55 and 57 Permafectors. It is also ideal for indirect lighting in wall urns, coves, columns and similar mountings. This series may be external or recessed mounted

and equipped with either louvers or roundels.

Recommended Spacing: 10½ in. on centers. Bottom Opening: 9½ in. diameter. Lamp size: 300W, PS-35.

No.	Each	No.	Each
99	\$ 8.25	99-5	\$17.00
99-2	10.67	99-7	24.08
99-4	17.00	99-8	24.08

Amplex Swivelites

Specify Amplex Swivelites for These 4 Sound Reasons

1. Double Ball Swivel

Exclusive free floating universal joint swivel. Positive finger-tip positioning to any angle. 360° hor., 170° vert.

2. Lustrous, Lasting Finish

Deluxe Satin Aluminum, infra-red baked. Will not chip, discolor or blister from heat even after long service.

3. Air Flow Ventilation

Eighty ventilating ports in base of Swivelite hoods carry off excess heat. Lamp burn cooler, last longer.

4. Adapt-a-Unit Construction

Hood easily added, removed, interchanged. Straight or curved pipe or flexible extensions installed as needed.

There's a complete line of Swivelite fixtures, Louver clips, Color clips, Color Filters for every accent and flood lighting need.

Contact GRAYBAR for complete details.

Holophane Commercial Lighting Units

Approved by Underwriters' Laboratories, Inc.

Holophane LO-BRITE* CONTROLENS* Units For In-Bilt Lighting

A recessed lighting unit used wherever uniform illumination of the work area is required. Intensive light distribution is achieved through an optical system consisting of a square reflector and a Lo-Brite Controlens with concave contour. The resulting distribution meets present-day practices of higher illumination levels and closer spacing ratios for uniformity on the work plane.

18-gauge steel housing with white enamel finish inside, baked gray enamel outside. 16-gauge steel, pearl gray finished, face plate.

No. F-1570-TS designed with lift-off top for above-ceiling servicing. FA-1560 for acoustic tile ceilings. T-1560 for JM metal tile ceilings. Units are not supplied wired.

†Medium base 6" light center lamp.

Holophane PARADOME* Lighting Units

C-5400

S-5400

The Holophane PARADOME* represents the closest approach to achieving desirable natural lighting. Has a pleasing and attractive appearance and provides visual comfort and low brightness.

Optical assembly consists of a prismatic reflector 8 $\frac{1}{2}$ -in. deep and a concave bottom CONTROLENS* 15 $\frac{1}{16}$ -in. diam., with a removable disc 7 $\frac{3}{4}$ -in. for relamping. The lower 7-in. of the reflector is enclosed in a specially designed fiber glass cover. These elements produce a semi-direct light distribution.

Ceiling-attached and suspension metal fitters are available; finished in satin chrome plate.

No.	Lamp Wattage	Max. Spacing Ratio	Dimensions, In.		Each
			Diameter	Depth	
C-5400	200† 300	1.0	15 $\frac{1}{16}$	12 $\frac{3}{4}$	\$28.80
S-5400	200† 300	1.0	15 $\frac{1}{16}$	33 $\frac{3}{4}$	33.15

Termination: C-5400—Outlet Box Strap.
S-5400— $\frac{3}{8}$ -in. hickey.

†No socket extension required for 6-in. light center lamp. Size of top canopy—8-in. diam.

Units are not wired.

Holophane In-Bilt Counterlite

Provides an unusually efficient means of producing high levels of illumination on counters or along lines of display. Unique in that it projects an oval pattern of light—narrow and widespread along the counter. Concentrates light on the display for higher illumination and greater attraction. Spill light is sufficient to take care of traffic aisles and stock shelves. Unsurpassed for "Point-of-Sale" lighting.

Semi-flush construction for partial recessing in ceiling.

Optical components, housed in a heavy gauge steel box, are a square, compound, dished CONTROLENS* and a polished metal reflector. Depressed inner lens controls almost the entire 360° of the generated light. Finish: Box—gray baked enamel; hinged face plate—pearl gray enamel. Recessed depth—7-in. Overall depth 9 $\frac{7}{8}$ -in. Face plate—15 $\frac{3}{8}$ -in. sq. Roughing box—13 $\frac{3}{4}$ -in. sq. Plaster opening 14-in. sq. Wire not furnished with units.

No. F-1814.....Each \$42.45

Holophane XTRAFICIENCY* Units

Provides "three-dimensional" controlled corridor lighting, so that this area will have high level comfortable, safe illumination conditions. Average brightness toward viewer is less than 1 candle power per square inch.

Enclosed prismatic glass refractor bowl with ceiling type fitter. Fitter consists of: a steel ceiling plate with mounting strap for a medium base socket, metal reflector, outlet box cover plate, and a steel housing 1 $\frac{3}{4}$ -in. deep with spring wire clips to support the refractor bowl.

Exterior finish—pearl gray baked enamel.
Dimensions: Depth—6-in., width—9 $\frac{1}{4}$ -in., length—13 $\frac{1}{4}$ -in.
Maximum spacing ratio—1.5.
Lamp wattage—150 (A23).

No. C-824.....Each \$15.95

*Holophane Trade Marks.

Litecraft Deluxe Pre-Wired Recessed Incandescent Lighting

Litecraft deluxe recessed fixtures combine high efficiency with easy installation and servicing. Pre-wired so that supply connections may be made with 60° wire (Type R, T, TW, etc.), no asbestos wire required.

Mounting rails included with fixture make installation extremely simple, eliminates need for plaster frame. Door-within-door construction insures no light leak regardless of ceiling condition. Spring latched, hinged, stainless steel lens frame provides instant access and assures a lifetime of trouble-free operation. Litecraft finishes dual-sprayed and baked twice at 375° F. for permanence. Union made and wired by IBEW-AFL. Underwriters' Laboratories approved.

*Use 75° feed wire on 1611-D.

Square Concentrating Models

Used where ceilings are relatively high; most jobs require the standard wide-angle units.

Square box is more easily installed than round box, and door being square permits stronger hinging, always a weak point on round doors. Finished in white enamel.

Light distribution is semi-concentrating on 1408 and 1413.

Concentrating Lens

Coloray interchangeable reflectors in red, blue or gold when ordered with unit. Add. \$0.55

Garcy Incandescent Fixtures

Recessed Unit For 300-Watt Lamp

Elliptical reflector permits wide angle light distribution from an inconspicuous source. Reflector is specular processed aluminum. Aperture plate is steel, finished baked white enamel. Four-in. extension ring with removable cover facilitates installation. Also available with concentric ring louver. Height 14 1/2-in. Requires 11 7/8-in. ceiling opening.

No. 6811 Each \$24.33

Recessed, Louvered Unit For R40 Spot Or Flood Lamp

Light beam adjustable 360° horizontally and up to 35° from vertical. Snap-in, parallel vane louver shields lamp from view and turns within housing for easy adjustment. Hinged for easy lamp replacement. Provides high level lighting for stores and other commercial interiors.

Drum housing and parallel-vane, cast louver are finished in matte black. Trim-flange is finished in baked white enamel.

No. 6815 1-R40 Spot or Flood, 150W. Each \$27.04
Plaster Frame for No. 6815. Each 1.98

Recessed Adjustable Unit For R40 Spot Or Flood Lamp

Simple finger-tip direction control. No screws or nuts to tighten. Universally adjustable Gimbal rings permit wide positioning range. Plaster Ring No. 7581 must be ordered separately if required. Exposed surfaces are finished in Garlite baked white enamel. Height 6 3/4 in. Ceiling opening 8 1/4 in.

No. 7580 Open type for 150W R40 Spot or Flood. Each \$15.69

Garcy Incandescent Fixtures

Swivel Display Units

No. 6970

For spotlighting store and window displays, lighting maps, board displays, pictures in offices, reception rooms and lobbies. Universally adjustable with full 360° horizontal sweep (with safety stop) and 90° vertical sweep.

Surface or stem mounting to wall or ceiling. Mounting strap furnished for easy attachment to outlet box stud. Open neck design provides adequate ventilation.

Listed by Underwriters Laboratories, Inc. Measures 13 1/2 in. from ceiling to bottom of surface mounted unit. Bottom shade diameter is 6 3/4 in.

Shade canopy and swivel are aluminum. The collar is steel, finished dead black. No. L6970 Louver Ring is optional where shielding is required.

No.	Description	Ship. Wt. Lbs.	Each
6970	Surface Mounting type	3	\$10.79
P6970	Stem Mounting type	4	11.88
L6970	Snap-in Louver Ring	1	2.73

Note—Standard stem length is 24 in. Other lengths available.

Recessed Drum Unit For Par 38 Spot Or Flood Lamp

No. 6809

Flush recessed drum fixture designed for high level recessed lighting from low brightness ceiling areas. Uses Par 38 spot or flood type lamps. Continuous spiral baffle ring finished in dead black to provide effective shielding at normal viewing angles. Furnished complete with socket, separable knockout box at top and wire lead in 5 ft. Green field BX. Height 10 1/8 in. Fits 8 1/4 in. ceiling opening. Plaster ring extra.

No. 6809 Recessed Unit. Each \$16.39
No. 7581 Plaster Ring. Each 1.64

Derby Downlights

Derby Downlights are compact units with all the top quality of Day-Brite equipment. They are engineered to save time, trouble and expense on installation. All units feature one-piece die-drawn bodies—no seams, no raw edges. Lip flanges cover ceiling defects and prevent light leaks. All fixtures come supplied with flexible conduit, box connector and wire leads but are shipped unwired. Derby Downlights are especially suited for window displays, marquees, stores, lobbies, soda fountains, reception rooms, murals, restaurants, canopy lighting, escalators, foyers, churches, kitchens, rathskellers, etc.

Fixed Derby Downlights are available with louvers, 6³/₄-in. Holophane Controls and deep baffles. U/L Approved.

Duo-Frame Recessed Units

One-lamp units with 8¹/₂ and 12-in. lenses. Duo-Frame construction features outer frame that fastens to box after plastering and painting have been completed. Remains in position during servicing operations by means of drop hinges mounted to inner frame. Opens easily by means of knurled captive latch screw. No tools required.

Fixtures furnished complete with porcelain sockets mounted in removable wireways, specular Alzak reflectors and quality lenses for maximum efficiency. Fixtures are shipped unwired.

Frames and outsides finished in Hammerlord aluminum with Super-White inside. Rust inhibited before painting. Conveniently located mounting holes and knockouts for easy installation and electrical connections.

Corning lensed bowl and Phoenix square bowl lenses extend below ceiling line to provide splash light on ceiling area surrounding fixtures. Creates distinctive appearance while reducing brightness contrast. (Although not listed here, Duo-Frame units are also available with vertical lamp mounting and Holophane prismatic glass reflectors instead of specular Alzak.)

Hinged Louvered Nite Lite has die-drawn recessing box of heavy gauge steel. Duo-Frame construction porcelain socket is mounted to removable steel wireway and provides concealed wiring within the unit. Uses one 25W A-19 lamp.

Litecraft Incandescent Downlights

Litecraft Hi-Hats, or downlights, are designed for installation wherever special lighting effects are desired as window displays in department stores, drug stores, reception rooms, or in homes. These fixtures are inexpensive, easy to install and take less space than ordinary fixtures.

Available in a wide variety of styles and sizes. The housings of Litecraft Hi-Hats are made of heavy-gauge metal. All finishes are dual-sprayed and baked twice at 375° F. to assure lifetime beauty of the fine finish.

D840 Shower-Lite

The heavy-duty porcelain sockets used are rated at 660 watts—250 volts. Litecrafts come wired with 4½-ft.—14G leads and are individually boxed. The gasketed D840 Shower-Lite (not wired) is ideal for weather-resistant installations. It's flashed opal lens gives widespread light distribution. All Litecrafts IBEW-AFL wired and labeled. Underwriters' Laboratories Approved. Heavy-gauge steel plaster rings available at modest cost. Specify when ordering.

Litecraft Adjustable Recessed Lighting

G502

G509

Compact, versatile and modestly priced. . . . Ideal for use as store window, counter, display or accent lighting where lighting needs change. Litecraft units are among the most flexible ever developed. Their positive-action adjusting mechanisms and neat appearance make them useful for almost any commercial or residential application.

G510

G512

The ruggedly built housings are vented for extra cool operation. Equipped with 660 watts—250 volts heavy-duty porcelain sockets, wired with 4½-ft.—14G leads. Made by IBEW-AFL craftsmen and Underwriters' Laboratories approved. Standard finishes: Satin Aluminum or White. Litecrafts are dual-sprayed and baked twice at 375° F. to assure lifetime beauty of the fine finish.

Heavy gauge steel plaster-rings available at modest cost. Specify when ordering.

Curtis Square Recessed Downlights

Curtis Square Recessed Series downlights have unlimited applications for all interiors. Units feature patented hinged steel door with no screws, nuts or hinges showing. Flush-type units mount at the ends or between sections of all Curtis Flush-type Eye-Comfort® Troffers.

Units with horizontal lamps (2400-2500 series) are supplied with socket positioned for 300-watt lamp. Units can be adapted to use 100, 150 and 200-watt lamps by repositioning the socket which automatically positions the lamp for maximum lumen output.

Units with vertical lamps (2800-2900 series) are for use with one 200 or 300-watt lamp only.

Kliegl Flush-Louver Ceiling Fixtures

No. 26 F 14

Directional reflector design with louvered ring light shields, that are efficient in performance, decorative in appearance and afford protection to lamp.

Suitable for gymnasium and other locations where this design is preferable and most practical.

Sturdy cast aluminum louvers, spun aluminum reflector with permanent Alzak finish. U/L approved.

Hinged louver permits easy access for relamping.

Completely wired with 5-ft. leads, ready for installation.

Surface mounted and suspension types of similar design also available to meet various structural conditions.

*For use in fire resistant structures only.

Kliegl Shovel Lights

No. 2175
Illuminates entire wall from ceiling to floor, evenly, without scallops. Unique reflector design projects the light through a small ceiling opening, 2½-in. x 2¼-in.

“Eyelid”, projecting only ¾-in. below the ceiling line, shields opening, and light source is practically invisible under normal viewing conditions.

With units spaced 3½-ft. out from wall, on 3½-ft. centers, lighting will be uniformly graduated with an unnoticeable high value at eye level or normal picture height. U/L Approved.

Removal of interior baffle permits straight down lighting.

Uses standard long life flood lamps. Flush center plate is removable for relamping.

Plaster ring is furnished for framing.

Reflector has permanent Alzak aluminum finish. Mounting ring is machined cast aluminum.

No.	Lamp Watts	Lamp No.	Each
2175	150	150R/FL	\$55.00

Kliegl Baffled Downlights

No. 2510

Utilizes concentrated beam characteristics of standard reflector lamps for general illumination or accent lighting.

Cylindrical ring baffles trap the side spill rays and eliminate all glare or surface brightness. Lamp cannot be seen from normal viewing angle.

Units are easily relamped from below the ceiling through light opening.

Furnished fully wired with 5-ft. leads, ready for installation. U/L approved.

Made in cylindrical form for flush inbuilt or surface mounting. Also with square housing and face plate for recessed installations.

No.	Lamp Watts	Lamp No.	Each
2510	150	150R/SP or /FL	\$21.80

Kliegl Regressed Lens Ceiling Fixtures

No. 2228

Designed for highest quality lighting. Provides direct illumination with efficiency of lens and reflector assembly, and visual effect of concealed downlight.

Gives comfortable lighting without side glare or surface brightness.

Cone supported regressed Fresnel heat resisting lens has colouvered black riser.

Spun aluminum permanent Alzak-finish reflector. Sturdy cast aluminum combination plaster and finishing ring. U/L approved.

Mounting facilities adaptable to all types of building construction.

Completely wired with 5-ft. leads ready for connections.

Hinged face plate makes relamping easy operation.

Kliegl Pin Hole Downlights

No. 2144 No. 2147
Top relamping

No. 2145 No. 2146
Bottom relamping

Small flush-type ceiling fixtures with an objective lens system and framing shutters for adjusting the beam spread and shape.

Used primarily for accent lighting. Light rays are projected through small aperture in ceiling.

Vertical models are used for lighting dining tables, game room equipment, and the like.

Angular models are generally used for lighting pictures, showpieces, and similar objects of art or decoration.

Beam may be patterned in square, circular or irregular forms to suit requirements. Easily relamped from above or below ceiling depending on design selected.

†Furnished with Plaster Ring

Kliegl Frontlights

No. 2170

Adjustable-beam downlight, mounted on circular frame with hinged front plate. Units may be rotated and tilted to direct light beam in required direction.

Designed for frontlighting a stage, floor show, spotlighting people or similar adaptations. May be focused to form a pattern with adjustable framing shutters.

Has highly efficient ellipsoidal reflector and focusable lens system.

Relamping can be done from above or below ceiling. U/L approved.

Kliegl Picture-Lighting Projectors

No. 276AA

Fitted with an optical system and four-way adjustable cut-off shutters. Permits regulation of size and shape of light beam so that illumination may be confined to any desired area or object.

Flexibly mounted in a yoke, light beam can be projected in any direction. Units are portable with suitable supports and may be placed on a table or shelf, hung from ceiling or fastened on wall.

Furnished with 9-ft. extension cord and attachment plug.

No.	Hgt. In.	Width In.	Lgh. In.	Lamp Watts	Each
276	6½	4½	7½	75-100	\$35.00
276AA	8½	6	9	100-250	41.00

Kliegl Fresnel-Lens Spotlights

No. 43N8-E

General purpose type spotlights which project a high intensity circular spot or floor beam with even field of illumination and soft diffused outline.

Spread range approximately 10° to 55°.

Has simple focusing adjustment and unrestricted directional movement.

Fully equipped with lamp holder, spherical polished Alzak aluminum reflector, heat-resisting Fresnel lens, and light-tight ventilated housing. U/L approved.

Supplied with pipe clamp mounting. Other kinds and sizes of mountings from 100 to 10,000 watts available.

No.	Lamp Watts	Lens Diam. In.	Type Mounting	Each
43N6-E	500	6	Pipe Clamp	\$26.30
43N8-E	1000	8	Pipe Clamp	64.00

Kliegl Klieglights

No. 1365 No. 1366

Projects high intensity light beam which may be patterned to any desired shape.

Particularly serviceable where illumination of area with a well defined cut-off of light is required.

Consists essentially of an ellipsoidal reflector and lens system coordinated

with adjustable framing shutters.

Reflector is spun Alzak polished aluminum. Has stepped lens with black risers held in movable mount to permit focusing.

Four-way adjustable shutters are built in the unit. Slide grooves on front hold a color frame. U/L approved.

Units is supported in a swivel yoke and supplied with pipe clamp. Other sizes and mountings are available.

No.	Lamp Watts	Lens Diam. In.	Type Mounting	Each
1365	200/500	6	Pipe Clamp	\$ 55.25
1366	1000/2000	6	Pipe Clamp	119.00

Kliegl Booth Spotlights

No. 1174 No. 1178

Dyna-beam Klieglights

Produces an exceptionally powerful beam. Used to spot or floodlight the stage from distances of 75 to 200 feet.

Mounted on roller cast-er floor stand. Fitted with step (front) lens in sliding mount; auxiliary spread lens on hinged mount; inbuilt curtain and iris shutters; ellipsoidal polished Alzak aluminum reflector; forced air ventilating system.

No. 1179 is equipped with color boomerang attached to front of unit which permits quick color changes.

Super-Klieglights

Similar in design to Dyna-beams, except they accommodate lower wattage lamps; are not equipped with auxiliary spread lens. No. 1175 is equipped with color boomerang. Super-Klieglights are effective within their working range up to 100 feet.

No.	Description	Lamp Watts	Lens Diam. In.	Each
1178	Dyna-beam	3000	12	\$619.00
1179	Dyna-beam	3000	12	823.00

*For 1/2-inch pipe.
†With 500-watt, 115-volt, G-40 bulb, floodlight service lamp.

Crouse-Hinds General Purpose Floodlights

The FLA and MUA line of general purpose floodlights were designed for lighting athletic fields of all types, parking areas, playgrounds, outdoor storage areas and service stations, suitable for 750, 1000 or 1500 watt, PS-52 bulb lamps. Can be arranged for 500 watt PS-40 bulb lamp if specified. Aluminum reflectors are Alzak finished.

Type FLA

The Type FLA floodlight was developed primarily for athletic field lighting. Because of its versatility, it is suitable for many general floodlighting applications.

The FLA floodlight can be furnished with five types of reflectors. A heat and impact resisting cover glass is sealed into the reflector.

A large hinged rear door makes relamping easy. A catch holds the door open.

Degree scales and a sight for aiming the floodlight are included.

Floodlight With FL1585 Cross-Arm Base for Wood Arm*

No.	Reflector	Dia., In.	Each
44429C	80 Degree—Etched Alzak	18	\$ 87.00
44428C	50 Degree—Etched Alzak	18	90.00

44559C†	14 Degree—Polished Alzak	20	108.00

†Use 1500 watt, G-48 bulb, floodlight service lamp.

Type MUA Elliptalux

With Porcelain Enameled Reflectors Models I and II Head

With Model II Head and Slip-Fitter Base

Wide beam auxiliary reflector is sheet aluminum with etched Alzak finish. Superimposes on the general distribution a wide beam of high intensity for lighting distant areas.

Narrow beam auxiliary reflector is sheet aluminum with polished Alzak finish. Supplies a narrow beam of high intensity having a spread of 40° horizontally by 27° vertically.

Floodlight with Cross-Arm Base*

Description	Mod. I No.	Mod. II No.	Each
Without Auxiliary Reflector	42173	44219B	\$40.00
With Narrow Beam Auxiliary Reflector	42187	44222B	47.00
With Narrow Beam Auxiliary Reflector	42179	44225B	51.00

The MUA line has two models of heads and eight different reflectors. Model II heads are especially suitable for athletic field installations. Alzak aluminum reflectors available with or without, hinged front door. All floodlights are furnished with four ft. of 2-conductor cable, except Model I heads which have pigtail leads.

Type MUA Alupalux

With Aluminum Reflector—Model II Head

Cross Arm Mounting With Model II Head

Mounting provides both horizontal and vertical degree scales for accurate setting of the floodlight during installation.

Either open style or with enclosing lens. Hinged door and lens recommended for keeping the reflecting surface free from dirt and dust, and preventing lamp breakages. Standard lens is plain; a stippled or 100° lens will be furnished if specified.

Reflector	Open Type		With Hinged Door	
	No.	Each	No.	Each
90 Degree—Etched Alzak	43909B	\$50.00	43951B	\$78.00
70 Degree—Etched Alzak	44417B	50.00	44404B	78.00
30 Degree—Polished Alzak	43910B	60.00	43952B	88.00
20 Degree—Polished Alzak	44419B	60.00	44407B	88.00

Note.—Model I Head will be furnished at same price when specified.

Type MUA Multalux

With Porcelain Enameled Reflector

Models I and II Heads

With Model I Head and Slip-Fitter Base

Designed for lighting service stations.

Wide beam auxiliary reflector is sheet aluminum with etched Alzak finish. Superimposes on the general distribution a wide beam of high intensity for lighting buildings and pumps.

Narrow beam auxiliary reflector is sheet aluminum with polished Alzak finish.

Floodlight With Cross-Arm Base*

Description	Model I No.	Model II No.	Each

**Model I head has integral cross-arm base with a single hole; clearance for ¼" bolt.

Crouse-Hinds Heavy Duty Floodlights

Heavy duty floodlights are efficient, rugged and weather-proof projectors. They are made of corrosion-resistant cast aluminum and have internal reflectors of polished Alzak aluminum.

Heavy duty floodlights are recommended for the illumination of industrial areas, railroad yards, buildings, smoke stacks, large signs and other areas.

Types ADE-12, ADE-14 and ADE-16

Medium and Long Range

Type ADE-12

Type ADE-14 and ADE-16

A clear, smooth beam lens is furnished on floodlights for PS bulb lamp unless otherwise specified. A clear, diffusing lens, plain lens and two types of spread lens, 50° and 100°, can be furnished without additional charge, if specified on the order.

Catalog numbers 44492, 42921A and 42743A cover floodlights with a special housing which provides the proper burning position for G-bulb lamps.

No.	Type	Reflector	Watts	Lamps Bulb	Each
42428A	ADE-12	Wide Beam	200	PS-30	\$86.00

42743A	ADE-16	Narrow Beam	1000	G-40	170.00

Slip fitter bases for 1¼ (except ADE-12), 1½, 2 and 2½-in. pipe available at same price. Other bases and brackets available.

Type LCE-1120

Medium and Long Range

An efficient floodlight for illumination of large areas. A clear, smooth beam lens is furnished on floodlights for PS-bulb lamp unless another type is specified. Plain, 50° spread, 100° spread and diffusing types are available without extra charge. When G-bulb lamp is used, the housing is inverted to provide the proper burning position. The standard base is flat. Other bases and brackets available.

No.	Reflector	Watts	Lamp Bulb	Each
42745	Wide Beam	1500	PS-52	\$280.00
42953	Narrow Beam	1500	PS-52	280.00
42746	Narrow Beam	1500	G-48	280.00

Color screens are available.

Types ADE-12, ADE-14 and ADE-16 are suitable for marine service on shipboard. To obtain these units carrying the U. S. Coast Guard approval, add suffix "M" to the catalog when ordering.

Types ADR-12, ADR-14 and ADR-16

Portable

Type ADR-12 With Holding Clamps

Type ADR-14 With Cable Assembly Connected

Types ADR-12, ADR-14 and ADR-16 floodlights are rugged units especially adaptable for portable use, either when a narrow beam spotlight or a wide evenly distributed beam of light is required.

Wiring Connections: Built-in weatherproof twistlock plug at rear of housing has spring door with gasket. No external cable is included with floodlights, but available as accessory.

KL9140	100 ft. cable assembly †	62.00
KL9454	Set of holding clamps complete with guide posts, screws and template	22.00

*Diffusing lens provides wide beam; plain lens provides narrow beam for long range.

†Consists of weatherproof connector to fit floodlight, 2-conductor No. 14 type SO cable, and twistlock plug.

Type LCE-24

Long Range

Especially designed for long range lighting with high wattage lamps. Furnished with a clear, plain lens unless another type is specified. Spread lenses are available without extra charge. Standard base is flat. Other bases and brackets available.

No.	Reflector	Watts	Lamp Bulb	Each
42781A	Narrow Beam	1500 or 2000	PS-52	\$380.00
42841A	Narrow Beam	1500	G-48	380.00

Crouse-Hinds Explosion-Proof Floodlights

Type RLEE-14
Class I, Group D—500-Watt

An explosion-proof outdoor floodlight designed for use in hazardous areas. The housing and door is made of cast aluminum alloy.

It is designed for conduit wiring into the base, which is also an explosion-proof junction box with a terminal block. Relamping is accomplished by unscrewing the rear door. This type is also available with carrying handles and wheel base for portable uses (RLER-14). Information on request.

No.	Description	Watts	Lamp Bulb	Each
44695	With Narrow Beam Polished Alzak Reflector	500	PS-40	\$415.00
44696	With Narrow Beam Polished Alzak Reflector	500	G-40	415.00
44697	With Wide Beam Etched Alzak Reflector	500	PS-40	410.00

Spread screen or diffusing lens can be furnished with RLEE-14 or RLER-14. Add \$20.00 list to price of floodlight.

Types RCDE-6 and RCDE-6

Class I, Group C and D

Type RCDE-6
With Wheel Base

RCDE-6 is designed for permanent installation at fixed locations.

The RCDE-6 is explosion-proof cast aluminum floodlight designed for aircraft maintenance, refueling operations and other locations where a portable floodlight is needed for use in class I, Groups C and D atmospheres. It is furnished with either a tripod or wheel base mounting.

The aluminum tubing tripod mounts the floodlight 5½ ft. above the ground when retracted and 10 ft. when extended.

When mounted on a wheel base, the floodlight is easy to handle because of its compact design and convenient carrying handle.

The RCDE-6 with tripod can be furnished to meet the requirements of Air Force-Navy Aeronautical Standard Drawing AN2580, specification MIL-F-6139. Information will be furnished upon request.

No.	Description	Each
44719	With explosion-proof junction box for permanent installation, for 150W, PAR-38 & R-40.	\$130.00
44655	With wheel base mounting, for 150W, PAR-38 and R-40 lamp	120.00
44599	With tripod mounting, for 150W, PAR-38 and R-40 lamp.	260.00

Crouse-Hinds Explosion-Proof Floodlights

Type RCDE-8
Class I, Group 200-300-Watt

Type RCDE-8
Pit Light

With Trunnion
Mounting

Designed to meet the requirements of an explosion-proof floodlight.

The RCDE-8 pit light is recommended for lighting automobile greasing pits and lifts and for general use in hazardous locations.

Crouse-Hinds Floodlights
For Pits, Tunnels, Underpasses

Type RCD-8
100—150—200 Watt
Form F for Floor Mounting

Watertight, door overlaps case; projects above concrete about 3/16 in. Door has rough pebbled surface. Has flat glass lens; heavy enough to allow it to be stepped on, impact-resisting. Available only in plain type.

No. 41427B..... Each \$60.00

Form W for Wall Mounting

Similar to Form F, except it is provided with a hinged and flush door, so that it can be set absolutely flush with concrete wall. Can also be mounted on a ceiling or wall by using brackets. Refracting lenses can be set to refract light up or down. Baked enamel finish.

Type RCD-12

200-300 Watt Multiple
1000-6000 Lumen Series

The RCD-12 was designed for multiple or series lamps. It is suitable for surface mounting or for flush mounting in concrete or stone. Tunnels and underpasses can be efficiently lighted from fixtures mounted overhead or along the sidewall. It is also suitable for lighting drives, walkways, and loading areas around industrial and public buildings, with sidewall mounted fixtures equipped with the deflecting spread lens.

The large wiring chamber is provided with four 1 1/2 in. conduit hubs. Two external hubs on sides, one internal hub on top and one internal hub on back.

Crouse-Hinds Underwater Swimming Pool Floodlights

Type SPS
For Dry Niche Mounting—500-1500 Watt

This unit is intended for pools which have a passage around the outside wall, or for installation in a manhole. The design is such that a very small manhole can be used, since it is unnecessary to enter the manhole for servicing. A 3-conductor cable is furnished with the floodlight.

In a pool with tile facing, a square bronze mask, with satin chromium plate finish, is used for covering the edge of the tile.

When concrete wall exceeds 5 3/8-in. thickness, use an extension ring listed below to provide an opening for the floodlight.

No.	Material	Description	Each
44124C	Bronze	Complete with porthole ring, door and floodlight for concrete pools.	\$270.00
44575B	Bronze	Complete with porthole ring, door, floodlight and tile mask for tile pool.	350.00
FL2633*	Sheet Steel	Extension ring, up to 16-in.	15.00
FL3265*	Sheet Steel	Extension ring, 16-in. to 24-in.	20.00

*Specify thickness of concrete wall when ordering.

Crouse-Hinds Underwater Swimming Pool Floodlights

Type RPS
500-750-1000 Watt

Underwater floodlight designed to be set in the wall of a swimming pool. It includes a flush floor box which is connected to the floodlight by a large tube. Combines the low installation cost feature of wet niche floodlights with the safety, convenience, and ease of servicing of the dry niche.

The lamp and lamp receptacle can be withdrawn from the floodlight through the tube and floor box. To assure safety in relamping, the unit is so constructed that the cord plug must be disconnected before the lamp receptacle assembly can be withdrawn.

No.	Description	Material	Each
44133C	Swimming Pool Floodlight for concrete pools	Bronze	\$560.00
44572D	Swimming Pool Floodlight complete with tile mask, for tile pools.	Bronze	650.00

Crouse-Hinds Lantern Floodlights

Type GCP-14
300-1500-Watt Incandescent
400-700-Watt Mercury Vapor

An ornamental lantern type floodlight designed for the illumination of buildings, gasoline service stations, and other places where the appearance of the lighting unit is important. The daytime appearance is that of an ornamental street lantern. At night the large, efficient reflector on the inside transforms it into a powerful floodlight. Frame is cast aluminum.

With Floodlight Reflector Slip Fitter

Note.—Can be arranged for mercury vapor lamp without extra charge if specified. Add suffix H1 for 400-watt, H18 for 700-watt.

Crouse-Hinds Type FS Lighting Fixtures

6-Watt—Dead End

25-Watt—Through Feed

Small lighting units made to mount flush in concrete, stone, or plastered walls; to light steps, walks, floors and gardens. Also used in hospitals, mounted low in the wall for lighting the floor without disturbing patients.

Cover is equipped with louvered glass, which is normally set to direct light downwards. The 6-Watt uses an FS single-gang body, and the 25-Watt uses an FS four-gang body.

General Electric Fluorescent Floodlights

Floodlight Fixture, Type L-108

A lightweight, easy-to-install, extruded aluminum, fluorescent floodlight. Standard Fluoroflood Fixture length is 8-ft. Double Fixture is 16-ft. in length and adaptable to standard outdoor advertising panels. Extension unit can be used with either the single or double fixtures for extending light source length.

May be equipped with clear-plastic cover, protecting fluorescent lamp and enameled reflector. Equipped with built-in device for easy, accurate aiming, and swivel-in feature of conduit mounting making installation and maintenance easy.

Has spring-loaded telescopic lamp holders for recessed double-contact, rapid-start lamps.

Open Units

General Electric Sports and Area Floodlights

Type L-45A

For close-range illumination of filling stations, and work, storage, parking and sports areas.

Durable open floodlights, with porcelain-enameled reflector. Die-cast aluminum socket housing, with porcelain-shell mogul socket.

The auxiliary processed aluminum reflectors provide increased illumination of areas or buildings that require special emphasis.

Supplied only with crossarm mounting which will fit all other mountings.

Type L-45A Floodlight for Crossarm Mounting for 300/1500 Watts

Approx. weight: Shipping, 13 lbs.; Net, 9½ lbs.
Reflector: Porcelain enamel.

Cat. No. A70G1.....Each \$21.00
Lamps are not included.

Type L-46A Floodlight for Crossarm Mounting for 300/1500 Watts

Approx. weight: Shipping, 19 lbs.; Net, 13½ lbs.

Type of Auxiliary reflector included: Porcelain-enameled steel.

Cat. No. A71G1.....Each \$31.50

For use with 300 or 500 watt lamp, order similar to above Cat. No., and specify lamp wattage.

Lamps are not included.

General Electric Sports and Area Floodlights

Type L-69A Floodlight for Crossarm Mounting

Aluminum floodlight available with either spun-sealed or clamp-band impact-resisting, tempered door-glass. Outstanding light control and beam efficiency is provided by anodized reflector designs available in very-narrow, narrow, medium and wide beam patterns.

Features V-notch aiming; rear relamping; handy terminal-box design for easy, low-cost installation and faceted rear reflector for improved candlepower.

Revere Enclosed Type Floodlights

Listed by Underwriters' Laboratories, Inc.

Constructed of spun sheet aluminum, with cast neck and socket mounting.

The unit is strong and sturdy, sealed by an impregnated asbestos gasket. Weatherproof and dust-tight in all positions. Available with clamp-type or hinged lens cover. The hinged type is advantageous from the standpoint of servicing.

Lenses are heat-resisting glass.

Focusing mechanism is furnished as standard on narrow beam floods only. Fixed focus furnished if desired.

Above prices are for plain lens; if stippled lens is wanted, substitute letter "S" for "P"; for ribbed lens substitute letter "R" for "P". Add letter "M" to Cat. No's. if for use with mercury lamps.

Rear Service Floodlights

This floodlight consists of two accurately shaped aluminum reflectors, the purpose of which is to permit servicing from the rear and not disturb the front setting or section.

The front section is provided with a plain clear impact-resisting glass cover which is rolled in place with a non-hardening cement to provide a permanent water-tight seal.

The all-aluminum construction assures light weight. There are no loose parts to drop or dangle in the wind. Maintenance is safe and easy. Parts are of non-ferrous metal, stainless steel or galvanized. Front and rear built-in sights enable accurate aiming.

Designed for use with a 750, 1000 or 1500-watt PS-52 clear bulb general service lamp with mogul screw base.

Revere Eliptor Floodlights

300 to 1500 Watts

No. 3800

Porcelain Enamelled
All adjustments are easily made from one position on side of the housing.

Porcelain enameled steel reflector, white inside — red, green, cream or blue outside. Other colors available.

Inner reflector is aluminum, semi-specular finish, giving maximum projection and control.

Any of the 500-watt floodlights can be used with the 400-watt type base-up burning mercury

lamps. When using Mercury Lamps keep lamp within 10° of vertical.

Cross Arm Mounting for Wood or Angle Iron

Wall Mounting

Clamps Around 1½ or 2-In. Vertical Pipe

Clamps Around 1½ or 2-In. Horizontal Pipe

Wall Type, Clamped Back to Back for Pole Mounting. Sets of (2) bolts and Nuts Furnished extra.

†Two lengths of Firezone wire furnished with each Bi-post socket.

Revere Alzak Open And Enclosed Type Floodlights

300 to 1000 Watt Lamps

Clamp Ring Cover Type

Hinged Cover Type

This series of floodlights furnished for individual or Mercury and Incandescent Lighting jobs. Open-type reflector is 17¾-in. diam. Formed reflector is 17⅜-in. Closed types—16½-in. diam. Reflectors are made of Alzak Aluminum. All castings are Aluminum.

Telescopic arm provides vertical adjustment of 37°. Horizontal 360°. Arm operates within a one-piece casting comprising socket dome enclosure. Wiring is enclosed, protected from heat of lamp or moisture.

When Mercury Lamps are to be used, enclosed floods recommended for better lamp performance.

Outlets—Maximum conduit 3/4-inch except No. 2369—1-inch. Specify size and locations.

*Clear lenses and globes are standard. Colored lenses and globes are available at additional cost, prices on application. Specify color when ordering.

R & S Step Light

Designed to illuminate steps, terraces, entrance gates, patios, etc. Bronze construction eliminates corrosion. Arranged for flush mounting and supplied with diffusing glass panels. Brush natural bronze finish. Other finishes available.

No.	Each
2090 (Max. size lamp, 100-watt)	\$31.25

Outlets—Furnished with two 3/4-inch maximum conduits on one end. Special outlets available.

R & S Curb Light

No. 2092

Used in illuminating driveways, catwalks and terraces. Furnished with internal half shade. The clear fresnel lens provides a wide horizontal beam of light, eliminating any tendency of light being thrown upwards on the surrounding landscape.

Constructed of cast bronze with all external parts brush natural bronze finish. Other finishes available on application.

No.	Each
No. 2092 (Max. size lamp, 60-watt)	\$28.00

Outlets—Maximum conduit two 3/4-inch on bottom. Specify sizes and location.

Lamps are not furnished with fixtures.

Hope Threaded Pole Bases

**With Junction Chamber
Malleable Iron**

Lighting poles easily fabricated by combining threaded pole bases with single or coupled lengths of galvanized conduit or pressure pipe. Limitless variety of custom-made uprights can be erected below usual costs. Adapted to small or large quantities. Hub is tapped deep for full locking engagement with all threads on pipe, with recess at top for field packing with lead. Headless setscrew prevents turning. Ample junction chamber, open through bottom, for stubbing up conduit run and for splicing and grounding. Attractive design of tough malleable iron. Available with standard plain gasketed cover or new NEMA 3 pole weatherproof receptacle cover for use of service tools. Standard finish hot dip galvanize. Sidewall tapped for 1/4 in.-20 ground stud.

Lighting Applications: Parking areas, service stations, car lots, piers and docks, railway station platforms, parks and playgrounds, schools, sewerage disposal and waterworks plants. Other applications: Mounting for signs, signals, police and fire boxes, yard speakers, electrical enclosures.

**Pole Type 1
Plain Base**

**Pole Type 1T
Transformer Base**

**Diagram of Dimensions
of Mounting Types**

Aluminum Floodlighting Standards

**TYPE "FR"
MOUNTING**

**Flood Ring Mounting
Type "FR"**

Ring mounting can be furnished, as illustrated, formed of 3 in. by 3 in. by 1/4 in. angle to a circular shape five ft. in diameter. Attachment hole groups consist of four holes, 1/16 in. in diameter, in each group. Placement of groups is generally at 90° around the ring. Variations to meet individual specifications are available.

**Flood Arm Mounting
Type "FA"**

A variation in floodlight mounting methods is available in the form of 3 in. by 3 in. by 1/4 in. angle (B) crossarms which may be mounted as single or double arms for any desired floodlight grouping. Mounting studs and strap are furnished for single arm mounting, studs only for double arm mounting. Special arrangements on request. "A" = 29 in.

Revere Hinged Floodlight Poles

These poles were created and developed by the Revere Electric Mfg. Co. Many years of service have proved this type of pole most efficient and practical for floodlighting. The hinged construction makes it possible to obtain full benefit of light from any lamps used, because reflectors can be kept clean at all times. The poles also eliminate risky climbing and expensive maintenance—servicing can be done at ground level.

Poles are available in Square Type in 18-ft., 20-ft. and 24-ft. mounting heights, and Round Type in 20 and 24-ft. mounting height. Poles are available for base and bolt mounting, also for concrete mounting. The Square and Round Types accommodate one or two floodlights. The Heavy-Duty Square Tapered Type, 199-E Series, will accommodate 1, 2, or 3 floodlights as well as one or two sign arms. The pole is also available in 30-ft. mounting height listed as 199-D30.

Brackets can be furnished for mounting extra area lighters (3018) or identification signs and other advertising on the regular and Heavy-Duty square types.

Base and Bolt Mounting

For 18, 20 and 24-ft. mounting heights. Lower section is 3-in., upper is 2½-in. square seamless steel tubing, with 2-in. short threaded top nipple. Counter-balance arm is made of two ¾x2½-in. side bars bridged and proportioned to balance. Four ¾x24-in. anchor bolts with nuts and washers are provided. Ornamental base securely welded to shaft. Wiring opening 10-in. from base bottom.

No.	Mtg. Ht. Ft.	Capacity	WL Lbs.
199-G18	18	1 or 2 Floods	138
199-G20	20	1 or 2 Floods	157

Revere "Ultra-Lite" Luminaires

A "4 in 1" spectacular for Shopping Center Parking Areas, Swimming Pools, Playgrounds, Amusement Centers, etc.

A scientific application of 4 Revere Mercury Luminaires mounted into a spun parabolic dome. Produces a square light pattern covering 40,000 sq. ft. at 32-ft. mtg. ht. Provides more light with fewer poles. Gives lighted area new impetus and reduces maintenance costs. Fitter slips 4-in. O.D. Pole Top. 52-in. unit of spun steel in standard green or other colors. 72-in. unit is of spun aluminum (natural finish), for use with rigid or hinged poles.

Composite Isolux Curve showing horizontal distribution in foot candles at grade. Poles spaced 170-ft. at 32-ft. mounting.

No. 560-30-3 Pole with No. 635 Sub-Base

No.	Description	Wt. Lbs.
5440	52-In. Ultra-Lite complete w/4 Luminaires	280
5441	72-In. Ultra-Lite complete w/4 Luminaires	280

560-30-3	30-ft. Octagonal tapered steel pole	295
635	Sub-base for 4 transformers	280

Revere Roof and Wall Brackets

Roof Type has "L" sleeve to accommodate 3-ft. x 6-ft. 90° straight arms to run over parapet. Wall Type has straight sleeve for 90°-1 1/2-in. bent arms or upsweep arms. Either bracket can be used for Mercury Lighting (by mounting transformers at a remote point) or for Incandescent Lighting. Brackets made to rigid standards, light in weight, strong. Wiring spliced at each bracket, no extra fittings required. Brackets for Mercury only designed to accommodate transformers and to mount on walls or roofs. Same type arms as above are provided.

Wall and Roof Type—No Provision for Transformers

No.	Description
860	Wall Bracket w/Aluminum sleeve.
*860-4A	Wall Bracket w/4-ft. upsweep Aluminum arm.
*860-904A	Wall Bracket w/4-ft. 90° Aluminum arm.
864	Roof Bracket w/90° sleeve.
864-36G	Roof Bracket w/3-ft. x 6-ft.—90° Galv. arm.

Wall and Roof Type With Provisions for Mercury

861	Wall Bracket for Transformer w/sleeve.
861-4A	Wall Bracket for Transformer w/4-ft. upsweep Alum. arm.
861-904A	Wall Bracket for Transformer w/4-ft. 90° Alum. arm.
865	Roof Bracket for Transformer w/90° sleeve.
865-36G	Roof Bracket for Transformer w/3-ft. x 6-ft. 90° Galv. arm.

*Available with Hot Dip Galvanized Arm.

Revere Fluorescent Pylon-Lites

No. 1981 consists of a cast steel base and octagonal shaft with cylindrical glass enclosure housing 6-IS Fluor. Lamps. No starters needed. Ht. to top cap 9-ft. 6-in. Strong, rigid frame assures upright installation unaffected by vibration.

No. 1982 mounts on pipe of 2, 2 1/2, 3, 3 1/2, 4, 4 1/2 and 5-in. diam.

No. 1970 is a Half Pylon-Lite for wall mtg. and houses 4 lamps.

No.	Description
1981	Unit with 2-in. pipe stub.
1981-A	As above and with air conn.
1981-W	As above and with water conn.
1981-AW	Same with air and water conn.
1982	Pylon-Lite for 2-in. pipe.
1970	Half Round Wall Type.

These units available with lettering in glass, without pipe stubs at top, and in many other combinations.

**Wide-Light Area Lights
Indoor Luminaires**

Aisle

Area

Indoor fixtures that bathe your aisles, bins assembly lines and work areas in "daylight". Each fixture gives light spread 40-ft. each way of aisle.

For shops, warehouses, terminals, sheds, machine shops, papermills, supply stores and for general industrial service.

Can be mounted directly on ceiling, or can be run on overhead universal trolley duct to provide the utmost flexibility and reduce the number of lights needed. Rearrangement of shop areas and warehouse aisling can be done with no need for lighting fixture relocation or wiring disturbance.

Description	Each
Aisle (400 watt)	\$ 40.00
Area (1000 watt Hi-bay)	112.00

Weatherproof Floodlights

Weatherproof 400-watt floodlights with built-in ballast meet most outdoor requirements for broad area lighting with maximum operating economy. For loading docks, parking areas, refineries, shipyards, billboards, used car lots, and other outdoor applications.

Available with Type "B" reflector designed for extra depth as well as breadth of beam.

Type "A" reflectors, giving broader, less concentrated beam, supplied on order at no extra charge. Specify Type "A" when floodlight must be mounted unusually close, up to within 6-ft. of surface to be lighted. Each **\$144.00**

1000 Watt "Big Bertha"

This extra high output floodlight available for use with new 1000 watt color-corrected mercury vapor lamp or 1500 watt inside frosted incandescent lamp. Performance outstanding when used for large areas. Each **\$148.00**

Wide-Lite Vapor-Tight Floodlights

Particularly valuable for hangers and outdoor aircraft maintenance, for oil rigs, tank farms, pump houses, bulk oil stations.

Double protection by use of protective glass cylinder surrounding lamp. No breather required.

Supplied with Type "A" reflector, designed to give extra breadth of beam so floodlight may be mounted close up, to within 6-ft. of surface to be lighted.

Each **\$136.00**

**Wide-Lite Floodlight Accessories
Mounting Brackets**

Trunion

Wall

Pole X-Arm

May be used with any outdoor type of Wide-Lite flood light. Heavy cast aluminum alloy construction.

Description	Each
Trunion	\$ 8.00
Wall	18.75
Pole X-Arm	16.00

Tripod Portable Bases

Designed for using Wide-Lites in construction or salvage work; for temporary or semi-permanent installations.

. Each **\$52.00**

**Adapter Kit For Duct
Mounting**

Adapts indoor Wide-Lite and ballast for suspension and feed from universal trolley duct.

. Each **\$16.00**

**Benjamin "Duo-Service" Floodlights
For Stationary Mounting or with "Saflox" Lowering Attachment**

No. 27564-P-3

Combines in the same unit a large porcelain enamel diffusing reflector, with a beam-producing, aluminum, inner flood-lighting reflector. For use in gasoline service stations, super-service stations, roadside inns, etc.

Inner reflector intercepts a portion of the light from the lamp and concentrates this light on the object to be emphasized. Balance of the light is utilized by the diffusing porcelain reflector for general illumination.

Hood and bracket are aluminum castings, the porcelain enamel finish of the diffusing reflector resists deterioration from smoke, dirt and unfavorable atmospheric conditions. Reflecting surface of the porcelain enamel never requires painting or refinishing.

Available with three types of brackets: closed-wiring slip-fitter, open-wiring cross-arm and cross-arm with pipe clamp. Also available with "Saflox" lowering attachment. Inner reflector can be adjusted from side to side to locate floodlighting beam on building independently. Units listed have slip-fitter to fit 1 1/2" pipe; for 2" pipe size, same price, add suffix "A".

With "Saflox" Lowering Attachment

Reflector Description	Without Clusterette		With 3 PAR 56

Less Inner Ref.	5765	41.79	5765P3	87.60

Units are for 750-1500W incandescent lamps. Also available for 400-watt mercury vapor lamps.

Benjamin "Variety-Lite" Floodlights

No. 1936

For use about the home and business establishments. The steel reflector is finished in porcelain enamel. The one-piece, medium base, porcelain lamp-holder is Underwriters' listed.

Supplied wire with 6 ft. of rubber service cord and rubber plug. Reflector is finished in porcelain enamel. Inner reflecting surface is special diffusing white.

No.	Lamp Size Watts	Description	Shp. Wt., Lbs.	Each
1934	75, 100	8" Diameter	3 1/2	\$6.55
1936	200, 300	10" Diameter	4 1/2	7.01

300W. lamp recommended above is medium base.

Benjamin "Olympia" Floodlights

No. 6274

For use in sport and recreational fields and areas as well as industrial and railroad yards. All exposed metal parts are aluminum or other non-ferrous material except for the steel trunnion bracket. Reduces tendency of movable parts to "freeze" and prevents rust streaks. Heat and impact-resisting cover glass is spun into the edge of the reflector as permanent protection for the lamp against rain, dirt and insects.

Detachable hood has a bead-like overhang at the reflector joint to keep out rain; a silicone-rubber gasket seals this joint. Lead wire has weather-proof gland at entrance to neck. Polished or etched, alzak aluminum reflectors.

No.	Lamp Size Watts	Description	Shp. Wt., Lbs.	Each
6270	750-1500	20" Dia. Narrow Beam	35	\$87.52
6272	750-1500	18" Dia. Medium Beam	32 1/4	73.87
6274	750-1500	18" Dia. Wide Beam	32 1/4	69.10

Benjamin 300 To 1000 W. Utility Floodlights

No. P6032M

One-piece, sheet aluminum housings with Alzak finish. Wire entrance to housing is weatherproof. Impregnated asbestos gasket seals the joint between heat-resisting cover glass and housing. Aluminum channel band, operated by single shoe-buckle type clamp, holds glass and gasket in place. Three styles of cover glasses available: clear, stippled and ribbed. Six types of brackets available.

With Type "B" Swivel and Stand Mounting Bracket

Lamp Size Watts	Shp. Wt., Lbs.	Spread Type		Concentrating Type

Listings are for clear glass covers; when ordering stippled glass substitute "S" for "P", for ribbed glass "R" for "P".

Benjamin "Type RD" Floodlighting Projectors

Model RD-14

A one-piece, seamless floodlight housing of heavy gauge aluminum provides strength with light weight. Housing, cover frame, cover clamps and mounting straps are of aluminum and will not rust or corrode. Housing interior is sealed by a special gasket (which is held firmly in place by a metal expanding band) against the passage of dirt, smoke and moisture.

Cover is held firmly and with equalized pressure against the housing by means of easily operated, adjustable, lever type clamps.

Mounting base is equipped with horizontal and vertical stops for automatic resetting of floodlights after lamp replacement or for floodlight cleaning.

Width of beam regulated by focusing device, operated by aluminum knob at rear of housing. Mirrored glass reflector is designed to intercept as much light as possible.

Model RD11 (11" Diameter)

No.	Lamp Size Watts	Description	Shp. Wt., Lbs.	Each
5825	200, 250	Plain Glass Cover	18	\$74.80
5826	200, 250	Stippled Glass Cover	18	74.80

Units take General Service or Floodlighting lamps.

Benjamin "Ellipto-Lite Play-Area" Floodlights

No. 5977

Wide-angle, open reflector type floodlights designed to provide illumination for outdoor sport and recreational areas. Combines a large, open type, diffusing, porcelain enamel, steel reflector with an inner reflector of processed aluminum.

Provides uniform and strong illumination on the ground to the front and sides of the unit. Directs adequate light on vertical surfaces to be illuminated.

Directs part of the reflected light to the upper areas permitting players and spectators to follow an object in flight. A sighting bar provided as part of cast neck, except for "Saflox" units.

With Pendant Hoods—Tapped 3/4" I.P.S.

Crouse-Hinds Aviation Lighting

High Intensity Runway Lighting

The Crouse-Hinds Company offers all three types of high intensity fixtures, as illustrated above, to meet the three CAA Specifications (L-818, L-819 and L-820). All are approved by CAA, and all provide the basic high intensity candlepower required. They have many construction features in common such as: cast aluminum housing, Pyrex glassware, disconnecting cable connector, same breakable coupling and standard steel base with base plate. All units provide the necessary top light and side light needed for planes not on the approach path; and use a 5-stage brightness control.

Type HIRC utilizes a double prismatic lens system on a cast aluminum base, with a 500-watt, 115-volt lamp mounted on a movable socket. The main beams are automatically "toed in" or "toed out" by a thermal control working in step with the applied voltage. The brightness setting selected by the operator produces automatically the most efficient aiming of the beams for any weather condition.

Type HRL fixture has a fixed focus double beam optical system. Each fixture uses a 200-watt lamp and is provided with a series to series insulating transformer installed underground in the base housing.

Type HSL fixture has a cast aluminum housing with two 95-watt sealed beam high intensity lamps inside and a 45-watt medium intensity light on top. Three insulating transformers are installed underground in the base. Each of the three lamps may be switched separately from the tower.

No.	Type	Description	Each
44919		Complete fixture with clear glass and base.	\$482.00
FI1877	HRC	180-degree yellow color screen with bracket.	18.00
FI1878		360-degree green color screen with bracket.	36.00
44607		Complete fixture with base plate, & clear glass, less base.	92.00
44609		Complete fixture as above, except clear/yellow.	105.00
44608	HRL	Complete fixture as above, except green (threshold light).	108.00

FI4605		200-watt, series-to-series transformer.	72.00
44543B		Complete fixture with clear glass, base, & 3 transformers.	*
44544B	HSL	Complete fixture as above, except clear/yellow, left-hand.	*
44545B		Complete fixture as above, except clear/yellow, right-hand.	*
44546B		Complete fixture as above, except green (threshold light).	*

*Price on request.

Type ERL Marker Lights

Type ERL elevated marker lights are constructed in accordance with CAA Specifications L-802 (runway and threshold lights) and L-822 (taxi lights). They are used on both large and small airports. On large airports type ERL fixtures are normally used on non-instrument runways, and high intensity fixtures (type HRL, HIRC, or HSL) on instrument runways.

Series runway fixtures normally use the 30-watt, 6.6-ampere, T-10 bulb lamp. The 45-watt, 6.6-ampere lamp is used for series threshold lights and taxi lights and can be used for runway lights where a higher intensity is desired. Multiple 115-volt units use the 40-watt, 115-volt lamp.

Style A mounting includes a 30 in. anchor stake, surface flange, and a direct burial insulating transformer. Style B includes a base plate for mounting on the FI1818 base (specify transformer separately). Style C consists of a junction box and 30 in. anchor stake.

The recommended system for new installations utilizes a series circuit and fixtures with Style B mounting, FI1818 steel base housing and FI4603 insulating transformer. The FI1818 base is large enough to take care of future conversion to type HRL high intensity fixtures. For a more economical installation, as for small airports, Style A mounting with direct burial transformers and series circuit can be used.

Type ERL with Style B mounting is used for converting existing flush fixtures to elevated fixtures. Practically any existing flush contact lights can be converted to ERL type, by adding a series-to-series insulating transformer in each base, and adding the elevated light with the necessary adapter base plate. Information will be furnished on request regarding conversion of any particular style flush light.

Photoelectric Control

For Aviation and General Service

Provides automatic operation of lighting circuits at dusk and dawn. The control employs a light sensitive photo-tube, amplifier circuit, sensitive relay, and 2-pole load relay, assembled within a weatherproof cast aluminum cabinet.

The sensitivity of the photoelectric control is adjustable within the light ranges listed below.

The contacts of the load relay are rated 25 amp. per pole, at 120 volts a-c. Separate load contactors for higher current ratings are listed.

No.	Description	Each

44415A	Contactors, 2-P, 50-A, Weatherproof	146.00

Crouse-Hinds Aviation Lighting

Type FCB-12 Fresnel Beacons

**For Airport Identification and Hazard Marking
Uses Two 500 Watt or 620 Watt Lamps**

Designed for use as an auxiliary green code flashing beacon at airports, and as a red marker light for major obstructions to air navigation.

When used at airports, it is usually equipped with green color screens, and connected to a special code flasher to produce a Morse code signal, designating the airport. Code signal consists of from one to three letters, and must be approved by the CAA. Should be mounted high enough to allow its beam to clear surrounding obstacles. Housing is cast aluminum alloy.

Lamps: 500-watt, 115-volt, PS-40 bulb, mogul prefocus base, 100 hour life, or 620-watt, 115-volt, PS-40 bulb, mogul prefocus base, 3000 hour life.

No.	Type	Description	Each
41257D	FCB-12	Red Hazard Beacon	\$450.00
41258D	FCB-12	Green Code Beacon	450.00

Type VAW Obstruction Lights

**Disconnecting
Fixture with
Thompson Hanger**

**Single
Fixture**

**Transfer
Relay**

**Double
Fixture**

Made in accordance with Specification MIL-L-7830 to meet requirements of the Air Forces, Navy, and CAA. Particularly used as obstruction lights. Meets FCC requirements for tower lighting.

When used as obstruction lights, VAW fixtures are equipped with red globes. Globes in other colors, for other applications, can be furnished.

Constructed of cast aluminum with 1-inch bottom hub. Available in two styles: multiple units for use on standard 115-volt circuits, and series units for use on 6.6-ampere series circuits.

The transfer relay is designed to complete the circuit to the spare lamp upon failure of the operating lamp. Relay is mounted in weatherproof housing.

The double disconnecting fixtures are used to mark obstructions to air navigation such as poles, towers, smokestacks, and water tanks, where it is desirable to lower the fixture for cleaning and relamping. Thompson Hanger is not included.

For 115-Volt Multiple Circuits

No.	Description	Each
43958	Single Fixture with Red Globe	\$32.00
43961	Double Fixture with Red Globes	64.00
43902	Transfer Relay, for Double Fixture	35.00
43950A	Disconnecting Double Multiple Fixture with Red Globes, for Thompson Hanger	82.00

For Series Circuits

43623	Single Fixture with Red Globe	65.00
43624	Double Fixture with Red Globes	130.00

Type TSS Flashers

120 Volts, 50/60 Cycles

Used to flash "on-off" signals as required for type FCB-12 red hazard beacons, and to flash code signals as required for type FCB-12 green airport identification beacons.

All type TSS standard flashers are arranged to flash "on-off" in accordance with CAA requirements for hazard beacons. Type TSS-18 (No. 46397) code flasher is furnished with the cam made to order to flash the code assigned to the airport by the CAA. The code flasher will flash most two-letter codes and some three-letter codes.

No.	No. of Circuits	Type of Flasher	Each
46993	1	TSS-22	\$135.00
46994	2	TSS-22	155.00
46995	3	TSS-22	175.00
46441	4	TSS-18	228.00
46442	5	TSS-18	258.00
46397	1 (Code)	TSS-18	230.00

Contacts of TSS-22 are mercury tube, rated 25 amperes.

Contacts of TSS-18 are metal, rated 10 amperes.

Type TGS Taxi Guidance Signs

**Type TGS 3-Section Sign
With Base Plate**

The need for taxi guidance signs on airports has been emphasized more and more each year with ever-increasing ground traffic, larger fields, and increased activity under reduced visibility conditions.

The use of Type TGS signs provides a system of taxiway guidance such as is commonly used on highways, showing the pilot his location at each intersection and telling him how to reach his designation.

The sign housing is lightweight, aluminum, box-type construction mounted on one or more breakable couplings, all in accordance with CAA Specification L-829. Each number, letter, or symbol (arrow, dot, dash) is contained in a standard 14" square removable and interchangeable cast aluminum panel. Signs can be either one-way type or two-way type (with letters both front and back). The letters are made with an orange-yellow plastic on a black background, providing excellent legibility for both day and night.

Signs vary in length from one to six sections. Each unit section base is detachable so that signs are easily converted from one size to another.

The signs may be mounted on either standard base housings or on standard anchor stakes as commonly used for medium intensity marker lights. A series circuit with series insulation transformers is generally used. A 115-volt or 230/115-volt system may be advantageous for short run or lightly loaded circuits. Insulating transformers are not required for these units.

Description	Complete With Stake Mounting and Series Transformer		Complete With Ft.1818 Base and Series Transformer	
	No.	Each	No.	Each
Single Section	44746	\$215.00	44745	\$260.00
2-Section	44748	300.00	44747	345.00
3-Section	44750	455.00	44749	490.00
4-Section	44752	550.00	44751	585.00
5-Section	44754	670.00	44753	695.00
6-Section	44745	760.00	44755	780.00

Crouse-Hinds Aviation Lighting

Type DCB-36 Rotating Beacons

36-Inch Diameter—1000 Watt

A rotating beacon of high efficiency which projects beams of light in two directions, 180° apart. The optical system consists of a lens combination in each end of the housing, with a single lamp in the center. Each combination consists of an 18-in. inner doublet lens and a 36-in. outer lens. The outer lens is made of a one-piece bull's-eye lens 20-in. in diameter, surrounded by twelve 30° sectors of an annular ring.

When color is required in either or both ends of the beacon, the inner doublet lens is furnished in red, green, or yellow. Standard airport beacon listed below has one beam clear, one beam green.

No. 41281B 115 volts, 60 cycles A.C. Each **\$3600.00**

Type DCB-24R Rotating Beacon

24-Inch Diameter—500 or 1000 Watt

A drum type beacon with drum rigidly mounted on rotating shaft. Beam can be raised and lowered by raising lowering lamp table on lamp-changer. Lamp-changer shaft is calibrated in degrees. Normal factory setting with beam 1.5° above horizontal.

Beacons for advertising purposes can be furnished but must be approved by the CAA before installation. Speed of rotation required is 2 R.P.M., and beacon must be red.

In addition to beacon, it is necessary to install a 24-inch fixed directional searchlight with automatic lamp-changer, the white beam pointing towards the nearest airport. Crouse-Hinds type DCE-24 searchlights meet this requirement.

One or more of these beacons with red lenses rotating at 12 R.P.M. can be effectively installed for marking hazardous areas.

No.	Description	Each
44779	12 R.P.M., Red Beam, 1000-watt	\$2600.00
43357	2 R.P.M., Red Beam, 1000-watt	2780.00

Type DCB-10 Rotating Beacon

For Small Airports—500 Watt

Designed to meet requirements of small airports with no regular scheduled air transport activities. Provides alternate clear and green flashes from an optical system rotating at 6 R.P.M., thus indicating the location of a lighted airport with the same beam characteristics as the standard type DCB-36 airport beacon.

Constructed with a large Pyrex glass dome which completely encloses the rotating optical system. A magnetic lamp-changer provides a spare lamp which is automatically moved to the correct focal position and switched on when the first operating lamp fails. An indicating circuit is included.

No. 44035 115 volts, 60 cycles A.C. Each **\$990.00**

Type WC Illuminated Wind Cone Fixtures

Type WC-36 is a heavy duty fixture equipped with a 36-inch diameter, 12-ft. fabric wind sock.

Type WC-18 wind cone is designed particularly for use at small airports. It is also recommended as an auxiliary wind cone at larger airports.

Both the WC-36 and WC-18 fixtures include ball bearings for the wind cone swivel support and

four lighting reflectors, which are 200-watt for type WC-36 and 150-watt for type WC-18.

No.	Description	Each
44622	WC-36 for Beacon Tower Mounting	\$570.00
44621	WC-36 for Roof or Ground Mounting	590.00
FL624	Hinged Standard for 44621	800.00
FL2446	Set of Lead Counterweights for FL624	520.00
44036	WC-18 for 2-inch Pipe Mounting	300.00
FL1123	Hinged Standard for 44036	250.00

Type WT Illuminated Wind Tees

Serves as a continuous day and night indication of the true wind direction. Gives the appearance of a single green "T" when viewed from above at night and a single stroke chrome yellow "T" when viewed from above in the daytime.

Can be furnished either as a standard wind tee responsive to and affected by the wind only, or can be furnished with any of several different combinations of accessories to make it completely automatic or controlled by a remote operator.

No.	Description	Each
43339C	Free Floating Wind Tee	\$ 3600.00
43338C	Free Floating Wind Tee with Position Trans.	3900.00
44592B	Automatic Wind Tee with Operator Control and Position Transmitter	11,500.00
KL3301	Indicating Panel for 43338C Tee	300.00
TL982	Indicating Panel with Switches for 44592B Tee	360.00

**Type PTS Signal Projectors
For Airport Traffic Control**

Type PTS signal lights are designed for projecting a high intensity beam of light for clear, green or red signals to planes in the air and on the ground.

New compact Type PTS #47014 portable traffic signal can be operated with one hand. This lightweight signal for airport control towers is supplied with an overhead trunnion and yoke support. It weighs only 6 lbs., 9 ozs.

A single pistol grip contains all signal controls: an index finger trigger for selecting red or green color screens, a middle finger trigger for flashing the lamp, a thumb-operated lever for selecting a clear signal. Morse code signals can be flashed.

No. 47014 Portable traffic signal complete with transformer, cable, & two lamps Each **\$260.00**

**Modern Metal Naval Marine Equipment

	EP	—Explosion-Proof	SBM	—Submersible
	NE	—Non-Enclosed	SPT	—Spraytight
			WT	—Watertight

How to Order G-E Lamps

To expedite service and to assure best discount, order in standard package quantities whenever possible. Specify quantity desired of each type of lamp and order by Lamp Ordering

Abbreviations. These consist of watts, bulb shape and diameter in eighths of an inch, color or other description. See illustrations below.

FLUORESCENT

FILAMENT

G-E Fluorescent Lamps

The life and light output ratings of fluorescent lamps are based on their use with ballasts providing proper operating characteristics. Ballasts that do not provide proper electrical values may substantially reduce either lamp life or light output, or both.

Ballasts certified as built to the specifications adopted by the Certified Ballasts Manufacturers (CBM) do provide values that meet or exceed minimum requirements. This certification assures the user, without individual testing, that lamps will operate at values close to their ratings.

Life Ratings—based on 3 burning hours per start: 7500 hrs.—T6, T8, and T12 preheat, rapid start, and slimline; T12 instant start; T17 preheat; all circlines. Exceptions: F100T12/RS rapid start (7500 hrs. for 10 hrs./start); 14 watt T12 preheat. 6000 hrs.—T17 instant start, 6, 8, and 13 watt T5 preheat; 14 watt T12 preheat. 4000 hrs.—4 watt T5. Life Multiplying Factors—for 6 hrs. per start: 1.25; for 12 hrs. per start: 1.6; for continuous operation: 2.5. Lamp lengths include lamp and two standard lamp-holders.

Inside Frosted

For most general lighting purposes. Inside frosting diffuses the light and helps eliminate shadows and glare. Light output is practically the same as for clear lamps. Outside surface is smooth and easily cleaned.

G-E Reflector Lamps

For General Lighting

R52

R-52 reflector lamps are designed for general lighting applications, particularly where dirt conditions are severe. Dust and dirt collection on the sides of the bulb do not affect light output since the metallic reflector coating is inside the lamp.

The 1M/RB52 has a double contour reflector design which permits using 1000 watts in the R52 bulb size. All R52 lamps require a shield to protect lamps from moisture or physical contact.

G-E Reflector Lamps

120 Volts

75R30/SP

150R/SP

300R/FL/1

300R/3FL

Reflector Lamps are self-contained spot and flood lamps employing a silver reflecting surface. Some are made of ordinary soft glass, others of heat-resistant glass for better performance with high wattage filaments and for out-door use. Even heat resistant bulbs should be protected from falling moisture when used outdoors.

Watts	Bulb	Base	Description	Lamp Ordering Abbrev.	Std. Pkg. Qty.	Each

G-E Coloramic Lamps

115-125 Volts

25W 50W 60W 75W 100W 150W 50/150W 100/300W

These lamps have colored ceramic coatings baked permanently on the bulb. The colors are Sky Blue (SKY), Spring Green (SPG), Sun Gold (SUN), and Dawn Pink (DPK), which can be used to accent certain colors in the decorative schemes of homes and other areas.

Use higher wattage lamp than normally employed if used in reading lamp since coating absorbs some light.

G-E Ozone Lamps

G-E Ozone Lamps emit ultraviolet energy through the special glass bulb which changes some of the oxygen of the air to ozone. This masks odors in many areas such as kitchens, rest rooms, closets, offices, stores, elevators, basements, etc. Use one lamp for each 1000 cubic ft. of space.

Lamps require a ballast to limit current during operation. This can be a choke-coil, a 40-watt light bulb or a resistance of the correct size.

G-E Photoflash Lamps

M2 8 SM 5 5B 6 11 22 22B 31 50 50B

PowerMite M2—Tiniest Flashbulb made, 66% more light than older type M2 bulbs. Plenty of light for the casual amateur or professional. Makes exceptional pictures with either black and white or color films.

PowerMite M2B—First miniature blue flashbulb. Same characteristics as the PowerMite M2 but has blue filter coating for use with daylight color films.

No. 8—Second smallest flashbulb in the G-E line. In light output and size it is between the PowerMite and the No. 5.

SM—Gas filled no. 1 flashbulb. Flash duration about 1/200 second. Ideal for simple cameras because it lessens subject and camera movement.

No. 5—The standard bulb used by professionals and amateurs with larger cameras. Precise, uniform, split-second flash for between the lens shutter synchronization.

No. 5B—Same characteristics as the No. 5 but with blue filter coating for use with daylight color films.

No. 6—For high shutter speed synchronization with most focal plane shutter cameras up to 2 1/4 x 2 1/4-in. negative size.

No. 11—Larger size screw base bulb for synchronization with many between the lens shutters.

No. 11B—Same as No. 11 but with blue filter coating for use with daylight color films.

No. 22—For use with front shutter cameras, this bulb provides plenty of peak light for extra coverage and high speed shots.

No. 22B—Same as No. 22 but with blue filter coating for use with daylight color films.

No. 31—For high shutter speed synchronization with large focal plane shutter cameras. Over 4 times as much light as the No. 6 flashbulb.

No. 31B—Same as No. 31 but with blue filter coating for use with daylight color films.

No. 50—Most powerful flashbulb in the G-E line. Great light intensity in a compact bulb size to cover large areas or for exposure at small apertures.

No. 50B—Same as No. 50 but with blue filter coating for use with daylight color films.

G-E Photoflood Lamps
105-120 Volts

3400°K Photoflood Lamps give maximum light for the amount of current used. Designed for use with Type A color materials, but are also ideally suited for black and white photography.

3200°K Lamps are for general studio use with either black and white film or professional types of indoor color materials.

Reflector Photo Lamps have built-in reflectors. Beam spreads of these lamps vary from 20° for the PH/RSP2, to 90° for the PH/RF12.

Outside colored orange or red available on G-10 or S-14 lamps at additional charge of 5 cents each.

*Applies to new lamp.

†210-250 Volts.

‡Dimension for glass parts only. Wire terminals extend 1 inch.

|| Designed for 67-87 volts, d-c (operating voltage at 1.5 milliamperes, 53-65 volts, d-c.).

G-E Train and Locomotive Lamps

200 PAR

15S14/IF 100A21/3 40A19

200P-25

Trainlighting: Voltage regulating devices should be adjusted to maintain rated lamp voltage at the socket. 30 and 60-volt are best adapted to the voltage conditions normally encountered in trainlighting service.

Locomotive Headlight: Should be operated at rated voltage in headlight equipment protecting it from excessive vibration. The bulb must be protected from water which might strike it while hot, except in the case of the 200-watt PAR-56, lamp, which is of heat-resistant glass. Two sealed-beam type lamps are used on road locomotives, one on switchers. The 250-watt lamp is designed for road locomotives equipped with reflectors. The 100-watt is recommended for switching locomotives.

Locomotive Cab: For all-steam locomotive lighting purposes except headlighting.

†Marker.

*Wind Direction.

‡Boundary Marker.

o Obs. Marker.

Note: For low intensity, semi-flush Airport Runway Marker lights, about 2-in. high, use A-21 lamps. For medium intensity elevated lights, about 2-ft. high, use T-10 lamps. For higher intensity elevated lights, on runways where instrument landings are made, use 6.6A/T14P lamps.

Effective functioning of aviation lighting equipment requires accurate positioning of the light source. Bipost and prefocus bases provide a high degree of accuracy.

G-E Black Light Lamps

Mercury Lamps. Four types of mercury lamps are commonly used for black light effects; the BL4 uses a red-purple glass filter for the outer bulb and the H100-SP4 Spot (H100-FL4 flood), H250-A5 and H400-E1 require separate filters.

Filament Lamp. A 250-watt filament lamp in a red-purple bulb is available for black light effects. Known as the Purple X lamp, it is designed for intermittent service only.

Fluorescent Lamps. Black light fluorescent lamps contain a special phosphor whose radiation peaks in the near-ultraviolet region of the spectrum. Lamps often used with filters to reduce visible light. Available with BLB glass for use without filters.

G-E Mercury Lamps

G-E Mercury lamps have high efficiency and long life and are applicable for general lighting in many industrial areas and for street and flood lighting. The reflector mercury lamps listed below provide good maintenance of light output even in dirty areas. They are intended for use in conventional high bay lighting units. Auxiliary equipment required to operate.

*Color Improved lamps contain a red producing inside coating that provides color balance more like incandescent lamps.

G-E High Voltage Lamps

Durability and efficiency are less than with 110-125 volt lamps, but are lamps designed for use in the few locations where only the higher voltage is available. Some rough service lamps and R-52 and R-40 lamps also are available in 230 and 250-volt designs. Lamps listed below also available in clear bulbs.

Medium Screw Base

G-E Sunlamps

Used in homes, offices and solaria.

●RS—Medium Screw Base. 275 watts. Is in a bulb with self-contained reflector and operates directly from 50-60 cycle, 110-125 volt a-c current with no auxiliary ballast required.

R-40, Inside Frosted bulb. Standard package, 6. Each \$9.95

RS

G-E Infrared Industrial Lamps
115-125 Volts (Design Volts 115)

G-30 R-40 T-40 T-40

For service other than illumination. Speeds up drying and surface heating processes, by radiation. Used in drying photographic prints, industrial and automotive finishes, food products, localized heating, surface moisture, motor and transformer windings, blueprints, pottery, etc.

The reflector drying lamp fits into many specialty jobs not otherwise readily equipped.

Reflector Lamps

Cory Commercial Electric Coffee Brewers

No. C500-H Electronic Automatic Stainless Steel Coffee Brewer

Brews 12-cup capacity decanter in approximately three minutes — entire operation takes only 11 seconds of operators' time.

Affords automatic control of the four essentials to perfect coffee — correct amount of coffee, water measurement, temperature and infusion time.

No. C500-H — One burner Hi-lo, three burners low-medium. 115/230 volts a-c or 120/208 volts a-c. 5-CDA decanters, 1-CAL replacement bowl, two extra cartridges with filters and cartridge racks. Size: 21 in. deep, 27 in. wide, 22 in. high. Approximate weight 83 lbs.

No. C500-H Each \$495.00

Commercial Fans

For Offices, Banks, Stores and Institutions

Desk Type

Can be Furnished in Various Sizes and Types, in both Oscillating and Non-Oscillating

Floor Circulator Type

For Home or Office use. In various sizes and colors

Pedestal Type

Available in Several Sizes

While we show only three typical fans of current style — desk, floor circulator, and pedestal — may we suggest that you call or write our nearest office or warehouse (see list at back of catalog) when you need technical help, prices, and delivery information.

For the latest fan information, be sure to contact your nearest Graybar office or warehouse

Fresh'nd-Aire Air Circulators

For Commercial and Industrial Use

Designed and built to deliver quiet, efficient, draft-free over all air circulation economically.

There is a model to cover almost every requirement, from the smallest office or store to the largest industrial plant.

Made of the finest and best material available for the purpose, by expert workmen. All are very attractive and their performance outstanding.

Heavy duty custom-built motor, with extra length sleeve bearings — floats on a cushion of rubber. Motor housing is air-cooled, assuring a constant flow of air in and around the motor; durable chrome finish. Patented plastic propeller, electrically, dynamically and permanently balanced to prevent motor wear and to deliver maximum air flow. Pull-chain speed control — shows each operating speed at a glance. Heavy steel wire safety guard, plated finish.

Complete with 8-ft. rubber covered cord and attachment plug cap.

Low Stand Model

Wall Mounted

Low stand or wall models are designed to be used basically as low stand table or wall circulators. Can be converted from low stand type to wall model by simply turning base as shown in "Wall mounted".

For Operation on 115 Volts, 60 Cycles A-C

Model	Propeller, In.	CFM	Speeds	Watts	Ship. Wt. Lbs.	Each
1700L	17	4000	3	100	24	\$ 74.95
2000L	20	6000	3	130	30	84.95
2300L	23	8000	3	175	32	99.95
2600L	26	12000	5	200	57	129.95

One in a Carton.

Note — Low stand or wall models can be converted into high stand models by using a Conversion Kit — Contact Graybar for further information.

Fresh'nd-Aire Ceiling Brackets

This ceiling bracket reduces ceiling installation to a one man job. Will mount any of the fans listed above in an upright position — adjustable for 360° turn. Comes complete with chromed ceiling canopy and black malleable iron mounting ring.

Model	Extension from Ceiling, In.	Each
UCM20	20	\$25.45
UCM48	48	27.45

*Distance from ceiling to fan center.

Fresh'nd-Aire Post and Corner Brackets

Makes it possible to mount any Fresh'nd-Aire air circulator into corners or other irregular surface. Fits any angle or rounded surface and works equally well on flat surfaces. Screw adjustment permits air circulator to swivel freely in any direction. Tubular steel, black crackle finish. Ship. wt., 12 lbs.

Model 3019 Ea. \$22.50

Michael Electric Hand Dryers

Ozo Hurricane

Simple, fool-proof, push button timer responds to fingertip or elbow pressure releasing quick-drying air current. Dries hands in about 20 seconds, shuts off automatically in 30 seconds.

This 20 amp. dryer can be directly wired to 110 a-c line. Heating element constructed of high quality nichrome wire. Heater protected by special fuse. Has grey metallic finish with other parts galvanized to prevent rust.

No.	Dimensions In.	Wt. Lbs.	Each
OHD-50C	9½ x 7 x 6¾	15	\$79.95

Wesix Bathroom Heaters

"Competitor"

In the lowest price field, the "Competitor" bathroom heater is a durable, high quality unit that is built to the same exacting standards as regular Wesix bathroom models. Shipping wt. is 11 lbs., standard voltage is 120 v.

No.	Wattage	Each
10BH-1	1000	\$16.00
12BH-1	1250	16.00
15BH-1	1500	18.00
15BH-2 (240 v.)	1500	19.00

"Time Switch Control"

An integral 60 minute time switch prevents wasted power in bathrooms in home, or in apartments, offices or motels. Mechanical time switch may be set for any period up to one hour. Chromium finish. Easily installed between studs. Over-all dimensions, 10½ in. by 20 in. 120 v., 1500 watts.

No. 15TH—Shipping Wt.,
12 Lbs..... Each **\$29.50**

Wesix Bathroom Heaters

"Built-In"

A compact heater for bathrooms of average size. Features an "electric chimney" similar to those in major WESIX models. Easy to place in the smallest bathrooms, it will fit into standard walls under windows or in almost any location.

Standard voltage 120 a-c. (Can be furnished for 240 volts). Over all dimensions 10½ x 20 in.

No.	Wattage	Each
10FC	1000	\$22.00
12FC	1250	22.00
15FC	1500	22.00

Ship. weight 11 lbs.

"Automatic"

Where automatic heat is desired, for cold climates or where the bathroom has a large outside wall area, we highly recommend this regular major air heater with its sparkling nickel finish.

It features the famous WESIX Thermostat which automatically regulates room temperature yet can be instantly and easily adjusted to any desired temperature.

Standard voltage 120 volts a-c. (Can be furnished for 240 volts.)

No.	Wattage	Each
10WFN	1000	\$59.00
12WFN	1250	59.00
15WFN	1500	59.00

Ship. weight 17 lbs.

Framing Details and Dimensions:

Heaters should not be located behind or in the way of hinged doors, under towel racks, tables or cabinets.

Wall Opening Dimensions:

No.	Width, In.	Height, In.	Heater Depth, In.
10FC, 12FC, 15FC	8⅝	17¾	3⅞
10WFN, 12WFN, 15WFN	9⅞	20¼	4

Installation:

Heater rests on bottom strip that is set flush with studs, 6 in. above finished floor. Heater is fastened with screws through side flange and wall finish, into studs. Interior wall finish should run even with wall opening on top, bottom and sides. For plaster finish a lath edging or ground strip around opening prevents crumbling. Heater grille overlaps wall opening about 1 in.

Wesix Automatic Fan Type Heaters

Wall Type

Built for dependable quiet operation with sealed motor that requires no oiling, vibration-free floating grille and low velocity air movement, the fan-type heaters are equipped with Wesix thermostat, separate fan control and full over-temperature protection.

Available in portable, flush wall or bracket mounted models. Wall opening of all flush wall models, width 14 1/4 in., height 20 1/4 in., depth 4 in. Shipping wt. 25 lbs. Standard finish, hammer-tone bronze. Available in polished nickel on special order. 240 v. operation.

Bracket type: 15 5/8 in. wide, 16 1/2 in. high, 8 1/2 in. deep.

Wesix Automatic Floor Furnaces

Designed to give safe and clean heating at a minimum cost including installation. They feature the same basic construction as other WESIX automatic electric heaters such as the "electric chimney" for high velocity natural circulation and the built-in WESIX thermostat for comfort and economy.

Equipped with two double-pole switches.

Operate on 240 volts a-c.

Guaranteed by maker against defects. Listed by Underwriters' Laboratories, Inc.

No.	Watts	Floor Opening In.	Grille Overall, In.	Shp. Wt. Lbs.	Each

80FFE	8000	20 1/4 x 30 1/4	22 x 32	126	156.00

Wesix Automatic Electric Wall Furnaces

The radiant plus circulating heat of these wall furnaces provide maximum room comfort — air is neither too hot nor too cold and neither stuffy nor drafty. Radiant heat gives quick, penetrating warmth. Wesix "electric chimneys" provide controlled natural circulation of warm air throughout the room. Without fans, blowers or other moving parts this circulation is gentle and silent. It provides even distribution of warmth from floor to ceiling in every corner of the room.

Standard voltage, 240 a-c, unless otherwise specified.

Standard finish hammer-tone bronze.

Depth of opening 4 in.

No.	Watts	Wall Opening In. Width	Wall Opening In. Height	Shp. Wt. Lbs.	Each

50WF	5000	35 3/8	20 1/4	46	114.00

Ionix Control available on all Units. Prices on request.

*Also available in 120 volts a-c.

Guaranteed by maker against defects. Listed by Underwriters' Laboratories, Inc.

Installation

These instructions should be followed exactly as to location and method of framing in: heaters are set 6 in. above finish floor, preferably on outside wall; heaters are supplied in one unit and should be so installed AFTER plastering or other wall-finishing operations are completed.

Wesix Automatic Electric Wall Furnaces

Ionix Wall Convactor

Heating by controlled radiation and convection, the low temperature on the grille panel of the Ionix Wall Convactor permits greater freedom in furniture placement and is ideal for use in schools, offices, theaters or in other locations near work or play areas.

Exclusive with Wesix, the Ionix wall convactor features ionization and air purification to destroy airborne bacteria, mold and pollen and make indoor air like outdoor air at its best. "Air sterilization" which is also found on Ionix wall furnaces is enhanced by the system of baffles found on the Ionix wall convactor.

Standard finish: hammertone bronze, special finishes available on order.

Depth of opening is 4 in.

Underwriters' Laboratories listed and approved.

Wesix Centramatic Controls

With this complete, packaged kit, central control and automatic capacity control can be added to the already "multiple zone controlled" electric heating system. Basic unit is 100 amp. switch which turns heating equipment throughout the home to high, low or off position automatically. Capacity and indoor-outdoor control is by the easily installed "Climatwins" a sensitive outdoor and indoor thermostat combination.

When outdoor temperature rises above a pre-set level, all automatic heating units are switched to 120 v. operation. In addition, house temperature is controlled by overriding central thermostat whenever temperature setting is lower than setting of individual room thermostats. Shipping wt. 55 lbs. UL approved. Each.....\$95.00

Wesix Automatic Portable Heaters

For completely automatic electric heating in one or more rooms or for general auxiliary heating, these Wesix portables provide the same balanced radiant plus circulating heat as Wesix wall furnaces. Strong, safe construction with over-temperature protection in case of tipover and ten year element guarantee insures years of silent, maintenance-free service. Grille easily removed for cleaning. Adjustable thermostat in incoming airstream for accurate temperature control; standard finish Hammertone Bronze. Standard or Ionix models available. All models except 50CR are complete with 5 ft. cord and polarized cap. (Regular cap on 120 v. models). Guaranteed by maker against defects.

No.	Watts	Appr. Width In.	Shp. Wt. Lbs.	Each
*15CR	1500	11	20	\$44.50
20CR	2000	15 3/4	30	56.00
30CR	3000	20 3/4	35	67.00
40CR	4000	25	45	78.50
50CR	5000	33 1/2	55	99.50

*Can be supplied for 120 volts a-c, 1500 watts or less.

"Fireball"

Small portable in attractive modern design. Heat is by radiation and convection. Heater stands on three rubber tipped legs with cool handle balanced for easy carrying. Five year guarantee against burnout. Complete with cap and cord. Sizes 1250 watts and 1500 watts, 120 v. Finish, Antique black.

Wesix Bracket Type Heaters

These heaters feature the same construction as Portable Heaters, except that the feet and handles are replaced by brackets which fasten to walls by screws and bolts. When mounted on the wall just above the baseboard, they give the same dependable service as the Wall Furnaces, with the floor surface left clear for easy cleaning. Ideal where masonry walls or other existing construction prohibits cutting wall openings.

Standard voltage, 240 volts, a-c. Specify finish and voltage. All sizes approximately 9 in. deep, 16 3/4 in. high; (Overall width—see table).

50CRB	5000	33 1/2	55	97.00

*Can be supplied for 120 volts a-c, 1500 watts or less.

Wesix Electric Baseboard Panels

Here is a vastly superior perimeter heating system designed for maximum comfort and perfect compatibility with modern interior design. It employs the same principle of radiative and convection heating that has been used by Wesix successfully for many years. Unlike so-called "panel" heat or "radiant" heating in floors or ceilings, these Baseboards are fully automatic and there is no time-lag or excess residual heat to bring waste and discomfort.

Installed beneath picture windows, the panels keep glass free of fog and counteract downdraft caused by high heat loss.

No metal fitting on the job. Two standard lengths are designed to fit any size room with sufficient capacity for design temperature difference up to 70 degrees F.

Controls are simple, assuring low installation costs. No expensive wiring or pipes to lay in concrete or plaster. No condensation, no furnace, no flues.

Engineered for a maximum surface temperature of 150° F., these units are rated at 250 watts per linear foot and operate on 240 volts a-c.

Baseboard

No.	Watts	Length, in.		Shp. Wt. Lbs.	Each
		FL	in.		
7CBB-32	667	2	8	20	\$27.00

No. CBBLDP — Thermostat and Switch; Length 6 in.; Ship. weight 5 lbs..... Each **\$25.00**

Accessories

No. CBBCS Corner Piece, length 2 3/4 in.; Ship, wt. 1 lb..... Each **\$3.50**

No. CBBDR Receptacle Section, lgth. 6 in.; Ship, wt. 2 lbs..... Each **\$9.50**

No. CBBES End Pieces, length 2 7/8 in., wt. 1 lb..... Each **\$3.50**

Note: For control by Wall Thermostat, specify Wesix No. DLV.

Standard Finish: Sea Grey.

Installation

Baseboard panels are surface mounted on the wall above finished floor. Baffle alignment plates assure even alignment of panels and control section.

Thermostatic controls should be carefully adjusted in each room for maximum comfort. In a well engineered installation in a properly constructed, well-insulated house, the temperature difference from corner to corner, floor to ceiling will be less than 2° F.

Big Beam Combination Portable Electric Hand Lamp and Flashing Red Signal Beacon

This combination portable electric hand lamp and flashing beacon No. 164 and incandescent bulb type No. 104 is the most popular of its kind on the market today. With beacon arm folded down over handle the beacon serves as a tail light. When beacon is raised to upright position, unob-

structed vision is assured. When placed on ground or top of car, it serves as a warning or signal light. Two switches—one for head light—the other for tail light. Powered by one #200, 6 volt lantern battery.

No.	Description	Each
164	Big Beam Beacon, less battery.....	\$10.50
104	Big Beam Beacon, less battery.....	9.95
200	6-volt lantern battery.....	1.00

Big Beam Flashing Flare Beacons

Gives safety in every conceivable emergency. Designed and created to fill a popular demand for a flasher of this type that is sturdy and dependable, compact and light weight and inexpensive to give long-lasting service.

Simple to operate push button starts and stops the flasher. The one 6-volt standard lantern battery can be replaced in seconds.

Flashes approximately 60 to 65 times per minute and gives about 65 hours of continuous use on one battery. Battery container 20 gauge steel, rustproof and weatherproof, painted with red baked enamel.

No.	Description	Each
108F	Flashing Flare Beacon, less battery.....	\$4.95
200	6-volt lantern battery.....	1.00

Big Beam Electric Hand Lanterns

Explosion-Proof

Approved by Underwriters' Laboratories for Class 1, Group D hazardous locations. Bulb is held in its socket by a compressed high-tension spring clamped over the glass envelope of the bulb. If bulb cracks or breaks, the spring crushes the bulb and simultaneously ejects bulb base from contact socket, thus eliminating filament after-glow.

Sparkproof case and head are of drawn brass. Handle die cast zinc. Lead seals to prevent tampering and container latch which can be padlocked. Ideal lamp for any hazardous area. Uses two 6-volt standard lantern batteries.

No.	Description	Each
287EX	Explosion Proof Hand Lamp, less batteries..	\$33.75
200	6-volt lantern battery.....	1.00

Big Beam Hand Lamps

Projects a beam for a distance of 2500 ft.

Powered by a 6-volt heavy-duty, 26 amp.-hr., rechargeable storage battery. Pressure type battery-to-lamp contacts eliminate broken and corroded wire. Has two bulbs—main and auxiliary. Lamp head adjustable in a 180° vertical arc.

Reflector, 7-in. triple-silver plated.

Lamp head and handle finished with durable black enamel. Case finished with acid-resistant coating. Shipping weight, 19 lbs.

No. 411	Complete with Battery.....	Each	\$41.00
No. 1280	Charger.....	Each	22.50

Big Beam Transista Lamps

Transistor circuit assures minimum of 1500 continuous flashing hrs. on two standard 6-volt lantern batteries.

Equipped with big, 4½-in. double-faced lens and filament type bulb clearly visible from both directions.

Has tamper-proof concealed switch and locking device for attaching to barricade.

Case constructed of 20-gauge steel and finished in red baked enamel. Telescoping cover weatherproofs entire unit.

Has no moving parts to get out of order.

No. 410T	Transista Flash, less batteries. Specify red or amber lens.....	Each	\$22.95
----------	---	------	---------

No. 408F Hand Lamps

Flash or Steady. Uses one or two standard 6-volt lantern batteries. Has two operating bulbs with spare in dummy socket for added protection. Equipped with Dome type fresnel lens. Specify red, green, amber, clear or blue.

No. 408F	Flashing Flare, less batteries.....	Each	\$11.50
----------	-------------------------------------	------	---------

Note: Prices slightly higher in 11 western states.

Justrite Safety Flashlights

Yellow Jacket

Approved for use in Class 1, Group D hazardous locations by the Underwriters' Laboratories, Inc., and by the U.S. Bureau of Mines, Approval No. 608, for use in methane gas and air mixtures.

A completely redesigned 3-cell flashlight, light in weight, small and powerful.

Case is high-visibility yellow in color, made of unbreakable cellulose butyrate acetate, that resists shock and withstands a wide range of temperatures. Completely insulated to permit its use around electrical circuits without danger.

Case fits the hand or pocket easily. Will stand steadily and throw a beam diagonally upward.

Highly polished silver plated reflector 2½-in. diameter. Protected with neoprene ring. Simple operating switch. Has finger ring on bottom and belt clip on side of case. Case is guaranteed unconditionally by the maker against breakage in normal use.

Complete with No. 365 bulb and clear lens. Throws a beam of light 1500 feet. Requires 3 standard flashlight batteries (Batteries not included).

Size: 2⅝ x 3⅝ x 6-in. Individually boxed, 12 in a standard package; weight of standard package, 7 lbs.

No. 1717-8.....	Each	\$5.35
-----------------	------	--------

Big Beam Jr. Electric Hand Lamps

Portable

No. 111

Gives a big, powerful light for unlimited sports, utility and emergency uses.

Designed for those who want a bright, portable light for work or play.

Battery case and hinged cover heavy drawn steel, with snap catch. One-piece handfit handle 4-in. long.

Lamp head 4½-in. diameter with highly polished reflector. Push button switch mounted on top of case.

Lamp-to-battery pressure type contacts—no wires to connect, weatherproof and rust-proof. Can be focused for wide or narrow beam.

Over all size: 8½-in. long, 4½-in. wide, 6¾-in. high.

Finish: Head lamp and handle assembly, nickel-chrome plated. Case and cover durable baked red enamel. Complete with Bulb No. 160.

Requires one 6-volt lantern type battery. (Battery not included.)

Packed individually; 12 in a shipping case

Weight Per Case 38 lbs.

Big Beam Electric Hand Lamps

Portable

No. 211

Throws a powerful 1500-foot brilliant beam, or spread light.

For unlimited utility, emergency or sports use.

Battery case and hinged cover heavy drawn steel, with snap catch. One-piece hand-fit handle.

Lamp head 5-in. diameter, with highly polished reflector. Heavy convex glass lens. Double throw control switch

lights either the main bulb or a small auxiliary bulb for dim light.

Simple focus adjustment permits choice of powerful 1500-foot beam or bright spread light. Lamp-to-battery pressure type contacts — no wires to connect, weather-proof and rust-proof.

Finish: Head lamp and handle assembly, polished nickel-chrome plated. Case and cover durable baked red enamel.

Overall size: 10-in. long, 5¼-in. wide, 9¾-in. high.

Requires two standard 6-volt lantern batteries. (Batteries not included.)

Packed individually; 12 in a shipping case

Weight of case 64 lbs.

No. 211 - Complete with Main Bulb No. 260 and Auxiliary Bulb No. 255..... Each **\$12.95**

No. 212 — An Excellent Lamp for Motorists, Road Crews, Railroad Men, etc. Complete with Main Bulb No. 260, and Red Auxiliary Bulb No. 255. Equipped with a Flashing Unit to operate Red Signal or Warning Light..... Each **\$17.95**

Prices slightly higher in 11 western states.

Big Beam Electric Hand Lamps

Portable

An all-purpose lamp for use by utilities, railroads, fire and police departments, and others who require a powerful working light.

Throws a brilliant beam 2500 feet and is unexcelled for all night emergency jobs.

No. 1000

Battery case and cover, heavy steel, with lever catches. One-piece hand-fit handle.

Lamp head 7-in. diameter, with silver plated brass reflector and crystal clear glass lens ¾-in. thick; two toggle switches, single pole, single throw, on top of lamp head. Lamp to battery pressure-type contacts — no wires to connect.

Finish: Head lamp and handle assembly chrome plated; Case and cover heavy baked red enamel.

Requires one 9-volt Dry battery. (Battery not included.)

Complete with No. 900 main bulb and No. 955 auxiliary bulb.

Over all size: 14-in. long, 7-in. wide, 13-in. high.

Packed Individually

No. 1000—Shipping Weight 9 Lbs..... Each **\$24.95**

With 100% Spillproof Rechargeable Battery

For all industrial purposes, public utilities, railroads, police and fire departments, hospitals and many other purposes.

Each cell of battery has a transparent window with three built-in specific gravity ball indicators, which indicate the condition of battery by their position in cells.

Container is 18 gauge welded steel, durable baked red enamel finish. Chrome plated carrying handle, with D rings for shoulder strap.

No. 312

Lamphead 6¼-in. diameter, chrome plated. Highly Polished reflector. Heavy convex glass lens. Double-throw switch, single pole, toggle type. Button on head for fastening snap-on lens.

Lamp head can be adjusted to 170° vertical arc.

Lamp-to-battery pressure type contacts — no wires to connect.

Overall size: 13½-in. long, 6¼-in. wide, 10½-in. high.

Storage battery for No. 311 — 6-volt, 20 ampere hour capacity, built-in specific gravity indicators. Complete with 6-volt pre-focused main bulb No. 900, 2.35 amperes, and standard G-E 6-volt auxiliary bulb No. 55.

No.	Description	Each
311	With Battery, without Charger; Shipping Weight 17½ Lbs.....	\$45.00

Storage battery for No. 312 — 4-volt, 20 ampere hour capacity, with specific gravity indicators. Complete with 4-volt pre-focused main bulb No. 360, 1.5 amperes, and standard G-E No. 502 special miniature base auxiliary bulb.

Built-in charger recharges battery by connecting to 110-volt a-c circuit by removing charge cord from inside of lamp container and following instructions furnished with lamp.

Packed Individually

No.	Description	Each
312	With Battery and Built-in Battery Charger; Ship. Wt. 17 Lbs.....	\$49.50

Big Beam Automatic Emergency Lighting Units

With Glass Jar Batteries

Model 2ATW

Automatic emergency lighting units with 2 heads, glass jar storage battery, trickle charger, fast charger and 12 hour time switch.

Wherever storms, fire, floods, accidents or a blown fuse disrupt lighting service, a Big Beam automatic emergency light will provide illumination for hours. No special wiring is needed—just place the unit for most effective illumination and plug into any convenient lighting outlet.

Battery charged to capacity at all times by enclosed automatic trickle charger. Actual test assure minimum

of 8½ full hours of operation when fully charged. Enclosed relay automatically turns lights ON when regular current fails and OFF when current is restored. 12-hr. time switch for fast charging run-down battery—automatically reverts to trickle charge at end of desired length of fast charging—up to 12 hours on one turn of switch. Has built-in specific gravity discs.

Power furnished by 3 cell, 25, 30, 40, 80 or 100 ampere hour glass jar battery. Complete unit 16-in. long; 8½-in. wide; 19¼-in. high overall. Complete unit with heads, but without battery, weight 20 lbs.

Big Beam Automatic Emergency Lights

Electric, Portable

These lamps are fitted with an extension cord and plug, and relay unit. When cord is plugged into an electrical outlet served by the same circuit, the auxiliary lamp goes on automatically the instant current fails and regular lights go out.

Single Head Model No. 801

Dual Head Model No. 802

For theaters, hospitals, hotels, institutions, public buildings, amusement buildings and department stores. Also where local building laws require auxiliary emergency lighting.

Projects a powerful light — adjustable to any direction. Equipped with floodlight lens for diffusing light over a wide area. Can be used as a regular portable hand lamp.

Lamp heads 6½-in. diameter, with highly polished reflectors. Heavy convex glass lens. Trouble-free toggle switch on top of lamp heads. Heads, handle and heavy steel case with snap catch, all finished in green hammerloid enamel.

Swivel lamp heads may be turned a full 360° horizontally and 230° in vertical direction.

Require four No. 6, 6-in. dry batteries. (Batteries not included.) Pre-focused Bulbs No. 760, 4½ volts.

No.	Type	Lgth.	Overall Size, In.		Hgt.	Shp. Wt., Lbs.	Each
801	Single Head	12	6½	13	9		\$32.95
802	Dual Head	14½	6¼	13	11		39.95

Big Beam Automatic Emergency Lights

Electric, Portable

Approved by Underwriters' Laboratories, Inc.

For providing instant, automatic emergency lighting whenever any interruption in electric service causes the regular lighting to fail. Avoids confusion and prevents panic and disaster in crowded buildings when a fire or storm causes the lights to go out.

The two powerful floodlights provide ample lighting over a large area minimizing property damage and guarding merchandise theft when lights fail.

The general operation and installation is the same as Nos. 801 and 802. Complete with an 8-ft. rubber cord and attachment plug cap.

No. 2AD-S

Attractively designed container of heavy steel, with full length piano hinge and two lever-type latches for cover. Heads, handle and container finished in soft green hammerloid.

Two floodlight heads 6¼-in. diameter with highly polished reflectors. Convex glass lenses. Brass, friction-type corrosion-proof swivel joints hold adjustable heads in any

position. Thoroughly dependable automatic switch over relay.

Complete with General Electric heavy duty pre-focused bulbs (one spare bulb (No. 900) included in battery case).

Requires one 9-volt standard dry battery that is easily replaced. (Battery not included.)

Over all size: 15-in. long, 6¼-in. wide, 15½-in. high.

No. 2AD-S—Shipping Weight 15 lbs. Each \$57.95

Big Beam Electric Hand Lamps

Portable With Weather Proof Battery Case

No. 700A

A powerful heavy duty lamp for use in industrial plants, R. R. contractors, public utilities and all night service jobs. Throws a powerful beam 2000 feet.

Battery case and hinged cover heavy drawn steel, with snap catches. One-piece hand-fit handle.

Adjustable lamp head 6¼-in. diameter, with highly polished reflector. Convex glass lens. Cutler-Hammer toggle switch on lamp head.

Simplified battery-

connecting plate assures correct battery replacement.

Finish: Case and cover finished in acidproof red enamel. Base waterproof.

Over all size: 11¼-in. long, 6¼-in. wide, 10¾-in. high.

Requires four No. 6, 6-in. dry batteries. (Batteries not included.) Net Weight 5 lbs. Shipping Weight 7 lbs.

No.	Description	Each
700	Black Japanned Lamp Head and Handle; With Main Bulb No. 760 only.....	\$18.95

Prices slightly higher in 11 western states.

Justrite "Light-Stick" Flashlights

The new "money-saving" design in flashlights for maintenance work in telephone companies and other utilities. Has 6 volt circuit. Gives 2 2/3 times more light than conventional flashlights and batteries last up to 2 1/2 times as long to secure a savings of 20% in cost of operation.

Flat-sided battery case holds 1 regular (size D) flashlight batteries, has belt hook on back, carrying ring on bottom. Headpiece adjusts to any angle, has rubber protector, highly polished 2 1/2 in. reflector, No. 27 bulb.

Overall size 2 1/2 x 3 x 8 1/2 in. Made of rust-proofed steel, finished in chip-proof gray enamel. Packed in unit carton, less batteries.

No. 2105-4 "Light-Stick" Flashlight. Each \$5.40

Justrite "Yellow-Flash" Lights

Powerful—Compact—Convertible

Lights designed for operation on 8 standard flashlight batteries (size D) and a No. 965—8 volt bulb for a far reaching, powerful light—where less light volume and battery economy is desired a standard lantern battery and a No. 27 or PR-13 5-volt bulb can be used.

Flashlights

A good, handy flashlight for hunters, fishermen, householders, inspectors, farmers, campers, guards, peace officers and watchmen. Small size makes it possible to carry in tool kit, tackle box or glove compartment.

Rust-resisting coated steel case, finished in chip-proof enamel. Folding wire handles. Head piece can be tilted so that light may be directed at any angle. Headlamp with 2 1/2 in. highly polished reflector and glass lens is chromium finished, mounted on swivel assembly.

Complete with one No. 965—8 volt bulb for operation on 8 flashlight batteries. (Batteries not included.)

Overall size: 8 x 3 x 3-in. One in a carton; 12 in a case.

No. 2109-1 Weight each, 1 1/4 lbs. Each \$4.95

Head Lights

For all purposes requiring both hands free. Ideal for camp chores, night loading, farm or guard duty.

Metal battery case, yellow baked-on enamel finish, with gray baked-on enamel end caps and trimmings. Has belt loop for fastening to ordinary belt.

Metal headlight assembly, polished heavy chrome finish, with 2 1/2-in. highly polished reflector and glass lens, mounted on swivel assembly with adjustable head band, padded with sponge rubber for comfort. Switch on

head lamp. Weatherproof plastic connecting cord attaches to head piece.

Complete with one No. 965—8-volt bulb for operation on 8 flashlight batteries (Batteries not included).

Battery case 5x3x3-in. One in a carton; 12 in a case.

No. 1903-6—Weight each, 1 1/2 Lbs. Each \$5.45

Justrite Head-Light

A four-cell general utility head-light for work requiring both hands free. Produces a splendid working light that will carry 1500 ft.

The battery case is small enough to slip easily into a pocket. Has clip on case to fasten securely to any belt.

Rust-resistant metal battery case, finished in attractive baked-on gray enamel, with cadmium plated trim.

Metal head-light assembly, baked-on gray enamel finish, with 2 1/2-in. polished reflector. Mounted on swivel assembly, with adjustable head-band, padded with sponge

rubber for comfort. 48-in. weatherproof plastic connecting cord attaches to headpiece.

Operates on four standard flashlight batteries, Size D (Batteries not included). Complete with No. 425 Bulb.

In shipping carton of 12; Weight 12 lbs.

No.	Description	Each
1904-4	General Utility.	\$4.60
*1704-8	For Class 1, Group D Hazardous Locations.	9.50

*With Heavy Cord and Kickout Bulb Socket; Approved by Underwriters' Laboratories, Inc.

Justrite Safety Extension Lights

Approved by Underwriters' Laboratories, Inc. For Use In Class 1, Group D Hazardous Locations

For inspection of barrels, storage tanks, gasoline drums, etc. The flexible extension is a core of tough flexible spring steel, entirely covered with flexible brass tubing—rust-resistant for long duty service.

It is sparkproof and can be bent and inserted into a 3/4 in. or larger opening, and will retain its curvature as set. Light head equipped with a clear plastic globe and No. 365 bulb.

Battery case is high visibility yellow in color, made of unbreakable cellulose acetate butyrate that resists shock and withstands a wide range of temperature.

Requires 3 standard flashlight batteries. (Batteries not included).

Size 2 5/8 x 3 5/8 x 6 in. In individual corrugated shipping carton. Approximate shipping weight 1 lb.

No.	Description	Each
1729-15	With 15 In. Extension.	\$12.00
1729-30	With 30 In. Extension.	14.00

Justrite "Pendragon" Industrial Lantern

A new, more powerful, more sturdy lantern for utility companies and industrial construction and maintenance work.

Combines maximum power and maximum efficiency: beam candle power averages 20,000; overall size only 5 1/4 x 8 x 9 in. Holds 3 standard lantern batteries, will operate for short periods on two batteries or on one battery.

Made of heavy-gauge rust-proofed steel finished in chip-proof enamel. Chrome plated trim.

Rubber covered carrying handle. Available with the new high power sealed beam lamp No. 4547 or with double filament bulb in 4 1/2 in. aluminized reflector.

No.	Description	Each
2401-4	With 1.25 amp. sealed beam lamp No. 4547 . . .	\$19.95
2404-3	With double filament lamp No. 508 (1.0 amp. filament for powerful beam; 0.3 amp. for long hours of burning)	19.95

Note: Batteries not included.

Justrite Railroad Car Inspectors' Lanterns

These lanterns are constructed of rust-resisting steel, chip-proof, baked enamel finish. Sturdy hardwood handle riveted to case. Adjustable guard, fully reinforced. Nickel plated focusing head.

Equipped with two independent lens housings, one having a spread beam honeycomb lens and a No. 27 bulb for spread light, the other with a clear lens and a No. 502 bulb for spot beam. Two independent switches make the lights adaptable for all inspection uses.

Finish: Baked-on yellow enamel.

Complete with one No. 502 clear bulb and clear lens, and one No. 27 bulb and honeycomb lens for use with standard 6-volt lantern battery (Battery not included).

No. 2121-1 In ship. carton of 12; Wt. 22 lbs. . . . Each \$9.95

This model is equipped with a spread-beam honeycomb lens which gives efficient wide spread illumination—a clear even pattern of light three times larger in diameter than the beam of ordinary flashlights or lanterns. There are no dark rings or spots in the light beam.

Complete with one No. 27 bulb for use with standard 6-volt lantern battery (Battery not included).

In shipping carton of 12; weight 22 lbs.

No. 2131-1 Each \$7.50

Justrite Portable Hand Lanterns

All-Purpose Safety Type

Approved by Underwriters' Laboratories, Inc., the U. S. Bureau of Mines, and the U. S. Coast Guard Merchant Marine Technical Division

Produces a powerful bright forward beam, plus light to all sides, or a more subdued light as desired.

Battery case is rust-resisting coated steel. Cadmium plated fittings. Globe covers 3 3/4 in. chrome reflector and two sliding bulbs which are put in operation by sliding switch. Aluminum tubing handle, covered with plastic insulating jacket.

Protruding parts are brass, or otherwise sparkproof. Light pivots on base and can be moved to any angle.

Complete with two bulbs, one No. 425 for bright light, and one No. 27 for more subdued light. Requires one standard lantern battery (battery not included). In shipping carton of 12; weight 33 lbs.

No. 1744-8 Each \$8.60

Justrite Flagman's Lanterns

Fully approved by the Association of American Railroads for use by Flagmen.

Has the twin-bulb feature that creates a bright light through 360° in a horizontal plane and a vertical pencil of light visible at a great distance. The twin-bulb feature guarantees against light failure; if one bulb burns out, light can be restored instantly by moving switch.

Battery case is rust-resistant with chip-proof gray enamel finish. Fittings on case and guard cadmium plated. Weatherproof 3 1/2-in. chrome plated reflector provides a powerful spot beam. Aluminum handle, steel reinforced, clears top of case by 4-in. Strong guard of steel, securely welded and reinforced.

The switch moves the bulb to the center of reflector where contact is made.

Fresnel globe produces an intense light with high optical fidelity.

Complete with two No. 27 bulbs. Requires one standard 6-volt lantern battery (Battery Not included).

In shipping carton of 12; Weight 32 lbs.

No. 2172-2—With Red Fresnel Globe Each \$9.35

Justrite Railroad Trainman's Lanterns

Has the twin-bulb feature, with one bulb socket extended for general lighting purposes, the other focused to provide a powerful forward beam for reading car numbers at a distance, for gnawing through smoke, fog, etc.

Battery case is rust-resistant steel with chip-proof gray enamel finish. Fittings on case and guard cadmium plated. Chrome plated brass reflector 3 1/2-in. diameter. Aluminum tubing handle, steel reinforced, clears top of case by 4-in. Strong stationary guard, with welded ring.

The switch moves the bulb to the center of reflector where contact is made.

Requires a standard 6-volt lantern battery and one each bulb No. 502 or 27 (Batteries and bulbs not included).

In ship. carton of 12; Wt. 24 lbs.

No. **2140-1**—Without Glass Globe over Reflector. Each **\$5.80**
 No. **2140-3**—With Glass Globe over Reflector... Each **6.40**

Exide Auxiliary Lights

Approved by Underwriters' Laboratories, Inc.

Model M

Model T

"Lightguards"

Gray hammerstone 20 gauge steel containers, equipped with 3-COE-7 battery and adjustable sealed beam lamps. Operates on 115 volts 60-cy. a-c, has relay which automatically connects lamp to battery on failure of power service. Units equipped with 6 ft. #18-2 cord set.

Model M Lightguard: Designed for 2 rate charging. High rate of 1 1/2 amps. recharge battery in 12 hours; trickle rate of 55 milliamperes maintain battery in a state of full charge.

Model T Lightguard: Designed with a single rate of charge—175 milliamperes.

Model A Lightguard: Designed for fully automatic high and low rate charging.

"Lightguards"

Gray hammerstone 20 gauge steel container equipped with 3-COE-7 battery and adjustable sealed beam lamp on cover.

Operates on 115 volts 60 cy. a-c, equipped with heavy duty relay which automatically connects lamps to battery on failure of power service.

MODEL ME Lightguard: Designed for 2 rate charging. The 1 1/2 amperes will recharge battery in 12 hours. Trickle rate of 55 milliamperes maintains battery in a state of full charge.

MODEL TE Lightguard: Designed for one rate of charge, 175 milliamperes.

MODEL AE Lightguard: Designed for fully automatic high and low rate charging.

No.	Model	Lamp	Width, In.	Depth, In.	O.A. Ht. In.	Wt., Lbs.
48762	ME	1	9 1/8	7 7/8	15 1/2	36 1/2

54660	AE	1	9 1/8	7 7/8	15 1/2	37

Models ME, TE and AE are conduit connected (no cord supplied).

Exide Lightguard Mounting Brackets

Constructed of 16-gauge cold rolled steel.

Designed for wood, tile or masonry walls, using wood screws, toggle bolts or lag screws. Gives full view of both sets of pilot balls.

Adaptable to Lightguard models equipped with studs and wing nuts.

Easy to install. Finished in gray hammertone.

"Eveready" Heavy-Duty Flashlights

Particularly suitable for Industrial Applications

No. 1251A

No. 1259A

Heavy Duty Flashlights: Heavy-duty insulated case will not shatter, crack or dent and it's resistant to temperature extremes. Withstands deterioration from water, oils, grease, gasoline, alcohols and acids. Equipped with unbreakable polyethylene safety-glow lens-guard and ring hanger.

Permissible Safety Flashlights: Same as heavy duty flashlights plus special safety features and extra lamp in bottom cap. Approved by U. S. Bureau of Mines for use in Methane and Air Mixtures and listed by UL for use in gas air mixtures of Class 1, Groups C and D.

No.	Type	No. of Cells	Lamp No.	Uses Batteries	*Each
1251A	Heavy Duty	2	PR6	950	\$2.50
1351A	Heavy Duty	3	PR7	950	2.75
1259A	Safety	2	PR6	950	4.15
1359A	Safety	3	PR7	950	4.35

*Without batteries.

"Eveready" Flashlights

Individually Packed In Attractive Boxes

No. 8251

Automatic Spotlight

All chrome finish. Removable bottom cap. Ring hanger.

No. 2251

Standard Automatic Spotlight

Two - cell. Chrome finish with black decoration. America's best seller.

No. 2351

Automatic Spotlight

Three - cell flashlight. Same features as the No. 2251.

No. 212

Small Penlite

Black and chrome finish. Use two No. 912 batteries.

2351	Automatic spotlight 3 cell	24	2.20
212	Penlite 2 cell	50	.89

*Batteries are not included.

"Eveready" Flashlight Lens Assortments

This assortment contains a good quantity of lenses for all popular flashlights.

Contains:

30 No. 53419 (Diam. 1.76") standard spotlight lenses. 6 No. 53123 (Diam. 1.64") small spotlight lenses.

4 No. 53390 (Diam. 3.109") large searchlight lenses.

For replacement quantities each of the 3 lens type can be ordered in separate packages.

No. 102..... Per Assortment \$1.84

"Eveready" Lantern Batteries

No. 409

No. 509

For electric lanterns requiring this type battery.

Size battery—2 5/8 x 2 5/8 x 3 7/8-in.

715	7 1/2	\$5.50
716	9	6.45

"Eveready Ignitor" Dry Batteries

For all applications requiring long life and heavy service. Their exceptionally high quality and recuperative powers makes them ideal for ignition, radio, bells, buzzers, electric games, toys, lanterns and other battery-operated devices.

Round jackets.

Screw terminals will be furnished unless Fahnestock spring terminals are specified.

Size: diameter, 2 5/8 inches; height, 6 5/8 inches.

In standard package of 12.

Weight per standard package, 27 lbs.

No. 6—"Ignitor"; 1 1/2 volts..... Each \$1.05

"Eveready" Dry Batteries

Railroad and Industrial

Especially designed for Railroad and Industrial uses where a wide range of service conditions, from extremely heavy to extremely light, are encountered.

Screw terminals will be furnished unless otherwise specified.

Round jackets only.

Size: diameter, 2 5/8 inches; height, 6 5/8 inches.

In standard package of 12.

Weight of standard package 27 1/2 lbs.

No. 6—Special Railroad and Industrial; 1 1/2 volts.... Each \$1.15

"Eveready Columbia" Dry Batteries

Telephone, "Gray Label"

These batteries are noted for their long life on light drain service and are recommended especially for telephone service.

Round jackets only.

Fahnestock spring terminals are furnished unless screw terminals are specified.

Size: diameter, 2 5/8 inches; height, 6 5/8 inches.

In standard package of 12.

Weight standard package 26 1/4 lbs.

No. 6—"Columbia," Telephone; 1 1/2 Volts..... Each \$1.05

"Eveready" Air Cell Batteries
For Telephone, Railroad and Industrial Use

No. T-1600

No. T-2600

The sustained voltage, long life and low ampere hour cost make these batteries desirable for railroad, telephone and industrial use.

Available in single cell units and in batteries consisting of two cells in series. Average voltage per cell is 1.25 volts, falling to 1.0 volts per cell at the end of their capacity.

They are shipped dry, but use a liquid electrolyte. This prevents shelf depreciation.

No.	Voltage	Amp. Hr. Cap.	Lgth.	Size, Inches Wdth.	Ht.	WL, Dry Lbs.	Each

"Eveready Hot Shot" Batteries

No. 1461

For all purposes requiring four or more dry cells in series. Particularly adapted for electric fences, gas engines (tractors, motor boats, etc.), blasting, fire and burglar alarms, gongs, bells, annunciators, signals, lights for closets, outhouses, camps, boats, searchlights, etc.

These batteries are composed of specially selected cells. Internal connections are securely soldered and the cells are completely insulated against accidental short circuits. Terminals are insulated.

No.	Voltage	Lgth.	Overall Size, In. Wdth.	Ht.	Std. Pkg.	WL, Std. Pkg., Lbs.	Each

"Eveready" Batteries

These batteries have an unusually long life and rapid recuperative power after use. All materials used are the best procurable for the purpose and each operation is carefully supervised and rigidly inspected.

No. 1050..... Prices on application.

Industrial Type

Revolutionary "inside-out" construction. Gives more bright white light, especially for sustained heavy duty use. Leak-proof, will not swell, stick or jam in flashlight case.

Height, 2 27/64-inches; diameter, 1 21/64-inches.

Cell size D.
Standard package of 192.
Weight per standard package, 42 1/2 pounds.

Ray-O-Vac Lanterns

No. 303

Powerful lantern has a sealed beam spotlight mounted in 180° adjustable head, red swivel flasher with shatter-proof lens and dual switches on handle. Uses 918 6-volt lantern battery. Lantern, complete with battery, packed in individual display cartons.

No. 303 Sportsman® Lantern Each \$12.40

No. 301

Same features as the No. 303 lantern, but without the flasher. A powerful lantern for outdoor use. Lantern, complete with battery, packed in individual display cartons.

No. 301 Sportsman® Lantern Each \$9.95

Ray-O-Vac Lanterns

No. 398

Versatile lantern has a 3-inch reflector, 3-position switch with flasher button and 180° swivel head. Uses bulb PR12 or PR15. Uses either 8 No. 2LP or 5LP flashlight batteries, or one No. 941 spiral spring terminal 6-volt lantern battery with no bulb changing. Available in individual cartons.

No. 398 Hunter® Lantern Each \$4.95

No. 298

Weights only 3 oz. Has a 3-inch reflector, lucite lens, battery pouch, adjustable headband. Uses 6-volt lantern battery No. 941 and bulb PR13. Available in individual cartons or 3 on display card No. M-329.

No. 298 Nite-Hawk® Headlite Each \$3.29

Ray-O-Vac Flashlights

No. N22

Highly resistant to breakage, chemical action, temperature extremes. Features removable end cap with spare bulb holder, plus replaceable lock-type switch. Available in individual cartons. Two-cell uses two No. 3LP or 2LP and bulb PR6.

No. N22 Workman® Flashlight Each \$3.25

No. N22T

A combination Workman flashlight and continuity tester which mounts into the end cap and is removable. Uses two No. 3LP or 2LP and bulb No. PR6. Available in individual boxes.

No. N22T Workman® Flashlight and Continuity Tester Each \$6.75

Ray-O-Vac Flashlights

G22

G32

Rubber end caps and fibre barrel. Replaceable switch with positive lock button. Available in individual cartons. G22 uses two No. 3LP or 2LP batteries and bulb PR6. G32 uses three No. 3LP or 2LP batteries and bulb PR7.

G22 Heavy duty flashlight Each \$2.60
 G32 Heavy duty flashlight 2.67

No. AN22

Safety lights approved for use in explosive atmosphere by Underwriters Laboratories and Bureau of Mines. Available in individual boxes. Two cell, uses two No. 3LP or 2LP and bulb PR6.

No. AN22 Workman Flashlight Each \$3.98

Ray-O-Vac Penlights

No. PAA2. Regular size. Uses two No. 7R or 7LP and bulb 222. Available in individual cartons or on display card M-260. Each \$0.89

No. PK2. Deluxe pen size. Uses two No. 400 batteries and bulb No. 224. Available in individual cartons or on display card M-130; Each \$0.89

No. PAA2 No. PK2

Ray-O-Vac Signal Wands

No. W2

No. W4

No. W8

Unbreakable red polyethylene signal wands to fit all standard Ray-O-Vac flashlights. Snap-in cap gives choice of red warning glow or piercing white beam. Available in individual cartons.

No.	Length In.	Each
W2	2	\$0.65
W4	4	.98
W8	8	1.59

Sterling Pocket Meters

These direct current meters can be used for battery testing of any kind (as stated with each meter), in railroad signal work, for photo flash purposes and in telephone and low-voltage electrical work generally. They are polarity indicators. Metal case 2 1/4-in. diameter, 5/8-in. thick, nicely nickel plated.

All are packed in individual boxes, in standard package of 10; shipping weight 4 lbs.

Pocket Ammeters

For testing No. 6—6-in. dry cells. 0—35 ampere scale, 1 ampere divisions. Has one flexible terminal.

No. 24.....Each \$2.75

Pocket Voltammeters

No. 44: For testing "Hot Shot," radio "A" batteries and No. 6—6-in. dry cells. 0-35 ampere scale, 1 ampere divisions; 0-10 volt scale, 1/5 volt divisions. Has one flexible terminal.

No. 44.....Each \$3.25

No. 45: For testing No. 6—6-in. dry cells and ordinary 45 volt radio "B" batteries. 0-35 ampere scale, 1 ampere divisions; 0-50 volt scale, 1 volt divisions.

No. 45.....Each \$4.25

Pocket Voltmeters

For testing 45 volt and 90 volt "B" batteries and 1 1/2 volts radio "A" batteries. Has flexible terminals which will fit any type of socket hole, prevent shorts and permit inclining meter for easy reading.

Scales: 0-100 volts, 5 volt divisions; 0-2 volts, 1/10 volt divisions.

No. 38A.....Each \$4.00

Pocket Voltmeters

Graphic General Testers

A single tester for dealers and servicemen for testing all portable "A" and "B" batteries.

Has red and green color chart for all standard batteries, including 45 volt and 90 volt "B" batteries and 1.5, 4.5 and 7.5 volt "A" batteries. Has flexible terminals for battery protection and easy reading.

Scale: 0-100 volt for special size "B" batteries, 5 volt divisions.

No. 42A.....Each \$6.25

Pyrene Fire Extinguishers

Approved by Underwriters' Laboratories, Inc., and Factory Mutuals.

Vaporizing Liquid, Small Pump Type

Light, compact and easily operated. Smothers all classes of incipient fires, particularly those in flammable liquid and electrical equipment. Double-acting hand operated pump. Discharges a steady stream 25 to 30 feet from any position in any direction.

For motorcycles, airplanes and heavy vehicles, "shock absorber" construction; clamp type brackets for wall or steering post guard against wear from excessive vibration. Complete with charge and bracket.

No. C21

No.	Cap. Qts.	Bracket	Unit Pkg.	Wt. Unit Pkg. Lbs.	Each
C21	1	Wall	12	87	\$20.60
C21T	1	Vehicle, Clamp	12	91	21.75
C31	1 1/2	Clamp	6	63	25.00
C31T	1 1/2	Vehicle, Clamp	6	63	25.00

Vaporizing Liquid, Pressure Type

C105PM

Type C105P and C105PM: Two quart dual cylinder pressure type for flammable liquid and electrical fires and incipient fires in ordinary combustibles.

Type C45P and C45PA: One gallon VL stored pressure type. Heavy duty unit for industrial, electrical and vehicular protection against all classes of incipient fire. Flexible metal, rubber-covered hose, adjustable shut-off nozzle, pressure gauge.

C45P

No.	Description	Each
C105P	2 Qt. Brass, without Pump	\$71.00
C105PM	2 Qt. Brass, with Pump	83.00
C45P	1 Gal. Stainless Steel, with Pump	118.00
C45PA	1 Gal. Stainless Steel, without Pump	113.00

Pyrene Foam Type

Polished Copper
2 1/2 Gallon Type

No. P13

Discharges a foam that floats on liquids, clings to ordinary combustibles, forms a fire-resistive, insulating blanket that smothers the fire by depriving it of air.

Protects against re-flash. Must be discharged annually and recharged with Pyrene Foam.

Seamless drawn one-piece copper shell and dome—no rivets or seams—tested to 500 lbs. Discharges about 22 gallons of foam.

No. PD2PN

No. P13—Shipping weight 23 lbs. **\$56.85**
If wanted with pressure relief valve No. PVI to meet U.S.C.G. requirements add \$5.00 to price.

Extinguishers on Wheels (Engines)

Large-capacity units for larger fire hazards, indoor and outdoor. Sturdily constructed of heavy sheet steel. Inner cylinder of cold rolled copper. Enamel finish. Manually-operated stopple prevents splashing and premature operation.

Outdoor and Airport Types are equipped with 50-ft. drag rope, reel and hose basket.

Forty-Gallon Capacity

No.	Type	Ship. Wt.	Each, Lbs.	Each
PD2PN	Indoor	554		\$860.00
PD3PN	Outdoor	630		912.50
PD4PN	Airport, with 8-in. Tires	855		992.50

Soda-Acid Type

No. S13

Discharges a stream of liquid effective on incipient fires in ordinary combustibles, such as wood, paper, textiles, etc.

Insurance authorities recommend that wet, chemical soda-acid type extinguishers be discharged and recharged annually.

Polished Copper
2 1/2 Gallon Type

Seamless drawn one-piece Copper alloy shell and dome, tested to 500 lbs. Tough plastic nozzle, resists damage and discloses clogging. Operated by inverting tank.

No. SD2L

No. S13—Shipping Weight 18 lbs. **\$51.60**
If wanted with pressure relief valve No. PVI to meet U.S.C.G. requirements add \$5.00 to price.

Extinguishers on Wheels (Engines)

Large-capacity protection for property consisting of ordinary free-burning material, such as lumber yards, camps, textile factories, heated warehouses and small communities.

Steel tank, with drawn steel bottom and dome. Seams welded and brazed. Entire tank coated with hot dipped galvanizing. Equipped with 3/4 in. chemical engine hose and brass shut-off nozzle. Operated by lowering handle to ground. Indoor types are narrow enough to permit passage through doors and aisles. Outdoor type has 50-ft. drag rope and reel and hose basket.

No.	Type	Ship. Wt. Each, Lbs.	Each
SD2M	Indoor, Manual Operation	536	\$795.00
SD3M	Outdoor, Manual Operation	620	845.00

Pyrene Gas Cartridge Type

No. W13

Operated by inverting and striking head on floor. Seamless drawn one-piece copper shell and dome, no seams or rivets, tested to 500 lbs. Discharges a 40 ft. stream by pressure from carbon dioxide gas cartridge. Tough plastic nozzle discloses clogging. Requires no annual recharging.

Water Type—2 1/2 Gallons

Effective on fires in ordinary combustibles.

No.	Weight Unit of, 6, 14 lbs.	Each
No. 1113	Polished; Wgt. 18 lbs.	\$61.85
No. HWC1	Extra Cartridge (New);	
	Weight Unit of, 6, 14 lbs.	4.95

Anti-Freeze Type—2 1/2 Gallons

For protection of unheated warehouses, docks, bridges, and other locations subject to freezing temperatures, and where the hazard consists of ordinary combustible material.

No.	Weight each 14 lbs.	Each
No. W13	Polished; Weight 27 lbs.	\$66.85
No. WR1	Extra Anti-Freeze Charge and Cartridge,	
	Weight each 14 lbs.	9.95

Pyrene Fire Extinguisher Recharges

SXR1	2 1/2 Gallon Size	24	68	\$ 1.20
SR3	40 Gallon Size	1	30	14.35

C-O-Two-Fire Extinguishers

Kills fire with Carbon Dioxide, a clean, pure, dry, odorless, non-damaging and non-deteriorating, inert gas.

The extinguishers smother fire instantly under a heavy, dense, blanket of cold Carbon Dioxide gas, which is the fastest extinguishing agent known. It is stored in steel cylinders under high pressure, and when liberated, the gas is discharged by its own pressure, without pumping, and snuffs out fire in seconds. It will not freeze in temperatures as low as 40° F. below zero, and is just as effective indoors as out, in high or low climatic temperatures.

Highly recommended for the speedy extinguishment of highly inflammable liquids, such as gasoline, oil, grease, paints, lacquer solvents; will not damage electrical equipment. Leaves no odor or stain and does not damage or injure machinery, woodwork, finishes, fabrics or other materials with which it comes in contact.

Carbon Dioxide is non-corrosive, a non-conductor of electricity and does not deteriorate. A periodic weight check of the extinguisher is the only maintenance required. Recharging stations are conveniently located in all principal cities.

Superior in design and construction, excellent quality material and workmanship.

PSA-5

No. PSH-15

Flexible discharge hose, wire, braid reinforced, with die-pressed couplings. Non-metallic discharge horns are shatter-proof, and non-conductors of electricity, resist corrosion and moisture. Special rubber handle covers all metal parts of horn, couplings of discharge hose and swivel connections.

Hand Portables

With Squeeze-Grip valves, easily opened or closed while carrying.

No.	Size Lbs.	With Swivel			App. Wt. Lbs.	Each
		Ht.	Overall Size, In. Wdth.	Dpth.

Kidde Fire Extinguishers

CO₂ Portables (Trigger Type)

A pull on the trigger of a Kidde carbon dioxide extinguisher releases a fog of fire smothering gas which stops electrical and flammable liquid fires in their tracks!

This clean dry gas is harmless to foods, fabrics, and finishes. It's safe to handle, and will not damage machinery, electrical equipment or insulation. It disappears without a trace following discharge.

A jam proof locking pin prevents accidental or premature discharge.

20T-1	20	56	26¾	7¾	88.90

CO₂ Portables (Squeeze Type)

This type of carbon dioxide portable is manufactured for those who prefer extinguishers with squeeze valve operation. When operated they discharge a fog of fire smothering gas that smothers electrical or flammable liquid fires instantly.

This clean dry gas is harmless to foods, fabrics, and finishes. It's safe to handle, and will not damage machinery or contaminate chemical mixtures. It disappears without a trace following discharge.

Jam proof locking pin prevents accidental or premature discharge.

Model No.	Cap. Lbs.	Average Charged Wt., Lbs.	Aver. Ht. Valve & Cyl. In.	Cyl. Diam. In.	Each
2½F	2½	8¾	17⅞	3⅞	\$35.20
5F	5	15½	16⅞	5¼	40.60
10F	10	32	21¾	6⅞	64.60
15F	15	42	26	6¾	72.90
20F	20	50	26¼	7¾	83.70

Cartridge Operated—Dry Chemical Portables

This cartridge-operated dry chemical portable comes in larger capacities and is your best weapon against larger fires, inflammable liquid, live electrical equipment, or textiles where dust and residue are not a problem.

Has single trigger control of the dry chemical and CO₂ valves, automatic fluffing assures instant action and thorough expulsion of the dry chemical.

Exclusive diffuser horn covers wider area, gives more effective fire extinguishment.

Model No.	Cap. Lbs.	Average Charged Wt., Lbs.	Aver. Ht. Valve & Cyl. In.	Cyl. Diam. In.	Each
20DC	20	37	21½	6¾	\$73.60
30DC	30	50	29	6¾	91.50

Wet Chemical Portables

Wet chemical portables are available in a wide variety of container metals, construction, operation and capacities. Interiors are treated against corrosion and shells pass 500 psi pressure tests. Kidde foam, soda acid and cartridge operated water extinguishers are available in 2½ gallon bronze or stainless steel models. Pressurized water or water anti-freeze units are bronze.

Vaporizing liquid extinguishers with CTC come in pump capacities of 1 and 1½ quarts, pressurized in 1 and 1½ quarts and 1 gallon. Water pump tank extinguishers, in steel or copper cases, available in 2½ and 5 gallon sizes.

Kidde Fire Extinguishers

Pressurized Dry Chemical Portables

This pressurized dry chemical portable combines tremendous fire-killing power with quick, simple recharging that permits you to put the unit back into service.

Extinguisher pressurization with dry air or nitrogen varies with the size: Model 5DCP, 150 lbs.; Model 10DCP, 150 to 250 lbs.; Models 20 DCP and 30DCP, 225 to 250 lbs. While the range is greater at the higher pressure, complete discharge of dry chemical is obtained also at the lower pressure.

Easy-to-read gauge tells if unit is pressurized.

New 20 and 30 lb. units have easier, faster trigger operation, automatic trigger-lock, fully enclosed mechanism.

Model No.	Cap. Lbs.	Average Charged Wt., Lbs.	Aver. Hgt. Valve & Cyl. In.	Cyl. Diam. In.	Each
5DCP	5	10	15 ⁵ / ₁₆	4 ³ / ₈	\$40.75
10DCP	10	21	17 ³ / ₄	5 ¹ / ₄	60.40
20DCP	20	35 ¹ / ₂	21	9 ⁵ / ₁₆	75.50
30DCP	30	49	28	9 ⁵ / ₁₆	93.50

Bean Power Sprayers

Model 70-MTBT

Especially adapted for right-of-way brush killing; can be drawn by Jeep, passenger model car, light truck or tractor.

Pump delivers 7 gallons per minute at 400 lbs. pressure; driven by a 5-h.p. Briggs & Stratton air-cooled gasoline engine. Plunger-type pump, fully enclosed and constantly lubricated by oil bath; has positive-action disc-type valves and quick-acting pressure-relief valve. "V" belt drives to pump and agitator.

With 150-gallon leak-proof and corrosion-resistant Bean-Bond tank. 200 or 300-gallon tank available at extra cost. Spray liquid strained as it goes to tank, then filtered between tank and pump. Constant agitation by propeller-type paddles.

Tapered roller-bearing disc wheels for 15-in. rubber tires; tires not furnished but can be supplied at extra cost.

Complete with Spraymaster Deluxe spray gun with quick-acting shut-off and easy adjustment for close or distant spraying; 100-ft. of 1/2-in. high-pressure hose on re-wind reel; removable refiller with 20-ft. suction hose for lifting water from ponds or other common refilling points.

Length less drawbar, 61-in.; height to top of tank 44-in. to top of reel 58 1/2-in. to top of rail 77-in.; width 53-in.; clearance 11-in.; tread 45-in.

No.	Capacity Gal.	Delivery	Net Wt., Lbs.	Each
70-MTBT	150	7 g.p.m. @ 400 lbs.	985	\$1148.00

Bean Power Sprayers

Spartan Model 33-LC

Equipped with 30 gal. all-steel tank with Bean-Bond anti-corrosive coating protection. Has 8-in. opening with snap on filler lid for easy cleaning and filling. Pump feeds from tank directly through valve chamber equipped with removable screened cleanout. Provided with removable drain plug.

Mechanical, paddle-type agitator plus jet stream from pump keeps materials thoroughly mixed.

Adjustable relief valve gives desired pressure for spraying. Complete turn changes pressure 35 lbs.

John Bean "45" Spray Gun easily adjusts from fine mist to solid stream. Comfortable pistol grip permits tireless operation with positive control. Furnished with 25-ft. of high pressure, heavy-duty hose, 1700 lb. burst proof tested.

Equipped with Briggs & Stratton 1 1/2-h.p. air cooled gas engine with spring recoil starter. V-belt drive to pump.

Provided with Model 61 pump, semi-enclosed with lifetime ceramic cylinders. Cold-forged crankshaft, full-stroke guided plungers, chemical resistant, wear compensating plunger cups, self-aligning ball bearings and heavy duty, cast iron manifold with built-in suction screen.

Has ball bearing disc wheels. 4.00 x 8 pneumatic tires. Length 36-in.; width 25-in.; height 40-in.

No.	Capacity Gal.	Delivery	Net Wt., Lbs.	Each
33-LC	30	3 g.p.m. @ 300 lbs.	160	\$312.00

Spartan Model 33-C

Provided with 15 gal. all-steel tank with Bean-Bond anti-corrosive coating protection. Tank easily filled or cleaned through large opening. Pump feeds from tank through valve chamber equipped with removable filter screen.

Material kept in constant circulation by overflow jet agitation by-pass.

Relief Valve is adjustable to desired spraying pressure. Complete turn regulates pressure 35 lbs.

John Bean "45" spray gun adjusts easily from fine mist to solid stream. Has comfortable pistol grip. Furnished with 25-ft. of high pressure (1700 lb. burst proof) hose.

Equipped with Briggs & Stratton 1 1/2-h.p. air cooled gas engine with recoil starter. V-belt drive to pump.

Has Model 61 pump with lifetime ceramic cylinders. Furnished with stamped steel wheels with sleeve bearings. Length 35 1/2-in.; width 19 1/2-in.; height 34-in.

No.	Capacity Gal.	Delivery	Net Wt., Lbs.	Each
33-C	15	3 g.p.m. @ 300 lbs.	140	\$265.00

Edwards Industrial Fire Alarm Systems

These alarm systems are made to meet almost any requirement. The more popular and standard ones are listed below. Many details have been omitted because of space.

Complete details concerning variations from any of these systems will be given promptly on request. Also detailed specifications for d-c and special systems will be supplied to meet specific requirements. For further information contact Graybar.

As fire alarm systems are protective in nature, conduit should always be used irrespective of the voltage or the type of system. The simplest and lowest-priced systems are open-circuit types which do not provide automatic detection of defects in wiring or connections, and are not listed by Underwriters. Open-circuit systems, however, are preferable to no system at all and afford valuable protection if properly inspected and tested at regular intervals.

All closed-circuit systems are fully supervised and have a control panel placing each unit of the system under constant electrical supervision. Open circuits or grounds in the wiring or in any device causes trouble bell alarm only. From the standpoint of safety and dependability they are the most satisfactory for the majority of buildings.

The installation of standard closed-circuit systems (SSA) is relatively simple since all stations are wired in series and are connected on one loop and the signals in series on another loop—all centralized at the control panel.

Many code authorities limit the number of stations on one circuit to 20 and the number of signals on one circuit to 10 for a-c and 14 for d-c.

Keys are provided for "break glass" type stations to operate any station without breaking glass when fire drill is held.

Information Chart

This chart presents the different systems at a glance and enables one to see the salient points of each system and the apparatus used. It has been arranged with as great a degree of accuracy as the subject of such diversity will permit. The (*) at left of Catalog Designation indicates that the system is listed by Underwriters' Laboratories and meets all requirements of NBFU Pamphlet 72.

Systems listed below are for operation from current supplied direct from a reliable light or power service. 3-Wire a-c single phase, with grounded neutral (one side to operate the signaling system and the other to operate the trouble bell) as recommended in Standards of the National Board of Fire Underwriters' Pamphlet No. 72. Some systems may be operated from d-c (Details furnished by Graybar on request).

Class of System	Catalog Designation	Operating Supply	Alarm Indication	Signals Used	Stations Used
Open Circuit	†VOA	120 Volts A-C or less	Vibrating Bells or Horns Continuous	Nos. 340 Bells, 380 Flush, 382 Projector, 384 Grille Horns	Nos. 270-SPO, 271-SPO 241, 242
Closed Circuit	*CCVA	120 Volts A-C	Vibrating Bells or Horns Continuous	Nos. 325 Bells, 360 Flush, 362 Projector, 364 Grille Horns	
Master Coding Closed Circuit	*SSAMR	120 Volts A-C	‡Code Ringing on Single Stroke Bells or Horns	Nos. 24 Bells, 360 Flush, 362 Projector, 364 Grille, 364, Horns, 18F Chime	Nos. 1250, 1251
Closed Circuit	*SSA	120 Volts A-C	Code Ringing on Single Stroke Bells or Horns	Nos. 24 Bells, 360, 362, 364, Horns, 18F Chime	
Pre-Signal Closed Circuit	*PSSA	120 Volts A-C	Code Ringing on Single Stroke Bells or Horns	Nos. 24 Bells, 360, 362, 364, Horns, 18F Chime	Nos. 1252, 1253

†All systems except VOA have control panels and are supervised.

‡Common Code Type.

Edwards Fire Alarm Stations

Single Action, Non-Code

No. 270 (Breakglass) and No. 271 (Non-Breakglass)

No. 270

Designed for use in installations where a coded alarm is not necessary.

A Zinc Die Cast Station (3 1/8 x 4 5/8 x 1 in.). Single pole switch is standard. Double pole normally open or closed and for city shunt or tripper connection available on request.

Simple to test, red finish. Rating is 4 amps. at 125 v. AC. Mounts on 4 or 1 1/8 in. square box with single gang plaster cover, overall depth of 2 1/4 in.

No.	Description	Each
270-SPO	Single Pole, Open circuit	\$15 00
270-SPC	Single Pole, Closed circuit	15 00
270-DPO	Double Pole, Open circuit	19 00
270-DPC	Double Pole, Closed circuit	19 00
270-DOC	Double Pole, Open & Closed	20 00
270-TC	Tripper Connected	25 00
270-SC	Shunt Connected	25 00
For surface mounting specify PP27193 back box		4 50
Additional glass rods specify PP27165		50
271-SPO	Single Pole, Open circuit	15 00
271-SPC	Single Pole, Closed circuit	15 00
271-DPO	Double Pole, Open circuit	18 00
271-DPC	Double Pole, Closed circuit	18 00
271-DOC	Double Pole, Open & Closed	20 00
For surface mounting specify PP27193 back box		4 50

Edwards Streamlined Fire Alarm Stations

Closed Circuit, Code Ringing

For use with Fire Alarm Systems operating on voltages up to 120 Volts a-c or d-c.

No. 1250

No. 1253

Pull-Lever Type—Local Non-Interfering

For Systems Nos. SS and SSA

Positive, fool-proof action—just a pull, release, and alarm is in. Adaptable to any circuit arrangement ever specified. "Hug-the-wall" appearance. Diecast case, lustrous baked enamel finished, with polished metal bands. Transparent plastic protective cover over mechanism. Front-connected terminal block for easy installation—saves up to 30% installation time over old stations. Elimination of special keys makes testing easier.

Size—7½ in. high, 5½ in. wide, depth 1⅞ in. Flush model protrudes 1⅞ in. from wall. Cast box available for surface mounting.

Pull Lever Type

No.	Each
1250—Approximate shipping weight, 4 lbs.....	\$77.00

Pull-Lever Break Glass Type

Has glass rod across pull-lever which is broken when alarm is turned in. Glass rod is easily and economically replaced.

No.	Each
1251—Approximate shipping weight, 4 lbs.....	\$90.00

Closed Circuit Pre-Signal Ringing Station Open Door

For Systems Nos. PSS and PSSA

Same as stations described above, except that presignal alarm is sounded at pre-determined places only. If it is found desirable, upon investigation, to sound a general alarm, that may be done by inserting key in lock on right side of box and pulling lever.

No.	Each
1252—Approximate shipping weight, 4 lbs.....	\$90.00

Pre-Signal Break Glass Station

Combines special features of Pre-Signal and Break Glass types, with all features of standard station.

No.	Each
1253—Approximate shipping weight, 4 lbs.....	\$103.00

City Controlled Systems

Shunt Trip, Break-Glass, Local Non-interfering; for Systems Nos. SSMS and SSAMS.

No.	Each
1351.....	\$121.00

Tripper Type, Break-glass. Local non-interfering; for Systems Nos. SSMT or SSAMT.

No.	Each
1353.....	\$121.00

When ordering specify P.P. No. 24901 Wall Box for surface mounting and P.P. No. 24900 Wall Box for flush mounting. This applies to all above stations.

Edwards Home Fire Alarm

Underwriters' Approved thermostatic detectors set off alarm when heat becomes excessive. Each detector offers 400 sq. ft. of coverage. Self-restoring, they may be tested for sensitivity by applying heat.

Two thermostatic detectors are provided with each system (which operates on house current), but additional detectors may be added to the system at any time.

No. F-100

No. 243

This low-cost, easily installed system assures effective and dependable protection against fire hazards. Central signal unit (either surface or flush mounted) is always ready to sound alarm. Test feature to check operation is included.

No.	Description	Each
F-100	Home Fire Alarm for Flush Installation	\$24.95
F-200	Home Fire Alarm for Surface Installation	24.95
243	Thermal Detector—140° F.	3.50
244	Thermal Detector—190° F.	3.50

Federal Sirens and Accessories

Industrial Sirens

Type A Siren

All purpose siren which has quick pick-up to high maximum pitch for contrast with industrial and traffic noises.

Weatherproof housing, adjustable bracket. Has 1/3 hp. sound output at 150 watts.

Choice of voltages includes 6, 12, 24, 48 and 110, for 25 to 60 cycles a-c or d-c.

Model	Length, In. Excluding Bracket	Diam. In.	Net Wt. Lbs.	Ship. Wt. Lbs.	Each
Type A	11 1/2	10 1/2	13	15	\$65.00

Type J Siren

This siren is similar to type A, however it has a heavy duty motor for severe services on cranes and other heavy industrial equipment.

Available in 110, 220 or 250 volts, 25 to 60 cycles a-c or d-c.

Model	Length In.	Diam. In.	Net Wt. Lbs.	Ship. Wt. Lbs.	Each
Type J	12	11 1/2	15 1/2	18	\$75.00

Type D Siren

Similar to types A and J but with a more powerful motor.

Produces 1/2 hp. sound output on 215 watts. Its deeper tone carries farther and provides a better contrast where ambient noises are high pitched.

Equipped with adjustable bracket. Weatherproof housing. Available in 6, 12, 24, 48 or 110 volts, 25 to 60 cycle a-c or d-c.

Model	Length In.	Diam. In.	Net Wt. Lbs.	Ship. Wt. Lbs.	Each
Type D	12	9 1/2	14	17	\$70.00

Type L Siren

Heavy duty version of type D siren, for heavy industrial use and higher voltages.

Available in 110, 220 or 250 volts, 25 to 60 cycle a-c or d-c.

Model	Length In.	Diam. In.	Net Wt. Lbs.	Ship. Wt. Lbs.	Each
Type L	11 1/2	11 1/2	16 1/2	19	\$80.00

Model AX Explosion Proof Siren

This model is similar in sound output to the models A and J siren.

Meets rigid Underwriters specifications for use in Class I group D and Class II groups F & G hazardous locations. 110 volts only a-c or d-c.

Model	Length In.	Diam. In.	Net Wt. Lbs.	Ship. Wt. Lbs.	Each
Type AX	10	7	16	19	\$186.00

Vertical Sirens

Inexpensive signal for fire, air raid and other alarm purposes in industry or municipality.

Vertical design distributes sound waves radially over distances averaging 1/2 to 2 miles. Specially designed ball bearing motors assure quick pickup and high output. Weatherproof housing.

The two hp. universal motor will also operate on d-c; all others are for 60 cycle a-c operation with choice of voltage.

Model STH-10 differs radically in design and appearance with sound output proportionately higher than hp. indicates.

Model	H.P.	Phase	Voltages	Ship. Wt. Lbs.	Each
2	2	1	110 or 220	70	\$275.00
5	5	3	220/440	300	500.00
5	5	1	220	325	650.00
7	7 1/2	3	220/440	440	550.00
7	7 1/2	1	220	460	700.00
STH-10	10	3	220/440	450	750.00
STH-10	10	1	220	470	900.00

Remote Control Relays

The remote control relays must be used with all large sirens to allow remote operation by push button, timers, alarm boxes or program clocks.

Remote Control for #2 siren \$35.00.

Remote Control for #5, 7 or STH-10 sirens. 3 phase \$60.00. Single Phase \$80.00.

STH-10

Predetermined General Alarm Control

This accessory operates the siren up and down scale for 2 1/2 minutes but can be actuated by one or more remotely located start only push buttons.

Choice of 110 or 220 volts.

Fire Alarm Pull Box

Pull Lever Box

A pull of the handle winds the clockwork actuated contacts to sound siren up and down scale for 2 minutes and then stop. No voltage limitations.

Program Clock

The program clock can be set to blow the siren one blast for a time or test signal at any five minute interval in a 24 hour day.

Has self-starting motor. Available in 110 or 220 volts, 60 cycle a-c.

Model	Each
Pull Lever Box as illustrated	\$ 70.00
Pull Lever Box weatherproof	100.00
Predetermined General Alarm Control	75.00
Push button for above	6.00
Push button in weatherproof break glass box	21.00
Model 75 Program and Test Clock	85.00

Federal Paging Devices

Push-Button Signakall

The Signakalls work with any existing horn, bell or light system or may be the nucleus of a new expanding system.

They relieve congested switchboard traffic; free held telephone lines; and speed location of key personnel.

Signakall actuated systems prove indispensable in busy offices, stores, factories and institutions.

Operates on 110 volt, 60 cycle a-c. Use of 110 volt line relay allows operation of low or high voltage signal circuits. Dimensions: 12½ x 6½ x 6¼ inches.

Model SK2: Initiates 20 different code signals. The selector knob in one position limits calls to 3 rounds but in second position permits call to repeat until shut off.

Model SK4: A 40 button model. Available in the same size case.

No.	Button	Net Wt. Lbs.	Ship. Wt. Lbs.	Each
SK2	Twenty	6	15¼	\$175.00
SK4	Forty	8½	17½	\$330.00
Line Relay, 110 volt (up to 10 amp. capacity)				20.00

Industrial Bells

Vibrating, Single Stroke And Chimes

Superior bells for all purposes. Strong impulses and special drawn steel gongs assure maximum sound output.

The standard model bells are weatherproof construction and will be so furnished unless otherwise specified.

Models with plug-in feature for surface or concealed conduit mounting on any standard outlet box are available at no additional cost;

please specify. Standard construction on the chime, which is primarily for interior use in quiet areas such as offices, etc.

Industrial bells available for d-c as well as a-c 60 cycle. No extra charge for 25 cycle if specified. Special voltages also available up to 250 volts.

Compressed Air Horns

Air horns for industries and municipalities or wherever a loud distinctive general alarm or code signal is desirable.

These air horns are ideal for short codes or prolonged alarms.

Each successively larger whistle has a deeper and more powerful tone. Projectors are specially machined cast bell bronze. Horns are available for specific pressures ranging from 15 pounds upward.

Diaphragms of special metal will last almost indefinitely at proper working pressure. Electric valves or hand valves available at prices depending on current and pressure characteristics required.

The numerals in Catalog Nos. indicate diameter of diaphragm. The letters H, M or L indicate high, medium or low pitch.

Valves are available for any common voltage in d-c from 6 to 250 volts; for 60 cycles a-c in 24, 110, 208, 220 and 240 volts; and for 25 cycle a-c on 110, 220 and 440 volts.

Screw Type Connection

Beacon-Ray Lights

The beacon-ray light is the finest general alarm warning device by itself or to supplement audible signals in extremely noisy areas.

It's an excellent signal in any danger spot such as drawbridges and other navigational or industrial hazards; also an exceptional attention getter on electric signs, drive-ins, etc.

The standard model is for 110 volt 60 cycle a-c. Available in a choice of red, green, blue, amber or clear white lenses.

Equipped with ½-in. pipe flange and two wire leads for simple and easy mounting. No rectifiers or transformers required.

Finished in hammertone gray enamel. Special models for other electric requirements available.

No.	Volts	Hgt. In.	Diam. In.	Ship. Wt. Lbs.	Price Each
27-S	110 a-c	14	6¼	6	\$65.00

For all your paging device requirements be sure to contact GRAYBAR first.

Federal Electric Horns

Excellent signals for coding as well as alarm. A variety of models available. The standard horns are the familiar industrial type. The Hi-Power horns are twice as loud as the standard and are used for larger or noisier areas. The resonating horns are twice as loud as the Hi-Power, also have distinctive trumpet tone. The motor driven horns are less powerful than the resonating and have another distinctive sound; are not satisfactory for fast code signals.

Horns are pearl gray baked enamel unless otherwise noted. All horns are tapped for 1/2-in. conduit. The a-c models are 60 cycles but 25 cycles are optional. D-C models are available as listed below.

Vibratory Horns

Two major classes, standard and hi-power, with choice of grille, single or double projector. Projectors may be rotated 180° to direct sound. Concealed conduit mounting optional if specified. Flush type also available. Horns constructed from material that will not corrode.

Standard Horns

Explosion Proof Horns

Models 31X-41X

Models 30X-32X-42X

A number of electric horns available in explosion proof construction meeting class I group D requirements. Model numbers similar to corresponding non-explosion proof units but have an X appended.

Resonating and all d-c explosion proof horns are furnished complete with an explosion proof splicing conduit which is not required in other models.

Faraday Air Trumpets

Gives an extremely loud alarm signal that will overcome very high noise levels and cover wide areas. It is an air-pressure horn ready to connect to existing circuits—no auxiliary equipment needed. Fitted with standard speed 1/4 hp motor. The powerful blast of the air trumpet is instantaneous when current is applied.

Hammertone gray enamel finish. (Red can be furnished if specified.)

One in a standard package. Approximate weight: single projector 68 lbs. Two-Way Projector, 85 lbs.

Single Projector Type

Nos.	Current and Voltage	Each
110	A-C, 115 and 230 volts.....	\$185.50
109	D-C, 24, 115, 250 volts.....	265.00

Two-Way Projector Type

111	A-C, 115 and 230 volts.....	\$237.50
112	D-C, 24, 115, 250 volts.....	295.00

When ordering specify current and voltage.

Faraday Industrial Horns

Listed by Underwriters' Laboratories, Inc.

For Coding and General Alarm—Heavy Duty

No. 121-U

No. 123-U

These horns give maximum signal strength, loud, commanding, clean-cut tone and positive instantaneous performance. Ideal for medium noise-level signaling.

The a-c vibrating electro-magnet mechanism operates without contacts. The d-c mechanism has heavy tungsten contact points.

Hammertone gray enamel finish. (Red enamel finish can be furnished when specified).

Uni-Pact—The adapter plate fits any standard 4 in. square or octagon outlet box, conduit or Wiremold fitting. All wiring is made to the plate installation to simplify maintenance.

Standard—Horns are same as Uni-Pact except for wall mounting with connection to 1/2 in. conduit directly to the housing or for mounting to an outlet box when used with the hanger plate that is furnished at no extra cost if specified.

One in a standard package. Approx. shipping weight: Drum type 4 1/2 lbs. Short and Megaphone type 5 1/2 lbs. Two-way type 9 1/2 lbs.

For A-C Operation

Faraday Air-Blast Signal Horns

Uni-Pact Kodaik

Listed by Underwriters' Laboratories, Inc.

No. 133-S

No. 133-L

A high powered signal horn with loud, powerful trumpet tone that can be heard above the usual noise level. Its positive instantaneous action makes it ideal for high-noise level coding or general signaling.

With adapter plate mounting.

Hammertone gray enamel finish. (Red enamel finish furnished if specified).

Dimensions: Loop type, 7 1/8-in. high, 7 1/8-in. wide, 12 3/4-in. long. Straight type, 6 1/2-in. high, 6 1/2-in. wide, 21 3/8-in. long.

One in a standard package. Approx. shipping weight 6 lbs.

Benjamin Type SNP Non-Weatherproof Howlers and Buzzers

Listed By Underwriters' Laboratories, Inc.

No. N-8755-115V

No. 8797-115V

Designed for use indoors where low current consumption, easy wiring and a sealed construction to keep out dirt are required. AC howlers operate on series or parallel circuits. DC howlers operate on parallel circuits only. DC howlers have interrupters with tungsten contacts protected from arcing by condensers.

Power consumption is 18 watts. Diaphragm is spring steel, 4³/₈ in. diameter. Finish baked gray hammered enamel. Baked red enamel finish available when specified.

SNP Buzzers recommended where competing noise is not excessive. Construction is same as Howlers except that a steel cover is used in place of the projector or grille.

				8796-250V	12.70

Housings have 1/2" I.P.S. knockouts at back and side. Also holes for mountings to a flat surface or 3 1/4" or 4" octagonal boxes. No. 8731 Adapter Plate is required for alignment of Double-Bell Howlers when mounted on an outlet box and for mounting all Howlers on switch or 4" square outlet boxes. No. 8731 included with Howlers, when specified.

A.C. devices are 60 cycles std.; 25 cycles optional at same price. Special voltage also available. 250 V. D.C. devices are also for use on 230 V. systems. Bell ringing transformers are not suitable for 12 and 24 V. A.C. devices; signaling type required.

Benjamin Type SWP Weatherproof Buzzers

Listed By Underwriters' Laboratories, Inc.

No. 8699-115V

Recommended where competing noise is not excessive. Same construction as type SWP weatherproof howlers except that a steel cover is used in place of the projector. Sound is produced by hammer action of a vibrating armature striking cover. Buzzers do not have a muting mechanism. Power consumption is 18 watts.

Benjamin Type SWP Weatherproof Howlers

Listed By Underwriters' Laboratories, Inc.

No. N-8546-115V

No. N-8590-115V

Sound-producing mechanism starts and stops instantly with the current impulse, making it ideal for code-calling. AC howlers operate on series or parallel circuits. DC howlers operate on parallel circuits only. DC howlers have interrupters with tungsten contacts which are protected against arcing by condensers.

Power consumption is 18 watts. Spring steel diaphragm, 4³/₈-in. diameter. Interchangeable projectors, 7-in. seamless single, or double bell-type projector assembly plugs into housing.

Heavy cast iron outlet box attached to seamless steel projector assembly by a cast aluminum threaded ring. Assembly joint is sealed by rubber gasket. Two lugs provided for wall mounting.

Finish baked gray hammered enamel.

Construction of type SWP fire alarm howlers, designed for fire alarm system operation, is same as for heavy-duty weatherproof howlers, except finish is baked red enamel.

The SWPE corrosion-resisting howler is designed to withstand atmospheres containing highly corrosive forces. It is similar in construction to the regular weatherproof howler except that the diaphragm is made of corrosion-resisting metal, 4³/₈-in. diameter; threaded union housing ring is cast brass; projector is finished in gray porcelain enamel. Other parts of the howler are baked gray hammered enamel. A muting mechanism is not provided as on the regular howler.

Bell ringing transformers are not suitable for 12 and 24 V. A.C. devices, signaling type required. No. N-8564 is rated 8 V.; No. N-8565 is rated 14 V. Boxes are tapped 1/2" I.P.S. std. — one side. Can be tapped 3/4" I.P.S. — one side, at same price; or 1/2" or 3/4" straight-thru at \$0.28 advance in price.

Benjamin Type SNP Moisture-Proof Howlers and Buzzers

Listed by Underwriters' Laboratories, Inc.

No. N-8652-115V

Effectively sealed against dirt and moisture for use in damp or dirty non-hazardous atmospheric areas in mines, factories, tunnels and subways. Same construction as Non-Weatherproof Howler except that 8 in. insulated wire leads enter housing through a watertight bushing.

Benjamin Type EXH Explosion-Proof Howlers and Buzzers

Listed By Underwriters' Laboratories, Inc. For Use In:

Class I, Groups C and D Hazardous Locations
 Class II, Groups E, F and G Hazardous Locations
 Also Suitable for Class III Hazardous Locations

No. 8130-115V

Has ample strength in every part to withstand the pressures of internal explosions without breaking down or permitting flame, hot gases or sparks to escape and ignite surrounding atmosphere—and are of such design as to prevent the development of temperatures on outside surfaces sufficient to cause overheating or ignition of dust.

Power consumption is 30 watts. Spring steel diaphragm 5 in. diameter, rigidly supported. 5½ in. seamless steel projector assembly plugs into housing. Finish baked gray hammered enamel. Baked red enamel finish available. EXB Buzzers same general design, not as loud as Howlers.

Prices on application

Benjamin Motor-Driven Weatherproof Howler

Listed By Underwriters' Laboratories, Inc.

No. 8170-115V

Distinctive tone obtained through use of a high torque motor that starts and stops with practically no lag or "coasting."

High torque motor, series wound, Universal type for DC to 60 cycle AC operation; 115, 230 and 250 v.; power consumption 80 watts; permanently aligned armature shaft bearings lubricated by large capacity wick-feed oil cups.

Diaphragm 5½-in. diameter, sealed by gaskets and rigidly supported. 18 gauge steel housing, sealed with rubber gaskets, weatherproof. Finish baked gray hammered enamel over electroplating on steel housing, mounting bracket and projector. Housing tapped ½" I.P.S.

Edwards Adaptabels

Listed for indoor uses by Underwriters' Laboratories, Inc.

Designed for average interior or protected exterior conditions in factories, offices and schools. Bells have a clear loud tone which carries great distances.

Electrical connections are made to the mounting plate only—the whole electrical installation can be made, tested and completed before painting and finishing walls. Large convenient binding posts for easy wiring.

Installation:

A-c Type—Mount separable plate on wall or any switch box, outlet box, conduit or wiremold type fitting. No nuts or screws required.

A-c Type—All 6-in. and 10-in. mount directly on wall, 4-in. square box, standard switch box, or any outlet box with single gang conduit or wiremold type fitting. 4-in. size has separable plate for mounting as above, except the 4-in. square box.

Edwards A-C Adaptahorns

These extra loud horns are especially designed for use in schools, industrial plants and institutions, and particularly where louder results from less current are desired.

They have specially sealed in mechanism, front connection feature and special mounting plate, which can be mounted on 3 1/4, 3 1/2, 4-in. octagon, 4-in. square boxes or any box with a single gang plaster cover for indoor uses, on wall or Conduit or Wiremold fitting. Wires can be easily connected to large, convenient binding posts on mounting plate. When wiring is completed it is only necessary to slip Adaptahorn on sturdy hanger and plug feature automatically makes connection.

Light gray finish.

Edwards Industrial Horns

Resonating Type

Listed by Underwriters' Laboratories, Inc.

No. 5420

For mills, mines, yards and wherever a powerful, distinctive signal is required. It is entirely electric in operation, eliminating expensive auxiliary equipment required for signals of equal tone and capacity. Weatherproof.

Housing is tapped for 1/2 in. conduit. Red lacquer finish. Swivel mounting bracket permits horn to be swung or tilted to any desired angle.

For voltage up to 250 A-C. (Specify voltage wanted.)

No. Each
5420—Approximate shipping weight, 9 lbs. \$72.00

Benjamin Telecode Relays

Listed by Underwriters' Laboratories, Inc.

For Panel Mounting

normally closed, "NC," until the relay coil is energized), or with locking armatures.

Locking relays have two independent coils; a pull-up and locking coil. The locking coil, usually connected in parallel with the signal, locks the contacts, when operated, to provide continuous operation of the signal until the circuit is broken by a release switch.

The pull-up coil is connected to the telephone line or actuating circuit and the locking coil is connected in parallel with the howler or other device operated from the contacts of the relay.

Contacts are tungsten. Coils are form wound with moisture-proof coverings and carefully impregnated.

Contacts are rated .8 ampere at 110 volts (will operate five vibrating-type howlers).

Standard coil windings are 1000 ohms. These will operate on a voltage range of 80 to 110 volts 20 to 60 cycles and also on 18 volts D.C. For use on telephone ringers with other than 1000 Ohms resistance specify resistance of ringer and voltage and frequency of ringing system. Not for use on harmonic ringing systems.

For Panel Mounting

No.	Description	Each	No.	Description	Each
	Less Condenser			With Condenser	
8313-P	Open Circuit	\$15.80
8313-C	Closed Circuit	15.80

Condenser capacity is 1 mfd. Pressed steel box is 6"x6"x3". Explosion-proof and Watertight Boxes are tapped "straight-thru" 1/2" I.P.S. std.; 3/4" if specified, at same price. Explosion-proof Relays are listed by Underwriters' Laboratories, Inc., for Class II, Groups F and G hazardous atmospheric locations. Also suitable for Class III hazardous locations.

Faraday Kodemasters

Portable Desk Type

Consists of a synchronous motor-driven contact interrupter on which the desired code is manually set up and automatically transmitted to the system of audible signals connected to it.

Thirty separate and distinct codes are provided each of which is automatically set for the name that appears on index card when viewed through the cover slot. A code is set up by rotating the index wheel on right side of unit to number desired. Operating the switch lever on left so that the word "ON" appears in slot lights the pilot light and energizes the driving motor which causes unit to transmit the code. Code is continuously transmitted until switch lever is turned back of the "OFF" position.

If Kodemaster is shut off while a code is being transmitted it will continue to complete the code and then stop itself. An automatic interlocking feature prevents code being changed while the Kodemaster is in operation. Completes code even after it is manually shut off, therefore the code cannot be changed during this time as the mechanism must first stop and the pilot light goes out.

In addition to calling individuals, may be used for general signals, such as: Start Work, Dismissal, Rest Period, etc.

Contact rating 3 amp. 120 volt a-c; Code signal load 1 amp. 120 volt d-c. Voltage 120 volts, 60 cycle a-c. Finish: Hammetone Gray Enamel. Front cover satin stainless steel.

No.	Signals	Type	Size, In.	Each
805	30	Portable Desk	6 3/8 x 3 3/4 x 3 5/8	\$99.50

Call Graybar FIRST For . . .

Edwards Lokator Systems

These systems use a predetermined code on audible and visual signal devices to call or "lokate" individuals in offices, stores, factories, etc. They are amazingly inexpensive, having been specifically designed and engineered to meet the diversified requirements of business and industry. Their versatility, dependability and low cost make them outstanding.

They are operated entirely by low voltage, irrespective of the voltage used to operate the signals. Mechanism is driven by sturdy, noiseless, synchronous motor.

Furnished in 20, 40 or 60 call units. All names can be typed on a printed form protected by a clear plastic strip. To locate an individual, operator need only slide the selector lever to desired name, apply a slight pressure and immediately the code of that person is sounded on all signal devices.

Wrinkle gray finish, with black panel and chromium relief.

Power Supply Units

When connected to standard lighting circuits they distribute 24 or 115 volts a-c to the signals, but permit only low voltage to enter the selector unit. They provide correct current, protect the Lokator from excessive line loads and provide a terminal box for centralizing all units in the system.

Lokator Signals

No. 5024
Bell Signal

No. 5005
Chime Signal

No. 5031
Light Signal

Designed especially for use on Lokator Systems.

Signal stroke bells sound a clear, crisp tone, audible over long distances and normal noise disturbances. Well built and will stand many years of hard service. Light gray finish.

Chime signals are the most commonly used. Emits a pleasant, musical tone, penetrating and clear, yet not annoying or harsh. Light gray finish.

Light signals—Ideal for locations where no noise whatsoever is desired. Call is shown by flashing light. Protruding glass dome enables it to be seen from all directions. Light gray finish.

Above signals are designed, rated and standardized for operation together.

Prices on application.

Edwards Return Call Annunciators
Electro-manual Reset

For return call systems. All indicated drops reset at once—individual resetting not possible. Also manual, mechanical reset in case of emergency. Rooms may be called from the office or central station, or vice-versa, and the call may be acknowledged.

Can be furnished in the following finishes — light gray, mahogany, walnut, oak, or any solid spray finish, if specified.

For other finishes, features, etc., and complete installation data contact Graybar.

No. 410—Surface Type, with Metal Case.

No. 412—Flush Type, with metal face plate and wall box.

Edwards Surface Annunciettes

Manual Reset Type

A small, neat annunciator designed for momentary operation only. The operating and reset mechanisms are thoroughly reliable and will stand up under severe service.

Standard audible signal is a buzzer. Marked connectors are furnished for adding extension signals if desired.

Complete with 100 assorted name and number cards for the drops.

Standard finish is light gray. All sizes 2 1/2 in. deep.

For 12 Volts, A-C

No.	No. of Drops	Arrangement Across	Arrangement Down	Height in.	Width in.	App. WL Each, lbs.	Each

Special finishes, features, etc., and complete installation data contact Graybar.

Edwards Surface Annunciators

No. 808 and 809 Industrial Annunciators

No. 808

When indication is caused, bell rings until "bell drop" is reset, but indicator can't be restored until source of trouble is corrected. Resetting bell drop still permits subsequent operation by another indicator. Standard features: Heavy steel case, black finish; bakelite insulation throughout; 115v. AC or DC (up to 250v., AC or DC on specification) 4 in. bell for separate mounting provided (6 in. for 250 v.); surface wall mounting case with screwed on front cover.

No. 808 cannot be operated in multiple with other devices though the No. 809 may be. Dimensions and drop arrangements on application. Also available; for flush mounting and with hinged front and back panels for accessibility for terminals or open back switch board mounting; closed circuit operation remote reset of audible and indicating coils.

No.	No. of Drops	Each
808 and *809	4	\$193.00
	6	242.00
	8	264.00
	10	308.00
	12	352.00
	Larger sizes, per drop, add	22.00

*Add \$4.50 per drop to price of No. 808.

Edwards Surface Annunciators

Electric Reset

A high quality annunciator that will give outstanding service.

Uses the No. 4 drop for indicating and resetting.

The audible signal is a buzzer.

One reset button is furnished on case for each 16 drops—button will reset all 16 drops at one time.

Provision is made on each annunciator for common remote control resetting as well as extension signals.

Standard finish is light gray. Depth 3 in. on all sizes.

For 24 Volts, 60 Cyc. or 16 Volts D.C.

No.	No. of Drops	Arrangement Across	Arrangement Down	Height in.	Width in.	App. Wt. Each, lbs.	Each
403/4	4	2	2	6 1/8	5 1/8	3 3/4	\$ 47.50

403/24	24	6	4	10 1/4	11 1/8	12	181.50

For each additional 6 drops add \$60.50.

For special finishes, features, etc., and complete installation data contact Graybar.

Edwards Annunciator Drops

Note—When ordering drops for annunciators, give voltage, whether a-c or d-c (exact frequency if a-c., i.e., cycles, etc.). State whether annunciator requiring replacement drops has buzzer or extension signal and give catalog and serial number of annunciator.

No. 8—Manual Reset

An efficient drop used in all annunciates. Its compact design gives a clear indication, but allows small, neat annunciators. Postive locking.

Approx. weight, 1/4 lb.

No. 8..... Each **\$7.70**

No. 80—Manual Reset

A heavy duty drop for high or low voltage as specified. It is used on Nos. 81 and 807 annunciators.

Its action is positive and the locking feature foolproof. Large indications are possible. Tag is 1 in. high, 1 1/4 in. wide.

No. 80..... Each **\$8.50**

Add **\$4.50** for each set of contact clips.

No. 4—Electric Reset

Used in all electric reset annunciators. The indication is a white arrow which points directly at the name card. When reset the arrow drops out of sight behind the name card. The arrow can be seen from any angle. Has no springs or contacts and cannot shake or jar out of adjustment.

Locks in either position and cannot indicate until current is passed through magnets. Indication card is 1 3/8 x 5/8 in.

No. 4..... Each **\$11.00**

Edwards Clock System Controls

Manual Dual-Motor Resetting Unit

For operating units of 80 clocks.

For use with multi-circuit program instruments without clocks as a power-interruption indicator.

Standard 115 volts, 60 cycles (can be supplied for other voltages and frequencies when specified. Contact Graybar for details.)

This unit consists of a special switch plate, with key type switches (to prevent tampering), power interruption pilot light and fits a 2-gang wall box with 2-gang cover, having a minimum depth of 2 1/2 in. (Wall box not included with unit.) Switch plate is brushed nickel finish, marked to indicate switch positions. The power interruption pilot light, located to the left of the switches, is a red jewel and lights only when power is restored.

When power returns after an interruption, clocks automatically start again, but are slow to the extent of the interruption, and the pilot light continues to show red. To return clocks to the correct time it is only necessary to throw the reset switch to "advance" position with the key provided. This causes all clocks to operate at an accelerated rate. When all clocks are again on correct time, the advance switch is thrown to normal position, the pilot light is set to normal and the system continues to keep time.

Approx. shipping weight 2 lbs.

No. 1900A..... Each **\$40.00**

Edwards Centrally-Controlled Program Clock System

These systems are designed to meet the rigorous standards set by modern timing requirements.

They are built around the famous dual-motored Telechron movement, and eliminate contacts, rectifier, master clock, relays and pendulum. The motor is bi-polar, self-starting and synchronous, with the motor for accelerated resetting geared directly to the shaft on which the clock hands revolve.

Of the two motors, one is for normal time-keeping and the other for accelerated resetting. The time-keeping motor has the advantage of uniform torque from standstill to synchronous speed, is virtually noiseless in operation and instantaneous in starting and stopping, which minimizes scattering of clocks upon power stoppage.

These clock systems are in perfect synchronization with the incoming alternating current—there is no central control clock to be serviced or regulated.

All program instruments, clocks and signals described are listed by the Underwriters' Laboratories and are designed for operation on 115 volt, 60 cycle alternating current. (When so specified, units will be specially wound to operate on other voltages and frequencies.)

All devices are unqualifiedly guaranteed for perfection in material and workmanship.

The clock systems described have unlimited installation range. They will give dependable and faithful service in schools, colleges, hospitals, institutions, offices, industrial plants, stores, apartments and residences.

The systems described are clock and program systems. There is no economy in trying to make one system do the work of three instead of doing one job well. For example, program bells are not designed to call teachers to the phone or warn of fire.

Audible Signals

They include bells of excellent tone quality for use in corridors, playrooms, vocational rooms, etc.

Classroom buzzers may be housed in the clock outlet box or mounted separate from the clock.

Chimes for classrooms have a more penetrating tone than a bell without objectional shrillness.

There are also horns for outdoor use where a bell is not desirable.

Edwards Multiple Circuit Program Instruments

Four-Circuit Type

For automatically controlling the operation of signals according to predetermined schedules. Can be installed as individual units or as parts of an Edwards centrally-controlled clock system.

Particularly suitable for large schools, institutions or industrial plants where classes or shifts are on different schedules.

Standard 115 volts, 60 cycles.

The program element consists of two perforated metal cylinders mounted vertically and revolving about their respective vertical axes.

By inserting metal pins (provided with each instrument) into proper holes in each of the two cylinders, signals may be operated at one minute intervals, 24 hours per day, seven days per week.

The timing unit is a dual Telechron motored movement geared to the program instrument. The timing unit also controls the operation of contacts which close every minute for a period of 2 to 6 seconds, thus controlling signal duration through a relay having 6 ampere contacts at 115 volts a-c.

Size — 31 1/2 in. high, 16 in. wide, 7 in. deep.

No. 1834..... Each **\$666.00**

Edwards Signal Control Boards

For use in schools having multiple circuit program instrument to transfer any room from one schedule or program to another. Has as many vertical conductor bars as there are program instrument circuits and as many connecting horizontal bars as there are signals. Push buttons are furnished to manually sound signals in any room.

Standard 115 volts, 60 cycles. Available for four circuit program systems in 20, 30 or 40 buttons; for six circuit systems from 40 to 120 buttons in multiples of 10 buttons. (Specify exact number of buttons.) For flush mounting unless otherwise specified.

No. 1940—Four-circuit, 20 buttons..... **\$175.00**
 Add for each additional 10 buttons..... **75.00**

Edwards Electric Clocks

Indoor Flush Wall Type

Satin aluminum finish metal case. Graceful hands, red sweep second hand.

Clear white dial, convex crystal glass and black arabic numerals for easy visibility from a distance.

Powered by Telechron synchronous, noiseless dual-motored movement. (For use with No. 1900A Manual reset or No. 1902A automatic reset control units.)

Hanger on back engages with special galvanized steel wall box and assures snug mounting to wall.

Wall box of ample size to accommodate clock movement and connecting wires. Also provides for mounting a program buzzer when desired. Wall box 7 7/8 in. high, 4 1/8 in. wide, 4 in. deep.

Dial 12 in. diameter. Outside diameter 13 1/4 in. Projects 1 1/4 in. from wall.

Approximate shipping weight 9 lbs.

*No. Each
1962—For 115 volts, 60 cycles A-C..... **\$40.00**

Indoor Surface Type

This clock is of the same general construction as the No. 1962 except for surface mounting.

Complete with concealed hanger with special wall fitting for "solid" mounting on wall over standard outlet box cover.

For concealed conduit only. (For new installation where a new

box is required use 4x4x1 1/2 in. deep box with 3/4 in. plaster cover.)

Dial 12 in. diameter. Outside diameter 14 3/8 in. Projects 3 3/8 in. from wall.

Approximate shipping weight 9 lbs.

*No. Each
1972—For 115 volts, 60 cycles A-C..... **\$40.00**

Edwards Electric Clocks

Indoor Suspended Type—Double Face

Designed especially for wall or ceiling mounting in corridors or places where it is desirable to have time visible from opposite directions.

The unit consists of two round surface type clocks (No. 1972 see above) mounted by standard hangers to a center suspension unit, which attaches directly to a special flush outlet box (4 1/4 x 4 1/4 x 2 1/2 in.) by a concealed bolt which is furnished with clock. Where lighting fixtures extend from ceiling, side wall mounting clocks are recommended.

Dials 12 in. diameter. Outside diameter 14 5/8 in.; Depth 8 in.; Height 17 5/16 in.

Approximate shipping weight 25 lbs.

*No. Each
1978—For 115 volts, 60 cycles A-C..... **\$132.00**

*For voltages and/or cycles other than 24V. 60 cycle or 115V. 60 cycle add **\$20.00**

General Electric Telechron Commercial Electric Clocks

Handsomely styled for offices, schools, stores and professional use. Has sturdy plastic case, black numerals and hands with red sweep second hand.

The Synchro-Sealed General Electric-Telechron motor in these electric clocks has an oil supply sealed against dirt. It is synchronized with local power plant master clocks and will give accurate, dependable time.

Available in rich brown or gleaming chrome color.

Edwards Flushcall Signaling Devices

Modernized signaling and calling devices for replacement of old-type bells, buzzers, transformers and pushes in residences, apartment houses, etc.

Each device fits standard gang boxes and takes standard switch or receptacle plates. Can be ganged together with 115 volt receptacles, etc., in standard box and finished with standard plates.

All are designed for a-c operation only, with absolutely no adjustment at any time.

Construction Details — Mechanism completely insulated from frame. Rust-resisting metals or finish throughout. Frame and louver front plate completely surround and protect gong and mechanism from wires in box. Large, accessible binding posts. Inclined construction of frame and shallow design leaves ample space for lock nuts and wires.

No. 660

No. 661

No. 664

All devices operate on 60 cycles. No extra charge for 25 cycles if specified.

The Ringcall

For replacing old-style small door bells. Has a pleasing tone and great carrying power.

No.	Schedule	A-C Volts	Std. Pkg.	Appr. Wt. Std. Pkg.	Each
660	S	8-10	6	2	\$2.09
760	S	24	3	3/4	2.59

The Buzacall

For replacing old-style buzzers. Has good tone and more carrying power.

No.	Schedule	A-C Volts	Std. Pkg.	Appr. Wt. Std. Pkg.	Each
661	S	8-10	6	1 1/4	\$2.04

Edwards Audible Signals

Classroom Chimes

Have a pleasant musical note, very penetrating but not objectionable. Two-note sequence. A simple neutral design to harmonize with the interior of the classroom. Grey finish.

Surface Type

Operates on 115 volts, 60 cycles.
Size—5 in. wide, 7¼ in. high, 2¼ in. deep.
Approx. shipping weight 2½ lbs.

No. 1984..... Each \$12.00

Note—Classroom chimes can also be furnished in flush type.

Classroom Buzzers

Can be housed in the clock outlet box—takes no room or wall space, saves an additional outlet. If desirable to mount away from the clock a single gang box for flush mounting, or Wiremold fitting for surface use.

Plate is not supplied.

Operates on 115 volts, 60 cycles.

Approx. shipping weight ¾ lb.

No. 1983..... Each \$6.00

Note—Contact Graybar for special voltages and frequencies.

Edwards Hospital Signaling Systems and Equipment

A dependable signaling system is an absolute necessity in every modern hospital.

Nurses' Calling System

May be either one of the following two types:

Locking-Button Type—in which the locking push button contains all the mechanism to actuate the audible and visible signals and to reset them when call has been answered, is suspended from a flexible neoprene-covered cord.

Pull-Cord-Switch Type—consists of a special toggle-type switch installed in the wall and operated by a pull cord. It is for use in those hospitals where low initial cost is the deciding factor. As the operation of the pull-cord switch requires more effort on the part of the patient, it is sometimes not favored.

Psychopathic Alarm Systems

A tamper-proof system that the deranged patient cannot operate. By means of a switch outside the corridor the attendants can make the calling station in each room operative before they enter the room. Then, in the event of an unruly patient, assistance can be called for.

Doctors' Paging System

As the services of the permanent staff and of visiting physicians are in constant demand in all hospitals, it is important that a doctor be reached as soon as possible. When visiting in a hospital, the doctor may have several patients requiring his attention, during which time a demand for his services may arise elsewhere.

These paging systems meet such conditions, as it permits calling three doctors to be paged at one time on any number of annunciators without disturbing the patients.

Doctors' In and Out Systems

In both large and small hospitals where the visiting doctors are likely to arrive at any hour of the day or night, it is important to know when a certain doctor is in or out of the building. This is accomplished with an electrical reset annunciator, with the required number of indications, located in view of the telephone operator. In the main entrance or doctors' cloak room is located a similar annunciator with switches. The doctor, by throwing the switch opposite his name lights the indicator showing his name on both annunciators. Throwing the switch in the opposite direction extinguishes the lights opposite his name in both instruments.

Ambulance and Entrance Signaling System

This is chiefly a push button located at doors leading out of the building and a lamp-annunciator having a lamp signal for each location, with buzzer as an audible signal. Very useful for night service.

Nurses' Home-Calling Systems

Provides communication between office and nurses' and attendants' rooms at their homes.

Two types of systems can be used, viz:

Return-Call Annunciator Type.

Intercommunicating Telephone Type.

A combination buzzer and push-button station is provided with the return-call annunciator system in the nurses' and attendants' rooms, and a combination annunciator and push button is installed at building office. This system permits the office to call the nurse and the nurse may answer the call by operating the corresponding push button.

Room stations can be provided with indicating drops which in a nurse's absence remain visible until reset, indicating that a call has been made.

In the intercommunicating telephone system a combination annunciator and push button board is provided with an operator's telephone and the room stations are replaced by telephones. Room telephones can be provided with indicating drops for the same purpose as stated above.

Hospital signaling equipment is approved by the War Department for Army Hospitals, Bureau of Yards and Docks of Navy Hospitals, and Department of Interior for Indian Hospitals.

Engineering Advice

We will gladly cooperate with architects, engineers, hospital superintendents, etc., in charge of operation to lay out systems and make recommendations.

There is no charge for this service. For information, contact Graybar.

Faraday Conventional and Uni-Pact Bells and Chimes

Listed by Underwriters' Laboratories, Inc.

All Uni-Pact units are furnished with the same size and type, easy-to-install adapter plate so that the various signaling units may be interchanged quickly and easily without rewiring.

The adapter plate mounting fits any standard 4 in. square or octagon outlet box, conduit or Wiremold fitting.

All connections are made to the adapter plate and the electrical installation and testing can be completed before painting building.

Bells
Heavy Duty—Underdome Type

Compact signals, with loud, clear tones necessary for good signaling. Heavy duty solenoid plunger type mechanism. Hardened alloy steel gong, parkerized finish. Hammertone gray enamel frame (Red enamel can be furnished if specified).

One in standard package. Approximate shipping weight: 4-in., 2 lbs.; 6-in., 5 lbs.; 10-in., 10 lbs.

Edwards Multiple Contact Push Buttons

For 50 Volts or Less A-C or D-C

Particularly suitable for use on electronic applications, special machinery, instruments, etc. Can be used on any applications requiring simultaneous operation of two or three devices, such as chime and buzzer, buzzer and annunciator drop, etc.

Nickel finish rim. Large terminals imbedded in tough plastic. Spring clips permit forced fit. Silver plated self-cleaning contacts.

Will fit 3/4-in. hole.

Standard package of 1.

Weight 1/4 lb.

No. 250—Depressing plunger closes 4 points together as a common circuit. Usually one point is connected to current

supply and the three other points are each connected to its associated device. Can also be used as a single pole, normally open circuit push of increased contact rating by connecting two points to current supply and the other two points to the signal device or instrument.

No. 251—Depressing plunger opens circuit.

No. 255—Depressing plunger breaks one circuit and makes another. Designed for three-wire return call systems and where a number of pushes are installed, one for each bell, with one push to ring all bells.

No.	Description	Each
250	Four Point, normally open	\$2 31
251	Two Point, closed circuit	3 41
255	Three Point "Return Call"	3 19

Edwards Weatherproof Push Buttons

For 50 Volts or Less

Surface Type

Thoroughly reliable for use outside of buildings, industrial, residences, for marine work, ice plants, chemical plants and wherever dampness, exposure or fumes would corrode or destroy the mechanism of ordinary push buttons.

Brass housing, polished finish. Weatherproof leather diaphragm under brass button center protects entire mechanism. Phosphor-bronze contact springs. Brass plate threaded for 1/2-in conduit. Diameter 2 5/8 in.

Standard package, 1; Approximate weight 1/2 lb.

Edwards Flush Push Buttons

For 50 Volts or Less A-C or D-C

No. 620

For general utility purposes. New improved plastic back, not affected by moisture. Long-life molded center in heavy nickel trim. Heavy brass springs and plunger, easy floating push action—positive self-cleaning contacts.

Large strong terminals embedded in composition body.

Standard package of 12; Weight, standard package, 2 1/2 lbs. Will fit 5/8-in. hole.

No.	Description	Each
620—Standard, Not Luminous.....		\$0.44

Flat Pearl Center Type

No. 59.....Each \$1.10

Composition body, with heavy brass springs and plunger. Large terminals.

Spring clips for mounting.

Will fit 3/4-in. hole. Rim is 1/8-in. wide, 1/16-in. from back of rim to end of terminals. Thoroughly insulated.

Standard package of 6; Weight standard package 1/4 lb.

Edwards Pendant Pushes

High Voltage — Quick Make and Break Type

Sturdy mechanism, built to withstand heavy shock, vibration and constant use. Quick make and break is assured irrespective of the amount of pressure or the speed with which it is applied. Contacts stay closed as long as push button center is depressed.

Gray plastic case with end removable for connection — ample space for taping and knotting.

Has 1/2-in. entrance hole for flexible cord. Plastic collar surrounding push button is luminous, making it ideal for use with slide films, electronic equipment, x-ray, etc.

Standard package of 1; weight standard package 1/4 lb.
No. 851 Luminous.....Each \$8.80

Edwards Hospital Locking Pushes

Has locking mechanism that keeps attendants' light on until call has been answered. Button is released and contacts open when small reset pin is operated.

Newly designed shell of attractive grey composition is easy to handle and is practically unbreakable. The collar is luminous and can be seen in darkened areas. Has five contacts which are closed (one momentarily) when button is depressed.

Standard package 1; approximate weight 1/2 lb.

For 24 Volts

No. 7620.....Each \$6.50

Edwards Pendant Pushes

Suitable for residence or hospital work. Light in weight, but exceedingly strong. Designed for fingertip grasp—no chance of slipping out of hand.

Bakelite casing. Push button has plastic back, not affected by moisture, with long-life molded center in heavy nickel rim. Heavy brass springs and plunger, self-cleaning contacts. Large strong terminals embedded in composition body.

Standard package of 3; weight of standard package 1/8 lb.

No. 71.....Each \$1.23

Edwards Push Button Blocks

With Numbered Pushes

No. 146

Molded black Bakelite, with removable weighted base and composition pad.

Numbered flush midget pushes. Can be mounted on side of desk by using a concealed mounting hole provided for that purpose. The lustrous permanent finish will not scratch, mar or deteriorate.

Standard finish, black.

Standard package of 3; weight standard package 1/4 lb.

Benjamin Heavy-Duty Watertight Push Buttons

Listed by Underwriters' Laboratories, Inc.

Single Button

Two-Gang Button

Rated at 5 amps. for 125 v. circuits with either inductive or resistance loads. This type of button is suitable for use with any Benjamin signal or any electrical device with a similar rating. Button proper (plunger) is normally below the surface of the cap so the button cannot be accidentally operated. A waterproof neoprene gasket seals the plunger opening. All joints are watertight. Std. Tapping: ½" I.P.S. at top.

No.	Description	Each
8493	Single Button—Open circuit	\$ 5.50
8874	Single Button—Closed circuit	5.50
8495	Two-Gang Button—Open circuit both buttons	9.40
8884	Two-Gang Button—Open circuit one button, closed circuit one button	9.40

Edwards Door Openers

Compact and rugged. For use under varying conditions. Can be used on either right or left hand doors. Door may be opened with the key in the usual way according to the type of latch used. Electric operation of the door opener allows nosing to pass without use of key.

Has release check feature which keeps door openers in unlocked position after button is pushed, until door opener is tripped to its normal locking position when door is pushed open.

Mortise Type

For better grade jobs and smaller mortise.

Has die-cast body. Forged brass roller and nosing. Will stand up under most severe operating conditions. Face plate beveled for perfect fit.

Body Size—2-in. high, 2⁷/₈-in. deep, 1¹/₄-in. thick. Nosing opening 1¹/₄-in. Face plate 3³/₈x1¹/₄-in.

Standard package of 1; Weight of standard package ³/₄ lb.

Voltage: 4.5-6 d-c or 12-16 volts, 60 cycles a-c.

No. 154..... Each **\$9.90**

For special voltages up to 48 volts, add to list. Specify A.C. or D.C. **\$5.50**.

Mortise Type

For use where economy is desired—especially for low cost apartment jobs.

Has solid brass face plate, forged brass nosing. Entire mechanism enclosed in rust-proof case with easily removable cover. Fits same size mortise as same shape openers of other manufacturers.

Body size—3⁵/₈-in. high, 2¹/₈-in. deep, 1-in. thick. Nosing opening 1³/₈-in. Face plate 5⁷/₈x1¹/₄-in. Complete with brass mounting screws.

Standard package of 6; Weight standard package 5 lbs.

Voltage: 4.5-6 d-c or 8-12 volts, 60 cycles a-c.

No. 9.....Each **\$5.78**

Rim Type

For operation with surface type locks, bolted to door.

For surface locks, thin frames, office gates, etc. Has few moving parts to be affected by constant use.

Forged brass nose and cast frame, brass finish face plate. Easily installed, with readily accessible terminals. Complete with mounting screws.

Body size—2-in. high, 3¹/₈-in. deep, 1¹/₈-in. thick. Nosing opening 1¹/₄-in.

Voltages: 3-6 volts d-c or 6-8 volts, 60 cycles a-c. Can be supplied for special voltages up to 48 volts.

Standard package of 1; Weight standard package 1 lb.

No. 152.....Each **\$8.25**

For special voltages up to 48 volts, add to list. Specify A.C. or D.C. **\$5.50**.

Edwards High-Voltage Push Buttons

**For Voltages up to 250 Volts
Momentary Contact — Quick Break Type**

Listed by Underwriters' Laboratories, Inc.

No. 820

No. 821

For heavy work. Sturdy, dependable mechanism requires a minimum of pressure to make contact and breaks fast regardless of how the pressure is released. Especially suitable on a-c where quick make is not a factor. Also used on d-c operation at lower current ratings.

Heavy brass chrome plated shell. Extra strong spring contacts. Terminals are large and easily accessible.

Standard finish, chrome.

Standard package of 1; weight standard package ¹/₄ lb.

Distance from back of rim to end of terminals 1¹/₂-in.

No.	Description	Each
820	Forced Fit, for ³ / ₄ -In. hole.....	\$4.40
821	Locknut Type, for ⁷ / ₈ -In. hole. Threaded for special modified ¹ / ₂ -in. conduit locknut.....	4.84

Edwards Light Switches

For Bus Door Steps

A well constructed switch built to stand up under the constant operation of bus doors.

Heavy brass face plate 2¹/₂x1-in., polished nickel finish. Stainless steel plunger head. Contacts enclosed in bakelite base. Bumper plate 1⁵/₈x⁵/₈-in.

Complete with screws for mounting.

Approximate weight ¹/₄ lb.

Operates on battery voltage.

Open circuit—depress plunger to open.

No. 504.....Each **\$5.50**

Edwards Door Trip

No. 236 Door Trip

Not Insulated Door Trip

For use where external mounting is desirable or not objectionable. Makes and breaks contact when door is opened and repeats operation when door is closed. Will not contact when door is closed. Standard package is 3. Weight per standard package 1/2 lb.

No. 236—Open Circuit.....Each **\$2.48**

Edwards Constant-Ringing Drops

For use on open or closed circuit burglar alarm systems.

When coils are energized by operation of any contact device on an open circuit system or through a relay on a closed circuit system the mechanism of the No. 26 drop closes a circuit and keeps it closed until reset by hand, thus causing a continuous alarm on bells, horns, etc., until reset.

The common terminal between coil and contact is grounded to case. In operation it also cuts its own magnets out of the circuit which reduces battery drain where d-c systems are used and protects the magnet coils where considerable time may elapse before resetting.

Standard operation: 6-8 volts d-c or 8-12 volts a-c. Special voltages to 48 volts a-c or d-c.

Exact voltage must be specified.

Standard package of 1; Weight standard package 1/2 lb.

No. 26.....Each **\$6.49**

For special voltages, add to list **\$3.85**.

Edwards All-Purpose Contactors

A universal device for doors, windows, transoms, etc. Easily and quickly installed. Fully insulated for use in wood or metal.

Designed for hard service, with pure phosphor-bronze scraping contacts, laminated phenolic insulation and heavy brass casing and moving parts.

So constructed that a pressure from any direction will depress the nosing, which requires slight pressure and may be installed in any position. It need not be mortised except where door or window is a very tight fit. Shallow enough for all standard frames and casings. Requires 3/4 in. hole. Complete with flat head brass screws.

Can also be used as a foot push, or on machinery where mechanical action of any kind must energize a low voltage electrical circuit.

Standard package of 6; Weight standard package 1/2 lb.

No.	Each
44—Pressure on nosing opens circuit.....	\$1.10
45—Pressure on nosing closes circuit.....	1.10
46—Momentary contact; pressure on nosing makes, then breaks the circuit and repeats the operation in returning to normal.....	1.10

Edwards Door Bell Transformers

Tri-Volt—25 Watts

Provides a greater selection of secondary voltages. Primarily adapted to applications where an unusually long wire run exists.

Finish: Gray.

Size: 4 3/8-in. high, 3-in. wide, 2 1/6-in. deep.

Standard package of 1; Weight of standard package 2 1/4 lbs.

Primary 115 volts, 50-60 cycles; secondary 8-16-24-volts, 25 watts.

No. **872**.....Each **\$6.05**

Note—Special primaries, secondaries, and 25-cycle transformers can be supplied. Contact Graybar.

Edwards Signaling Transformers

Completely enclosed in sturdy stamped metal housings designed to form their own barriers between high and low voltages.

They have large, convenient binding posts on both primary and secondary to eliminate splicing, soldering and taping. Knockouts into both compartments permit entrance with BX, conduit or open wiring.

No. 88-50 and 88-100 listed by Underwriters' Laboratories, Inc.

Primary: 115 volts, 60 cycles. Can be used on up to 130 volts.

Secondary: 4-8-12-16-20-24 Volts.

No.	Watts	Height	Size, inches Width	Length	Wt. Std. Pkg., lbs.	Each
88-50	50	4 1/4	3 5/8	7 7/8	5 1/8	\$11.77
88-100	100	4 7/16	4 5/8	8 5/8	8 3/4	19.00
88-250	250	6	5 1/2	9 1/2	16 1/2	48.40
88-500	500	6 1/2	6 1/2	12 1/8	34 1/8	74.80
7194	750	6 1/2	7 1/2	14 1/2	42	88.00
7195	1000	6 1/2	9 3/4	14 1/2	58 1/4	111.00

Note—Special primary voltages up to 230 volts, special primary voltages 230 to 400 Volts, special secondary voltages and 25-cycle transformers can be furnished. For further information contact Graybar.

Edwards Door Bell and Chime Transformers

Easi-Mount

Can be mounted on any outlet box or cabinet with 1/2-in. knockouts or alone on any surface without box. No plates needed for any type mounting. No screws or parts to take out or lose. Has expandable nipple for box or cabinet mounting and integral mounting flanges for surface mounting to wall or ceiling.

Light gray finish. Size: 2 5/8-in. high, 2 5/8-in. wide, 1 1/8-in. deep.

Primary 115 Volts, 50-60 Cycles

Kirkland Indicating Lamps and Annunciator Components

All lamps on this page for 120-volt bulbs. Prices do not include the bulb. Lamp bulbs serviced from panel front.

A most rugged lamp. Unusually shallow depth—only 1¼-in. behind front of panel. Single 1⅜-in. hole mount. Heavy deeply cupped glass lens (all colors). Threaded lens cap. Brilliant signal produced from all angles. Heavy duty socket with ½ terminal screws. Hex holding lip in chrome finish. U/L listed. Uses S6 or T4 bulbs.

No. 659 D/E.....Each \$3.20

Lamp with flat surface lens. Illuminates engraved designation on lens. All

color effects. Saves a separate nameplate. 1-in. engraving area. 2¾-in. OA depth behind front of panel. Mount in 1⅞-in. diam. hole. Uses S6 or T4 bulbs. U/L Listed.

Each \$1.80
150 Engraved lens.....*

Brilliant side visibility. Deep cupped heavy glass lens. All colors. Chrome

lens cap. Overall depth behind front of panel 2¾-in. Overall diam. 1¼-in. Mounting hole 1⅞-in. Uses S6 and T4 bulbs.

No. 160.....Each \$1.80

185W

170SW

The 180SW unit has a No. 180 lamp mounted on a chrome finished single-gang switchplate. Ideal overdoor or exit light. The 170SW unit has a No. 170 lamp mounted as above.

Each \$4.25
No. 180SW.....\$4.25
No. 170SW.....4.25
No. 170SW Engraved Lens....*

Rugged, heavy duty lamp with smooth curved surface lens (all colors). Chrome plated lens cap. Slip-fit lens cap. 2¼-in. OA depth behind front of panel. 1⅜-in. mounting hole. U/L listed. ½ terminal screws.

No. 600.....Each \$2.40

Square lamp designed for engraved lens. 1⅜-in. diam. hole mount. All molded unit. Snap-on lens cap. All colors. 2¼-in. overall depth behind panel.

No.	Description	Each*
2SQS	screw type S6 bulb.....	\$3.20
2SQB	S6 bayonet base.....	3.20
2SQT	T3¼ bayonet base.....	2.80

Recessed lamp receptacles. Bulb acts as lens. Exposed bulb tip effects long lamp life. Chrome finish.

Bulbs not included in price.

No.	Description	Each
S11	For tungsten bulb.....	\$4.25
G10	For neon bulb.....	4.25

Resistors for Above Bulbs

Description Each
 For 120V service **\$1.35**
 For 220V service **1.60**

Brackets furnished for above resistors.

T-2 slide base socket, metal body, threaded lens - cap of metal with smooth curved lens. Black finish. T2 low current bulb, all low voltages. Use with resistor on 120/220V. Overall diameter 7/8-in. Mounting hole 1/8-in. Overall depth behind front of panel 2 1/8-in. Also available with flat lens for engraved message. Solder terminals. All colors.

No. Each
T2SLC (Less Bulb & Resistor) **\$.275**
T2SLC Flat lens engraved *

Flat lens for engraved message. All color effects. Threaded lens-cap in polished chrome. Overall depth behind front panel 1 1/2-in. Mounting hole 1 1/8-in. Area to engrave 1-in. Overall diameter 1 1/4-in. Uses T3 1/4 SC miniature bulbs, all low voltages. With series resistor on 120/220V. Solder terminals.

No. Each
150 SC **\$1.80**
150 SC Engraved *

Brilliant side visibility obtained with low current T2 slide base bulb (0.038 amp.). Plastic lens, deeply cupped, in all colors and clear. Used with resistor on 120/220V. Black finish. Overall diameter 7/8-in. Depth behind front of panel 2 1/8-in. Mounting hole 1/8-in. Solder terminals.

No. Each
T2SLC-P (Less Bulb & Resistor) **\$2.45**

This superior heavy duty unit will withstand an extremely high potential test. A ceramic casting guards against insulation breakdown. Threaded plastic lens-cap permits full side visibility. Mounts in 3/4-in. diam. hole. Overall depth behind front of panel 1 1/2-in. Uses T3 1/4 bulb on LV. Used with resistor for 120/220V. Solder terminals.

No. Each
2213 (Less Bulb & Resistor) . . **\$1.60**

Type DR Multiple Lamp Box

Illuminated Engraved Designations: One to Six Indications; One to Six Bulbs Uses T3 1/4 Bayonet Base Bulbs; Voltages Up to 28 Volts.

The engraved white designation on black background shows brilliantly when lighted. Also white plates.

Slots contain removable light barriers to produce 1, 2, 3, 4, or 6 individual light chambers.

DR boxes used in multiple can be stacked in vertical or horizontal rows producing a modern Annunciator. See Catalog.

Dimensions

Overall—5-in. wide x 1 1/8-in. high.
 Panel Opening: 4 1/8-in. x 1 1/8-in.

No.	Plate Area to Engraved Sections	Dimen. In.
*DR-HM-1	1	4 3/16 x 7/8
*DR-HM-2	2	2 1/16 x 7/8
*DR-HM-3	3	1 3/8 x 7/8
*DR-HM-4	4	3 1/24 x 7/8
*DR-HM-6	6	5/8 x 7/8

*Also for 120 V. S6 Lamp Bulbs.

***ENGRAVING COSTS** A Set-up charge of **\$1.50** net (no discount) is made for engraving on one or more units of same type on the order.

List price per engraved character **\$.12**. The number of engraved characters on order constitutes the basis for discount.

Kirkland Indicator Lamps and Annunciator Components

Rectangular Indicating Lamps

Ideal to engrave. Low voltage T3 1/4 bulbs. Two sizes. Black frame. All colors.

No.	Frame Size, In.	Mount Hole, In.	Depth Behind Panel, In.	Each
2025-P	3 1/2 x 1 1/16	1 1/2	1 1/8	\$1.15*
2025-F	Same as above with flat lens to engrave.			1.15
2025-P—Neon, Same as 2025-P but with NE-51 resistor.....				1.40*
2026-P	1 1/2 x 3 1/2	3/4	1 5/8	1.35*
2026-F	Same as above with flat lens to engrave (1 1/2 x 3/4).....			1.35
2026-P—Neon, Same as 2026-P but with NE-51 resistor.....				1.50*

*Add for resistor 120/220V.

Rectangular Push Buttons

Match with lamps. Engraved designation. Two sizes. Black frame. Button colors: Red, Green, Black, White. Momentary contact type. Solder and screw terminals.

Small Models: (0.5 amps/250 VAC)

No.	Contacts	Each
1025-NO	Normally open	\$1.30
1025-NC	Normally closed	1.30

Large Models: (2.0 amps/250 VAC)

No.	Contacts, Sets	Each
1126-2O	2 open	\$2.00
1126-2C	2 closed	2.00
1126-0C	1 open, 1 closed	2.00

Multiple Lamp and Button Panels

Mounted on standard switchplates or special cabinets.

Prices on application.

Circular Push Buttons

Black frame. Button colors: Red, Green, Black, White. Single 3/4-in. hole mount. Rated 2 amp. per set, 250 VAC.

No.	Contacts	Each
1101-2O	2 open	\$1.70
1101-2C	2 closed	1.70
1101-0C	1 open, 1 closed	1.70

Solder and screw terminals. Other single contact buttons available.

Combination Lamp and Relay Assembly

Type RBE-170 individual lamp Annunciator. Prewired, complete with cable ready to install. Single 1 3/8-in. hole mount. Up to 3 DPDT relays. Uses S6 bulb. Engraving diam. 1 1/8-in. All modern alarm services possible on existing panels with economy. Alarm services arranged so that a new audible alarm signal will never be lost. RBE unit also available with beehive type lens (Type RBE-180).

Typical Installation of RBE-180 Units

Mounted on existing panel. Present panels can be readily equipped with modern alarm service without the need for added cabinets. Just install RBE units and connect incoming wiring.

Type MLP Individual Alarm Units

Panel mount. 3-in. by 1-in. area for illuminated message. Box contains: Relays, S6 lamp bulbs and terminal block on rear. Cabinet size—4 1/8-in. x 1 3/4-in. Face plate—5-in. x 2 1/4-in. Depth from front panel 7 1/4-in. All standard alarm services. Ideal for group use. With or without toggle switch or push button.

Type VIG Individual Alarm Units

A wiring device. Mounts on standard 2-gang outlet. Contains two lamps, one DPDT relay, and toggle switch. Interesting alarm services possible. Ideal for industrial applications.

Type CFA Flasher Assembly

For alarm service. Anti-dust container houses thermal unit, resistor and relay. 100 flashes prox. per minute. 8-point octal plug fits standard receptacle.

Kirkland Custom Annunciators For Power Plants and Industry

Typical Message Plate

Bulls-Eye Annunciator

Window Annunciator

Desk Annunciator

All Modern Alarm Services

Supervise liquid levels, motors, transformers, pumps, doors, vaults, sprinklers, production factors, pressure, valves, switches, etc.

Standard anti-dust container, with plug, contains relays completely wired for intended service. The relay containers mount in plug receptacles mounted on ebony asbestos panels that are wired to the terminal block. Wires from the panel go to the lamp bulbs, power, and audible signal.

A wide variety of standard size windows are available for illuminated messages. Examples: 1-in. x 1-in., 1-in. x 2-in., 1-in. x 3-in., 2 1/4-in. x 2 1/4-in., 4-in. x 1-in., 2-in. x 2-in., 2-in. x 4-in.

Other sizes are also available along with a wide variety of indicating lamps (See catalog data) Plus Graphic Annunciators.

Typical wiring diagrams and suggested services available on request.

ENGRAVING COSTS A Set-up charge of \$1.50 net (no discount) is made for engraving on one or more units of same type on the order.

List price per engraved character.....\$.12. The number of engraved characters on order constitutes the basis for discount.

R & S Unilarm
Factory Built Unit Alarm System—Ready to Install
Explosion-Proof and Dust-Tight—Class I, Groups C and D

Complete details on request.

1. Provides unfailing supervision of equipment and process operations.
2. Precision-built to Underwriters' Laboratories requirements. Completely wired and tested . . . ready for field connections.
3. Plug-In Panel (large illustration), fits interchangeably into Explosion-Proof, Vaportight and General Purpose enclosed units. Reduces maintenance to a minimum . . . easily and quickly replaced with a spare unit.
4. Your choice of 100 standard circuits to suit every conceivable application.
5. Distinctive visual signal for each condition (flashing light) insures immediate attention.
6. Any number of Unilarms may be connected to one audible signal.
7. Tried and tested in the field. Thousands in use giving trouble-free protection. Accepted as standard by leading industries.
8. Available as individual unit or in multi-unit Panels. Also time delay types for applications subject to high surge or excessive vibration.
9. Saves space, engineering costs, installation and maintenance over other alarm systems.
10. Acknowledgement-test switch permits periodic testing of each Unilarm circuit.

*Reg. U.S. Patent Office.
 D1

Special Explosion-Proof Unilarm Panel showing stock units, group mounted.

Vaportight Unilarm General Purpose Unilarm

R&S Unilarm is also available in a complete line of Surface Mounted Types — Explosion-Proof, Vaportight and General Purpose.

Standard lens colors are White (normal), Green (low alarm), Red (high alarm). Other colored lenses will be supplied if specified.

Lamp—S6-6 watt, 120 volt bulbs regularly furnished.

Unilarm can be supplied for surface mounting. Information and prices on request to Graybar.

Crouse-Hinds Type EKP Visularm

Explosion-Proof and Dust-Tight

Class I, Group D (NEMA Type VII); Class II, Groups E, F, and G; and Class III (NEMA Types IX, V and III)

Three Horizontally Mounted VISULARMS
Front View of Panel

Three Horizontally Mounted VISULARMS. Back Feed Conduit Arrangement. Rear View of Panel

Separated View

Type EKP VISULARM is a complete compact unit used to supervise and control manufacturing processes in chemical plants, oil refineries, synthetic rubber plants and in other locations where constant control is necessary. The VISULARM will indicate, by means of pilot lights, normal and abnormal temperature, liquid level, speed, load or any other condition which can be electrically coupled to the circuit. It is desirable to provide an audible indication of abnormal conditions and therefore the units listed are arranged to operate horns, sirens, and bells listed elsewhere in this catalog.

Auxiliary circuits can be furnished to actuate with other devices or control process equipment.

The VISULARM includes the following electrical features as standard: 1. Jack-mounted plate completely factory wired and tested. 2. High speed flasher on alarm light. 3. Independent horn circuit. 4. Reset switch. Silences horn and changes alarm light from flashing to steady until fault is corrected. 5. Test switch. Permits periodic check of every device in the VISULARM insuring proper operation under abnormal conditions.

Two-Light Two-Position Visularm

For Normal and Abnormal Indications

Signal Indications:

1. Normal—Bottom Green light on. Top Red light off.
2. Abnormal—Red light flashing. Horn on. Green light off.
3. Reset—Horn silenced. Red light on steady until conditions return to normal.

Description*	Initiating Device Contacts Maintained		Each

†Visularm does not include bowler. Refer to types ETH or WH horns listed elsewhere in this catalog. Pilot light jewels of colors other than those listed can be supplied. Information on request to GRAYBAR.

*Standard unit arranged for 115 volts a-c, 60 cycles. Visularm can be supplied for other voltages and frequencies or other circuit arrangements. Prices on application to Graybar.

Crouse-Hinds Type KP Visularm

Dust-Tight and Weather Resistant (Raintight)★

**Class II, Groups E, F, and F;
and Class III (NEMA Types IX, V, and III)**

Type KP Visularm Mounted on Steel Panel

Three-Light Visularm Cover Removed

Visularm Cover and Interior Removed Showing Terminal Block

Type KP Visularm performs the same functions as type EKP explosion-proof Visularm which is designed primarily for Class I hazardous locations. The Type KP is ideal for use in boiler rooms, chemical plants, grain handling and food processing plants and similar moist or corrosive locations.

Electrically, types KP and EKP are identical. The jack-mounted relay plates are also identical and interchangeable which allows stocking common spare plates for both types of Visularm.

A 1" back hub is provided and all sides may be drilled and tapped for additional conduit entrances. Type KP Visularms may also be bolted together with a suitable gasket between and with clearance holes to allow passage of wires between units. Information on request to Graybar.

Two-Light, Two Position Visularm†

For Normal and Abnormal Indications

Signal Indications:

1. Normal—Bottom green light on. Top red light off.
2. Abnormal—Red light flashing. Horn on. Green light off.
3. Reset—Horn silenced. Red light on steady until conditions return to normal.

Description*	Initiating Device Contacts (Maintained)		Each
	Normally Open	Normally Closed	
Complete Jack-mounted Plate	KP32-1-J1-3†	KP32-6-J1-3†	\$160.00
	EKPU32-1	EKPU32-6	102.00

Two-Light, Three-Position Visularm†

For Normal, Intermediate, and Abnormal Indications

Signal Indications:

1. Normal—Bottom white light on. Top red light off.
2. Intermediate—White and red lights on.
3. Abnormal—Red light flashing. Horn on. White light off.
4. Reset—Horn silenced. Red light on steady until conditions return to normal.

Description*	Initiating Device Contacts (Maintained)		Each
	Normally Open	Normally Closed	
Complete Jack-mounted Plate	KP32-2-J1-8†	KP32-8-J1-8†	\$196.00
	EKPU32-2	EKPU32-8	115.50

Three-Light, Three-Position Visularm†

For Normal, Intermediate, and Abnormal Indications

Signal Indications:

1. Normal—Bottom green light on. Center amber and top red lights off.
2. Intermediate—Amber light flashing. Horn on. Green and red lights off.
3. Reset—Horn silenced. Amber light on steady until conditions become abnormal or return to normal.
4. Abnormal—Red light flashing. Horn on. Green and amber lights off.
5. Reset—Horn silenced. Red light on steady until conditions return to intermediate (steady amber light shows) or normal.

Description*	Initiating Device Contacts (Maintained)		Each
	Normally Open	Normally Closed	
Complete Jack-mounted Plate	KP33-11-J1-6-3†	KP33-12-J1-6-3†	\$205.00
	EKPU43-11	EKPU43-12	137.00

Three-Light, Three-Position Visularm†

For Normal and High-Low Abnormal Indications

Signal Indications:

1. Normal—Center green light on. Both red lights off.
2. Abnormal Low—Bottom red light flashing. Horn on. Green and top red lights off.
3. Reset—Horn silenced. Bottom red light on steady until conditions return to normal.
4. Abnormal High—Top red light flashing. Horn on. Green and bottom red lights off.
5. Reset—Horn silenced. Top red light on steady until conditions return to normal.

Description*	Initiating Device Contacts (Maintained)		Each
	Normally Open	Normally Closed	
Complete Jack-mounted Plate	KP33-3-J1-3-1†	KP33-7-J1-3-1†	\$181.00
	EKPU43-3	EKPU43-7	115.50

Three-Light, Five-Position Visularm†

For Normal, High-Low Intermediate, and High-Low Abnormal Indications

Signal Indications:

1. Normal—Center white light on. Top and bottom red lights off.
2. Intermediate Low—White and bottom red lights on steady. Top red light off.
3. Minimum Low—Bottom red light flashing. Horn on. White and top red lights off.
4. Reset—Horn silenced. Bottom red light on steady until conditions return to normal.
5. Intermediate High—White and top red lights on steady. Bottom red light off.
6. Maximum High—Top red light flashing. Horn on. White and bottom red lights off.
7. Reset—Horn silenced. Top red light on steady until conditions return to normal.

Description*	Initiating Device Contacts (Maintained)		Each
	Normally Open	Normally Closed	
Complete Jack-mounted Plate	KP33-4-J1-8-1†	KP33-9-J1-8-1†	\$205.00
	EKPU43-4	EKPU43-9	137.00

†Visularm does not include horn. Refer to listings of types ETH or WH horns elsewhere in this catalog. Pilot light jewels of colors other than those listed can be supplied. Information on request.

*Standard unit arranged for 115 volts A-C, 60 cycles. Visularm can be supplied for other voltages and frequencies or other circuit arrangements. Prices on application.

†For panel 1/8" to 1/4" thick. Specify type KPA for panel 1/4" to 5/8" thick or type KPB for panel 5/8" to 1" thick.

*To maintain raintightness, cover threads must be kept liberally coated with a lubricant which will not flow at the operating temperature encountered. Crouse-Hinds type STL thread lubricant is recommended.

Minneapolis-Honeywell Thermostats

Line Voltage Thermostats

Designed to permit frequent cycling of low mass, quick-heating, quick-cooling electric resistance heating equipment.

Cycles 15 to 20 times per hr. under normal 50% heating load to assure close temperature control and long equipment life.

Cover amply vented for accurate air sampling.

Non-adjustable Differential, approximately 1/4 F.

Electrical Rating (a-c only): Resistance load, 4000 watts at 230 volts; 2000 watts at 115 volts. Pilot duty rating, 125 volt amps. at 115 or 230 volts.

Available with the following special features: Model with "Auto-Nite" switch to prevent automatic operation. Model with temperature range stops and locking cover. Wall plate for mounting thermostat on vertical switch box.

Finished in Silver bronze.

No.	Switching Action	Range	Height In.	Width In.	Depth In.	Wt. Lbs.	Each
T40A	S.P.S.T.	56 to 84 F	2 7/8	5	2 1/4	1	\$15.25

Specify Model number and special features required.

Designed for ceiling cable type electric resistance heating. Slower cycling, 3 to 6 times per hour, makes it ideal for high mass, slow heating, slow cooling installations. Cover amply vented for accurate air sampling.

Electrical Rating (a-c only): Resistance load — 4000 watts at 230 v; 2000 watts at 115 v. Pilot duty rating — 125 v. amps. at 115 or 230 v.

Differential: Non-adjustable, approximately 1 F.

Dimensions: Height (including knob) 5-in., width 2 7/8-in., depth 2 1/4-in.

Finish: Silver bronze.

Available with the following special features: Model with "Auto-Nite" switch to prevent automatic operation; Model with temperature range stops and locking cover; Wall plate No. 33410C for mounting thermostat on horizontal switch box.

No.	Switch	Range	Wt. Lbs.	Each
T41A	S.P.S.T.	56 to 84 F	1	\$15.25

Specify Model number and Special features required.

This heavy duty thermostat makes contact on temperature drop.

Designed for accurate and dependable control of line voltage heating equipment. Capable of directly handling motor driven units, blowers, and other line voltage loads.

Horizontally mounted allowing maximum circulation of air over the temperature sensing bellows.

Non-adjustable differential, approximately 2 F.

Electrical Capacity — a-c, 115 volts, 10.2 amp., 230 volts, 6.5 amp., d-c 115 volts, 0.2 amp., 230 volts, 0.1 amp.

Available with the following special features: Adaptor plate for mounting on vertical switch box and Conduit Adaptor for hanging thermostat in space.

Finished in Silver bronze.

No.	Switching Action	Range	Height In.	Width In.	Depth In.	Wt. Lbs.	Each
TA42A	S.P.S.T.	42 to 75F 56 to 84F	2 7/8	5	2 1/16	1	\$21.70

Specify Model number, Range and Special features required.

Light Duty Thermostats

This snap-acting, bimetal actuated line voltage room thermostat makes contact on temperature drop.

Suitable for either line or low voltage applications.

Used for direct control of small motors, unit heaters, coal blowers, automatic burners, relays, motor starters, and similar equipment.

Differential: Adjustable, 1 1/2 to 6 F.

Available with the following special features: Locking cover, Manual night shutdown, Special ranges 64 to 96 F., 34 to 66 F or their Centigrade equivalents, Special finishes and Q18A sub-base.

Finished in Silver bronze.

Electrical Capacity — a-c, 115 volts, 4.6 amp., 230 volts, 2.3 amp., d-c, 115 volts, 0.13 amp., 230 volts, 0.07 amp.

No.	Switching Action	Range	Height In.	Width In.	Depth In.	Wt. Lbs.	Each
T44A	S.P.S.T.	44 to 76 F. 54 to 86 F.	5	2	1 7/8	0.5	\$15.70

Specify Model number and Special features required.

Heavy Duty Thermostats

Makes contact on temperature drop. Used in either line or low voltage circuits to control heating systems.

Provided with proven, dependable mercury switch, this thermostat directly handles line voltage loads.

Differential: Non-adjustable 2 to 3 F.

Available with the following special features: Locking cover; Centigrade scale equivalent to standard Fahrenheit range and Special finishes.

Electrical Capacity — a-c, 115 volts, 7.4 amp., 230 volts, 3.7 amp., d-c 115 volts, 2.5 amp., 230 volts, 1.3 amp.

Finished in Silver bronze.

No.	Switching Action	Range	Height In.	Width In.	Depth In.	Wt. Lbs.	Each
T42A	S.P.S.T.	40 to 80F 60 to 100F	5 7/16	3 3/8	2 1/4	1 1/4	\$21.70

Specify Model number, Range and special features required.

Electric Clock Thermostats

Suitable for replacement of Series 10 or Series 80 thermostats. Standard voltage 115 volts, 60 cycles.

The Comfort Chronotherm automatically lowers room temperature at night for desired period of time (minimum six hours) and raises temperature in the morning to provide both day and night comfort.

Two handy fingertip levers allow convenient changing of day and night settings. Easy to read clock set in silver bronze case.

Universal heater element eliminates need for changing heaters to match the various applications, yet provides the short, frequent burner operations which are necessary for maintaining accurate temperature control.

May be used with the CS82 Powerpile in the self-energized systems.

Has adjustable Differential and Clock Transformer AT75A.

Available with the following special features: Night shutoff, Locking cover, Centigrade scale 10 to 26 C., Special voltages of 115 volts 25 or 50 cycles; 230 volts, 25, 50 or 60 cycles, Special finishes.

No.	Switching Action	Range	Height In.	Width In.	Depth In.	Wt. Lbs.	Each
T852A	2 or 3 wire snap-acting	50 to 80 F.	2 7/8	5	2 1/2	3.6	\$45.20

Minneapolis-Honeywell Thermostats

Double-Setting

Ideal for motels or offices, where heat can be lowered in unoccupied units and restored to comfort temperatures in occupied units from a central panel.

Has double-setting, low voltage thermostat (Series 80). Heat leveling element in comfort stage. 2 S.P.S.T. switches. Range: 56°F. to 84°F. A 77°F. range stop and a locking cover are standard.

Switching: Panel switch in "Hi" position — Comfort stage circuit completed on drop to temperature setting. Panel switch in "Lo" position — Anti-freeze stage circuit completed on drop to 20° below setting.

Electrical Rating: 2 amps at 25 v. a-c. Rating for heater plug in comfort stage 0.135 to 1.4 amps.

Finish: Silver bronze. Special finishes available.

Temperature Sensing: Two bimetal elements.

No.	Ht. In.	Width In.	Depth In.	Each
TA802D	5	2	1 7/8	\$26.00

Note — When ordering specify Model number, voltage and frequency of M-II device to be controlled.

Round Thermostat

Designed for use with electric resistance heating. Recommended for use with R879A, R879B or other two-wire, low voltage electric heating relays. Adjustable heater provides means of regulating ON-OFF operating cycles of electric heating equipment.

Temperature selector and thermometer scale are combined in one easy-to-read dial.

Mercury switch assures positive, dust-free contact operation.

The T86A29 is the standard model for use with electric heating equipment.

The T86A31 is the same as the T86A29 except it has provision for night shutdown.

Operating Differential: Approximately 1/2 F., non-adjustable.

Electrical Rating: .5 amps. at 25 v. a-c.

Dimensions: Diameter 3 1/4-in., depth 1 1/2-in., diameter of adaptor plate 5-in.

Heater: Adjustable for currents from 0.35 to 0.8 amps. standard.

Available with the following special features: Centigrade scale 7 to 23 C.; Locking cover; No. 104528B plate for mounting on outlet box; Ranges 35 to 65 F. and 45 to 75 F.

No.	Switch	Range	Wt. Lbs.	Each
T86A29	S.P.S.T.	55 to 85 F.	0.5	\$12.95
T86A31	S.P.S.T.	55 to 85 F.	0.5	12.95

Note — When ordering specify Model number and Special features required.

Pulsatherm*

Fast-cycling thermostat designed for use with the R879 Mercury Switch Relay to control electric resistance heating within a narrow temperature range.

Has non-adjustable thermostat heater which provides proper cycling rate when operating an R879 relay only.

Equipped with mercury switch that assures positive, dust-free contact operation for the life of thermostat.

Temperature selector and thermometer scale are combined in one dial.

Electrical Rating: .5 amps. at 25 v. a-c.

Operating Differential: Approximately 1/2 F. non-adjustable.

Dimensions: Diameter 3 1/4-in., depth 1 1/2-in.

Available with the following special features: Locking cover; No. 104528B plate for mounting on an outlet box.

No.	Switch	Range	Wt. Lbs.	Each
T86C	S.P.S.T.	55 to 85 F.	0.5	\$12.95

Note — When ordering specify Model number and Special features required.

*Trade Mark, Minneapolis-Honeywell.

Heating-Cooling Thermostats and Subbase

A Series 80, double-acting, three-wire, low voltage thermostat, designed for heating-cooling applications. When used with Q405 Subbase it provides complete control of heating cooling equipment.

Adjustable heat leveling provided in the heating position and "Cooling Anticipation" in the cooling position.

Features dustproof mercury switch. Thermostat closes one contact on temperature rise and another on temperature fall.

Range 55 to 85° F.; Differential, Adjustable, factory set at 1.5° F.; Electrical Rating, low voltage a-c only (1.5 amperes at 25 volts maximum); Heater adjustable for currents 0.4 to 0.8, 0.8 to 1.2, 0.16 to 0.32 amperes; Cooling Anticipation Non-adjustable, 0.65 amperes is standard. Adjustable from 0 to 0.8, 0.7 to 1.2, 1.1 to 1.5.

No.	Description	Diam. In.	Each
T87A	Heating Cooling Thermostat	3 1/4	\$13.45

Q405 Subbases

No.	Description	Each
Q405A	Provides system changeover switch with positions for Cool, Off, and Heat. Provides fan switch with positions for Auto and On.....	\$ 7.70
Q405B	Provides system changeover switch with positions for Cool and Heat. Provides fan switch with positions for Auto and On....	7.20
Q405C	Provides system changeover switch with positions for Cool, Off, and Heat.....	7.20
Q405D	Provides system changeover switch with positions for Cool and Heat.....	6.70

When ordering specify Model number of thermostat, Model number of subbase and special features required.

Minneapolis-Honeywell Electric Heating Sets

The Y362A and Y362B Electric Resistance Heating Packages contain the TA802D Double-Setting Thermostat and the R879 Mercury Switch Relay. The TA802D is designed for installations such as motels or offices where temperatures are desired to be lowered approximately 20° from a central panel in unoccupied units or offices, and restored to the "comfort" temperature setting during occupied periods.

The Y362A contains the R879A Relay capable of handling a single circuit up

to 4600 watts resistance load at 230 volts a-c.

The Y362B contains the R879B Relay capable of handling two circuits up to 4600 watts resistance load each at 230 volts a-c total 9200 watts. A transformer in the R879 provides low voltage power to the control system.

Mercury switches in these relays are operated by a plunger-type solenoid having no metal-to-metal contact, insuring quiet operation.

Voltage and Frequency: 230 volts, 60 cycle standard.

Available with the following special features: Voltage and frequency of 208 or 115 volts, 60 cycle; 230 volts, 50 cycle.

No.	Description	Wt. Lbs.	Each
Y362A	Electric Heating Set	5	\$40.65
Y362B	Electric Heating Set	5	51.00

Note — When ordering specify Package set number, voltage and frequency.

Minneapolis-Honeywell A & B Electric Heating Sets

The Y321 Electric Heating Sets contain the T86A Round Thermostat and R879 Mercury Switch Relay. The Y321A contains an R879A Relay capable of handling a single circuit up to 4600 watts resistance load at 230 volts a-c. The Y321B contains an R879B Relay capable of handling two circuits up to 4600 watts resistance load each at 230 volts a-c total 9200 watts.

A built-in transformer in the R879 provides low voltage power to the control system. Both thermostat and relay have quiet switching mercury switches.

Voltage and Frequency: 230 volts, 60 cycles, standard.

Available with the following special features: Night shut-down thermostat; 104528B wall plate for mounting on an outlet box; voltage and frequency of 208 or 115 volts, 60 cycles.

No.	Description	Wt. Lbs.	Each
Y321A	Electric Heating Set with wall plate	5	\$28.20
Y321A	Electric Heating Set less wall plate	-	27.60
Y321B	Electric Heating Set with wall plate	5	38.55
Y321B	Electric Heating Set less wall plate	-	37.95

Note — When ordering specify Model number and special features.

Minneapolis-Honeywell C and D Electric Heating Sets

These sets contain the fast cycling T86C Round Thermostat and the R879 Mercury Switch Relay. The fast cycling T86C has a narrow differential which provides 8 to 10 cycles per hour at 50% load conditions, prevents wide temperature variations.

The Y321C contains an R879A Relay capable of handling a single circuit up to 4600 watts resistance load at 230 volts a-c. The Y321 D contains an R879B Relay capable of handling two circuits of 4600 watts resistance load each at 230 volts a-c. The R879 has a built-in trans-

former. Thermostat and relay have mercury switches.

Voltage and Frequency: 230 volts, 60 cycle standard.

Available with the following special features: Voltage and frequency of 208 or 115 volts, 60 cycle; 104528B wallplate for mounting thermostat on an outlet box.

No.	Description	Wt. Lbs.	Each
Y321C	Electric Heating Set	5	\$27.60
Y321D	Electric Heating Set	5	37.95

Specify Package set number and special features required.

Minneapolis-Honeywell Mercury Switch Relays

Designed to carry a high amperage, line voltage, resistance load, when controlled with a two-wire low voltage thermostat.

Specially suitable for electric panel heating control application. Heavy duty sealed-in mercury switch, built to provide trouble-free operation, is actuated by plunger-type solenoid having no metal-to-metal contact. Designed to carry a single circuit, up to 4600 watts at 230 volts a-c.

Finish: Gray wrinkle.

Dimensions: Height 6 5/8-in., width 4 1/4-in. depth 3-in.

Voltages and Frequency: 230 volts, 60 cycles is standard. 208 or 115 volts, 60 cycles available.

Rating in Amperes (a-c Resistance load only): 20 amps. at 230, 208 or 115 volts, a-c.

No.	Switch	Resistive Load Rating in Amperes 115, 208, or 230 V. A-C	Wt. Lbs.	Each
R879A	S.P.S.T.	20 amps	4.3	\$14.65

Designed to carry two high amperage, line voltage, resistance loads, when controlled with a two-wire low voltage thermostat. Provided with heavy duty sealed-in mercury switches actuated by plunger-type solenoid having no metal-to-metal contact.

Designed to carry two resistance load circuits, up to 4600 watts each at 230 volts a-c, total for two circuits 9200 watts at 230 volts a-c.

Finish, Dimensions, Voltage and Frequency same as Model 879A.

No.	Switch	Resistance Rating in Amperes 115, 208, or 230 V. A-C	Wt. Lbs.	Each
R879B	D.P.S.T.	20 amps per switch	4.3	\$25.00

Specify Model Number, voltage and frequency.

Minneapolis-Honeywell Intermediate Relays

No. R882

Used for switching line-voltage loads under the control of two-wire low-voltage controllers.

Has two-wire relay coil operated from an external low-voltage supply. An external transformer can be ordered with the relay.

Controllers used to operate these relays must be either snap-acting or mercury switch type devices.

Voltage and frequency 20-24 volt, 50 or 60 cycle without transformer standard.

Weight 2¾ lbs.

No.	Switching Action	Rating in Amperes* (Full Load)		Each
		115 volts A-C	230 volts A-C	
R882A	S.P.S.T.			\$16.05
R882B	S.P.D.T.	10.2	6.5	17.65
R882C	D.P.S.T.			18.20

*Rating for each circuit.

When ordering specify Model number, voltage and frequency and transformer, if desired.

No. R482

Used for switching line-voltage loads under the control of line-voltage controllers.

Has two-wire relay coil which is operated directly from a line-voltage supply.

Controllers used to operate these relays must be either snap-action or mercury switch type devices. Can also be controlled by a manual switch in the line to the relay coil.

Voltage and frequency 115 volts, 50 or 60 cycle standard.

Weight 1 lb.

No.	Switching Action	Rating in Amperes* (Full Load)		Each
		115 volts A-C	230 volts A-C	
R482A	S.P.S.T.			\$16.05
R482B	S.P.D.T.	7.4	3.7	17.65
R482C	D.P.D.T.			18.20

*Rating of each circuit.

When ordering specify Model number, voltage, frequency.

No. RA89A

Used in low-voltage control circuits to provide S.P.S.T. switching of a-c line-voltage loads. Low-voltage for control circuit is provided by built-in transformer. Open contact switch closes the load circuit when relay coil is energized.

Relay can be operated by thermostat or other controller of the S.P.S.T. two-wire snap-action or mercury switch type.

Voltage and frequency 115 or 230 volts, 50 or 60 cycle standard.

The RA89A is a replacement for the RI9A switching relay.

Weight 2¾ lb.

No.	Switching Action	Rating in Amperes (Full Load)		Each
		115 Volts A-C	230 Volts A-C	
RA89A	S.P.S.T.	10.2	5.1	\$15.40

When ordering specify Model number, voltage, frequency.

Minneapolis-Honeywell Switching Relays

Designed for control of heavy duty loads such as cooling compressors.

Makes possible the control of relatively high current by a low-amperage thermostat. Relay has optional switching, D.P.S.T. or S.P.S.T.

Model R847A with voltage and frequency of 230, 208 or 115 volts, 60 cycles, is used as control of cooling compressor with low voltage thermostat.

Model R847B with voltage and frequency of 24 volts, 60 cycles, is used as a control of cooling compressor with low voltage control circuit.

No.	Description	Height In.	Width In.	Depth In.	Each
R847A	With Transformer	5¼	4¼	2¾	\$18.45
R847B	Without Transformer	5¼	4¼	2¾	16.00

When ordering specify Model number, voltage, frequency.

Minneapolis-Honeywell Relays

Small, compact switching relays designed for mounting in panel boxes or similar locations where relay will be covered.

May be operated by two-wire line or low-voltage snap-acting thermostats or controllers to switch line or low-voltage loads.

The R488 operates directly on line voltage. The R888 operates on low voltage (24 volts). An external transformer must be used with R888 Relay.

Voltage and Frequency: R488 115 volts, 50 or 60 cycles standard. R888 24 volts, 50 or 60 cycles standard. Weight ¾ lb.

No.	Relay Description	Each
R488A	115, 230/50, 60	\$12.40
R488B	115, 230/50, 60	15.95
R488C	115, 230/50, 60	16.05
R488D	115, 230/50, 60	16.05
R488E	Relay	11.25

R888A	115, 230/50, 60 w/Transformer	14.90
R888B	115, 230/50, 60 w/Transformer	18.45
R888C	115, 230/50, 60 w/Transformer	18.55
R888D	115, 230/50, 60 w/Transformer	18.55
R888E	115, 230/50, 60 w/Transformer	13.75

Special Features available: No. R488 in other voltages and frequencies. No. R888 in 25 cycle low voltage or with 115 or 230 volt transformer.

When ordering specify Model number, voltage, frequency.

Minneapolis-Honeywell Time-O-Switches

A line voltage timer designed to control operation of attic fans, store lights, or similar electrical equipment, which is to be shut off after a predetermined interval.

Timer may be set for "on" periods of from one-half to eleven hours.

Mercury switch controls the line-voltage circuit.

The S403B Time-O-Switch is similar to the S403A except that it is used in applications requiring timed "off" periods from one-half to eleven hours. The controlled equipment is turned "on" after the timed interval.

"Manual-Automatic" switch permits by-passing timer on both Models.

No.	Rating in Amperes (Full Load)			Wt. Lbs.	Each
	115 volts A-C	230 volts A-C	D-C		
S403A	7.4	5.1		1½	\$13.10
S403B		2.4	1.2	1½	13.10

When ordering specify Model number.

Minneapolis-Honeywell Farm-O-Stat Thermostats

Ruggedly constructed line-voltage thermostat designed for high humidity applications.

Has 1/2 hp. Micro Switch totally enclosed and not affected by dust.

Durable red cover has slots in front and bottom to allow maximum circulation of air over the protected element.

Three mounting holes in base provide easy means of surface mounting. Has easy to read dial and external adjustment knob.

Differential: Non-adjustable, 2 F.

Electrical Capacity — a-c, 24 volts, 2.0 amp., 115 volts, 7.4 amp., 230 volts, 3.7 amp.

Special features available: No. 7640 HIF Bag assembly for post mounting.

No.	Switching Action	Range	Height In.	Width In.	Depth In.	Wt. Lbs.	Each
T631A	S.P.D.T.	35 to 100F 70 to 140F	4 1/4	6	2 1/4	2.5	\$20.60

Specify Model number and Special features required.

Minneapolis-Honeywell Dehumidifier Controllers

Operates dehumidifying equipment automatically.

Whenever relative humidity rises above setting selected controller turns dehumidifier ON. When humidity is reduced to setting selected controller turns dehumidifier OFF.

Equipped with 6-ft. cord and an interrupter plug.

Operating Differential 5% R.H. (approx.) non-adjustable.

Electrical Rating 115 v. a-c full load, 3.2 amp.; 115 v. a-c locked rotor, 19.2 amp.;

230 v. a-c full load, 1.6 amp.; 230 v. a-c locked rotor, 9.6 ampere. Gray Finish.

No.	Switching Action	Range	Height In.	Width In.	Depth In.	Each
H45A	S.P.S.T.	20 to 80% R.H.	5 3/4	2 5/8	1 1/8	\$11.95

Minneapolis-Honeywell Humidity Controllers

Operates dehumidifying equipment automatically. When relative humidity in room rises above setting selected, dehumidifier controller will turn dehumidifier ON. When relative humidity in area is reduced to setting controller will turn dehumidifier OFF.

Has permanent wiring terminals. May be used in line or low voltage circuits.

Operating Differential 5% R.H. (approx.) non-adjustable.

Electrical Rating 115 v. a-c full load, 3.2 amp.; 115 v. a-c locked rotor, 19.2 amp.; 230 v. a-c full load, 1.6 amp.; 230 v. a-c locked rotor, 9.6 amp.

Provided with backplate for mounting on vertical conduit box. Finished in Gray. Weight 1 lb.

No.	Switching Action	Range	Height In.	Width In.	Depth In.	Each
H45C	S.P.S.T.	20 to 80% R.H.	5 3/4	2 5/8	1 1/8	

Minneapolis-Honeywell Cutout Switches

Used to prevent possibility of reverse circulation in counterflow furnaces, and for attic fan control.

In attic fan installation it serves as a safety shut-off switch to guard against fire hazards by shutting off fan when temperature of air indicates presence of fire. After it opens circuit it must be manually reset.

Cutout temperature is factory set at 125° F., 135° F., 165° F., 200° F., or 240° F., Non-adjustable.

No.	Rating in Amperes (Full Load)	WT. Lbs.	Each
L477A	115 volts A-C 230 volts A-C	10.2 5.1	1 \$ 9.70

When ordering specify Model number, and Cutout setting.

Minneapolis-Honeywell Pressure Controls Pressuretrol

The L404A breaks the circuit on pressure rise, and the L404B breaks circuit on pressure fall.

Used primarily as limit controls on steam heating systems. Bellows-actuated mercury switch provides S.P.D.T. switching. May be used with air, liquids, and non-combustible gases that will not injure the bellows.

The L404A and L404B are two-wire line voltage controls. Available with the following special features: External hand adjusting knob (standard on 10 to 300 lb. range); Special Range: 10 to 300 lbs.; Siphon 14026 (standard on 10 to 300 lb. range).

Finished in Gray wrinkle. Differential is Adjustable. Electrical Capacity — a-c, 115 volts, 7.4 amp., 230 volts, 5.1 amp., d-c, 115 volts, 2.4 amp., 230 volts, 1.2 amp.

No.	Height In.	Width In.	Depth In.	Wt. Lbs.	Each

L404B	3 7/8	3 1/2	2 1/2	2.5	24.10

Specify Model number, Range and Special features required.

Minneapolis-Honeywell Remote Bulb Thermostats

To control temperature in ducts, tanks, boilers, and similar applications.

The T415 Models are used in two-wire line or low-voltage circuits and have an S.P.S.T. mercury switch.

No. T415A closes circuit on temperature fall. No. T415B opens circuit on temperature fall. No. 615A used in line or low-voltage circuits and has an S.P.D.T. mercury switch which opens one circuit and closes another on temperature fall.

Can be used to operate the K200B motorized valve assembly or M204A and M604B Modutrol motors.

Bulb Size: CA fill 1 1/2-in. x 1/16-in.; HT fill 4-in. x 1/2-in. Element: 5-ft. (including bulb) copper standard.

Special Features Available: Knurled adjusting knob, A11A; Models with narrow differential; Low temperature fill in place of cross-ambient fill; Special element lengths and materials: 10, 20, 30-ft. copper; 5, 10, 20, 30-ft. mild steel or monel; Separable wells; Pressure fittings for liquid installations.

Mercoid Temperature Controls

These remote stem temperature controls have many industrial applications controlling temperatures of liquids and gases.

Furnished standard with 6-ft. copper stem and bulb, but are available in stainless steel or other materials, and length of stem. Have easy outside adjustments for setting cut-in and cut-out temperatures. Visible calibrated dial. Mercury switch contacts.

Electrical capacity—10 amp. 115 volts, 5 amp. 230 volts, and on order 3 amp. 440 volts.

Type DA-35

Call Graybar FIRST For ...

Cordley Electric Water Coolers

Five Year Guaranty

Entire cooler replaced and freight paid both ways if defect occurs in hermetic refrigeration system or cooling tank.

New Compact Line

G-2S

H-3S

Model G-2S: In Gray or White finish. 36-in. high. Uses 1 to 5 gallon bottle. Also available with cover for use without bottle.

Model H-3S Bubbler: Gray finish. 41½-in. high. Connects to municipal water supply and drain lines. Feather-touch "Accelerator-Pedal" handle for convenient operation. Adjustable automatic stream regulator.

The Standard Line

Completely vermin-proof. Fully sealed hermetic refrigeration systems. Meet and exceed U. S. sanitary codes. Comply with Bureau of Standards CS127-45. Tested and listed by U. L. and Canadian Standards Assn. For operation on 115 volts a-c 50 or 60 cycles.

Practical, extremely popular for commercial and industrial use. Bubbler models have connection on top for glass filler. Also extra connection on back for remote bubbler fountain (except HC-5). All standard models have stainless steel top, infra-red baked gray cabinet with black base.

Refrigerator Models: Compartments with 1 cu. foot of storage space plus two ice trays. Useful for storing lunches, beverages, doctors' vaccines, etc. Compartments may be locked.

Low Height Model J-8: Only 33½-in. high. Ideal for schools with small children, hospitals with wheel chair patients, etc.

The Remote Line

For hook-up to fixed fountains, faucets, etc. Four models meet a wide range of requirements . . . in soda fountains, laboratories, restaurants, institutions, etc.

ILG Home Cooling Fans

Designed for top performance and utmost convenience these fans are ideal for ventilating homes, offices, stores or apartments. Provide top cooling comfort without installation costs. Simply place in desired spot and plug in. Easy to move—these portable fans can be quickly rotated from room to room.

Using the type Q fan wheel the home cooling fans give you super quiet performance even when operating at the highest

of their three speeds—they are a sleeper's delight. Equipped with a totally enclosed motor direct-connected to the fan blade. Each moving part is precision balanced. This superior design assures you of top performance at all times. All fans come equipped with six foot rubber covered cord.

All home cooling fans are covered by ILG's famous "One-Name-Plate" guarantee which includes motor as well as fan.

ILGwindowaire

No. 7062: 115 volts, 1 phase, 60 cycles used as an exhaust fan or as an intake fan. Includes adjustable window panel No. 261-381-A which will fit any double hung window from 28 to 36 inches wide.

ILG Portable Type Electric Ventilators

115 Volt—60 Cycles—Single Phase

8104 & 8106

Portable Ilg Electric ventilators are ideal for use in homes or apartments where wall space or room arrangement does not permit use of the Built-In type.

Easy to install, fits ordinary window. All steel ivory finish adjustable panel.

10-Inch Portable Ilgette

No.	Panel Adjustment In.	†CFM Air Capacity	Ship. Wgt. Lbs.	Retail Price F.E.T. Included
8104	26 to 36	500	20	\$48.24
8106	36 to 46	500	24	48.24

†Ratings are certified according to test codes set up by the NAFM and ASHVE.

ILG Electric Window Ventilators

Package Type

115 Volt, 60 Cycle, Single Phase

No. 8102

10-in. package Ilgette easy to install in any window.

Pull chain operation starts and stops fan. Equipped with whisper quiet type "Q" fan wheel and a continuous duty motor . . . no radio or television interference.

Uses only 40 watts of electricity per hour.

**ILG Portable Floor Fans
For Cooling Air in Industrial Plants**

These fans discharge a large volume of air at high velocity and afford a practical and economical means of heat relief to the workmen in large industrial plants. They run at exceedingly high speeds and are intended for use in places where their air noise is not a consideration.

The cast aluminum propeller has four blades, adequately protected by heavy wire guards.

Cast iron weight of sufficient weight to prevent overturning of fan.

The 12 in. fan is equipped with 20 ft. cord and plug; larger sizes have standard enclosed switch. Finish, attractive Green.

3-Phase, 60 Cycle, 220 Volts A.C.

No.	Size In.	RPM	*CFM	Hp. Motor	Ship. Wgt. Lbs.	Retail Price F.E.T. Included

*Capacities include induced air volume.

For 115 or 230 volt d-c contact GRAYBAR.

ILG Electric Propeller Fans

Air conditions in a given type of building are fairly uniform and it is possible to generalize on the rate of air change advocated for various classes of buildings. The air change required in a room differs with the conditions found therein. The worse the air conditions the faster should be the air change. More rapid air changes are necessary in restaurants than in offices, etc.

To make it possible to select the correct size Propeller Fan, we give you the following:

Air Change Table

Class of Building	*Recommended Air Change	
	For Adequate Ventilation and Cooling	For Thorough Ventilation
Attic Cooling and Ventilation	2 min. on floor below attic space.
Churches	2 min.	5 min.
Factories (Gen. Ventilation)	3 min.	6 min.
Garages	3 min.	6 min.
Home kitchens	1 min.	2 min.
Halls (meeting)	2 min.	5 min.
Laundries	1 min.	3 min.
Offices	2 min.	5 min.
Restaurants and hotel kitchens	1 min.	2 min.
Stores	2 min.	5 min.
Theaters	2 min.	5 min.
Farm barns	100cfm per cow
Poultry houses	30cfm per horse
		2cfm per chicken.

*Definitions: "Adequate Ventilation and Cooling": The use of rapid air change for the dual purpose of providing good ventilation and, in addition, effective cooling by (1) air movement (2) quick removal of heat caused by the sun, lights, equipment, processes, human occupants, etc. "Thorough Ventilation": The use of air change carefully established by thousands of installations as sufficient for health and comfort required by the nature of the space.

Example: If it is desirable to change the air in a room each five minutes, figure the cubical contents of the room by multiplying the length, width and height. Divide this figure by the rate of change, 5 in this case, which will give the amount of air the fan should handle each minute. Fans are rated in this manner.

Self-Cooled Motor

Ilg propeller fans have the patented enclosed self-cooled motor which affords low operating cost of the open motor with the protection of the fully enclosed motor. The fan action draws clean air through the vent pipe in the bottom of the fan from the outside, circulates it through the motor and exhausts it. The motor stays cool and clean always.

One Nameplate Construction

The entire fan, including the motor, is made by Ilg. Fan wheels are dynamically balanced to assure freedom from vibration, quiet operation and long bearing life. Sizes 63 to 123 have permanently oiled bearings—sizes 163 to 483 inclusive have permanently lubricated ball bearings. Size 72, type "W" fan is equipped with ball bearings and grease cup. Ilg frames are rugged and wrap-free. Sizes 63 to 243 inclusive are cast aluminum.

Size 303 and larger are steel. Finished in attractive and durable green enamel.

ILG Type "LQ" Propeller Fans

Propeller fans are designed for free air delivery and should not be used with extensive duct systems, flues or pipes, or to deliver air against greater than 1/8-in. static pressure.

ILG Types "PQ" and "XQ" Propeller Fans

High Speed

Explosion-Proof Fans

Type PQ

Particularly suitable for industrial applications where low decibel sound ratings are not of primary importance.

They combine the remarkable Type "Q" wheel with high-speed self-cooled motor and has greater air moving capacity with minimum physical dimensions.

The complete unit has all the fine features of the LQ fan.

Type XQ

These fans have all the performance features of the Type Q propeller fans combined with the use of a ball bearing explosion-proof motor carrying the Underwriters' Laboratories label, suitable for all Class 1, Group D hazardous applications.

Type PQ High Speed Fans

ILG Propeller Fan Guards

Heavy gauge steel wire, close set, meeting all safety codes. Fan guards are recommended for protective purposes for fan installations 7 ft. or less from floor. Sizes 63, 83, and 103 are one piece type. All sizes for Type XQ propeller fans are one piece type. All other types and sizes consist of three sections. Guard may be attached to fan already installed and in use. Attached directly on fan frame.

ILG Automatic Shutters

Automatic Shutters should always be installed on the outside of propeller fans to protect the fan and the interior of the building against rain or snow; also to prevent wind pressure against fan from overloading the motor, blowing out fuses or burning out the motor.

When fan is operating, shutter blades are held open by the air current; when fan is not operating the shutter closes automatically by gravity.

Rugged steel frame, with durable aluminum blades pressed on heavy duty rods. All parts are completely weather-resistant.

Fan in operation

Fan not operating

No.	Size in.	For Fan Size	List Price	No.	Size in.	For Fan Size	List Each
638	8	83	\$19.00	644	24	243	\$56.00
639	10	103	22.00	645	30	303	85.00
640	12	123	23.00	646	36	363	121.00
641	16	163	26.00	647	42	423	176.00

643	21	213	47.00	651	72	300	447.00

Note—Size of shutter corresponds to size of fan—e.g. 36-in. shutter for 36 in. fan.

Shutters 48-in. and larger are in two sections built in one frame.

Motor-Operated Shutters—For full information and prices contact Graybar.

ILG Power Roof Ventilators

Type "PRV-L & PRV"

Type PRV-L

Provide positive controlled ventilation independent of wind or weather conditions in sizes providing air deliveries over the unusually large range of pressure from free air to 1½ inch static pressure.

Sturdy weather-tight welded steel frame and heavy gauge galvanized housing. Type PRV has 16-inch high base eliminating the need of expensive high-profile curbing

and fitting of air control accessories into the roof or curbing section. Easily and quickly installed, wired and serviced.

The top, hinged on two sides, can be removed without tools for access to the direct-connected motor. Has four screened louvers which are instantly removable.

Standard features include self-cooled, direct-connected motor, self cooled motor compartment, floated-drive sound isolation, non-overloading, backward curved type wheel. Ilg Green finish.

For 208 & 220/440 Volts, 3-Phase, 60 Cycle

Also available for 115 volts, 1-phase, 60 cycles and 230 volts, 1-phase, 60 cycles.

PRV Power Roof Ventilators also available for 115 volts-230 volts, 1 phase, 60 cycles and 208, 220/440 volts, 3 phase, 60 cycles—for full information and prices contact Graybar.

An optional feature is sprayed-on insulation to prevent condensation forming on inside of housing in the handling of steam, etc. in cold weather. Other accessories can be furnished, such as gravity or motor-operated shutters, manual or motor operated variable air controllers.

For exact construction information and other specifications, contact Graybar.

*The lowest speed in each size provides the most quiet operation.

ILG Power Roof Ventilators

New Type "L-LSQ"

Meets all modern institutional, commercial and industrial architectural requirements. The three new sizes in the LSQ series are 83, 103, 123. They incorporate the super quiet, high efficiency,

low silhouette characteristics of the larger units.

The propeller fan is directly connected to the motor . . . no belts or pulleys . . . literally no maintenance. Optional gravity type or motor operated shutters for easy curbing.

Large Size LSQ, L-LSQ (Exhaust) and SRQ, L-SRQ

(Supply) Series

Larger sizes feature the "Q" propeller, connected directly to motor. Recommended for large area roof ventilation.

All-Aluminum housing provides year round protection for fan and motor. Type LSQ and SRQ have

self-contained base sufficient to house various optional air control accessories. Eliminates the need of expensive curbing, and the cost of installing air control accessories on the job. Optional automatic or operated shutters.

†A three speed switch for use with sizes 83 to 123 L-LSQ Roof ventilators is available as an accessory as follows: Size 83 at 115 volts, Cat. No. 825 \$16.00 list, size 83 at 230 volts, Cat. No. 826 \$16.00 list; size 103 at 115 volts, Cat. No. 835, \$16.00 list; size 103 at 230 volts, Cat. No. 836, on application; size 123 at 115 volts, Cat. No. 838, \$22.00 list, size 123 at 230 volts, Cat. No. 839 on application.

Note: Also available for two speed, 1 phase operation and constant speed, 3 phase operation — for full information and prices contact Graybar.

ILG Penthouses For Power Roof Ventilators

These Penthouses are for use with Ilg self-cooled motor propeller fans. They are solidly constructed of rust-resisting steel and are thoroughly weather proof.

Gauge Metal — 10- to 16-in., 20 gauge; 18- to 48-in., 18 gauge; 72-in., 16 gauge.

Equipped with an Ilg automatic shutter to protect the fan from the weather when it is not in operation.

Hinged top on back of penthouse furnishes easy access to fan for periodic lubrication. (Top has provision for lock.)

Also available with insulated lining for use where condensation of moisture during cold weather is a problem.

ILG Volume Centrifugal Fan

Type 6S—Motor Driven

A compact, direct-connect unit particularly suitable for building into apparatus which require ventilation or air movement. Widely used for electronic tube cooling.

Die-stamped steel housing, stand and flanges. Die-cast zinc wheel, dynamically balanced for quiet, highly efficient operation.

Direct connection of motor and wheel saves space, weight, time and cost and provides permanent alignment. Permanently-lubricated bearing type motor—3200 rpm, shaded pole; or 5000 rpm, series permanently-lubricated ball-bearing motor. Complete with 2 1/2-in. leads brought out of motor for making connections. Approx. Ship. Wt. 4 1/2 lbs.

ILG Volume Centrifugal Fans

Type B

Combines high efficiency and low power consumption and is suitable for small volume, low pressure installations of any kind. Quiet and smooth running.

Die-cut steel housing and multi-blade wheel. Wheel is carefully balanced. Cast iron base and inlet flange bears both the housing and direct-connected motor. Universal discharge.

Note: Contact GRAYBAR for information and prices on 25 cycle blowers.

Type B—Gasoline Engine Driven

This portable volume blower is entirely self-contained and is recommended for ventilating manholes, vats, tanks and other spaces where electricity is not available.

It is driven by a direct-connected 4-cycle gasoline engine. Blower inlet is screened to prevent paper, leaves and other litter from entering. Outlet has flange for attaching canvas hose (hose not included). Batteries or other connections are not required.

Gasoline consumption per hour: No. B12, 1/3 pint; No. 15, 1 pint. Capacity of tank; No. B12, 1 quart; No. B15, 1 gallon. Speed 1750 rpm.

ILG Centrifugal Fans

Type BC Direct-Connected—Constant Speed, 1 and 3 Phase, 60 Cycle

Type BC

New line of Ilg Type BC centrifugal fans sizes 122—200, in both direct-connected and belted models is the latest development of Ilg Research Laboratory. Checked feature by feature, the new Ilg fans with aluminum sides and scroll will be found to embody the characteristics accented in today's ventilation, air conditioning and air handling installation.

A backward-curved type wheel of all aluminum, spark-proof construction with non-overloading characteristics, features airfoil blades. New design fan wheel is highly efficient and provides quieter operation.

With wheel overhung on shaft, inlet is free of all obstructions. Every model suitable for both Class I and Class II duty. Sizes 45 through 70 cover the standard type BC fan with flat-bladed wheel.

Direct-connected data shown. For belted data contact GRAYBAR.

ILG Centrifugal Fans

"PE" Pressure Type

Especially designed for high pressure dust removal, waste conveyance, gas exhaust, supply blast, a rapid cooling. Dynamically balanced, Ilgprex universal wheel. Base furnished as standard equipment on belt-driven models. Furnished as an accessory on all direct-connected units.

For belted data contact Graybar.

Volume Centrifugal Fan Type "P"

For exhausting fumes from chemical laboratories; handling light dust from polishing wheels and grinders; or any small exhaust purpose where considerable resistance is caused by long run of ducts.

Can be built into other machines such as automatic doughnut machines, lable making machines, heat treatment cabinets, etc.

*Prices include all controls except Room Thermostat or Manual Cut-Off Switch. Prices are for 115 volt, 60 cycle, single-phase electric service. Light duty thermostat optional. Price \$24.00.

Input and output ratings are given in Btu per hour. Output rating includes allowance for recoverable heat due to jacket losses, etc., not concerned in determining efficiency. Ratings shown are for elevations up to 2000 ft. For elevations above 2000 ft., ratings should be reduced at the rate of 4% for each 1000 ft. above sea level.

ILG Electric Unit Heaters

Ilg has developed a new line of small electric heaters, sizes 1½ K.W. to 7½ K.W.

Steel and spiral design are protected against overheating by a built-in thermal cut-out.

Safety design eliminates bare live wires or terminals in air stream.

The entire unit covered by Ilg's one-name plate guarantee. An electric heater equal to every job.

For extra heat capacity sizes 9 KW to 15 KW are available. This unit is designed for heavy duty, continuous or automatically controlled operation in industrial and commercial applications.

Steel hanger bracket accessories that make it easy and convenient to mount 1½ KW to 5 KW sizes on wall or ceiling, or to mount 6 KW and 7½ KW sizes on ceiling are available at an additional charge of List Each \$6.00.

Note—For 440 volts and up, heater control, requires a 120 control circuit. If this circuit is not available, specify 480/120 volt No. 9T51Y6426 transformer at \$25.00 list or 600/120 volt No. 9T51Y6806 transformer at \$26.00 list.

ILG Steam Unit Heaters

The new design and advanced engineering are reflected in every detail. The heaters are easily attached to the steam or hot water system in factory, store or office.

Heaters provide maximum heat where it is needed.

Clean, attractive lines, quiet, hushed operation, rugged construction . . . freedom from maintenance attention.

Nineteen capacity sizes are available.

Note: 3 Phase, 220/440 volt, 60 cycles also available.

Textile Type

Has all horizontal type features and dimensions but more seamless copper tubes to increase heating surface.

The fins which would ordinarily pick up lint are eliminated.

Ten sizes are available.

†CFM is cubic feet per minute of standard air at 70°F. and standard basis of rating 12 lbs. steam pressure 60°F. entering air.

ILG Steam Unit Heaters Vertical Type

Ilg paces the field with this new heater that throws a powerful current of air downward to provide better heating in buildings with high ceilings. Coil construction similar to the horizontal type. Ball bearing motors are shielded from radiant heat. Available in eighteen capacity sizes and two types. Type V for standard outlet air temperature and Type VL for low outlet air temperature.

Optional adjustable directional vanes, diffuser cones and anenostats. For price on accessories contact Graybar.

G-E Natural-Convection-Type Horizontal Unit Heaters

For heating out-of-the-way places. Easily installed and very convenient.

Consist of a number of G-E strip heaters mounted in a perforated, pressed steel case, with heat-resisting painted finish.

Free air circulation provides maximum heat. Are easily installed and connected to power line and quickly moved from one location to another.

Common typical applications—Substations, valve houses, pump houses, warehouses, crane cabs, airplane hangars, electric locomotives, blower rooms, repair shops, service stations, laboratories, garages, scale rooms, watchmen's houses, elevators, drying rooms, waiting stations and ticket booth.

The Wall-Mounted Style can be furnished with and without switches (as below). Heaters with 3-heat snap switches make regulation of temperature simple and very economical.

Wall-Mounted Style

Equipped with heat baffles to prevent overheating and scorching of wall surfaces.

For mounting directly on wall, with main axis horizontal. Can be mounted with the cable emerging from either right or left.

Suitable G-E control is available for these heaters. Contact Graybar for complete details.

G-E Forced-Convection-Type Unit Heaters

Fig. 1. Portable Style (2, 3 and 4 Kw.)

Fig. 2. Suspension Style (5, 7.5, 10, 12.5 and 15 Kw.)

Heaters—Equipped with G-E tubular heater, with strong radiating fins that multiply its radiating surface. Fins are electric-furnace brazed to the heater and provide maximum heat-transfer efficiency.

Motor—A G-E totally enclosed motor with sleeve bearings, protected against direct radiation from heating units by ingenious baffle. Cool air is drawn over the motor frame at all times through the space between motor and baffle.

Fan—G-E aphonic pressure-type, with matching outlet orifice. Efficient and quiet in operation.

Wide Utility—The smaller sizes of heaters are designed so that they can be used as hot weather fans.

Automatic Protection against Overheating—Heaters rated under 10 kilowatts have a convenient reset button located on outside of case. On heaters rated 10 kilowatts and higher a remote push-button control provides necessary reset feature.

Heater may be directed upward or downward as much as 30 degrees from horizontal to serve required area. There are no louvres to retard free flow of air.

Motor and fan can be operated independently on heaters of 2-, 3- and 4-kw by tumbler switch mounted on casing. On 5- and 7-5-kw heaters, fan-motor leads are brought out so fan can be connected to manual switch.

Portable Style—Primarily for Floor Mounting, But Easily Adaptable for Wall or Ceiling Mounting

*All 480-volt heaters have 115-volt motors. These motors have separate thermal control, and heater lead brought out through conduit.

†Price includes 4-ft. of armored connecting cable as shown in Fig. 2.

Chromalox Electric Unit Heaters

Listed by Underwriters' Laboratories, Inc.

Type CHF Hi-Flow Portable

Compact, functional design that packs tremendous heating capacity into a small, space-saving unit—ideal for shops, homes and stores. Rugged, tubular chrome support stand allows it to be mounted on walls or ceilings or to operate free-standing on floors, counters or shelves.

All metal Chromalox finned Microtube heating element provides rapid heat-up. Smooth running motor gently forces warmed air throughout the room. Controlled by a manual on-off switch and protected against overheat by a built-in thermal cutout switch.

All metal housing painted with durable, baked-on Mediterranean-Blue finish.

Overall size 15-in. high x 14½-in. wide and 9-in. deep.

No.	Volts	Rating	Watts	Output B.T.U. Per Hr.	Approx. Wt., Lbs.	Each
CHF-120	120 A.C.		2000	6824	17½	\$53.50

CHF-240	240 A.C.		4000	13648	22	69.50

All models supplied with 5½-ft. UL listed cord and polarized plug.

Separate polarized wall outlet recommended.

Chromalox Electric Convection Heaters

Type D

Small, efficient, portable heaters which can be easily picked up and moved from one place to another.

For use in industry for auxiliary heating in many locations and also for sole heat source in locations too remote for central heating plants.

Heating elements are the efficient, long-life, enclosed-type Chromalox strip heating elements.

Rugged construction throughout. Black enamel finish.

No. EH-810 and EH-815 have 6-ft. heater cord and attachment plug. Larger sizes with 6-ft. cord for connection to power lines.

All are equipped with 3-heat switch.

For 115, 230, 250 and 460 Volts, 25 or 60 Cycles A-C, or D-C

No.	Kw.	Length	Overall Size, In.	Height	Ship. Wt., Lbs.	Each

EH-430	3.0	28	6	13	38	41.50

Chromalox Electric Unit Heaters

Listed under Underwriters' Laboratories, Inc.

Re-Examination Service—Reference No. E-7061

Type H

Designed for wall mounting to concentrate heat near the floor. Ideal for installation in crane cabs and beneath windows.

They discharge heated air horizontally and can be

safely fastened to walls or wooden partitions.

The heating elements are efficient, long-life, enclosed type Chromalox strip heaters.

Sturdily constructed throughout to resist hard usage.

For 115 and 230 Volts, A-C or D-C

†Also available in 460 volts.

Dillon Thermometers

For indicating the temperature of liquids and gases. Can be permanently installed in pipes, furnace flues, tanks, cookers, etc. Should be immersed 2 in. in liquids and 4 in. in gases.

They are accurate to 1% of the range over the entire scale. Accuracy is unaffected by overload up to 50% 500°F. range; 10% above 750°F. range.

Standard mounting nut for Models S and R is ½ in. N.P.T. Models H and Q are furnished with plain bushing .406 in. dia. by ⅝ in. long, but these last two are also available with ¼ in. N.P.T. or ⅜-24 x ½ in. N.F. nut if specified. Nuts are welded to stem for high pressure use.

Anti-corrosion and acid resistant. Models H and Q are fully stainless except for dial. Models S and R are likewise stainless except for dial and bezel. All have pressure proof welded construction. Dials are of heat resistant aluminum with large black figures on silver background.

Scaled against moisture. Pointer is permanently fixed onto shaft. Direct drive from bi-metal coil assures accuracy of 1% of full scale. Stem is ⅝ in. diameter.

Standard stem lengths are 5 in. and 9 in.; any intermediate length from 2½ in. to 72 in. available at extra charge. When ordering, state desired length from top thread of mounting nut to tip of stem.

Prices below are based upon standard stem length of 5 in.

Note: Special ranges are procurable on order.

G-E Flanged Water Immersion Heaters

These units were designed primarily for use in domestic water heaters, either in the original equipment or as replacement units for existing equipments. However, they can be applied successfully to almost any application where a flanged

immersion heater is required. These heaters feature a copper sheath, with a steel, brass face plate flange. Sizes and ratings are available from stock.

G-E Immersion Heaters For Water—Copper-Sheathed

These heaters have a high heat density. A few of their applications are—water baths, cleaning tanks, water-jacketed containers, humidifiers, load resistors, industrial water heaters,

quench tanks, electric steam radiators, stills and sterilizers, steam generators, and many others.

For Water—Nickel-Silver Sheathed—Self-Protecting Type

Made only by General Electric—designed for applications in which the heaters are at times accidentally exposed to the atmosphere. Some of the applications of these heaters are—water baths, stills, sterilizers and others where the liquid is likely to be boiled away or drawn off.

Self-protecting—the special alloy resistance wire which has a high temperature coefficient of resistance reduces the watt input as the temperature is increased, thereby limiting the sheath temperature.

†To maintain the self-protecting feature, the two elements must be wired in parallel when operating at rated voltage.
‡Nominal pipe-thread diameter.

For Noncirculating Oils—Steel-Sheathed

These heaters have steel headers and are particularly suitable for:
Oil heating Alkaline baths
Oil sterilizing Oil-jacket containers and
Fuel-oil preheating many similar applications.
Impregnating waxes

They have also been successfully applied to alkaline cleaning solutions and cyanide plating solutions. They can be used in such alkalies as sodium carbonate, sodium cyanide, etc., which will not attack steel. Some of the plating-bath solutions which utilize cyanides are brass, bronze, cadmium, gold and copper.

G-E Strip Heaters

For use as air and clamp-on heaters. Here are a few of the many applications—Process machinery, drying ovens, warming tables, glue tables, water baths, drying cabinets, pipe lines, incubators, valve and pump houses, etc.

They are rigidly constructed to withstand vibration, give uniform heat distribution. Compressed insulation.

With Offset Terminals At One End

Chromalox Electric Strip Heaters

Width 1½ Inches

Type "S"

Type "SE"

For use in heating platens, dies, hot plates, melting pots, kettles and tanks, air ducts, in plastic forming, plastic molding, drying operations, etc.

Type "S" has One Bolt Terminal at each end.

Type "SE" has Two Bolt Terminals at one end; can be bent lengthwise or curved in cross section for clamping to curved surfaces.

For 115 or 230 Volts

Note—Where line voltage is above 460 volts, strip heaters can be connected in series provided they are mounted on insulating bushings. Contact Graybar for prices.

Standard strip has mounting tabs at each end with slotted holes 5/16-in. wide, 1/2-in. long for bolting to supports. If wanted without mounting tabs, please specify, no additional charge.

Standard package is 12, 25 or 50 elements.

When ordering specify number and voltage wanted.

These heaters have standard pipe-threaded screw plug for mounting through walls of tanks, in pipe, etc. The heating section must be completely immersed in the material to be heated.

Type MT—For heating water and solutions that readily absorb heat. Watt density from 35 to 45 watts per square inch of heating surface. Copper sheath, bronze screw-plug and brazed joints are standard. (For Oakite solution cleaning tanks, where copper is attacked, specify steel sheath, forged steel screw-plug with welded joints).

Type MTO—For heating mineral oils, paraffin, etc. Watt density from 18 to 20 watts per square inch of heating surface. Steel sheath, forged steel screw-plug and welded joints are standard.

G-E Heating Cable

Roof De-icing

Pipe Heating

Soil Heating

Freeing Sidewalks from Ice

New G-E vinyl-jacketed heating cable sets are designed for general purpose applications involving sheath temperatures up to 200° F. and offer special features of durability, long life, and safety. Very flexible, easy to install and clean handling. Minimum bending radius ¼-in.

The cable is constructed of a resistance-type conductor with nylon covering, a layer of thermoplastic vinyl insulation, a 16 carrier tinned-copper grounding braid, and an extruded vinyl jacket. This gives great resistance to abrasion and the action of oils, chemicals, and water.

Copper braid imbedded in jacketing provides both full electrical grounding protection, so external grounding connections are unnecessary, and additional mechanical strength.

Provides efficient, low cost heat in a wide range of applications. Used for soil heating—roof de-icing—protecting pipes, valves, and pumps from freezing—warming pipelines that carry liquids—brooder and kennel heating—poultry water warming—protecting sprinkler systems—floor heating—miscellaneous air heating.

Pipe Heating — Protects against freezing; Keeps viscous liquids warm for increased flow. For still air (pipe heating, etc.), install approximately 0.8 watts per sq. ft. of un-insulated surface per degree F° temperature difference between pipe and surrounding air. If insulated with 1 inch of insulating material, use 30% of this value.

Surface Heating — Melts snow and ice. Install 3 to 6 feet of cable per square foot of iced surface, depending on temperature, time allowed, etc. For heating kennel floors, brooders, etc., install approximately 1 foot of cable for each square foot of floor area.

Roof De-icing—To keep eave gutters and downspouts free of ice (roof-de-icing) install 1 or 2 feet of cable per foot length of gutter, depending on temperature, time allowed, etc. This method forms channels through ice dams on eaves and in gutters and downspouts, allowing water to drain off instead of backing up underneath shingles, causing interior water damage.

Soil Heating — Reliable, automatic temperature control makes it possible to maintain ideal temperatures for plants —this provides strong, healthy plants that grow faster and are ready for market when prices are highest. Cost of operation compared with manure bed heating is decreased since this type of bed necessitates expensive preparation and loss of time.

Heating Wire Sets

Designed specifically for low-cost heating installations involving temperatures of 110° F. or below. Heating wire is lighter in weight than heating cable and possesses greater flexibility.

Diameter of conductor is approx. .0027-in.; insulation is ¾-in. thick. Resistance wire on HIW12020 is color coded with dark green stripes; other sets have tan stripe. Non-heating power

leads of 120 volt sets are yellow colored. 240 volt power leads are red.

Triangle Infrared Batch and Conveyor Ovens For Baking, Drying, Preheating, Dehydrating

These ovens incorporate the time-saving benefits of instant heat through radiant energy and the by-product, recirculated heated air—the combination of which produces greater overall thermal efficiency.

They have many excellent features which make for increased production, lower equipment installation and maintenance costs, great flexibility and ease of control, reduced space requirements, cleanliness and safety.

Being entirely enclosed, they make fullest use of both radiant and derived convected heat. This improved temperature control insures faster, better drying and baking and cuts power consumption and operating costs.

The standardized prefabricated panel construction makes for low-cost installation and a minimum of maintenance. Can be fabricated to either supplement or complement other heating facilities and are adaptable to processing a wide range of work.

All wiring, lamp bases and sockets are enclosed in covered channels. Automatic or manual switching devices can be used to vary working temperatures—maintain different baking cycles. Accessibility to all vital parts permits fast, easy, safe servicing without interrupting oven operation.

The positive ventilation control removes all fumes and moisture from the system and speeds drying. The equalized, uniform over-all oven temperatures insure uniform, high quality baking results.

They are designed and engineered to meet individual requirements. Laboratory tests, which give the time and temperature required to accomplish desired results will be made by the manufacturer at no extra cost.

Standard Prefabricated Panels and Channels available for Construction of Infrared Banks.

Panel-channel combinations from 86 to 108 in. long require 3 raceway brackets. Combinations under 86 in. long require 2 raceway brackets.

Always mention voltage when ordering.

G-E Metallic-Rectifier Power-Conversion Units

General Electric metallic-rectifier power supplies are designed for industrial applications, such as the excitation of synchronous motors; electrochemical and electrometallurgical process power supplies; computer power supplies; various military and airborne applications; and as constant-voltage power supplies for d-c motors. Users of d-c power supplies include electric utilities and commercial buildings changing over from d-c to a-c service, as well as industrials and others who find that purchasing a-c power from their electric utility is cheaper than generating their own d-c power but have no simple and inexpensive way to convert their present d-c equipment. In addition, users of machine

tools and magnetic chucks will find these power supplies a reliable source of d-c power.

Ratings and prices are available on request.

G-E General-Purpose Chargers

General Electric general-purpose selenium battery chargers are designed for charging and floating batteries of all types. Control, signal, and communication batteries are especially well serviced by these chargers. Automatic control and output filters are available as accessories. Resistive and inductive loads can also be supplied by these units.

Prices and ratings are available on application.

Walker Silicon and Selenium Power Rectifiers Heavy Duty

For elevator cranes, coal mine hoists, magnetic separators, synchronous motor excitation, speed controls, electro-chemical plants, cathodic protection of pipe lines and other underground metal structures and wherever D-C power is required. Natural convection or fan cooling is available.

Efficiency and power factor is approximately 82 to 90% and 95% respectively. May be connected to any three-phase system—two or three wire output. Cubicles containing as much as 350KW of rectification are made in single units.

No maintenance required. Contains no moving parts except a fan in fan cooled models; no sliding contacts and a minimum of relays. Variable voltages required for synchronous motor field excitation are obtained by saturable reactor controls which eliminate current interruption and sparking, permitting explosion proof installations. Generally, single tap switches accomplish field excitation.

Selenium power rectifiers have lower efficiency than the silicon. Selenium types have been used widely in the low voltage-high current metal finishing industry. Silicon though, is more economical for D-C voltages from 120 to 440-volts.

Voltage regulation is approximately 3% for silicon and 7% for selenium. Automatic controls allow 1% regulation for either silicon or selenium with A-C line voltage variations as much as 10% from no load to full load.

Walker Selenium, Germanium and Silicon Rectifiers

Metal Finishing Rectifying Service

These heavy duty metal finishing rectifiers whether used for electroplating, electrocleaning, electroforming, or anodizing are rugged and dependable. They are highly efficient and operate at lowest cost.

Germanium and Silicon rectifiers evidence no aging with continued use. They may be operated at full load 24 hours a day, seven days a week in high ambient temperatures and in corrosive atmospheres. The equipment has long life and requires little or no maintenance. Easily installed requiring no special concrete or steel flooring as do large motor generator sets. May be placed in close proximity to plating tanks.

Cabinets are finished in acid resistant grey paint.

Three models are available: (1) Without voltage control; (2) An integral control unit with built-in voltage control; (3) A separately controlled type with a control at a remote location from the rectifier.

Voltage controls of various types are available, the above illustration shows the common three dial tap switch arrangement. A single dial tap switch rectifier is available as is a stepless voltage control using either variable transformers or

saturable reactors. All controls may be either manually or automatically operated. The efficiency of germanium and silicon plating equipment is from 80 to 90 per cent while that of selenium is from 70 to 80 per cent.

Sizes range from six volt, fifty ampere, metal finishing rectifiers to large single package fan or water cooled ten thousand ampere, forty volt, reactor controlled plating units.

Equipment is designed for a low ripple of approximately 4.5% by use of three phase to six transformation. The use of interphase transformers assures uniform heating of all circuit elements. Protective circuits include A-C starter overload elements, thermal protection in the event of overload or fan mal-function, and protection against single-phase operation of the rectifier.

A unique protection circuit on all automatically controlled saturable reactor, constant current or voltage stabilized rectifiers is provided. In the event of elevated temperatures a visible and audible warning is evidenced. If after two minutes the source of trouble is not removed the rectifier load current is automatically reduced to a safe operating limit. The plating work is thus unharmed while the plating process continues at a lower rate. This feature is particularly important if chrome is being plated. This protective work saver feature of Walker rectifiers alone may save costly down-time and useless, expensive labor charges.

Most metal finishing applications are especially designed as to A-C voltage, ambient temperatures, method of control, and cycle of operation. Equipment calling for special as well as standard requirements can be supplied.

Periodic reverse equipment for the electroplater is supplied up to 1500 amperes and 18 volts.

Note: Consult Graybar for complete specifications.

Walker Selenium—Germanium—Silicon Battery Chargers

Heavy Duty

For telephone and railway communication service, materials handling equipment, or unattended substation Battery Chargers.

Full wave, low ripple output for, float, two rate, taper and automatic voltage control. Require no adjustment beyond initial setting.

Range: 6 V at 1 A. to 250 V at 70 A. Specify use, input and output volts and amps. and any special features required.

G-E Battery Chargers Farm and Home Type

No. 6RS937A2 "Overnight" Charger for 3 cells, 6 volts, 12 amperes

Selenium-rectifier chargers—small and lightweight. Can be mounted on shelf or wall, or placed on garage or car floor. Will charge battery without removing it from car, truck or tractor.

The No. 6RS937A1 (One-day Model) will charge the normally run-down battery in 24 hours or less.

The No. 6RS937A2 (Overnite Model) will charge the average discharged battery in 12 hours or less.

Model No.	Capacity	A-C Volts	Cycles	D-C Amp.	Each
6RS937A1	3 cells	115	60	7-4	\$23.00
6RS937A2	3 cells	115	60	12-7	33.00

G-E Tungar* Battery Chargers Half-Wave

Model 6RB33B1

Suitable for use in repair shops, garages, service stations, by car dealers, tire dealers, at airports, etc.

They are very efficient and have an adjustable charging—rate of from 2 to 6 amperes.

Autotransformer

Operates on 105/125 Volts, 60 Cycles A-C

Model No.	Battery Capacity		Each
	Quantity of 3-cell 6-volt	Quantity of 6-cell 12-volt	
6RB33B1	1 to 6	1 to 3	\$67.00
6RB33B2	1 to 12	1 to 6	74.00

*Registered trade-mark of General Electric Co.

G-E Tungar* Chargers Full-Wave

Model No. 6RB6B1 "6-12" Charger

"6-12" Charger

A medium-capacity charger, fast and economical in operation, that will handle—

Six 6-volt batteries at 12 amperes, or

Twelve 6-volt batteries at 6 amperes, or the equivalent.

Charging rate is adjustable from 2 to 12 amperes for 3 to 18 cells, and from 2 to 6 amperes for 3 to 36 cells.

"12-24" Charger

A heavy-duty charger that will do fast, one-day charging to meet all requirements of the busiest battery departments.

Will handle—

Twenty-four 6-volt batteries at 6 amperes, or

Twelve 6-volt batteries at 12 amperes, or the equivalent.

Charging rate is adjustable from 2 to 6 amperes for 3 to 72 cells and from 2 to 12 amperes for 3 to 36 cells.

Autotransformer

Operate on 105/125 volts, 50/60 Cycles A-C

Model No.	Charger	Each
6RB6B1	"6-12"	\$146.00
6RB6B5	"12-24"	162.00

*Registered trade-mark of General Electric Co.

G-E Tungar* Rectifier Bulbs

Nos. 189048-49 and 99X44

Manufactured of the finest material available and are laboratory-tested before being used. These bulbs were first developed over thirty years ago, and constant research has improved their design, increased their efficiency, and trebled their operating life.

Tungar bulbs make possible an excellent d-c power supply, free from noise and vibration. They operate with a very low voltage drop and consequent high over-all efficiency of the equipment with which they are used. Tungar bulbs are ideal for battery chargers ranging in size from the small home type to the large garage type which handles several batteries.

Graybar Gasoline Electric Plants

400 Watts to 15000 Watts

Air Cooled Models

Power and Light for Every Purpose—A Size for Every Need

These Electric Plants have unlimited uses the world over for constant or standby service. The rugged, heavy-duty generators are backed by 32 years of manufacturing experience . . . powered by the finest engines in the world . . . at prices below competitive makes. These Electric Plants will enable you to electrify your home, farm, ranch, resort, store, service station or cabin at surprisingly low cost.

Each Electric Plant is compactly designed and precision built to give years of satisfactory service. They cost less to own and operate and are easy to start and service. All features not essential for dependable operation have been eliminated.

Available in 60 cycles, 115 or 230 volt, making it possible for you to use standard wiring and low cost A-C lights, radios, appliances and tools.

60 Cycle—Lightweight—3600 RPM—115 or 230 Volts—1-phase, 2-wire—Remote or Manual Start*

Graybar Water-Cooled Gasoline Electric Plants
5000 Watts to 100,000 Watts

No. G10C18C

No. G15C18C

Rugged, dependable, and ideal water-cooled gasoline Electric Plants for a wide variety of uses, ranging from permanent power plants for lumber camps, oil fields, mines, manufacturing plants to emergency standby hospital, airport, contracting, amusement centers and small factory service.

In selecting the proper size be sure the unit you select is large enough to take care of your total present requirements and anticipated needs. The cost of additional capacity is small compared to the inconvenience of having insufficient current to meet all demands instantly, or the cost of changing models at a later date.

All capacity and horsepower ratings are in accordance with S. A. E. and I.C.E.I. test codes, corrected to sea level and 60° F. Deduct 3% for each 1000 feet above sea level and 1% for each 10° F. rise above 60° F.

Graybar Portable Floodlight and Power Units

No. NH5-W2

No. NH10

Dependably powered by air- or water-cooled engines. 115, 115/230 or 120/208 volt, 60 cycle, single or 3-phase A-C or D-C generator unit.

Large lighted steel control panel, complete with voltmeter, ammeter, and rheostat to control voltage. Standard electric starter. All these features add up to make these units among the easiest to operate.

The panel is equipped with two plug-in duplex receptacles and outlets, for power tools and other auxiliary power needs or for use of portable floodlights away from unit itself. Side mounted tool box locks. A portable power plant for any emergency.

Ball-bearing wheels for high-speed transport. Front caster wheel retracts to transport position, let down for parking. Multiple leaf springs. Shipped complete with 6:00 X 16 auto wheels and tires. Painted highway yellow.

Heavy structural steel chassis. Waterproof steel housing with folding doors. Alloy axle.

**Graybar Diesel Electric Plants—Air Cooled and Water Cooled
1500 Watts to 6500 Watts**

No. DA3P18B

No. DR3P18BE

For more than 35 years large users of power have been using Diesel engines because they have proven to be the most dependable and economical source of power.

Now, all of the recognized advantages of diesel engines are brought to the small user of power. These Diesel Electric Plants are built in a range of sizes to meet the electric light and power needs of every farm, ranch, garage, hotel, theatre, hospital, school, small town, shop, mine, mill and factory.

All unnecessary parts have been eliminated from these plants in that all are designed especially for the service for which they have been sold.

Start easily even in the coldest weather.

Highest grade materials obtainable machined and finished to the closest tolerances give the plants an exceptionally long service life.

Available in a wide range of Diesel Engines, voltage output, phases, etc. Only a few of the most popular numbers are listed here—Consult Graybar for a complete listing. Electric start models only are listed, manual start models are available.

Graybar Belt or Direct Drive Generators 400 Watts to 100 Kw.

All Voltages, Phases and Cycles

A Size for Every Need—Belt or Direct Drive

Efficient, sturdy, rugged construction and long-life performance.

Each Generator is thoroughly inspected and tested before shipment and warranted to be free from defective material and workmanship.

All 600 to 10,000 watt models are self-excited and have an inherent voltage regulation of + or - 5% at unity power factor when operated at constant speed. All revolving fields 10KW to 100KW Generators are separately excited, automatic voltage regulated and have a regulation of + or - 2% at 0.8 power factor when engine speed does not vary more than 5%. All models are cooled by forced air from centrifugal blowers with a maximum temperature rise of 50° C.

All Models, unless otherwise specified, operate at 1800 RPM. 60 Cycle. 3KW to 1000KW A-C sizes are built in 115, 230, 115/230, 220/440 Volts, Single-phase or 120/208, 220/380 Volts, 3-phase. Also available in other voltages, cycles and phases. Direct current Generators, 600 W to 3000 W, available in 6, 12, or 32 volt battery charging. 3 KW to 10 KW Generators are built for 120 or 240 V non-battery charging

Listings on this page are only a partial list of the most popular Generators. For a complete listing of all Generators available, as well as accessory items and component parts consult Graybar.

White Diesel Generating Equipment

Diesel Generator Set, 150 to 500 Kw.

Used by telephone companies, industrial firms, gas, water, and electric utilities for continuous or standby power. Reliable Superior engines achieve low fuel consumption on non-premium fuels because of highly developed combustion system. Simple design permits easy maintenance. High quality construction, minimum of parts means reliable service and low upkeep.

Generators are 3 phase, 60 cycle, 2-bearing ac rated at .80 P.F. 50°C. temperature rise continuous duty with loft mounted exciters. Mounted with engine and cooling equipment of diesel, on steel sub-base. Standard generator voltages may be 120/208, 127/220, 240, 480 or 600 as customer may specify. Special generator sets quoted on request. Controls mounted on generator frame on standard units. Gas, diesel or dual fuel engines available. Automatic starting system available.

Kw.	RPM	BHP	Wt. Lbs.
150	600	225	23650
200	720	290	24050
250	900	360	23525
300	900	430	25975
350	900	505	27200
400	900	600	Variable with requirements
500	900	715	Variable with requirements

Order by kw size. Specify Voltage.

Mobile Generating Plants, 350 Kw. and 500 Kw.

Useful to electric utilities or telephone companies needing mobile power the completely self-contained plants are available in 350 Kw. and 500 Kw. sizes. Superior diesel engines operate approximately 12 hours on non-premium fuel from tank below trailer. Heavy duty 6 or 8 cylinder Superior Model 40 diesel designed for continuous duty at 900 RPM.

A thirty-two foot trailer houses switchboard, 500 Kw. generator, muffler, starting equipment, engine, and radiator. Jacks provided to level trailer when in use. Can be operated by one man. All components are standard production items engineered for mobile power plant by WHITE DIESEL ENGINE DIVISION, The White Motor Company, Springfield, Ohio. Weight of 500 Kw. unit including White 3000 Series tractor approximately 53,000 lbs.

Prices on application.

Advantages of Purchasing General Electric Motors

These motors are manufactured in a wide variety of types and ratings. The most widely used motors—those fulfilling the requirements of the great majority of industrial applications—are listed in this catalog. Motors of large size, non-standard rating, or special construction are described in other publications, available on request from Graybar.

General Electric motors possess the exacting characteristics needed to power modern industrial machinery. They are mechanically sturdy, incorporate the latest developments in electrical design and provide the essential benefits of long life and unusually trouble-free service. Specified values of current torque, and speed can be depended upon in every unit.

Electric motors form a most versatile type of drive. They permit the application of power directly to the job. They frequently eliminate gearing and belting requirements altogether. They make it possible to bring processing operations directly into a production line.

The wide choice available in G-E motors permits the efficient application of motors in widely varying types of drives. The different enclosures offered permit the selection of motors that will stand up under the most severe conditions and that can be safely operated in the most hazardous locations. Enclosures can be obtained for installation in the presence of explosive and corrosive fumes, magnetic and abrasive dusts, splashing liquids, outdoor weather, and other adverse conditions.

General Electric motors are backed up by renewal-parts and exchange-plan services that mean economy and long life to any motor installation. G-E renewal parts are built of the same materials and to the same specifications as the original equipment. G-E exchange-plan motors eliminate long delays in repair or replacement of motors in fractional-hp. sizes and some integral-hp. sizes up through 15 hp.

Selection of Motors and Control

The selection of an electric motor and control for a given application depends upon the following factors.

Available Power

Whether a-c or d-c; the voltage; and, if a-c, the number of phases and frequency.

Selection of Motor Enclosure

The purpose of a motor enclosure is to protect vital motor parts, such as windings, from dust, fumes, water, and chemicals, and in some cases to prevent the possibility of an explosion due to over-heating or sparking of the motor when the atmosphere is laden with inflammable gases or combustible dust. Open motors, especially of the drip-proof type, provide sufficient protection for all normal conditions and are the most economical from an initial-cost standpoint. Open motors should not be installed where more complete enclosures are required to provide low maintenance and long life. The following can be used as a guide in selecting the enclosure required.

Open (Dripproof)—For ordinary industrial conditions—all conditions not requiring the more complete enclosures identified below.

Totally Enclosed—For extremely moist, dirty, or dusty locations, outdoor operation, or corrosive atmospheres.

Explosion-proof and Dust-explosion-proof—For hazardous-gas and hazardous-dust conditions as defined by the National Electrical Code. These motors carry a special Underwriters Label.

How to Select Polyphase Induction Motors

Determining Type of Motor Required—The type of motor required for a particular application is determined basically by the character of the driven machine and frequently also by the kind of operation desired of it.

Consideration must be given, for example, to the number of speeds required, to starting and accelerating requirements, to character of the load and to required speed regulation. In Table I are shown the types of motors commonly available to meet driven-machine requirements. While the large majority of machine requirements are met by general-purpose squirrel-cage motors, the exceptional requirements are tabulated as an aid in preventing misapplication of general-purpose types.

Service Factor

The service factor is a multiplier, which, applied to the normal horsepower rating, indicates a permissible loading within the accepted safe limits of temperature rise for the insulation.

Service factors apply only to 40° C. rise motors and range from 1.4 for the smaller fractional-horsepower a-c motors to 1.15 for integral-horsepower motors above 2 hp. 50° C. and 55° C. rise motors do not have a service factor.

Voltage and Frequency Range

Motors will operate successfully under the following conditions of voltage and frequency variations, but not necessarily in accordance with the standards established for operation at normal rating:

Where the variation in voltage does not exceed 10 per cent above or below normal.

Where the frequency variation does not exceed 5 per cent above or below normal.

Where the sum of the voltage and frequency variation does not exceed 10 per cent (provided the variation in frequency does not exceed 5 per cent) above or below normal rating as stamped on motor nameplate.

The starting and maximum running torque of a-c induction motors will vary as the square of the voltage, the speed varying directly with the frequency.

Selection of Motors and Control

Table I—Meeting Requirements of Driven Machine

Requirements of Driven Machine			Examples	Available Motors			Remarks
Type of Drive	Permissible Running Characteristics	Starting Load		Description	NEMA Classification	G-E Type	
Single-speed	Constant-speed	Normal	Fans, Saws, Lathes, Centrifugal Pumps, Centrifugal Compressors	Squirrel-cage, Normal-starting-torque, Low-slip	Designs A and B	Type K	See Table II for Locked-rotor Torque. See Fig. 1 for Speed-torque curve.
		High Break-away	Reciprocating Pumps, Loaded Conveyors	Squirrel-cage, High-Starting-torque, Low-slip	Design C	Type KG	See Table III for Locked-rotor Torque. See Fig. 1 for Speed-torque curve.
			Reciprocating Pumps and Compressors, Loaded Conveyors	Squirrel-cage, High-starting-torque, High-slip	Design D	Type KR	Locked-rotor Torque 275 percent of full-load torque. See Fig. 1 for speed-torque curve.
		High Inertia	Laundry Extractors, Punch Presses, Large Flywheel Loads	Squirrel-cage, Normal-starting-torque, Low-slip	Designs A and B	Type K	Advantageous where torque requirements increase with accelerating speed. (See Fig. 1). See Table II for Locked-rotor torque.
				Squirrel-cage, High-starting torques, High-slip	Design D	Type KR	Use for fluctuating fly-wheel loads.
				Wound-rotor	Type M	Smooth acceleration possible by use of starting rheostats in secondary circuit.
Rapid Reversing	Laundry Machines, some Machine Tools	Squirrel-cage, High-starting-torque, High-slip	Design D	Type KR	High-slip characteristics essential in rapid reversing service.		
Multi-Speed	Constant-Speed	Normal	Stokers, Printing Presses, Conveyors	Squirrel-cage, Normal-starting-torque, Low-slip	Type K	Available with two, three, or four speeds in constant-torque, constant-hp., and variable torque designs.
Adjustable Speed	Varying-Speed	Normal or High	Conveyors, Printing Presses, Rotary Kilns	Wound-rotor	Type M	Has constant-speed characteristics at full speed. Best speed range 2:1.
	Constant-Speed	Normal or High	Conveyors, Printing Presses, Paper Machines, Calenders, Rotary Kilns, Reels, Winches	Packaged Adjustable-Speed Drives	Speed Variator	M-G set conversion. Wide speed ranges. Automatic controls.
						Thy-motrol	Electric conversion. Wide speed ranges. Automatic controls.

Selection of Motors and Control

(Continued)

Control

The starting and maximum running torque of a-c induction motors will vary approximately as the square of the voltage, the speed varying directly with the frequency.

Other Control Equipment

See Pages 1335-1344

Fig. 1 Typical Speed-torque Curves of Squirrel-cage Motors

Type K—Normal-starting-torque, low-slip. NEMA design A or B.

Type KG—High-starting-torque, low-slip. NEMA design C.

Type KR—High-slip, high-starting-torque. NEMA design D.

Fig. 2 Typical Speed-torque Curves of Wound-rotor Motor, with Different Secondary Resistances

Various speed-torque and corresponding speed-current curves can be obtained by using different values of external secondary resistance. Numbers on the curves indicate the secondary (rotor) circuit resistance in per cent of value required to give full-load torque at standstill. Other values can be obtained by varying the secondary resistance to meet specific requirements.

The curves for "no external resistance" are merely reference curves, as appreciable resistance is necessary to obtain positive values of initial starting torque.

G-E Tri-Clad* "55" Squirrel-Cage Induction Motors

Type K, Normal Starting Torque; Type KG, High Starting Torque; Type KR, High Slip

1 to 125 Hp, 3 and 2-Phase, 60 Cycles

Dripproof

Totally enclosed, fan-cooled

A complete line of G-E motors—from 1 to 125 hp—with increased operating efficiency packed into the new NEMA frame dimensions. The line includes the general-purpose models, plus a variety of gear-motors, including the right-angle shaft gear motor. Available in most ratings are vertical, single-phase, wound-rotor, and multispeed motors, as well as NEMA Types C and D face- and flange-mounted units.

Because these Tri-Clad "55" motors are the result of extensive engineering research, their dimensions, operating characteristics, and appearance bear no resemblance to the former Tri-Clad line. Their lighter weight and smaller over-all size save money on shipping, handling, storing, and installing. Yet they retain the full power rating and service factor of previous models.

Features include: Greater rigidity, because of cast-iron construction. Increased protection from dripping liquids. Water-shedding rotor assembly—the result of silicone Dri-Film* coating. Nonwicking leads protect internal connections. Formex* wire windings retard heat aging. New polyester-film slot and phase insulation is eight times stronger than ordinary electrical insulations. Attractive finish is easy to clean or repaint. Sealed bearing housing prevents lubricant leakage or entrance of dirt. Grease can be added during motor operation. Maintenance is easy with large knockoff lugs, stainless-steel nameplate, and oversize conduit box.

Type K—Normal Starting Torque NEMA Classification Design B

The Type K is suitable for either full-voltage or reduced voltage starting, depending upon the permissible starting current of the particular application. It has the highest efficiency and power factor of all the standard lines of induction motors, and is well fitted for driving pumps, fans, blowers, line shafting, and similar equipment requiring continuous operation with fairly constant load.

In general this motor can be used for any application where continuous operation and constant speed are required, together with a fairly constant load.

Type KG—High Starting Torque NEMA Classification Design C

The Type KG motor has high starting torque and low starting current and is intended to supply the need for motors having a higher starting torque than can be obtained from the Type K motors with full voltage applied.

Recommended for such drives as compressors without unloading valves, conveyors which must be started loaded, and other applications requiring high starting torque.

Type KG motors starting at full voltage should be applied only where high torque at start is actually required and only when the driven mechanism will not be injured by the sudden application of this torque. This latter caution applies especially to drives or driven machines utilizing belts, either of the flat or V type, chains or other flexible or flat elements.

Type K, Normal Starting Torque—General-purpose, Dripproof, Horizontal 60 Cycles, 3 and 2-Phase—208, 220, 440 and 550 Volts

DIRECTION OF ROTATION. For motors in frames 444S and larger at 3600 rpm, the direction of rotation must be specified (as viewed from end opposite driving end) so that fan can be properly arranged for ventilation.

***208 VOLTS.** Listed Type K motors in frames 445 and smaller are rated 208-220/440 volts. Motor warranties covering voltage and frequency variation apply to the 220- and 440-volt ratings.

220-volt, 60 cycle ratings in frames 504 and above are usable on 208-volt network systems.

Torques are reduced by approximately 11 per cent, and other characteristics are modified slightly when motors are operated on 208 volts.

x—Model Nos. 3x—5KG215AG601. 5x—5KG215AG201.

G-E Tri-Clad "55" Squirrel-Cage Induction Motors

Totally Enclosed, Fan-Cooled Horizontal

Type K—Normal Starting Torque

Standard and Explosion-proof—1 to 30 H.P.

2 and 3-Phase, 60 Cycles, Continuous Duty, 55°C Rise
208, 220/440, or 550 Volts

Enclosed motors are built in either nonventilated or fan-cooled construction. Motors in the smaller ratings are non-ventilated.

In the larger ratings, the totally enclosed, fan-cooled design is standard. This latter construction draws air into the end of the fan cover and directs it over the motor frame toward the pulley end. The integrally cast blades on the rotor agitate the air inside the motor, thus dissipating heat from the frame.

General Electric also has a complete line of totally enclosed motors which have been tested and listed by Underwriters' Laboratories for Class I, Group D (specified gases and vapors); Class II, Group E (magnesium or aluminum dust); Class II, Group F (coal or coke dust); and Class II, Group G (grain dust) service. Motors must be specified for the particular application in order that they may bear the proper Underwriters' label indicating suitability for the conditions applied.

†These motors are for hazardous conditions—tested and listed by Underwriters' Laboratories—as follows:

Class I, Group D—All frames.

Class II, Group E—Frames 505 and smaller, except 3600 rpm motors in frames 504S and 505S.

Class II, Groups F and G—All frames except 3600 rpm motors in frames 504S and larger.

#Sleeve bearings.

DIRECTION OF ROTATION. For motors in frames 504 and larger at 3600 rpm, the direction of rotation must be specified (as viewed from end opposite driving end), so that fan can be properly arranged for ventilation.

*208 VOLTS. Listed Type K motors in frames 445 and smaller are rated 208-220/440 volts. Motor warranties covering voltage and frequency variation apply to the 220- and 440-volt ratings.

220-volt, 60 cycle ratings in frames 504 and above are usable on 208-volt network systems.

Torques are reduced by approximately 11 per cent, and other characteristics are modified slightly when motors are operated on 208 volts.

▲This page includes "Book" prices subject to discount. For the correct discount, consult Graybar.

G-E Tri-Clad "55" Wound-Rotor Induction Motors

General-Purpose, Dripproof

Type M—Tri-Clad wound-rotor motor

Type M—Constant-Speed and Adjustable-Varying-Speed 1-200 H.P., 2 and 3-Phase, 60 Cycles, Continuous Duty, 40°C Rise

Type M wound-rotor induction motors have both constant- and adjustable-varying-speed characteristics, the desired speed characteristics being obtained by selecting controllers of the proper types. This type of motor is suitable for constant-speed applications requiring frequent starting or reversing under heavy load, or where exceptionally high starting torque is encountered. It can also be used on applications requiring adjustable-varying-speed characteristics. For this type of service, the speed can be adjusted to any value over a considerable range but, once adjusted, will vary with change in load.

Type M Wound-rotor 60 Cycles, 3 and 2-Phase

*Three-phase motors only.

208 Volts. Listed Type M open 220-volt, 60-cycle motors are usable on 208-volt network systems with an 11 per cent torque reduction and other modified characteristics.

Dual Voltage. Motors for 220 and 440 volts in frames 445 and smaller are dual-voltage, 220/440 volts except those two-phase ratings identified as single-voltage.

Temperature Rise. The temperature rise of 3600-rpm motors in frames 504S and larger is 40° C rise on stator and 75° C rise with Class B insulation on rotor.

Horsepower Output. The horsepower output at 50 per cent below normal speed will be approximately 40 per cent of nameplate horsepower for 60-cycle motors and 30 per cent of nameplate horsepower for 60-cycle motors operating at 50-cycles, where 50-cycle operation is authorized. The temperature rise at reduced speed is on a 50° C basis. For constant torque loads, requiring 50 per cent horsepower at 50 per cent speed, consult Graybar.

G-E Tri-Clad "55" Integral-HP Single-Phase Induction Motors

Dripproof, Horizontal 60-Cycle Capacitor-Motors

Type KC—General-Purpose, Capacitor-Motor

Type KCJ—High-Torque, Capacitor-Motor

Typical Type KC Tri-Clad "55" Capacitor-Motor

Type KC Tri-Clad "55" capacitor-motors may be used for air compressors, pumps, fans, conveyors, and other general-purpose applications. These motors are rated in accordance with NEMA standards—breakdown torques meet NEMA standards for general-purpose motors—starting currents are of NEMA Classification Design L.

The Tri-Clad "55" design meets the advanced demands of industry. This modern, more enclosed design incorporates the latest developments in the art of motor manufacturing.

Type KCJ Tri-Clad "55" motors are designed for applications requiring high breakdown torque, such as compressors, saws and some farm applications. In general, Type KCJ motors should be selected when application requirements call for high breakdown torque. Contact Graybar for application recommendations.

*Automatic-reset thermal protective devices are for use where equipment should be restarted automatically after interruption. Such devices should not be used where automatic restarting would endanger personnel or machines.

Type KCR—Capacitor-Motors

The Type KCR Tri-Clad dripproof motor is built in four frame styles for various applications: horizontal for heavier jobs from single-phase current (all farm applications, plus compressors, blowers, etc.); horizontal end-shield-mounted (for pump, blower, and hoist equipment which are mounted directly on the driving motor); horizontal close-coupled pump (for driving centrifugal pumps); and vertical solid-shaft (for jet pumps, machine tools, and wherever a vertical mounting offers advantages).

General Electric General-Purpose Synchronous Motors

High-Speed—Open (Drip-Proof)—Horizontal—Two-Bearing

Type TS Tri-Clad—3-Phase, 60 Cycles

Type QS Tri-Clad—2-Phase, 60 Cycles

These motors make complete, compact power units which simply require connection to an a-c power supply for operation. They are especially advantageous where (1) good power factor is desired, (2) where power factor improvement is needed, (3) where high efficiency is wanted (in the case of steady, continuous loads of 75 hp. and larger), or (4) where exact speeds must be maintained.

They have a mechanical simplicity comparable to that of squirrel-cage motors. Where direct-connected exciters are used, the exciter forms an integral part of the motor structure and saves both space and installation cost over other types.

Tri-Clad Synchronous Motor with Direct-Connected Exciter

Tri-Clad construction offers the benefits of smooth contours, attractive appearance, and extra operating life.

Cast iron frame and end shields provide the best possible protection against physical damage.

G-E synchronous motors are particularly suited for driving centrifugal pumps, centrifugal compressors, belt-driven reciprocating compressors, fans, blowers, line shafts, d-c generators, rubber and paper mills, and the like.

Leading-power-factor motors are especially advantageous where other loads are of induction-motor and similar lagging power-factor types.

G-E Fractional-HP Industrial Motors

Notice: These fractional-horsepower motors are for industrial service and are available to users, resale purchasers, and distributing manufacturers. They are not to be confused with the fractional-horsepower Utility motors distributed to dealers for farm, home-workshop, and incidental use.

A Complete Line of Advanced-Design Form G Motors

Developed over many years by General Electric, these motors have many outstanding, exclusive electrical and mechanical design features. Available for general or special duty in open and enclosed frames, there is a model suited for nearly any fractional-horsepower application. Up to 10 percent smaller and 50 percent lighter, these motors are easier to handle, mount, and connect.

New Flexibility—new bearing design makes possible all-angle operation. You can use G.E.'s quiet, all-angle sleeve-bearing motors with shaft up, down, or in any position—and with no loss of lubrication. Direction of shaft rotation on all models is easily reversed.

Easy Mounting—easily detachable cradle base means you can mount the base quickly wherever you want the motor, then simply attach the motor to the base with special clamps—which permit the motor rotation within the base.

Long Life—results from new insulation that resists moisture, corrosion, and electrical breakdown. You get the most advanced type of motor insulation in G-E fractional-horsepower motors, with famous G-E Formex* wire and insulating varnish stator protection, neoprene leads, and Mylar† polyester film, made available for the first time in this motor.

Full NEMA Performance—all models meet or exceed AIEE and NEMA requirements.

Quiet, Smooth Running—made possible by completely new design of rotor, including unitized rotor-fan casting, precise rotor balancing, and advanced magnetic design.

Slot and between-phase insulation of "Mylar" polyester film, Formex wire, and insulating varnish treatment make the stator winding strongly resistant to heat, aging, moisture, electrical stresses, and other hazards. Compact, dielectrically strong capacitor helps start heavy loads, reduces starting current.

Unique locking device and thrust washer assembly maintains correct end-play adjustments, absorbs moderate thrust loads, needs no maintenance.

Advanced magnetic design and unified rotor-fan casting provide quiet operation.

Ventilating openings and large fan combine to make a quiet, effective cooling system, providing cool running and long motor life.

Reinforced, lightweight end shields improve appearance. Flat disk-type design increases strength, promotes free running, lengthens bearing life.

Lubrication system, with extra-large oil reservoir and specially compounded wicking materials, floats bearing surfaces in oil, prevents leakage, permits operation in any position.

Steel cradle base and latches strongly support all-position mounting, permit rotation of motor in base when required, make motor installation easy.

*Reg. trade-mark of General Electric Company.

†Du Pont trade-mark.

G-E Fractional-HP Industrial Motors Open Split-Phase, Type KH, 60 Cycles

Type KH Motor—Resilient Base

where starting is infrequent. Since service factor is 1.0, motors should be used only when maximum load is known. Typical applications are summer cooling fans, evaporative coolers, small drill presses, jig saws, grinders, etc.

Features

Open (dripproof) construction, continuous duty, quiet all-angle sleeve-bearings, attractive blue-gray enamel finish, detachable base.

Where to Use

40 C Rise Motors—Specially suited for loads which need moderate starting torque (approx. 150% of running torque). Starting current is normal and meets all electrical codes for automatically controlled devices. A 1.35 service factor permits motors to handle loads 35% above nameplate rating. This is advantageous if maximum load is doubtful. Typical applications are furnace and air-conditioning fans and blowers, office machines and similar devices.

50 C Rise Motors—Can be used on loads requiring moderately high starting torque (approx. 200% of running torque). They have high starting currents and should be used only on applications

**230-volt ratings also available. #This model has double shaft extension (1 7/8-in. by 5/8-in. each end).

Type KC Motor—Solid Base

Open, Capacitor-Start, Type KC, 60 Cycles

Features

Open (dripproof) construction, continuous duty, quiet all-angle sleeve-bearings, attractive blue-gray enamel finish, detachable base.

Where to Use

40 C Rise Motors—Specially designed for applications requiring exceptionally high starting torque (approx. 400% of running torque). Starting current is normal. Service factors of 1.25 to 1.35 provide load-carrying ability above nameplate rating. These extra-heavy-duty motors are ideal when maximum load is doubtful. Typical applications are pumps, air-conditioning compressors, conveyors, industrial equipment, etc.

50 C Rise Motors—Recommended for use on hard-to-start loads (starting torque 250% of running torque). Starting current is normal. Service factor is 1.0 and motors should be used only when maximum load is known. Typical applications are evaporative coolers, milking machines, attic fans, saws, jointers, etc.

G-E Fractional-HP Industrial Motors
Type K, Three-phase, 60/50 Cycles

Type K Open Motor

Features

Continuous-duty, all-angle sleeve-bearings for moderate thrust or heavy-duty ball bearings with 10-year lubrication for heavy thrust, attractive blue-gray enamel finish.

Where to Use

For continuous-duty application where power supply is three-phase. Normal torque for starting, high pull-up torque for inertia loads, and high breakdown torque for peak-load conditions.

G-E Fractional-HP Industrial Motors

Ordering Directions

In placing order, specify:

(1) Complete model number if listed, type (First letters in model number, such as K11, KC, K, etc.) (2) Horsepower, full-load speed, voltage, and frequency. (3) Type of base (solid or resilient).	(4) Direction of rotation as viewed from end opposite the shaft-extension end. (5) Overload protection, if desired. (6) Enclosure and bearing construction. (7) Standard control, if desired.

¹Includes ¼ hp, 3450 rpm; ½ hp, 1725 rpm; ¾ hp, 1140 rpm; 1 1/2 hp, 860 rpm; 60 cycle and all smaller ratings built in this frame group.

²Includes 1/8 hp, 3450 rpm; ¼ hp, 1725 rpm; ½ hp, 1140 rpm; ¾ hp, 860 rpm; 60 cycle and all larger ratings built in this frame group.

†-W = Allowance for variation in castings after final assembly.

G-E Fractional-HP Replacement Motors

This listing represents those models of General Electric motors most commonly used for oil burners, fans, blowers, pumps, and compressors.

Heating and Ventilation Motors

Oil-Burner Motors

Split-phase, sleeve-bearing, 50 C rise, continuous. Enclosure meets Underwriters' Laboratories requirements for totally enclosed oil-burner motors. NEMA standard flange mounted (6 $\frac{3}{8}$ -in. dia. rabbit); built-in manual-reset overload protection; lightweight, compact design, clockwise rotation easily reversed at terminal board; shaft diameter, $\frac{1}{2}$ -inch.

1725 Rpm—60 Cycles

Hp	Volts	Model Numbers		▲ Book Price, Each
		Two 20-in. Leads Out 3 O'clock*	9.5-in. of 2-conductor Cord. Out 5 O'clock*	
$\frac{1}{8}$	115	5K1139CG103Y	5K1139CG105Y	\$31.00
$\frac{1}{4}$	115	5K1132EG108Y	5K1132EG110Y	33.50
$\frac{1}{6}$	230	5K1132RG109Y	37.10
$\frac{1}{4}$	115	5K1135KG134Y	43.60

*Lead location described facing end opposite shaft. Standard rotation is clockwise viewing the end opposite shaft. Motors with this rotation will be furnished unless order specifies counter-clockwise.

Small Fan and Blower Motors

Type KSP, 51-frame unit-bearing shaded-pole motors are totally enclosed and have a large sealed-in oil capacity sufficient for years of dependable operation. Equipped with 20 inches of two-conductor cord with eyelets, threaded shaft $\frac{3}{16}$ -in. long with $\frac{1}{4}$ -in.-20 thread and special fan mounting with speed nut, they may be supplied for either horizontal or all-angle operation.

Type KSP 11- and 21-frame motors are specifically designed for all types of fans and blowers, such as room air conditioners, window fans, unit heaters and coolers, furnace blowers, exhaust and circulating fans, and many others that have moderate radial- and axial-thrust loads. Most applications require air over motor. Open construction, all-angle operation, sealed-in oil supply, attractive gray enamel finish, 2 18-in. long leads. Shaft diameter, 11-frame— $\frac{5}{16}$ -in., 21-frame— $\frac{1}{2}$ -in.

A type KSP39 (5 $\frac{1}{2}$ -in. diam.) is also available in a 115-volt motor in $\frac{1}{10}$ -, $\frac{1}{8}$ -, $\frac{1}{6}$ -, and $\frac{1}{4}$ -hp ratings, 1550 and 1050 rpm. Consult Graybar for complete information on this motor.

G-E Fractional-HP Utility Motors

Notice: General Electric Utility motors are built for farm, home-workshop, and incidental use. Their distribution is limited to dealers handling them as items of stock for retail sale.

Typical 1/2-HP Type KC Utility Motor

New Form G Open (Dripproof), Split-Phase, and Capacitor-Start Solid Base, All-Angle Sleeve-Bearing, 60 Cycles

G-E Utility motors are especially designed for the large variety of general applications in the shop, farm, and home. Their attractive appearance, sturdy construction, dependable low-cost operation, and simple connections make these motors ideal as a high-quality source of power for incidental use.

Outstanding features are—

Continuous duty—50 C rise.

Open (dripproof) construction.*

Motors designed to operate in any position—quiet all-angle sleeve-bearings absorb moderate thrust load.

Attractive finish of durable blue-gray enamel with red and silver label.

Large built-in terminal board—easy to connect.

Strong steel base rigidly clamped to bearing housing.

*Motors mounted in horizontal position meet NEMA specifications for dripproof construction.

†These motors are ideally suited for home workshop applications because the internal starting switch is protected against saw-dust accumulations.

‡Includes Federal Excise Tax.

Warranty and Service Plan

These motors are backed by dependable 1-year G-E warranty. To aid the purchaser in obtaining prompt in-warranty service, inoperative motors will be repaired by a G-E authorized service station at no charge.

Out-of-warranty failures should be referred to the nearest General Electric authorized service station. For further information consult Graybar.

G-E Fractional-HP Gear Motors

Horizontal, Floor-mounted, 60 Cycles

Open, and Totally Enclosed, Fan-cooled, Types KC Single-phase, and K, Polyphase

Concentric-Shaft, A-C

Proved by successful performance on industry's toughest jobs . . . a balanced combination of motor and gear in a single package.

Precision-machined, accurately assembled, helical gearing delivers maximum power at the output shaft.

Where to Use

Fractional-horsepower gear motors are especially applicable where dependable low output speeds are required.

Typical applications include all types of conveyors, mixers, agitators, pumps, materials-handling devices, and machine tools.

G-E Fractional-HP Gear Motors

Horizontal, Floor-mounted, 60 Cycles

Open, and Totally Enclosed, Fan-cooled, Type KC Single-phase, and K, Polyphase

Right-angle-shaft units are particularly useful where space is at a premium, or mounting space is confined. Units are convenient to handle, easy to install.

General Electric right-angle-shaft gear motors are available in both single-reduction and combination worm and planetary designs. By the use of the combination design, maximum efficiency is provided in the lower range of output speeds.

G-E Integral-HP Gear-Motors

Tri-Clad "55"—Horizontal, Floor-Mounted—Class I, 1 to 5 H.P.
 Dripproof and Totally Enclosed—60 Cycles, Polyphase, 220/440 or 550 Volts
Right-Angle Shaft

Where To Use

Right-angle shaft worm gear-motors are normally used when mounting configuration does not permit the use of either the concentric- or offset-shaft ratings. Examples of typical right-angle shaft applications are conveyors, door operators, and confined mounting positions on some machine tools.

G-E Direct-Current Motors

Dripproof—Industrial—Kinamatic*

Type CD (Frames 186A-505A) 150 HP and Smaller

Type CD Kinamatic motors in frames 186 to 505 conform to new NEMA Standards for industrial direct-current motors. Designed to supersede the "constant-speed" and "adjustable-speed" general-purpose direct-current motors. All motors are suitable for operation over wide speed ranges by a combination of field control and armature-voltage control. Equipped throughout with Class B insulation and rated 60 C. rise for continuous operation at base speed. Especially suitable for use in adjustable-voltage systems where precise, stepless

speed control with constant torque output may be obtained in a relatively simple manner. Additional speed range with gradually increasing available horsepower output may be obtained by using a rheostat to weaken the motor shunt-field excitation.

The completely integrated design of General Electric Kinamatic d-c motors permits application flexibility. Low armature inertia and high transient commutating ability make them ideal for systems involving quick starting, stopping, and reversing duty. The greater protection offered by the dripproof enclosure and Class B insulation permits application of the standard motor in much more severe environmental conditions than is possible with general-purpose motors. Rugged ball bearings permit mounting at any angle—horizontal to vertical, shaft up or down.

Typical applications include drives for machine tools, such as lathes, milling machines, boring machines, and grinding wheels. Can be used in the paper, textile, steel, printing, rubber, and plastic industries for driving reels, rollers, conveyors, and other continuous-processing machinery where speed flexibility is required.

Standard voltage rating 240 volts.

Ratings

Graphical Representation of Ratings

Continuous Ratings

1. Continuous 60 C. Operation:

- The standard hp rating is the continuous 60 C. rating at base speed.
- Between 150 per cent base speed and 300 per cent base speed, the continuous 60 C. rating is 130-133 per cent of the standard hp. rating.

2. Service-factor Operation:

- At base speed, the service-factor rating is 115 per cent of the standard hp. rating.
- Between 150 per cent and 300 per cent base speed, the service-factor rating is 130 per cent of the standard hp. rating.
- Above 300 per cent base speed, there is no service factor. For continuous 60 C. rating above 300 per cent base speed, see 1 (b).

Short-time Ratings

Standard Kinamatic dripproof industrial direct-current motors are suitable for operation at the next-higher standard horsepower rating without service factor for intermittent-duty application, such as cranes and machine tools.

Adjustable-Voltage Operation

Suitable for reduced-speed operation by adjustable armature voltage. Some derating may be necessary for applications requiring extended periods of low speed operation at full-load torque.

Ambient Conditions

Designed for operation in a 40 C. ambient temperature and at altitudes up to 3300-ft. above sea level. These motors can be operated in ambient temperatures up to 50 C. or altitudes up to 8800-ft. without service factor.

Enclosure

The standard enclosure for Kinamatic direct-current motors is dripproof. These motors are so constructed that drops of liquid or solid particles falling at any angle not greater than 15 degrees from the vertical cannot enter the motor, either directly or by sticking and running along a horizontal or inwardly inclined surface.

*Trade-mark of General Electric Company.

The Standard General Electric industrial motor-generator set has been designed to provide a maximum source of d-c power in minimum space. The new matched ratings utilize full power capacity of both motor and generator to provide a small, more compact set—one that will mean important savings in initial cost and space.

Four-bearing construction of standard two-unit motor-

generator sets permits faster, more economical replacement of units. By utilizing standard Kinematic d-c generators and Tri-Clad induction motors, alignment problems are minimized and low inventories of spare units and parts can be maintained.

Flexible steel couplings allow free end float of shafts without imposing thrust load on either motor or generator bearings. Easily disconnected couplings simplify alignment, and help assure smooth operation of motor-generator set.

Modern-design base is constructed of solid steel-plate bed with rigid cross bracing. Extra strength of base simplifies mounting and facilitates installation.

G-E Speed Variators

**Packaged, Adjustable-voltage D-C Drives
Operates from A-C Power—1-500 HP**

Packaged, all-electric, adjustable-speed drive which operates from a-c power. The power unit converts incoming a-c power to d-c power and supplies it to a d-c drive motor. Speed of the d-c motor can be adjusted over a wide range by controlling its armature voltage and field current. Speed ranges of 200 to 1 and higher are available.

The basic model, with an 8 to 1 speed range, forms the foundation for the speed variator line. However, such a wide variety of modifications are available for these drives that applications for the speed variator are practically unlimited wherever an adjustable-voltage d-c drive is required.

For the large majority of industrial applications where reliable adjustable-speed power is required the general industrial speed variator drive may be used. Typical applications are drives for cement, chemical, food, glass, lumber, machine-tool, materials handling, metal-working, paper, paper converting, plastic, printing, rubber, steel, textile and wire drawing industries.

Power Unit

**Speed Variator Power Unit
(Typical of 15-30 HP)**

The basic power unit consists of a motor-generator set, full voltage starter for the induction motor of the M-G set, and the necessary d-c control for simple nonreversing operation of the d-c drive motor, all packaged together in an attractive, ventilated cabinet.

Since the power unit is factory assembled, wired, and tested, the cost of installation is extremely low.

Operator's Control

The basic operator's control devices are: an oiltight push-button station for starting and stopping the d-c drive motor and a small rheostat which adjusts the field current of the d-c generator in the power unit.

The adjustment of the generator field current controls the voltage applied to the d-c motor armature which, in turn, controls the speed of the d-c motor over an eight-to-one range.

The push-button station is for surface mounting, and the rheostat is for front-of-board mounting.

D-C Drive Motor

**Kinamatic* Dripproof
D-C Motor**

The d-c motor included in the basic Speed Variator drive is suitable for constant torque operation over an eight-to-one speed range. It is rated 240 volts d-c, 60 C. rise, Class B insulated in frames up through 505, and is rated 230 volts d-c, 50 C. rise in larger frames. Has dripproof enclosure, ball bearings, and is shuntwound.

These motors make it possible to obtain rapid acceleration and deceleration with low-energy demand.

*Trade-mark of General Electric Company.

Prices and information on other readily available modifications on application.

G-E Control Centers

**1 to 100 HP, 220 Volts, 3 Phase
1 to 200 HP, 440/600 Volts, 3 Phase
Interrupting Ratings: 15,000 to 25,000 Amperes**

Type DA7093

This pre-engineered control center permits the grouping of all switching and control operations at one convenient location. Compact design results in 50 percent saving of floor area.

Complete installation composed of standardized vertical sections, fusible or circuit-breaker-type control units, and accessories as required. Easy to plan, install and maintain and can be used for all types of industrial and commercial applications. Easily expanded to meet changing control requirements.

This space-saving design permits use of nine NEMA Size 1 units or six NEMA Size 2 units in one 90-in.-high vertical section. These starter units can be either of the fusible or circuit breaker type and are readily interchangeable. Main circuit breakers and fusible switches are available.

Control sections can be supplied in either factory assembled NEMA Types A, B, or C construction or as units for field assembly. Where switching sections only are required, these can be furnished as complete equipments or as units for field assembly.

With the broad line of standardized sections and control units available, it is easy to select combinations to meet exacting motor control requirements, whether for a single machine, a department, or an entire plant.

This packaged control center comes fully equipped with starters prewired to customer specifications. Load and control wiring on job is minimized and can be done with units in place.

Maximum safety protection for operating personnel built into this design. Handle must be moved to OFF position before door can be opened and unit removed from section. Handle can be padlocked in either of three positions. Aluminum barriers provide isolation from unit below when unit atop barrier is removed. Interlocked handle on control unit has "by-passing" interlock release to permit inspection.

Wide-opening door permits easy access to section interior. Unit easily released from section by turning latching screw. Unit can be locked during inspection in safe position clear of buses by latch on horizontal barrier. All components are mounted on unit frame for easy inspection or removal. Use of three separate stabs makes replacement easy. Individual bus-bar insulators assure complete electrical and mechanical protection.

Space saving unit size permits nine NEMA Size 1 units in one section without reduction in pull-box size. Flexible design permits 13 1/4 in. sections to be installed back to back with combined depth of only 27 1/4 in. or single back to back arrangement in one structure with 24 in. depth.

Note:—Two speed Control Centers available. For further information contact Graybar.

G-E IC7092 Motor Control Centers

Offers the answer to simplified installation and maintenance of a-c combination starters, lighting panels, lighting transformers, and feeder circuit breakers, as well as other associated equipment for a group of motors in a central location.

Adapted for all starters in one factory area, or on a particular process—starters can be grouped and connected with one continuous power bus.

Features of the IC7092 control center include:

Standard Dimensions—all starter units are constructed in even multiples of 14 in. high; Extra-large wiring trough 4 in. wide (full height) continuous vertical wiring trough with cable supports for unit wiring; Vertical bus barrier separates starter components from vertical bus; Front Connection—all connections and terminals easily accessible from the front; Removable Starter Units; Flange-formed Doors; Free-floating stab-on Connector providing positive silver-to-silver contact on both sides of the vertical bus; Back-to-back mounting affords maximum space saving; I-beam construction provides strong, rigid structure; Safety Interlock prevents opening starter door when circuit breaker or fused switch are in ON position.

Normally furnished with bus work braced to withstand 25,000 rms amp. short-circuit current.

In cases where 50,000 rms amp. interrupting capacity is required, all fusible-type combination starters are supplied with current-limiting fuses. In addition, the bus is braced for 50,000 amp. A current-limiting reactor of proper rating, connected ahead of the motor control center, or a hook-stick-operated incoming-line Amp-trap current limiter may be connected on the incoming bus—to provide the required higher interrupting capacity.

Motor control centers are available in three types:

NEMA Type A construction—motor and control leads connected directly to contactor and interlocks at installation.

NEMA Type B construction—motor and control leads connected to individual terminal boards located in the individual starter compartment at installation.

NEMA Type C construction—motor and control leads connected at installation to master terminal board located in either top or bottom cable compartment of control center. All interconnecting wiring is done at the factory and an over-all interconnection diagram is furnished.

G-E Limitamp* Controls

The Limitamp* Control with IC7160 starter with air-break contactor is designed to operate and protect squirrel-cage, wound-rotor, and synchronous motors; transformer feeders; and other equipment used in special applications. Can include control for auxiliary and accessory equipment, such as incoming-line panels, lighting panels, small low-voltage a-c and d-c motor starters, relaying and metering equipment.

Meets NEMA Class E2 Standards; and furnished completely assembled and wired in NEMA Type 1 free-standing, 30-in.-deep enclosures.

Equipped with gang-operated disconnect switch which will not allow access to the high-voltage compartment unless contactor and isolating switch are in OFF position.

Type EJ-2 current-limiting fuses provide short-circuit protection.

Ambient-compensated thermal overload relays protect motor against damaging overloads. Time-delay undervoltage protection is also provided.

The IC2812 air-break improved contactor is designed for reliable service and easy maintenance. Its principal parts—

arc chute, phase barriers, contact tips, interlock, and coil—are designed for repetitive service.

Has 30-in. deep enclosures with front connections requiring no rear-aisle space. All connections made from front, and line contactor rolls out for free working space.

In synchronous-motor control panels, load-angle field removal provides fastest field removal possible within the first half-slip cycle out of synchronism; motor field-loss relay is not required. Precision-angle switching is provided for utmost use of motor synchronizing ability. Graduated squirrel-cage protection is included to obtain maximum advantage of motor's accelerating ability, protecting time-rated squirrel-cage winding, yet allowing more time as the speed increases.

Limitamp interrupting capacity at 50 or 60 cycle power for 2300 volts, a-c is 150,000 kva; 4000 volts, a-c, 250,000 kva; and 4600 volts, a-c, 250,000 kva.

G-E IC8070 Plate-Type Field Rheostats

These G-E plate-type field rheostats are field-control devices for all types of direct current rotating equipment. They can be used to adjust the output voltage of a-c or d-c generators, and the speed of d-c motors.

Suitable for use in textile mills, paper mills, machinery manufacturing, steel mills, switchboard building, educational institutions, laboratories, etc. They are available for open-type, totally enclosed, open-type concentric, totally enclosed concentric, open-type sequence operation—all for front- or back-of-board mounting.

Features include: (1) Constant resistance—maintained by using resistance material affected only slightly by temperature; (2) Long mechanical life—since contact segments and brushes are made of special alloy material with long-wearing qualities; (3) Versatility—employing two adjustable stops, one at each end.

When ordering include ohms resistance, maximum ampere, and voltage for rheostat required. If for use with d-c motor, include information on motor rating (Model or Serial No.), together with speed increase desired. If rheostat is to be used

with other than G-E motor, the order should state maximum shunt-field current and ohms resistance necessary to insert in the field current to give maximum speed increase.

IC8070 Field Rheostats for Use with D-C Motors on General-Purpose Applications*

G-E IC2800 D-C Contactors

IC 1617 Contactor

Heavy duty and accessibility are the two special features of this line of d-c contactors, as regards their use by switchboard builders and panel assemblers for industrial service with machine tools, textile machinery, and the like.

IC2800 contactors are rated at 25-100 amp., 600 volts, maximum.

Both single-pole and multipole contactors in all forms are unit-mounted, supplied already assembled in a sturdy steel base drilled for surface mounting. All connections are made from the front.

Unit-style interlocks are available, factory-mounted or separately for field mounting. These can be easily changed from normally open to normally closed; or from normally closed to normally open.

G-E IC9516 A-C Brakes

The IC9516 a-c brake is a long-wearing device used primarily to hold rotating apparatus or machinery in a fixed position while it is not in use. The brake is especially designed for shops with small a-c cranes; for spinning equipment in textile mills; and for use in laundries, bakeries, food processing plants, small assembly plants, and metal-working plants.

Features of the IC9516 brake include: (1) Long mechanical life—balanced molybdenum-alloy wheel, highly resistant to wear; (2) Easy torque adjustment—achieved by adjusting nuts at end of spring which sets brake; (3) Solenoid-coil connectors protected—metal connectors and conduit box mounted adjacent to solenoid.

The brake may also be used for stopping duty, if proper application rules are followed.

Brake shoes are lined with woven asbestos. Because the shoes operate at low unit pressure, lining wear is reduced, and normal time between relinings is lengthened.

Type B construction with drip-proof and splash-proof enclosures is available for outdoor applications; and Type C construction in dust-tight and watertight enclosures is available for severe atmospheric operation.

Hand-release mechanism also available.

*Prices include one overload-device heater which must be ordered separately. Heater may be omitted, or additional heaters may be ordered, at \$1.00 each.

Heaters for Thermal Overload Devices

Interchangeable heaters are available for a variety of motor current ranges as shown in the accompanying table.

The table below gives the proper size heater to trip the switch on approximately 125 per cent motor current.

Listed values are for motors rated 40° C. continuous. For motors rated 50° C. or 55° C. continuous, multiply full-load current of motor by 0.9 and use this value to select heater.

G-E CR106 and CR7006 A-C Magnetic Starters

For Connecting Single-, 2-, or 3-Phase Induction Motors Directly on the Line

Undervoltage Protection
Thermal Overload Protection
1-100 Hp. for 600 Volts, 60-25 Cycles

The CR106 and CR7006 magnetic motor starter is used for full voltage starting of squirrel cage induction motors. These starters consist of a 2- or 3-pole magnetically operated contactor with overload relays, mounted on a base and enclosed in a suitable case. Provide undervoltage protection or release. May be operated by means of a push-button station, float switch, or other pilot device.

CR7006, Size 0, with cover removed

Prices will be quoted on request for starters with push buttons mounted in cover.

Order by CR number and specify rating of motor with which to be used and heater units required for overload protection.

G-E CR1062 Manual Motor-Starting Switches

For 1- to 7½-HP A-C Motors

600 Volts, Maximum, 60-25 Cycles, Single-phase and Three-phase

Push-button, Size 1, and toggle-operated, Size 0, manual motor starter for wall or machine mounting.

CR1062 toggle-operated Size 1. Wall, machine, or pedestal mounting.

for push-button or toggle operation in 2-, 3-, or 4-pole forms, Sizes 0 and 1. Toggle switches in the above forms are also available in cast-iron enclosures suitable for installation in moisture, dust-laden, and hazardous locations. A specially designed form for textile loom service is included in the line.

Bimetallic overload device and a wide range of heaters give accurate response to overloads and provide complete motor protection. When the relay trips, the toggle or push button assumes a neutral position, giving positive indication of overload trip.

Guards around push button and toggle prevent accidental operation. Holes in guards on toggle forms permit padlocking in On or Off position. All general-purpose cases may be padlocked closed to prevent tampering.

General Electric now offers a complete line of manual starters for application on blowers, grinders, pumps, farm machinery, laundry and textile applications, and small machine tools. Available in open and general-purpose enclosures

Lift-off covers, retained by screws top and bottom, are provided to minimize space requirements. Combination knockouts conveniently located are provided. All starters conform to NEMA ratings and have Underwriters' approval. Renewal parts are available for all sizes and forms.

G-E CR7051 A-C Reduced-Voltage Magnetic Starters

For Squirrel-Cage Induction Motors

2- or 3-Phase, 3-Wire, 60 Cycles

No. CR7051-A1G

Provides remote control for constant-speed squirrel-cage induction motors on compressors, blowers, and any application that does not require longer than 15 seconds to attain full speed, once every 4 minutes for an hour.

Consists chiefly of an autotransformer for supplying reduced voltage to motor during acceleration, accelerating contactor which connects autotransformer to line and motor to low-voltage taps, line contactor, temperature overload relay, a definite-time relay which causes accelerating contactor to open and line contactor to close after a predetermined time.

5-200 Hp.

3-Phase—3-Wire
2-Phase—3-Wire

CR1043-K1 low-voltage starter with ammeter attachment

A typical CR1034 starter

These starters are suitable for two- and three-phase motors, driving pumps, conveyors, compressors, blowers, or for other applications where reduced-voltage starting torques and currents are satisfactory for the load and power requirements. They afford high-torque efficiency, flexibility, protection to operator, protection to motor and driven machine, and time-delay undervoltage protection.

Each starter includes an autotransformer provided with several sets of starting taps, which facilitates adjustment of the motor starting torque and current to suit the particular load conditions. An autotransformer, switching device, instantaneous undervoltage device, and a hand-reset overload relay are all self-contained within a sheet-metal enclosure.

To order, specify CR and Form number, giving the complete motor rating, including horsepower, voltage, phase, and frequency. Order ammeter attachment, if desired. Book price, \$198.

General Electric CR7008 A-C Combination Magnetic Starters

Full-Voltage Starters for Induction Motors

Fusible, Nonfusible, or Circuit Breaker—Undervoltage Protection or Release
Thermal Overload Protection

1½-100 Hp., for 600 Volts, 60-25 Cycles, 2- and 3-phase

Size 1 combination magnetic starter with fusible disconnect switch in general-purpose enclosure

This combination magnetic starter is available in three basic forms consisting of a full-voltage starter in combination with a nonfusible disconnect switch, a fused disconnect switch, or a circuit breaker. Short-circuit protection is provided by the circuit breaker and fuse. Undervoltage protection or release, depending on the type of pilot device, is included.

A simple and reliable equipment for starting a small a-c motor is provided by a CR7008 combination magnetic starter and a CR107, CR108 and momentary-contact Start-Stop push-button station, limit switch, pressure governor, float switch, or other pilot device. The combination provides complete protection to both the motor and operator. Starters and pilot devices are completely enclosed, preventing accidental contact with any live parts.

These starters are available in general-purpose, water-tight, industrial use and automotive JIC cases, as well as in enclosures for hazardous and corrosive locations. The doors of all starters can be padlocked closed, and the switch can be padlocked in either the open or closed position. Positive interlocking between the switch, or breaker operating handle, and the case, prevent opening of the door with the handle in the On position, providing increased safety.

Advantages

Over-all Protection.—For complete, all-around protection to a-c motors, select a G-E combination magnetic starter. With fuses or circuit breakers to open the circuit the instant a short-circuit occurs, these units protect motor, wiring and the starter itself. In one compact low-cost unit, G-E com-

Size 4 combination starter with circuit breaker in watertight enclosure

bination starters give full protection where you need it most. Non-renewable fuses or completely enclosed circuit breakers give the tamperproof short-circuit protection that modern distribution demands—the magnetic starter and overload relays give the instant response you need for protecting the motor from overloads.

Protection of Personnel.—The new rotary-action disconnect switch on the G-E combination starter makes it impossible to open the cover without opening the circuit. The rotary action is positive and easy. Circuit-breaker forms have similar features.

Single-Unit Control.—The G-E combination magnetic starter saves space, speeds installation, because it's a single, compact unit that meets all National Electric Code requirements for circuit isolation and short-circuit protection. The combination starter provides complete protection to the equipment to which it is connected, and insures continuity of electric service to adjacent machines.

**G-E CR109 and CR7009 A-C
Magnetic Reversing Controllers**

**Full-Voltage Reversing Controllers For Squirrel-Cage
Motors, Single-, 2-, or 3-Phase**

**Air-break — Undervoltage Protection and Thermal
Overload Protection
For 440 Volts, 60-25 Cycles**

Size 1 magnetic reversing controller with cover removed

G-E CR109 or CR7009 magnetic controllers are suitable for use with reversing motors which are connected directly across the line. Each controller consists of two mechanically interlocked, magnetically operated, three-pole contactors with overload relay. The controllers may be controlled remotely through push-button station, limit switch, float switch, or other pilot device.

Undervoltage Protection or Release—These controllers are ordinarily operated by a momentary-contact Forward-Reverse-Stop push-button station. A normally open interlock is furnished on both the forward and reverse contactors of all controllers to complete the holding circuit. Undervoltage release is provided when maintained-contact pilot device is used.

Overload Protection—Sizes 0 through 4 include thermal overload relays that can be set for hand or automatic reset. Size 4 relays are hand-reset only. All use two relays externally reset from the front of the enclosure.

Enclosures—Controllers are enclosed in wall-mounted cases. Knockouts are conveniently located for conduit connections and for easy mounting.

Mechanical Interlock—The interference-type interlock is positive in action. Electrical interlocking is unnecessary.

Note: All controllers listed above are for separate push-button connection. Price does not include push button. Above controllers Sizes 0 and 1 are also available in 2- and 4-pole forms. Sizes 2, 3, and 4 are also available in 4-pole form. Order by CR number and description, giving complete motor ratings.

G-E CR2940 and CR2943 Push-Button Stations

Typical 3-button station for front-of-panel or wall mounting

CR2943-NA 102A

Typical watertight station, CR2940-NJ102A

CR2940 push-button stations are for use in the control circuits of various magnetic controllers. The large contacts and substantial construction of these heavy-duty stations make them well able to withstand the frequent operation and rough usage of machine-tool and similar applications.

The stations listed are divided into two general classes: momentary-contact and maintaining-contact. With a momentary contact, the circuit is completed or interrupted only as long as the operator's finger depresses the button. This feature is required when the station is used with a controller that must provide undervoltage protection. A maintaining contact holds the circuit open or closed. Stations with a combination of momentary and maintaining contacts are available. Information on request.

Push-button stations come in two sizes: standard-duty, suitable for use with contactors up to and including 150 amperes, and heavy-duty, for use with any-size contactor.

G-E CR2931 Enclosed Float Switches

For A-C or D-C Motors

Form P

Form D

Suitable for use in the control circuit of a-c or d-c automatic starters, and, except for the Form P, can directly handle the circuits of small motors.

Arranged as furnished for tank operation — switch closes as lower liquid level is reached, and opens as top level is reached. Can be easily changed for sump pump operation by interchanging float and counterweight. Standard floats should not be subjected to pressure. Quotation on special floats will be furnished on request.

All switches are dripproof and splashproof, and are suitable for outdoor installation where they are not subjected to snow or sleet. Where the liquid whose level is to be controlled is subject to freezing, a float switch should not be used.

All switches are quick-acting when closing and opening, insuring minimum arcing and burning of contacts.

All switches are quick-acting when closing and opening, insuring minimum arcing and burning of contacts.

A	D-p	Rod-operated for clamping to inside top edge of tank; operated by rod and float; range, 10-in. to 5-ft.	85	\$°101.00
A	4-p	Same, except 4-pole	95	°112.00
B	D-p	Rod-operated for bolting to tank cover; requires guide in cover for operating rod; range 10-in. to 3½-ft.	95	°108.00
B	4-p	Same, except 4-pole.	105	°118.00
C	D-p	Rod-operated for bolting to tank cover; range, 10-in. to 3½-ft.	95	°112.00
C	4-p	Same, except 4-pole.	100	°124.00
D	D-p	Chain-operated for bolting to tank cover; operated by chain and float; suitable for any depth of tank or any variation in water level not less than 10-in.	110	*112.00
D	4-p	Same, except 4-pole.	120	*124.00
L	D-p	Chain-operated by chain and float; for any variation in water level not less than 5-in.	40	* 80.00
M	D-p	Rod-operated; range, 2½-in. to 4½-ft.	70	° 80.00
P	S-p	Operated by chain and float; for any variation in water level not less than 2-in.	10	† 44.00
AW	S-p	Same as Form P, except with mercury-tube, heavy-duty "Konnectors".	10	† 50.60

*Price includes 15-ft. of bronze chain. If more is needed, add \$0.40 for each additional foot.

†Price includes 15-ft. of brass chain. If more is required, add \$0.10 for each additional foot.

‡To obtain maximum operating range; deduct 3½-ft. from length of chain.

§To obtain maximum operating range; deduct 1½-ft. from length of chain.

¶Two standard lengths (each 3-ft.) of 3/8-in. brass rod are furnished. 3-ft. lengths can be furnished at \$1.20 per length.

G-E CR2927 Pressure and Vacuum Switches

Diaphragm Type — For Starting Small Motors or For Pilot-Circuit Control

Pressure switch (cover removed) with unloader valve and differential-adjusting attachment mounted in place

These switches are designed to open or close contacts upon changes of pressure or vacuum of any gas or liquid which will not affect synthetic-rubber or brass or steel parts.

When larger motors than above ratings are used, these switches can be used in connection with automatic starters which will also provide overload protection.

Maximum Horsepower Ratings

The CR9440-J1C1 and J1D1 are sturdy, lever-operated limit switches enclosed in strong die-cast cases and molded phenolic covers. Their oilproof construction and single-pole, double-throw, double-break silver contacts of snap-action design make them very suitable for machine-tool and miscellaneous service.

Complete operation of the switches is obtained by a 12-degree travel of the lever with an overtravel of 24 degrees in either the clockwise or counterclockwise directions of rotation.

As supplied by the factory, these switches are arranged for clockwise operation, looking at the cover side. The direction of operation can be reversed by removing the base plate and transferring the return spring to the opposite side of the swing bar.

CR9440-B1B

Side plate removed
to show mechanism

Closed

A heavy-duty, snap-action, single-pole, double-throw switch with two independent circuits. This limit switch should be used whenever a small, compact, heavy-duty reversing limit switch is required to open or close a control circuit and where maintained accuracy of operation is of primary importance. Its field of application includes tapping machines, heading machines, grinder tables, welding machines, and other reciprocating machines where a reversing limit switch is applicable.

The contacts are double-break, and both stationary and movable tips are of fine silver to insure long life and dependable operation.

The movable contacts are held in either position by a small alnico magnet acting on an iron yoke. When the yoke is broken away from the magnet face, by direct mechanical action of the operating lever a sturdy spring snaps the contact assembly to the opposite position, where it is held in by the same alnico magnet until the yoke is broken away in the opposite direction. For this reason, the operating point is determined entirely by the position of the operating lever and is independent of tension in the spring. This construction insures maintained accuracy of operation in spite of changes in spring tension caused by aging under repeated operation.

Switch is enclosed in an oiltight steel enclosing case with two gasketed side plates and an opening in the rear for 1/2-inch conduit connection. With the side plates removed, the terminals are easily accessible, and large working clearances make the switch easy to wire and install.

CR9440-D2

Push-rod-operated, or
spring-return
ratchet-operated, or
spring-return
operating rod

open to normally closed operation, or vice versa. The operating heads can be interchanged, or turned 180 degrees. Holes are provided for mounting the switch on either its back or its side. These features allow maximum flexibility in application.

The switches are available in both open and enclosed forms. The open switches are particularly adapted to built-in applications where space is limited. Frames and plungers are constructed of molded *Textolite. The contacts are solid silver and are designed to close with a rolling action. All switches are equipped with flag terminals to accommodate two wires on each terminal. The construction is extremely compact and flexible. The enclosed form has a die-cast case, and is provided with velumoid gaskets and grease seals at shaft journals to make the switch oilproof for machine-tool use.

Application extends to virtually any automatic equipment where a traverse motion must be converted into control of an electric circuit, particularly where the motion is slow and snap-action contacts are necessary to prevent burning of the contact tips.

A lever-operated, push-rod-operated, or plunger-operated limit switch. All except the plunger-operated form have snap-action contacts. A variety of contact arrangements is available, which can be changed in the field from normally

*Registered trade-mark of General Electric Co.

Hoffman Oil Tight Pushbutton Enclosures

Standard

Designed for use with all standard makes of oil tight pushbuttons, switches and pilot lights. Oil tight construction seals out foreign materials making units suitable for use where liquids and dirt are a problem.

Constructed of 14 gauge steel. All seams gas welded. No conduit holes or hubs in the box. Flanged cover is gasketed with cellular neoprene and readily removable from box.

Standard finish is baked gray hammertone enamel over a phosphatized surface.

Standard enclosures are available for 1, 2, 3, 4, 6, 9, 12, 16, 20 and 25 control units. Special sizes and hole arrangements can be promptly furnished.

No.	No. of Units	Enclosure Size, In.	Std. Pkg.	Ship. Wt. Lbs.	Each

Note—EXTRA DEEP (1 3/4 inch) enclosures, SLIM and PENDENT enclosures are also available.

Mercoïd Liquid Level Controls

For use on boilers as low water cut-off, feed water pump control and alarm purposes, and for many industrial applications where control is desired from change of liquid level of water, oil, gasoline, ammonia and other fluids.

Electrical capacity: 10 amp. 115 volts, 5 amp. 230 volts, and on order 3 amp. 440 volts. Bodies on all types are cast iron.

Low Water Controls

Standard with copper float and brass trim. Available semi-automatic, with hand reset. Also available weatherproof at extra cost.

Pressure Rating 150 lbs. Max.

Type 123

Type	Description	Each
123	Cuts in as level rises	\$32.00
123-3	Cuts in as level falls	32.00

Mercoïd Pressure Controls

DA-31 & DA-21

DA-531 & DA-521

DS-231 & DS-221

Have easy outside adjustments for setting cut-in and cut-out pressures. Mercury switch contacts. Visible direct-reading dial. Bourdon tube pressure element.

Types DA-31, DA-531, DS-231 have light gauge Bourdon tube for applications where pressures change slowly and without surge.

Types DA-21, DA-521, DS-221 have heavier gauge Bourdon tubes and check valve for pressures which surge or pulsate.

Types DA-31, DA-21 have minimum differentials as indicated and electrical capacity: 10 amp. 115 volts, 5 amp. 230 volts, and on order 3 amp. 440 volts.

Types DA-531, DA-521 have closer, minimum differentials: electrical capacity: 115 volts — 5 amp. ac. 2½ amp. dc; 230 volts — 2 amp. ac, 1 amp. dc.

Types DS-231, DS-221 are single adjustment type with very close operating differential. Electrical capacity: 115 volts — 0.3 amp. ac, 0.15 amp. dc; 230 volts — 0.15 amp. ac, 0.07 amp. dc.

All are single pole, single throw to OPEN circuit as pressure increases. If desired to CLOSE circuit as pressure increases add suffix (-3), such as DA-31-3, etc. Double pole and other circuits available on request. Also available semi-automatic with hand reset.

Diaphragm seals of stainless, monel, etc. also available.

Struthers-Dunn Relays

The ratings of all relays are conservatively based on non-inductive loads. Contacts will break 150% and carry rated load without overheating. Motor and lamp loads require special consideration because of high inrush (5 to 12 times normal).

Fine quality material is used throughout and each one is individually adjusted for correct wipe and pressure to assure maximum life. They are also adjusted for satisfactory operation at 15% under-voltage on a-c and 20% on d-c. Fine silver button contacts. Most relays can be furnished with any contact combination desired. Housings of various types are available if specified.

Midget Relays

These are small size, plain magnetic relays for general control applications.

Type B1XBX

Coils—Shunt: Up to 230 volts a-c., 60 cycles and up to 115 volts d-c. (Up to 230 volts d-c with resistor.)

Series up to 30 amperes a-c or d-c.

Contact ratings: A-c, 115 volts 6 amperes; 230 volts 3 amperes. D-c, 24 volts 6 amperes; 115 volts 0.5 ampere. Non-inductive loads.

Size base 2 3/4 x 1 7/8-in.

Instrument-Controlled Relays

For Two-Wire Instruments

Type BR5239

Recommended when a high voltage load circuit is the sole source of supply and the instrument is for low voltage. Thermostat should be of the quick make-and-break type.

Underwriters' approved.

Consists of relay and transformer mounted in sheet metal housing, with external binding posts for connecting to thermostat.

Type	A-C Rating, Amps. 115 V.	230 V.	Hp. Rating	Each
ARS71	20	20	1	\$19. 80
BRS239	6	3	1/3	13. 90

For Three-Wire Instruments

Separate Circuit

Recommended for use where low voltage control is available. Load and control circuits are isolated.

Type 8BXX50

Type	Contact Rating, Amps.		230 V.		Size, Base, In.	Each
	115 V.	D-C	A-C	D-C		
8BXX50	30	6	20	3	4 1/4 x 3	\$15. 10
B1BXX50	6	0.5	3	..	2 3/4 x 1 7/8	9. 20

Type RS73

For supplying low voltage to instrument contacts and relay coil where sole power supply exceeds voltage rating of instrument contacts.

Mounted in sheet metal housing, with transformer. External binding posts for connecting to thermostat.

Type	A-C Contact Rating, Amps. 115 V.	230 V.	*Hp. Rating	Each
RS73	20	20	1	\$23. 00
BRS240	6	3	1/3	15. 40

*Approved by Underwriters' Laboratories for motor loads specified.

For Three-Wire Instruments

For controlling heaters, refrigerator units, pressure devices, etc.

For use where control circuit and load are fed by the same line and where instrument contacts can handle the load circuit voltage. Instrument contacts make but do not break current.

Type B1MXX50

Type	Contact Rating, Amps.		230 V.		Size, Base, In.	Each

Struthers Dunn Relays

Mechanical Latch-in and Electrical Release Relays

Ideal for 3-wire or separate circuit control. Two-coil type, with mechanical latch for locking contacts in "operated" position until electrically released.

Coils: Continuous Duty.

Shunt—Up to 550 volts, 60 cycles a-c, up to 230 volts d-c. Series—Up to 30 amperes a-c or d-c.

Size base 4½ x 3¼ in.

Type	Description	Each
.5HXX46	S.P., S.T., D-B.	\$14.00
.5BXX46	D.P., S.T., S.B.	16.00
.5AXA46	S.P., D.T., S.B.	16.00

Ratchet Type Sequence Relays

Repeating Type (Round and Round)

These relays continuously repeat a pre-determined contact sequence.

Contact ratings: a-c, 115 volts, 20 amperes, 230 volts, 10 amperes, d-c, 115 volts, 1 ampere, 230 volts, 0.25 amperes, non-inductive.

Coils: Intermittent duty.

Shunt—Up to 550 volts, 60 cycle, a-c; Up to 230 volts, d-c. Series: Up to 30 amperes a-c or d-c.

Size base 5x3 in.

Sequence—"O" open contact, "X" closed contact.

Position	1	2	3	4	
XX—Contact	O—O	X—X	O—O	X—X	Then
XA—Contact	O—X	X—O	O—X	X—O	Repeat

Type	Description	Each
.85BXX	Double Pole, Single Throw	\$25.40
.85AXA	Single Pole, Double Throw	25.40

Midget Sequence Type

Coils—Shunt: Up to 230 volts a-c, 60-cycles and up to 115 volts d-c. (Up to 230 volts d-c with resistor.)

Series: Up to 30 amps a-c or d-c.

Non-inductive Contact Rating, Amps.

Type	A-C		D-C		Each
	115 Volts	230 Volts	24 Volts	115 Volts	
.11BXX	6	3	6	.5	\$16.00
.11AXA	6	3	6	.5	16.00

Emergency Lamp Control Relays

For automatically cutting in an emergency or standby lamp when main lamp burns out.

These common circuit relays are single pole with series coil and normally-closed contacts on weighted armature for gravity return to normal position.

Relay can also be connected to an auxiliary source of power (as storage battery) to switch the emergency lamp into the auxiliary circuit should the main line voltage fail or the main lamp burn out.

The voltage drop at contacts is practically eliminated by low resistance fine silver contacts.

Contact ratings: Emergency lamps, maximum watts—115-230 volts, a-c, 800 watts; d-c, 100 watts.

Size of base, front connected, 4x2¾ in.

Single Pole, Single Throw.

Type	Description	Each
.20XXA5	Single Break	\$8.60
.20XXH5	Double Break	8.60

Telephone Auxiliary Signaling Relays

For sustained signaling from telephone ringing circuit. Auxiliary signal remains on until relay is manually reset by pushing button in bottom of housing. For police and taxicab signals, etc.

Mechanical latch relay, ¾ Mf. condenser and push button mounted in cast iron housing and wired. Operates on 10 ma. at 90 volts, 60 cycles, with 7500 ohms impedance.

Contact ratings: 10 amperes at 115 volts a-c, 2 amperes at 115 volts d-c. Non-inductive.

When ordering specify type reset coil voltage and frequency (or d-c) and contact rating.

Type	Description	Each
A5XXH501W6	In Cast Iron Weatherproof Housing	\$49.60

For operating audible or visible auxiliary signals from telephone ringing current.

Relay and ¾ Mfd. condenser mounted in metal housing. Operates on 8 ma. at 90 volts, 20 cycles, with 9500 ohms impedance.

Contact ratings: 10 amperes at 115 volts a-c, 3 amperes at 115 volts, d-c. Non-inductive.

When ordering specify type and contact rating.

Type	Description	Each
4HXX56H3	In Sheet Metal Knockout Box	\$20.20
4HXX56W6	In Cast Iron Weatherproof Housing	36.00

Mercury Contact Relays

Solenoid Type

Recommended for high inrush loads (Motor-lamp, etc.) or dirt-laden atmosphere. Solenoid magnet assembly tilts mercury tube.

Contact ratings: a-c, 115 volts, 25 amperes, 230 volts, 20 amperes. d-c, 115 volts, 20 amperes, 230 volts, 10 amperes.

Coils—Shunt: Up to 550 volts, 60 cycles a-c. Up to 230 volts d-c. Series: Up to 30 amperes a-c or d-c.

Type	No. of Cont.	Normal Contact Position	Each
48AXX39	1	Open	\$29.50
48BXX39	2	Open	46.00
48XXA39	1	Closed	29.50
48XXB39	2	Closed	46.00

Sensitive Relays

Long life, fast operation and vibration resistant relays with low inertia and balanced moving parts result in high sensitivity.

Sensitivity, 0.015 watts, d-c, 0.19 watt-amperes at 60 cycles.

Can be furnished with interconnected coil and contact circuits for use with thermoregulators.

Single pole, double throw contacts on non-inductive loads rated 2 amperes, 115 volts a-c; 1 ampere, 230 volts and 0.25 ampere 115 volts d-c.

Base size, front connected, 2½x2¾-in.

Coils wound with wire up to 44 gauge—prices varying with wire gauge.

Type 112XAX—Single Pole, Double Throw. Available with double pole, double throw contacts.

For more complete information and prices contact Graybar for bulletin.

Struthers-Dunn Time Delay Relays
Repeating Type
(Round and Round)

Type APSY1

These timers continue to repeat the contact cycle as long as the motor remains energized. The single pole, double throw snap action contacts are individually operated by fibre cams mounted on a shaft. The cam shaft assembly is rotated by a single wound synchronous motor.

Contacts rated: For a-c—10 amperes, 115 volts; 5 amperes, 230 volts; 3 amperes, 460 volts—non-inductive, or 1/2 hp. on 115, 230 or 450 volt d-c motor load.

Size base 3 3/4 x 2 1/4 x 2 1/8 in.

Type	Description	Each
APSY1	One contact; Speed 1 rpm.....	\$16.00

We can also furnish other type timers, such as single cycle repeating, immediate recycling, etc.

Edwards General Purpose Relays
Single Pole
Contact Ratings

No.	Coil Volts 12 V. A-C	Coil Volts 24 V. A-C	Coil Volts 115 V. A-C	Coil Volts	Each

For Type A Surface Box on all 941 Relays, add to list \$8.25.

When ordering any of the above relays be sure to specify correct voltage for operation of relay coils—a-c or d-c (give cycles); contact arrangement—Front, Back or Front and Back; number of circuits contacts are required to open or close. Voltage and amperage contacts must handle. Is load inductive or non-inductive? Is relay to operate in series with any other device? Give any other information (or a sketch) of its intended use.

“Diamond H” Momentary Contact Toggle Switches

For Manual Control of Magnetic Switches, Relays, Etc.

No. 15009

A special switch for use with magnetic switches. Contacts are made of pure silver. Will fit all standard conduit boxes and takes a standard switch plate.

Packed 10 in a carton. 100 in a standard package. Package weight, 38 pounds.

No.	Description	Each
15009	Single Pole Double Throw Toggle Switch Normally Open.....	\$3.68

H-B Mercury Plunger Relays

For Street Lighting Control

Hermetically-sealed Relay mounted in a weather-proof housing of new and simplified design. Coil and load fuses and lightning arrestor, singly or in combination as desired, are optional and are mounted on heavy bakelite base measuring 3 3/16-in. x 6-in. x 3/8-in.

Complete unit is made in both normally open and normally closed types, and for either open or closed pilot circuits used in remote control of cascade lighting. Load fuses are 30 amperes, coil fuses 2 amperes. The lightning arrestor is in coil circuit.

Assemblies also furnished with wired leads, when specified, extending

12-in. below bottom of housing at slight extra cost. Flexible stranded copper leads with moisture-proof (Type TW or equivalent) insulation are used. No. 8 wire used for load circuit. No. 10 for coil (control) circuit. Mounted in cast aluminum housing.

Fuse on Load and Coil Circuits with Lightning Arrestor

No.	Load Circuit*	Induction Load Rating in Amperes		Coil Voltage	Wt. Lbs.	Each
		110 AC	220			
C-7496	N/O	30	20	110/60	4 1/2	\$22.75
C-7516	N/C	30	20	110/60	4 1/2	23.55

*N/O: Normally Open. N/C: Normally Closed.

If flexible stranded wire leads, which extend 12-in. below box, are desired, add suffix "A" to catalog number and add \$2.00.

Mossman Switches

BASIC CONTACT FORMS

All contact forms are shown unoperated. Almost any combination may be made of these contacts up to a maximum of 15 spring in each spring stack.

When ordering a lever turn or push button switch, please specify: Series Number, giving switch Series number to identify the basic construction; the contacts required, using the basic form letters illustrated; the location of each contact by the switch position (or station) number; the ampere rating (standard ratings are at 110 volts, a-c non inductive); and the type of action desired whether locking or non-locking. For Interlocking Push Button Switches, give the desired type of operation.

Mossman Switches

Custom Built Multiple Contact Leaf-Spring Lever, Push and Turn Switches

Action of Lever Switches

Two Position—Without Neutral or (O) Position

Three Position, Locking or Non-Locking

These switches are ruggedly constructed for reliable service. They are furnished with silver or other precious metal contacts in almost any combination of contact arrangement and mechanical action. They are regularly constructed for long life applications in radio transmitters, signal systems, fire alarm systems, test sets, industrial process controls, etc.

Series 4100 Heavy Duty Lever Switch

Affords great flexibility of circuit arrangement. Available in an almost unlimited series of combinations of contact assemblies and may be built up to suit specific requirements.

Contact Ratings:

Standard Heavy Duty—Fine silver contacts 3/16 in. diameter. Rated 10 amperes, 110 volts a-c, non-inductive.
 Extra Heavy Duty—Silver alloy contacts 5/16 in. diameter. Rated 20 amperes, 110 volts a-c, non-inductive.
 Phosphor bronze springs with solder-lug terminals. Frame tapped for 4 No. 4-40 machine screws, 5/8 x 1 1/4" centers.

Series 4103—Three Position: Locking or Non-Locking in active positions (Always locking in neutral position).

Series 4102—Two Position: Always locking in active position—has no neutral position.

Prices on application.

Series 4200 Lever Switch

Has many of the outstanding qualities of the Series 4100, but is lighter in weight and smaller in size.

Any combination can be made of the Basic Contact Forms.

Contact Ratings:

Standard Duty—Fine silver contacts 1/8 in. diameter. Rated 5 amperes, 110 volts a-c, non-inductive.
 Extra Heavy Duty—Fine silver contacts 3/16 in. diameter. Rated 10 amperes, 110 volts a-c, non-inductive.
 Phosphor bronze springs with solder-lug terminals. Frame tapped for No. 4-40 flat head screws, 13/16 x 1 1/8" centers.

Series 4203—Three Position: Locking or Non-Locking in active positions (Always locking in neutral position).

Series 4202—Two Position: Always locking in active position—has no neutral position.

Mossman Switches

Series 4803 Telephone Lever Key Switch

A high grade switch, more rugged than the average Telephone Key, designed for exacting applications in switching electronic,

communication, signalling and control circuits and for other purposes requiring more positive action.

Available with all Basic Contact Forms except F and G.

Has detent or arresting spring to eliminate "bounce" or false operation of the contacts when key is restored to neutral position.

Contact Rating:

Standard Duty—Code 4, 18 gauge welded Palladium; Rated 3 amperes, 110 volts a-c, non-inductive.

Nickel silver leaf springs, with tinned solder type terminals.

Polished black phenolic handles are standard. Mounts with 4—#3-48 oval head screws on 1/32" x 13/16" centers.

Series 4803—Normally three positions; locking or non-locking action available in the active positions. Locking always in neutral position.

Series 536 Illuminated Push Switches

Designed for use on illuminated panels. Standard 24 or 48 volt telephone switchboard lamps are used to illuminate push button; lamps are removable from front by

lamp extractor. Standard contacts are code 4, 18 gauge Palladium, welded on nickel silver springs in combination of all Basic Forms except F and G. Buttons available in red, green, blue, amber and yellow and clear, all snap fitted. Buttons may be engraved with desired characters.

4400 Push Type

4400 Turn Type

Series 4400 Short Frame Push and Turn Switches

These switches are more ruggedly constructed than the conventional

jack switch of this type. Fine silver contacts 1/8 in. diameter: Rated 3 amperes, 110 volts a-c, non-inductive.

Contact Forms A, B and C available in any combination.

Black plastic push buttons and pointer knobs. Complete with mounting hardware.

Push Switches

Series	Description
4400PNL.....	Push, Non-Locking
4400PL.....	Push Locking

Series 5600 Push and Turn Switches

For a variety of applications where panel space is limited in communication, signalling and instrument apparatus. Contacts are 3 ampere, 110 Volts A-C (non-inductive). All basic forms except F and G may be used.

Push Switches

Series 5600PL—Locking Series 5600PNL—Non-Locking

Series	Position 1	Position 2
5602TL-NT	Locking	No Throw
5602TNL-NT	Non-Locking	No Throw
	Three Position	
5603TL-L	Locking	Locking
5603TL-NL	Locking	Non-Locking
5603TNL-L	Non-Locking	Locking

Series 7700 and 7600 Switches

Provide for easy push button selection of multiple circuits in almost any combination. Molded nylon plungers mounted on phenolic rollers result in extremely smooth, easy operation. Each button depressed releases any previously operated station. Contacts of released station restore to normal before contacts of a newly operated station are actuated. Series 7600 has 5/8 in. plunger centers, series 7700 3/4 in. centers.

Furnished in standard construction with from 4 to 12 stations. Up to 24 stations in a single row on special order. Optional features available include Lock-out or "No-two-operate feature" to prevent operation of more than one station at a time; non-locking stations; accumulative locking stations and illuminated buttons.

Contact Rating—3 amp., 110 v. a-c (non-inductive). Basic contact forms A, B, C and D may be used in any combination to a maximum of approximately 10 springs per pile-up. Twin pile-ups may be mounted on each station to provide up to 20 springs per station. (Requires 3/4-in. plunger centers).

Give complete Series number, state the type of operation desired and the required contacts for each station. Stations are numbered from left to right viewing from the terminal end with contact springs on the upper side of frame.

G-E Photoelectric Devices

CR7505-K100 Photoelectric Relay

CR7505-K100G3
General-Purpose
Relay

The CR7505-K100 photoelectric relay and accessories provide a complete line of inexpensive but thoroughly reliable apparatus for general-purpose indoor photoelectric application. Some of the possible applications are counting, signalling, limiting, and protecting.

The CR7505-K100G3 includes a double-throw magnetic relay, with contacts rated 10 amperes, a-c. This relay is energized by an amplifier circuit which includes a GL-923 phototube and a GL-2050 thyratron tube. Power supply is 115 volts, 50/60 cycles.

The relay will operate, without any lens in front of the phototube, on a minimum of 40 foot-candles at the aperture, and will reset when the light intensity is reduced to 30 foot candles or less.

CR7505-K100 Accessories

Phototube Holder
CR7505-P211

Light Source
Transformer

Light source CR7505-C201G1 can be mounted on transformer Cat. No. 9T53Y8025 or on any standard 1/2-inch conduit. Light source CR7505-C203G1 may be used where operating distances are greater than nine-feet. CR7505-K100 power requirements are 10 volt-amperes.

Phototube holder CR7505-P211G1 is similar in appearance to the -C201 light source. The P211G1 is furnished with six feet of special phototube cable and a plug for connecting the tube socket in the relay. CR7505-P212G1 is similar in appearance to the -C203 light source. Because of its 3-inch lens it is used where greater operating distances are required. Like the -P211, it is furnished with special cable and plug but no phototube, since a phototube is included in the K-100 relay.

CR7505-K100 Photoelectric Relay

CR7505-K201G2, CR7505-K202G2
Photoelectric Relays

These photoelectric relays are suitable where higher sensitivity to light changes and/or higher operating speed is needed. The -K201G2 has a dust-tight/weather resistant enclosure and the -K202G2 has an explosion-proof/watertight enclosure.

They operate on either light increase or decrease, depending on the connections. A time delay may be added to make the relay insensitive to light change of short durations. They will operate from light flashes on interruption of 1/15 second between impulses, with not less than 1/15 second between flashes. They also have a maximum rate of 450 operations per minute. The d-c phototube circuit permits remote location of the phototube with no loss in sensitivity. Will operate from a 115/230-volt, 50/60 cycle power source with 10 volt-amperes power requirements.

The -K201G3 is the same as the -K201G2, except that it has a solid front cover for use with a remotely located phototube holder.

CR7505-K108G15 Photoelectric Relay

This device operates from a 115-volt d-c, or 25-cycle supply with a power requirement of 20-volt-amperes. The unit is mounted in a dust-tight and weather-resistant enclosing case for outdoor use. The cover of the enclosing case is fitted with a 3-in., lens and aperture for admission of light to the phototube. A metal visor is mounted over the lens to assist further in minimizing the effect of slanting sun rays. The relation of the lens and aperture is such that the operating light beam must be accurately aligned with the center of the lens and aperture behind it. Otherwise, the beam will not pass through the small aperture and will not reach the phototube. This system minimizes the effect of general daylight illumination, but the device must be so mounted that direct sunlight does not reach the lens.

The light source can be placed at a maximum distance of 35 feet from the phototube. A minimum illumination of 3-foot-candles is necessary to operate this relay.

115/230 Volts, 50/60 Cycles

- CR7505-N212G2 (Weather-resistant or Dust-tight)**

CR7505-N210G2
Photoelectric Relay
(Cover Removed)

CR7505-N211G2
Explosion-proof
Photoelectric Relay

These three photoelectric relays are identical in circuit design. They are especially adapted for photoelectric applications where a device must respond to rapid light changes or short pulses of light or darkness. The relays can operate as rapidly as 600 times per minute. Since the magnetic

relay would be energized for such a short duration, the time might not be sufficient to perform the external control operation desired (to flash a warning light, for example). A time-delay feature is provided to delay the dropout of the magnetic relay. This time is adjustable up to one-half second by means of a potentiometer dial.

While the photoelectric relay may be operated on either light increase or decrease, it may at the same time be used in either two ways, depending on the need. It may be resistant-coupled, allowing the relay to energize with a signal without de-energizing the relay until after the original light level at the phototube is restored. Or, it may be capacitive-coupled, allowing the relay to respond to rapid changes in light by energizing the relay and then de-energizing it, regardless of the value of the light level. The time-delay reset alone determines when the relay will de-energize. The relays will respond to light changes as small as 1/2 a foot-candle, providing there is sufficient light on the phototube.

Power Requirements are 60 Volt-amperes

G-E CR7505 Photoelectric Accessories

Light Sources

CR7505-C201

CR7505-C201
Light Source

The CR7505-C201G1 light source has a die-cast aluminum enclosure. The back cover is spring-clipped in place so that it is easily removable for accessibility to the socket. An adjustable mounting bracket permits mounting in almost any position. The unit can be mounted directly on 1/2-inch conduit. The CR7505-C201G2 is identical except that it is weather-resistant and dust-tight.

The CR8505-C201 light source can be mounted directly on top of the Cat. No. 9T53Y8025 transformer so that a completely assembled light source with transformer results. This eliminates the use of protected leads to the light source,

as connections can be made directly within the light-source enclosure.

CR7505-C203

CR7505-C203
Light Source

The CR7505-C203 is similar to the CR7505-C201G1, except that the lens is 3-in. in diameter and has a 4 1/2-inch focal length. CR7505-C203G2 is of weather-resistant and dustproof construction in accordance with NEMA specifications. It may be used on machines which must be washed down, provided that the unit is not directly subjected to the hose stream.

CR7505-C202

This light source is for indoor service. It is similar to CR7505-C201, except that an additional lens is added to provide a short-focus, concentrated beam of light. This unit will concentrate an intense spot of light approximately 1/4-inch in diameter at a distance of 2 1/2 to 4-inches in front of the lens. The appearance and dimensions are the same as the CR7505-C201.

CR7505-C208

CR7505-C208 Light Source

This light source is explosion-proof and can be made watertight by applying a rubber gasket, which is furnished. This unit has a self-contained step-down transformer for the automobile type No. 1323 pre-focused lamp which has a 25/50/60-cycle, 115/230-volt rating. It has a 3-in.-diam. lens which will accommodate the infrared filter CR7505-B201G1.

Order light sources by CR number. Light-source power requirements are 20 volt-Amp.

G-E Photoelectric Devices

Electronic Timers

These timers are electronic devices which provide either a time delay or timed interval after an external switch, contact, or interlock is operated.

Among their many applications are:

Immediate-start Timing

Accurate control of the time duration of operations such as paint spraying, electroplating, car washing, heat-treating, preliminary bag filling, photographic printing, delaying heat-treating or painted parts until paint fumes are exhausted, prolonging fire siren operation afterswitch is turned off, etc.

Delayed-start Timing

Accurate limiting of the time duration of a delay required for: shutting down belt conveyors if material-removal lag becomes excessive, preventing too frequent starting and stopping of a thermostatically controlled motor, etc.

Sequence Timing

Two or more timers in combination will accurately control the time durations of operations in a sequence such as: cutting time, drift time, or oscillations on bearing-grinding machines, several operations required in sequence on rod-coiling machines; steam scalding, hydraulic flushing on commercial potato-peeling machines; low speed, medium speed, high speed on centrifuges, etc. This sequence may be manually or automatically reinitiated (repeat sequencing).

All models have a contact rating at 115 or 230 volts, a-c of: 30 amp. inrush; 10 amp. carry; 10 amp. break.

Approximate shipping weight is 13-pounds.

No.	Timing Range Seconds		Contact Rating, Amp Break		Approx. Reset Time, Seconds		Each w/Tube

Note: Special ranges available on request.

*0.08 second minimum to 1.2 seconds maximum time ranged when used for immediate start operation.

†Has 0-100% time scale.

Infrared Filter Cap

This unit is a small cap which fits over the end of the lens barrel of the CR7505-C201, -C203 or -C208 light source to provide a practically invisible beam. The cap contains a filter glass which absorbs practically all of the visible energy radiated by the lamp, but permits the infrared energy to pass. The photoelectric relays are sensitive to this infrared energy. The sensitivity is reduced somewhat by adding a filter.

The CR7505-B200G1 is for 1½-in. lens; the CR7505-B201G1 is for 3-in. lens.

Phototube Holders and Infrared Filters

No.	Description	Use With CR7505-	Approx. Ship. Wt. Lbs.	Each

Electronic Relay

CR7511-A126G2

The CR7511-A126G2 electronic relay is used to obtain a reliable contact from the touch of two conductors through which only a small current can flow. It may be used as a floatless liquid-level control in water, acids, salts, beer, etc. to operate motors, lights, solenoids, and contactors whenever there is sufficient change in the resistance of a circuit.

The electronic relay is basically an electronic-tube amplifier, which consists of an electromagnet relay, an electronic tube, and a supply transformer. The components are mounted on a metal chassis, which fits into a standard weather-resistant and dust-tight enclosing case. Conduit knockouts in the case, with conveniently located large terminals on the chassis, greatly simplify installation.

The amplifier consists of an input or actuating circuit (the circuit which is to initiate the relay) and an output circuit which operates the electromagnetic relay. This relay is referred to as the anode relay, because it is in the anode circuit of the electronic tube. With the electronic relay connected for normal operation, the anode relay is circuit is closed as long as the contacts connected to the input circuit remain open. At the instant the input contacts are closed by a body having a resistance within the range of the input sensitivity for which the potentiometer is set, the anode relay opens.

When the electronic relay is connected for normal operation, a time delay is provided before the electromagnetic relay closes. This time delay depends on the external or actuating resistance. If the external resistance decreases greatly in value, the time delay is relatively short.

When the relay closes on an increase in the external resistance, the time delay depends essentially on the potentiometer setting. This time delay may be appreciable at high dial settings—particularly if the external resistance increased from a very low value.

The time-delay characteristics for reversed operation are similar. When the external resistance changes abruptly from a high value to a low one, the time delay will be quite short (Minimum 0.005 second); when the external resistance varies from low to high, the time delay may be much longer, depending essentially on the setting of the potentiometer.

115/230 Volts.

Frequency—50/60-cycles.

2 spdt output-relay contacts.

Price Includes Tubes.

No. CR7511A126G2..... Each \$80.00

Indoor Light-Source Transformer

These transformers may be used to supply low-voltage a-c to a 21- or 32-cp lamp in any one of the indoor light sources. They are rated 115/230 volts primary with a secondary voltage to provide approximately 1000 hours' life from either a 21- or 32-cp, 6-8 volt automobile lamp. A tap is also provided on the secondary to give approximately 3000 Hours' life from either a 21- or 32-cp, 6-8 volt lamp (with reduced illumination).

G-E Timing Devices

General Electric Timing Devices include 3 distinct product groupings: (1) Time Switches; (2) Interval Timers; (3) Time Meters.

The following table will be of assistance in selecting the proper type of timing device for the desired operation.

Time Switches

Use Time Switch Type	For Uses Requiring
TSA-47 and TSA-471	Regular-duty operation, related to hour of day, indoor use.
TSA-41	Regular-duty operation, related to hour of day, outdoor use.
TSA-40	Heavy-duty operation, related to hour of day, outdoor and indoor installation.

Percentage Timers

TSA-14, Percentage Timer	Repeating operation cycle, not related to hour of day (indoor).
--------------------------	---

Time Meters

KT-11, -12, -13, -14	Counting units of time-operating time of machines or electronic equipment.
----------------------	--

Complete Line of New Time Switches

Type TSA-40 Time Switch

No matter what the particular application, there is the right General Electric time switch to handle it. Now industry's only manufacturers of a complete line of general purpose time switches, General Electric's line can handle both indoor and outdoor jobs—regular—or heavy-duty—with up to 16 ON-OFF operations in a day.

Regular-Duty Indoor Time Switches

Type TSA-47 Time Switch

Used for a variety of timing jobs such as advertising signs, store windows, floodlighting, heating, air-conditioning, refrigeration and motor starting. Newest addition to General Electric's complete line, the TSA-47 is specially designed for flexibility on general purpose indoor timing jobs. For example, both double-pole and single-pole models are available. In addition, operations can be set as close as one hour apart with the TSA-47. You can get as many as 12 ON-OFF operations in a single day.

Gives heavy-duty protection, too. Contacts are rated at 35 amps., 240 volts per pole under tungsten—important for lighting loads. The TSA-47 will withstand 350 amps. of inrush current. This built-in protection is in both the 120-volt and 240-volt models.

Adjustable trippers are attached to the easy-to-read dial with thumb screws, actuate ON-OFF levers. Trippers for as many as 12 ON-OFF cycles may be placed on dial.

**Contact Rating Per Pole:
Spst: 35 Amps., Tungsten Load, 240 Volts A-C**

†Plain Dial.

‡Plain Dial with Omitting Device.

Order by catalog number and rating.

For 50 or 25-cycle operation add \$1.00.

For omitting device, catalog number 699X83, for installation in the field \$3.00.

Extra trippers—standard "ON" tripper, standard "OFF" tripper or special "OFF" tripper for omitting device actuation . . . \$0.25 each.

Switches can be supplied without case and cover, and with special mounting brackets, for convenient mounting in equipment.

G-E Regular-Duty Outdoor Time Switches

**Type TSA-41
Time Switch**

Ideal time switch for such jobs as street lighting, sign, store, floodlighting, irrigation and pump control, motor control, plus many other outdoor applications.

Has raintight case offering better protection against all types of weather. It has heavy-duty contact ratings of 35 amps., 240 volts per pole under tungsten load, in both 120-volt and 240-volt models.

As many as 12 ON-OFF operations per day can be set up on the easy-to-read dial. As on all other General Electric time switch, trippers can be set one hour apart.

**Contact Rating—35 Amps. Tungsten Load
240 Volts A-C**

G-E KT Time Meters

An ideal indicator for compiling operating time and shut-down time for plant utilization records, to provide proper servicing and preventive maintenance on machinery and electronic equipment.

A complete line of KT time meters for every time-measuring application—includes 2½-in. and 3½-in. sizes in either round or square case for panel mounting, conduit-type case, portable stand and also military sealed model.

Has 6-digit register—extra large counter numbers. Counter digits are 2½-times the size of those found in any other meter. White numbers on a black background to provide unexcelled readability. Last digit in contrasting colors to indicate tenths.

Die-cast zinc bezel and plastic case completely enclose the mechanism, providing a dust-resistant enclosure.

Panel models meet ASA panel mounting specifications.

Time meter has wide temperature operating range.

G-E KT Time Meters (Cont.)

Panel-mounted Case

Time meters for slush mounting on a panel board or in an equipment case. Die-cast zinc bezel with aluminized dial face. Available in 2½-in. and 3½-in. sizes, round or square cases; all models with or without reset knob.

Paragon Interval Timers

(Series 2900)

Self-Starting, Synchronous

A manually preset interval timer for industrial control of plastic moulding, batch mixing, rubber curing, conveyor operations and other applications. The timer mechanism is mounted to cover, with inner terminal block for easy installation.

All models are single pole, double throw.

Can be equipped with bull's eye, signal buzzer, stop-start switch, etc. at a slight additional charge.

Write us for prices.

Surface mount case 8 x 5 x 3⁵/₁₆ inches.

Shipping weight 5 lbs.

Paragon Time Switches

(Series 700)

Seven-Day Calendar Dial

Provides individual settings for each day in the week. An entire week's program can be set in advance, with Sunday and holiday cutout.

For automatic control of heating, ventilating and air-conditioning systems in public buildings, schools, churches, factories, etc. Also for control of machine tool warmup glue pots, linotype machines, etc., on weekly schedule in accordance with daily operating or working schedules.

The 7-day dial is large and easy to set. Operations can be set to occur as close as 3 hours apart.

Surface-mounting case — 12⁵/₁₆ x 6¹/₈ x 3⁵/₁₆ in. Shipping weight 10 lbs.

Note: For 25 or 50 cycle motors add \$1.00 to list price. One extra set of trippers furnished at no charge on request. Additional trippers \$0.25 per set of two.

Paragon Time Switches

3300 Series—Heavy Duty Outdoor Type

For Surface Mounting And Conduit Connections

Accurate, dependable time switch for countless outdoor applications. Designed for tough outdoor operations under extreme temperature variations.

Removable trippers on the 24 hour dial. Up to 7 "On-Off" operations per day are possible, with operations set as close as 90 minutes apart.

Motor sealed and lubricated for life.

Single-pole and double pole types available.

Dimensions: 9⁵/₈-in. high, 5³/₈-in. wide and 4¹/₂-in. deep.

Tork Time Switches

Economical Torkmaster

Turns any electrical circuit ON and OFF automatically.

30 Amperes, 3000 Watt per pole Incandescent Lamp Load Rating.

Twenty-four hour dial, 2 hour minimum setting, 15 minute adjustments.

Guaranteed 3 years.
120 Volt—60 Cycles.

No.	Switch	Each	No.	Switch	Each
948	SPST	\$10.95	954	DPST	\$12.95

Astronomical Dial Type

By automatically changing the ON and OFF operations to follow the daily changes of sun time, these time switches save their cost many times each year. ON time occurs at sunset—may be set to turn off between 10:30 P.M. and 1:30 A.M.—or at sunrise. Insures ON time occurring when needed with a maximum saving of kilowatt hours.

Completely mechanical—may be installed wherever convenient.

Extreme accuracy is obtained by providing different operating cams

for each 140 miles or 2° of North Latitude. Simple to set. Extra heavy duty motor. **Fully rated for incandescent lamp loads.** 120 Volt—60 Cycles. Specify city of use.

No.	Switch	Amps. Per Pole	Each
1191Z	SPST	35	\$28.95
1962Z	DPST	35	30.95
1963Z	3PST	25	39.95
1197Z	SPDT	15	31.95

Astronomical Skip-A-Day Types

Parking Lot lighting, yard and school protective lighting and similar applications require skipping Saturdays, Sundays and Holidays as well as the astronomic feature. 120 Volt—60 Cycles. Specify city of use.

No.	Switch	Amps. Per Pole	Each
1191ZSK	SPST	35	\$33.95
1962ZSK	DPST	35	35.95
1963ZSK	3PST	25	44.95
1197ZSK	SPDT	15	36.95

Program Dial Type

Provides multiple ON-OFF operations by means of trip tabs. Each tab provides ON operation for 15 minutes—adjoining tabs keep operation ON continuously. Many and varied ON and OFF times can be programmed to suit.

Special models available with dial speeds from one minute to one week.

Contracts rated 10 Amperes.
120 Volt—60 Cycles.

No.	Switch	Dial	Each
801	SPST	24-Hour	\$19.95
801SK	SPST	Skip-A-Day	\$24.95

Optional Features

Any Tork Time Switch can be equipped with optional features listed below, except as otherwise noted.

240-volt operation, add prefix "2-" and \$2.00.

20-Hour Reserve Power Unit to provide accurate timing during power outage, (all 24 hour models except Torkmaster), and suffix "-L" and \$35.00.

Standard Line Time Switches

This "High Quality" line features solderless lug terminals taking wire size down to No. 6 without bending and knockouts at top of case as well as sides, bottom and back for easy installation.

Separate manual On-Off levers. Heavy Duty all brass gears.

Twenty-four-hour dial, 45 minute minimum, 15 minute adjustments.

120 Volt—60 Cycles.

No.	Switch	Amps. Per Pole	Each
1191	SPST	35	\$13.95
1962	DPST	35	15.95
1963	3PST	25	24.95
1197	SPDT	15	16.95

Skip-A-Day Dial Type

Designed for commercial lighting, heating, air conditioning and other applications where working hours are regular five or six days a week and it is desired to "skip" operation on Saturdays, Sundays or Holidays.

Equipped with a seven-spoke calendar wheel in addition to the 24-hour dial, which rotates one revolution per week. Selection of the day or days of the week on which operation is to be omitted is made by simply inserting by

hand knurled knob screws into the tapped hole of the appropriate spoke.

Fully rated for incandescent lamp loads.

Twenty-four-hour dial, 45-minute minimum, 15-minute adjustment. 120 Volt—60 Cycles.

No.	Switch	Amps. Per Pole	Each
1191SK	SPST	35	\$16.95
1962SK	DPST	35	18.95
1963SK	3PST	25	27.95
1197SK	SPDT	15	19.95

Seven Day Dial Type

Permits individual ON-OFF times for each day of the week as well as omitting any day. This is necessary in all commercial installations where working hours vary such as stores and shopping centers.

Minimum setting 2 hours.

Fully rated for incandescent lamp loads.

120 Volt—60 Cycles.

No.	Switch	Amps. Per Pole	Each
7D1191	SPST	35	\$21.95
7D1962	DPST	35	23.95
7D1963	3PST	25	32.95
7D1197	SPDT	15	24.95

Flush enclosure, add suffix "-FL" and \$15.00.

Waterproof outdoor enclosure, add suffix "O" and \$15.00.

Raintight enclosure, (all models except 3 pole) add suffix "-R" and \$10.00.

Sangamo Time Switches

All Sangamo time switches are powered by a Sangamo Synchronous, high-torque, self-starting, low-speed 450 rpm. motor, unaffected by extreme high temperatures. Fine quality, carefully machined and inspected parts, with all metal parts corrosion resistant. Manual operation of switch does not affect subsequent automatic operation.

Types L and W

For heavy duty, and continuous service under widely varying installation requirements. The basic time switch units can be adapted to a wide range of applications by addition of special features available.

Type L

Type W

Case: Pressed steel, gasket sealed against dust, gray enamel finish. Size: 10¼ in. high, 5¼ in. wide, 4 in. deep. Four multiple knockouts, with ample wiring space.

Operation: Two pairs of time-setting levers. Minimum ON period 30 minutes; minimum OFF period 90 minutes.

Standard Motor Voltage 120 or 240 Volts, 60 Cycles, A-C.

Poles	Throw	A-C Amp. Per Circuit	Type L		Type W	
			No.	Each	No.	Each
Single	Single	35	L11	\$31.70	W11	\$55.70
Double	Single	35	L21	35.00	W21	59.00
Triple	Single	6	L31	42.00	W31	66.00
Single	Double	35	L12	35.00	W12	59.00
Double	Double	6	L22	39.00	W22	63.00
Triple	Double	6	L32	45.00	W32	69.00

Approximate shipping weight 7 lbs.

Type L—Synchronous

Synchronous motor drive, accuracy depends entirely upon frequency and continuity of power supply.

Type W—Synchronous-Carryover

Combines synchronous timing with reserve spring clock operation, providing accurate timing during power outage up to 10 hours duration, and eliminates resetting the dial.

Types LY and WY—Two Circuit

Type LY

The timing mechanism, general construction and other features are identical to that of Types L and W standard switches, but made to control independently two separate circuits. Minimum ON period 30 minutes; Minimum OFF period 2½ hours.

When furnished with omitting device or astronomic dial, both ON operations occur together, while OFF operations are separate.

Poles	Throw	A-C Amp. Per Circ.	Type LY		Type WY	
			No.	Each	No.	Each
Single	Single	35	LY-11	\$43.00	WY-11	\$67.00

Type B Time Switch

Powered by low-speed, hysteresis motor same as used in heavy duty switches. Single-pole, single throw construction. Equipped with silver contacts and a service-tested timing mechanism that runs quietly and efficiently, needs no maintenance.

Dead front safety construction, housed in all-steel case with hinged cover and sealable hasp; no glass to break. Overall dimensions: height, 7¼ in., width 4¼ in.,

depth 3⅞-in. Shipping weight 2 lbs., 3 oz.

Type SR and SJ Time Switches

Type SJ

Synchronous, self-starting, low speed 450 rpm. motor. Precision made gears. Single pole, single throw contacts operated by lever action.

Type SR provides conduit k.o. on bottom, pryout on back, mounts on wall or switchbox.

Type SJ supplied with 6 foot plug-in cord and built-in receptacle for portable use. For operation in upright position.

Height 5⅝-in. high, 3⅞-in. wide, 3⅞-in. deep. Type SR weight 2 lbs. Type SJ 2¼ lbs.

No.	No. of Operations	A-C Rating at 120 V.	A-C Rating at 240 V.	Each
B	2 ON and 2 OFF	30 Amp.	15 Amp.	\$13.50
SR	2 ON and 2 OFF	15 Amp.	15 Amp.	13.50
SJ	1 ON and 1 OFF	10A. or ¼ HP	15.75

Type T—Interval Timers

Type T

These timers are for controlling attic fans, unit heaters, air conditioners and appliances.

Provide an automatic OFF operation following a manually-set ON period.

For operation in upright position. Contacts are single pole, single throw, normally open.

For 120 Volts, 60 Cycles, A-C.

Type T for switchbox or wall installation.

Type TJ has 6-ft. plug-incord and built-in receptacle for portable use.

Base: Pressed steel, ivory finish; Plaskon cover. Size: 5⅝ in. high, 3 in. wide, 3⅞ in. deep. Shipping weight 2 lbs.

No.	Interval	A-C Rating	Shp. Wt. Lbs.	Each
T-12H	15 min. to 12 hrs.	15 amp.	2	\$13.50
T-30M	1 min. to 30 min.	15 amp.	2	13.50
TJ-12H	15 min. to 12 hrs.	10 amp. or ¼ Hp.	2¼	15.75

Astronomic Dials

Automatically turns lights on at sunset and off at sunrise, compensating progressively day by day for the change in the seasons. Off operation can also be set at any time between 9:30 P.M. and 2:15 A.M. Reversed On and Off switch operations available.

Dials furnished as original equipment on Types L, LD, LY, W, WY and TC time switches. Space limitations prevent its use on Types B, SJ and SR time switches.

Astronomic Dials for latitudes 20°, 27½°, 30°, 32½°, 35°, 37½°, 40°, 42½°, 45°, 50°, 52°, add \$14.00.

G-E Dry-Type General-Purpose Transformers

Type M—For Indoor and Outdoor Service
Type D— For Indoor Service Only

Type M Single-Phase transformer For Indoor and Outdoor Application

Small Type D Single-Phase Transformer for Indoor Application only

Type M transformers are totally enclosed, making them suitable for installation outdoors or where protection from dust and moisture is needed. Type D transformers are enclosed by louvered case and are suitable for indoor installation only.

Types M and D utilize Class B insulation and are designed for continuous operation in a 40 C. ambient with a temperature rise of 80 C.

The following table shows the NEMA standards and levels which Type M quiet transformers are designed to meet.

KVA	NEMA Standard, Decibels	Quiet Type M, Decibels
3-7.5	50	40
9-30	55	45
37.5-112.5	60	45
150	65	45

Widely used in commercial and industrial applications for supplying appliance, lighting, and power loads from 240, 480 and 600 volt distribution circuits. No vaults required, transformers can be located right at the load to provide correct voltage for the application.

Type M dry-type transformers 600 volts or below, single-phase and three-phase, 10 kva or less, 25 to 60 cycles, are listed by Underwriters' Laboratories Re-examination Service in the classification of Power Transformers.

For General Light and Power Service Indoor or Outdoor, Type M—3 to 500 Kva.—600 Volts and Below Indoor Only, Type D—Single-Phase—60 Cycles

Used to reduce the voltage of 240, 480 or 600-volt distribution circuits to supply 120 or 240 volt loads.

Primary 120/120 Volts—Secondary 120/240-Volts

*Wherever possible, 240/480—120/240 volt transformers should be ordered in preference to these units, to obtain stock shipment.

†These transformers are provided with (4) 2¹/₂% rated kva taps below normal. 25, 37.5, and 50-kva Type D transformers can be wall-mounted by the use of hangers.

G-E Transformers for General Light and Power Service

Indoor or Outdoor, Type M—3 to 500 Kva—600 Volts and Below Indoor Only, Type D—Three-Phase—60 Cycles

Type M Three-Phase Transformer
For Indoor and Outdoor Application

Small Type D Three-Phase Transformer for Indoor Application only

Used for general light and power applications to supply and insulate 208Y/120 volts from 480 or 600-volt circuits.

These Type M three-phase transformers consist of main and teaser connected and sleeved together to form a single unit. Designed for wall mounting.

Type D three-phase transformers, because of their size and weight, are recommended for platform or floor mounting. However, units rated 75 kva and below can be wall-mounted by use of the hangers.

Three-phase voltage transformation is often made with three single-phase transformers connected as a three-phase bank. Each single-phase unit is one-third the bank kva rating. For example, three 50-kva single-phase, 480 to 240-volt transformers can be connected as a 150-kva, three-phase bank, 480 volts delta to 240 volts delta.

G-E Autotransformers for General Light and Power Service

Indoor or Outdoor, Type M—Three-Phase—60 Cycles—5 to 25 Kva

Type M Autotransformer
For Indoor and Outdoor Application

More economical and smaller than transformers designed to carry the same load. Within their voltage limitations, they will perform the same function as transformers, with the exception of insulating two circuits.

These autotransformers can be used to obtain 120 volts from a 240-volt circuit, to derive a neutral on a 240-volt, 2-wire circuit, or to balance a 120/240*-volt, 3-wire circuit.

May also be used in banks on poly-phase circuits.

Input 120 or 240 Volts, Output 120 or 240 or 240/120 Volts, 3-wire, 60 Cycles

Kva Output Cont. 80 C Rise	Model No. 9T-	Type	Approx. Dimensions—			Approx. Ship. Wt. Lbs.	List Price Each

G-E Quiet Transformers for Commercial Buildings

600 Volts and Below—Single-Phase and Three-Phase—60 Cycles

Type M Single-phase transformer for commercial building Applications

Type M single-phase transformer for indoor and outdoor Application

Small Type M three-phase transformer for commercial building Application

Large Type M three-phase transformer for commercial building Application

These transformers are designed for a noise level of 45 decibels or below, making them suitable for installation in commercial buildings, such as hospitals, libraries, offices, hotels, and other locations where population is dense. Some of the single and three-phase units, 15 kva and below, are also listed as part of the standard line dry-type transformers for

general light and power service.

The basic noise level of a transformer does not necessarily determine the noise in a given installation. Noise is transmitted through the air and the structural parts of the building, so care must be exercised when mounting the transformer.

G-E B-B Transformers for Boosting and Bucking Applications

Single-phase and Three-phase—50 and 60 Cycles

B-B transformer for indoor or outdoor service

Provide an economical and convenient means for boosting or bucking voltage on single and three-phase circuits. They are compact, light in weight, and can be easily installed for indoor or outdoor service.

Employed primarily for boosting single-and three-phase circuits by connecting them as autotransformers. When used as autotransformers, the voltage change is small and the kva load they can handle is large in comparison to their physical size.

The transformers with series-multiple 12/24-volt secondary windings are suitable for a wide variety of applications. In addition to boosting low circuit voltages to rated voltage, they can be used as transformers to supply 12 or 24 volts, 2-wire or 24/12 volts, 3-wire; also as autotransformers to supply 132 or 144 volts from a 120-volt supply, or 252 or 264 volts from a 240-volt supply. Two or more units can be used in various combinations to obtain many other special voltages.

0.025 to 2 Kva—Single-phase—60/50 Cycles

Features

Lighter Weight

Smaller Size

All-Welded Construction

New Frame-size Concept

Better Lamination Protection with
"Inset Core" Construction

Diagrammatic Name Plate

Numbered Leads and Terminals

Class B Insulation Throughout

Ample Wiring Space

Pressure-vacuum-impregnated Core
and Coil

New standard control-transformer line. Open and enclosed units

Many of these G-E control transformers (particularly those with 12/24 and 16/32 volt secondaries) provide an economical and convenient means of boosting or bucking voltage on single-phase or three-phase circuits. They are compact, light in weight, and can be easily installed. These transformers have both the primary and secondary windings

arranged for series-multiple connections.

With B-B transformers connected in series or in multiple, a 5, 10 or 20 per cent boost is possible. Because of the small voltage change required in such applications, the output of these small transformers is exceedingly large in comparison with their physical size.

G-E Standard Control Transformers

0.025 to 2 Kva—Single-phase—60/50 Cycles

Ordering Information

Listed below are model numbers for the G-E standard control-transformer line. Select from either of the first two tables the volt-ampere rating you need and match it with the voltage rating you require. This will give you the transformer frame size. Model numbers within a given frame size and construction type have the same mounting and overall dimensions. Model numbers, together with their prices and other pertinent selection data, are listed in the last table on this page.

G-E Autotransformers for General Light and Power Service
Indoor or Outdoor Type
0.5 to 3 Kva—Single-phase—50/60 Cycles

Small Control Autotransformer

Fig. 1

These autotransformers can be used to obtain 120 volts from a 240 volt circuit, to derive a neutral on a 240 volt, 2-wire circuit, or to balance a 120/240* volt, 3-wire circuit. They also may be used in banks on polyphase circuits.

Model No.	Voltage Rating		Va Output	Frame Size	Approx. Dimensions In. (See Fig. 1)					Approx. Ship. Wt. Lbs.	List Price Each

G-E Autotransformers for Boosting Voltage of Grounded Circuits
5 to 45 Kva—Three-Phase—60 Cycles

Three Control Autotransformers make One three-phase bank

The autotransformers listed below are designed primarily to boost the voltage of a three-phase secondary network system where the neutral is available and solidly grounded. They give the desired voltage at the minimum cost. Because of their small physical size as compared with the kva output of the bank, a very compact installation neat in appearance can be obtained.

Autotransformers of the bank ratings listed consist of three units with three leads brought out of each unit. Each bank of transformers consists of three separate units to be individually mounted.

3 Separate Units Per Bank—Dimensions and Weights are Per Unit
208Y volt 3-phase Transformation

Note: When ordering autotransformers, care should be exercised that the installation will meet local electrical inspector's requirements.

G-E Control-Panel and Machine-Tool Transformers

230/460 and 230/460/575 volt Primaries—0.050-1.5 Kva
115 and 115/95 volt Secondaries—60, 50/60 Cycles

Panel mounted machine-tool transformer (G1)

These transformers have been designed for use by panel manufacturers, as well as those machine tool manufacturers who fabricate their own panels.

Features

Full compliance with all electrical requirements of NEMA and JIC standards.

Low regulation.

Compact design saves panel space.

Rugged construction—built specifically for machine-tool operation.

Ease of mounting helps reduce installation costs.

Low price helps you keep overall equipment costs down.

Wide Range of Ratings

More than one hundred different machine-tool transformers.

Eleven volt-ampere ratings: 50 to 5000 va.

Two frequency and primary-voltage combinations:

60 cycles, 115 volts—for domestic use.

50/60 cycles, 115/95 volts—for domestic or export use.

Five construction combinations: 50 to 150 va.

Seven construction combinations: 300 to 1500 va.

“Customer-specified” Accessory Groups

Machine-tool and panel transformer accessories available in seven different groups. The basic standard transformer ratings are available with fuses, circuit breakers, or leads.

The selection of one of these accessory groups gives the panel-board or machine-tool purchaser exactly the transformer he requires.

Group 1 (Model No. Suffix G1)

Basic transformer equipped with terminal boards. Primary and secondary terminal boards of Textolite* material. Top quality copper terminals suitable for spade, closed, or open terminal ends, as well as stripped leads. No wrapping necessary. Leads held firm in contact with terminals as screw is turned down. Boards mounted as integral part of core-and-coil assembly.

Entire unit is compact, yet terminal arrangement allows ample connection space.

Series-multiple ratings include brass terminal links on primary board for simple changes from series to parallel connections.

Note—Units in this group may be ordered without “G1” as a suffix to the basic model number.

*Registered trade-mark of General Electric Co.

G-E Control-Panel and Machine-Tool Transformers

**230/460 and 230/460/575 volt Primaries—0.050-1.5 Kva
115 and 115/95 volt Secondaries—60, 50/60 Cycles**

“Customer Specified” Accessory Groups (Con’t)

Group 2 (Model No. Suffix G2)

Basic transformer equipped with terminal boards; fused secondary.

Primary and secondary terminal-board arrangement of Textolite material as in Group 1, with the addition of a fuse* on the secondary board.

Sturdy fuse clips provide firm, vibration-free contact.

Group 3 (Model No. Suffix G3)

Basic transformer equipped with terminal boards; circuit breaker in secondary.

Primary and secondary terminal-board arrangement of Textolite material as in Group 1, with the addition of a high-shock circuit breaker mounted on the secondary board. Fully accessible for quick resetting.

Group 4 (Model No. Suffix G4)

Basic transformer equipped with secondary terminal board; primary leads out.

Secondary terminal boards as described in Group 1. Eight-inch, stranded primary leads are stripped 1/2-in. for easy connection.

Group 5 (Model No. Suffix G5)

Basic transformer equipped with terminal boards and 2-fuse board.

Primary and secondary terminal-board arrangement of Textolite material as in Group 1.

In addition, a 2-fuse* Textolite board is mounted on top of the transformer for easy access to fuses.

*Fuses not included with these transformers.

Group 6 (Model No. Suffix G6)

Basic transformer equipped with terminal board and 4-fuse board.

Primary and secondary terminal-board arrangement of Textolite material as in Group 1.

In addition, a 4-fuse* board of Textolite material is mounted on top of the transformer for easy access to fuses.

Group 7 (Model No. Suffix G7)

Basic transformer (leads out). Basic core-and-coil transformer with 8-in. stranded leads out. Leads are stripped 1/2-in. for easy connection.

G-E Voltage-Stabilizing Transformers

For Indoor Service

Dry-Type—Single-Phase—60 Cycles

Standard line of G-E Voltage-Stabilizing Transformers, rated from 15 VA to 10,000 VA.

These transformers give stabilized output voltage within $\pm 1\%$ with input voltage variations of $\pm 15\%$ when operating at rated load and 1.0 power factor. They provide a dependable source of constant output voltage for applications such as radio transmitters, laboratory testing equipment, precision electrical processes, or wherever voltage must be held within close tolerances despite wide fluctuations in the supply voltage. These transformers are totally insulated and are for indoor service only.

Limitations

When considering voltage-stabilizing transformers for applications involving three-phase supplies, varying frequency sources, half-wave rectifiers, high starting currents (motors, relays, etc.), or where there is a need for nearly sinusoidal voltage wave shape, consult Graybar.

Volt-Amp Output Capacity	Voltages		Mode No.	Approx. Wt., Lb.		Net Price Each

*These can be connected for either 115- or 230-volt operation, but they cannot be connected 3-wire.

Jefferson Signaling Transformers

Listed as Standard by Underwriters' Laboratories, Inc.

For operating alternating current bells, horns, gongs and signaling systems.

Enclosed in a heavy metal case with primary and secondary wiring compartments having knockouts on sides and end. Screw terminals for quick and easy installation. All have secondary voltages: 4-8-12-16-20 and 24.

Primary 115 Volts, 50/60 Cycles.

No. 231-101

No.	Cap. V.A.	Max. Sec. Current at Any Volt.	Length In.	Width In.	Depth In.	Wt. Lbs.	Each

231-111	100	4 amp.	7 ¹¹ / ₁₆	4 ¹¹ / ₃₂	4	9	22.80

Jefferson Door Bell & Chime Transformers

No. 230-201

Each Transformer listed has a Universal Mounting. By a simple "one-two" method, they will lock firmly into any outlet box or cover plate and are equipped with mounting feet for open wiring installation on post, wall or ceiling.

Primary - 115 Volts - 50/60 Cycles. Dimensions - (In.) 2¹/₂ x 1⁷/₈ x 2¹/₈. Weight - ³/₄ lb.

No.	Model	Wattage	Secondary Voltage	Each

Jefferson Machine Tool Control Transformers

No. 636-101

Window frame type construction, with use of heavy clamping bolts, assure quiet operation under normal operation. Exposed core type construction affords efficient heat dissipation.

No. 10 screw terminals accommodate Nos. 12 or 14 wire. Terminals securely fastened to coil withstand heavy screwdriver pressure. All terminals accessible from front.

Jefferson Power Circuit Transformers

Dry Type — Double Wound

No. 240-201

No. 244-411

All transformers are provided with brackets for quick installation at points convenient to the load to be serviced. Also possesses suitable large knockouts for conduit on both sides, bottom and back.

Transformer core is securely clamped on all four sides by a continuous window frame type of bracket. Exposed core type of construction affords efficient heat dissipation while permitting a substantial reduction in overall transformer dimensions.

Doubly impregnated with highest quality polymerizing varnish. Varnish is highly resistant to moisture, never softening under operating heat conditions nor ever tending to become brittle.

System Analyzer Add-a-Phase Power Converters

Operates 3 phase motors from single phase lines at 100% rated load and with balanced currents.

This power converter is an autotransformer type phase converter, designed to efficiently operate 3 phase motors on single phase 208-220 volt lines. Balanced currents can be maintained for specified loads up to 125% of rated horsepower.

Manufactured in ratings of 1 to 30 horsepower, the Add-A-Phase is matched in horsepower for the individual motor. Can be used in conjunction with several motors if two-thirds of the connected load is started, maintained and stopped simultaneously and the name plate rating is not exceeded. Autotransformer phase converter can be adjusted for smaller motors than its rating.

Available with built-in magnetic starter. Add MC to model number. Available in several types with modifications. Contact Graybar for full information.

T-P Phasing Units

T-P Special

T-P Super

All advantages of a three phase motor can be available by incorporating a T-P Phasing Unit with a three-phase motor and standard fusible motor control. Utilizes all protective devices of a controller.

The Standard Unit is approximately 85% of rated nameplate horsepower. The Special and Super Units allow full 100% of nameplate.

Available in two models that can be adjusted to produce accurately balanced current in three phases by simple adjustment of transformer output and capacitance.

The SPECIAL Unit is suited for variable load equipment which does not have to be started under full load. External transformer taps and capacitor terminal board make it easy to balance phase currents for desired installation.

The SUPER Unit is similar to the Special except is designed where heavy duty operation is required. Particularly adaptable for use with air conditioners, irrigation pumps and similar equipment.

Dry-type Induction Voltage Regulators
Hand-operated, Motor-driven and Automatic

Hand-operated

Motor-driven

Automatic

Automatic Inductrol with separately mounted control panel

Poor Voltage Drags Down Plant Efficiency

Type of Equipment	Effect of Undervoltage	Effect of Overvoltage
Incandescent Lamps	10% undervoltage cuts light output 30%—slows production.	10% overvoltage cuts lamp life 70%—triples replacements.
Fluorescent Lamps	10% undervoltage cuts light output 10%—may fail to start.	Life unpredictably and drastically shortened, depends on starts, ballasts, etc.
Mercury Vapor Lamps	10% undervoltage cuts light output 15 to 25%—lamps may go out.	Even 5% overvoltage overheats lamp—shortens life. May damage lamp transformer.
A-C Motors	Causes overheating—increases maintenance costs.	Decreases power factor—increases power costs.
Resistance Heaters	10% undervoltage cuts heat output 19%—slows production.	Causes severe overheating—high replacement costs.
Electronic Devices	Drastically cuts tube life. May destroy gas-filled tubes.	5% overvoltage cuts tube life 50%—high replacement costs.
Infrared Processes	Lengthens process time—slows production.	Causes blistering or scorching—increases manufacturing costs.

G-E Inductrol* Voltage Regulators

Typical
Inductrol Stator

An induction voltage regulator designed for industrial use. Can be used to accurately hold constant load voltage when supplied from fluctuating supply voltage or, can be used to provide a variable load or utilization voltage from a relatively constant supply voltage. Either of these functions can be automatically controlled, or can be manually controlled by means of motor drive or hand crank.

Consists basically of a laminated steel stator, on which is wound the regulating (series) winding, and a laminated steel rotor on which is wound an exciting (shunt) winding. By changing the position of the rotor, the magnitude of the voltage induced in the series winding is controlled, adding or subtracting from the supply voltage to produce the required output voltage.

Features

Higher reliability because there are no brushes to wear out or to cause maintenance trouble. Simple and rugged, the induction principle of operation provides an infinite number of voltage steps.

The Inductrol voltage regulator does not introduce harmful wave-form distortion.

Has no effect on the output voltage of Inductrol voltage regulators.

Voltage automatically held to within $\pm 10\%$ band width. Compensating controls on the Inductrol voltage regulator make it unnecessary to continually reset voltage level.

Electrically, the Inductrol voltage regulator will withstand up to 25 times normal currents.

Will withstand a 100% overload for one hour, while maintaining excellent long-life operating characteristics.

Typical Applications For Inductrol Voltage Regulators

TV Transmitters	Air Conditioning
Radio and Radar	Simulated Flight Trainers
Equipment	Calculators
Induction Heaters	Office Machines
Lighting	X-Ray Equipment
Radar	Laboratory Equipment
Resistance Heaters	Welders
Rectifiers	Film Processing
Crane Control	Wire Enameling
Heat Treating	Equipment Testing
Electrolytic Processes	Instrument Calibration
Blueprinting	Carrier Telephone
Spectographs	Equipment
Corona Detection	Motor Speed Controller
Photoengraving	

*Registered trade-mark of General Electric Co.

Note: Information on Inductrol voltage regulators for other ranges of regulation are available on request.

Automatically Operated Inductrol Voltage Regulators

Ideally suited for maintaining constant voltage on long secondary runs, supply lighting or power, especially where wide variations in load occur on various circuits, as in mills and factories, large office and apartment buildings. Where lighting and power are both supplied from the same bus, these Inductrols will compensate for change in power load, maintaining illumination at normal level.

Standard automatic Inductrol regulators are adjusted at the factory to hold output voltage within band width of $\pm 1\%$. Within $\frac{1}{2}$ second after voltage goes outside this band width, correction is initiated by the Inductrol regulator. Since the time of operation from the maximum lower position to the maximum raise position is 45 seconds, the time required to make a correction depends on the magnitude of the voltage deviation. On the average feeder, the majority of corrections are completed in approximately one second.

Automatically operated Inductrol voltage regulators can also be used for the following: a-c voltage control; a-c current control; rectifier control for d-c output voltage; rectifier control for d-c output current; temperature control; electronic control for mobile applications; vernier control for wide-range induction regulators; process control for cyclic industrial processes.

Hand-operated and Motor-operated Inductrol Voltage Regulators

Provide a convenient source of variable voltage for the calibration of meters, relays, and other instruments, also for testing vacuum tubes.

When used in circuits supplying high-voltage transformers, they facilitate the control of the applied voltage while tests on insulating materials are being made.

Offers smooth control of light for such applications as theater ceilings, photoprinting, blueprinting, etc.

Current-transformer and Oil-circuit-breaker Testing combined with high-current transformers provide variable current for testing current transformers, tripping mechanisms of oil circuit breakers, and the current-carrying capacity of contacts.

Particularly valuable for industrial processes, such as the control of resistance furnaces and induction furnaces.

May be used wherever a smoothly variable voltage source is needed. Inductrol regulators for these applications are usually arranged for 100% raise and 100% lower regulation; that is, they vary the supply voltage uniformly over a range from 0 to 200% of normal.

Inductrol Power Pack

Inductrol Power Pack, including a lighting transformer (Type D), and Inductrol (dry-type Induction Voltage Regulator), and a distribution panel board.

General Electric also builds an Inductrol Power Pack (combining a regulator, a transformer and circuit breakers) for circuit regulation where lighting and power voltages are different.

G-E Switchgear

The General Electric Company produces a complete line of switchgear equipments and component devices consisting of hundreds of items. A number of these items are listed in this catalog with complete information. Following is a list of many other standard items and the publications describing their

applications and characteristics. Upon receipt of a request, accompanied by a statement of your application requirements, a quotation and necessary descriptive matter on any of these items will be gladly supplied.

G-E Low-Voltage Drawout Switchgear

With Type AK-1 Air Circuit Breakers

Interrupting Ratings—15,000 to 150,000 Amperes

600 Volts Maximum—3-phase, 3-wire, 60 Cycles

Installation view of a metal-enclosed, low-voltage, drawout air-circuit breaker switchboard.

Application

These equipments are available for indoor or outdoor service, for 600 volts maximum, in interrupting ratings of 15,000 to 150,000 amperes, for a-c 2-phase or 3-phase or d-c 2- or 3-wire circuits.

Features

- Completely metal enclosed.....
- Easily removed breaker, drawout relays and meters.....
- Co-ordinated switchgear components.....
- Complete primary and secondary control assembly; factory built.....
- Standard unit construction.....

Advantages

- Maximum protection to personnel; fire hazard minimized; long life.
- Easy to maintain; short outage time; lightweight installation.
- Balanced engineering and design. Interchangeability of breakers reduces outage time for maintenance.
- Lower over-all installation cost and purchasing expense; a finished tested job.
- Low initial cost; flexibility in application; easy future expansion; simplifies station planning; high salvage value. Saves system investment.

They incorporate the latest improved features to provide inexpensively for the safe and reliable control of 600-volt (or less) a-c generators, power transformers, incoming and outgoing feeder lines, synchronous and induction motors and motor branch feeders which may be used for general power and lighting service in power plants, municipal and industrial installations, and such "commercial" structures as office buildings, banks, hotels, theaters, department stores, hospitals and educational and public buildings where the interrupting rating requirement for the breaker does not exceed 150,000 amperes.

The reliability in service of low-voltage air circuit breakers, combined with their ease of operation and economy in initial installation cost and maintenance, has resulted in their general acceptance and adoption as the standard practice for the control of a-c circuits and apparatus rated 600 volts or less.

As a consequence, the application of low-voltage air circuit breakers to the universally accepted and generally preferred metal-enclosed type of switchgear equipment has made similar progress, resulting in the production of the standard metal-enclosed low-voltage a-c switchgear equipments described in this section.

In the general design of this class of equipment, the anticipated requirements for the comprehensive field of their application has been carefully studied, and to provide properly for such application, all the advantages and outstanding constructive features have been fully incorporated in these standard equipments.

These equipments are of the highest quality manufactured, and may be relied upon to give sufficient and satisfactory service for many years, with minimum maintenance attention and expense.

G-E Service Protectors

Type LB-1

Combines a high-capacity switch with current-limiting fuses for service-entrance and feeder applications in buildings by using power from networks or high-capacity 120/208 or 277/480-volt systems.

It is a properly co-ordinated combination of interruptor-switch and current-limiting silver-sand fuses, possessing many outstanding features, including a quick-make, quick-break operating mechanism.

Economical and practical circuit-protective and switching device for circuits capable of 200,000 amperes RMS symmetrical short-circuit current.

Type AK-1-25 Dead-front Switchboard Mounting

Type AK-1-50 General-purpose Enclosure, for Indoor Wall Mounting

Type AK-1-100, Dead-front Switchboard Mounting

Application

Recommended for use in general industrial and switchgear applications. Suitable for severe service, where numerous opening and closing operations are required for general power and lighting circuits, and motor-starting service.

Features

Small size, compact arrangement. Short-time rating equal to interrupting rating. Improved multislotted contact design. Individual unit-pole construction simplifies maintenance. Pole units are mounted on metal plate, providing maximum fire resistance between front and back of breaker. Variety of enclosures. Complete line of accessories.

Mounting or Enclosure

Dead-front Switchboard

Breaker is not enclosed, except for arc quenchers. Dead-front steel plate not furnished, except as an accessory.

General-purpose, for Indoor Mounting, NEMA Type 1

Breaker is mounted in a steel enclosure. For indoor use only. AK-1-15, -25, and -50 wall-mounted, with easily removable breaker element, including terminal connectors.

AK-1-75, and -100 floor-mounted, stationary, with removable covers.

Semi-dust-tight Enclosure, NEMA Type 1A

This enclosure is similar to the general-purpose enclosure, with the addition of a gasket around the cover and escutcheon.

Weatherproof, NEMA Type 3

Easily removable breaker is mounted in a weatherproof steel enclosure, including terminal connectors. For indoor or outdoor use.

Dust-tight, Watertight, NEMA Types 4 and 5

Easily removable breaker is mounted in a heavy-duty, welded-steel-plate enclosure with gasketed door, including terminal connectors.

Explosion-proof, NEMA Type 7

Breaker is mounted in a heavy-duty cast-iron enclosure, including terminal connectors. Suitable for Class 1, Group D hazardous locations.

*Prices apply only when accessories are mounted at factory.
 †Included with electrically operated breaker.
 ‡Includes 4-contact auxiliary switch.

Prices Include

Manually Operated

- Trip-free breaker, mounted on a metal base, with:
 - *Dual-magnetic time-overcurrent trip unit per pole. (Characteristic 1B furnished unless otherwise specified; see "Tripping Characteristics.")
 - Arc-quenchers.
 - Push-button mechanical trip.
 - Position indicator.
 - Provision for up to three padlocks (for locking breaker in the trip-free position).
 - Bolted-type terminal connectors (enclosed breaker).
 - Revolving pistol-grip operating handle.
 - Selected enclosure (except breakers for dead-front switchboard mounting).

Electrically Operated

- Same as manually operated breaker (except omit handle), plus:
 - Electric closing mechanism with closing relay.
 - Shunt-trip device.
 - Four-contact auxiliary switch.
 - Push-button closing switch.
 - Maintenance closing handle.
- *Normally one overcurrent trip unit will be omitted if reverse-current device (see "Accessories") is furnished, since both units mount in the same location. In special cases, the reverse-current device can be mounted on a breaker housing three overcurrent units, but the size of breaker base or enclosing case will be increased.

Tripping Characteristics

Time-current characteristics produced by individual elements of Type EC-1 trip device for Types AK-1-15, 25, and -50 breakers. For characteristics of AK-1-75 and AK-1-100 breakers, consult your G-E distributor.

Dual-Magnetic Trip

The overcurrent trip unit of the AK-1 breaker is of the dual-magnetic type. It consists essentially of an electromagnet which is excited by the current in a series coil, and a pivoted laminated-iron armature which is normally restrained by a spring whose tension can be increased or decreased by means of a calibration knob which, when set, indicates the tripping current values. The calibration range is from 80 to 160 per cent of the breaker rating.

Movement of the armature is further restrained by a piston in a sealed, fluid-filled cylinder, the armature is linked to the piston which is accurately machined and provided with a calibrated orifice for controlling the flow of the fluid. The piston fits into an accurately machined cylinder which is completely sealed to keep out all dirt. The movement of the piston is restrained by the flow of the silicone fluid through the orifice. Continuous overcurrent exerts a magnetic pull on the armature until it and the piston have traveled their full stroke, thus tripping the breaker.

The linkage between the armature and piston is connected by a heavy adjustable restraining spring. At currents exceeding 15 times normal breaker rating, the magnetic force exerted upon the armature is sufficient to overcome this heavy restraining spring and instantaneously trip the breaker without waiting for the piston to move.

The entire overcurrent trip device is assembled into a molded phenolic case and all external adjustments are thoroughly insulated from energized parts.

*Switches are constructed to use removable noninterchangeable handles. No other listed handle can be used to operate the switch.

†Switches are available for mounting on panels 1/8 to 2 in. thick. Model No. are listed only for the 1/8 in. thick panel; for other thicknesses, Model No. are derived by substituting the appropriate suffix no. following the "X" in the Model No. The suffix no. indicates the number of 1/16 in. panel thickness. For example: 3 = 3/16 in.

‡Fixed operating handles are included in switch Model No. and price. Removable handles must be ordered, and priced, separately.

§"Off" position furnished on switch, but not engraved on escutcheon plate.

•These meters are equipped with palladium contacts.

Note: Switches other than those listed are available. Information on application.

G-E Control Switchboard Components

Type SB-1 Control and Transfer Switches

†Switches for Hazardous Locations

**For Class I, Group D 250 Volts, D-C—500 Volts, A-C
For Panel Mounting (Specify Panel Thickness)**

It is recommended that where SB-1 switches are to be operated in explosive atmospheres that they be enclosed in explosion-proof housings. The front, or switch-support section of the housing is made so that sufficient size of conduit opening is provided to accommodate the maximum number of control wires, as determined by the switch connections.

Fig. 3. Explosion-proof box with cover on

The tank or cover section is made in three lengths, to accommodate:

- (a) A maximum of 4 stages.
- (b) A maximum of 8 stages.
- (c) A maximum of 12 stages.
- (d) Switch may also be furnished with removable handle or lock handle.

Any standard spring-return or sustained-contact Type SB-1 switch, with fixed handle, having a maximum of 12 stages, may be assembled with a housing as illustrated in Fig. 3.

Stages	SB-1 Switch and Explosion-proof Housing Poles	Outlet for Std. Pipe Thread, inches	Approx. Shipping Weight Lbs.	Net Price, Each, Includes Switch and Housing
1	Single-pole, double-break, or double pole, single-break . . .	1/2 or 3/4	9	\$64.00
2	Double-pole, double-break, or four-pole, single-break		9	66.00
3	Triple-pole, double-break, or 6-pole, single-break		10	68.00
4	4-Pole, double-break, or 8-pole, single-break		10	70.00
5	5-pole, double-break, or 10-pole, single-break	1 or 1 1/4	16	72.00
6	6-pole, double-break, or 12-pole, single-break		16	74.00
7	7-pole, double-break, or 14-pole, single-break		18	76.00
8	8-pole, double-break, or 16-pole, single-break	1 1/2 or 2	18	78.00
9	9-pole, double-break, or 18-pole, single-break		23	80.00
10	10-pole, double-break, or 20-pole, single-break	1 1/2 or 2	24	82.00
11	11-pole, double-break, or 22-pole, single-break		25	84.00
12	12-pole, double-break, or 24-pole, single-break		25	86.00

†This control is designed to conform with the standards of the Underwriters' Laboratories, Inc., but has not been tested or listed by the Laboratories.

Control and Transfer Switch Housings

**Watertight, Dust-tight or Oil-immersed
For 600 Volt Service (Fig. 4)**

For flat surface vertical mounting, the top support is common to three sizes of tanks. Small — for 1 to 4 stages; Medium — for 5 to 8 stages, and Large — for 9 to 12 stages, or for 13 to 16 stages. Top support will be drilled and tapped to accommodate conduit or pipe of 1-inch maximum iron pipe size.

The same housing can be used for immersing the switches in oil when they are exposed to gaseous or explosive atmospheres. For such applications a 1 3/4 inch spacer is used to lower the switch contacts into the oil in the tank, and the number of stages per housing is one less, as indicated in table.

Fig. 4

Net Price per housing any size, when sold with SB-1 Switch **\$42.00**

Watertight or Dust-tight	Number of Stages	Switch Oil Immersed	Dimensions in Inches (Fig. 4)	
			A	B
	1-4	1-3	10 7/8	7 1/16
	5-8	4-7	16 7/8	10 1/16
	9-12	8-11	22 7/8	13 1/16
	13-16	12-15	28 7/8	16 1/16

Control and Transfer Switch Housings

Fabricated Metal — For 600 Volts

Fig. 5

For wall or flat — surface mounting. Made in five sizes to accommodate switches of 1 to 6 stages, 7 to 9 stages, 10 to 12 stages or 13 to 15 stages. Knockouts can be provided for pipe or conduit connections.

Type SB-1 switches mounted in these housings require different terminals. Therefore, if switch is ordered separately, requisition should specify "For mounting in fabricated housings."

Net Price per housing, any size, when sold with SB-1 switch **\$14.00**

No. of Stages	Dimensions in In. (Fig. 5)	
	A	B
1-6	8 21/32	5 1/2
7-9	10 29/32	7 3/4
10-12	13 5/32	10
13-15	15 18/32	12 1/4

*Reducer necessary for smaller sizes.

G-E Control Switchboard Components

Type PK-2 Test Blocks and Plugs

For use with proper test equipment to facilitate the testing of a-c instruments, meters and relays. For mounting on switchboard panels.

Test Blocks are 4-pole and 6-pole jacks provided with Textolite covers having internal plug contacts which make a through connection when the cover is in place. The contacts in the blocks are of the line-pressure type and provide positive contact with minimum contact resistance. For all current circuits auxiliary contacts are used which automatically short-circuit the current transformer when the cover or plug is removed.

Test Plugs are provided with studs and links, and can be permanently connected to the testing equipment for any of the various test methods in use.

Routine testing is accomplished by simply removing the cover and substituting the properly connected test plug; normal connections are restored by replacing the cover.

Contact rating, 250 volts, 10 amperes continuously.

Fig. 1
4-pole block with cover

Fig. 2
4-pole test plug

Explanation of Listing

With each test block and cover is included a set of unmounted auxiliary contacts, jumpers and screws in sufficient quantity and variety to provide the combinations to suit any testing application desired—typical arrangements are shown in Fig. 10 to 15 on next page. There are also included mounting screws, nuts for the studs, and (for blocks for mounting on 1/8-1/2-inch panels) bushings for the studs. Test-plug links may be ordered by referring to No. V-2453076.

G-E Control Switchboard Components

Type PK-2 Test Blocks and Plugs

Fig. 9. 6-pole block with jumpers and connectors

The above illustration shows a composite assembly of a 6-pole test block with auxiliary contacts and jumpers, as follows:

- No. 1—Auxiliary contact (Cat. No. 6179685G3) used as a bridge to maintain the circuit during the period that the cover or the plug is not in place. Without this connection, loss of revenue is possible because of interrupted operation if the replacement of the cover or plug is long delayed.
- No. 2—Auxiliary contact (Cat. No. 6179685G2) to short-circuit the current transformer when the cover or plug is not in place.

- No. 3—Jumper (Cat. No. 6179685G4) to be used in connection with auxiliary contact No. 2 or No. 4, to serve the same purpose as No. 2 in short circuiting a current transformer, or to inter-connect phases when the cover-fastening stud is to be by-passed.
- No. 4—Auxiliary contact (Cat. No. 6179685G1) equal to one pole of contact No. 2, to be used in connection with jumper No. 3 as shown in Fig. 9. If all poles are to be interconnected, as indicated in Fig. 15, contact bars No. 2, with jumpers No. 3 would be used.

Fig. 14

With auxiliary contacts No. 2, for current circuits

Fig. 15

With auxiliary contacts No. 2 and Jumper No. 3, for current transformer short circuiting

NOTE—All test blocks are supplied with a sufficient quantity of auxiliary contacts and jumpers for any connection shown above.

Interchangeability of Type PK-2 with Type PK-1

Test blocks Type PK-2 can be surface-mounted on insulating panels in the PK-1 drilling, or surface-mounted on steel panels in the PK-1 drilling plus two small holes for mounting screw bolts. PK-2 plugs, 4- and 6-hole are interchangeable with PK-1 plugs.

However, the base of the PK-2 is 1-inch longer than that of the PK-1, therefore it may not always be possible to mount the PK-2 blocks in the same location as the PK-1.

G-E Control Switchboard Components

Types ET-5 and ET-6 Indicating Lamps

Application

For application where good visible indication, long lamp life, and low wattage consumption are desirable. They can be used for signal-light indication or in combination with control switches to show circuit-breaker position.

Description

Devices include G-E telephone lamp, Type T-2, slide base, rated 24 v., 0.032-0.038 amp. Special Code 24X lamp, Cat. No. 59X243, used in ET-15 device, is suitable for use in Type ET-6 also. However, the standard Code 24E lamp included with the Type ET-6 device, cannot be used in the Type ET-5 combination. Screw-type color caps, easily removed, are used and give positive indication. Color of cap desired should be specified when ordering.

The resistor element slides over the receptacle body from the rear. The complete device has provision for soldered or clamped connections.

Features

Each unit is compact and simple in construction. Requires only one hole for panel mounting.

Series resistor prevents the possibility of a short circuit from a broken lamp filament, thus eliminating the need for special fuses and assuring long lamp life.

Low-wattage consumption results in economy and cool operation.

Telephone Type T-2, slide base 24 v. lamp is used and is available the world over.

Color caps are designed for max. visibility and are available in six basic colors: red, green, yellow, blue, white, and clear.

Terminals are readily accessible and have facilities for soldered or clamped connections.

The new Type ET-6 lamp has a molded base and is designed for mounting in panels up to 1/4 in. thick. It is similar in appearance to Type ET-5 lamp and is interchangeable with the ET-5 on thin-panel applications.

G-E Terminal Boards and Covers

Fabricated Types EB-5 and EB-6

Fig. 1. 4-pole board Type EB-5 without short-circuit strips, Cat. 6422482G4

Fig. 2. 4-pole board Type EB-5 with four short-circuit strips, Cat. 6352652G1

Fig. 3. 4-pole terminal board Type EB-6 with hinged cover in place, Cat. 6422494G104

Application

To be applied wherever leads are brought to any part for permanent or temporary connection, especially if many wires are involved.

Description

Type EB-5 are fabricated terminal boards. Each is equipped with the necessary washer-head binding screws for circuit wire connections, and also a white marking strip for circuit identification (See Notes A and B below). To mount, drill for No. 10 screw. Board will accommodate wire sizes No. 18 to No. 10 inclusive.

Type EB-6 are fabricated terminal boards of the same construction and dimensions as Type EB-5, except that clamp-type connectors are furnished for circuit wire connections. Boards will accommodate wire sizes No. 18 to No. 10 inclusive.

Boards are available with from 2 to 18 points, except those with short-circuit strips.

*Each board is furnished with a total of 4 short-circuit strips to provide for a total of 3 current transformer secondary circuits connected Y with grounded neutral. The short-circuit strips can be easily removed or added as required.

Molded-Type EB-4

Molded-composition terminal boards make possible neat, compact arrangements on the back of the switchboard. Especially desirable where a large amount of small wiring is necessary on the back of the switchboard and will be found very convenient for attaching the wires, not to exceed No. 8 in size. Each stud is furnished with four pronged washers.

Fig. 4. 6-point terminal board, Cat. No. 2860351G3

600 Volts

†Cat. No.	‡No. of Studs	Dimensions in Inches (Fig. 4)		Approx. Ship. Wt. Each, Lbs.	Net Price Each
2860351G1	2	1 1/4	1 3/4	1/4	\$1.55
2860351G2	4	2 1/2		1/2	1.75
2860351G3	6	3 3/4		3/4	2.10

†Boards for more than six circuits to be made up of combinations of 2-, 4-, and 6-stud boards.

‡When ordering, use Catalog Number.

Note A—Unless specified on the order, each board will be shipped with an all-white Fibre marking strip.

Note B—On request, we can furnish a bi-plastic marking strip (black on one side, white on the other, or all black) suitable for engraving or marking.

G-E Auxiliary Relays

Types HGA and HMA

Fig. 1. HGA11A, back-connected

Instantaneous in operation, positive in action and attractive in appearance.

Application

These relays are available for many applications, both on a-c and d-c circuits. They can be applied where several circuits are to be closed or opened as a result of closing one set of contacts in a protective or actuating relay. Where more than two circuits are to be controlled, the coils of two or more relays may be connected either in series or parallel on d-c, or parallel on a-c to obtain the desired results.

Features

Contacts are silver-to-silver, double-pole, double-throw (two normally open, two normally closed). Textolite base of high insulating qualities, molded in one piece, impervious to moisture. Cover, also of black Textolite, is held in place by two spring clips, easily removed and replaced.

Back-connected relays, with covers or front-connected relays without covers can be provided. The front-connected are generally used in enclosures where the back of panel is inaccessible.

†Type HGA—Heavier Duty—Larger

12HMA11B Series—Net, 1; Shipping, 2.

*For 25- or 50-cycle relays use same price as listed for corresponding 60-cycle relay. See "Ordering Directions."

†To obtain glass in cover of HGA relay add suffix letter "G" to Model No. and add \$0.85 to selling price. Example: Model 12HGA11A58G, selling price \$17.45. (This feature not available in HMA relays.)

‡Within plus or minus 10%.

Ordering Directions

Order d-c and 60-cycle a-c relays by Model No. For 25- or 50-cycle relays order "Similar to Model No." (give 60-cycle No., except state for 25- (or 50-) cycles).

If relays are to be mounted on a steel panel, specify "with short studs" and order as a separate item, insulating bushings for each live stud. (These bushings are furnished without charge when ordered with the relay.)

Unless otherwise specified, back-connected relays with short insulated studs suitable for steel panels up to 1/4-in. thick will be furnished.

Operation and Characteristics

Operation—These relays have an operating coil and an opening spring. When the coil is energized, the hinged armature is attracted, closing the normally open contacts and opening the normally closed contacts.

Characteristics—Both the a-c and d-c relays are normally adjusted to pick up at 80% of rating (hot). This is approximately 60% of the rating for d-c relays (cold), because the coil resistance changes with heating. The a-c relays will drop out at approximately 40 to 50% of normal voltage; the d-c at 2 to 10%.

These relays will withstand a 10% increase in voltage without injury to the operating coils.

Ratings of contacts—The current-closing rating of the contacts is 30 amperes. The current-carrying rating is 12 amperes continuously or 30 amperes for one minute. The interrupting ratings are listed in the following table.

Interrupting Ratings of Contacts in Amperes

Contact-circuit A-C	Volts D-C	Type HGA		Type HMA

General Electric Load-Center Unit Substations

The New and Improved Way of Distributing Low-voltage Power in Industrial Plants, Commercial Buildings, and for Power-Station Auxiliaries.

A G-E load-center unit substation, with Pyranol transformer and metal-enclosed drawout air circuit breakers, installed indoors at load center

Load center distribution has many big advantages. Elimination of long secondary cable runs, which cause voltage drop, results in better voltage conditions. Proper voltage at point of use means improved motor performance, bright and steady lights.

G-E metal-enclosed load-center unit substations are completely factory-engineered and factory-assembled and are shipped ready to install. They can be installed either indoors or outdoors, put underground in vaults, on the roof, on balconies, or in production areas, in a space that is otherwise unused.

Save Time — Only one purchase transaction is necessary. They can be selected and ordered quickly and easily from a line of standard units and standard arrangements that fill all requirements of a broad range of applications. The units are shipped in two or three complete sections ready to be bolted together and connected to power cables. They are standardized, completely assembled and wired at the factory — no special knowledge being required by purchaser's men to install or disconnect for removal to new locations.

Greater Safety — All live parts are metal-enclosed. Circuit breakers of adequate interrupting capacity insure adequate circuit protection. Pyranol, a noninflammable cooling and insulating liquid is normally used in the transformer, providing safety for indoor installations.

Flexibility — A wide variety of high- and low-voltage switching equipment is available, including oil, Pyranol or dry-type transformers, and circuit breakers for either manual or electrical operation, making these substations adaptable for practically every need.

Appearance — Compact and modern in appearance. No skeleton steel framework or exposed equipment. They require much less space than the old type.

Industrial Lighting — When the industrial load is not heavy, the same load-center unit substation which supplies motor power can be used. Dry-type lighting transformers (capacities 5-25 kva), which step 480 volts down to 120 volts can be mounted or hung any place in the plant to supply the lighting load.

Ratings — These unit substations serve loads 600 volts and below (208Y/120, 480 volts, etc.) from incoming lines up to 15 kv.

A complete unit substation may consist of metal-clad incoming-line section with magne-blast power circuit breakers, a Pyranol (or dry-type, or oil-filled) transformer section, and a low-voltage feeder section with drawout air circuit breakers.

Here is the modern equipment to help insure an adequate power supply at all times — more important now than ever in the light of present conditions.

We will be glad to help you select a low-cost load-center unit substation to meet all your requirements. Other apparatus can be combined in one of these units if, for instance, you need the addition of a power rectifier. For further information ask GRAYBAR for Bulletin GEA-3592

G-E Distribution Center Unit Substations Sectional Type

**Primary: 15,000 Volts or Less, Delta Connected.
 Secondary: 600 Volts or Less, Delta or Wye Connected.
 Transformer: Liquid Filled, 112½ Kva and above;
 Dry type, 300 Kva and above**

Provides a completely metal-enclosed, co-ordinated substation for indoor or outdoor installations. Used to step primary voltages in the range 601 through 15,000 volts down to more effectively utilized ratings of 600, 480, 480Y/277, 240, or 208Y/120 volts.

Usually eliminates the need for expensive, space-wasting vaults or transformer rooms.

Provides the additional power needed for extra motors, air conditioning, and increased lighting loads without disturbing existing high-voltage lines and existing substations.

Can be effectively used in small plants, warehouses, railroad terminals, airports, hospitals, office buildings, schools, and light-duty areas in utility systems. Helps assure safety for men and equipment, reduces maintenance costs, and lessens possibility of production shutdowns.

Easily installed. Components shipped separately as packaged units. It is simply necessary to spot equipment in desired location, bolt together, and make necessary electric connections. The low-voltage section control center or switchboard can be located remotely from the rest of unit and connected by G-E Type LVD feeder busway.

The equipment steps down incoming line voltage to a voltage suitable for serving utilization loads and for supplying power to various loads through individual feeder circuit protective devices.

Incoming power can enter transformer section either directly through a cable terminal compartment or through an interrupter device. Interrupter device enables the customer to disconnect substations from incoming line. Incoming line may consist of any one of the following: Terminal compartment; Cutout, fused or unfused; Unfused air interrupter switch; Fused air interrupter switch; Liquid-filled switch; Unfused air selector switch or Fused air selector switch.

The transformer section steps primary voltages of 2400 through 13,800 volts down to utilization voltages of 240, 480, 600, 208Y/120, or 480Y/277 volts and feeds the low-voltage section. The transformer section contains the transformer with primary and secondary leads as well as provisions for changing taps on the primary side. There are four approximately 2½ percent rated kva taps, two above and two below rated primary voltage. There are three types of transformers: Pyranol filled for installation indoors or outdoors; Oil-filled for use outdoors or in approved vaults; Open-dry for indoor use in clean, dry locations.

In some applications, a transition or metering section may be used.

The Low-Voltage Section may consist of a free-standing switchboard of either the fusible or circuit breaker type; free-standing distribution panelboard, either fusible or circuit breaker type; or a general purpose type motor control center.

Note: For further information contact Graybar.

G-E Distribution Centers Integral Units

One compact unit of three co-ordinated components: an incoming-line section, a transforming section, and a low-voltage outgoing section consisting of a stationary molded-case feeder-breaker panel. Ideal for supplying up to 500 kva of power to light-load areas, either indoors or outdoors. This type of distribution center offers the additional advantage of having the low-voltage section integral with the transformer housing.

Incoming-Line Section: May consist of simple terminal compartments or high-voltage switch. Three types of high-voltage switches are available: air switch (fused or unfused), oil cutouts (fused or unfused), and liquid-filled switch (unfused).

Transforming Section: May consist of oil-filled, Pyranol filled, or open or sealed dry-type transformer. The transformer primary is rated 2400-15,000 volts and the secondary is rated 600 volts or less. There are four 2½ percent full-capacity externally operated taps, two above and two below normal.

Low-Voltage Section: Consists of a panel containing stationary molded-case air circuit breakers, manually operated, with thermal-magnetic overcurrent protection and clamp-type terminals.

Standard Transformer Ratings Available

KVA Oil-filled Pyranol Open Dry	Delta-connected Incoming Line Voltages	Outgoing Feeder Voltages
.....	2400
75	4160	120/208Y
112½	4800	240 Delta
150	6900	480 Delta
225	7200	480Y/277
300	12000	600 Delta
500	13200
.....	13800

G-E Load Center Units

A load-center unit substation is a completely co-ordinated factory-built equipment for stepping down primary voltage and protecting and switching low-voltage (600 volts and less) power-distribution circuits. The equipment is contained within a grounded metal enclosure. The sections (incoming-line, transformer, and outgoing) are designed to be easily and quickly bolted together at the point of installation. Unit offers advantage of drawout low-voltage circuit breakers. Available in indoor or outdoor units, 300 to 2000 kva.

The sections are:

Incoming-Line Section: May consist of simple terminal compartments or high-voltage switch. Three types of high-voltage switches are available: air switch (fused or unfused), oil cutouts (fused or unfused), and liquid-filled switch (unfused).

Transforming Section: May consist of oil-filled, Pyranol filled, or open or sealed dry-type transformer. Transformer primary is rated 2400-15,000 volts and the secondary is rated 600 volts or less. There are four 2½ percent full-capacity externally operated taps, two above and two below normal.

Low-Voltage Section (outgoing): For the connection of one or more outgoing low-voltage feeders. Outgoing feeders are protected and switched by drawout Type AK magnetic air circuit breakers.

Standard Ratings For Utilization Voltage

Standard Primary Voltage Ratings	Drawout Switchgear Construction	
	208Y/120 240	480, 480Y/277 600
2400	300KVA	300KVA
4160	500KVA	500KVA
4800	750KVA	750KVA
6900 or 7200	1000KVA	1000KVA
12000	1500KVA
13200	2000KVA
13800

**I-T-E Unit Substations
Indoor Construction**

Available in liquid and dry types, indoor and outdoor. Conventional secondary unit substation rating from 75 to 2000 kva., primary voltage—14,400 and below; secondary voltage—600 volts and below. Primary unit substations having higher kva. and voltage ratings are also available.

Engineered, built and tested as one complete, coordinated unit. Obtainable in any combination of switchgear and transformer types to meet individual requirements.

Provides efficient means of stepping-down primary voltages to utilization values.

**I-T-E Metal-Clad Switchgears
Indoor Construction**

Metal enclosed for indoor or outdoor installations. Voltage ratings of 5, 7.5 and 15 kv., through 2000 amps. continuous, with interrupting ratings from 50,000 to 500,000 kva.

Provides safe, centralized electrical protection and control in industrial plants for incoming power lines, feeder and transformer circuits, heavy synchronous and induction motor drives.

Circuit breakers are properly coordinated with main buses, relays, meters, instruments, instrument transformers and other devices to form a complete unit designed to meet exact requirements.

I-T-E Metal Enclosed Switchgears Indoor Construction

Low voltage, metal-enclosed drawout switchgear offers complete protection, indoor or outdoor, for voltages through 600 volts. Completely enclosed, self supporting structures containing one or more removable air circuit breakers and their associated equipment provide maximum service continuity and personnel safety.

Ideally suited as a centralized distribution system for low voltage power and lighting networks and may be installed in or above the production area for maximum space economy.

Square D Switchgears

High Voltage Metal Clad Switchgear

To control the high voltage circuits popular in so many modern distribution systems Square D offers Metal Clad Switchgear using high voltage switches to provide a safe, convenient and economical means for handling high voltage power.

Voltages up to 15,000 volts.

Incoming and outgoing cable terminations—potheads if required.

Load break air interrupter switches—fused or unfused.

High voltage main bussing.

Components completely enclosed in $\frac{1}{2}$ -in. steel housing.

Standard depth 54-in., height $91\frac{1}{2}$ -in.

Facilities for high voltage metering.

Low Voltage Metal Enclosed Drawout Switchgear

For increased system reliability and easier equipment maintenance on systems up to 600 volts, Square D offers Low Voltage Metal Enclosed Switchgear. Drawout construction enables large air circuit breakers to project from their enclosures for quick, safe inspection, adjustment or replacement.

Air circuit breakers up to 4000A mounted on pantograph type drawout mechanisms in isolated compartments.

18-in. wide section accommodates 4 LA-25 (600 A.) or LA-15 (225 A.) air circuit breakers.

26-in. wide section accommodates 3 LA-50 (1600 A.) air circuit breakers.

34-in. wide sections for 3000 A. breakers, 40-in. for 4000 A. breakers.

Instruments and meters on hinged door of isolated compartment.

Silver plated bussing braced for at least 50,000 A.

Standard depth 54-in., height $91\frac{1}{2}$ -in.

Weatherproof enclosures for outdoor applications.

Square D Switchgears Low Voltage Drawout Switchgear

Circuit breakers projected from individual compartments on pantograph drawout mechanisms.

Back of projected breaker is beyond front of enclosure for easy inspection of drawout contacts and compartment interior.

Outdoor Low Voltage Drawout Switchgear

Standard indoor switchgear inside weatherproof housing.

Doors—front and rear.

“Walk-in” aisle space inside enclosure in front of circuit breakers.

Lights, space heaters and power outlets for tools.

Low Voltage Drawout Switchgear

Two LA-50, 1600 A. and six LA-25 600 A. manually operated air circuit breakers.

Two future breaker compartments for LA-25 circuit breakers.

Meters in isolated compartment; instrument transformers.

Square D Unit Substations

Square D offers a complete line of indoor substations having primary voltages up to 15,000 volts and secondary voltages up to 600 volts.
Designed in Power-style construction to match and include

Square D switchgear, switchboards and motor control centers these substations incorporate all applicable standards of NEMA, ASA and AIEE plus many Square D extras for better service.

Package Unit Substation

Package Unit Substation with combination type low voltage section.
High voltage load break fused air interrupter switch.
300 KVA transformer in rear.
Main large air circuit breaker, 1000 A.; molded case feeder breakers.
Instruments and instrument transformers.

Very compact yet versatile in design to accommodate a large variety of indoor application requirements, this substation is popular in schools, office buildings, shopping centers, factories and department stores.

Sizes from 75-500 3- KVA.

Primary voltages up to 5000 volts, secondary to 600 volts.

3 1φ dry type transformers in 3φ combination.

Package Unit Substation with full panel low voltage section
High voltage load break fused air interrupter switch.
300 KVA transformer in rear.
Molded case circuit breakers in full 60-in. panel.

Transformers individually mounted on base for minimum noise, easier inspection and removal, and longer life due to more efficient cooling.

High voltage termination with air interrupter switch or oil cutouts—(fused or unfused).

Low voltage section with molded case circuit breakers, QMB fusible switches, large air circuit breaker and/or instrumentation.

88-in. wide, 44-in. deep, 91½-in. high.

Sectional Type Unit Substations

Sectional Type Unit Substation
High voltage fused air interrupter switch section.
500 KVA dry open ventilated transformer section.
Low voltage drawout switchgear section.

Designed and manufactured to fill any load center substation requirements, this equipment combines high voltage and transformer sections with low voltage sections of switchgear, switchboards or motor control centers tailored to the systems needs.

Primary voltages up to 15000 volts, secondary to 600 volts.

Transformers—liquid filled or dry, up to 2000 KVA 3φ.

High voltage termination with air interrupter switch or oil cutouts (fused or unfused).

Low voltage air circuit breakers, molded case circuit breakers, switches, metering and motor control equipment.

Standard depth 54-in., height 91½-in.

G-E Medium-Voltage Switchgear

Standard Metal-Clad Equipments

With Magne-Blast Power Circuit Breakers

75,000 Kva Interrupting Capacity—3-Phase, 3-Wire

4160 Volts—1200 Amperes

Application

A brief description of metal-clad switchgear in this section will show the advantages obtainable in completely factory-assembled, metal-enclosed, safety-type switching equipments for general power service in power plant main and auxiliary circuits, steel mills and other types of industrial applications, distribution substations, office buildings, hotels, theaters, department stores, hospitals, educational and public build-

ings, and other similar locations. It will provide proper and reliable control for generators, transformers, incoming power and tie lines, feeder circuits, bus-tie and bus-sectionalizing circuits, synchronous and induction motor and condenser circuits, power capacitors, electric furnaces and other kinds of apparatus.

Standard Class M20 Metal-clad switchgear for the control of feeder and motor circuits

The equipment is available in standardized unit construction for installation where the interrupting rating requirements for the magne-blast power circuit breakers do not exceed 75,000 kva, and the service voltage does not exceed 4160 volts.

The factory-built standard units have been installed (at a minimum over-all installation cost), in many important applications where reliability in the performance of the switchgear equipment is of first importance.

Features

Advantages

- | | |
|---|---|
| Completely metal-enclosed; segregated metal compartments for bus, instrument transformers, breaker, etc..... | No hazard to personnel—fire hazard minimized; long life. |
| Liberal insulation..... | Service continuity. |
| Easily removed vertical-lift breakers; drawout potential transformers and fuses; drawout relays and meters..... | Easy to maintain—short outage time. |
| Co-ordinated switchgear components..... | Balanced engineering and design. |
| Sequence interlocking..... | Safety to operators; continuity of service. |
| Complete primary and secondary control assembly, factory-built..... | Lower over-all installation cost and purchasing expense; a finished, tested job. |
| Shipped Assembled..... | Easy to install, and at low cost. |
| Standard unit construction..... | Low initial cost; flexibility in application; easy future expansion; simplifies station planning; high salvage value saves system investment. |

G-E Medium Voltage Switchgear

Standard Metal-Clad Equipments

With Magne-blast Power Circuit Breakers

Type AM (Oilless) Magne-Blast Power Circuit Breakers Stretch the Arc to Destruction

The magne-blast breaker used in these switchgear equipments interrupts by magnetically forcing the arc into a series of gradually interleaving, closely spaced, insulating barriers. These barriers elongate the arc and absorb its heat so that the electrical resistance in the path of the arc is greatly increased, reducing both the current and the phase angle of the circuit. At an early current zero the arc path is so long that the voltage is reduced and the gases produced by the arc so cooled that the arc cannot re-establish itself; and interruption occurs.

There are two sets of contacts on the magne-blast breakers — the silver-inlaid primary contacts, and the arcing contacts of an arc-resistant alloy.

On opening, the primary-contacts part first, shunting the current through the magnetic blowout coil and the arcing contacts. Thus the magnetic force will be sufficiently well established to drive the arc when it is drawn on the arcing contacts.

The solenoid mechanisms used on the magne-blast breakers are the same as those used for many years on oil breakers. Conventional control and familiar equipment are therefore used in the mechanism of magne-blast breakers.

Schematic diagram showing the elongation of the arc in the magne-blast circuit

At section A-A the arc is formed in a line between the parting contacts. As the arc is forced into the chute, the fins constrict it and force it into a serpentine path as shown in Section B-B, and finally, C-C.

Diagram of section through magne-blast circuit breaker, showing contacts (in open position), blow-out coils, and one side of arc chute with fins other side of arc chute removed to show details of construction

Breakers are Safely Withdrawn or Replaced

The circuit breaker is easily lowered from the operating position to either a disconnected position, or for removal from the stationary structure for transportation to another location for inspection and maintenance. A spare breaker can be inserted to continue operation and reduce outage time to a minimum.

Removable element, consisting of power circuit breaker, solenoid mechanism, and disconnecting devices

G-E Indoor Power Circuit Breakers

Type FK-33

2500 Volts—400 Amperes—15,000 Kva—12-Cycles Interrupting Time

Fig. 1. Triple-pole, manually operated breaker for panel mounting. (Terminal connectors and trip coils not shown)

Application

These breakers are suitable for light-duty applications on circuits within their voltage and continuous-current ratings. The rated interrupting current of the breaker must be as great or greater than the maximum short-circuit current which it may be called upon to interrupt.

Prices Include

For Manually-Operated Breakers

Single-throw Breaker with Type HA-2 trip-free manual mechanism, including necessary instantaneous or time trips. (Current transformers and relays not included.)

Standard bolted-type terminal connectors (no deduction for omission).

Necessary oil (2- and 3-pole breakers, 4 gallons; 4-pole breakers, 5 gallons).

Double-throw Breaker, complete with integral mechanical interlock and two operating levers, with mechanical cross trip.

Prices Include

For Electrically Operated Breakers, A-C or D-C

Single-throw Breaker, with Type MS-5B solenoid mechanism mounted back-to-back on a steel plate, direct-coupled.

Closing relay.

1—Potential trip coil (Current trip coils, relays, and current transformers not included).

4-stage auxiliary switch.

Terminal Board.

Standard bolted-type terminal connectors (no deduction for omission).

Necessary oil (2- and 3-pole breakers, 4 gallons; 4-pole breakers, 5 gallons).

Copper-oxide rectifier (if A-C operated).

Maintenance closing device, if required.

Double-throw Breaker, complete with two solenoid mechanisms, electrically interlocked.

G-E Indoor Power Circuit Breakers

Following dimensions are subject to change and should not be used for construction without approval.

Fig. 2. Type FK-33 triple-pole, single- and double-throw manually operated breaker for panel mounting

Fig. 3. Type FK-33 triple-pole, single-throw electrically operated breaker

**G-E Indoor Power Circuit Breakers
Type FK-142 and FK-143**

Type FK-142, triple-pole, 600 amp, manually operated, panel-mounted (Terminal connectors & trip coils not shown)

Type FK-143, triple-pole, 600 amp, electrically operated, frame-mounted (Terminal connectors not shown)

Application

These breakers are suited for medium-duty applications on circuits within their voltage and continuous-current ratings. The rated interrupting current of the breaker must be as great as, or greater than, the maximum short-circuit current which it may be called upon to interrupt.

Manually Operated

Single-throw Breaker: with Type HC-5 trip-free manual mechanism, including necessary instantaneous or time trips. (Current transformers and relays not included).

Standard bolted-type terminal connectors (no deduction for omission).

Necessary oil (2- and 3-pole FK-142 breakers, 6 gallons; 4-pole FK-142 breakers, 8 gallons; 2- and 3-pole FK-143 breakers, 9 gallons).

Double-throw Breaker: Consists of two single-throw breakers, with mechanical interlock and two operating levers with mechanical cross trip.

Prices Include

Electrically Operated A-C and D-C

Single-throw Breaker: with Type MS-5B trip-free solenoid mechanism, mounted back-to-back on a steel plate, direct-coupled, supported by steel framework.

Closing relay.

1-Potential trip coil. (Current-trip coils, relays and current transformers not included.)

4-stage Auxiliary switch.

Terminal board.

Standard bolted-type terminal connectors (no deduction for omission).

Necessary oil (2- and 3-pole FK-142 breakers, 6 gallons; 4-pole FK-142 breakers, 8 gallons; 2- and 3-pole FK-143, 9 gallons).

Copper-oxide rectifier (if a-c operated).

Maintenance closing device, if required.

Double-throw Breaker: Consists of two single-throw breakers and two solenoid mechanisms electrically interlocked.

Δ FK-14.4 breaker uses 60 gallons of oil; FLO, 25 gallons.

Prices Include

Electrical Operation A-C and D-C

- T-p, s-t breaker.
- Framework.
- Necessary trip coils (a-c or d-c).
- Auxiliary switch (10-stage).
- Latch checking switch.
- Closing relay.
- Clamp-type terminal connectors.
- Trip-free, motor-compressed-spring operating mechanism (for FK-14.4).
- 3-bushing transformers (relay type) in standard location (Bushings 1-3-5).
- Maintenance closing device.
- Operation counter.
- Necessary oil.
- Control power switch.

Standard Automatic Reclosing Breaker D-C Close and Trip

- Breaker complete, electrically operated, as listed under "Breaker Only," Plus:
- 1—Relay Cabinet, with:
 - 1—Reclosing relay (multi reclosures).
 - 3—Relays, time-overcurrent, single pole, arranged for d-c trip, with instantaneous unit if required.
 - 3—Miniature ammeters.
 - 1—Control switch, with red and green indicating lamps.
 - 1—Selector switch, to include or cut out reclosing feature.
- Necessary small wiring.
Terminal boards, with designation strips.

A-C Close, D-C Trip

Same as d-c close and trip, Plus:

A-C Close and Trip

Same as a-c close, d-c trip, Plus:

Necessary modifications in trip coils to permit a-c tripping.

Optional Modifications

Standard Automatic Reclosing Breaker Only

- One—Ground Relay, time-overcurrent, single pole, arranged for d-c trip, with instantaneous unit if required..... \$200.00
- Substitute 1 triplex thermal demand ammeter for 3 miniature ammeters..... 165.00

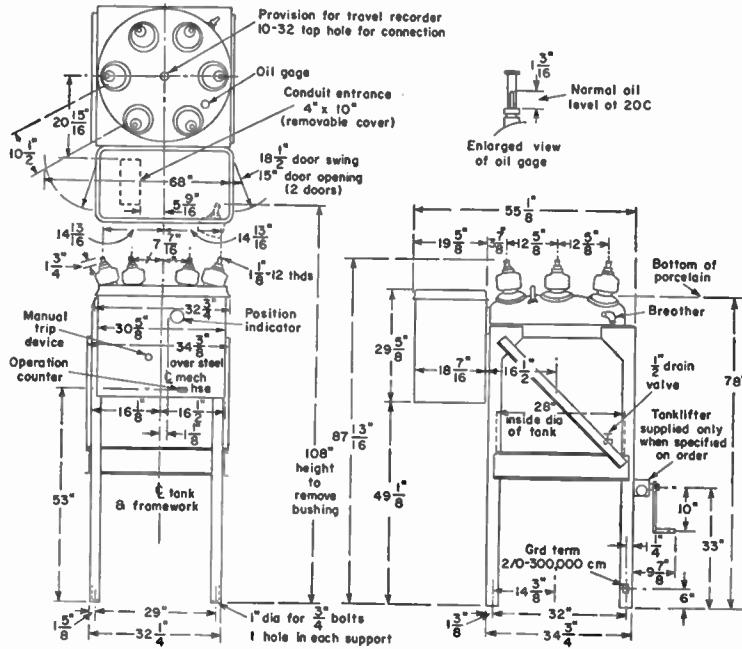

Accessories

- Tank Lifter..... 160.00

G-E Small Outdoor Oil Circuit Breakers

Type FK-14.4

Dimensions are subject to change and should not be used for construction without approval

Frame-mounted, electrically operated, 600- and 1200-amp. Type FK-14.4 nonreclosing oil circuit breaker.

Frame-mounted, electrically operated, 600- and 1200-amp. Type FK-14.4 automatic reclosing oil circuit breaker

G-E Type HR Automatic Circuit Reclosers

50-Ampere Frame—2400-14,400 Volts (Line-to-Line)

60 Cycles—Single- and Three-Phase

Application

These reclosers provide overcurrent protection for rural and suburban distribution systems. They are designed for dependable year-round co-ordination between reclosers in series; and between reclosers and sectionalizing fuses, branch fuses, and external or internal transformer fuse fuses.

The rating of the recloser to be used is based primarily on normal load and maximum short-circuit current at the point of application.

The continuous current rating of the recloser should at least equal the normal load current. It is preferable to select a rating approximately $\frac{1}{8}$ higher than the load current to allow for future load growth. Reclosers have no overload rating and should not be applied beyond their continuous current rating.

The interrupting rating is given in terms of symmetrical short-circuit current. This simplifies the application by permitting the use of data from a conventional short-circuit study. All Type HR reclosers can interrupt off-set current up to 1.4 times the symmetrical value when the symmetrical value does not exceed the interrupting rating of the recloser. This factor of 1.4 is based on a system reactance to resistance ratio of 8 (maximum), which is seldom exceeded on distribution circuits.

Apply NEMA or AIEE derating factors for elevations above 3300 feet.

Fig. 1, Type HR single-phase recloser

Reclosers are available with different time-delay operating characteristics, providing a choice for "hold-closed" applications or for co-ordinating with reclosers of other manufacture. (See Fig. 2 and 3.)

Lightning Protection of Reclosers

Protection is required to limit to safe values voltage surges caused by lightning. Requirements are similar to those for distribution transformers on the same system.

Some protection can be had by connecting only one arrester to the side of the recloser having the longest length of line. As long as the recloser is closed, the internal Thyrite* unit will effectively by-pass a lightning surge from the other side. However, when the recloser is open, a lightning surge on the unprotected side could result in a bushing flashover and damage to the recloser. If this occurs on an unprotected source side, service is disrupted at least temporarily to additional customers.

It is preferable to provide complete protection by installing arresters on both sides of a recloser. One additional arrester is an especially good investment whenever the recloser serves a sizeable number of consumers.

The arresters should be a type which permits no sizeable 60-cycle follow-up current after a lightning surge. This will avoid unnecessary operations of the reclosers and needless blowing of fuses.

For Type HR 50-ampere frame reclosers, "Hi-stroke" rural lightning arresters are recommended. These may be conveniently mounted on either side of the recloser mounting bracket. These apply for altitudes up to 6000 feet and for systems where the line-to-ground symmetrical short-circuit current will not exceed 2000 rms amperes.

*Registered Trade-mark of General Electric Co.

Type HR Reclosers 14,400 Volts (Maximum Design Voltage 15,000 Volts) (Impulse-withstand Test—95 Kv)

*Recloser Catalog Number does not include special mounting material; add from Table 3.

†Single-shot Lockout may be added by adding the suffix "SS" to the Catalog Number and increasing the price \$5.80 net.

‡Example: to specify a Type HR recloser, 1-phase, 50-ampere frame, 35-ampere rating with 2-instantaneous and 2-"B" time-delay trips, the Catalog Number would be HR1-50-35-22B.

§Example: To specify a Type HR recloser, 1-phase, 50-ampere frame, 35-ampere rating with "hold-closed" operation, the Catalog Number would be HR1-50-35-21.

¶In lieu of time delay. Single-phase only.

G-E Type HR Automatic Circuit Reclosers

Table 2—Tripping Sequences

*Sequence No.	Sequence Desired
13	One instantaneous & three time delay.
22	Two instantaneous & two time delay.
31	Three instantaneous & one time delay.
40	Four instantaneous & no time delay.
04	Four time delay.
21	Hold-closed operation.

*This sequence number is to be added to the basic catalog number to designate the desired tripping sequence.

Higher Ratings Available

Reclosers in the 100- and 200-ampere frame sizes are also available in both single- and three-phase units. They have interrupting ratings up to 2000 and 4000 amperes respectively, for the 100- and 200- ampere sizes for 14.4-kv service; and 3000 and 6000 amperes respectively for 4.8-kv service.

G-E Components for Outdoor Substations

General Electric has designed and built thousands of outdoor substations many of which are the largest of their kind.

A variety of standardized completely co-ordinated, factory-built step-up and step-down stations in standard voltage and kva ratings are available.

These substations are carefully and completely engineered to meet the exacting requirements of outdoor service and to conform to NEMA Standards. Complete lines of General Electric apparatus such as transformers, power circuit breakers, power fuses, switches, lightning arresters, insulators, and connectors are available and they are used as components of these substation equipments. Full responsibility for design and manufacture of the entire station thus rests with General Electric and the purchaser is relieved of all details of design and co-ordination.

Inquiries for stations to meet any need are solicited and such inquiries should be accompanied by the following minimum of information to enable the engineers to prepare complete plans and specifications.

1. A one-line diagram of the proposed station upon which the following information should be recorded.
 - (a) Circuit layout
 - (b) Transformer ratings (kva)
 - (c) Line and feeder ratings (amps)
 - (d) Circuit voltages and frequency
 - (e) Circuit grounding
 - (f) Required metering and instrumentation
 - (g) Required protective relaying
 - (h) Maximum available short-circuit at the station terminal of each incoming line and tie feeder.
 2. Plan of available ground space showing:
 - (a) Dimensions
 - (b) Points and directions of entry of all lines and feeders.
 - (c) Any minimum clearance requirements of lines and feeders beyond boundaries of station plot.
 3. Size, type, and material of conductors of all lines and feeders.
 4. Automatic features required such as automatic reclosing or emergency line switching.
- Contact Graybar for full information.

G-E Components for Outdoor Substations (Cont.)

Type FGK-230-10000 power circuit breaker rated 230 kv, 1600 amperes. Available in ratings from 115 to 315 kv.

Floor-mounted Type FK-439 oil-blast power circuit breaker rated 138 kv, 1200 amperes. Available in ratings from 69 to 161 kv.

Framework mounted Type FK-34.5 oil-blast power circuit breaker rated 34.5 kv, 600 amperes. Available in ratings from 14.1 to 69 kv.

Framework mounted Type FK-14.4-100 oil-blast power circuit breaker rated 14.4 kv. Type FK-227 breaker also available for circuits rated 7.2 kv.

G-E Components for Outdoor Substations (Cont.)

Single-pole element of Type RF group-operated switch rated 161 kv. Other ratings from 7.2 to 345 kv are available.

Single-pole element of Type RB group-operated switch rated 69 kv. Other ratings from 7.2 to 115 kv are available.

Type EF-1 non-dropout expulsion fuse disconnecting switch.

Type EF-2 dropout expulsion fuse disconnecting switch.

Type FA hook-operated disconnecting switch.

Type EKO-3C current-limiting fuse disconnecting switch.

Type EKO-1D current-limiting fuse support (non-disconnecting).

G-E Components for Outdoor Substations (Cont.)

Type MR-8 motor operating mechanism may be applied to any group-operated switch.

Insulator rated 69 kv heavy duty. Ratings from 7.2 to 345 kv are available.

Variable-size bus support fitting.

Reamed-to-size bus support fitting.

Class E flexible expansion connector.

Stud terminal connector.

Tee connector.

Single-bolt block terminal connector

Ground connector.

G-E Tilting Insulator Air Switch

Outdoor, Group Operated
Type TA 7.2 KV Thru 34.5 KV 400,600 Amps

Type TA Switches provide highly dependable low-cost switching for power circuit breaker isolation, for opening primaries of power transformer banks and for sectionalizing transmission lines.

When arcing horns are used, the switch will interrupt magnetizing current of transformer banks. The TA horn gap

switch may be used to interrupt small load currents in an emergency, but it is not recommended for general load-breaking duty nor for breaking line-charging currents of appreciable magnitude.

Consult Graybar for complete information and prices.

Rated Kv *	Voltage Ratings		Insulation Level Withstand Test Low Frequency RMS Kv (Drz)	Impulse (Crest Value) Kv †	Insulator NEMA Technical Reference No.	Current Rating in Amperes		
	Max. Design Kv †					Continuous at 60 Cycles	Momentary ‡	4 Second ¶
7.2	8.25		36	95	1	400 600	20000 40000	12500 25000
14.4	15.5		50	110	4	400 600	20000 40000	12500 25000
23	25.8		70	150	7	400 600	20000 40000	12500 25000
34.5	38		95	200	10	400 600	20000 40000	12500 25000

*Rated voltage is the highest nominal system voltage on which the switch is intended to be applied. Nominal system voltage refers to the general voltage class designation by EEI-NEMA Joint Committee on "Preferred Voltage Ratings for A-c Systems and Equipment," EEI Publication R-6, NEMA 117.

†The maximum design voltage is the highest rms voltage at which the switch is designed to operate.

‡Positive or negative 1.5 x 40 ms wave. Impulse values listed are phase-to-phase and phase-to-ground.

§The momentary current rating is the maximum rms total

current which the switch shall be required to carry for at least one cycle. The current shall be the rms value, including the d-c component, during the maximum cycle as determined from the envelope of the current wave, and the test period shall be at least one second.

¶The four-second rating is the total rms current, including the d-c component if present, which the switch shall be required to carry for four seconds. For practical purposes, this current shall be taken as the integrated heating equivalent of the four-second rating; the maximum test period shall not exceed eight seconds.

Substation Fence Enclosures

Fabric is 1-ft. less than height of fence. 2-in. diamond mesh, 9 gauge wire galvanized after weaving (also 11 gauge and 6 gauge). Advise if special galvanizing coat is required.

Top rail and braces 1 1/2-in. O.D. heavy galvanized steel pipe.

Line posts of heavy galvanized pipe, set 2 1/2 to 3-ft. in concrete.

Barb wire extension 45 degree or vertical pressed steel arms on malleable base to take 3 strands, 4 point, 12 1/2 gauge barb wire.

End, Corner and Gate Posts 2 1/2-in. O.D. or 3-in. O.D. heavy galvanized pipe, 4-in. O.D. for larger gates.

Gates to match. Single walk or double drive, 1 1/2-in. O.D. or 2-in. O.D. galvanized pipe frames; locking device. State opening between gate posts.

- No. 64TR Line Post O.D. 2-in.
- No. 65TR Line Post O.D. 2 1/2-in.

Note—Mail in diagrams of fence enclosures with dimensions and any specifications other than above styles for delivered net prices.

Usual height is 84-in. overall including 3 strands of barb wire. (Also furnished 6 to 10-ft. high.)

Chance Hookstick Disconnecting Switches

Single-Pole, Single-Throw

Type BT

400-600-1200 Amp
Full NEMA-Rated

For substation and line applications where maximum mechanical and electrical reliability are required.

Rigid blade design and self-aligning contacts mean positive closing even when operated with heavy side thrusts.

Feature blade latching, pryout opening and centered contact pressure. Silver-to-silver contacts; 400 and 600 amp switches also available with copper-to-copper contacts.

Flanged base furnished as standard; channel base also available when specified.

Specify size and type of conductor on order.

†When desired with copper-to-copper contacts, specify and deduct \$5.00 each.

*With cap and pin insulators. When specified, station post insulators will be furnished at no extra cost; add prefix "S" to catalog number.

Type BTH

2000 Amp
Full NEMA-Rated

Rugged, high-current switch for vital industrial circuits. Toggle-jaw action combines high-pressure contact performance with unusual ease of operation.

High-pressure silver-to-copper hinge and jaw contacts, and the bus-bar copper hot parts provide a high-conductivity, straight-line current path.

Double-latch holds blade securely in closed position. Available with flanged steel base, or channel base when specified.

KV	*No. Vertical Mounting	*No. Underhung Mounting	Approx. Shipping Wt. Lbs.	†Each
7.5	82300	82310	116	\$270.00

†Less terminals. Contact Graybar for complete data.

*With standard strength cap and pin insulators. When specified, station post insulators will be furnished at no extra cost; add prefix "S" to catalog number.

Type BTL

200 Amp
NEMA-Insulated

An economical unit for light-load circuits where full NEMA insulation is required.

Has "big switch" features for ease and reliability of operation. Rigid truss blade resists side thrusts; has 90° stop. Positive latch holds blade in closed position; opens with pryout action.

Multi-finger contacts are self-wiping; have phosphor bronze back-up springs.

Galvanized flanged base has pull-off eyes for dead-ending direct to switch.

General purpose terminals take No. 6 to 4/0 copper or No. 6 to 3/0 ACSR.

KV	*No. Vertical Mounting	*No. Underhung Mounting	Approx. Shipping Wt. Lbs.	Each

Crossarm hanger No. 92851 also available, \$2.00 each.

*With cap and pin insulators. When specified, station post insulators will be furnished at no extra cost; add prefix "S" to catalog number.

Type M

200 & 400 Amp

Distribution-Level Insulated
Ideal for rural lines, suburban circuits, small subs, or wherever an inexpensive, distribution-level insulated switch is required.

Simple to install; no adjustments. Self-aligning contacts. Rigid double blade made of high-conductivity bus-bar copper; latch secures blade in closed

position. Pryout action makes opening easy. Furnished complete with crossarm hanger.

200 Amp

Terminals take from No. 6 to 2/0 copper or No. 6 to 2/0 ACSR.

Chance Tilting Insulator Switches

3-Pole, Single Throw

Have Compensator Control Mechanism that automatically absorbs structural distortion and provides positive contact in all phases regardless of crossarm warpage, prevents shock in closing, simplifies installation and gives extra leverage for easy operation under the severest operating conditions. Blades have Crow Bar Action for ice-breaking.

Full NEMA-rated, with silver-to-silver contacts and self-aligning clips. Deep-drawn galvanized steel base houses Compensator Control; flanges prevent cutting of crossarm. All mounting holes $\frac{5}{16}$ in. diameter.

Standard terminal clamps take $\frac{1}{2}$ in. and $\frac{3}{4}$ -in. IPS tubing or No. 4 through 600 MCM copper cable. For other sizes and types of conductor, specify size and type on order.

Universal Transformer Mounts

No. 315

No. 350

No. 3100

Standard Parts

Universal pole brackets are known throughout the industry for economy, mounting ease and outstanding versatility. Brackets to meet any transformer mounting requirement from one 3 KVA to three 167 KVA may be ordered by the standard catalog numbers listed below, by half-unit packages or by individual parts. Write for complete catalog.

All parts are made of heavy material, hot dip galvanized to rigid A.S.T.M. specifications, and are completely salvageable.

No.	Description	Each
115	Mounts one 3 KVA through 25 KVA transformer (or any 12-in. lug spacing—EEI-NEMA Type A).....	\$11.60
150	Mounts one 3 KVA through 100 KVA transformer (or any 12-in. or 24-in. lug spacing—EEI-NEMA Type A or B).....	18.70
1100	Mounts one 3 KVA through 167 KVA transformer (or any 12-in. or 24-in. lug spacing—EEI-NEMA Type A, B or C).....	22.68
215	Mounts two 3 KVA through 25 KVA transformers (or any 12-in. lug spacing—EEI-NEMA Type A).....	18.75
250	Mounts two 3 KVA through 50 KVA transformers, any combination (or any 12-in. or 24-in. lug spacing—EEI-NEMA Type A or B).....	30.76
2100	Mounts two 3 KVA through 167 KVA transformers, any combination (or any 12-in. or 24-in. lug spacing—EEI-NEMA Type A, B or C).....	38.52
315	Mounts three 3 KVA through 25 KVA transformers, any combination (or any 12-in. lug spacing—EEI-NEMA Type A).....	24.60
350	Mounts three 3 KVA through 100 KVA transformers, any combination (or any 12-in. or 24-in. lug spacing—EEI-NEMA Type A or B).....	39.59
3100	Mounts three 3 KVA through 167 KVA transformers, any combination (or any 12-in. or 24-in. lug spacing—EEI-NEMA Type A, B or C).....	51.77

Detailed specifications for Universal brackets and capacitor racks available.

Prices slightly higher west of the Rockies, or in other zones.

Hubbard Hub-Mounts

No. 2786

The Hub-Mount, developed for single pole mounting, will hold one to three transformers with a combined vertical load of 15,000 lbs. reducing the cost of double pole platform structures for transformers.

The small diagrams above, which are drawn to scale, show how a Hub-Mount is assembled (left) on a 6 1/2 in. diameter pole and (right) on a 16 in. diameter pole. The same size Hub-Mount is suitable for these and all intervening sizes.

The turnbuckle bolts, made of long-life, corrosion resistant Cor Ten Steel, are wrenched downward for tightening to prevent the possibility of the lineman from "cutting out" on a pole. The left hand nuts, bolts and boxes are color coded for easy identification for assembling. Only one lineman on the pole is required to install the mount.

No.	Description	Wt., Lbs.
2790	Vertical Adapter Plate for Hub-Mount, 3 in. x 14 1/2 in. x 1/2 in.....	6.15
2791	Offset Horizontal Adapter (1 3/16 in.) Plate, 5 in. x 16 in. x 3/8 in.....	8.51
2792	Turnbuckle bolt with nuts, 3/4-in. diam., Cor-Ten steel.....	1.9

2784	Double—1 box each, no adapter, one 25 to 50 KVA.....	52.33
2785	Double—2 boxes each, no adapters, two 25 to 50 KVA, or one 25 to 50 KVA and one 3 to 15 KVA.....	66.27
2786	Double—3 boxes each, no adapters, any combination of three 3 to 50 KVA.....	80.21
2787	Double—1 box each, 2 No. 2791 adapters, one 75 to 167 KVA.....	70.87
2788	Double—2 boxes each, 4 No. 2791 adapters, any combination of two 75 to 167 KVA.....	103.35
2789	Double—3 boxes each 6 No. 2791 adapters, any combination of three 75 to 167 k.....	135.83

G-E Type HS Oil-Immersed Distribution Transformers

Single-Phase, 60 Cycles, Self-Cooled

The G-E Type HS distribution transformer offers the highest degree of service reliability, backed by careful attention to all details of manufacture, including the selection and preparation of the raw materials used, the adoption of the most progressive manufacturing processes, and the constant improvement of transformer design.

Among the most recent of these improvements is the wound-core construction, identified by the G-E trade-mark Spirakore.*

This new design, now furnished on all sizes, results in higher efficiency at heavy loads, better voltage regulation at higher power factors, low exciting current, smaller size, and lighter weight.

The tanks are of all-welded steel with fins, corrugations, or cooling tubes in the larger sizes to provide ample radiating surface for the dissipation of heat. Each tank is given a coat each of primer and super-melaglyp paint, and oven-dried, resulting in an attractive and durable finish. For complete information, ask Graybar for Bulletins GEA-6070 and GEC-781.

Small Distribution Transformer with Low-Voltage Tank-wall Bushings

Interior Assembly of Small Spirakore Transformer

Large Distribution Transformer with Cooling Tubes and High- and Low-voltage Cover Bushings

Typical Interior Assembly of Larger Spirakore Transformer

For 480 or 600-Volt Circuits

Application: By connection of the low-voltage leads, transformers are arranged for series or multiple two-wire service, or for three-wire service.

High Voltage Taps (Rated Kva.): Above rated voltage, none; below rated voltage, two 5%.

Service: Suitable for outdoor or indoor installation.

Mounting: Sizes 167 kva. and smaller are suitable for direct pole mounting.

High-Voltage Rating, 480

	167	7111773	1450	39		2301

For 4160-Volt Circuits

Application: These transformers are to provide service where it is more economical or desirable to connect transformers across phases than between line and neutral on 2400/4160-volt Y circuits. The use of this transformer gives the same service voltages as 10:1-ratio transformers connected between line and neutral.

By connection of low-voltage leads, transformers having low-voltage ratings of 120/240 or 240/480 are arranged for series or multiple two-wire service, or for three-wire service.

Service: Suitable for outdoor or indoor use.

Mounting: Sizes 167 kva. and smaller are arranged for direct pole mounting.

For 12,470, GrY/7200-Volt Circuits

Application: For use on circuits having a common electrical neutral. By connection of low-voltage leads, transformers having a low-voltage rating of 120/240 are arranged for series or multiple two-wire service, or for three-wire service.

Service: Suitable for indoor or outdoor service.

Mounting: Suitable for direct pole mounting.

G-E Type HSBA Oil-Immersed Distribution Transformers

With Self-Contained Lightning Protection and Overcurrent Protection—Single-phase, 60 Cycles

With High-Voltage Tank-Wall Bushings

Class A: For universal use on delta and Y circuits.

Complete with: Two high-voltage bushings; two magneto-valve lightning arresters; low-voltage neutral gap; internal high-voltage fuses; low-voltage circuit breaker; overload signal lamp (5-kva and above); support lugs for direct pole mounting.

Class B-1: For application on Y circuits having solidly grounded neutrals.

Complete with same features as Class A transformers, except omit one arrester.

For 2400 & 4160Y-Volt Circuits

Application: By connection of the low-voltage leads to the bushing terminals inside the tank, transformers with low-voltage rating of 120/240 are arranged for series of multiple two-wire service, or for three-wire service.

G-E Type HSBA Oil-Immersed Distribution Transformers

Class B2: For use on solidly grounded common-neutral circuits with the tank solidly grounded.

Complete with: One high-voltage bushing; one clamp-terminal tank-grounding connector; one mangle-valve lightning arrester; low-voltage neutral link bolted to tank externally; internal high-voltage fuse; low-voltage circuit breaker; overload signal lamp (10-kva and above); support lugs for direct pole mounting.

G-E Type HS Oil-Immersed Rural-Line Transformers
In Accordance with R. E. A. Requirements

Transformers are of the single-high-voltage-bushing design, with one end of the high voltage winding permanently connected to the tank which, in turn, is to be solidly grounded by connection to the common system neutral.

Each unit complete with: One high-voltage cover bushing; handhole in cover; three low-voltage tank-wall bushings; provision for direct pole mounting with the low-voltage bushings 90 degrees from the pole; two mounting positions, on opposite sides of tank; two clamp-terminal tank-grounding connectors; low-voltage neutral grounded to tank.

Application: By connection of the low-voltage leads to the bushing terminals inside the tank, transformers are arranged for series or multiple two-wire service, or for three-wire service.

G-E Type HSBA Oil-Immersed Rural-Line Transformers

In Accordance with R. E. A. Requirements

Embodies the same reliability as the conventional Type HSBA transformer. Lightning protection is afforded by a Hi-Stroke rural arrester mounted directly on the tank, and overcurrent protection is provided by a low-voltage circuit breaker mounted inside the tank, under oil.

Each unit complete with: One high-voltage cover bushing; one Hi-Stroke rural arrester; internal high-voltage fuse; handhole in cover; overload signal lamp (on sizes 7½ kva and larger); three low-voltage tank-wall bushings; internal low-voltage circuit breaker with external operating

handle; provision for direct pole mounting with low-voltage bushings 90 degrees from the pole; two mounting positions, on opposite sides of tank; two clamp-terminal tank-grounding connectors; low-voltage neutral grounded to tank.

Application: By connection of the low-voltage leads to the bushing terminals inside the tank, transformers are arranged for series or multiple two-wire service, or for three-wire service.

G-E Type HS Oil-Immersed Rural-Line Transformers and Gap and Internal High-Voltage Fuse

In Accordance with R. E. A. Requirements

Transformer with gap and fuse is for service on solidly grounded, common-neutral 7200-, 7620- and 14,400- volt circuits.

Each unit complete with: One high-voltage cover bushing with double bushing gap; internal high-voltage fuse; handhole in cover; three low-voltage tank-wall bushings with low-voltage neutral grounded to the tank externally; bracket for future mounting of lightning arrester; two clamp-terminal tank-grounding connectors; two sets of support lugs for direct pole mounting in either of two positions. The support lugs are 90 degrees from the low-voltage bushings; name-plate; lifting lugs.

G-E Portable Oil Testers 35,000-Volt 0.5 Kva

This oil tester affords a compact, convenient, and accurate means for testing oil in the field, as it combines in a single unit, a step-up transformer, a means for gradually raising the test voltage, a voltmeter to measure breakdown values, an automatic circuit breaker, and an oil-testing receptacle.

The successful operation of high-voltage oil-insulated apparatus requires that the dielectric strength of the oil be maintained at a high value. Assurance that the oil is always satisfactory dielectrically is possible only by testing oil regularly.

All live parts of the equipment are enclosed and complete safety features assure full protection to the operator.

Furnished complete with 15 feet of 3-conductor attaching cord and plug.

For price and description information consult Graybar.

G-E Insulating and Cooling Oil No. 10-C

G-E No. 10-C oil is a specially prepared insulating and cooling oil for use in transformers, feeder voltage regulators, and oil fuse cutouts.

The development of this oil and the attainment of proper characteristics and uniform quality have required the closest co-operation for many years between G-E engineers and oil refiners, and involve a careful selection of proper crude oil, as well as the use and control of special refining processes applicable only to insulating oil.

Refined from selected grades of crude oil by refiners experienced in producing oil for this highly special application, this oil has the characteristics which provide both the cooling and insulating factors essential to transformer operation; it does not affect the transformer insulation, and is unaffected by these insulating materials. An important quality in transformer oil is its long service life, the inherent resistance to sludge formation. To have such properties should be used for t/

G-E Type HS Pyranol Distribution Transformers

This transformer generally affords substantial savings over the total installed cost of oil-filled equipment for all installations indoors or in confined locations.

Filled with Pyranol, G-E's synthetic insulating and cooling liquid, which has all of the desirable characteristics of mineral oil and, in addition, is non-flammable. Pyranol transformers can, therefore, be safely installed indoors or in confined locations without expensive fireproof vaults. They can usually be

installed at the load center, giving additional savings by the elimination of long and costly runs of secondary copper, with improved voltage regulation at the load.

Pyranol transformers have made possible savings on overall installed costs of as high as twenty-three per cent, compared with the cost of oil-filled equipment.

It is recognized by the National Electrical Code.

Pyranol is suitable for use only in Pyranol transformers, designed especially for the purpose.

For complete information, ask for Bulletin GEA-2048.

†Reg. trade-mark of General Electric Co.

Single-phase, 60 Cycles, Self-cooled

For 480- and 600-Volt Circuits

Application: By connection of the low-voltage leads to the bushing terminals inside the tank, transformers are arranged for series or multiple two-wire service.

Service: Suitable for indoor or outdoor installation.

*5213764G5	Double-crossarm Base Plate	45	91.A21157 91.A21159 91.A21161 91.A21162 91.A21181 91.A21164 91.A21165 91.A21166	24.00
2981434G13	Wall Bracket	100	91.A21164 91.A21165 91.A21166	45.00

The standard top cap fitting of all of these arresters has a 1 1/8 inch diameter hole by which the arrester can be suspended.

This fitting is included with suspension mounting arrester at no increase in price, if specified on order.

The fitting is known as Eyebolt Cap, Cat. No. 246B711G1, and is for use with suspension mounting ratings 20-21 inclusive.

*These mountings include crossarm straps or U-bolts for 4-by-5-inch crossarms.

†It is not recommended that these heavier arresters be mounted on a single crossarm, unless the crossarm is one of two parallel double arms or is otherwise mechanically supported to prevent torsional twisting of the arm by the weight of the arrester.

Station-Type Lightning Arresters

Altitude, 0 to 6000 Feet

Three-phase Thyrite arrester, 3- or 6-kv max., arranged in a single stack

Model No. 9LA1H66
Thyrite arrester (one pole only) for 69 kv ungrounded-neutral system

Model No. 9LA1H61
Thyrite arrester (one-pole only) for 34.5 kv grounded-neutral system

Model No. 9LA1H46
Thyrite arrester (one pole only) Max. rated 3kv for 4160-v grounded- or 2400-v ungrounded-neutral systems (half-unit shown)

The G-E Form II Thyrite magne-valve station-type lighting arrester combines improved electrical characteristics and refinements of mechanical construction which establish a new standard of protective efficiency and over-all dependability.

Designed for protection of service continuity as well as apparatus insulation, the Thyrite magne-valve arrester provides excellent valve performance which prevents system disturbances or outages as the result of lightning discharges.

The Thyrite magne-valve arrester can be applied indoors or outdoors for the protection of either large or small generating or substation equipment, on either grounded- or ungrounded-neutral systems, and over a voltage range of 2.3 to 330 kv.

The simplicity of design and the small space requirement make this arrester ideal for mounting directly on power transformers and unit substations or for mounting on substation steel structures, as well as on concrete foundations or piers.

Possessing every mechanical and electrical feature known to the art of reliability, endurance, fidelity of protective performance, and economies of application, the Thyrite magne-valve station-type arrester should be applied at generating stations and substations where either the investment in equipment to be protected or the importance of service continuity warrants the highest degree of protection.

The unexcelled protection record established by Thyrite station-type arresters in service operation over the past fourteen years and the demonstrated economies of their interchangeable unit construction, are notable evidence of the soundness of protection.

G-E Thyrite Line and Station-Type Arresters

Station-Type Lightning Arresters

Distinctive features of these Thyrite magne-valve station-type arresters include: (1) Excellent protective efficiency 20 per cent lower IR drop). (2) Exceptionally large discharge capacity—3 times greater than heretofore available. (3) Thyrite shunted and shielded gap construction. (4) Interchangeable sealed-unit construction. (5) Freedom from moisture or

atmospheric influences. (6) Ease of installation.

The following information applies to single-pole arresters. For 3-phase circuits, use three single-pole arresters.

For a complete discription, ask Graybar for Bulletin GEA-1304L.

G-E Distribution Lightning Arresters

Pellet-type

For Circuits 1 to 15 Kv.

Altitude 0 to 6000 Feet

The electric elements of these arresters consist of a pellet column that forms the valve element and prevents the flow of system current following discharge, and a series-gap assembly sealed in nitrogen-filled gap chamber which isolates the valve element from the line until it is sparked over by a surge.

The dry nitrogen gas in gap-chamber prevents entrance of moisture, makes arrester proof against atmospheric conditions and assures freedom from leakage and corrosion permanently.

3-KV pellet arrester Model No. 9LA10C21, Showing EE1-NEMA Standard Mounting Bracket

Porcelains are wet-process type, well glazed. They have flexible leads securely soldered for line connection.

Clamp-type ground terminal permits clamping either one or two solid or stranded ground wires to arrester, does away with connectors, splicing, soldering and taping—saves both labor and material.

Hangers and Mountings

Standard EEI-NEMA mounting bracket and T bracket are available for all pellet arresters and can be used alone, in combination with primary fuse cutouts, or on transformer tanks.

Arresters have two mounting grooves on porcelain providing for alternate positions in either standard or special hangers, making it possible to balance either the clearances or the appearance of the installation. The arrester can be inserted in any hanger either before or after hanger has been mounted.

In addition to the EEI-NEMA standard mounting bracket, pellet arresters can be furnished with special hangers as shown in the detail at right. Arresters with special hangers have same prices as arresters of the same rating with standard mounting brackets. To determine number of arrester with a special hanger—Select the standard arrester from Tables 1, 2, 3, or 4, then refer to Table 5 for the number of the corresponding arrester with special hanger desired. (For complete description write for Bulletin GEA-2975).

Number of Arresters Required at Installation

For Table 1. Use two at each single-phase and three at each three-phase installation.

For Table 2. Use one on phase wire at a single-phase installation made between phase wire and neutral. Use also on neutral wire, a neutral gap if voltage to ground is not over 300 volts; if, because of unbalancing, voltage is between 300 and 1000 volts, use Model No. 9LA10C11, 9LA10CA11 or 9LA10CB11 arrester, depending on altitude. Use two arresters at a single-phase installation between outside phase wires. Use three arresters at each 3-phase installation.

For Table 3. Use one arrester at each installation.

G-E Rural Lightning Arresters

Hi-Stroke

Heavy-duty expulsion type, with many exclusive features of construction, designed specifically for Rural Systems. They have high lightning discharge capacity and combine highest efficiency in impulse protective level and long operating life.

For separate mounting these arresters utilize the same arrester element (0-2000 amperes rms. interrupting rating) and have the same performance characteristics as those furnished since 1944 on Type HBA rural line transformers and which have established an excellent service operating record on many rural systems.

Separate Mounting

†Will also accommodate flip-open cutouts listed in Table 2 or open-type dropout cutouts.

‡Will also accommodate enclosed cutouts listed in Table 1 and open-type dropout cutouts.

§Cutouts rated 7.8 kv. max. can be used on grounded-neutral circuits where the voltage that an individual cutout is required to interrupt does not exceed 7.8 kv. rms.

¶Includes EEI-NEMA Standard mounting bracket for cross-arm or direct-to-pole mounting.

Ohio Brass Thorex Dynagap Arresters Distribution Lightning Arresters

DV-6 with External Cap

DV-6 with Ground Lead Isolator

Sparkover distance is stretched 140 times its original length by the Dynagap. This transfers a major share of power-follow current limitation to the gap element and permits

compounding of valve blocks to embody greater durability and high immunity to low-current, long-duration system disturbances, including damaging components of natural lightning strokes.

Thorex DV supplied in two models: (1) with external gap, and (2) with supplementary internal gap and automatic ground lead isolator. Standard NEMA brackets are provided when units are to be pole-mounted. Size and weight of each type has been kept to a minimum. Spring-pressure-follow sealing (imposing a dynamic loading on gasket joints) makes the Type DV completely air-tight and moisture-tight.

Intermediate and Station Class Lightning Arresters

The Type GP Thorex, classed as "Intermediate," provides protection required in average station applications. Single unit GP arresters cover the range between 3 and 37 kv., while larger arresters are formed by stacking units in combination. The GP spark gap structure features improved nonlinear resistance grading system.

Types MP and MPR Thorex arresters are for applications where maximum durability and equipment protection is desired and/or where severe contamination exists. Type MP arresters are single units up to 37 kv and two-unit stacks

from 40 to 73 kv. Above 73 kv the MPR offers single unit arresters with electrically continuous porcelain housings.

For voltage ratings up to 15 kv, both the GP and MP are available with choice of metal caps at both ends or with a porcelain top. The latter is denoted by an "A" after the type number. A much smaller terminal is featured on the porcelain top which reduces phase and ground clearances and permits closer grouping. The GP, MP, and MPR Thorex arresters are compact in size and self-supporting, from the lowest to the highest kv rating.

G-E Pellet Meter or Service Protectors

115/230 Volts—Altitude, 0 to 6000 Feet

Model No. 9LA15A1
Pellet Protector for Direct Metal-clad Mounting to Bottom Knockout Hole

Pellet Protector with Bracket for Separate Mounting, Model No. 9LA15A4

The indoor protector is designed to permit direct mounting in the knockout holes of a service switch, fuse box, meter-connection cabinet, or meter case. In some applications, it may be preferable to locate the protector on the building wall at the point where the exposed secondary circuit enters the conduit goose-neck or the service cap of the enclosed service wiring. Therefore, another design

is provided for such separate outdoor mounting.

For 115-volt, single-phase, 2-wire; or 115/230-volt, single-phase, 3-wire grounded-neutral, secondary services. For indoor or outdoor service.

Model No.	Maximum Permissible Line-to-ground Voltage, Rms.	Type of Mounting	Net Wt. Lbs.	Each
9LA15A1	175	Mounting to Bottom Knockout Hole	2	\$10.50
9LA15A4	175	Separate Bracket Mounting	2½	5.00

For complete description, ask for Bulletin GEA-2977.

G-E Thyrite Meter or Service Protectors

0 to 650 Volts—Altitude, 0 to 6000 Feet

Thyrite Protector, Three-pole, for Indoor Installation, Model No. 9LA15A13

Thyrite Protector, Three-pole, for Outdoor Installation, Model No. 9LA15A23

For protection of watt-hour meters, industrial power-service entrances, or consumer apparatus and appliances on single-phase or polyphase secondary circuits or services in the 0- to 650-volt class.

The case of the protector is of aluminum. Each single-pole assembly has a series gap and a Thyrite disk valve element 3 inches in diameter and ⅝ inch thick. These single-pole elements are mounted in a Textolite container, and one, two, or three of these assemblies (for single-, double-, or three-pole protectors respectively) are sealed within the outer aluminum case. The side of the case bears complete nameplate data.

Indoor Service—For Mounting to Knockout Hole

The indoor design is arranged for mounting directly in a knockout hole in the meter case or connection box.

Model No.	No. of Poles	Circuit Voltage Rating, Rms.	Maximum Permissible Line-to-ground Voltage, Rms.	Net Wt. Lbs.	Each
9LA15A11	1	0-650	650	4	\$16.00
9LA15A12	2	0-650	650	4½	22.00
9LA15A13	3	0-650	650	5	32.00

Outdoor Service—For Separate Bracket Mounting

The outdoor design is provided with a bracket for separate mounting as illustrated.

Model No.	No. of Poles	Circuit Voltage Rating, Rms.	Maximum Permissible Line-to-ground Voltage, Rms.	Net Wt. Lbs.	Each
9LA15A21	1	0-650	650	4½	\$18.00
9LA15A22	2	0-650	650	5	24.00
9LA15A23	3	0-650	650	5½	34.00

Number of Arresters Required at Installation

Use two single-pole arresters at each single-phase installation. Use three single-pole arresters at each 3-phase installation. Use one 2-pole arrester at each single-phase installation. Use one 3-pole arrester at each 3-phase installation.

Call Graybar FIRST for . . .

G-E Isolating Gaps

For Distribution Circuits, 15 Kv. and Below

Model No. 9LA11A1, A2, and A3 with Mounting Hanger

Model No. 9LA11A5, A7, and A9 with Mounting Hanger

G-E porcelain-enclosed isolating gaps effect efficient inter-connection through a gap, where it is desired to isolate the primary lightning-arrester ground from the secondary neutral. These gaps can also be used wherever distribution-transformer tanks are to be grounded through a gap.

Standard spark-potential ratings have been established at 6, 11, and 15 kv., rms. These ratings are average values subject to about 10 per cent tolerance, plus or minus.

Model No. 9LA11A1, A2, and A3 gaps are sturdily constructed, and have no exposed live parts. Model No. 9LA11A5, A7, and A9 gaps are smaller and designed for mounting on a pole, crossarm, transformer tank, or for suspension from a line conductor.

Model No. 9LA11A1 gap (6 kv. spark potential) is recommended as a primary-neutral arrester for protecting the neutral side of distribution transformers operating on grounded-neutral systems with the system neutral grounded only at the substation, and where the neutral potential does not exceed 300 volts, rms.

Model No.	Primary-circuit Voltage	60-Cy. Rms. Spark Potential, Kv.	Impulse Spark Potential, Kv.	Each
9LA11A5	†2400	6	11	\$7.00
9LA11A7	‡4160 and ‡4800	11	17.5	7.00

9LA11A9	{ †6900, ‡8320 and ‡Higher-voltage Circuits }	15	25	7.00
---------	--	----	----	------

†Isolated neutral.

‡Grounded neutral.

For complete description, ask for Bulletin GEA-2976.

G-E Low-Voltage Pellet-Type Lightning Arresters

0 to 650 Volts—Altitude, 0 to 6000 Feet

Model No. 9LA10A202 Single-pole Pellet Arrester with Mounting Bracket

Model No. 9LA10A204 Double-pole Pellet Arrester with Mounting Bracket

For outdoor service, crossarm or pole mounting, on railway-signal lines or secondary power lines, for protection of railway-signal transformers, distribution-transformer secondaries,

autotransformer boosters, cables, and other line apparatus in the 0- to 650-volt class.

The single-pole arrester unit consists of a series gap and a pellet valve column completely housed in a wet-process porcelain container.

The double-pole arrester consists of two single-pole units mounted in a single hanger. This arrester is economically advantageous on single-phase, 2-wire circuits.

Model No.	No. of Poles	Circuit Voltage Rating, Rms.	Maximum Permissible Line-to-ground Voltage, Rms.	Ship. Wt. Lbs.	Each
9LA10A202	1	0-650	650	2	\$ 9.50
9LA10A204	2	0-650	650	4	19.00

G-E Neutral Gaps

Altitude, 0 to 6000 Feet

Model No. 9LA11A1

Cat. No. 146187

These neutral gaps are plain gaps having an impulse sparkover voltage of about 11 kv. crest on the AIEE standard impulse test, and embody no valve element. They are for application on the neutral wire of the usual grounded-neutral 3-phase, 4-wire primary systems, where the neutral-wire voltage to ground does not exceed 300 volts, rms.

Model No. 9LA11A1 embodies the same desirable features of construction and mounting that are incorporated in the standard pellet arresters for protection of the phase wires.

Cat. No. 146187, being less expensive, does not possess the refinements of Model No. 9LA11A1. Unit has a ground lead similar to the line lead, and is mounted on crossarm by wood screws.

Model No. 9LA11A1, Ship. Wt. 4 Lbs. Each \$11.00
Cat. No. 146187, Ship. Wt. 1.3 Lbs. Each 4.00

Use on neutral wire of 3-phase, 4-wire circuits having the neutral solidly grounded only at the substation, if voltage of neutral wire to ground is not over 300 volts rms. If, because of unbalancing, voltage of neutral wire is between 300 and 1000 volts, use Model No. 9LA10B1 pellet arrester. Use standard pellet arresters on phase wires.

For complete description ask for Bulletin GEA-2975.

G-E Lightning Protection Equipment For A-C Rotating Machines

The problem of protection of a-c rotating machines from lightning voltages applies to a-c generators, synchronous condensers, and large motors subjected to impulse voltages, either from directly connected exposed overhead lines or from those transmitted to the machine through transformers.

Protection from these sources can be obtained by a combination of line-type arresters located a short distance out of the station on each exposed line which is directly connected to the machine; by Pyranol filled protective capacitors and by station-type Thyrite lightning arresters in parallel with the protective capacitors, installed on the bus or at the machine terminals.

Thousands of equipments representing the advanced form of protection from lightning have been applied since 1929, some of the earlier ones being made for protection of machines which had failed repeatedly, but since the protective equipment was installed, no further failures have occurred.

This equipment easily installed; requires no maintenance.

In the table below is listed equipment required for any given service application, and is applicable for protection of machines of practically any type or manufacture.

Machine		Protective Equipment For Installation at Machine Terminals or on Machine Bus							For Installation of Directly Connected Exposed Overhead Lines

¶The same capacitors are applicable to either grounded- or ungrounded-neutral circuits. However, the arresters for machines 2400 volts and above have lower valve ratings for grounded-neutral circuits than for ungrounded-neutral circuits. The listing of arresters for grounded-neutral machines is premised on the circuit neutral's being solidly and directly grounded. If the machine neutral or circuit neutral is grounded through resistance or reactance, ask Graybar for assistance in making selection of arresters.

*For indoor service only.

†These arresters are Thyrite meter protectors.

▲Clamp-type terminals.

#Where machines have no direct connection to exposed overhead lines, and where connection to transmission lines is not through Y-Y or auto-transformers, use only one capacitor unit (0.25 mfd.), line-to-ground.

‡Where machines are directly connected to exposed-overhead lines, or are connected through Y-Y or autotransformers to transmission lines, use two capacitor units in parallel per phase to obtain a capacitance phase-to-ground of 0.5 mfd. This method will limit reflections within the winding of delta-connected machines or at the neutral point of Y-connected machines which have their neutrals isolated or grounded through a resistance that is higher than the surge impedance of the machine winding. In general, if the neutral of a machine is grounded through a resistance of less than 50 ohms, positive reflections at the machine neutral will not occur. If a machine neutral is grounded through a reactance of less than 5 ohms

(60-cycle basis), positive reflections at the machine neutral will be negligible when 0.25 mfd. capacitance phase-to-ground at the machines is used. Hence, when the machine neutral is grounded through a resistance of less than 50 ohms or through a reactance of less than 5 ohms (60-cycle basis), only one capacitor unit (0.25 mfd. phase-to-ground) will be required. Where two or more machines are operated in parallel, with the neutral of only one machine grounded, the capacitor applied on the machine bus for protection of all machines, or applied at the terminals of machines having neutrals ungrounded, should be 0.5 mfd. capacitance phase-to-ground (2 capacitor units in parallel per phase). This method limits impulse-voltage reflections at the neutrals of those machines that have ungrounded neutrals.

§This arrester, Model No. 9LA1G295, rated 7.5 kv., provides somewhat better protection than the Model 9LA1G292 unit rated 9 kv., and can be used wherever there is little, if any, risk of the system line-to-ground voltage exceeding the arrester's maximum line-to-ground rating of 7.5 kv., rms., under any condition of operation.

¶The pellet arresters listed for machines 2400 volts and above, can also be used in place of station-type Thyrite arresters for application at the terminals of rotating machines below 1000 kva. This application is recommended if economy of protection necessitates lower cost though less efficient protection.

Note: For altitudes above 6000 ft. ask Graybar for engineering recommendations. **Prices on application.**

*Capacitor rating should be selected according to the normal phase-to-phase voltage rating of rotating machine, regardless of whether circuit is grounded- or ungrounded-neutral. Capacitor can be used where machine phase-to-phase voltage does not exceed 10 per cent above listed capacitor rating. These protective capacitors are suitable for 25-, 40-, 50-, or 60-cycle systems.

G-E Porcelain Enclosed Fuse Cutouts

Typical G-E Enclosed Fuse Cutout Mounted in a Vertical Position

Now, all functions are available in one basic design with four interchangeable doors for each voltage and current rating.

Any housing of a given voltage and current rating can easily be converted to the desired function by simply interchanging any of the following doors.

(1) **Normal-duty Indicating or Drop-out Door**—provides visual inspection of a blown fuse by a flip-out semaphore or drop-out action of the door. Drop-out indication is provided by removing the converting bar.

(2) **Normal-duty Indicating Non-drop-out Door**—provides visual inspection of a blown fuse by a flip-out semaphore only. This door is specifically designed for those users who desire that the door remain closed after a fuse is blown.

(3) **Heavy-duty Door (or Extra-heavy Door)**—of the indicating drop-out type, is particularly applicable on system locations where high or extra-high short-circuits can occur.

(4) **Disconnect Door**—with hinged blade, which has continuous current rating double that of the standard fuse-holder door, combines maximum safety with ready accessibility.

Normal-duty Indicating or drop-out door

Doors for normal-duty indicating or drop-out, indicating non-drop-out, heavy-duty, extra-heavy-duty, and disconnecting make this cutout usable practically everywhere on the system. In most cases only two cutout housings will meet every need, enabling lower investments and simplified stocking. The interchangeable doors avoid the necessity of discarding or changing-out the cutouts when systems grow and available short-circuit currents of the system increase; instead, merely up-rate the cutout by substituting the heavy-duty or the extra-heavy-duty door.

*For heavy-duty cutouts rated 200 amp., consult Graybar.
†These ratings conform to maximum design ratings of distribution fuse cutouts in accordance with NEMA standards. Cutouts rated 7.8 kv maximum may be used on grounded-neutral circuits where the voltage that an individual cutout has to interrupt does not exceed 7.8 kv and where the insulation to ground meets the operating conditions.

‡Current Rating—The fuse cutouts listed above, rated 50 and 100 amperes are designed to take fuse links of these capacities or less when the fuse links are rated on the 100 per-cent basis. Also, coordinating fuse links can be used in these cutouts. When these cutouts are used with fuse links that meet NEMA specifications, the cutout will carry its rating continuously with a maximum temperature of 30° C for the conducting parts of the fuse holder above and ambient of 40° C. All G-E universal cable-type fuse links meet these specifications.

#EEL-NEMA standard mounting bracket for separate mounting on crossarm, direct to pole, or wall, and for combination mounting with lightning arresters on crossarms, included in Model No. given.

*All 9F6D cutouts, including those now in service, are capable of interrupting these higher interrupting ratings.

** (1) Normally furnished as indicating, non-drop-out cutout, but easily convertible to drop-out operation by removing the converting bar.

(2) Where large usage of drop-out function only is required, cutouts can be furnished for drop-out operation only.

§Operating Function—Letters indicate following:

- A—Indicating or Drop-out—Normal-duty (Field Convertible).
- B—Indicating Only—Normal-duty.
- C—Indicating Only—Heavy-duty.
- XC—Indicating Only—Extra-heavy-duty.
- D—Disconnect.

Heavy-Duty Enclosed Fuse Cutouts

200-amp., 5.2-kv Cutout Mounted on Crossarm

5.2 kv, 200 amp. indicating fuse cutouts having same advantages of fuse renewal as the porcelain-enclosed indicating and dropout fuse cutouts.

Have interrupting rating of 10,000 to 14,000 rms amp. at 60 cycles. Applicable for use on banks of transformers feeding industrial plants or for sectionalizing heavy feeders.

200-amp fuse cutout convertible to a 400-amp. disconnect cutout by replacing fuse holder door with a disconnect door.

Call Graybar FIRST for . . .

G-E Porcelain Enclosed Fuse Cutouts

How the Cutout Operates

1. Fuse link in place. Plastic-to-metal latch holds door closed.

2. Spring-actuated flip-out semaphore held in position by the fuselink cable.

As an Indicating Cutout

3. Fuse link melts, flip-out semaphore flips to position shown, aids interruption of low fault current, provides visual indication of blown fuse. With converting bar in place door remains closed as shown above.

As a Drop-out Cutout

4. Remove converting bar and bottom of door is free to kick out when the fuse link has been ejected.

5. Compressed spring and weight of door lets door latch disengage from housing and drop open as shown. Allows plenty of time to permit clearing of the arc within fuse-holder.

As a Disconnect

6. Install a disconnect-blade door, and housing converts to a disconnect. Door has a one-piece, silver-plated, copper blade hinged at the lower end. When disconnected, blade hangs below the housing where it is electrically isolated from the circuit yet always available and ready for use. Lineman can tell at a glance when the circuit is open.

79X311	Door, complete with 400-amp. disconnect blade	6 1/2	7 1/2	20.53

Note: The above doors can be used with superseded Model No. 9F16A7, 9F16A70, 9F16B76, and 9F16BB76 cutouts. When so used the interrupting rating of the Cat. No. 79X307 will be limited to 8000 amperes at 5.2 kv and 12000 amperes at 2.5 kv.

*These ratings conform to maximum design ratings of distribution fuse cutouts in accordance with NEMA standards.

†For single-phase, line-to-neutral installations on 8330 volt, 4-wire circuits, or wherever voltage across a single cutout does not exceed 5.2 kv.

††On 4160- or 4330- volt, 4-wire circuits, or wherever voltage across a single cutout does not exceed 2.5 kv.

G-E Open-Type Fuse Cutouts

Provides overcurrent protection throughout full range of fault currents up to their rated interrupting capacity, on distribution circuits of 15 kv and below.

Wet - process - porcelain insulator has undercut petticoats for greater insulating strength. Solid construction prevents insects from nesting inside.

Birds and animals prevented from bridging insulator, and blowing fuses by a compression-clamped through porcelain mounting support, free of outside clamps

All hardware is made from nonferrous metals.

Fuse holder drops to completely open position for easy identification of blown fuse.

Have EEI-NEMA Standard mounting bracket for separate mounting on crossarm, direct to pole or wall, and for combination mounting with lightning arresters on crossarm.

Cutouts with Fuse Holder and Having Heavy-Duty Interrupting Rating

Model No.	Voltage Rating Kv.*	Current Rating, Amperes	Ship. Wt. Lb.	List Price, Each
9F3K71	7.8	100	18 1/2	\$21.23

482B941G8		15	100	2000	2½	10.87
	482B941G12	15	200	2½	10.87

Equipped With Load-Break Device

Provides not only fault protection but also a means for opening circuits under load. Advantageous for simplified sectionalizing of main feeders, isolation of branch circuits, switching transformers, capacitor banks and other loads. Load currents up to 100-amp., 15-kv or less interrupted easily.

Sharp downward pull of the load-break device with switch-hook breaks fusible section of fuse link and current interruption occurs within the fuse-holder similar to when a low fault current is interrupted.

Cutouts w/Fuse-Holder—Heavy-duty Interrupting Rating, 5000 Amperes

Model No. of Cutout with Load Break Device†	Max. Design Voltage Rating Kv*	Cutout Cont. Current Ratings Amperes 100% Basis	Shp. Wt. Lb.	List Price, Each
9F3KC71	7.8#	100	19	\$21.23
9F3KC81	15‡	100	21¼	26.32

Supply-part Fuse Holders, Complete with Load-break Device, Interchangeable with Equivalent-voltage-rated Cutouts Above

Cat. No. Fuse Holder with Load-break Device \$	Max. Voltage Rating Kv	Current Rating Amp.	Interrupting Rating Rms Amp. at 60 Cycles	Load-Break Rating Rms Amp.	Approx. Wt. Lb. Shp. Net	List Price, Each
482B941G9	7.8	100	5000	100	3 2½	\$11.46
482B941G10	15	100	4000	100	3½	12.69

§Can also be used with corresponding ratings of Cat. No. 9F3F... and 9F3G... open-type cutouts.

†This 3000-amp. interrupting rating conforms to latest NEMA Standards and applies only with fuse-holders that have this 3000-amp. rating shown on the fuseholder's nameplate. Fuse-holders of this same Model No. (furnished on earlier designs of 9F3II21 or 9F3IIC21 cutouts) which have no interrupting rating on the nameplate conformed to the previous NEMA Standard and are capable of interrupting only 2000-amp.

*These ratings conform to maximum design ratings of distribution fuse cutouts in accordance with NEMA standards. Cutouts rated 7.8 kv. max. may be used on grounded-neutral circuits where the voltage that an individual cutout has to interrupt does not exceed 7.8 kv and where the insulation to ground meets the operating conditions.

#The 7.8-kv rating will break any capacitive or inductive load current within the voltage rating and load-break of cutout.

‡Will break any capacitive load current within the voltage rating and load-break rating of the cutout. Will also break any inductive load current within voltage rating and load-break of the cutout providing eight miles or more of energized line remains on the system. This small mileage of connected line is advantageous with the 15-kv load-break to slow the rate of rise of the recovery voltage which is inherently faster on higher-voltage systems; and thereby prevent restriking after current interruption by load-break.

§Includes EEI-NEMA Standard mounting bracket.

G-E Flip-Open Fuse Cutouts

***50 Amperes**

A fuse link provides over-current protection without the conventional hinged fuseholder tube. Expulsion action obtained entirely by the fuse-link tube—a unitary part of the fuse-link. Spring contact arms pull the lower cable terminal out of the fuse-link tube when the fuse-link melts.

An inexpensive cutout for rural-line service where the circuit conditions impose a less-severe interrupting duty on the cutout, and where the advantage of the hinged fuseholder type of conventional cutout may be dispensable.

Mechanically and electrical reliability is embodied in these cutouts. Their ability to meet the shocks and stresses of service has been demonstrated by flashover tests, both wet and dry, short-circuit tests, tension test of the metal-to-porcelain joints, and accelerated life tests.

Model No.	Voltage Rating Max. Kv	Mounting Bracket	Shp. Wt. Lb.	List Price, Each
9F17E21	7.8	EEI-NEMA Std.†	10	\$11.23
9F17EA218	7.8	Bushing‡	6½	9.63
9F17E31	15	EEI-NEMA Std.†	12	13.61
9F17E41	18	EEI-NEMA Std.†	18	22.70

*These ratings conform to maximum design ratings of distributor fuse cutouts proposed by EEI-NEMA report on preferred voltage ratings. Cutouts rated 7.8 kv maximum may be used on grounded-neutral circuits where the voltage that an individual cutout has to interrupt does not exceed 7.8 kv and where the insulation to ground meets the operating conditions.

†EEI-NEMA Standard mounting bracket for separate mounting on crossarm, direct to pole, or wall and for combination mounting with lightning arresters on crossarm or direct to pole.

‡For mounting to high-voltage bushing of type IIS or IISA distribution transformer.

Hubbard Heavy-Duty Cutouts
Open Type Fuse

No. 2468

Rugged metal and porcelain parts withstand damage by handling, gun shot and vandalism. Optional addition of load break to meet local service conditions.

Conveniently placed line connectors with non-separable parts, insuring tight connections with aluminum or copper conductor, either stranded or solid.

Easy and convenient opening and closing, insertion or removal of fuse tube by any length of fuse stick under all weather conditions. The fuse link clamp with non-turning washer prevents mutilation of fuse cable strands for proper dropout with low current operations.

Hubbard Arrester and Fuse Cutout Combinations
(With Load Break Drop-Out Fuse Holder)

No. 2315

All of the features of the Autogap and the Drop-Out mechanism combined into one unit. NEMA standard bracket furnished, No. 2337 for pole or crossarm mounting.

A section of the fuse cable is exposed at the bottom of the Drop-Out mechanism so that without accessories, standard fuse links up to 50 amps. may be mechanically disconnected without external arcing.

Complete bird and animal protection. Heavy duty weather-proof fuse holder—positive acting. Positive closure of Drop-Out mechanism from any angle due to properly designed guides and large bearing surface.

G-E Fast-Blowing Universal Cable-Type Co-ordinating Fuse Links

The 51-, 52-, 101-, and 102-ampere fuse links have time-current characteristics of 75-, 100-, 150-, and 200-ampere fast-blowing fuse links respectively. The 103-ampere fuse link has time-current characteristics of 200-ampere slow-blowing fuse link. These co-ordinating fuse links are rated only 1, 2, and 3, amperes higher than the 50- and 100-amp. links, as this is the limit of their 100% continuous current carrying ability. They will save the expense for larger cutouts where neither the load current nor the short-circuit current exceeds the safe operating ability of either the 50- or 100-ampere cutout. These links require more than 230 per cent of their rating to melt within five minutes and are, therefore, not "N"-rated to NEMA Standards.

Packed 25 in a carton.

Over-all length of fuse link—20-inches.

Fuse Link Model No.	Fuse Link Cap. Amp.	For Use In Cutouts Rated, Amp.	Ship. Wt. Lb. Per Carton	List Price, Each
9F1C80	51	50	4½	\$0.86

9F1C83	102	100	7	1.20
9F1C84	103	100	7	1.62

G-E EEI-NEMA Universal Cable-Type Fuse Links

These fuse links, in accordance with NEMA Standards SG9-90, will carry rated current continuously with a maximum temperature rise of 30 C for conducting parts of the fuse holder above an ambient temperature of 40°C.

The relation of the 300-second (or 600-second) minimum melting current to the fuse-link rating is approximately 200% for fuse links rated 100-amperes or below and 240% for fuse links rated over 100-amperes. Because of superior low-melting-point characteristics, these fuse links have over-current continuous ratings. These ratings parallel the current ratings of G-E "N"-rated fuse links.

9F1K18	9F1T18	200#	200	4½	2.19

*The Type letters "K" and "T" identify a series of fast and slow fuse links respectively as established by the EEI-NEMA Standards for distribution links. The terms fast and slow are used only to indicate the relative speeds of "K" and "T" fuse links. EEI-NEMA current rating and type letter (K or T) are stamped into the top of the button-head cap. When packaged, they can be identified by color-code stamping of descriptive data on one end of the carton—green for Type K and blue for Type T.

†Use 1-, 2-, and 3-amp. ratings of 5-amp. series Hi-surge fuse links.

††This overload rating applies only when the fuse is used in 100-, or 200-ampere cutouts.

§These fuse links can be substituted for G-E "N"-rated fuse links to obtain a comparable degree of protection.

#EEI-NEMA preferred ratings.

¶Conform to 20-in. NEMA Std. min. spec. If extra length is required, fuse links can be supplied at the stated price additions over and above the prices listed above.

24-in. over-all length—no extra price.

24- to 30-in. incl.—add \$0.05 per link.

30- to 36-in. incl.—add \$0.10 per link.

G-E High-Surge Universal Fuse Links

100% "N"-Rated Double-Duty Fuses

For use in expulsion or flip-open-type distribution fuse cutouts.

Provide maximum overcurrent protection for distribution transformers (at 1, 2 or 3 amperes) yet provide the same freedom from surge blowing as a conventional 5-ampere fuse.

Hi-Surge, Universal, Cable-type Fuse Links

Cat. No.	Hi-surge Fuse-link Rating, Amperes		Shp. Wt. Lbs. per Carton of 25 Fuse Links	Each
	100% or Continuous Rating	Surge Rating		
9F1CH1	1	{ Equivalent to conventional 5-amp fuse }	2	\$0.59
9F1CH2	2		2	.59
9F1CH3	3		2	.59
9F1CH22	2	{ Equivalent to conventional 10-amp fuse }	2	.59

9F1FH1	1	{ Equivalent to conventional 5-amp fuse }	2	\$0.80
9F1FH2	2		2	.80
9F1FH3	3		2	.80
9F1FH22	2	{ Equivalent to conventional 10-amp fuse }	2	.80
9F1FH23	3		2	.80
9F1FH24	5		2	.80
9F1FH25	8		2	.80

5-Ampere Series (red auxiliary tube):

Low Current—1-, 2-, 3-ampere rating for over-current protection.

High Current—5-ampere characteristic for withstanding surges.

10-Ampere Series (black auxiliary tube)

Low Current—2-, 3-, 5- or 8-ampere rating for overcurrent protection.

High Current—10-ampere characteristic for withstanding surges.

For Transformer Installations they offer these Outstanding Advantages:

- Improved Overcurrent Protection where 5-ampere minimum fusing has previously been used.
 - With the same freedom from blowing by motor-starting, inrush lightning, or other surge currents.
 - Without rechecking their co-ordination with line-sectionalizing devices.
- Reduced Blowing by surges where 1-, 2-, or 3-ampere conventional fuses have previously been used.
 - With the same overcurrent protection.
 - With no need for rechecking their co-ordination with line-sectionalizing devices, in the majority of applications.

Note—In these applications of Hi-Surge Fuse Links the only factors to consider are:

- That overload currents do not exceed the fuse rating.
- That they co-ordinate with service-entrance fuses.

G-E Fast-Blowing Universal Cable-Type Fuse Links

For Use with All G-E Reclosing, Enclosed Indicating and Dropout, Enclosed Nonindicating, and Open-type Fuse Cutouts

These fuse links are rated on the 100 per cent basis, and are designed to carry their rated current without blowing, and to blow at not over 230 per cent rating within five minutes. All G-E fast-blowing universal cable-type fuse links may be operated safely and continuously at 100 per cent rating, with a maximum temperature rise of 30° C. for conducting parts of the fuse holder above an ambient temperature of 40° C.

G-E Indicating Secondary Fuses

Outdoor Type

The G-E indicating secondary fuse is an outdoor cartridge-type, nonrenewable fuse designed to permit transformer-secondary banking, transformer-secondary protection, and the isolating of service-entrance faults at minimum initial expense.

The fuse element is totally enclosed, protected from the weather, and cannot be twisted when swayed by the wind.

It can easily be installed with any type of overhead secondary construction by means of conventional solderless connectors.

For circuits 600 volts and below.

Packed 25 fuses in a carton, 200 amp and less.

Packed 5 fuses in a carton, 250 and 300 amp.

G-E Secondary Indicating Fuse Cutouts

Closed

Indicating

The G-E secondary fuse cutout gives positive indication that the circuit is open whenever a fuse link is blown, by pushing the Textolite housing down from the upper terminal cap and displaying the red fuse-holder tube which is readily visible from the ground. This secondary cutout makes transformer-secondary banking, transformer-secondary protection, and the isolating of service-entrance faults economically possible.

The fuse link is protected from the weather; in this way, maintenance is minimized. The small size and light weight of the cutout enable it to be mounted in the space between secondary lines, attached directly to the line conductor, or mounted directly on the clamp terminals of a distribution transformer (using an adapter). Cutout can be easily and safely refused.

G-E Oil Fuse Cutouts

Pole Type 5000 Volts, 100 to 200 Amperes; 7500 Volts, 100 Amperes

Subway Type 5000 Volts, 100 and 300 Amperes; 7500 Volts, 100 Amperes

Pothead Type, 100 and 200 Amperes

Cat. No. 242B58862 Expansion Chamber for Subway-type Cutouts

Subway-type Cutout with Expansion Chamber

The G-E oil fuse cutout is completely metal-enclosed, with a fusible element under oil, by which the circuit is broken safely and rapidly. Standard oil fuse cutouts are available in three designs for pole, subway, or pothead service on circuits up to 7500 volts and 300 amperes.

The "U"-shaped universal fuse links consist of laminated-metal terminal strips, forming the vertical legs and supporting a horizontal section of fusible alloy having a low melting temperature. This horizontal section is housed in a specially formed expulsion tube of insulating material. Fuse carrier is locked in place before circuit is closed.

Flame from arc is confined within housing, and prevents ignition of explosive gases and external damage.

Fuse link is under oil—this prevents deterioration from oxidation or electrolysis. Gases are released, but oil is confined. Subway fuse cutouts have operated for years while submerged in water.

Fuse links are quickly and easily replaced. Oil level can be maintained without removing cutouts from service.

Heavy self-aligning contacts make possible repeated opening under load.

Cutouts may be fused closely to load, providing simultaneously protection against overload and heavy short circuits.

G-E oil fuse cutouts are particularly applicable for subway service, for replacement of potheads, and for installations where high current-interrupting ability is required and where high-speed operation is essential. Other locations in which they can be used to advantage are:

- Where quiet operation is desirable.
- Where the cutouts are exposed to smoke, corrosive fumes, salt air, explosive gases, or inflammable dust.
- All indoor installations.
- Where it is desired to have no exposed live parts, whether the cutout is in the open or the closed position.

They are ideal for indoor industrial applications. As no flame is expelled, and as all live parts are completely enclosed, the oil fuse cutout best meets the requirements of the National Electrical Code.

New G-E Universal Fuse Links
For Oil Fuse Cutouts Having Notched Carrier Plugs

Universal Fuse Link Mounted in Notched Fuse-carrier Plug

Universal Fuse Link

Time-Current Characteristics

Universal fuse links, when used in G-E oil fuse cutouts of the proper rating, will carry continuously 100 per cent of the rated current of the fuse link. They will melt at approximately 150 per cent of their rating in 300 seconds (5 minutes).

Application

These universal fuse links are designed for use in all oil fuse cutouts, 100 to 300 amperes, with Model No. in the 9F2D, -E, and -F series. These cutouts all have notched fuse-carrier plugs, as illustrated.

Universal fuse links can also be used in all superseded designs of G-E oil fuse cutouts, in the Cat. No. 9F2C series or earlier (except 50-ampere, 2500-volt rating), simply by cutting a notch in the lower end of the wooden fuse-carrier plug. A template is included in each carton of universal fuse links to facilitate correct notching.

G-E Power Capacitors for Kilovar Supply
Pyranol* Capacitors

Individual Outdoor Units — Class ID

Single- or Three-phase, 60 Cycles
 240 to 13,800 Volts, 5 to 50 Kvar

Compact and easily installed, with hangers available for crossarm mounting or for direct bolting to the pole, these units are especially suited for gaining kw carrying capacity and reducing voltage drop on distribution circuits.

They permit extremely effective distribution of the capacitor kvar in small blocks and at many points over an entire feeder. In small blocks, they supply reactive kva economically and with great flexibility for future arrangement.

For application data, see Bulletin GET-2360.

Individual Enclosed Units
Type EDT and EWT

For Low-voltage Industrial Application
 Single-phase or Polyphase, 60 Cycles
 230 Volts, 0.5 to 7.5 and 15 Kvar

460 and 575 Volts, 1, 2, 5, 10, 15 and 20 Kvar

Dust-tight design
 Class EDT

Weather-proof design
 Type EWT

These units are for indoor and outdoor applications for improvement of power factor directly at individual motors or other small loads. Group installations, consisting of a small number of enclosed units, can be made if the kilovars required exceed those of a single unit.

For larger loads, enclosed units may be grouped in a bank and in these applications small housed units (type LSO or DTSR) are recommended. Ask for Bulletins GEA-2742 and GEC-1331.

Small Rack-Type Equipments —
Type DTSR and LSO

Single-phase or Polyphase
 230 Volts — 30 to 120

460 and 575 Volts — 40 to 240 Kvar.

In the improvement of plant power factor, it is very often desired to locate capacitor equipment in one group on the low-voltage circuit, or perhaps in several smaller groups. The total kva rating generally exceeds the output of a single individual capacitor unit.

Ask for Bulletin GEC-1331A.

Prices on application.

Dust-tight design for
 indoor service,
 Class DTSR

*Registered trade-mark of General Electric Co.

Open-Type Stack-Rack Equipments
For High-voltage Transmission Lines and Substation
Application—24 to 138,000 Volts

These factory assembled racks are designed to minimize installation time and provide reliability and economy where housed equipments are not required. A wide range of kvar and voltage ratings may be obtained by omitting units or combining racks. Each individual rack is a complete "building block" assembly and is designed so that relocation or changes in bank size may be easily accomplished. The racks consist of capacitors, individual bus-mounted fuses, interconnecting material, and insulators.

Large Equipments — Class LLI and LLO

For Low-voltage Applications
 Single-phase or Polyphase
 230 to 575 Volts — 270 to 1320 Kvar

Large capacitor equipments afford a means of applying large blocks of kilovars as, for example, in substations or large industrial plants. These equipments are available for either indoor or outdoor service, with or without air circuit breakers. The units are easily accessible through hinged doors in the sides, and adequate ventilation is assured through screened openings in the housings.

G-E Power Capacitors For Kilovar Supply Small Equipments — Class HSO

**For High-voltage Industrial & Substation Applications
Single-phase or Polyphase
2400/4160Y Volts, 45-180 Kvar.
4800 and 7200 Volts, 90 and 180 Kvar.**

Class HSO equipments are for use on indoor or outdoor circuits where small blocks of power-factor-improvement capacity are desired.

In the application of capacitors on circuits of 2300 volts and higher in small industrial plants, ratings 180 kvar and less are often desired. These small equipments are ideal for this purpose, and in large plants a number of these installed at various load centers may prove more advantageous than one large equipment.

HSO equipments are also used on outdoor circuits where small blocks of power-factor-improvement capacity are desired.

In applying capacitors on outdoor primary circuits for small industrial plants, ratings 180 kvar and less are often desired. This is especially the case where the power is metered on the primary side of the transformer bank. These HSO equipments are ideal for this purpose, and in larger plants, a number of these installed at various points may prove more advantageous than one large equipment. Ask for Bulletin GEA-2860.

Large Equipments — Class HLO

**For High-voltage Industrial Substation Applications
Single-phase or Polyphase
2400-13,800 Volts
600-5400 Kvar.**

Class HLO,
for indoor and outdoor service

Large capacitor equipments afford a means of applying large blocks of power - factor - improvement capacity which are frequently desirable in substations or large industrial plants. These equipments are available for either indoor or outdoor service, with or without oil or magne-blast circuit breakers.

G-E Auto-Switch Equipments

**For High-voltage Power-distribution Lines, 3-phase—
2400-13,800 Volts. 150, 300, 450, and 600 Kvar**

Open-Type Auto-Switch Capacitor Equipment

For distribution circuits requiring adjustable power-factor improvement because, where permanently connected capacitors would result in over-voltage or leading power factor at light loads, switched pole-top open capacitor equipments are available. These equipments are switched on and off automatically.

For further information, please contact Graybar.

**G-E Specialty Capacitors
Standard Commercial Types**

**For A-C and D-C Applications
Fixed Paper-dielectric Capacitors**

A-c/d-c dual-rated Pyranol capacitors for motors, controls, electronic equipments, and other applications will: reduce inventories, simplify design problems, and increase standardization. Capacitors in the voltage ranges 236 through 660 volts, a-c, and 400 through 1500 volts, d-c, are now dual-rated and can be used for either a-c or d-c applications. Other a-c and d-c ratings available: 0.01 to 75 mu f, 236 to 660 volts, a-c, and 400 to 100,000 volts, d-c.

Ask for Bulletin GEC-809.

Prices on application.

**Capacitors to Meet Joint
Army-Navy Specification MIL-C-25A**

100 to 12,500 Volts, D-C — 0.01 to 15 Microfarads

These fixed paper-dielectric capacitors are designed to meet the rigid requirements of the joint Army-Navy specifications for use in electronic equipment for the armed forces. Hermetically sealed in metallic containers, these capacitors for d-c applications are available in Characteristics E and F and in case styles CP-53, -54, -61, -63, -67, -69, and -70.

In addition to regular applications, these units may also be used at higher temperatures, higher voltages for short-life applications, and with a-c voltages.

Ask for Bulletin GEC-810.

G-E Specialty Capacitors

Permafil Capacitors

For High-temperature Operation

0.01 to 10 Microfarads—100 to 1500 Volts, D-C

Permafil d-c paper-dielectric capacitors are especially designed for operation in high ambient temperatures. They require no derating for temperatures up to 125 C. Their function is to provide suitable components for the many recent applications involving operation at ambient temperatures above 85 C.

Hermetically sealed in metallic containers and provided with permanently sealed silicone bushings, permafil capacitors, meeting MIL-C-25A characteristic K requirements, are available in case styles 53 and 61.

Ask for Bulletin GEC-811.

Tantalytic* Capacitors

3.75 to 150 Volts, D-C—0.1 to 250 Microfarads

The tantalytic capacitor was developed to fit certain direct-current, low-voltage applications where aluminum electrolytics and paper capacitors have not proved entirely satisfactory, and is suggested for applications where superior performance and small size are the major factors.

The tantalytic capacitor is a foil-type, tantalum electrode, electrolytic unit, similar in construction to an aluminum electrolytic capacitor, but because of the characteristics of tantalum foil and the electrolyte employed, is smaller in size. The tantalytic capacitor has lower leakage currents, longer shelf life, and a wider range of temperature operation (—55C to +85C) than the conventional aluminum electrolytic capacitor. Currently, they are being used in telephone and military communication equipment.

Ask for Bulletin GEC-808.

*Trademark of General Electric Co.

High-Temperature Tantalytic* Capacitors

High-temperature Tantalytic capacitors are rated for operation at 125 C. These capacitors come in rectangular- and double-case, cylindrical designs. They are now being applied in missiles and other military communication and ordnance equipment. They feature low leakage current, small size, long shelf life, and a wide range of temperature operation.

*Trademark of General Electric Co.

Capacitor Networks

For guided missiles, aircraft, and land and sea radar equipments. Whether for a service life of 10,000 hours, or just 100 hours, G-E networks, designed to meet exacting specifications, will give you the reliable performance you require.

These pulse-forming network capacitors are used for radar equipment where the normal (exponential) capacitor discharge shape is not suitable and where an impulse having a definite energy content and duration is required.

For more information, see Bulletin GEA-4996.

Low-Voltage, High Mu-F Capacitors

These small-size, lightweight capacitors were developed to provide aircraft and communication fields with a high-quality replacement for many of the applications where metallized paper capacitors are not entirely satisfactory. Selected ratings for the MIL-C-25A case styles CP-53 and CP-61 are available.

The units are intended primarily for low-voltage, d-c applications.

Contact Graybar for further information.

G-E Specialty Capacitors

Drawn-Oval and Drawn-Rectangular Capacitors

330 A-C/600 D-C to 660 A-C/1500 D-C Volts—1 to 40 Microfarads

These are a-c and d-c capacitors in drawn seamless containers. They are designed for use in fluorescent lamp ballasts, air-conditioning equipment, voltage stabilizers, business machines, luminous-tube transformers, and submersible pumps. Drawn-oval and drawn rectangular capacitors are smaller, lighter, mechanically stronger, use less critical material, and cost 10 to 20 per cent less than standard fixed paper-dielectric capacitors.

Ask for bulletin GEA-5777.

High-Frequency Paper-Dielectric Capacitors

For Blocking and By-pass Applications
5000, 15,000, 20,000 Volts D-C

Class HF paper-dielectric capacitors are for use in electronic oscillator circuits of high-frequency induction - heating equipments. These capacitors may also be used advantageously in other high-frequency circuits of a similar nature.

G-E high-voltage paper-dielectric capacitors are of relatively high capacitance for high - frequency units, and yet they are more economical than conventional high-

frequency units of considerably smaller capacitance values. They can, therefore, be applied with savings in cost, as well as with reduced losses and lower voltage drop across the capacitor.

Oscillator-Tank-Circuit Capacitors

Class HFP—Series 300

High - frequency, liquid - filled, parallel-plate capacitors designed specifically for use in the resonant circuit, or "tank circuit" of high-frequency electronic oscillators, such as those used in electronic-heater equipments. The unique synthetic liquid dielectric, lectronol, coupled with an improved water-cooled design, permits an unusually compact assembly whose case measures 9x9x9 inches. This results in high current rating per unit volume.

Designers find these smaller, low-loss units contribute materially to more compact, powerful, efficient heaters.

The capacitor, when connected in parallel with an inductance coil, constitutes the resonant circuit which determines the frequency of the oscillator.

These units are built in a standard size which is convenient to handle and install. Available in ratings which will meet most requirements.

For further information, please contact Graybar.

Pyranol Energy-Storage and -Discharge Capacitors

2000 to 6000 Volts, D-C
12.8 to 100 Microfarads

General Electric d-c Pyranol capacitors for light-duty energy-storage applications are the result of years of experience in the design and manufacture of capacitors for this type of service. The use of Pyranol provides a relatively small, lightweight, stable capacitor which has a life consistent with the application involved. They are completely liquid-filled and hermetically sealed in terneplate containers. Their gray-lacquer finish is attractive, durable, and corrosion-resistant. For full information, see Bulletin GEC-1357.

Molded PVZ* Tubular Capacitors

These capacitors have applications in computers, missiles, telephone equipment, and other high-grade military and commercial electronic equipment.

Ratings: 100 to 400 volts. Can be supplied from 0.00047 to 0.022 uf in the 400-volt range and from 0.00047 to 0.15 uf in the 100 volt range. Tolerances: $\pm 5\%$, $\pm 10\%$, $\pm 20\%$. Temperature range is from -55°C to $+125^{\circ}\text{C}$.

*Trademark of General Electric Co.

D-C Alumalytic* Capacitors

For radio, television, and other communications equipment manufacturers, General Electric supplies d-c aluminum electrolytic capacitors of high quality, in ratings to meet varied industry requirements, in high production quantities which assure availability.

Extensive test data and performance data of General Electric electrolytic capacitors is readily available on request, or sample capacitors built to your specifications will be supplied for testing purposes. Units may be supplied to meet particular specifications or to the industry general use specifications (RETMA RS-154).

Tubular units may be insulated or uninsulated, single or dual-sectional, with a choice of various leads and terminals. The "can-type" units may be insulated or non-insulated, in standard diameter and length cans, with either solder-lug or bayonet pin terminals.

*Trademark of General Electric Co.

G-E Watthour Meters

General Electric provides a complete line of single-phase and polyphase watthour meters and watthour demand meters, meter sockets and water-heater time switches.

The single-phase line of watthour meters now includes the new I-60-S, Class 200 meter. The polyphase line has been expanded by the addition of the new V-60 family of polyphase meters.

Both the I-60 and the V-60 family of meters incorporate all the time-proven features of magnetic suspension with its resultant savings in bearing replacement and greater sustained accuracy.

**Index of Types
For Alternating Current**

Type	Max. Rated Amp.	Max. Volts	Circuit
Wall Mounting Type			
I-60	30	240	1-stator, 3-wire, 1-phase
I-50	50	210	1-stator, 2 or 3-wire, 1-phase
V-62	30	600	2-stator, 3-wire, 1, 2, 3-phase
V-63	30	600	2-stator, 3-wire, 3-phase
V-4	50	120	3-stator, 4-wire, Y, 3-phase
V-5	50	120	2-stator, 4-wire, Y, 3-phase
V-6	50	240	2-stator, 1-wire, Δ, 3-phase
V-7	50	240	2-stator, 1-wire, Δ, 3-phase
V-9	50	240	Tot. 3-wire, 2 or 3-phase and 2 or 3-wire, 1-phase
V-10	50	240	
Switchboard Mounting Type			
IS-8	..	240	1-stator, 2-wire, 1-phase
DS-19	..	600	2-stator, 3-wire, 1, 2 or 3-phase, and 4-wire, 2-phase
DS-20	..	120	3-stator, 4-wire, Y, 3-phase

**Single-Phase, Single-Stator
60-Cycle**

Types I-60, I-55 and I-50

Type I-60-S

Type I-50-A

The single-stator product line comprises a complete group of watthour meters, each one designed to meter one of your particular single-phase loads; yet each design incorporates the time-proven, yet extremely modern features that signify the name I-50.

The newest addition to the line, the Type I-60-S, is a Class 200 meter, which means it can accurately meter loads up to 200 amperes. The I-60 meter, however, not only extends the range to 200 amperes, but also provides outstanding accuracy at light loads

In the preceding paragraph, mention was made to meter class. The meter class is a recently established industry standard which defines the current capacity of a meter. For example, the I-60 is a Class 200 meter and the I-55 is a Class 100 meter (100 ampere current capacity).

Popular Plastic Socket-Meter Covers

Designed and engineered to meet new requirements of socket meter users.

Constructed of unbreakable clear plastic.

Weather-tests indicate covers are not affected by temperatures of almost 200° F.

Seal-tight rim eliminates use of gasket.

Furnished for all modern meter types and street light controllers.

Prices on application.

G-E Watthour Meters

Types V-62-S and V-62-A
3-Wire

Intended for use on circuits consisting of two "line" wires and the "neutral" obtained from a 4-wire Y, 3-phase circuit. These meters can also be used on 3-wire, 1, 2, or 3-phase circuits.

Extended-range current capacity of the 15-ampere meter is 100 amperes (Class 100) and of the 30 ampere meters is 200 amperes (Class 200).

Type V-62-S is for socket connection and the V-62-A for bottom connection. Approximate dimensions for the "S" type are 7 by 7 1/4 in.; for "A" type, 7 1/2 by 8 1/2 in. Approximate shipping weight, 12 lbs.

Amp.	*120 Volts			†240 Volts

Approximate shipping weights: Type V-5-S—10 lbs.

Type V-5-A—12 lbs.

*13-terminal meter provides separate terminals for all coils (10 terminals) plus contact device (3 terminals) when required.

Call GraybaR FIRST For . . .

Types V-63-S and V-63-A
3-Wire

Type V-63-S

Type V-63-A

Type V-63 meters in both self-contained and transformer ratings are intended for use on 3-wire, 1, 2, or 3-phase circuits. Transformer-rated meters are provided with potential-indicating lamps.

Extended-range current capacity of the 15 ampere meter is 100 amperes (Class 100), and of the 30 ampere meter is 200 amperes (Class 200).

Type V-63-A is for bottom connection and the Type V-63-S is for socket mounting. Approximate dimensions for the "S" type are 7 by 7 1/4 in.; for the "A" type, 7 1/2 by 6 1/4 by 9 1/2 in.

G-E Portable Meter-Testing Standard

Type IB-10

Here is a portable standard which combines, for the first time, the capacity essential for the testing of both high and low-current-rated meters with the light weight and small size of the best low-capacity standards.

The use of four current coils has resulted in wide operating range and excellent flexibility. All coils will carry 200% current continuously making it possible to test service meters of all ratings up to 100 amperes.

It has a completely new electromagnet, with low inherent errors, and excellent load, voltage and temperature characteristics; has also excellent balance (accuracy) between current circuits.

This is the first portable standard to use the G-E anti-parallel arrangement of dial and pointers, which promotes speed and accuracy as the reading is always the same regardless of the angle from which the scale is viewed. The large sweep hand, coupled to the disk shaft makes one revolution for each one of the disk. The anti-parallel scale is divided in 100 clearly marked divisions in order that readings, even closer than 1/100th of a revolution can easily be taken. Small dials within the large one make it possible to take readings up to 100 revolutions of the disk.

**G-E Switchboard Watthour Meters
For Use With Instrument Transformers**

These back-connected single phase and polyphase meters combine elements of front-connected meters with narrow 5½-inch universal-type switchboard case.

For use with instrument transformers in 2.5 ampere rating. Used with good accuracy on loads up to 400% of normal load.

Test links are not provided for these meters. Separate test blocks can be furnished for this purpose.

The listed switchboard watthour meters are of surface mounted construction. Semi-flush and drawout construction are available.

Switchboard meters are also available for use on circuits other than those listed. Information and prices on request.

**Single-Stator, Single-Phase
Type IS-8**

Available only in 2-wire construction. For 3-wire service, we recommend Type DS-19. Three-wire, single-phase circuits can be metered with the 2-wire meter (Cat. No. 97X335) when connected with double primary, single-secondary, 3-wire type current transformers.

Approximate size: 6 x 5½ x 7-inches. Ship. wt. 20 lbs.

*No potential transformers.

Catalog numbers cover meters with ball-type bearings.

Instrument transformers are not included with above meters. Specify ratios of transformers with which meter is to be used. It is standard practice (for meters of modern construction) to use 2.5 ampere meters with current transformers having 5 ampere secondary rating.

**G-E Type MC Phase-Shifting
Transformers**

For Var (reactive volt-ampere) Metering

These phase-shifting transformers can be used on circuits where the voltage may be 10 per cent above or below the rated voltage of the phase-shifting transformer. When ordering these phase-shifting transformers for voltages outside these limits, the normal operating voltage should be specified. Types listed are without test switches.

Type VM-62-S

With Type M-30 Register

These meters are intended for use on circuits consisting of two "line" wires and the "neutral" obtained from a 4-wire Y, 3-phase circuit. These meters can also be used on 3-wire, 1, 2, or 3-phase circuits.

Extended range current capacity of the 15-ampere meter is 100-amperes (Class 100), and of the 30-ampere meter is 200-ampere (Class 200).

G-E Square Watthour Meter Sockets Without Circuit-Closing Device

Square socket with Type I-55-S meter horizontal mounting

Used with single-phase and network meters of four, five, and six terminals. The S-1 is extremely versatile, as illustrated by the numerous features included in every socket.

Easily converted from vertical to horizontal mounting and fifth and sixth terminals may be added with use of screwdriver only.

To convert from vertical to horizontal mounting:

- Remove socket cover.
- Interchange adjacent line terminals.
- Interchange adjacent load terminals.
- Rotate meter socket 90 degrees.
- Replace cover so that rain lip is on top and locking clip is on bottom.

Square socket with cover, 4 terminal vertical mounting

With Serrated Ground Strap

Note—To order extra Fifth or Sixth terminal assembly, specify Cat. No. 680X34, Price..... Each \$0.80
Standard shipping cartons contain 12 sockets; shipping weight approximately 46 lbs.

G-E Box-Type Sockets
With a Manual and Visible By-Pass

Single Phase with Manual By-Pass

For use with single-phase and network meters that require a manual by-pass such as for all transformer-rated meters and for self-contained meters when it is imperative not to interrupt service upon removal of meter.

Sockets available with four, five, or six terminals.

Specifications:

Rating: 100 amp.

Terminal Clamp Capacity: Maximum wire size is 3/0 stranded copper or aluminum wire.

Conduit Outlets: Boxes may be obtained with hubs suitable for 1 1/4-in., 1 1/2-in., or 2-in. conduit.

Knockouts: Sides—Concentric knockouts for 1-in., 1 1/4-in., 1 1/2-in. conduit located at bottom of each side. Bottom—Concentric knockouts for 1-in., 1 1/4-in., 1 1/2-in., 2-in. conduit. Also has grounding knockouts of 1/4-in. and 1/2-in. diam. on the bottom.

Material: Boxes made of galvanized steel. Aluminum supplied on request. Finished with gray paint, baked on, or sheet aluminum.

Terminals: J-shaped open top type and equipped with maximum diam. screws with specially formed bottom ends that secure copper or aluminum wires firmly and without injury. Maximum wire sizes are 3/0 on line and load.

Grounds: Ground terminals are the same as the line and load terminals. Available with either single or double terminals.

Manual By-pass: Circuit can be completed manually by inserting and fastening the by-pass links on the studs, allowing meter to be removed from the socket without interrupting service.

By-pass consists of two porcelain blocks in which stubs are provided for link type by-passes. Wiring connections from line and load terminals to by-pass stubs are furnished. Cover over by-pass compartment cannot be replaced in the by-pass lines are in the circuit.

Construction: Outdoor weatherproof.

Dimensions: Overall—13 1/4-in., by 7 1/4-in., by 3 1/2-in.

Shipping Weight: Approximately 13 lbs.; if aluminum 9 lbs.

Fifth Terminals Alone, No. 909X37..... Each **\$0.80**

Fifth and Sixth Terminals, No. 909X38..... Each **\$1.60**

By-Pass Link, No. 909X39..... Per Pr. **\$1.50**

If sockets having aluminum cases are desired specify "Similar to standard Cat. No. except with aluminum case." Add **\$2.40** each.

By-Pass Links not furnished with the sockets and must be ordered separately.

Sockets also available with Snap-action Sealing Ring.

For further information, contact Graybar.

G-E High-Capacity, Box-Type Sockets
Specifications

Conduit Outlets: Cabinets with hub suitable for use with 2 1/2-in. conduit, or less, are standard. Hubs are of the removable type.

Knockouts: Sides—Concentric knockouts for 1 1/2-in., 2-in., and 2 1/2-in. conduit are located at the bottom of each of the two sides. Back—Concentric knockout for 1 1/2-in., 2-in., and 2 1/2-in. conduit. Bottom—Two sets of concentric knockouts, one set 1 1/2-in., 2-in., and 2 1/2-in., and the other set 1/2-in., 3/4-in. and 1-in.

Material: 16-gauge galvanized steel. Aluminum supplied on request. Finished with gray paint, baked on, or sheet aluminum.

Jaw Contacts: The four high-capacity contacts are 3/16-in. silver-plated copper. Good contact is further assured by heavy duty back-

up springs. Four terminal sockets are standard, five contact sockets are available.

Terminal Block Assembly: Jaw contacts and cable terminals are mounted on large porcelain base assuring rigid and permanent alignment of the jaws. The whole assembly is removable to facilitate mounting the box, pulling in and preparing the cable for making the final connections to the socket.

Cable Terminals: Six pressure-type connectors, four accommodate 4/0 cable, while the two grounding terminals 2/0 cable. Cable terminals and jaw contacts have unit construction, minimizing potential sources of heat.

Sealing Ring: One piece, stainless steel, snap-action is standard. Supplies on request with slip-lock ring or with no ring.

Circuit-closing Device (By-pass): Supplied with or without this feature. This spring loaded circuit-closing device automatically opens when the meter is inserted, and closes again before the meter is fully removed from the socket.

Test Links: None.

Construction: Outdoor weatherproof.

Rating: Maximum continuous rating of the socket when wired with 4/0 cable is 200 amp. Combined rating of socket and meter depends on thermal rating of meter. When the I-50, 50 amp. meter is used, the maximum continuous rating is 200 amp.

Dimensions: Overall 15-in. by 7 1/4-in. by 4 1/2-in.

Without Circuit-Closing Device

No.	No. of Hubs	Conduit Size In.	No. of Terminals	Each
642X4	None	...	4	\$44.10
642X7	1	1 1/2	4	43.10

*Hub size is actually the conduit size that can be used with the corresponding hub: "Less hub" can be supplied. From list price of corresponding socket with 1 1/4-in. hub, deduct . . . Each \$1.20. "2 1/2-in. hub" can be supplied. To price of corresponding socket with 2-in. hub, add . . . Each \$1.90.

Prices listed include G-E snap-action sealing ring.

Sockets listed have galvanized steel case. If sheet aluminum case is desired, order as "similar to standard Cat. No. except with aluminum case." Add . . . Each \$2.00.

If no sealing ring is desired, specify "without sealing ring." Deduct . . . Each \$1.10.

If slip-lock sealing ring is desired, specify "with slip-lock sealing ring." Deduct . . . Each \$0.50.

G-E High-Capacity Connection Boxes

For Use with A-Type Meters

Dimensions: Overall 21 1/8-in. by 9 1/2-in. by 4 5/16-in.

Shipping Weight: 18 lbs.

Maximum continuous rating when wired with 4/0 cable is 200-amps. Combined rating of mount and meter depends upon the thermal rating of meter. When the I-50-A 50-amps. meter is used, the maximum continuous rating is 200 amps.

The cable terminals are mounted on a large porcelain block which is easily removable to facilitate mounting the box and pulling in and preparing the cable for making final connections to the terminal block.

The line and load terminals are pressure type connectors and accommodate 4/0 cable. Two neutral terminals are of similar size joined by a bus on which is mounted a terminal for 2/0 cable for connection to ground.

A steel collar and rubber gasket effectively seals glass meter cover opening.

No.	Threaded Hubs		Each
	No. of Hubs	Conduit Size In.	
642X51	1	2 1/2" hub	\$51.20
642X52	1	2" hub	49.30
642X53	None	No hub	46.70

Applications

Single-phase, 3-wire circuits rated 240 volts, 200 amp. for use with the I-50-A 50-amp. meter.

Specifications:

Conduit Outlets: Boxes with a hub suitable for use with 2 1/2-in. conduit are standard. The hubs are of the removable type.

Knockouts: Sides — Concentric knockouts for 1 1/2-in., 2-in. and 2 1/2-in. conduit are located at the bottom of each of the two sides. Back — Concentric knockouts for 1 1/2-in., 2-in. and 2 1/2-in. conduit are located on the back. Bottom—(with hub)—Two sets of concentric knockouts, one set 1 1/2-in., 2-in. and 2 1/2-in.; the other set 1/2-in.,

3/4-in. and 1-in. (Without hub)—Three sets of concentric knockouts, two sets 1 1/2-in., 2-in. and 2 1/2-in.; other set 1/2-in., 3/4-in. and 1-in.

Material: 16-gauge galvanized steel with gray paint baked on. Outdoor, weatherproof construction.

Ventilation: Natural draft through sheltered vents at bottom and top of cover.

G-E High-Capacity Polyphase Box-Type Sockets

Specifications:

Conduit Outlets: A hub suitable for 3-in. conduit is standard. No hub or hubs suitable for 2-in. or 2½-in. conduit are available on a special basis. Hubs are removable.

Knockouts: Sides — Concentric knockouts for 2-in., 2½-in., and 3-in. conduit are located at the bottom of each of the two sides. **Back** — Concentric knockout for 2-in., 2½-in. and 3-in. conduit. **Bottom** — Two sets of concentric knockouts, one set 2-in., 2½-in. and 3-in. and the other set ½-in., ¾-in. and 1-in.

Material: Galvanneal steel or sheet aluminum finished in gray paint baked on or natural aluminum.

Jaw Contacts: The six high-capacity contacts are ⅜-in. silver-plated copper. Good contact is further assured by heavy-duty contact springs. The seventh contact is used for potential and is standard contact clip.

Terminal Block Assembly: Jaw contacts and the cable terminals are mounted on large porcelain base, assuring rigid and permanent alignment of the jaws, the whole assembly being removable to facilitate mounting the box, pulling in and preparing cable for making final connections to the socket.

Cable Terminals: The six cable terminals which accommodate 4/0 cable and the jaw contacts have a unit construction, minimizing potential sources of heat. Grounding terminals are also of the pressure type and accommodate 4/0 cable.

Sealing Ring: Snap-action, stainless steel sealing ring is standard. Slip-lock ring or no ring can be supplied on request.

Circuit Closing Device (by-pass): Supplies with or without this feature. This spring-loaded circuit-closing device automatically opens when the meter is inserted and closes again before the meter is fully removed from the socket.

Test Links: None.

Construction: Weatherproof.

Rating: Maximum continuous rating of the socket when wired with 4/0 cable is 200 amps. The combined rating of socket and meter depends on the thermal rating of meter. The V-5-S and V-6-S have a maximum continuous rating of 125 amps. when used in this socket.

Dimensions: (Overall height 19-in. (including hub), Width 9½-in., Depth 5¼-in.

No.	Threaded Hubs No. of Hubs	Conduit Size In.	No. of Terminals	Shp. Wt. Lbs.	Each
Without Circuit-Closing Device

582X2	1	2½	7	26	68.60
582X3	1	3	7	26	70.10

Prices listed include G-E snap-action sealing rings.

If no sealing ring is desired, specify "without sealing ring." Deduct. . . Each \$1.10.

If slip-lock sealing ring is desired, specify "with slip-lock sealing ring." Deduct. . . Each \$0.50.

Sockets listed have galvannealed steel cases. If sheet aluminum case is desired, order as "similar to standard Cat. No. except with aluminum case." Add. . . Each \$4.50.

G-E CT Sockets

For Use with Transformer-Rated Watthour Meters

Current transformers are included and are properly wired making the sockets ready for immediate installation in the line.

Specifications:

Sealing Ring: One-piece all-welded, stainless-steel, snap-action ring is standard.

Terminal-block Assembly: Remains in position when cover is removed.

Circuit-closing Device: Automatically opens when meter is inserted in the socket and closes again before meter is fully removed from socket.

Hubs: Removable type.

Knockouts: Sides—Concentric knockouts for 3-in. and 3½-in. conduit located at bottom of each side. **Bottom**—Concentric knockouts for 3-in. and 3½-in. conduit located in the bottom.

Grounding Knockouts: ½-in., ¾-in., 1-in. located in the bottom.

Construction: Outdoor type.

Material: Galvanized steel, with baked gray finish.

Transformers: Type JCA-O, butyl-molded.

Rating: Maximum for 200-amp. CT's, 200% load (400 amp); maximum for 400-amp. CT's, limit of entrance cable (one 600 MCM or two 250 MCM per terminal).

Shipping Weight: 70-lb. for sockets with two transformers; 115 lbs. for sockets with three transformers.

No.	Meter Type	Circuit	No. of Terminals	*Hub Size In.	Transformers	Each
642X60	1-50-S	1-phase, 3-wire	6	3	2-200/5	\$248.00

642X65	V-3-S	3-phase, 4-wire delta	8	3½	2-400/5 1-200/5	361.00
642X66	V-3-S	3-phase, 3-wire	8	3	2-400/5	281.00

*Hub size is given as the conduit size that can be used with each hub.

G-E Switchboard Instruments

Long-Scale Models

Type AB-18 (A-C)—Type DB-18 (D-C)

Type AB-18 Ammeter

These compact long-scale instruments are intended for general switchboard service on both large and small equipments. They are excellent for control stations, test equipment and other installations where space is limited. Five instruments can be mounted on a 24-inch panel.

They are particularly attractive because of their long concentric scales, which are very accurate and easily read. Readability is also improved

by a new cover designed for shadow elimination. The scale angle is 250 degrees for all except power-factor meters (which are calibrated over 180 or 360 degrees) and synchrosopes.

Drawn steel, dustproof cases, with molded front, designed for semi-flush mounting. Anti-parallax scale and pointer, magnetic damping, and external zero adjusters are standard features. White scales with black markings are standard. Black scales with white markings can be supplied on all listed ratings. Numbered major divisions are accented to save time in reading.

A-C Voltmeters

All ratings, except 300, 600 and 750 volts, have the resistance housed in a ventilated molded cage on back of case. 300-volt ratings require one 2-tube external resistor. Those rated 600 and 750 volts require one 4-tube external resistor.

75	110.00	600	134.00
150	110.00	750	142.00

D-C Ammeters

These ammeters are normally self-contained in ratings up to and including 60 amperes. Higher ratings are supplied with external 50-mv. shunts and 6-ft. leads, which are included in the price of the instrument. Longer shunt leads can be furnished at an additional price. If the one-way lead length exceeds 45 feet (or the two resistance exceeds 0.170 ohms) a 100-mv. instrument and shunt are required.

D-C Ammeters with Lead-Length Compensator For Use with External Shunts

For use when it is not practical to specify the length or resistance of the shunt lead when ordering, ammeters, less shunt and leads (Millivoltmeters) are available with internal lead-length compensators. Compensation for lead resistance can be made after installation by means of a shaft extension with a screw driver slot, accessible from the back of the instrument.

Shunts are not included, but should be ordered separately. Leads can be ordered separately or supplied by the user.

Rating, Mv.	Range of Compensator Adjustment	Scale Marking	List Price Each

G-E Switchboard Instruments

6-Inch Rectangular Class

Type AD (A-C)—Type DD (D-C)

Here is a general-purpose line of instruments that has long been used for instrumentation of power switchgear, control boards, test benches and similar industrial apparatus. We have a most complete line, including such specialized forms as heavy-duty types for steel mills and similar industries, alarm contacts, tachometers, voltmeters and high-

frequency instruments for induction-heating applications, besides more standard forms listed in this catalog.

All have welded, pressed steel cases (except heavy-duty type, not listed) with a durable black finish. Non-glare glass, anti-parallax scale and pointer, magnetic damping and external zero adjusters are standard features. White scales with black markings are standard—black scales with white markings can be supplied.

Scale Length.....5 In.
Accuracy Class.....1%
Mounting.....Surface or Semiflush
Size: Surface.....6 x 5½ In.
Semiflush.....7 x 6½ In.

Thorough shielding is provided by the steel cases which are rendered dustproof by resilient rubber gaskets.

The bold, monument-shaped pointer and prominent scale markings facilitate reading from a distance.

Listings below are for surface-mounted, Type AD-6. Unless otherwise noted, add \$4.00 for semi-flush Type AD-7.

In addition to these listings a complete line is available including polyphase wattmeters, varmeters, frequency meters and power factor meters.

A-C Voltmeters

Single-range voltmeters rated 300 volts or lower have self-contained resistance. Those rated 600 and 750 volts require one 2-tube external resistor.

Dual-range voltmeters are self-contained for the low range; an external resistor is used for the high range.

Operating Principle.....Moving-Iron, Inclined-Coil
Burden at 120 Volts.....5.3 Va.
Accuracy.....1%
Frequency Range.....25-125 Cycles

Single-Range

Volts	Volts per Scale Div.	List Price Each	Volts	Volts per Scale Div.	List Price Each

Approximate weight—

5 to 40 Amp.—Net, 5 lbs.; shipping, 8 lbs.

60 to 600 Amp.—Net 6 lbs.; shipping, 9 lbs.

Dual-Range

Furnished complete with four studs to permit series-parallel connection of the current windings. Scales are double-marked. Transfer switches are not furnished, but are available as accessories.

Amps.	Amps. per Scale Div.	List Price Each
2.5/5	0.5/0.1	\$106.00
5/10	0.1/0.2	106.00

Approximate weight—Net, 5 lbs.; shipping, 11 lbs.

Pointer-Stop Ammeters

Type.....AD-6 (Surface)
AD-7 (Semiflush)

Operating Principle.....Moving-Iron, Inclined-Coil
Burden at 5 Amperes.....1.9 Va.
Accuracy......5% for Current Impulses of 1/20 Second or More
Marked Scale Range.....2/3 of Full-Scale Value

For measuring currents of short duration, such as resistance-welder current, pointer-stop ammeters are available. An adjustable lower stop, moved by a small knob protruding from the cover front, may be used to advance the pointer upscale to the point of minimum observable "kick" in response to a current impulse, this indicating the rms current.

Amps.	Scale Marking	List Price Each
5	*	\$106.00
2.5/5.0	*	126.00
5/10	*	126.00

Approximate weight—Net, 5 lbs.; shipping, 11 lbs.

*Scale marking depends on current-transformer rating. Lower third of scale is not marked, because readings there are meaningless.

Amps.	AD-10	AD-12
5	\$248.00	\$260.00

Approximate weight—Net, 9 lbs.; shipping, 25 lbs.

A-C Wattmeters

Normally furnished with zero-left scale and self-contained potential resistance for 120-volt potential rating. Zero-center scales can be supplied at standard prices.

Type AD-6 Single-Phase

The following listings are for potential of 120 volts. For 240 volts add \$8.00; for 480 or 600 volts add \$18.00.

Note—We can also furnish a complete line of polyphase wattmeters.

Amps.	Kw.	List Price Each	Amps.	Kw.	List Price Each	Amps.	Kw.	List Price Each
1	0.1	\$165.00	4	0.4	\$165.00	10	1.0	\$165.00
2	0.2	165.00	5	0.5	165.00	15	1.5	172.00
3	0.3	165.00	7.5	0.75	165.00	20	2.0	172.00

Approximate weight—Net, 7 lbs.; shipping, 12 lbs.

Direct-Current Types

Types.....DD-6, Surface
DD-7, Semiflush
Operating Principle.....Permanent-Magnet, Moving-Coil
Scale.....Zero-Left is standard; Zero-Center can be furnished at standard prices.

Type DD-6 D-C Voltmeters

All those listed have a sensitivity of approximately 100 ohms per volt, and are self-contained. Higher-sensitivity instruments are available.

Suppressed-zero voltmeters, such as 50-150 volts, or 100-150 volts are available at \$10.00 additional. Such instruments, however, are not recommended, since accuracy is not increased and the absence of a natural zero reference makes it difficult to maintain standard accuracy.

Volts	List Price Each	Volts	List Price Each
150	\$ 95.00	600	\$116.00
300	101.00	750	124.00

Approximate weight—Net, 5½ lbs.; shipping, 12 lbs.

Type DD-6 D-C Ammeters

Are normally self-contained in ratings of 60 amperes and lower. Higher ratings, up to 3000 amperes, have an external Form 15—50-mv. shunt and 6-ft. leads included in price. If the one-way lead length exceeds 45 feet, or the two-way resistance exceeds 0.170 ohms, a 100-mv. instrument and shunt are required.

Amps.	List Price Each	Amps.	List Price Each	Amps.	List Price Each

40	104.00	300	106.00	1500	151.00
60	104.00	400	109.00	2000	159.00
80	104.00	500	113.00	3000	193.00
100	104.00	600	116.00		

Approximate weight—less shunt—Net, 5½ lbs.; shipping, 12 lbs.

G-E Strip-Chart Recording Instruments
Switchboard and Portable Models
Type CH—For A-C 60 Cycles and D-C

Portable

Switchboard, Back-Connected

Available as switchboard instruments for surface or semiflush mounting and also as portable instruments. There is a complete line for a-c and d-c circuits, including ammeters, voltmeters, wattmeters, varimeters, and frequency meters. They can be furnished with a variety of chart speeds and drives. Single speed, inches per hour, are standard on switchboard instruments, and double speed inches per hour and minute are standard on multirated portables. Gears are available to provide as many as 28 various chart speeds, from ¼-inch per hour to 2-inches per second. Driving mechanism is either a 120-volt, 60-cycle or a 120/240-volt, 60-cycle synchronous motor. Special voltage ratings and frequencies are also available. A double-speed handwound clock can be furnished. This clock will run 60 days without winding at speeds of one inch per hour or slower. Type CH recorders are all of the ink type. Have a new-design spillproof throw-away 3-oz. inkwell which comes sealed for easy insertion with no spilling, and needs no refilling or cleaning. Record rolls are 150-ft. long, require less-frequent changing, and are six-in. wide with a 4½-in. calibrated width.

Switchboard instrument dimensions are 16⅞ x 10⅞ x 12⅝ inches.

Approximate net weight, 30-lb.; shipping weight, 40-lb.

Only a partial listing of the available standard ratings is given here. For additional ratings, consult Graybar.

G-E Strip-Chart Recording Instruments

Portable, Inkless, Type CF

For A-C and D-C

Type CF-1 for A-C

Designed to provide recording voltmeters, ammeters, milliammeters, microammeters, wattmeters and tachometers for application where reliability and maximum convenience are important to the user. (Information on items not described below furnished on request.)

For either indoor or outdoor service. The instrument illustrated is the portable type, but can be wall- or pole-mounted. Switchboard models can also be furnished.

The special feature of this instrument is inkless recording, no ink to dry up, freeze or spill. Type CF recording instruments having a chart speed of one inch per hour (optional) make possible continuous operation for 30 days without attention. They are ideal for installations where frequent servicing is impractical.

Chart size 4 inches wide, 65 ft. long. Chart speed, Standard 3 inches per hour (1 inch and 2 inch per hour type available). 1 inch per day type can be furnished at \$15.00 additional. Size—10³/₄x8³/₄x6 inches. Weight, 12 lbs.

A-C Voltmeters—Type CF-1

60 cycles—Accuracy 1¹/₂% within Normal Range.

Volts.....0-140/280
List Price Each.....**\$235.00**

Telechron* motor circuits internally connected to element terminals. Instruments can be supplied with separate motor terminals at \$11.00 additional.

*Registered trade-mark of General Electric Co.

A-C Ammeters—Type CF-1

25-125 cycles—Accuracy 2% of full scale.

Has 120/240-volt or 240/480-volt Telechron motor circuit. Connections to separate terminals on terminal block. Motor ratings changed by link arrangement on terminal block.

Ampers.....0-5/10
List Price Each.....**\$235.00**

Type CF-2 for D-C

The G-E Type CF line, previously offered only for a-c applications has been extended to include d-c instruments in the usual ratings of voltmeters, ammeters, milliammeters and microammeters, which makes it now economical to apply recording instruments to many applications where heretofore the expense of suitable equipment could not be justified. (Information on items not described below furnished on request.)

All d-c instruments listed are accurate to within 2% of full-scale value.

Type CF-2 voltmeters and ammeters are insulated for and designed for use in circuits not exceeding 750 volts to ground.

All listed instruments have 60-cycle, 120/240-volt motor circuit brought out to separate terminals. 25- or 50-cycle motors or 240/480-volt motor circuit may be specified at no addition in price.

D-C Voltmeters—Type CF-2

Resistance Approximately 233 Ohms per Volt.

G-E Type CF-7 Recording Volt-Ammeter

For Recording Current on Circuits Rated up to 8700 Volts; Also Records Voltages up to 750 Volts. A-C Only.

Very convenient for measuring current in transformers and feeder circuits; permits measurement to be made without interrupting service.

Equipment includes a Type CF-7 recording volt-ammeter, 10-ft. lead, and a butyl-insulated hook-on current transformer.

When in use, the transformer hook is clamped around the cable or lead in which the current is to be measured.

Accuracy—3 per cent, except above 625 amp., 4 per cent.

Length of Lead.....10-ft. (add \$14.00 for 50-ft. lead)

Approx. Wt.....19-lb.

Current Amperes	Rating	Voltage	Frequency Cycles	Chart Speed 3-in. per hr.	List Price Each
15/30/75/150/300/750		150/300/750	60		\$512.00

50-cycle operation or 1-inch-per-hour chart speed available at same price.

G-E Panel Instruments

General-purpose type, particularly suitable for use in radio equipment and industrial applications where medium accuracy and high quality are required and space is at a premium.

The direct-current instruments operate on the permanent-magnet, moving-coil principle; the alternating-current instruments are of the moving-iron type.

All are accurate to within 2% of full scale.

Voltmeters, ammeters, milliammeters and micro-ammeters can be furnished in all required ranges and in 2½-inch, 3½-inch and 4x4¼-inch sizes.

Two styles are available in each of the 3½-inch and 2½-inch classes, all in *Textolite. In addition to the round, flush-mounted model, there is a flush-mounted square style available at the same price.

*Reg. trade-mark of General Electric Co.

The 4¼-inch rectangular type listed is a standard, flush model in Textolite. There are also available in illuminated types—one using rear illumination through a clear Lucite case, at an additional price.

All instruments are unshielded, but external magnet shields can be supplied for 3½-in. and 4¼-in. sizes.

Description	2½-Inch D-C	3½-Inch A-C D-C	4¼-Inch A-C D-C
Depth behind Panel — In. (less Terminal Studs†)	0.93	1.58	1.0 1.22
Radius of Mounting Holes — In. (Round Types).....	1.22	1.58	1.58

†Standard terminal studs are 2½ in. long.

When ordering, specify rating, size, mounting, and, in 4¼-inch models, whether standard or illuminated. (See price additions above for change from standard.)

Direct-Current Types

Types DW-71, 2½-in.; DO-71, 3½-in.; DO-78, 4¼-in.

Permanent-magnet, moving-coil type, with an accuracy of ±2% full scale. Voltmeters are self-contained up to 500 volts, ammeters up to 50 amperes for DO-71 and DO-78 types; 300 volts and 30 amperes for DW-71.

External resistors and shunts are available for higher ratings.

G-E Indicating Instruments

Portable

Type AP-9

For General A-C Measurement

Designed for general utility testing and made for rough usage. Ideal for motor testing, maintenance work and trouble investigation. Their high accuracy makes them suitable for measurement work in school and industrial laboratory. The dustproof case of dark-red Textolite has top of simulated leather, and a leather handle. Large window opening, knife-edge pointer and mirror scale are standard.

Over-all Size—2 7/16 x 6 9/16 x 4 1 3/16 in.

Weight—2 1/2 lbs.

Accuracy—3/4 of 1%.

Frequency—25-133 cycles.

Scale Length—4.1 In.

Operating Principle—Ammeters and Voltmeters; Thomson Inclined-Coil; Wattmeters and Voltwattmeters; Electrodynamometer.

Damping—Magnetic.

Shielding—Excellent Shielding from Stray Fields.

G-E Indicating Instruments Portable Type DP-9—For D-C Measurement

Accurate and dependable. For general utility testing these instruments will find wide application in general plant testing, electrolysis measurements, equipment maintenance, battery testing and electronic measurement.

Has sturdy dustproof, Textolite case, with hinged cover and leather handle.

The large clearance between moving parts affords maximum readability, long service and sustained accuracy.

Knife-edge pointer and mirror scale are standard features. Size—2 7/16 x 6 9/16 x 4 13/16 In. Weight—Approximately 2 Lbs. Accuracy—1/2 of 1%. Scale Length—4.1 In. Operating Principle—Permanent Magnet. Moving-Coil. Damping—Magnetic. Shielding—Shielded for Stray Magnetic Fields.

G-E High Accuracy Instruments

Type AP-11—A-C Instruments

Conform to ASA specifications C-39.1—1951, for 0.5% accuracy class portables.

Accuracy— $\frac{1}{2}$ of 1% of full-scale values; Standard Temperature—25C (77F); Temperature Compensation—Variations of 25 ± 10 C have negligible effect (about $\frac{1}{4}$ rated accuracy); Frequency Range—25 to 125 cycles; Scale Length—5.5 inches; Pointer—Knife-edge over mirrored scale; Operating Mechanism—Ammeters and voltmeters: repulsion vane.

Wattmeters: electro-dynamometer. Burden — 5 amp. ammeter: 1.5 volt-amps.; 150 volt voltmeter: 6 volt amps.; 5 amp., 150 volt wattmeter. Current circuit: 2.5 volt-amps. Potential circuit: 1.0 volt-amps.

Adjustments—External screw-type zero set; Internal screw-type full-scale set (ammeters and voltmeters).

Has molded Textolite Case with carrying strip. Terminals designed for spade, plug or wire-lead connectors.

Size $7\frac{3}{4} \times 7\frac{1}{8} \times 3\frac{1}{4}$ inches. Shipping wt. 10 lbs.

G-E High Accuracy Instruments

A-C—D-C Portables Type AP-12

Type AP-12 portable standards are suitable for a-c as well as d-c current, voltage, and power measurements. They are recommended for calibrating or checking lower-accuracy instruments. Rated accuracy of 0.25% (ASA class) is maintained over a wide range of operating conditions. These newly designed instruments are recommended for laboratory and electric-utility, as well as factory and field use whenever highest accuracy is an important factor.

Type AP-12 instruments conform to ASA specifications C-39:1-1951, for 0.25% accuracy class portables. Essential data, including temperature—correction factors are given on a leather tag attached to each instrument.

Accuracy— $\frac{1}{4}$ of 1% of full-scale values; Standard Temperature—25 C (77F); Frequency Range—25 to 125 cycles; D-C measurements—Rated accuracy obtained from average of a direct and a reversed polarity reading; Scale Length—5.5-in.; Pointer—Knife-edge over mirrored scale; Operating Mechanism—Ammeters and voltmeters: repulsion-vane; wattmeters: electro-dynamometer; Burden—5 amp. ammeter: 1.5 volt-amp.; 150-volt voltmeter: 6 volt-amp.; 5-amp., 150-volt wattmeter: current circuit: 2.5 volt-amp.; potential circuit: 1.0 volt-amp.

Adjustments: (Ammeters and voltmeters), External screw-type zero set. Internal screw-type full-scale set.

Has molded Textolite case with carrying strap. Terminals designed for spade, plug or wire-lead connectors.

Size $7\frac{3}{4} \times 7\frac{7}{8} \times 3\frac{3}{4}$ -in. Shipping wt. 10-lbs.

Accurate D-C Portables Type DP-11 Portable Indicating Instruments

Conforming to all applicable requirements of ASA 0.5% Class Portable Instrument Specification C39.1-1951, these instruments are intended for general testing where dependability, readability, and durability are paramount.

Sturdy, break-resistant molded Textolite case and molded shadow-reducing window enclose the shock-resistant mechanism. Knife-edge pointer and mirror scale and spring-mounted jewel bearings provide accurate measurement under adverse operating conditions.

Size, $8 \times 8 \times 3\frac{1}{2}$ -in.; Weight, 5-lb.; Accuracy $\frac{1}{2}$ of 1% of full scale; Scale Length, $5\frac{1}{2}$ -in.; Operating Principle, Permanent magnet, moving coil; Damping, Magnetic; Shielding, Shielded against stray magnetic fields; Pivot Bearing, Spring-mounted jewels.

G-E Hook-On Wattmeters

Type AK-2

Provides a convenient method of measuring power on single-phase and polyphase a-c circuits. This handy portable instrument will solve easily and quickly many power-generation and industrial measurement problems.

Will help make quick and accurate checks on active and reactive power for survey and trouble-shooting applications.

Assembled in a sturdy Textolite case, molded in one unit for maximum strength and safety. The over-all appearance, including the hook arrangement is

similar to that of the popular G-E Type AK-1 hook-on volt-ammeter.

Strong 6-ft. voltage leads are mounted permanently through the handle of the instrument. The leads have sheathed alligator clips for connection to non-insulated points on the conductors. Range selections can be made by simple one-hand switching of the potential circuit.

Rating—Full-Scale, Single-Phase Kw.: Voltage Range—100 to 600 Volts A-C. Current Range—15 to 600 Amperes, A-C 3-6-20-60-200-300. Frequency Range—50-70 Cycles. Accuracy—5% of Full Scale. Scale Length—2½ Inches. Size—14x4x2¼ Inches. Diameter of Hook Opening—2 In. High Potential—4000 Volts (rms). A-C volts hook to potential circuit.

Cat. No.	Description	List Price Each
378X88	Type AK-2 hook-on wattmeter.....	\$129.00
8941377	Leather carrying case.....	14.00

Weight complete with leads 3.65 lbs.

G-E Hook-On Polyphase Power-Factor Meters

Type AK-3

This meter has all the portability and convenience of the AK-1 and AK-2 meters. Permits direct measurement of power factor without cutting conductors or interrupting service. Can be used on any balanced three-phase circuit. Measures both lagging and leading power factor on circuits of 100 to 600 volts

and 15 to 600 amperes.

Especially desirable and handy for industrials to check requirements for corrective equipment to reduce power costs. Central stations will find it useful in determining how best to utilize existing distribution facilities.

Range—Scale A:0.5-0-0.5 Lag-Lead
Scale B:1.0-0.5 Lead
Scale C:0.5-1.0 Lag

Circuit Limitations—

G-E Portable Instruments

Hook-on Volt-ammeter, Type AK-4

Has an exclusive range and scale selector to eliminate the possibility of misreading scales with multiple markings.

By means of a rotating scale drum, each selection of a current or voltage range simultaneously exposes the corresponding scale. The needlethin pointer, moving across the clearly marked straight scale, permits fast, accurate readings.

Current scales are marked in black, voltage scales in red.

The voltage leads of, the AK-4 screw in and are provided with recessed terminals thus preventing accidental pullout and protecting the operator when the leads are removed. One set of terminals serves all voltage ranges, which are switched by the selector knob.

The insulated hook is trigger-operated, providing safe operation near bare conductors. Each instrument is tested to withstand 4000 volts a-c. A pointer-stop mechanism permits quick determination of peak currents in welding equipment and surges, such as starting currents.

Ranges: 0-10/30/100/300/800 amperes, a-c
0-150/300/750 volts, a-c

Accuracy: 3% of full scale.

Scale length: 2⅝-inches

Dimensions: 9½x3½x1½-inches. Hook admits conductors up to 2-inches diameter.

Weight: 1¼-lb. net, 5-lb. shipping

Type AK-5

Similar to Type AK-4, except covering a lower range of currents, 0-5/20/80/350 amperes a-c, and not provided with pointer stop. Note the new low range, 0-5 amperes.

All come complete with leads and leather carrying case.

G-E Portable Transformers

For use with meters, instruments and similar devices. For laboratory and general testing work.

Current Transformers

2500 Volts—25-60 Cycles

Type JP-1

Type JP-6

Type JP-7

Current transformers are available to cover a wide range of primary currents.

The Type JP-1 covers a wide range of 10 amperes to 1000 amperes by using a wound-primary construction for the lower current ratings and a window construction for the higher currents.

The Type JP-2 uses the window construction for currents over a range of 1200 to 2500 amperes.

The Type JP-3 is designed with a combination of self-contained wound-primary and window or through-primary construction. The wound primary is tapped to give either three or four current ratings.

The Type JP-6 uses a window construction but it is also a split-core type for clamping over conductors without interrupting the circuit.

The Type JP-7 is of the wound-primary construction for all current ratings. The primary winding is divided into four coils and the ends of these coils are brought out through eight studs on top of the transformers. These studs are connected by removable links with wing nuts which permit connection of the coils in series, series-multiple and multiple to give three primary current ratings. Three additional ratings on the six rated transformers are obtained by a tap in the secondary winding.

G-E Double Bridges
Portable

For measuring low values of resistance in electric apparatus, such as motors, generators, transformers, cable, appliances, etc. Simple and very practical.

All internal parts, galvanometer ratio switch, dial, binding posts, are mounted on the top panel which is easily removable for checking or adjusting.

- Accuracy—0.1% of full scale.
- Scale—Potentiometer dial calibrated in ohms.
- Range—0.0001 to 22 ohms.
- Size—9x13x8 inches.

Double Bridge—Complete with One Set of 5-Ft. Connection Leads. List Price Each \$545.00
Weight each 16 lbs., net shipping weight, 30 lbs.

G-E Gauss Meters
For Measurement of Flux Density

An efficient and simple device for direct measurement of density of flux of permanent magnets and d-c electromagnets. Compact and low cost, but equal or superior to electronic fluxmeters.

Operated by holding the meter in one hand and placing the rigid exploring rod, protruding from the back of the meter, in the field to be checked. A small magnet in the end of the tubular prod is connected by a movable shaft to the pointer. The magnet lines up, in direction and polarity, with the field. Manual rotation of the instrument case gives

direction of flux, when pointer is at 0 position, and magnitude of flux when pointer is at maximum deflection.

- Accuracy—±5%
- Dimensions—
Case, 2-in. diameter, 1-in. deep.
Prod, 0.075-in. diameter, 1¼-in. long, or 0.090-in. diameter, 5-in. long. (0.052-in. diam. by 1¼-in. long at slightly higher price.)

Complete with carrying case and standard magnet.

When ordering, specify range in gaussses, and give prod length.

List prices range from **\$119.00 to \$176.00.**

Weight each, 3-ozs.; net shipping weight, 1 lb.

G-E Thermocouple Vacuum Gauge

Portable and Self-Contained

These gauges provide a convenient means of measuring pressure from 1-1000 microns Hg. They work on the principle that the heat-loss of the gauge-tube filament is a function of pressure of the medium enclosing the filament.

By use of tubes installed at desired locations, pressure readings at several points in the vacuum system can be obtained.

Description	List Price Each
With scale marked 0-1000 microns; with standard gauge tube.	\$141.00

G-E Halogen Leak Standard

A portable precision device used to calibrate a halogen leak detector making possible quantitative leak checking.

Enables accurate leak size determination ± 10% full scale. Plug in to 110-120 volt, 50-60 cycle power supply and turn on power. Adjust leak standard to desired leak rate value. Then insert probe of leak detector firmly into gun fitting of leak standard and read output indicator.

Dimensions 7½ in. wide x 9 in. high x 16 in. deep. Ruggedly designed and equipped with rechargeable containers providing low cost maintenance.

Shipping wt. 25 lbs.

*Registered trade-mark E. L. Du Pont.

Note: Order by name and Catalog Number covering range desired.

G-E Portable Instruments

Leak Detector. Type H-1 For Locating Leaks in Closed Systems

The Type H-1 leak detector, which detects the presence of halogen vapors, is used for rapid location of minute leaks in closed systems that must be leaktight. Extremely sensitive, it can locate a leak of 1/100 of an ounce of Freon per year. Durable construction, it is used in the field, in testing, or on the assembly line.

Leaks can be located in systems in which one of the halogen family of gases is present or can be introduced. Among the many applications of this instrument it can be used to detect

leaks in: Refrigeration and air-conditioning systems; Transformer casings; Hermetically sealed products; Tanks; Instrument tubing, and Sports equipment.

The leak detector consists of a detector unit and control unit. The detector unit is a hand-held probe with a plastic-tipped metal nozzle. It has an element sensitive to halogen vapors and a blower which draws in a continuous air sample. The control unit contains the power supply, amplifier, indicating instruments, loudspeaker, and necessary controls. The loudspeaker gives an audible indication when a leak is detected. A jack is provided on the front of the cover for optional use of earphones. A sensitive electronic relay is available to operate a light, horn or other indicator or control when leaks are detected

Many of its advantages are: High sensitivity, detects leaks in a moment; Versatility, designed for production line, as well as field use; Economical, minimizes risk of breakdowns caused by leaks; Time saving, provides fast efficient means of inspecting seams, welds and it's compact, lightweight in a portable design.

Specifications:

Power: 105-125 volts, 60-cycles, 85 watts.

Dimensions and Weights:

Detector unit—6½ x 2 x 10 inches; 2½ lb.

Control unit—14½ x 8 x 6½ inches; 15 lb.

Leak detector, Type H-1, includes: Detector unit, Cat. No. 9159532G7 with 10 ft. of cable lead, and control unit, Cat. No. 9159506G4, with 25 ft. lead, carrying case and strap.

Cat. Nos. **9159532G7 & 9159506G4** List **\$792.00**

G-E Halogen Leak Detectors

Type H-1 Control Unit and Fixed-Head Unit with Pumping Assembly

Specifically designed to facilitate automatic, high-production leak testing at low cost. Used by the container manufacturing industry, and manufacturers who package in pressurized cans which utilize Freon* or its equivalent as a propellant, Used also in area monitoring. Has high sensitivity: 1-3 ppm. Easily installed and sturdily designed.

Halogen gas concentration of 1 part per million can be detected. Sensitivity is varied by selector switch.

No.	Description	Each
	Fixed-head leak detector, Type H-1, for 120-volt, 60 cycle operation, consisting of control unit (1) and fixed-head detector unit (2)	\$730.00
9159506G4	(1) Standard control unit (purchased separately)	472.00
5469797G1	(2) Fixed-head detector unit (purchased separately)	301.00
	Renewal Parts	
5467845G1	Halogen-sensitive element	121.80

*Registered trade-mark E. L. Du Pont.

Note: Order fixed-head leak detector, Type H-1, complete or parts, by name and Catalog Number.

G-E Portable Instruments
Molecular Vacuum Gage

Measures Vacuum with External Detectors

The molecular vacuum gage measures and continuously indicates pressures encountered in many manufacturing and chemical processes. Entirely new in its principle of operation the F-E molecular vacuum gage eliminates the need for external detectors. Instrument is valuable in vacuum metallurgy, metal purification, refrigeration, vacuum coating, plating etc.

The gage is a complete unit in itself. Two calibration types are available: one for dry air indicates pressures between 0 and 20 millimeters, while another type with a linear scale of 100 uniform divisions is available for other gases.

Detecting cylinders, constructed of thin vane brass, are coaxially aligned. A driving motor rotates one detecting cylinder, mounted in ball bearings lubricated for life, which sets gas molecules in motion. The movement of the molecules rotates the other detecting cylinder (jewel-bearing mounted). The indicating pointer is coupled directly to the cylinder rotated by the moving molecules.

Advantages are that the unit is self-contained with no external detectors; has a wide range of 0 to 20 millimeters; is low in cost; completely mechanical, no tube burnouts; easy to use, no controls to adjust; and is direct reading, the calibration is unaltered through continuous operation.

Cat. No.	Description	Each
8947991G3	(0-20 mm dry air)	\$350.00
8947991G4	(0-100 uniform divisions)	350.00

For full specifications, order Bulletin GEC-986.

Models 921 and 924

Model 924

The instruments have black japanned Bonderized steel cases, and are available in flush or surface type, with either embossed or smooth fronts. The smooth front cases harmonize with the Model 496 Group. Size at Base 5 3/4 x 6 in.

Unless otherwise specified all instruments will be furnished with embossed fronts.

Prices below are for flush type cases; if surface type are wanted deduct \$3.00 from list.

D-C Voltmeters — Model 921

Accurate within 1%. Scale length 5.12 in.
Type: Permanent magnet moving coil.
Resistance 100 Ohms per volt, self-contained.

Range	Scale Div.	Each
15	30	\$97.00
150	30	97.75
300	30	100.00

Can be supplied with a sensitivity of 1 ma for use with tubular resistors.

D-C Ammeters — Model 921

Ranges up to and including 50 amperes are normally supplied with self-contained shunts. All external shunt ammeters are supplied with standard 5 ft. shunt leads. Higher ranges available through the use of external shunts.

Instead of the standard 5 ft. leads furnished, any leads having a total resistance of 0.065 ohm can be used. This model can be supplied with leads of higher resistance up to 1.5 ohms at a surcharge of \$4.50.

Range	Scale Div.	Each	Range	Scale Div.	Each	Range	Scale Div.	Each

A-C Voltmeters — Model 924

Accurate within 1%. Scale length 5.12 in.

Type: Movable iron.

Power Consumption: 150 volt range at 115 volts, 60 cycles — 4.6 watts, 4.6 volt-amperes.

For use on frequencies from 25 to 125 cycles. Ranges above 750 volts require a potential transformer.

Range and *Scale	Approx. Res.	Scale Div.	Type Box	Each
150	2900	30	Self-Contained	\$ 90.25
250	7700	50		91.75
300	9250	30		92.50
500	24400	50		95.50
600	34500	60		14
750	43000	30	14	114.25

*Where potential transformers are used the instrument will be scaled in terms of transformer primary.

A-C Ammeters — Model 924

Accurate within 1%. Scale length 5.12 in.

Type: Movable iron.

Power Consumption: 5 ampere range at 5 amperes, 60 cycles — 0.55 watt, 0.59 volt-ampere.

For use on frequencies from 25 to 125 cycles.

Range	*Scale	Scale Div.	Each	Range	*Scale	Scale Div.	Each
1	1	50	\$86.50	5	150	30	\$86.50
2	2	40	86.50	5	400	40	86.50
5	5	50	86.50	5	600	60	86.50
5	75	30	86.50	10	10	50	86.50

*Where current transformers are used the instrument will be scaled in terms of transformer primary.

Wattmeters, Power Factor Meters, Frequency Meters and Synchrosopes

We can furnish a complete line for the conventional switchboard, in designs matching the voltmeters and ammeters listed above. Contact Graybar for complete bulletin and prices.

Weston Portable Instruments

For Testing Direct Current

Model 931 Voltmeter

Model 931

Accurate within 1/2 of 1%.

Scale length 4.04 in.

Type: Self-shielded permanent magnet moving coil (shielded from external magnetic fields).

Well compensated for temperature changes.

Size Case: 3 1/4 x 5 x 5 1/4 in.

Approximate wt. 2 lbs.

D-C Voltmeters

Ranges are self-contained up to 1000 volts inclusive. Up to four ranges can be provided on binding posts, or 11 ranges with a switch and two binding posts. On instruments of 1000 ohms per volt sensitivity, higher ranges to 5000 volts may be obtained with external resistors. Instruments with a sensitivity of 5000 ohms per volt can obtain ranges to 3000 volts with external resistors.

Ranges	Scale Div.	1000 Ohms Per Volt Each	5000 Ohms Per Volt Each
75/30/7.5	150	\$106.00	\$121.00
150/15/3	150	106.75	121.75
300/150/3	150	109.00	124.00
750/300/150	150	115.75	130.75

D-C Ammeters

Ranges are self-contained up to 50 amperes inclusive. A maximum of three self-contained ranges can be supplied on binding posts.

Range	Scale Div.	Each	Range	Scale Div.	Each
1	100	\$94.00	10/1/0.1	100	\$109.00
5	100	94.00	15/3/0.15	150	109.00
15	150	94.00	25/10/2.5	100	109.00
30	150	94.00	30/15/3	150	109.00
5/0.5/0.05	100	109.00	50/5/0.5	100	109.00
			50/25/10	100	109.00

Note—For maximum flexibility and where one instrument is required to measure current of a few amperes to hundreds of amperes, a 50 mv. instrument with 5-ft. leads and a group of external shunts is recommended. External shunt ammeters are calibrated with scales to suit the shunts selected. When these instruments are desired add price of appropriate shunts to instrument price.

D-C Milliammeters

Ranges up to four can be provided self-contained on binding posts, a maximum of 10 ranges can be provided with a switch and two binding posts.

Range	Approx. Res. Ohms	Scale Div.	Each	Range	Scale Div.	Each
1	55	100	\$89.50	150/15/1.5	150	\$104.50
15	1.0	150	89.50	1500/150/15	150	109.00
150	...	150	89.50	3000/300/30	150	109.00
3/0.3/0.03	...	150	119.50			

Note—Single range milliammeters with ranges above 30 ma are shunted and have a drop of 50 mv. ±5%.

D-C Microammeters

Up to four self-contained ranges can be provided on binding posts, a maximum of 10 ranges can be provided with a switch and two binding posts.

Range	Scale Div.	High Resistance		Low Resistance	
		Approx. Res. Ohms	Each	Approx. Res. Ohms	Each
30	150	2300	\$113.50	150	\$121.00
100	100	1500	106.00	40	113.50
200	100	450	98.50	10	106.00

Carrying Cases—For all standard ranges \$20.00 List. For instruments requiring extended cases, \$25.00 List.

For Testing Direct Current and Single-phase Alternating Current

Model 432

D-C and Single-Phase A-C Wattmeters

Accurate within 1/2 of 1%.

Scale length 4.04 in.

Type: Electrodynamometer (shielded from external magnetic fields).

Size case: 3 1/4 x 5 x 5 1/4 in.

Approximate wt., 3 1/4 lbs.

Model 432 Wattmeter

Power Consumption: Potential circuit at 115 volts, 60 cycles—1.2 watts, 1.2 volt-amperes. Current circuit at 5 amperes, 60 cycles—0.65 watt, 0.68 volt-amperes.

Frequency Coverage: Alternating current at frequencies from 25 to 125 cycles. Can be compensated at a surcharge, to cover a frequency span up to 1000 cycles at an accuracy with 1/2%, or to 2500 cycles within 1% accuracy.

Self-contained Ranges: Double voltage and single or double current ranges, self-contained up to 300 volts and 50 amperes.

Range Extension: Potential Ranges can be obtained up to 750 volts with external multipliers. Higher ranges require the use of potential transformers.

For General Use

Volts	Normal	Max.	Amperes		Watts, Range		Scale Div.	Each
			Normal	Max.	High	Low		
150/75	200/100		1	1.5	150	75	75	\$173.75
			2	3	300	150	75	173.75
			5	7.5	750	375	75	173.75
			10	15	1.5 Kw.	75 Kw.	75	181.25
			20	30	3 Kw.	1.5 Kw.	75	181.25
			50	75	7.5 Kw.	3.75 Kw.	75	181.25
300/150	400/200		1	1.5	300	150	75	176.00
			2	3	600	300	60	176.00
			5	7.5	1.5 Kw.	.75 Kw.	75	176.00
			10	15	5 Kw.	1.5 Kw.	75	183.50
			20	30	6 Kw.	3 Kw.	60	183.50
			50	75	15 Kw.	7.5 Kw.	75	183.50

Y-Boxes for Model 432 Wattmeters

A Model 432 single-phase a-c wattmeter can be used to measure the power in a balanced 3-phase, 3-wire system by means of an external Y-Box.

Type Box	Normal Voltage Instr.	Y-Box Multiplying Constant	Normal Line Voltage With Y-Box	Maximum Voltage With Y-Box	Each
51	75	3	150	170	\$51.25
52	150	3	300	340	51.25
52	150	4	400	450	51.25
53	150	5	500	550	51.25
53	150	6	600	650	51.25

Note—All orders for Y-Boxes must give the instrument potential range with which the box will be used and the line voltage of the 3-phase system to be measured.

Carrying Cases—For all standard ranges \$20.00 List. For instruments requiring extended cases, \$25.00 List.

Weston Portable Instruments

For Testing Alternating Current

Model 433 Voltmeter

Model 433

Accurate within 3/4 of 1%.

Scale length 4.04 in.

Type: Movable iron shielded from external magnetic fields).

Well compensated for temperature changes.

Size Case: 3 1/4 x 5 x 5 1/4 in.

Approximate wt., 2 1/2 lbs.

A-C Voltmeters

Power Consumption: 150 volt range at 115 volts, 60 cycles —2.5 watts, 2.5 volt-amperes.

Frequency Coverage: Standard, alternating current 25 to 125 cycles. High frequencies, at a surcharge, as many as 3 self-contained ranges can be supplied for a coverage of 25 to 1000 cycles providing the ratio of the highest to the lowest range is not greater than 4. Lowest practical range is 15 volts, highest 750 volts. About 3.3 watts minimum is required to operate single range instruments or the low range of multi-range units.

Coverage to 2500 cycles is possible in single range voltmeters only, with an accuracy within 1 1/4%. Single ranges from 20 to 750 volts are practical and have an extension on the case to accommodate the additional resistance necessary. Approximately 10 watts are required for operation.

Self-contained Ranges: Single, double and triple volt ranges up to 750 volts. Higher ranges can be obtained with multipliers or by using a Model 311 Potential Transformer in connection with a 150 volt range.

Single Range

Range, Volts	Resist. Ohms	Scale Div.	Each	Range, Volts	Resist. Ohms	Scale Div.	Each
10	80	100	\$90.00	125	4400	125	\$90.75
15	168	150	90.00	150	5300	150	90.75
30	425	150	90.00	250	18200	125	92.25
50	1140	100	90.00	300	22000	150	90.75
75	2680	150	90.00				

Double Range

10/5	40/20	100	\$97.50	*150/15	5300/530	150	\$98.25
20/10	160/80	100	97.50	150/75	5300/2680	150	98.25
30/15	336/168	150	97.50	300/150	22000/11000	150	100.50
60/30	850/425	150	97.50				

Triple Range

Range Volts	Resistance, Ohms	Scale, Div.	Each
450/300/150	33000/22000/11000	150	\$119.25
**600/300/150	41000/22000/11000	150	121.50
**750/300/150	55000/22000/11000	150	123.75

*The low range of this combination has an accuracy of 3%.

**Have an extension on the case to accommodate the additional resistance necessary.

A-C Milliammeters

Frequency Coverage: Standard, single and double ranges only, for use on frequencies from 25 to 500 cycles. Double range instruments have a range selector switch. Higher frequencies subject to a nominal surcharge—can be adjusted to cover a frequency span from 25 to 1000 cycles at a normal 3/4% accuracy. At a slightly higher surcharge these instruments can be specially compensated to cover a frequency span from 25 to 2500 cycles within 3/4% accuracy.

Range Milli-Amp.	Resist. Ohms	Scale Div.	Each	Range Milli-Amp.	Resist. Ohms	Scale Div.	Each
30	460	150	\$88.50	250	6.0	125	\$88.50
75	78	150	88.50	300	3.9	150	88.50
100	49	100	88.50	500	2.0	100	88.50
150	13	150	88.50	750	0.74	150	88.50
200	8.8	100	88.50				

Carrying Case for above \$20.00 List.

For Testing Alternating Current

Model 433 A-C Ammeters

Power Consumption: 5 ampere range at 5 amperes, 60 cycles—0.50 watt, 0.52 volt-ampere.

Frequency coverage: Standard, single, double and triple ranges for use on 25 to 500 cycles. All instruments have two binding posts, double and triple range instruments are provided with a range-selector switch. High frequencies, single and double range instruments, subject to a nominal surcharge, can be adjusted to cover a frequency span from 25 to 1000 cycles at the normal 3/4% accuracy. At a slightly higher surcharge, these instruments can also be specially compensated to cover a frequency span of 25 to 2500 cycles, with 3/4% accuracy.

Self-contained Ranges: Single, double and triple ranges up to 50 amperes. Higher ranges can be obtained by using the Model 461 Type I Current Transformer in conjunction with a 5 ampere instrument.

Single Range

50/20/10	0.0073/0.0080/0.010	100	154.50

For Testing Alternating Current

Model 330

Model 330

A compact multi-range a-c voltmeter recommended for use wherever the current drain of the instrument must be limited to a low value, as in testing railway signal circuits, etc.

All ranges are fused for protection of overloads, and a range-changing switch is incorporated for range selection. Parallax errors are eliminated by use of a knife-edge pointer and mirror scale.

Contained in a black molded Bakelite case with hinged cover and leather carrying handle.

Accuracy: 1% at 60 cycles; 2% at 25 to 100 cycles. Scale length 2.67 in.

Type: Iron core dynamometer.

Size Case: 3 15/16 x 4 7/8 x 1 13/16 in.

Approximate weight 1 3/4 lbs.

A-C Voltmeters

Range	Sensitivity, Ohms per Volt	Scale Div.	Each
125/25/12.5	21	50	\$127.00
*125/25/5/1	21	50	123.50
150/30/15/1.5	21	75	134.50
150/50/10/1	21	50	134.50

*Conforms to A.R.A. Specifications.

Weston Portable Instruments

For Testing Direct Current

Model 904 Voltmeter

Model 904

Highly efficient—keeps the instrument load on the circuit to a minimum. The more linear scale permits good readability over 90% of full scale.

Accurate within 1/2 of 1%.

Scale length 5.5 in.

Type: Radial vane, moving iron (shielded from external magnetic fields).

Size case: 7 1/2 x 7 1/4 x 3 5/8 in.

Approximate weight, 4 3/4 lbs.

A-C Voltmeters

Power Consumption: 150 volt range at 115 volts, 60 cycles—2.2 watts, 2.2 volt-amperes.

Frequency—Normally supplied for 25 to 125 cycles.

Rating: Lowest practical range is 5 volts, the highest self-contained range is 750 volts. Higher ranges are obtained by the use of multipliers, or by using Model 311 Potential Transformers in conjunction with an instrument having a 150-volt range.

Range	Approx. Resist. Ohms	Scale Div.	Each
150	6000	150	\$152.75
300	22000	150	155.00
300/150	12000/6000	150	162.50
*600/300/150	24000/12000/6000	150	174.50
*750/300/150	30000/12000/6000	150	177.75

*Complete with non-locking contact key in high range.

A-C Ammeters

Power Consumption: 5 ampere range at 5 amperes, 60 cycles—0.38 watt, 0.44 volt-ampere.

Frequency: Normally supplied for 25 to 500 cycles.

Rating: Self-contained to 50 amperes inclusive. Higher current ranges are obtained by using a 5 amp instrument in conjunction with a Model 461 Current Transformer. Double ranges are supplied with a range changing switch and are limited to a range ratio of 2:1.

Range	Approx. Resist. Ohms	Approx. Inductance Henries	Scale Div.	Each

Model 540
D-C Fused Six Range
Volt-Ammeters

Designed especially for railway signal testing, for school use and for general industrial work.

Accurate within 1%.

Scale length 2.7 in.

Type: Permanent magnet moving coil.

Size Case: 3-15/16 x 4 7/8 x 2 1/2 in.

Approximate weight 2 lbs.

All ranges are fused and brought out through a selector switch to three binding posts; a common +, a current, and a potential post. The arrangement facilitates connections so that both current and voltage readings can be taken by turning the switch without changing connections. The line is closed at all times when connected to the ammeter binding post regardless of the position of the range selector switch.

Black bakelite case, hinged cover and leather carrying strap.

Range, Volts	Range, Amperes	Scale Div.	Each
30/3	15/1.5/0.15/0.03	60	\$133.00

Weston Portable Instruments

Model 461

A general purpose current transformer with wide varieties of ranges in three types, with adequate accuracy for most industrial measurements.

Type 1 — Primarily for use with ammeters.

Type 2 — Has a nickel alloy core and corresponding low phase angle, and is preferable for wattmeters and ammeters.

Type 5 — Similar to Type 2, but designed primarily to standardize ammeters, particularly in the lower ranges, but can be used with wattmeters and ammeters to measure load currents and power. Because of the relatively high voltage drop in the low ranges it may be necessary to increase the voltage source to the load by the amount of the transformer drop, in order to maintain the voltage across the load.

For voltages beyond the ratings listed, Model 9960 High Voltage Insulating Sleeve should be used. A secondary short-circuiting switch is provided.

Types 1 and 5 are in black Bakelite cases; Type 2 in a tan or natural color canvas filler Bakelite Case. Size: 8 x 6 5/8 x 2 3/4 in.

Approximate weight 8 lbs.

Ranges, Amperes	Type 1 Each	Type 2 Each	Type 3 Each
*800/*400/*200/100/50/20/10 Pri. to 5 Sec.	\$132.00	\$169.00
*1000/*500/*250/100/50/25/10 Pri. to 5 Sec.	132.00	169.00
*500/*250/*100/50/25/10/ 5/2.5/1/0.5 Pri. to 5 Sec.	\$182.00

*These ranges are obtained by inserting one, two, etc. turns, respectively, of the primary through the core opening; other ranges are on binding posts.

For Testing Direct Current

Model 281

Accurate within 1%.

Scale length 2.97-in.

Type: Core magnet moving coil. (Shielded from external magnetic fields.)

Size Case: 4-2/5 x 4-3/5 x 1 1/2 in.

Approximate weight 14 oz.

Hand calibrated scales; knife-edge pointers, combined with mirrors to eliminate parallax errors.

Recommended wherever precision d-c testing is required.

D-C Voltmeters

Resistance approximately 100 Ohms per Volt.

Range	Scale Div.	Each	Range	Scale Div.	Each

Weston Portable Instruments
For Testing Alternating Current

Double Range Voltmeter

Model 528

Miniature portables for checking small electrical products and for servicing them in the field; also for use in research and educational laboratories and for general testing.

Accurate within 2%.
Scale length 2.03 in.
Type: Movable iron.
Size: 3⁷/₃₂ x 3³/₃₂ x 2¹/₈ in.
Approximate weight 11 ozs.

In black molded Bakelite Case. All single and double range instruments have binding post connections. Triple range voltmeters have pin jacks to receive standard pin-tipped leads which are supplied at no extra charge.

A-C Voltmeters

For use on frequencies from 25 to 125 cycles. Made in double and triple range combinations, having high internal resistance with correspondingly low current consumption. Self-contained for all listed ranges. Complete with 48 in. tests leads.

Double Range

Range	Approx. Res. Ohms.	Scale Div.	Each

Weston Portable Instruments
For Testing Direct Current

Model 489

Model 489

Accurate within 2%.
Scale length 2.36 in.
Type: Permanent magnet moving coil.

Size: 3⁷/₃₂ x 3³/₃₂ x 1²⁹/₃₂ in.
Approximate weight 11 ozs.
For all-around checking where a more precisely accurate instrument is not required.

In Black molded Bakelite case. Binding post connections on all single and double range instruments. Triple range voltmeters have pin jacks to receive standard pin-tipped leads which are supplied at no extra charge.

D-C Voltmeters

Made in double and triple range combinations having sensitivities of 125 and 1000 ohms per volt. All are supplied with 48-in. test leads.

Weston Portable Instruments

Current Transformers

Model 539 — Miniature

Small, light weight and inexpensive. For use where only moderate accuracy is required with low burden ammeters having a range of 1 amp. Ordinarily it cannot be used with a wattmeter since its phase angle, while satisfactory for current measurements, precludes its use for power measurements. Has a secondary short-circuiting switch.

Black Bakelite case 5¹/₂ x 4¹/₈ x 1¹/₈ in.

Approximate weight 3 lbs.

Inserted primary opening 1¹/₂ in.

Ranges, Amperes	Each
*200/*100*50/20/10/5/2 Primary to 1 Secondary....	\$82.50

*These ranges are obtained by inserting one, two, etc. turns respectively, of the primary through the core opening; other ranges are on binding posts selected through a switch.

Surface, Bakelite.....		2.94
Surface, Metal.....		2.75
	Rectangular:	Size, In.
Flush, Bakelite.....		3.13 x 3

Group Instruments

Normally calibrated for use on non-magnetic panels. If instruments are for use on magnetic panels, state panel thickness.

If wanted for use on circuits above 300 volts, Bakelite cases should be specified, when it is not possible to connect in grounded side of line.

Accurate within 2%. Scale length 2.36 in.
Type: Permanent magnet moving coil.

Weston Panel Instruments

Models 861, 862, 863
(Illuminated)

Model 861-Milliammeter

Models 961, 962, 963
(Not Illuminated)

Model 962 VU Meter

These matched groups of large, rectangular panel, semi-flush, bakelite instruments combine well proportioned mechanical design with easy readability of long scales through large openings.

Both groups have removable molded bakelite fronts. All are mounted the same as round types — only one round opening for instrument body and four small holes for mounting studs being necessary.

The a-c movable iron type instruments incorporate excellent magnetic damping, high sensitivity, good torque to weight ratio and low response time consistent with well-balanced design. A dielectric test of 5000 volts a-c is given each instruments. Steel cases provide magnetic shielding and make it unnecessary to specify the panel material, since mounting on magnetic panels will not change the calibration. The a-c scales approach uniformity for the upper 90%.

The d-c, thermo and rectifier type instruments have bakelite cases, and if used on steel panels, thickness of panel should be specified to assure proper adjustment. They are also subjected to the 5000 volts a-c dielectric test.

Instruments in Model 861 Group (Models 861, 862 and 863) are equipped with two self-contained miniature base 6-volt 0.15 amp. lamps, ordinarily connected for dial illumination. (Illumination feature is not included in the Model 961 Group — Models 961, 962 and 963.)

Accurate within 2%. Scale length 3.17 in.

Type: Thermocouple.

Size: 4.25 x 3.94 in., Depth 2.5 in., Diameter of panel hole required 3.25 in.

D-C Voltmeters

Approx. weight 1 lb.

Ranges listed below are self-contained and have a sensitivity of approximately 200 ohms per volt up to and including 200 volts; higher ranges are 1000 ohms per volt.

A-C Rectifier Type Instruments

Models 862 and 962

These instruments are offered as the only practical means of measuring small a-c currents. They may be relied upon to within about 5% of full scale value on wave forms closely approximating sine wave at ordinary room temperatures.

Rectifier Type A-C Voltmeters

Range	Scale Div.	Model 862		Model 962

Type 30 VU Meters

Available with a choice of two scales, and because of their size and balanced design are most practical.

Type A scale stresses the level in VU and is used largely in monitoring wire lines.

Type B scale emphasizes per cent use of transmitter output and is the standard for broadcast service.

Model	Scale	Each
862	A or B	\$59.00
962	A or B	51.50

Thermo Ammeters

Power Consumption: 1 to 4 amperes inclusive varies from 0.2 to 0.4 watt per ampere. Approx. 5 amperes and above — 0.2 watt per ampere.

Frequency errors less than 2% up to 65 megacycles.

Amps.	Scale Div.	Model 863 Each	Model 963 Each	Amps.	Scale Div.	Model 863 Each	Model 963 Each

Weston Panel Instruments

1301 and 1306 Line

Available for d-c and a-c rectifier types, in both round and rectangular cases. Instrument can be mounted interchangeably on magnetic or non-magnetic panels without need for special adjustment.

Accuracy: D-C, +2% of full scale range. Rectifier type A-C +3% of full scale when used on sine wave of 60 cycles at normal room temperature of 25°C. Lance type pointer. Self-shielded Cormag mechanism. Case 3½-in. round or rectangular flush bakelite. Terminals: Solder type up to 10 amperes.

D-C Microammeters—Model 1301

Range	Approx. Res.	Scale Div.	Each	Range	Approx. Res.	Scale Div.	Each

*Does not include shunt or leads. Leads provided only when specifically called for on order. Unless otherwise specified 0.065 ohm is allowed in adjustment of the 50 millivolt instrument for shunt lead resistance. Where specified, 5 ft. shunt leads, PN-131442 (instrument end of wire stripped and tinned-eye terminals at shunt end) will be provided for specific use with this instrument at a price of \$1.00 list per pair. List price for this millivoltmeter is \$15.00 when provided with any of the listed ammeter scales. Other scales are available on special order.

**All d-c voltmeters have sensitivity of approximately 1000 ohms per volt. Resistors are precision metal film Weston Vamistors. Wire wound resistors are available on special order.

Weston Sight Meters

Model 703

Sightmeter

Pocket-size, direct-reading instruments for measuring light. Size: 4½ x 2½ x 1½. Can be used by anyone. Can be placed on chair, desk or machine in home, office or factory — or held in the hand in whatever position the light is to be measured. The scale on the Sight Meter instantly indicates whether or not the light is adequate for a particular seeing task.

They are invaluable aids for the promotion of better sight through the use of better light; and ideal for use in the selling of home lighting equipment, such as lamps and reflectors.

The use of the Sight Meter Multiplier Disc over the *Photronic Cell will extend the range ten times its normal full scale value.

Model	Description	Each
Model 703, Type 7	Sight Meter, 0-100 foot-candles (with †VISCOR and Cosine correction filters)	\$53.00
Model 703, Type 6A	Sight Meter, 0-75 foot-candles (with †VISCOR filter)	50.00
Model 703, Type 3A	Sight Meter, 0-75 foot-candles (Unfiltered)	38.00
Model 9924	Multiplier Disc (x10) not usable with Cosine corrected instruments	1.50
Model 9959	Leather Carrying Case	3.00

*Photronic and †Viscor — Registered Trade Marks.

Weston Foot-Candle Meters

Model 614

This versatile instrument is for making general commercial lighting surveys and measurements requiring a wide range of light values. No correction factors are necessary. Any type of commercial lighting can be measured directly with this compact Foot - Candle Meter.

Ranges are selected through the operation of a conveniently located range-changing switch.

The *Photronic Cell is mounted on a hinge, so that with the instrument lying flat, the cell can be tilted at an angle to facilitate measurements such as reflected light from a wall or ceiling. Entirely self-contained in a sturdy bakelite case equipped with a hinged cover and leather carrying handle; Size 7⅞ x 3⅜ x 2¼ in.

Model 614	— 0-100/250/500 foot-candles (with *Viscor and Cosine correction filters)	Each \$113.00
Model 614	— 0-60/120/600 foot-candles (with *Viscor filter)	Each 110.00

*Photronic and Viscor — Registered Trade Marks.

Weston Plug-In Illumination Control

This instrument provides automatic "on-off" control of artificial lighting. Operates automatically on the basis of light level in terms of foot-candles.

No resistors or capacitors are used, nor phototubes or vacuum tubes. Consists primarily of a Photoelectric cell, a relay, a clock motor, one or two mercury switches and a limit switch.

Complete unit is ruggedly constructed and enclosed in standard weatherproof watt-hour meter glass case. To install simply plug it into a standard watt-hour meter receptacle.

An ideal control for aircraft obstruction markers; air-way beacon and airstrip lights; industrial lighting and street lighting.

- No. 1089 Types 1, 1R, 4, 5 Plug-In Illumination Control (One Mercury Switch).....Each \$75.00
- No. 1089 Types 2, 3, 6 Plug-In Illumination Control (Two Mercury Switches).Each \$90.00

Weston All Purpose Electronic Tubechecker

A new functional tubetester of the Proportional Mutual Conductance type. For industrial, laboratory and general testing of receiving tubes, voltage regulator tubes and low power thyratron tubes.

Provides meter measurement of leakage resistance as high as 5 megohms between tube elements, nine single circuit, twelve position selector switches protect against obsolescence, three toggle switches make it possible to check and compare sections of twin section tubes at only one setting of the selector switch.

Filament Voltages: 0.6a, 0.65, 1.1, 1.5, 2, 2.5, 3.3, 5, 6.3, 7.5, 10, 13, 20, 27.5, 35, 47, 70, 85, 115.

Plate Voltages: 90, 130, 220 volts d-c; 22, 44, 160 volts a-c.

Grid Bias: 0-5V, 0-20 volts d-c.

Signal Voltages: 5.2, 2.6, 1.3, 0.65 volts peak to peak. Gm Ranges up to 30,000 micromhos.

Power Requirements: 100 to 125 volts, 60 cycles single phase, a-c, 30 watts.

Meter measurement of high leakage resistance provides accurate meter measurement of leakage resistance as high as 5 megohms between tube elements, thus being particularly useful for TV servicing and TV line production assembly.

Roll index chart provides comprehensive, up-to-date test data on commonly encountered tubes as well as those used infrequently.

Case is gray hammertone finished steel.

No.	Size, In.	Approx. Wt., Lbs.	Each
981 Type 3	17 1/2 x 13 1/4 x 6	23 1/2	\$199.50

Weston Volt-Ohm-Milliammeter

A highly sensitive, accurate and rugged instrument with an etched circuit and a combination of functional ranges which provide a wide range of test measurement applications in the electronic field.

Has a d-c sensitivity of 20,000 ohms/volt, and an a-c sensitivity of 1000 ohms/volt. Accuracy is 2% d-c, 3% a-c.

Range and functional switching greatly simplified by use of a single dial for all ranges and functions.

Scale length 4.63-in. Black bakelite case.

No.	Size, In.	Approx. Wt., Lbs.	Each
980	6.25 x 7.50 x 3.25	2 11	\$43.50

Weston All Purpose Oscilloscopes

A high gain, wideband oscilloscope designed to accurately reproduce waveforms comprising a wide band of frequencies.

The high sensitivity of 15 millivolts per inch RMS makes the oscilloscope ideal for setting resonant traps; signal tracing in low-level stages; as a general null indicator; for phase characteristic measurement in Industrial Applications and for sweep frequency visual alignment of TV receivers.

Scope contains identical vertical and horizontal push-pull amplifiers with choice of a-c or d-c coupling without affecting either sensitivity or band width. Both amplifiers have compensated step attenuators and cathode follower input.

Specifications

Wide Band Frequency Response: Flat within 1.5 db from 0-3.6 mc and within-3 db to 4.5 mc on both vertical and horizontal amplifiers. Transient response: overshoot 2 to 5%. Rise time: 0.1 microsecond.

High Deflection Sensitivity: 15.0 millivolts per inch RMS, on both vertical and horizontal amplifiers.

Phase Shift: Between horizontal-vertical amplifiers. 0-500 kc-0°, to 1 mc within 2°; by internal adjustment with gain controls at max. 0° phase shift possible on any specific frequency to 6 mc.

Calibrating Voltages: 500 millivolts, 5 volts, 50 volts, 500 volts, peak to peak.

Sweep Frequencies: 10-500,000 cps., variable. Preset TV/V position-30 cps. Preset TV/H position-7875 cps. Retrace time-better than 2% to 100 kc; at 500 kc less than 10%.

Internally Phased Sine Wave: Adjustable through 170°.

Vertical and Horizontal Polarity: Reversible.

Input Impedance: Vertical Amplifier (without Shielded Cable), 1 meg. shunted by 60 mmf. Vertical Amplifier (with Shielded Cable, 1 meg. shunted by 120 mmf. Vertical Amplifier (with Low Capacitance Probe), 2 meg. shunted by 15 MMF. Horizontal amplifier (without Shielded Cable), 1 meg. shunted by 60 mmf.

Power Supply: 105/125 volts, 50/60 cycles. Case: Grey hammertone finished steel. Approx. weight 40 lbs.

No.	Description	Size, In.	Each
983	Oscilloscope	10 x 14 x 19 1/2	\$328.50

Weston Industrial Circuit Testers
Type 6A Multi-Purpose—Multi-Range

For testing communication systems, telephone, radio, etc. Electronic circuits and equipment. Lighting and power circuits. Resistance in all types of circuits. Signal systems, police, fire and burglar alarm. Transformers, loads and wiring.

Size: 13 x 12½ x 5½ in.

A most complete ultra-sensitive single unit 28-range tester for general maintenance and test purposes. General maintenance work, such as checking motors, lighting circuits, etc. can be accomplished with a minimum expenditure of time. Current and potential leads can be connected to the instrument at the same time for instantaneous current and voltage readings.

Specifications

Standard Weston 4¼ in. instrument. D-c sensitivity 50 microamperes. New temperature compensated rectifier circuit gives greater a-c accuracy.

Ranges

A-C Volts, Six Full Scale Ranges:

5/15/30/150/300/750 volts (1000 ohms per volt). Accurate within 3%.

A-C Current, Four Full Scale Ranges:

.5/1/5/10 amperes. Accurate within 3% on 60 cycles. Slightly less on 25 and 133 cycles. Higher ranges with external current transformers.

D-C Volts, Seven Full Scale Ranges:

1/10/50/200/500/1000 volts (20,000 ohms per volt), and 100 millivolts direct or for use with external shunts. Accurate within 2% to 500 volts — 3% at 1000 volts.

D-C Current, Six Full Scale Ranges:

50 microamps . . . 1/10/100 Milliamps . . . 1/10 Amps. Accurate within 2%. Higher ranges, at full scale reading, with 100 mv external shunts.

Resistance, Five Full Scale Ranges:

3000/30000/300000 Ohms 3/30 Megohms
 25/250/2500/25000/250000 Ohms Center Scale
 (Self-contained Batteries). Accurate within 2% of linear arc length on any ohmmeter range.

Model 785, Type 6A in Oak Carrying Case . . . Each **\$185.25**

Model 785, Type 6A in Steel Case for Bench Use Each **155.25**

Weston Power Analyzers

Model 639 — Type 2

A complete power analyzer designed to analyze industrial loads by measuring a-c current, voltage and power, in single and polyphase circuits; as well as power factor in 3-phase, 3-wire balanced circuits. It is convenient, safe, compact, light in weight, rugged and portable.

Ideal for use in industrial plant maintenance; by utility service engineers, electrical contractors, marine service men and in general testing and installation work.

Accurate within 1% for voltmeter, ammeter and power factor meter, and 2% for wattmeter.

Scale lengths 3.5 in. Size case: 18¾ x 10⅞ x 6⅞ in.

Approximate weight 32 lbs.

Unit consists of four Model 610 instruments (4 x 4½ in.) a voltmeter, ammeter, wattmeter and a power factor meter, all in a rugged oak carrying case. These instruments contain the large, rugged mechanisms as used in the Weston 6 in. Line.

The ammeter has an adjustable pointer stop making it possible to quickly determine the maximum of starting currents. The wattmeter has a single scale with multiplying factors given on the instrument panel.

Internal connections eliminate possibility of "outages" due to improper connections; or damage to individual meters. Heavy insulated binding posts are located at top away from the operator. Instruments are placed along a horizontal centerline, with all switches below. Danger of interference with other equipment is minimized, due to less external wiring.

Insulated for 1000 volt service.

Self-contained — All interconnections are made within the unit, saving considerable time when power studies are being made. Only a few simple connections are necessary to place this instrument in circuit. Internal switches facilitate rapid measurement of all line currents and voltages. Fine line scales with knife-edge pointers, and "Straightline" grouping of identical instruments, provides easy readability.

Low Burdens — Potential circuit per phase, 7 volt-amperes. Current circuit per phase, 6 volt-amperes.

High Overload Capacity — Current circuits are designed to be used continuously at 25% above their rated values and may be subject to greater overloads for shorter periods of time.

Built-in Accuracy — Current transformers are hand-wound on nickel alloy ring type cores, making it possible to maintain the phase angle and ratio errors at a minimum. The overall accuracy of the wattmeter and power factor meter is maintained even at low power factors as a result of the low phase angle of the transformers.

Series resistors, consisting of inert cards which are wire wound, and well spaced throughout provide maximum cooling for sustained operation and accuracy.

Model 639, Type 2 Each **\$763.00**

Weston Portable Standards

For A-C and D-C Power Measurements

Model 310

Accurate within 1/4 of 1%.
Scale length 5.25 in.

Type: Electro-dynamometer (shielded from external magnetic field).

Size Case: 8 1/2 x 10 3/8 x 5 1/8 in.

Approximate weight, 12 lbs.

Power Consumption:

Forms 1 and 3—Potential circuit at 115 volts, 60 cycles—2.9 watts, 2.9 volt-amperes. Current circuit at 5 amperes, 60 cycles—0.81 watt, 0.95 volt-ampere.

Form 2—Potential circuit at 115 volts, 60 cycles—4.4 watts, 4.4 volt-amperes. Current circuit at 5 amperes, 60 cycles—3.5 watts, 3.9 volt-amperes.

This is a true electro-dynamometer and will measure true rms values when used on commercial wave forms, since the wave form error in general is exceedingly small and practically unreadable.

All are calibrated at 25°C. A certificate provided with each instrument supplies all essential data.

Description of Forms

Form 1—For general service on d-c, and on frequencies to 125 cycles. Not compensated for instrument losses, ranges based on product of normal volts and amperes. Compensated for normal temperature changes. Potential circuit has push button switch.

Form 2—For low power factor service. Potential circuit power compensation is provided as ranges are usually quite low, and the power consumed by the instrument is therefore an appreciable portion of the total. Switch is provided in potential circuit to omit or include compensation. Ranges are based on 20% of the product of maximum volts and amperes. Frequency coverage same as Form 1. Special instruments, without potential circuit power compensation can be built, at a surcharge, to cover a frequency span up to 1000 cycles with the standard accuracy.

Form 3—Similar to Form 1, except that the potential circuit is designed for use on higher frequencies and therefore is not so well compensated for temperature changes as Form 1. On 50 volt range, frequency coverage is from 25 to 600 cycles; 100 volts and above, 25 to 1200 cycles. Special instruments can be built, at a surcharge, to cover a frequency span up to 2500 cycles with an accuracy within 1/2% above 1200 cycles.

Summary

	Form 1	Form 2	Form 3
Compensated for large temperature changes.....	Yes	No	No
Compensated for potential circuit power.....	No	Yes	No
Equipped with push button switch..	Yes	No	Yes
†Current circuit overload capacity..	100%	None	100%
*Potential circuit overload capacity..	50%	None	50%

Frequency range for normal accuracy:

Form 1—d-c & 25-125.

Form 2—d-c & 25-125.

Form 3—d-c & 25-600; 100 volts and above, d-c & 25-1200.

†100/50 ampere range 50% overload only.

*Applies to ranges up to 400 volts; above 400 volts overload is 20%.

Model 310 — Form 2 — For Low Power Factor Use

Volts Max.	Amperes Max.	Watt Ranges	Range Figured	Scale Div.	Each
150/75	1	30/15	15	150	\$430.50
	2	60/30	30	150	430.50
	5	150/75	75	150	423.00
	10	300/150	150	150	423.00

*This range is not compensated for potential circuit power and is useful for special conditions only. Power required for instrument operation will often equal, and in some cases be more than, the power to be measured. Correspondence giving full particulars of the problem is usually required before placing the order.

All ranges listed are self-contained. Higher current ranges are obtained by using a 5 ampere range in conjunction with Model 461, Type 2 or Model 327, Types 1 or 2 Current Transformers. Higher potential ranges are obtained with multipliers or Model 311 Potential Transformers.

Leather Cases—For all Standard Ranges Each \$44.00

Weston Portable Standards

For Testing Alternating and Direct Current

Model 341

Accurate within 1/4 of 1%.

Scale length: 5.25 in.

Type: Electrodynamometer (shielded from external magnetic fields.)

Size Case: 8 1/2 x 10 3/8 x 5 7/8 in.

Approximate weight 11 lbs.

Power consumption: (300/150 and 300/150/75 volt instruments) 150 volt range at 115 volts, 60 cycles—4.0 watts, 4.0 volt-amperes.

Model 341

A true electro-dynamometer, self-contained, and suitable for d-c and a-c voltage measurements. Will

measure true rms voltage when used on common wave forms since the wave form error, in general, is exceedingly small and practically unreadable.

All are calibrated at 25° C. A certificate provided with each instrument supplies all essential data, true temperature correction factors and true frequency correction factors.

Instruments with all ranges of 7.5 volts and above are accurate to within 1/4 of 1% of full scale and are usable on d-c, and a-c from 25 to 125 cycles. They are calibrated on d-c and have a negligible frequency error at 60 cycles.

All instruments with one or more ranges below 7.5 volts are accurate to within 1/2 of 1% of full scale and are calibrated on 60 cycles. The sustained operation influence is, of necessity, somewhat greater for the 1.5 range than for higher ranges. All ranges may be used on d-c, or a-c frequencies from 25 to 125 cycles by applying a small correction factor.

A-C and D-C Voltmeters

Ranges	Approx. Sensitivity Ma	Approx. Resist. Ohms	Scale Div.	Each
*†3/1.5	500	6/3	150	\$345.75
*†7.5/3	500	15/6	150	345.75

600/300/150	30	20000/10000/5000	150	375.25
750/300/150	30	25000/10000/5000	150	380.25

*Accuracy 1/2 of 1%.

†Provided with 5 ft. leads.

For higher ranges use Model 311 Potential Transformers or external multipliers.

Leather Cases—For all Standard Ranges Each **\$44.00**

Weston Portable Standards

For Testing Alternating and Direct Current

Model 370

Accurate within 1/4 of 1%.

Scale length 5.25 in.

Type: Electrodynamometer (shielded from external magnetic fields).

Size Case: 8 1/2 x 10 3/8 x 5 3/4 in.

Approximate weight, 10 lbs.

Power Consumption: 5 ampere range at 5 amperes, 60 cycles — 4.5 watts, 4.7 volt-amperes.

Model 370

For measuring a-c and d-c current. True electro-dynamometers of the shunted moving coil type in all double range combinations, and all ranges above .5 amperes.

Will measure true rms current on commercial wave forms since the wave form error is unreadable.

Instruments can be supplied for d-c, and a-c from 25 to 125 cycles, or d-c, and a-c from 25 to 1000 cycles at a rated accuracy within 1/4% of full scale. At a surcharge these instruments can be compensated for frequencies up to 2500 cycles. The accuracy of such instruments will be within 1/4% for d-c, and a-c from 25 to 1000 cycles. From 1000 cycles to 2500 cycles the accuracy will be within 1/2%. All are calibrated at 25° C. A certificate provided with each instrument supplies all essential data.

A-C and D-C Ammeters

Range	Scale Div.	D-C, and 25 to 125 cycles A-C Each	D-C, and 25 to 1000 Cycles A-C Each
1/.5	100	\$370.00	\$394.75

5/2.5	100	360.50	387.25
10/5	100	362.50	387.25
20/10	100	372.50	397.25

A-C and D-C Milliammeters

Range	Approx. Resist. Ohms	Scale, Div.	D-C and 25 to 125 cycles D-C Each	D-C and 25 to 1000 cycles A-C Each
30/15	915/1470	150	\$394.75
150/75	44/110	150	\$370.00	394.75
300/150	13/12	150	370.00	394.75
500/250	4.2/5.1	100	370.00	394.75

All ranges listed above are self-contained. For higher ranges use Model 461, Type 2 or Model 327, Types 1 or 2 Current Transformers.

Leather Carrying Cases—For all Standard Ranges Each **\$44.00**

Weston Portable Standards

Model 329

Model 329

Accurate within 1/2 of 1%.
 Scale length 5.25 in.
 Type: Electrodynamometer (shielded from external magnetic fields).
 Size Case : 9 1/2 x 10 1/2 x 8 1/8 in.
 Approx. weight, 18 lbs.
 Power Consumption per element: Potential circuit at 115 volts, 60 cycles — 3.4 watts, 3.4 volt-amperes. Current circuit at 5 amperes, 60 cycles — 0.80 watts, 0.91 volt-ampere.

rent circuit at 5 amperes, 60 cycles — 0.80 watts, 0.91 volt-ampere.

Made in three types: Form 1, 2 and 3, with characteristics comparable to those of Model 310 Wattmeters.

Consist of two electrically independent single-phase wattmeters having their movable coils mounted on a common shaft, with each coil surrounded by its own system of field coils. Each system may be used independently with scale errors of less than 1/2%, which is of great importance for measurements on unbalanced polyphase circuits, or on balanced three-phase circuits at low power factor.

Have double current and triple voltage ranges. Current ranges changed by means of links, and voltage ranges have independent binding posts. Power measurements on direct current — single-phase a-c, two- or three-wire circuits — two-phase, three- or four-wire circuits, and on three phase circuits, may be made directly. All instruments have "On" and "Off" switch in the potential circuit. Calibrated at 25° C. A certificate, provided with each instrument, supplies all essential data.

Model 329 Form 1 or 3

Approximate Sensitivity per Element at Normal Voltage — 26 Ma. Polyphase Wattmeters

Volts Normal	Amperes Normal		Watt High Current Range
	High	Low	
200/100/50 (Max. 300/150/75)	5 10 20	2.5 5 10	2000/1000/500 4/2/1 kw 8/4/2 kw
500/200/100 (Max. 600/300/150)	5 10 20	2.5 5 10	5000/2000/1000 10/4/2 kw 20/8/4 kw

Watt Low Current Range	Range Figured	Scale Div.	Each
1000/500/250	500	100	\$761.00
2/1/5 kw	1 kw	100	761.00
4/2/1 kw	2 kw	100	821.00
2500/1000/500	500	100	798.50
5/2/1 kw	1 kw	100	798.50
10/4/2 kw	2 kw	100	858.50

All ranges listed are self-contained. Higher current ranges are obtained by using a 5 amp. range in connection with two Mode 461, Type 2, or two Model 327, Type 1 or 2, Current Transformers. Potential ranges are extended by using multipliers of two Model 311 Potential Transformers.

Weston Portable Multi-Purpose Instruments

Model 633 Clamp Volt-Ammeters and Clamp Ammeters

Type VA-1

Dependable magnetic circuit. Rugged bakelite case and solid bakelite handle. Completely insulated for 750 volt service. Fast, well-damped movement, accurate within 3% of full scale value. Non-shatterable scale glass. Easily-read double scale. Pear-shaped pointer. Adjustable pointer stop for measuring motor-starting currents. Successive voltage and current readings at the flick of switch. Positive 6-position range and selector switch. Safety type trigger — designed for glove or bare hand use. Can be hung on a conductor 2 in. diameter, leaving operators' hands free.

Note — Can be used for continuous duty up 500 amperes.

A-C Clamp Volt-Ammeters

Combines in one instrument 3 a-c voltage ranges and 5 a-c current ranges. Provides complete coverage of the voltages and currents most frequently encountered in industrial and utility service work. It is the ideal maintenance tool for on-the-job testing.

Model 633 — A-C Clamp Ammeters

These are basically of the same design as the Clamp Volt-Ammeter, except that they are not provided with the voltage features or regularly equipped with an adjustable pointer stop.

Current measurements can be made at a distance from the clamping jaws when the instrument is used in conjunction with Model 9958 50-ft. Extension Cable. This is done by removing the indicating instrument from the clamp-ammeter and inserting it in the receptacle provided on one end of the extension cord. The plug end of the cable is then inserted in the clamp-ammeter.

Note — Extension cannot be used with Type VA-1 Clamp Volt-Ammeter.

Type VA-1 — For 750/350/175 Volts; 1000/250/100/25/10 Amperes: Includes Potential leads.....	\$125.00
Type A-1 — 500/250/100/50/25/10 Amperes.....	117.00
Type A-2 — 1000/500/250/100/25/10 Amperes.....	117.00
Type A-3 — 2000/1000/500/250/100/50 Amperes...	125.00
Model 9958, 50-ft. Extension Cable, Plug and Receptacle.....	72.00
Leather Carrying Case for Types VA-1, A-1, A-2 and A-3.....	13.50
Leather Carrying Case for Model 9958 Cable, Plug and Receptacle.....	22.50

Weston Clamp Volt-Ammeter
A-C Pocket Size

Lightweight, compact clamp volt-ammeter designed for the electrician, service man, engineer and motor repair shop.

Contains six current ranges and three voltage ranges that are quickly readable from any angle on one large size scale.

Precision ground faces provide positive jaw contact. Shatter-proof wrap-around plastic window.

Accommodates conductors up to 1-inch round or 1 3/4 x 3/8 in. rectangular.

New shock-mounted core magnet mechanism. Fully insulated for 750 volt service. Accurate within ±3% of full scale value when used on 50-60 cycles. Scale length, 2.36 inch.

Supplied complete with sturdy carrying case, voltage test leads with insulated battery clips and three accessory probes.

Ranges

300/150/60/30/15/6 amperes a-c; 600/300/150 volts a-c.

No.	Size, In.	Approx. Wt., Oz.	Each
749	7 1/2 x 3 x 1 1/4	14	\$40.50

Plug-In Adapter

Model 9886 Plug-in Adapter is designed for use with the Model 749, facilitates current measurements of double conductor leads without breaking the circuit. Handy receptacles on either side, for direct reading or as a 10 to 1 divider for low current measurements. Also simplifies voltage testing during current checks.

It is rated at 250 volts a-c and can be used to measure current up to 25 amperes for "Direct Reading" connection and up to 10 amperes for the "Amperes Divided by 10" connection.

No.	Description	Each
9886	Plug-in Adapter.....	\$4.75

Simpson Dynamometer Instruments
For A-C and D-C

Precision portable instruments offered in a wide selection of ranges to meet most requirements for general purpose. Accurate to 1% of full scale and built to maintain that accuracy.

Large, 4 1/2 in. hand drawn scale, mirrored for easy reading, carries a knife edge pointer.

Cases are heavy molded bakelite. Instruments are for a-c or d-c service.

Simpson Panel Meters

2½, 3½, and 4½ in. round and rectangular a-c and d panel meters. Engineered and constructed for long life and lasting accuracy. D-C models are supplied with D'Arsonval movements. A-C models have iron-vane movements. Highly polished pivots are set in jewel bearings. All meters are damped and have heavy bakelite cases. Meters are supplied with mounting hardware and template.

Model 125

2½ in. round case, open face style. Flange diameter, 2¾ in. Depth over-all, 2⅞ in. Body diameter, 2⅛ in. Scale length, 1⅞ in.

Model 25

3½ in. round case, open face style. Flange diameter, 3½ in. Depth over-all, 2¼ in. Body diameter, 2¾ in. Scale length, 2⅞ in.

Model 127

2½ in. rectangular case. Width, 2⅜ in. Height, 2⅞ in. Mounts in round hole. Body diameter, 2⅜ in. Scale length, 1⅞ in.

Model 27

3½ in. rectangular case. Width, 3 in. Height, 3⅞ in. Mounts in round hole. Body diameter, 2¾ in. Scale length, 2⅞ in.

Model 29

4½ in. rectangular case. Width, 4½ in. Height, 4⅞ in. Mounts in round hole. Body diameter, 2¾ in. Scale length, 3⅞ in.

Simpson Wide-Vue Panel Meters

All Wide-Vue meters listed below are supplied with new core magnet movement (except 0-25, 0-50 d-c microammeters and V. U. meters).

The core magnet movement is self-shielded and requires no calibration allowances for mounting on steel panels.

One-piece covers for these 3 1/2 in. size meters are molded from clear methyl methacrylate. Scale lengths are extra long for easy reading. Meters supplied complete with hardware and mounting template.

Simpson Horizontal Edgewise Panel Meters

Edgewise meters require only half the panel area yet provide a scale length comparable to a conventional 2 1/2-in. meter. Choice of two self-shielded core magnet meter movements offers a wide range of sensitivities.

Edgewise meters are supplied complete with mounting hardware and meet these specifications:

Accuracy: D-C, 2% of full scale. A-C rectifier type, 5% of full scale.

Types: D-C and A-C rectifier.

Pointers: Knife-edge, lance, and spade types.

Scale length: 1 7/8 in.

Case: Dustproof, molded lucite.

Standard scale: Black numbers on white background.

Terminals: Solder or stud type.

Weight: Approximately 5 oz.

Simpson Plate Conductance Tube Testers

Tests any receiving tube, including 9 pin miniatures and sub-miniatures with base arrangements in a line or circle. Extra low volt leakage test will not damage any tube.

The Model 1000 is ideal for radio-TV and industrial control servicing.

Plate conductance method provides simple, positive and accurate tests.

Snap-out snap-in transparent plastic windows are provided over the roll chart. Add new tube data at any time.

Model 1000 operates on a line voltage of 105-125 volts, 50-60 cycles. Supplied complete with operator's manual.

Simpson Line-O-Meters

Line current capacity tester pre-tests the ability of existing electrical circuits to furnish motor starting current from 13 to 50 amps. Size 3 1/16 x 5 1/2 x 2 1/2 in. Weight 2 lbs.

No. 397.....Each \$29.95

**Simpson Volt-Ohm-Milliammeters
For A-C and D-C**

Model 260

Multi-purpose tester provides quick, accurate electrical checks.
 29 ranges . . . 20,000 ohms per volt d-c . . . 5,000 ohms per volt a-c.
 Volts, a-c and d-c: 2, 5, 10, 50, 250, 1000, 5000.
 AF, output: 2.5, 10, 50, 250.
 Decibels: -20 to +50 decibels in 4 ranges.
 Current, d-c; 50 mca; 1, 10, 100, 500 ma; 10 a.
 Ohms: 0-2K (12 ohms center), 0-200K (1200 ohms center), 0-20 meg. (120K center).

Supplied complete with test leads and operator's manual.

No.	Width In.	Height In.	Depth In.	Shpg. Wt. Lbs.	Each
260	5 1/4	7	3 1/8	6	\$43.95
260RT	As above but in roll top safety case				49.95

Model 262

Deluxe instrument offers 33 ranges on big 7-in. scale.
 Shielded core magnet meter movement permits compact design for easy portability.
 D-C volts: 1.6, 8, 40, 160, 400, 1600, 4000 . . . 20,000 ohms per volt.
 A-C volts: 3, 8, 40, 160, 800 . . . 5000 ohms per volt.
 AF output voltage: 3, 8, 40, 160 volts.
 Volume level in decibels: -12 to +45.5 decibels in 4 ranges.

D-C resistance: 0-500 ohms (4.5 center); 0-5K ohms (45 ohms center); 0-50K ohms (450 ohms center); 0-500K ohms (4500 ohms center); 5 megohms (45K ohms center); 0-50 megohms (450K ohms center).
 D-C current: 80, 160 ua; 1.6, 16, 160 ma; 1.6, 16 a.
 Supplied complete with leads and operator's manual.

No.	Width In.	Height In.	Depth In.	Shpg. Wt. Lbs.	Each
262	7 15/16	6	2 15/16	6	\$59.50

Model 240

Designed for radio testing . . . 1000 ohms per volt, a-c and d-c.
 A-C volts: 15, 150, 750, 3000.
 D-C volts: 15, 75, 300, 750, 3000.
 D-C milliamperes: 15, 150, 750.
 Ohms: 0-3000 (center scale 30); 0-300,000 (center scale 3000).
 Supplied complete with leads and operator's manual.
 Model 240 Each \$28.95

Model 230

Low cost multi-purpose tester ideal for many industrial test needs.
 A-C volts: 10, 250, 1000, (400 ohms per volt).
 D-C volts: 10, 50, 250, 1000, (1000 ohms per volt).
 D-C milliamperes: 10, 50, 250.
 Ohms: 0-1000, 0-100,000.
 Model 230 supplied complete with leads and operator's manual.
 Model 230 Each \$27.95

**Simpson Volt-Wattmeters
For A-C and D-C**

Model 391

Model 392

A-C, d-c volt-wattmeters used for simultaneous readings of volts and watts. Each has 2 separate 3-in. sq. meters, built-in cord and plug for connection to the line outlet, and separate toggle switches for range selection, a-c or d-c. Supplied complete with cord, plug and operator's manual.

No.	Ranges	Volts	Watts	Each
391	A-C, D-C	0-130	0-1500	\$34.95
		0-260	0-3000	
392	A-C, D-C	0-130 0-260	0-1000 0-5000	37.95

Simpson A-C Volt-Amp-Wattmeters

Ruggedly built tester provides four wattage ranges which cover testing requirements for practically any appliance.
 Volts: 0-150, 300.
 Amps: 0.3, 15.
 Watts: 0-300, 600, 1500, 3000.
 Tester supplied complete with break-in plug, leads, and operator's manual.
 Model 390 Each \$43.95

Simpson Vacuum Tube Volt-Ohmmeters

Unusually versatile instrument with easy-to-read 4 1/2 in. scale may be used as an electronic d-c voltmeter, ohmmeter, a-c or AF voltmeter, RF voltmeter (with accessory probe), output-meter, and other applications.
 Model 303 is supplied with DCV probe, ACV-ohms probe, ground lead and operator's manual.

D-C voltage: ranges—1.2, 12, 60, 300, 1200.
 Ohms: 1K ohms (10 ohms center); 100K ohms (1000 ohms center); 1 megohm (10K ohms center); 10 megohms (100K ohms center); 1000 megohms (10 megohms center).
 A-C voltage: ranges—1.2, 12, 60, 300, 1200.
 AF voltage: ranges—1.2, 12, 60.
 Decibels: -20 to +63 decibels in 5 ranges.
 RF voltage: range—20 volts maximum. Frequency flat 20 Kc to 100 Mc.
 Line voltage: 105-125 volts, 50/60 cycles.
 Model 303 Each \$68.00

Simpson Carrying Cases

Simpson Ever-Redy instrument carrying cases protect instruments and save time.
 Large, one-piece lid folds back to expose meter and selection switches. Flip the lid and the tester is ready for instant operation.

No.	Description	Each
4236	Vinyl case for Models 260, 303	\$9.75
1818	Leather case for Model 260	7.75

**Simpson Volt-Ohm Microammeters
For A-C and D-C**

Self-shielded movement for dependable performance. 100,000 ohms per volt capacity makes the Model 269 a suitable replacement for VTVM's for many voltage and resistance checks.

D-C Volts: 1.6, 8, 40, 160, 400, 1600, 4000 . . . 100,000 ohms per volt.

A-C Volts: 3, 8, 40, 160, 800 . . . 5000 ohms per volt.

AF output voltage: 3, 8, 40, 160 volts.

Volume level in decibels: -12 to +45.5 decibels in 4 ranges.

D-C resistance: 0-2K ohms (18 ohms center); 0-20K ohms (180 ohms center); 0-200K ohms (1800 ohms center); 0-2 megohms (18K ohms center); 0-20 megohms (180K ohms center); 0-200 megohms (1.8 megohms center).

D-C current: 0-16, 0-160 ua; 0-1.6, 0-16, 0-160 ma; 0-1.6, 0-16 a.

Tester supplied complete with leads and operator's manual. Weight, 4 lbs.

No.	Length In.	Height In.	Depth In.	Shpg. Wt. Lbs.	Each
269	7 ¹ / ₁₆	6	2 ¹ / ₁₆	6	\$88.00

Simpson Midgetesters

Self-shielded a-c d-c volt-ohmmeter that fits in your shirt pocket. Rated at 10,000 ohms per volt a-c or d-c. Ideal for appliance repair, radio-TV service. Utilizes a rugged core magnet meter movement.

D-C voltage: 3, 12, 60, 300, 1200.

A-C voltage: 3, 12, 60, 300, 1200.

D-C resistances: 0-10K ohms (120 ohms center); 0-100K ohms (1200 ohms center); 0-1 megohm (12K ohms center); 0-10 megohms (120K ohms center).

Supplied complete with leads and operator's manual.

No.	Width In.	Height In.	Depth In.	Weight Oz.	Each
355	2 ³ / ₄	4 ¹ / ₂	1	7	\$34.95

Simpson Low-Ohm-Meters

Features greater accuracy from 0.1 to 25 ohms and low circuit current. Utilizes currents of only 5 ma maximum, which assures damage-free testing of low current components. Accuracy is 3% of the full scale value, in two ranges, 0-5 ohms and 0-25 ohms.

Checking motor armatures and fields, switch and relay contact resistances, shorts between generator windings and grounds, shorts in TV and radio chassis wiring, electrical equipment in industrial plants are typical uses.

Supplied with calibrated test leads.

No.	Height In.	Width In.	Depth In.	Each
362	5 ⁷ / ₈	3	2 ¹ / ₂	\$24.95

Simpson Ohmmeters

Broadly useful instrument features a wide range of measurements from 0.2 ohm to 50 megohms in 6 ranges.

Center scale values are 5 ohms, 50 ohms, 500 ohms, 5000 ohms, 50,000 ohms, and 500,000 ohms.

Ohmmeter supplied complete with leads and operator's manual.

Model 372..... Each \$27.95

Simpson Handiscopes

Handles practically any TV-radio job. Small, handy size and rugged construction mean you can carry it anywhere. Take reading of 5-in. screen.

Frequency response of vertical amplifier: from 15 cycles/sec. to 100 Kc/sec., flat within ±1 db.; 6 db. down at 250 Kc/sec.; usable to 1 Mc/sec.

Maximum vertical deflection sensitivity: 30 millivolts RMS/inch.

Frequency response of horizontal amplifier: from 15 cycles/sec. to 20 Kc/sec., flat within ±1 db.; 6 db. down at 100 Kc/sec.

Maximum horizontal deflection sensitivity: 0.7 volt RMS/inch.

Z-axis sensitivity (voltage required to extinguish beam): 20 volts RMS.

Calibrating voltage (at 117.5 vac power source): 1 volt P-P ±10%.

Maximum input voltage: 400 volts peak.

Input resistance: 0.1 Meg (at atten. x 1); 0.5 Meg (at atten. x 100).

Input capacitance: 40 uuf (at atten. x 1); 35 uuf (at atten. x 100).

Sawtooth sweep range: 15 cycles/sec. to 80 Kc/sec.

Power consumption: (at 117.5 volts a-c) 50 watts ±10%.

Handiscope supplied complete with lead and operator's manual.

No.	Height In.	Width In.	Depth In.	Each
466	12 ¹ / ₄	8	16 ¹ / ₄	\$144.95

Simpson Therm-O-Meters

Takes temperature of air, gases, solids, or liquids with 7¹/₂ in. thermocouple leads.

Measures -50° to +1000°F.

Two models, each supplied with internal battery and one 7¹/₂ in. general purpose probe.

Size is 7¹/₁₆ x 6 x 2¹/₁₆ inch. Operator's manual included.

Model 388-3L (for up to 3 probes) supplied with one general purpose probe..... Each \$64.50

Model 388 (for 1 probe) supplied with one general purpose probe..... Each \$59.50

Simpson Temperature Meters

Compact instrument developed principally for refrigeration equipment measures temperatures from +70°F. to as low as -50°F. Operator's manual included.

Model 385-3L (for up to 3 probes) supplied with 1 general purpose, 15-in. Thermistor lead..... Each \$33.95

Model 385 (for 1 probe) supplied with 1 general purpose, 15-in. Thermistor lead..... Each \$30.00

**Simpson Millivoltmeters
For Servicing Gas-Fired Equipment**

Check the millivolt output of safety thermocouples by simply placing probe leads across the thermocouple terminals and taking your reading.

Ranges: 10, 30, 100, 300, 100 millivolts. Accuracy: 3% of full scale from 50-120°F.

Supplied with 48-in. leads with alligator clips and instructions.

No.	Height In.	Width In.	Depth In.	Wt. Lbs.	Each
387	3 ³ / ₈	3	2 ¹ / ₂	1 ¹ / ₂	\$29.95

Associated Research Electrical Testing Instruments

Vibrotest Insulation Resistance Testers

Vibrotest megohmmeters give fast, accurate insulation resistance measurements for complete electrical testing of circuits, panels, motors, circuit-breakers, cable and wiring. Many models have ohm and a-c and d-c voltage ranges. All-electric, self-contained, push-button operation, requiring no cranking or leveling. All tests made from one set of binding posts, readings made on large 4½-in. meter. All steel case size 8⅞-in. x 6-in. x 8¼-in. Complete with test leads, batteries, record cards and instruction manual.

Model	Megohm Range	D-C Test Volts	Ohm Range	Voltage A-C	Ranges D-C	Each
For General Industrial Maintenance						
201	0-200	500	0-2000	0-150/300/600	0-150/300/600	\$136.50
For Production Testing and Maintenance

Vibroground Ground Resistance Testers

Vibroground tests are the quick, sure way to check resistance to earth of man-made grounds to insure safety of personnel and equipment from lightning or superimposed voltages from other circuits. No cranking, leveling or complex calculations are necessary with Vibroground. Accurate readings are made directly from instrument panel with null balance meter, potentiometer and range selector. Fully portable in enameled steel cases, size 6-in. x 9-in. x 8½-in. Furnished with batteries and instruction manual.

Model	Ranges	Each
251	0-12.5, 0-125, 0-1250 ohms	\$120.50
255	0-3, 0-30, 0-300, 0-3,000 ohms	142.50

Vibroground Test Kit

Consists of 2 T-shaped reference ground rods, 18-in. long; 1 test lead 40-ft. long; 1 test lead 20-ft. long; 1 test lead 5-ft. long; durable carrying case for complete kit. Leads are kinkless, rubber-covered, with spade terminals at both ends.

No. 7104.....Each **\$27.50**

Vibroground Model 263A

Designed for testing soil resistivity, anode-ground resistance and circuit resistance. Rugged, lightweight self-contained field instrument, powered by 8 standard flashlight batteries. Accurate, highly sensitive, simple to use and read directly from instrument panel.

Provided with all steel enameled case with removable cover 9-in. x 6-in. x 6½-in.

Model	Ranges	Each
263A	0-1, 0-10, 0-100, 0-1000 ohms	\$152.50

For additional information contact Graybar.

Phase Sequence Indicator

Fast, positive phase sequence indication with this A.R.I. instrument saves time and guesswork, speeds wiring 3-phase circuits operating at 120, 240 or 480 volts. Instant reading light indication of sequence. No batteries, moving parts or binding posts.

Pocket size only 3-in. x 5-in. x 2-in. Weighs less than a pound.

Model	Cycle	Each
40	60	\$27.50
44	400	34.75

For additional information contact Graybar.

**Associated Research
Electrical Testing Instruments**

"Hypot" High Potential Testers

Model 412

Makes high-voltage a-c tests for leakage, breakdown and shorts; gives clear visual indications by means of glow lights on the instrument panel. Actual voltage output across transformer secondary shown on 4½-in. meter. Breakdown or short causes automatic voltage collapse for safety and non-destructive testing of circuits, components, small meters, etc.

Provided with all steel enameled case, size 6-in. x 9-in. x 8½-in. Furnished complete with leads and instruction manual.

Model	Output Range A-C Volts	Primary Cap. V. A.	Each
412	0-1500	50	\$137.50
411	0-2500	75	144.50
404	0-4000	100	150.00
405	0-5000	100	167.50
414	0-6000	140	182.50

Direct-Current

Model 424

Direct-current Hypots of comparable test capacities are generally smaller and much less expensive than equivalent a-c instruments. In addition, they show true leakage current directly when testing wire and cable, large motors, transformers, bushings, etc.

Soundly engineered and built for dependable, accurate operation under production-line or field conditions.

Case is gray wrinkle-finish steel, rack and panel type, 22-in. wide, 14¾-in. deep and 12½-in. high. Input 115 V. A.C., 50/60 cycle.

Model	Output Voltage Continuously Variable	Metering	Each
424	0-5000 V. D.C.	4½-in. d-c voltmeter Calibrated 0-5 KV d-c. 4½-in. micro ammeter, ranges 0-5/10/50/100 microamps. . .	\$397.50
*421	0-10,000 V. D.C.	4½-in. d-c voltmeter Calibrated 0-10 KV d-c. 4½-in. micro ammeter, range 0-500 microamps.	387.50

*Same as Model 424 except equipped with high-voltage bushing which stands 1¾-in. above case. For additional information contact Graybar.

Jackson Wire Tracers

Trace-O-Meter

Fast, low cost circuit tracer for multi-conductor cables does complete job without need for color coding.

Built-in neon lamp shows whether voltage is a-c or d-c also gives indication of amount by brightness of glow. Range: 60 to 600 volts a-c. 80 to 600 volts d-c.

Traces 30,000 ft. #10 AWG or 2,500 ft. #22 AWG with nine test blocks.

Black non-metallic case. Blue-gray carrying case, battery and test leads furnished.

Meter marked for "opens", "shorts" and nine conductor circuits.

No.	Width In.	Length In.	Depth In.	Ship. Wt. Lbs.	Each

Biddle Meg Type Megger Insulation Testers

This popular Megger type of Megger insulation tester is a conveniently portable instrument with constant voltage hand generator. This compact, easy-to-use instrument has become the most popular of all Megger Testers simply because of its quick availability for service at any time—no dependence on batteries or other current supply.

Easy to use—easy to read—and rugged in constant service.

Weight 8 lbs.

No.	Description	Each
7676	0 to 200 megohms, 500 volt d-c, complete with No. 7699 Fabrikoid case and 12 Ft. lead. . .	\$250.00

Note: Other ranges up to 2000 megohms, 1000 volts d-c available.

Biddle Midget Megger Insulation Resistance Testers

A compact and rugged little set for detecting and diagnosing faulty insulation before serious and costly damage occurs.

Camera-type leather case permits operation without removal from case.

For rugged shop and field use. Range 50 megohms, 500 volts d-c.

Weight complete 4 lbs.

No. 705 with No. 7716 leather case and 12-ft. leads.....Each **\$115.00**

Biddle Meg Type Megger Ground Testers

For measuring resistance to earth of ground connections. The method is quick, easy and economical, requiring no previous experience. Weight 7½ lbs., mounted in cast aluminum case. Scales are logarithmic in character, so as to cover as wide range as possible within the limits of practical field accuracy. Range 0 to 300 ohms.

No.	Description	Each
563	Meg Type Megger Ground Tester with No. 693 Fabrikoid Case.....	\$262.00

Note: Other models available, ranges 0 to 30,000 ohms.

Biddle Motor Rotation Testers

Saves time in electric motor hook-ups, eliminates guesswork and danger.

With it you can easily and quickly determine the direction of rotation of any size of 1, 2 or 3-phase motor and make your first connection permanent; also test circuits, check phase sequence and identify windings of multi-speed or multi-voltage motors.

Weight, approx. 10 lbs.

No. 7370 Complete with leads.....Each **\$80.00**

Biddle "Seely" Motor Testers

For measuring the electric resistance of a-c energized windings while at the same time observing winding temperatures under actual load conditions.

Particularly effective for testing hermetic refrigeration motors, since thermocouples cannot be readily used and since motors cannot be shut down during test for resistance readings, without disrupting the test.

No.	Description	Each
7400	Seely Motor Tester single phase 120 volt, 15 amperes, frequency 50/400 cps., resistance ohms 0.2—200, weight 29 lbs.....	\$345.00

Biddle Jagabi® Speed Indicators

The Jagabi speed indicator for measuring average number of revolutions per minute without any calculations, for speeds up to 20,000 rpm. After a short interval of 3 or 6 seconds of running time, the hands stop automatically at positions which indicate the measured speed.

The instruments do not show instantaneous speeds or speed variations. The spindle is set in ball bearings thereby eliminating need for lubrication. Weight 1 lb.

No.	Description	Each
9920	Complete with case and accessories.....	\$44.00

Note: Other ranges available up to 100,000 rpm.

**Biddle Hand Tachometer
Frahm Miniature**

Frahm miniature hand tachometer range 1000-4000 rpm for measuring speed simply by touching the instrument to the operating equipment . . . no need to come in contact with moving parts. Accurate and dependable, direct reading in rpm easily and quickly. Approx. wt. 1 lb.

No.	Description	Each
2516	Tachometer 1000-4000 rpm	\$40.00

Note: Other ranges available 1000 to 100,000 rpm.

**Biddle Jagabi® DO Type Precision Hand
Tachometers**

Has 5 ranges 30-120, 100-400, 300-1200, 1000-4000, 3000-12,000 rpm. It is direct indicating, shows instantaneous speeds and speed variations.

Built-in refinements include ball bearings, thrust plates, ample size gears, overspeed protection and jewel bearings for the indicating mechanism.

Ranges up to 48,000 rpm available. Weight 2 lbs.

No. 554 Complete with case and accessories . . . Each \$72.00

**Biddle "TTR" Transformer Turn Ratio
Test Set**

A portable, simple-to-use and highly accurate device for measuring turn ratio in power and distribution transformers, including auto-transformers. Invaluable for checking new units and units during and after repairs. Size 14½ x 8 x 9½ in.; weight approximately 31 lbs.

No. 55003, Model 3 Each \$790.00

**Biddle Frahm Resonant Reed Miniature
Frequency Meters**

Frahm resonant reed miniature frequency meter having 11 reeds calibrated 55/65 cps. One cycle interval between reeds, for operation on 100/150 volts. Inherent simplicity, accurate, long life, low power consumption. Approx. wt. 1 lb.

No.	Description	Each
4967	Frahm resonant reed miniature frequency meters	\$22.00

Note: Other ranges available from 10 to 1000 cps.

Sunshine GEL Time Meter

To identify gelation point of thermosetting compositions.

During polymerization, fluid thermosetting compositions such as monomers, resins, and varnishes pass through a critical point at which the viscosity increases suddenly.

The length of time required to reach this point of gelation is important for both quality control and research because it is a relative measure of the rate of the polymerization process.

The gel time meter is a comparative viscosimeter designed to measure this characteristic property.

No. 22 Each \$276.00

Sunshine Switchboard Electric Clocks

An attractive electric clock matching G. E. Switchboard types AB-18 and DB-18 in frontal appearance and mounting dimensions.

Case design eliminates scale shadow caused by overhead lighting and is dust tight.

Also available equipped with a timing switch for process or alarm timing.

No. 31A Each \$70.00

Sunshine Coil Turn Counter

The coil-turn counter is used in factories and laboratories for determining or checking the number of turns in air-core electric coils which can be placed over a $\frac{1}{16}$ -inch or $\frac{1}{4}$ -inch core.

Three models are available with the following ranges: 0-11, 110 turns; 0-31, 110 turns; or 0-61, 110 turns.

This unit indicates a coil turn count with an accuracy of 0.1 percent and makes it possible to meet the most exacting specifications.

No.	Description	Each
16-1A	Counter—Less Rods	\$1825.00
16-1B	Counter—Less Rods	1900.00
16-1C	Counter—Less Rods	1975.00
A16	Magnetizing Rods	256.00
B16	Magnetizing Rods	335.00

Sunshine Coil Tester

A single short circuited turn of #42 AWG copper wire can be detected with this sensitive tester.

Valuable before assembly of coils in relays, radios, small transformers, instruments, etc.

No.	Description	Each
10	Coil Tester—Complete	\$355.00
T10	Less Core and Coil Assembly	195.00
A10	Core and Coil Assembly— $\frac{1}{2}$ "	160.00
B10	Core and Coil Assembly— $\frac{3}{16}$ "	160.00

Sunshine Metals Comparator

Ferrous or non-ferrous parts are compared against a pre-selected standard to detect differences in composition, heat treatment, hardness, plating thickness, case depth, or other characteristics which alter the resistivity or magnetic properties.

No. 27 Comparator—Less Test Heads and Coils.... \$898.00

No.	Description	Per Pair	No.	Description	Per Pair
L27A&I127A	$\frac{1}{4}$ In. Coils	\$97.00	L275&I1275	5 In. Coils	\$159.00
L27B&I127B	$\frac{3}{8}$ In. Coils	97.00	L278&I1278	8 In. Coils	197.00
L271&I1271	1 In. Coils	97.00			
L272&I1272	2 In. Coils	97.00	No.	Description	Each
L273&I1273	3 In. Coils	109.00	T27A	Test Head	\$63.00
			T27B	Test Head	99.00

Sunshine Magnetic Comparator

Ferrous parts are compared against a pre-selected standard to detect differences in composition, heat treatment, hardness or other characteristics which alter the resistivity or magnetic properties.

No. 26 Comparator—Less Gage Heads and Coils... \$470.00

No.	Description	Per Pair	No.	Description	Per Pair
T26	Gage Heads	\$126.00	262	2 In. Coils	\$80.00

B26	$\frac{3}{8}$ In. Coils	80.00	264	4 In. Coils	129.00
C26	$\frac{1}{2}$ In. Coils	80.00	265	5 In. Coils	149.00
261	1 In. Coils	80.00	266	6 In. Coils	179.00

Sunshine Anodized Aluminum Tester

The tester quickly and accurately determines the effectiveness with which either a chromic or sulphuric acid type anodized coating has been applied to an aluminum surface.

No. 12... Each \$295.00

Sunshine Analog Field Plotter

The plotter solves problems by means of electric flow patterns set up in a sheet of semi-conducting paper.

There is an analogy between the electrical field and similar fields as found in electrostatics, electromagnetics, aerodynamics, thermal flow and fluid flow.

No.	Description	Each
24-1A	Industrial Model	\$295.00
24-1B	Educational Model	295.00
P24	Conducting Paper—Roll	7.50
C24	Conducting Paint—Bottle	8.00

Sunshine Lamp Type Ground Detector

A Switchboard-type instrument matching the G.E. AB-18 long scale instrument cases, using lamps as a means of detection.

Lamps are rated at 120 volts or 240 volts.

Under normal operation all lamps glow dimly. When a ground occurs the corresponding lamp goes out and the remaining ones glow brightly.

No. 32... Each \$60.00

Exide Storage Batteries

In Multi-cell

These new batteries in plastic have been designed and engineered to give—

Long, Trouble-free Life.

Unsurpassed Dependability for the most vital applications.

Low Operating Cost. Extremely low internal resistance and losses, hence minimum charge currents are required.

Low Maintenance Cost. No solutions to change, nothing to renew, require water only once or twice a year. Smooth, streamline design facilitates cleaning.

Increased Power (watt) output per unit of space.

Less Weight per ampere-hour output.

More Attractive Installations.

Less Space Required.

Highly-sustained Useful Voltage even under heavy discharge.

Damage Resistant.

Transparent as glass, the plastic containers and covers are lighter in weight, more compact and possess much greater shock-resistance. The plastic is polystyrene—impervious to electrolyte—annealed for high mechanical strength and heat resistance. The cover seal is permanent—electrolyte will not leak out. Container surface is smooth and easily kept clean.

Elements are precision-fit and cover-suspended. Adequate water space is provided. Lines on all four sides of the container show recommended upper and lower electrolyte levels. Pilot balls indicate approximate state of charge. Units are supplied filled and charged (charged and wet) ready for use. They can be supplied charged and dry without electrolyte in the cells. Terminals come equipped with connector bolts. Interunit connectors are furnished when two or more units are ordered.

Type PLX

Type 3-PLX-13

For telephone, emergency lighting, laboratory and many other services. Batteries assembled in two and three compartment plastic containers. Two cell unit equipped with one set of pilot balls. Three cell unit has two sets of pilot balls.

Have double insulation of Mipor rubber separators and Vitrex retainers. Width 7¹/₁₆-in., hgt. 10³/₈-in.

Full charge specific gravity 1.200—1.220.

Plate Dimensions

Description	Hgt., In.	Width, In.	Thick., In.

Manchex

Type 3-CME-5 Side-to-Side

Small power in plastic. Has the famous Exide long life manchester positive plate.

Double insulation with microporous separators together with slotted plastic separators. These provide maximum insulation with minimum resistance between plates.

Unbreakable and sprayproof plastic vent plugs. Addition of water made easy by molded-in-cover funnel filling vent.

Available in three styles of containers in capacities of 8, 16, and 24 A. H. at the 8 hour rate.

†End to End assembly width and height are 8" and 8¹/₂" respectively.

‡Side to Side assembly width and height are 4¹/₄" and 8¹/₂" respectively.

Tytex

Type 2-COE-7 End-to-End

Small power in plastic. A flat plate battery providing long life with less weight per ampere hour output. Where space is limited, operating conditions satisfactory, service requirements light and price a consideration, Tytex is recommended.

Exide Manchex Batteries

Type EMP-13

For all stationary power applications. Batteries equipped with Manchester Plante positive plates assembled in shock-absorbing, leakproof polystyrene container.

Heavy terminal post provides ample electrical path for high current requirements at maximum sustained voltages. Ample electrolyte enables cells to deliver all rated capacities.

Cells furnished with necessary connector bolts and lead plated copper intercell connections for 1/2-in. spacing between cells. Full charge specific gravity 1.200—1.220.

Exide Calcium Grid Batteries

These batteries are recommended only for applications where regulated full float charging methods are used.

The Exide Tytex with Calcium cells correspond in capacity, dimensions, and weight with the Exide Tytex with Silvium DOP and EOP cells. They are designated as DCP and ECP cells.

Type EW Exide Calcium Grid cells are available corresponding in capacity, etc. to EWA cells with Silvium. Data on cells with capacities up to 1680 ampere-hours at the 8-hour rate of discharge supplied on request.

Counter EMF cells are also available.

All steel battery racks can be supplied for any battery.

For complete information and prices, contact your Graybar representative.

Exide Lead Calcium Grid Batteries

Type EW and FW

2-EW-7

In plastic containers capacities of 2 and 3 cell 180 A.H. Single cell 240 to 660 A.H. all at 8 hour rate.

Double insulation of microporous rubber separators and Vitrex retainers. Lead plated inter-unit or intercell connectors furnished provides 1/2-in. spacing between units.

Full charge specific gravity 1.200—1.220. Dimension Type EW: 10 1/8-in. wide, 18 1/4-in. high. Type FW 14 1/2-in. wide, 23-in. high.

**Exide Storage Batteries
Type EWA**

With Silvium for Telephone Service in Plastic (Polystyrene) Containers

Type EWA-23

Batteries were developed especially for float operation in telephone service. A most desirable quality is greater capacity per unit of space.

Explosion control construction prevents harmful amounts of explosive gas from accumulating in cells.

Microporous separators and Vitrex retainers which are inert to electrolyte immersion are used. 2-EWA-7 is a 2 cell unit. 3-EWA-7 is a 3 cell unit. Dimensions: 10 1/8 in. wide, 18 1/4 in. high.

55757	EWA-23	660	10 1/4	132	152

*Ampere hour capacity at 8 hour rate of discharge to 1.75 final volts per cell.

Information on cells with capacities up to 1680 ampere-hours will be furnished on request.

Exide Steel Battery Racks

All steel racks, strong and of modern design. Provides maximum safety and easy servicing for your battery.

Steel frames are fabricated from structural steel 2 x 1½ x ⅛-in. or 2 x 1½ x ¼-in. angle iron with welded joints throughout. Steel rails for supporting the cells are made from 1⅞-in. x 1⅞-in. steel channels. Plastic insulating channels, having a dielectric strength of 5000 volts, are fitted snugly over the channels to insulate the cells from the steel rails. Finish: Two coats acid resisting gray. Shipped unassembled. Four basic types of racks available, single row—1 tier, single row—2 tier, two step and 3 step.

Schauer Battery Chargers Rectifier

Type "G"

Trickle charger for small common battery exchanges and small storage battery used in telephone service.

Battery charger consists of transformer having adjustment taps for varying charging rate; rectifying element; ample choke to eliminate d-c ripple; sturdy output terminal block; rubber cord and plug. Unit mounted on steel base, no housing.

Standard Capacities

Type	D-C Output		Size In.
	Volts	Amps.	
G-05008	6-8	0.5	8¼ x 8 x 5

Call Graybar **FIRST** For . . .

Schauer Rectifiers, Battery Eliminators

Type "RB"

Automatically maintains the terminal voltage of a set of batteries at a relatively constant value regardless of load condition.

Battery charger consists of transformer; continuously rated full wave Selenium rectifier; magnetic regulating equipment; ample choke-type filtering system; d-c voltmeter; rubber cord and plug. Housed in ventilated steel cabinet and designed for wall mounting.

Standard Capacities

For Small Telephone Common Battery System

Type A

Designed for supplying direct current of suitable smoothness to operate small telephone common battery system, apartment house and inter-communicating telephone systems, which are not of lamp signal type.

Type PA05004 is commonly used for operators circuit in magneto switchboards. This model is equipped with power-off relay for automatically transferring power to stand-by dry cells in the event of a-c power failure.

Battery eliminator consists of a transformer; full wave copper-oxide or selenium rectifying element; ample choke and condenser filtering system; cord and plug. All parts housed in a ventilated steel case. Designed for wall mounting.

Model with taps for 60 cycle a-c ringing also available.

Standard Capacities

**Schauer Rectifiers, Battery Eliminators
For Lamp Signal and Automatic Switchboard**

Type "RA"

Automatically provides constant voltage output. Consists of transformer; full wave Selenium rectifier; magnetic regulator; ample choke and condenser filtering system; precision d-c voltmeter; cord and plug. Housed in ventilated steel cabinet that is designed for wall mounting. Power-off relay optional.

Standard Capacities

For AM and FM 2-Way and Marine Radios

Adjustable 6-12 Volt

A-c input 115 volts, 60 cycle, single phase. D-c output 6 volt up to 48 amperes or 12 volt d-c up to 24 amperes. Equipped with dial type tap switch which provides adjustment from less than 1 ampere up to maximum rated output. Case finished in durable grey wrinkle is designed for bench or wall mounting.

Type A3V	3	0.150	2½ (diam) x 3½

**Raytheon Battery Charger Rectifiers
New 48-Volt Recticharger Series
Designed and Produced for Telephone Industry**

The Recticharger is a completely automatic, constant-voltage battery charger developed specifically for use by the telephone industry.

New design, smaller, compact and lighter cabinet. The Recticharger uses no tubes and no moving parts. It can literally be installed and forgotten. Recticharger automatically maintains battery at full charge under all normal load conditions by means of small trickle charge which offsets "local action" at the battery plates. Recticharger supplies power at constant voltage to normal battery load, with no discharge/charge cycle of the battery. Increases charging current to proper value after an overload has drawn power from the battery. Recticharger restores a completely discharged battery to full charge at optimum charging rate without battery gassing and heating.

All controls, connectors, and fuses are mounted on a panel, conveniently mounted inside hinged door of cabinet.

Raytheon Battery Charger Rectifiers 24 Volt Recticharger Series For Telephone Switchboard Power Supply

These battery chargers are of the constant potential type for use in telephone service. They are essentially rectifiers of the dry-dise type, combined with a control circuit which maintains a constant voltage output over a complete load range regardless of the wide line voltage fluctuations found in many communities.

For emergency and peak period a small storage battery is floated across the output terminals and is kept at an essentially constant cell voltage, making a complete and permanent a-c to d-c telephone power unit, and regardless of outside conditions it produces constant d-c voltages. The battery is maintained at a given cell voltage and never becomes overcharged or undercharged. This operation is performed automatically without moving parts of any kind.

Because of this constant potential method of charging, battery gassing is prevented and there is no loss of water aside from normal evaporation.

By maintaining the close voltage limits required by dial systems, such trouble as short lamp life, incorrect ringing, noise on the line, etc., is eliminated.

All equipment is enclosed in a steel cabinet, finished with durable paint and provided with hinged door. Cabinet is arranged for wall mounting. Brackets are available for wall or floor mounting.

Raytheon Voltage Stabilizers

Style "E"

Style "F"

Style "C"

Style "H"

Voltage regulation is very essential to most electrical and electronic equipment.

Magnetic type regulator, the performance of which remains constant throughout many years of useful life. Rapid in voltage correction and precise in operation. Compensates within 1/20 of a second, a voltage output that may vary from 95 to 130 volts or a fluctuation of more than ±15% of rated output and controls it to ±1/2%. Protects most sensitive electronic devices against adverse effects of voltage change.

Regulators have no moving parts . . . nothing to wear out; compact design, rugged construction. Requires no adjustment or maintenance as stabilizer is completely automatic.

Regulators are self-protecting and cannot be damaged by overload. Current is limited to about 200% or rated load. Their principal operating characteristic is their ability to maintain constant voltage with varying input voltage. Degree of control is maintained at any load, and change from no load to full load results in small change in output voltage when load is pure resistance (100% power factor).

Raytheon Rectifiers

For Telephone Communications Service

Rectifiers offer a modern and economical method of obtaining d-c power direct from an a-c source. They provide full, filtered, noise-free power for the best operation of telephones and reduce cost of maintenance to a minimum. Their compact design permits quick and easy installation in a small space.

They operate entirely without moving parts, units consisting of a power transformer, dry disc rectifier element, a retardation coil and condenser for filtering, and in the 1.0 ampere and larger sizes, a saturable core reactor for voltage control, all mounted in a gray lacquered steel cabinet, with hinged front. Each one complete with built-in voltmeter.

Rectifier Uses:

The economy and efficiency of these Rectifiers have been definitely established by many time-tested installations for various uses:

- ... to eliminate the installation of storage batteries and provide operation direct from an a-c source.
- ... to operate one or more PBX direct from an a-c source.
- ... to operate one or more equipments direct from an a-c source.
- ... to operate in series with the regular 24-volt central office battery to give 48 volts for toll service. When placed in series with the large central office battery, it eliminates the use of a supplementary battery.
- ... to use for seasonal installations, such as resort areas to eliminate the necessity for installing a battery at the beginning of each season, and removing it when the season closes.
- ... to release for revenue-producing service cable pairs for supply of d-c power to remote installations.

Steady D-C Voltage

To provide uniform voltage for proper operation of communication systems, the 1.0 ampere and larger sizes include an exclusive a-c stabilizing circuit which operates magnetically and requires neither adjustment or maintenance; also insures closely stabilized d-c voltage for proper operation of switchboards under conditions of changing traffic load normally encountered.

For Continuity of Service

Continuous d-c supply is normally assured from the Rectifier without auxiliary power sources, as the a-c source is generally dependable; however there may be certain applications that require an alternate power source for continuity of service. In such cases relays can be provided that will automatically connect to a standby power source (dry cells, etc.) the instant the a-c power fails.

Also Available

The Rectiringer, a combination of the Rectifier and a 20-cycle ringer, is also available. Contact Graybar for complete information and prices.

Change of source relay can be applied on all models.

When not listed, order by adding suffix "R". Example: RFR-1041-AR.

Brach Rare Gas Arresters

Exposed wires are subject to the effects of lightning induction. When exposed wires are near other exposed wires carrying high voltage, they are subject to induced voltages from the high voltage circuit. Rare Gas Arresters are the recommended type for protection from both these conditions.

The electrodes of the Rare Gas Arrester are in a sealed chamber and free from effects of atmospheric conditions, dirt, insects, or other maintenance problems that generally affect the operation of arresters.

Combines speed of operation with capacity for heavy currents, and ability to restore itself to normal functional characteristics after discharges in protecting low-voltage circuits. Provides high normal insulation and functions repeatedly within a predetermined voltage range. It is highly conductive and restores itself instantly after the passing of the abnormal voltage. Can be mounted in small space and easily installed and maintained.

The Arresters are treated chemically and constructed to function at a relatively low voltage. They are made in two general classes, one having plain electrodes with the ability to carry high currents for short duration, the other having thermostatic electrodes with the advantage of carrying currents for long periods. Other types are available having plain electrodes with external thermostats to protect the arresters from leaks from adjacent high-voltage circuits.

Brach Vincent Rare Gas Relays

For Elimination Of Noise On Telephone Lines

Type RTC-2

Vincent Rare Gas Relay In Bell Box

The Vincent Rare Gas Relay may be used on magneto or common battery lines. Either harmonic or coded bells may be used.

Relay consists of small glass tube containing special combination of rare inert gases acting in contact with special metal electrodes which allow current to pass above closely pre-determined voltage. Enclosed in heavy bakelite shell and equipped with "single hole" mounting clip.

Relay has no moving parts and is not affected by temperature or atmospheric changes.

No.	Length In.	Each
RTC-2	2 ¹ / ₂	\$3.62

Cook Cable Terminals

For Plastic Cable

Protected Or Unprotected
6, 11, 16, 26 Pairs

Terminal designed for use on plastic cable in which cable is looped through terminal without cutting wires and the desired pairs terminated for distribution.

Can be used for junctioning and terminating cable. Grommets are used to seal cable entrance. When ordering specify cable sizes, so correct grommets will be furnished.

Heavy galvanized steel frame, deep drawn chamber, welded zinc cover, and XB bakelite face plate with Everdur studs comprise some of the major features. No stubbing, no splicing, no potting make it simpler and more economical.

Protection provided by Minigap arresters mounted in a convenient arrester plate.

Protection provided by Minigap arresters mounted in a convenient arrester plate.

*Since these grommets are designed to compress in order to seal around the cable, it is necessary to choose a grommet size than is somewhat larger than the cable size.

Cook Building Terminals
With Lead Or Plastic Cable Stub

No. 60

Gas-tight, moistureproof building terminal that is designed for interior cable distribution.

Furnished with surface type steel cabinet with hinged black enamel cover with snap lock.

Core section has same design feature as Cook Stranterm. Made of special unsaturated polyester thermo-setting plastic with fiber-glass filler in which heavy studs are embedded. Cable studs are soldered to these studs.

With 5¹/₂ Ft. Plastic Stub

Cook Underground Cable Terminals

Unprotected Type UX
6, 11, and 16 Pairs

Cable terminal designed to facilitate installation and service in manhole termination and distribution of underground cable systems.

Body and cover made of cast, nonporous red brass; locking screw and hinge pins made of brass. Silicon bronze mounting bracket. None of these materials are affected by dampness or water. Cover fits tightly making a water-tight seal. Heavy Everdur studs are rigidly set in molded bakelite face plate.

Terminal may be mounted with cable stub out of top or bottom. Service outlets provided in sides of terminal and sealed with ³/₈ in. brass pipe plug.

Terminal is available with or without stub.

Accessories

506-548 Stuffing Box Complete for ³/₈-inch cable.

Cook Building Terminal Boxes

Type WXB

This box is the usual method of housing the WXB terminal inside buildings.

Made of heavy gauge steel, enameled both inside and out, available in four sizes to accommodate the different sizes of terminals.

Equipped with a close fitting cover to protect the terminal from dust and dirt. Lock and key optional.

Box available for flush or surface mounting. When ordering, specify type also with or without lock.

Cook Utility Substation Protectors

Type "U"

Has variety of uses in the outside plant. Provides protection for small cables and open wires, up to six pairs per unit, at railroad crossings, power line crossovers and parallels. Especially valuable for protection of subscriber drops where several instruments are closely grouped.

As many as six type H protector units can be mounted on the heavy-gauge, galvanized steel base. Galvanized hood and insulated entrance holes in base makes entire unit weather-proof. Brackets for pole or wall mounting are such that the base unit may be brought to horizontal position for easy wiring. Dimensions: 6 in. high, 9 in. wide and 6 1/2 in. deep.

No.	Description	Net Wgt. Lbs.
517-1	6 Pair U Mount less protectors	4 1/4
517-1722	Unit complete with six type-H protector	6 3/4

Cook Fuseless Protectors

No. 2

Indoor arrester consisting of solid piece of glazed porcelain fitted with Everdur binding posts, nuts, washers and Phosphor bronze springs.

Arresters are nongrounding Tru-Gap dischargers and plain ground carbons set in recess and covered with ventilating metal cap. Dimensions: 2-in. high; 3-in. wide; and 3-in. long.

No.	Description	Net Wgt. Lbs.
244-1606	With Tru Gap Dischargers	1 1/2

Cook Power-Cross Protectors

The continued extension of the practice of joint occupancy of wood poles by communication and power circuits of higher voltages has created a need for heavy-duty arresters on communication circuits. Arresters must be capable of carrying the fault current long enough to allow the power breakers to operate and de-energize the power circuit. For this protection, below is listed, two power-cross protectors which also furnish protection from lightning damage.

Single Circuit

Five Circuit

Single Circuit Hy-Cap Power-Cross Protector

Miniature protector consists essentially of three carbon electrodes mounted on porcelain base with metal cover, held in place by suitable spring. Each electrode equipped with fusible element which melts and further reduces impedance of fault-current path when fault current continues over an extended period.

Three insulated copper wire leads are attached to protector for easy installation. Steel angle bracket permits direct mounting on pole or crossarms.

Five Circuit Hy-Cap Power-Cross Protector

With this unit five circuits can be protected at low cost. Only one ground wire. Ten carbon electrodes are fixed to porcelain base which has weatherproof aluminum cover. Each electrode has a fusible element which forms direct path to ground when an extended discharge occurs.

Ten insulated copper wire leads are factory connected to protector and are cut to correct lengths for installation on a 19B crossarm. Wire entrances sealed with rubber grommets. Steel bracket permits easy mounting.

No.	Description	Hgt. In.	Width In.	Depth In.	Net Wgt. Lbs.
501-40	Single Pair	6	3	3	1
501-50	Five Pairs	8	4 1/2	4 1/2	4 1/2

Cook Precision Rated Fuses

Telephone fuses designed for use in Cook protectors and terminals. Interchangeable with corresponding types of telephone fuses.

No.	Description	Used in

91-1200	A-12 Lavite, 5 Amperes	H-51, O-12

Note: Part numbers on all fuses should be as shown above except last digit to be the same as amperage required. *Listed as standard by Underwriters' Laboratories.

Cook Indicator Alarm Type Fuses

(Grasshopper Fuses)

These fuses can be used to set off an alarm when fuse wire has separated causing the bottom spring to contact an alarm circuit.

This type fuse normally used on circuits operating up to 90 volts, but are also made for circuits up to 160 volts limited current, with fuse wire enclosed in glass or porcelain tube to prevent side flash.

When ordering, specify catalog number and rated capacity.

Cook Resettable Grasshopper Fuses

Combination of grasshopper fuse and heat coil provides a new economical and positive acting fuse, arc free, with accurate operation time. Is now available to wire communications and electronic equipment. Resettable by re-engaging heat coil ratchet. Parts easily replaceable.

Heat coil operation simple and positive. When subject to more than rated current, the ratchet releases the ground and alarm spring. After trouble has been cleared, and current flow is normal, fuse can be reset manually by ratchet which is again locked into position.

Overload Failure Warning Relay

Accessory item for operation with Grasshopper fuses. It energizes when Grasshopper fuse operates and shorts against the bus. The relay coil connected in series with bus then energizes and warning contacts close. Operates at 24 or 48 volts, d-c; or with external shunt removed 135 and 165 volts, d-c.

Reliable Protected Cable Terminals

Type B

Designed for terminating lead-covered cable and to facilitate drop wire distribution. Add greatly to the convenience of installation of wiring and maintenance. Has detachable mounting bracket to simplify installation.

Square aluminum cover, will stay in any raised position and cannot be tilted into contact with live parts. Cover, bracket and base assembly are of corrosion-resistant aluminum alloys.

Binding posts are at front, accessible to lineman without removing fuses or reaching around cable terminal. Binding post insulation is high grade molded plastic.

Discharge blocks are the self-cleaning sawtooth type and are held by individual springs and cannot be accidentally loosened or crossed.

Cable terminals are very close to pole or building — no tilting.

Binding posts, fuse clips and carbon springs are corrosion-resistant and are free from season cracking.

Complete with 5-amp. fuses, No. P495-L saw-tooth discharge blocks; No. P1384 carbons and a 7 ft. No. 24 A.W.G. stub.

Type B27 is fitted with No. 27L Ceramic fuse; Type B56 is fitted with No. 56 Fibre fuse; Type B55 is fitted with No. 55L Ceramic fuse. Specify Type and Number of pairs required.

The following table applies to Types B27, B56 and B55:

Cap. Pairs	Stub Ft.	Over-all Ht. In.	Wt Lbs.	Net Price Each
11	None	14½	11	\$26.30
11	7	14½	17	31.50
16	None	17½	13	36.15
16	7	17½	19½	42.65
26	None	23¾	21	49.55
26	7	23¾	27	58.10

Quantity prices on request.

Reliable Protected Cable Terminals

Type RP

Compactly designed and made of corrosion resistant aluminum alloy throughout making it light in weight, but substantial. Meets the requirements of a small protected terminal of high quality and fine workmanship.

Ruggedly constructed; cable chamber is a heavy casting. Sliding cover is reversible, eliminating bother of handling separates types for installation with stub at top and bottom. Mounting bracket is detachable for easy installation.

Molded bakelite insulation. Discharge blocks are of the self-cleaning type and are held by individual springs and cannot be accidentally loosened or crossed.

Complete with 5-amp. fuses, No. P495-L sawtooth discharge blocks, No. P663 Carbons and a 6-ft. No. 24 A.W.G. stub out of top.

Capacity 6 Pairs; Height overall 11 in.

No.	5-Ampere Fuses	WL Lbs.	Net Price Each
RP-27	27-L Ceramic	15	\$27.40
RP-56	56 Fibre	15	22.40

Reliable Unprotected Cable Terminals

Type RU

Reversible; protects terminals from weather and permits installation with stub at top or bottom.

Has ribbed aluminum alloy sliding cover. Chamber filled and sealed with Reliable cable compound when supplied with stub.

Flat fanning plate simplifies wiring and, in combination with a cover which surrounds the wires at the back, makes an unusually weather-proof terminal. Gives the lineman more convenient working space.

Equipped with gravity catches to hold cover in raised position, glide rings for jumpers and bead chain. Silicon-bronze screws — free from season cracking — are mounted on bosses to increase surface leakage distances and are locked in panels of highest grade molded insulation.

Furnished with 6 ft. of No. 24 A.W.G. Double-wrap paper-insulated cable unless otherwise specified.

Stuffing Boxes for RUG Terminal .86

General Machine Six-Pair Terminals

Serves as a speedy and handy means for making multiple connections on a pole, house or other outside location. Frame is of electro-galvanized steel. Terminal body is of high dielectric plastic. Top is rust-proof steel and provides completely weatherproof cover. Connections can be made for five additional party lines to the main trunk.

Finish: Cadmium plated. Weight 1 lb., 3 oz.

Reliable Single Pair Protectors

Designed to drain lightning and static voltages from open wires and long drop wires that are connected to cable. When used with a good ground, it can be depended upon to reduce these voltages at the cable-open wire junction, thereby reducing cable trouble.

No. 451

Equipped with sawtooth discharge blocks, porcelain base, aluminum cover with stainless bead chain and cover locking screw.

Aluminum bracket has two 5/32-in. round holes for wood screw mounting, and one 13/32-in. square hole for carriage bolt mounting. Units measure 4-in. x 2 1/2-in. diameter.

Churchill Indoor Telephone Booths

No. 100

Indoor telephone booths with new metal lining are acoustically built assuring you of privacy.

New automatic electric ventilator completely changes air every three minutes. Equipped with new and improved automatic light.

Durable metal "telephone" sign. No floors in both which provides better sanitation. Wood writing shelf included, seat is optional and must be ordered separately.

Dimensions: 84 3/4-in. high, 29-in. wide and 30 1/2-in. deep.

No.	Description
100-A	Selected Oak, Medium Oak Finish
100-B	Selected Birch, Medium Mahogany Finish

Burgess-Manning Acousti Telephone Booths

No. 601

No. 602

No. 601 wood wall model: reinforced plywood construction with walnut stain exterior finish or unfinished. Walls of thick sound absorbing material.

No. 602 steel wall model: rigid, durable steel construction. Gray wrinkle finish. Heavy gauge steel sheets protect acoustic material.

No.	Width, in.	Depth, in.	Height, in.	Net Wt., Lbs.	Ship. Wt., Lbs.
601	28	26	32	60	75
602	28	26	32	85	91

Note: No. 601 furnished unfinished.

Unique booth design makes possible multiple installations in less space.

Designed for use in locations of excessive noise and where privacy of conversation is essential.

Welded metal construction. Sound absorbing materials are combined to provide maximum quiet. Silver gray hammered finish.

Burgess-Manning Acousti Telephone Booths

Heavy duty, all steel construction.

Durable gray wrinkle finish. Highly efficient acoustic construction.

Ideal for use in stores, restaurants, hotel lobbies, power stations, factories, public buildings where outside noises make telephoning difficult.

Equipped with light fixture and shelf. Outside dimension: 31-in. wide; 38½-in. deep; 79¾-in. high.

No.	Net Wt., Lbs.	Ship. Wt., Lbs.
211	350	375

Sherron Outdoor Telephone Booths

Special

Reinforced construction of zinc coated cold rolled steel with integral rigid steel base and safety plate floor.

Constructed with equal-leaf folding door. Has backboard for mounting coin collector, corner shelf, tubular wiring standard. Half panel construction with lower half panels on three sides and upper rear half panel steel acoustic filled, upper right and left side half panels of wire glass.

Equipped with flush incandescent light fixture with ceiling. Provided with solid lintel panels, decal "Telephone" sign with weatherproof entry fittings in rear lintel panel.

Booth has positive action door closer and peaked steel roof.

Finished in DuPont baked synthetic enamel, standard color flame red. Booth completely packaged, set up, as described, no extras or substitutions.

No.	Height, in.	Width, in.	Depth, in.	Ship. Wt., Lbs.
15-S Type 1	89¼	30	30	500

Sherron Outdoor Telephone Booths

Designed for increased acoustic efficiency. Booth is of Cold Rolled Steel fireproof construction. Has cold rolled steel base with linoleum covered steel floor. Booth has perforated metal linings backed by 3-in. thick acoustic sound absorbing material.

Equipped with extra thick insulated equal-leaf folding door with half-length glass panels. Door panels are double glass with ¼ in. dead air space between.

Regularly equipped with standard flush ceiling light with self closing lens and automatic door switch.

Furnished as specified with either standard backboard corner shelf and tubular standard for pay station use or with straight 10-in. wide shelf across rear fitted with tubular standard and having provision for up to three hand-set telephones.

Finished in DuPont baked synthetic enamel, standard colors: Exterior of booth light brown, dark brown, maroon, red, gray; Interior of booth gray. Special finishes available at extra charge.

Extra Equipment Available: Seat Assembly, cold rolled steel, linoleum covered. Ventilating Unit, for concealed installation (115v. 60 Cycle a-c). Stainless Steel Base, for added protection at floor line. Kick Plates, for door, stainless steel. Signal Light Arrangement for visual outside summons.

No.	Width, in.	Depth, in.	Ship. Wt., Lbs.
150-S Type 1	42	42	800

Note: For further information, please contact GRAYBAR.

Sherron Outdoor Telephone Booths

Standard

Reinforced construction of zinc-coated cold rolled steel. Stainless steel base with safety plate floor, equal leaf folding door.

Translucent plastic hinged ceiling assembly and "Telephone" signs on front and two sides. Equipped with incandescent light fixtures; backward for mounting coin collector; corner shelf, weatherproof entry fittings.

Baked synthetic enamel finish in choice of flame red, alert green, highway yellow, hunter green color. Please specify color desired.

Optional Extra Equipment: Door closing device; wire duct; photo-electric control switch with adjustable light sensitivity switch; circline 2-40 watt fluorescent fixture; model AA directory unit; seat assembly; kick plate and ventilating unit.

Sherron Indoor Telephone Booths

Steel fireproof construction. Integral steel base with linoleum covered steel floors. Equal leaf folding door.

Perforated metal linings backed by acoustic sound absorbing material. Equipped with drilled backboard and shelf mounted on tubular wiring; adjustable for standing or sitting position. Hinged bracket, hinged ceiling assembly. Concealed automatic door switch and decal "Telephone" sign on front lintel. Large area translucent plastic light. Dimensions: 30-in. wide, 30-in. deep, 83 3/4-in. high. Shipping weight 500 lbs.

Optional extra equipment such as linoleum covered seat assembly, stainless steel shelf and base; directory lights, etc., also available.

No. 18-S Type 1A: Constructed of zinc-coated cold rolled steel. Baked enamel finish. Exterior of booth available in light and dark brown, maroon, red, gray; interior of booth gray.

No. 19-S Type 3A: Constructed of stainless steel, interior and exterior for free standing installations. Includes stainless steel base, shelf and backboard.

No. 19-S Type 3B: Same as model 19-S Type 3A except for recessed installations. Zinc-coated cold rolled steel exterior side, rear post and back panels.

Sherron Outdoor Telephone Booths

Clearview

Reinforced construction of zinc-coated cold rolled steel. Stainless steel base with safety plate floor, equal leaf-folding door.

Quarter panel construction. Lower panels solid steel clad with ventilating louvers, upper three panels each side clear safety glass. Specify if solid steel panels are preferred.

Translucent plastic hinged ceiling assembly and telephone signs on front and two sides. Equipped with door switch, stainless steel shelf assembly and kick plate, door closing device, spring door stop, weatherproof entry fittings and two 40-watt circline fluorescent fixture.

Booths finished in baked synthetic enamel and colors available are flame red, alert orange, highway yellow and hunter green. Please specify.

Optional Extra Equipment: Cold rolled steel seat assembly; wire duct at rear for incoming services from ground; photo electric light control switch with adjustable light sensitivity control.

U. S. Instrument Sound Powered Telephone Sets and Accessories

Jack Boxes

No. A531: Watertight brass enclosure. Equipped with single jack on cover to accommodate No. A529 plug and with molded phenolic terminal block in case.

No. A532: Same except has two jacks on cover.

No. A533: Same except has four jacks on cover.

U. S. Instrument Dial P. X. Switchboards

Private Automatic Exchanges Dial Telephone Switching Equipment

Type 50B Dial PX

Completely new, completely automatic dial telephone switching system designed to provide private, self-operative internal telephone service for industrial plants, offices, department stores, ships, institutions and other installations.

The 50B PX requires no operator. Compactly constructed in single units for 50 station lines and a maximum of seven connecting links. An unlimited number of units may be furnished.

Exchanges with 100 lines or less, two digit numbers are used and connecting links consist of connectors. Larger exchanges, three digit numbers are used and selectors and connectors are required.

The Line Racks have sufficient space for 50 pre-selectors and seven connectors with relay sets. One ringing and signaling machine provided for each two line racks. Line racks are 7½-ft. high, 20¼-in. wide, and 13-in. deep. Plug-in type ringing machines. 24-volt storage battery with charger, or battery eliminator required. Maximum conductor loop is 500 ohms or about 2.9 miles of 22 gauge cable.

The Selector Racks accommodate 15 selectors with relay sets. Selector racks are 7½-ft. high, 18½-in. wide and 13-in. deep. All racks wired for the full complement of equipment.

Emergency right-of-way may be installed to permit an executive to interrupt a call in progress. Minimum maintenance.

For full information contact GRAYBAR.

Line Rack

Selector Rack

Type 50A Dial PX

Telephone System For Industrial Plants, Institutions, Offices, Department Stores, Ships And Other Installations

Switching Equipment Type 50A

Completely automatic dial telephone switching system designed to provide private, self-operative internal telephone service. The new 50A PX requires no operator. It contains its own switching equipment enclosed in an attractive wall cabinet. The compact wall mounted cabinet is 25-in. high, 23½-in. wide, 12-in. deep and weighs 128 pounds.

The dial telephone switching system enables extension users to dial their own calls. Unit operates on a 24 volts d-c power supply outside the cabinet. Commercial power with or without a standby battery may be used.

Connection to central office lines or to other PX's can be made available with supplementary equipment. Up to 28 stations and four interconnecting links are available, although equipment may be furnished with an initial installation of fifteen stations and three connecting links.

For full information contact GRAYBAR.

U. S. Instrument Sound Powered Telephone Sets

Equipped with Magneto-Howler Call

The voice of the user supplies all the power necessary to operate sound powered telephones. The voice causes fluctuations in the magnetic circuit of transmitter creating alternating current. This current is transmitted to receiver where sound waves are created, reproducing speaker's voice.

Designed to withstand exacting shock, vibration, salt water corrosion, temperature and pressure tests. Molded parts are of impact material. Metal parts made of non-corrosive materials wherever possible.

No. A543

Each station consists of a sound powered telephone handset mounted on a waterproof cast aluminum case, which contains a 1000 cycle magneto generator, a howler unit with connecting horn, the necessary terminal blocks and, if selective ringing is required, a rotary selector switch.

Common Talking—Common Ringing No. A541 Station

Four stations per system with maximum separation between any two stations of four miles. Wiring reduced to minimum. Two twisted pairs per system of No. 22 AWG or larger. One for calling and one for the telephone. To call, turn generator crank, this operates howlers at all stations except originating station. To talk simply press and hold down button on handset.

Common Talking—Selective Ringing No. A542 and A543 Station

No. A542: Maximum number of stations per system is eight. No. A543: Maximum number of stations per system is sixteen. Twisted pairs of No. 22 AWG or larger recommended for both telephone and calling lines to avoid cross talk. To call simply turn selector switch to desired station and turn generator handle. Howler operates only at selected station. To talk, press and hold down the button on the handset.

Master Station Systems No. A540 Substation

Designed to be used in conjunction with a master station. Any selective ringing station. No. A542 or A543 may be used as master stations. Master station may call any substation, but substation may only call master station. Three twisted pairs wiring required between each substation and master station.

Approved by Bureau of Mines

These sound powered telephone stations have been tested and approved by the Bureau of Mines, U. S. Department of the Interior, for use in mines. The Bureau states: "Permissible" as used in the schedule forms formally approved by the Bureau for use in mine atmospheres that may contain methane or coal dust. The approval plate will be placed on all stations listed below. No shielding or special protection is required to make these systems explosion-proof throughout, other than caution against contact with power or light lines noted on the approval plate.

No. A544 Station
With No. 2961 Hood

Common Talking—Common Ringing No. A544 Station

Four stations per system with maximum separation between any two stations of four miles using No. 22 AWG wire will give good performance. 11¹/₄-in. long, 10³/₄-in. wide, 4³/₄-in. deep. Approximate weight 9 lbs.

Common Talking—Selective Ringing No. A545 Station

Maximum number of stations per system is eight. Specifications similar to A542 but is supplied with terminal tube. 11¹/₄-in. long, 10³/₄-in. wide, 5³/₄-in. deep. Weight 10 lbs.

No. A546 Station

For sixteen station common talking—selective ringing system. Specifications similar to No. A543 station but is supplied with terminal tube. 11¹/₄-in. long, 10³/₄-in. wide, 5³/₄-in. deep. Approximate weight, 10 lbs.

No. 2961 Hood

Can be used with any station listed on this page. It is particularly useful in mine areas where falling rocks or dirt is an ever-present hazard.

U. S. Instrument Sound Powered Telephone Sets and Accessories

Sound Powered Handsets

No. A560

No. A560 Weatherproof Handsets

With built-in press-to-operate switch, recommended for heavy duty uses or where portability is desired. When button of press-to-operate switch is depressed, the handset is connected to the line. Supplied with 4 ft. of rubber covered cord. Weight without cord is 22 ounces.

No. A555 Weatherproof Handset

Without built-in switch. Has 4 feet of rubber covered cord. Weighs 20 ounces without cord.

No. A257-2 Underwriters' Laboratory Handsets

With built-in press-to-talk switch. Approved by Underwriters' Laboratories, Inc. for hazardous locations Class I, Group D. Supplied with 4½-ft. rubber covered cord. All other interconnecting lines are to be enclosed in grounded rigid metal conduit to safeguard against accidental contact of telephone circuits with power lines or other circuits.

Type 333 Approved Coast Guard Handsets

A weatherproof sound powered handset for use where Coast Guard approval is required.

Special Handsets

Handsets providing special switching requirements can be made up on order as can handsets with three or four conductor cords.

Mounting Hooks

No. A-281

No. 5200

No. 5200 Mounting Hooks: Standard mounting hook for left hand mounting. Stainless steel. Weight 2¾ ounces.

No. 5201 Mounting Hooks: Similar to No. 5200 but for right hand mounting.

No. A281 Mounting Hooks: For use where there is motion, vibration or shock. Receiver end of handset is held by a rubber padded fork; transmitter end by a coil spring covered by bakelite rollers. Aluminum frame is finished black. Weight is 9½ ounces.

No. A325-1 Mounting Hooks: Similar to No. A281, but provides for various switching arrangements in base which are activated by removing or replacing the handset.

For more complete information contact GRAYBAR.

Head-Chest Sets

No. A602

No. A602: Heavy duty design, recommended as an all around instrument wherever it is desirable to have operator's hands free.

Furnished with built-in press-to-talk switch which controls transmitter only. Supplied with 10-ft. rubber cord.

No. A603: Sound powered weatherproof single receiver head-chest set is same as A602 except has single receiver.

Headsets

No. A331: A sound powered weatherproof double receiver headset supplied with 19-in. rubber covered cord.

Weight without cord, 16 ounces.

Pocket Telephone

No. A278

This sound powered pocket telephone is a combined receiver and transmitter that is easily carried. Convenient for tests or periodic reports.

Equipped with 3½-ft. rubber covered cord. Weight without cord is 7 ounces.

Instrument Units

No. UA1614

Sound powered units serve as microphone and receiving units in diversified products such as gas masks, power megaphones and geophysical instruments. Standard units available with warble frequency impedances of approx. 6 to 25,000 ohms. Supplied with a chemically treated aluminum diaphragm grill and nylon cover.

When ordering specify exact requirements.

Plug and Panel Mounted Jack

No. A529

No. A689

No. A530

No. A529 Plug: Designed for use with portable sound powered telephone equipment and can be supplied separately or attached to telephone cord.

No. A689 Portable Jack: For use with A529 plug.

No. A530 Panel Mounted Jack: For use with A529 plug.

Crouse-Hinds "ET" Series Telephone Sets

Explosion-Proof and Dust-Tight

Manual, Dial, and Magneto Types With Built-In Ringer

Class I, Groups C and D (NEMA Type VII)

Class II, Groups E, F, and G

Class III (NEMA Types IXA, IX, and V)

Manual and dial type telephones for use on common battery systems. Magneto telephones for local battery talking and magneto signaling, but in some cases can be arranged for common battery talking and magneto signaling.

Telephones used only on straight line or divided ringing circuits. They are not suitable for use on harmonic ringing circuits.

Telephones available for either desk use or wall mounting and are equipped with a built-in ringer mounted in base. Telephone housing and handset cradle made of cast aluminum. The desk and wall type are equipped with explosion-proof handsets. Each handset furnished with a 5-foot length of flexible cord and a factory-sealed connector. Two conduit hubs in base.

Manual and Dial Types—Common Battery

For Desk Use

For Wall or Panel Mounting

Conduit With Telephone Equipment No.	Hub Size	Housing Western Electric Co.	Style	Telephone Interior	D. C. Resistance of Ringer

Battery Housing

Furnished with terminal block. Arranged for Ray-O-Vac 386C, or equal dry cell battery. Battery is not included.

Without choke coil. For ETDG23 and ETWG23 with Western Electric Company interior.

No.	Size, Hub
ETG22	3/4

Installation

The table below lists accessories required for telephone installations both with and without auxiliary signals. This does not include the miscellaneous items such as junction condulets, sealing condulets, conduit and other material which will be required.

In hazardous locations all conduits entering the line switch, battery housing, power cut-off switch, relay, or wall type telephone must be sealed with explosion-proof sealing condulets. Where elbows, tees and junctions are required in the conduit installation, the GUA series are especially suitable. The ETS22 line switch is so arranged that when it is turned to the "off" position the line is opened and the condensers discharged at the same time.

Telephones with Western Electric Company interiors are equipped with bleeder resistors which discharge the condensers. This allows the use of type ETS terminal block condulets, in place of the ETS22. The ETS264 should be used with Western Electric telephones.

When these terminal block condulets are used in place of the line switch it will be necessary to remove the fuses or disconnect line wires from the telephone line protector in the non-hazardous area before opening the telephone housing for service.

Crouse-Hinds "ET" Series Telephone Sets

Wiring Diagram

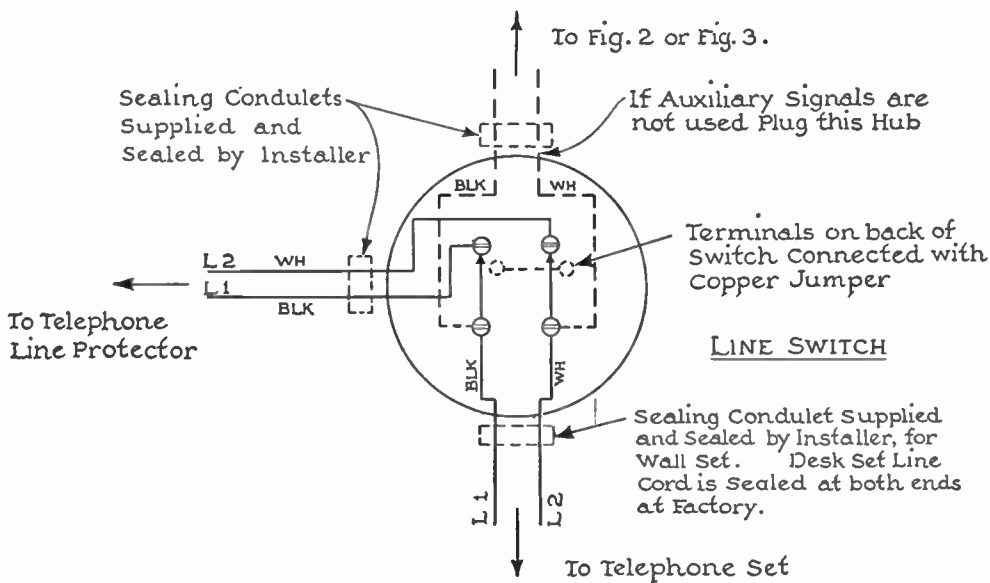

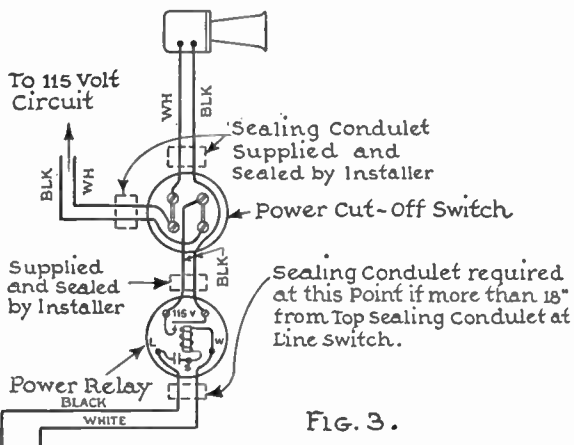

For ET Series Manual Or Dial Telephone Condulets

Hazardous Locations

TELEPHONE BELL SIGNAL

HORN SIGNAL

When ET series telephones are to be installed without auxiliary signals, only the lower part of the above wiring diagram need be used. These telephones, manual or dial, are available in both desk and wall types and each type is equipped with a built-in bell in the base.

The upper parts of the diagram show the connections and the equipment required when auxiliary signals are to be installed. Figure 2 shows the connections for the ringer which

operates on the telephone ringing current. Figure 3 shows connections for horn or bell signals which operate through a relay on a separate 115 volt a-c, 60 cycle source of power.

Sealing condulets are indicated in the diagram at several points. Types EYS, EZS, and EZD listed in section J are recommended for this application. Where elbows, tees, and junctions are required in the conduit installation, the GUA series condulets listed in section G are especially suitable.

Crouse-Hinds Sound Powered Telephone Sets Type ETWS

Explosion-Proof and Dust-Tight—Hazardous Locations

No. ETWS3160 With Built-In Relay

No. ETWS3166 With Built-in Howler

Dimension—Type ETWS

Type ETWS sound powered telephones for common talking, selective magneto signaling. Satisfactory transmission assured under normal conditions for 30 miles or more, using No. 22AWG wire. Available with either 16 or 24 circuit selector switches.

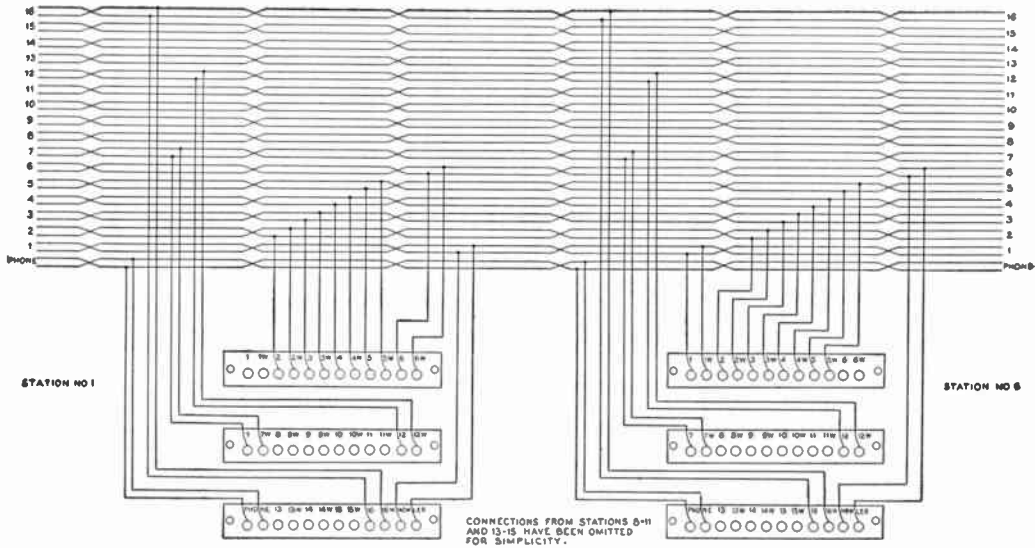

Designed for wall mounting, Handset is furnished with a 5-foot length of cord and a factory-sealed connector. Telephones provided with through-feed threaded hubs for 1-inch rigid conduit and an additional 1-inch threaded hub at the bottom. Selector switch controls only the magneto signaling.

Housings are in two sections which are held in flame-tight relationship by large cover screws. The body and cover are approximately the same depth. Terminal block for connection of the line wires is mounted in the body. All other interior parts are mounted in cover, with a cable assembly connecting them to the block.

No.	Type	Number Circuits	Size Hub
Furnished with U. S. Instrument Co. Magneto, Howler and Handset. Interior Includes 1200 Cycle Magneto and Built-in Howler. No Separate Signal Required. Howler has Loudness Rating at 10 Ft. of 86 Decibels or 27200 ASA Units.			
ETWS3166	ETWS	16	1*
ETWS3246	ETWS	24	1*
Furnished with U. S. Instrument Co. Magneto and Handset. Interior Includes 1200 Cycle Magneto and Built-in Relay and Separate 115-V. a-c 60 Cycle Source of Power Allows Use of Type ESR Bell or ETH Horn.			
ETWS3160	ETWS	16	1*
ETWS3240	ETWS	24	1*

*1-inch through-feed hubs with an additional 1-inch hub at bottom.

Crouse-Hinds Sound Powered Telephone Sets
Type ETWS
Wiring Diagram

For wiring in hazardous locations, twisted pairs of telephone cable of No. 22AWG run in conduit are recommended. For overhead wiring on poles in non-hazardous locations, No. 22AWG lead covered telephone cable should be used.

Wire size given is the minimum size. On long runs, somewhat better performance may be expected when wire sizes larger than those given are used.

Installation Drawings

The installation drawings immediately above show the auxiliary equipment required when installing type ETWS sound powered telephones.

In both types of installation, the EZD30 inspection seal condulet is recommended for sealing the incoming telephone wires or cable. This sealing condulet is selected as its design allows inspection while the seal is being poured, to make certain that each of the many conductors is surrounded by compound.

When installing a type ETWS telephone with built-in relay for horn or bell signals operating on a separate 115-v. a-c, 60 cycle source of power, the ETS24 power cut-off switch is recommended, but is not necessary when a convenient

means of disconnecting the power is available. EZS26 sealing condulets for horizontal or vertical conduit are used to seal at the power cut-off switch.

Where elbows, tees, and junctions are required in the conduit installation, the GUA series condulets are especially suitable.

**Crouse-Hinds Magneto Telephone Sets
Graybar Type GB**

Weatherproof—With Built-In Ringer

**Local Battery Talking, Magneto Signaling
(Similar to Western Electric No. 1336E Telephone)**

A complete magneto telephone station in an attractive weatherproof enclosure for local battery talking and magneto signaling. Suitable for use in industrial plants, outdoor locations, and non-hazardous areas of mines.

Cabinet and hinged door made of cast aluminum. Mounting straps with fastening holes at each end are attached to back of cabinet. A cam catch firmly tightens the door against gasket cemented to cabinet, providing a raintight joint. If desired a lock and key can be supplied in place of the cam catch at a slight additional charge.

Handset, handset hanger and magneto crank mounted on front of hinged plate. Removal of two screws allows plate to be opened outward, exposing the magneto, condenser, induction coil, hook switch and terminal block which are attached to the back of the plate. Ringer is fastened to the bottom of the cabinet.

Space is provided in bottom of cabinet for two No. 6 Gray Label dry cells used to supply necessary 3 volt d-c for the talking circuit. (Batteries not included.)

A 1/2-in. conduit opening is provided in bottom near the back for entrance of the circuit wires. Insulating bushing with a 1/2-in. hole is also supplied.

Stromberg-Carlson Intercommunication Telephone Systems

**All Sub-Station TS-51, TS-52, TS-53
Common Ringing . . . Common Talking**

All sub-station, or party line, inter-communicating telephone systems are used extensively where an economical system of two to six telephones is required. When only two telephone instruments are needed, a two wire system (TS-51) or a three-wire system (TS-52) can be used. When three to six telephones, or a two-instrument system that might be expanded, are needed, a four-wire system (TS-53) is required.

TD-11

Sub-stations are common talking. Only one conversation can take place at a time but any or all telephones can be in on the conversation.

Code ringing is employed on systems of three to six telephones. Each telephone equipped with single push-button which, when depressed, rings all other telephones in the system. A pre-arranged code of signals is used to call desired party.

The telephones which can be used in these systems, and mixed in the system when desired are the TD-11 and the TW-31. The TD-11 may be converted to wall-mounting by means of TK-3 conversation kit.

Installation Material

System	Max. Lgth. of Line (a)	Wire No. 19 Gauge	Retard Coil	1/2 Volt Batteries (b)
TS-51	4350 Ft.	2 conductor	None	3 to 16
TS-52	4350 Ft.	3 conductor	1 No. 51-H	4 to 8
TS-53	1150 Ft.	4 conductor	1 No. 51-H	4 to 8

(a) Max. lgth. using No. 19 gauge conductors, heavier gauge wire increases maximum length.

(b) 2 conductor system, batteries divided and installed at each end of line. 3 and 4 conductor systems, batteries and retard coil at one instrument. Raytheon Rectifier Model 1021 is satisfactory on TS-53 system only.

Stromberg-Carlson Intercommunication Telephone Systems

**Master to Sub-Station TS-41
Selective Ringing—Common Talking**

The "Master to Sub-Station TS-41" system is ideal for installation where there is little need for communication between sub-stations. An inter-communication telephone system which provides a single master station that can call and be called by a number of sub-stations.

TD-11

**TD-11
Wall Mounted**

TW-31

Although only one conversation can take place at a time, any number of stations may be in on the conversation. While sub-stations cannot call each other, they can call the master and request the master to ring the desired sub-station.

Master stations available are the TD-18 for desk use, the TW-28 and 2527-C8 for wall mounting. Sub-stations used in the system are the TD-11 and the TW-31, which can be mixed in the system. The TD-11 can be converted to wall mounting by means of the TK-3 conversion kit.

The TD-18 Master Station and the TD-11 Sub-station telephones supplied complete with a 5 ft. line and cord and terminal block to facilitate installation. TW-28 and TW-31 telephones provided with terminals in telephones to which building wiring is terminated.

Installation Materials

Master Telephone	Wiring to Sub-Stations	Power Supply*
TD-18 TW-28	Three common wires to all sub-stations plus one individual wire from master to each sub-station	Dry Cell or Battery Eliminator
	*4 to 8, 1½ volt dry cell batteries or battery eliminator.	
	Contact Graybar for full information.

Stromberg-Carlson Intercommunicating Telephone Systems

**All Master TS-31
Selective Ringing—Common Talking**

"All Master" TS31 system is an inter-communicating telephone system for master-to-master operation especially suited to small offices, banks and residences. Has selective ringing so that any master can select and ring individually any other master telephone in the system.

Model TD-18

Model TW-28

A common talking system using only one pair of wires for talking purposes. Only one conversation can take place at a time although any number of stations can be in on the conversation. Very satisfactory for systems of nine telephones or less.

Three master station models available that are interchangeable and can be mixed in the system.

Desk set Model TD-18 is

supplied complete with a 5 ft. line cord and terminal box to facilitate installation.

Models TW-28 and 2527-C8 provide two types of wall mounting instruments.

Altec Lansing Velocity Microphones

Has an improved sensitivity and frequency range. A compact microphone providing excellent broadcast quality, high signal-to-noise ratio, and extremely low hum pickup.

Frequency response 30 to 16,000 cycles. Directivity, bidirectional. Impedance 30/50, 150/250 ohms. Output level —54 dbm/10 dynes/cm². Hum (max.) —130 dbm ref 10⁻³ gauss.

Has 5/8-in. x 27 swivel head. Finished in dark gray.

No.	Height In.	Width In.	Depth In.	WL Oz.	Each
671B	4½	2½	3⅜	14	\$114.00

Altec Lansing Dynamic Microphones

Designed to properly fill the requirements for a close talking, rugged microphone for use in announcing and public address systems. Not intended for music pickup.

Frequency response 100 to 10,000 cycles. Output impedance 30/50 ohms. Output level —58 dbm/10 dynes/cm².

Finished in gray.

No.	Length In.	Width In.	WL Oz.	Each
632C	2⅞	2	8¼	\$52.00

Altec Lansing Dynamic Microphones

"Salt Shaker"

Famous for its ruggedness, dependability and quality.

Normally omnidirectional, but the addition of the 8B baffle provides semidirectional pattern.

Frequency response 35 to 12,000 cycles. Output impedance 633A—30/50 ohms—633C—30/50, 150/250 ohms. Output level —58 dbm/10 dynes/cm².

Finish is gray.

No.	Length In.	Diam. In.	WL Oz.	Each
633A	3½	2	10	\$69.00
633C	3½	2	13	78.00

No. 660 Dynamic Microphone

Rugged, efficient unit of broadcast quality. Adapted for public address and outdoor use where its high output level, excellent signal-to-noise ratio, and durability are particularly advantageous.

Frequency response 35 to 12,000 cycles. Output level —58 dbm/10 dynes/cm². Output impedance 660A—30/50 ohms—660B—30/50, 150/250 or 20,000 ohms. Has 5/8-in. x 27 swivel head. Finished in satin silver.

Microphone equipped with 15-ft. of cable.

No.	Length In.	Diam. In.	WL Oz.	Each
660A	4	1 11/16	11	\$49.50
660B	4	1 11/16	13	59.40

Altec Lansing Cardioid Microphones

A combination of a dynamic pressure element and an improved ribbon type velocity element.

Has a wide variety of directional patterns which are easily selected through screwdriver operated switch on back of the microphone.

Frequency response 40 to 10,000 cycles. Output impedance 30/50 ohms. Output level —56 dbm/10 dynes/cm². Discrimination, average front to back 20 db. Hum —120 db (ref: 10-3 gauss).

Has stand or suspension mounting. Finished in dark gray.

No.	Height In.	Width In.	Depth In.	WL Lbs.	Each
639	7½	3 7/16	4 7/16	3 1/4	\$235.00

When ordering add the suffix "A" for three directional patterns. Add suffix "B" for six directional patterns.

No. 670B Cardioid Microphone

Provides high quality performance and excels in frequency response, front-to-back discrimination and low hum pickup.

Three directional pattern, omnidirectional, bi-directional and cardioid are easily selected by means of adjusting screw at back of microphone.

It is possible by shutter adjustment between the patterns to shift the null points of the microphone over a 90° angle and effectively suppress undesired sounds.

Screwdriver switch permits selection of proper output impedance.

Frequency response 30-16,000 cycles. Output impedance 30/50, 150/250 ohms. Output level —56 dbm/10 dynes/cm². Discrimination average front to back, 20 db. Hum (max.) —130 dbm ref 10-3 gauss.

Has 5/8-in. x 27 swivel head. Finish is dark gray.

No.	Height In.	Width In.	Depth In.	WL Lbs.	Each
670B	6½	2½	3 3/8	1 1/4	\$138.00

Altec Lansing Microphones

This slim unit with the exclusive "Acoustic Gate" feature is a broadcast dynamic that eliminates high frequency peaks inherent in conventional microphones and provides outstanding performance throughout an extended frequency range.

Unaffected by wind, water, dirt or weather. Offers dependable broadcast quality combined with rugged durability.

Frequency response 30-15,000 cps; output impedance, low 30/50 ohms, medium 150/250 ohms, high 20,000 ohms; output level —58 dbm/10 dynes/cm².

Has "Slidein" holder mounting with 5/8-in.—27 swivel head.

Finished in black and green.

No.	Length In.	Diam. In.	WL Oz.	Each

Altec Lansing M-11 Microphone Systems

No. 21D Microphone with No. 150A Base—No. 152A Cable Set No. 518A Power Supply

This system using the 21D microphone represents the ultimate in quality reproduction. Its graceful, slender shape presents a minimum of obstruction when used on a microphone stand and fits comfortably in the hand for mobile use.

The M-11 system is omnidirectional in pickup characteristic, completely shock and blast resistant, and not affected by strong winds, magnetic fields or dampness.

M-11 system complete..... \$296.00

M-11 Microphone System Components are as follows:

21D Microphone

Condenser type with frequency range 20 to 15,000 cycles. Pickup, omnidirectional. Not susceptible to magnetic fields. Capacitance 6 mmf. Length 3/8-in.; diameter 5/8-in. Weight 1/4-oz. Finish is stainless steel. Each \$67.00

150A Base

Contains a vacuum tube used as a cathode follower and an 8 pin cannon connector for connection of the microphone to the power supply. Length 8 5/16-in.; diameter 1 1/8-in. Weight 5 3/4 oz. Finish is satin black. Each \$63.00

152A Cable Set

For stand mounting microphone. Mounting 5/8-in.—27 thread. Length 25-ft. Weight 1 lb. 11 oz. Each \$26.00

153A Cable Set

For hanging suspension mounting of the microphone system (may be ordered extra as extension cable for 152A cable set). Length 25-ft. Weight 1 lb. 11 oz. Each \$26.00

518A Power Supply

Supplies necessary voltages to 150 base and 21D microphone. Power requirements 117 volts, 60 cycles a-c; System output level from power supply —48 dbm/10 dynes/cm²; Load impedance 30, 150/250, 500/600 ohms; Low frequency cutoff 20, 40, 120 cycles. Height 7 1/2-in. Width 8 1/4-in. Depth 6-in. Weight 11 1/2 lbs. Each \$144.00

Altec Lansing M-20 Microphone Systems

No. 21D Microphone with No. 165A Base—No. 166A Stand Attachment

No. 525A Power Supply

The M-20 "Lipstik"® microphone system provides the outstanding features of the Altec M-11 system with the latest developments in miniaturization and printed circuit applications making it the smallest quality microphone on the market.

It is no larger than a lipstick and is practically invisible when mounted on microphone stand.

M-20 system complete..... **\$236.00**

M-20 Microphone System Components are as follows:

21D Microphone

Condenser type with frequency range 20 to 15,000 cycles. Pickup, omnidirectional. Not susceptible to magnetic fields. Capacitance 6 mmf. Length 3/8-in.; diameter 5/8-in. Weight 1/4-oz. Finish is stainless steel. Each **\$67.00**

165A Base

Contains the subminiature impedance matching vacuum tube and provides the interconnection between the 21D microphone and the 525A power supply. The attached flexible 15-ft. cable is covered with an abrasion resistant fiber glass webbing. Each **\$60.00**

166A Stand Attachment

Provides swivel stand holder for Lipstik microphone. Mounting 5/8-in. with 27 thread. Finish is gray plastic. No. 166A..... Each **\$7.00**

525A Power Supply

Supplies necessary voltages to 165A base and 21D microphone. Power requirements 117 volts, 60 cycles, 15 watts. System output level from power supply unbalanced. High impedance (10,000 ohms or higher) —30db re 1 v/10 dynes/cm² (open circuit voltage—not power measurement); 600 ohms —49 dbm/10 dynes/cm²; 150 ohms —53 dbm/10 dynes/cm²; 30 ohms —59 dbm/10 dynes/cm². Balanced: using 4665 plug-in transformer for 30, 150 and 600 ohms —48 dbm/10 dynes/cm². Load impedance 30, 150, 600 balanced (using 4665 transformer); 30, 150, 600, 10,000 ohms unbalanced.

Dimensions: height 2 3/8-in. Width 8 5/8-in. Depth 7 1/2-in. Each **\$100.00**

Lipstik® Microphone Accessories

No. 4665 Plug-in transformer for balanced output. Height 2 5/16-in. Width 2-in. Depth 1 1/2-in. Each **\$27.00**

No. 11853 Rack mounting assembly holds two 525A power supplies. Requires 3 1/2-in. of rack space. Each **\$20.00**

No. 167A Extension cable with connectors (uses 5426 cable). Lgth 25-ft. Each **\$23.00**

No. 1883-116 Cable-slim fiber glass covered cable as supplied with 165A base. Each **\$0.35**

No. 1883-116..... Per Foot **\$0.35**

Altec Lansing M-14 Microphone System "High Intensity"

No. 21BR Microphone with No. 165A Base

No. 526A Power Supply

Designed for the measurement of sound pressures beyond the dynamic range of the normal commercial microphone.

Applicable for the measurement of high explosive blasts, drop forges, horns and sirens, and the analysis of the characteristics of noises created by air craft, jet engines, missiles, factory, etc.

May be operated safely from —30°F to 300°F.

Each microphone system supplied with its frequency-response calibration.

M-14 system complete..... **\$350.00**

M-14 Microphone System Components as follows:

21BR-150 Microphone

Condenser type with frequency range 5-17,000 cps. Sound pressure range 68-164 db. Pickup, omnidirectional. Not susceptible to magnetic field. Capacitance 6 mmf. Length 3/8-in.; diameter 5/8-in. Weight 1/4-oz. Finish is stainless steel.

Or 21BR-180 Microphone

Same as 21BR-150 except the sound pressure range is 83-179 db; frequency range is 5-20,000 cps.

Or 21BR-200 Microphone

Same as 21BR-150 except the sound pressure range is 98-194 db; frequency range 5-25,000 cps.

No.	Description	Each
21BR-150	Calibrated	\$175.00
21BR-150	Uncalibrated	120.00
21BR-180	Calibrated	175.00
21BR-180	Uncalibrated	120.00
21BR-200	Calibrated	175.00
21BR-200	Uncalibrated	120.00

165A Base

Contains subminiature impedance matching tube and 15-ft. of cable for the interconnection of microphone and 526A power supply. Finish is anodized gray. Each **\$56.00**

526A Power Supply

Furnishes the necessary voltages to the impedance matching tube in the 165A base and to the condenser microphone. Microphone output, transmitted through the impedance matching tube and power supply, is available on the two-conductor shielded output cable. Power requirements, 117 volts, 50-400 cps, 15 watts.

System output voltage:

21BR-150	—55 to —65 db/1 v/dyne/cm ²
21BR-180	—70 to —80 db/1 v/dyne/cm ²
21BR-200	—85 to —95 db/1 v/dyne/cm ²

Output impedance 250 ohms, unbalanced; load impedance 50,000 ohms or higher.

No.	Height In.	Width In.	Depth In.	Wt. Lbs.	Each
526A	2 3/8	8 3/8	7 1/2	7	\$143.00

For balanced load impedances 600, 150 or 30 ohms, the 4665 plug-in transformer is supplied. Order as 526A power supply, low impedance.

Available with the following accessories: No. 159B probe tube, No. 167A extension cable with connectors and No. 12185 acoustic calibrator.

Altec Lansing Microphone Accessories

25A Desk Stand

Constructed of cast iron and designed to insure stability. Base is machined for a 5A microphone switch kit. Has a 5/8-in.—27 thread and is equipped with 5/8-in.—24 adapter.

No.	Length In.	Width In.	Height In.	Wt. Lbs.	Each
25A	5 3/8	3 3/4	3 1/2	3	\$22.50

5A Microphone Switch Kits

Designed to assemble into the base of the 25A microphone desk stand. Incorporates two single pole, double throw microswitches, operated by a single press-to-talk or lock-to-talk slider. Provides microphone on-off positions and remote relay muting facility for priority announcements.

No.	Length In.	Height In.	Width In.	Wt. Oz.	Each
5A	2 7/8	1	1/2	1/2	\$9.00

Altec Lansing Microphone Accessories

6A Microphone Switches

Incorporates two single pole, double-throw microswitches operated by a single press-to-talk or lock-to-talk slider.

Provides microphone on-off positions and remote relay muting facility for priority announcements.

Switch assembly designed to fit between any microphone and its stand, and has lock ring for orientation.

Has 5/8-in.—27 thread, male and female.

No.	Length In.	Diam. In.	Wt. Oz.	Each
6A	4 3/8	1	3 1/2	\$19.00

Floor Stands

No. 22C

Heavy weight, rugged floor stand, gray base with chrome stand.

Adjustable from 35-in. to 64-in. Has 5/8-in.—27 thread and equipped with 5/8-in.—24 adapter.

No. 22C..... Each **\$19.00**

No. 10821 Gale Screen

For use on 21C and D microphones to provide suppression of wind noises under extreme conditions.

No. 10821..... Each **\$1.95**

Altec Lansing Microphone Accessories

Desk Stand

No. 24C

Short desk stand that provides minimum microphone height on speakers' tables.

Has 5/8-in.—24 thread and adapter for 5/8-in.—27 thread.

Finished in gray.

No. 24C..... Each **\$8.50**

Altec Lansing Amplifiers

A compact, 165 watt, medium gain power amplifier designed for public address applications, either portable or fixed location.

Negative feedback is carried around all stages from a tertiary winding on the heavy duty output transformer permitting output to feed an ungrounded load or load with one side grounded as the case may be.

Especially designed for stable 70 volt line operation under all output load conditions without impairment of program quality.

Two pairs of input connections are provided. Terminals one and two, which connect directly to the input potentiometer, are provided for unbalanced high impedance sources or for bridging unbalanced low impedance lines having signal voltage of one volt or more. Terminals three and four connect to standard octal socket which permits low impedance input with the accessory 4665 plug-in transformer.

Output taps for loudspeaker loads of 8, and 16 ohms, and 70 volt line (32 ohms) are provided.

Has two controls. Volume control and a-c power switch. If "push to talk" operation is desired, provision has been made for mounting an accessory relay.

Specifications

Gain 72 db; input sensitivity 1.0 volt rms for rated output; power output 165 watts at less than 3% thd. 70-20,000 cps; frequency response ±1.0 db, 10-50,000 cps; input impedance 100,000 ohm potentiometer; source impedance 30/50, 250/300, 500/600 ohms with 4665 plug-in transformer; load impedance 8, 16, 32 (70 v line) ohms; output impedance less than 10% of nominal load impedance; noise level, output noise —25 dbm: 77 db below rated output; power supply 117/125 volts, 60 cps, 350 watts; external power available 117 vac receptacle on chassis.

Finished in green.

No.	Height In.	Width In.	Depth In.	Wt. Lbs.	Each
1570A	9 3/8	17	13 3/4	58	\$318.00

Altec Lansing Amplifiers

No. 1568A

Rack mounted, a-c operated, 40 watt power amplifier for use in sound reinforcing, paging, and music distribution systems. Easy to install and service. Provides low distortion, wide frequency range, and complete stability with any load.

Occupies five units of rack space and has a hinged front panel which contains the power switch, pilot light, and continuously variable gain control.

All circuitry is completely accessible for installation and servicing when the panel is opened. The output provides for 70 volt and 25 volt lines as well as a variety of load impedances.

The Altec No. 12066 Cabinet may be used for mounting this amplifier on wall or table when rack mounting is not desired.

Specifications

Gain: 65 db; Input Sensitivity: 0.9 volt; Power Output: 40 watts at less than 2% T.H.D. 40 to 20,000 cps; Frequency Response: ±1 db 5 to 30,000 cps, ± 4 db 1 to 100,000 cps; Input Impedance: 70,000 ohms volume control; Source Impedance: 30/50, 125/150, 250/300, 500/600 ohms with 4665 Plug-in Transformer; Load Impedance: 4 (12.6v), 8 (18v), 16 (25v), 124 (70v) ohms; Output Impedance: Less than 15% of nominal load impedance; Noise Level: 80 db below rated output; Controls: Volume control, continuously variable, composition; Power Supply: 117 volts, 60 cps, 125 watts; External Power Available: 117 volt a-c receptacle on chassis; Tubes: 2-6CG7, 2-6CA7/EL34, 1-5U4GB; Color: dark green; Accessory: 4665 Plug-in Transformer.

No.	Height In.	Width In.	Depth In.	Wt. Lbs.	Each
1568A	8¾	19	7¾	22	\$199.00

No. 1569A Amplifier

Identical to the No. 1568A Amplifier except in power output. This rugged unit provides 80 watts of stable, low distortion power for use in larger sound reinforcing, paging, and music distribution installations.

Specifications

Gain: 68 db; Input Sensitivity: 0.9 volt; Power Output: 80 watts at less than 2% T.H.D. 60 to 20,000 cps, 80 watts at less than 5% T.H.D. 40 to 20,000 cps; Frequency Response: ±1 db 5-30,000 cps, ±5 db 1 to 100,000 cps; Input Impedance: 70,000 ohm volume control; Source Impedance: 30/50, 125/150, 250/300, 500/600 ohms with No. 4665 Plug-in Transformer; Load Impedance: 4 (18v), 8 (25v), 16 (36v), 62 (70v) ohms; Output Impedance: Less than 15% of nominal load impedance; Noise Level: 80 db below rated output; Controls: Volume control, continuously variable, composition; Power Supply: 117 volts, 60 cps, 240 watts; External Power Available: 117 volt a-c receptacle on chassis; Tubes: 2-6CG7, 4-6CA7/EL34, 2-5U4GB; Color: dark green; Accessory: No. 4665 Plug-in Transformer.

No.	Height In.	Width In.	Depth In.	Wt. Lbs.	Each
1569A	8¾	19	8	27.5	\$258.00

Altec Lansing Amplifiers

A 30 watt power amplifier for professional applications, such as recording and broadcasting studios, requiring the highest quality and reliability.

An improved version of the 127 type amplifier, retaining all the sturdy features of the 127, including metering, step-type gain control and the trouble-free class AB₁ circuit.

Provision for plug-in input transformer and accommodation of the full variety of load impedances make for wide versatility.

Amplifier mounts on a rack or in 12066 cabinet.

Specifications

Gain 68 db; Input Sensitivity .66 volts rms for rated output; Power Output 30 watts at less than 2% thd, 30-20,000 cps, 15 watts at less than ½% thd, 30-20,000 cps; Frequency Response ±1 db, 5-50,000 cps; Input Impedance 100,000 ohm potentiometer; Source Impedance 30/50, 125/150, 250/300, 500/600 ohms with 4665 plug-in transformer; Load Impedance 16 ohms grounded, 150 ohms (70 v. line) balanced, 270 ohms grounded, 600 ohms with CT balanced; Output Impedance less than 20% of nominal load impedance; Noise Level —37 dbm; 80 db below rated output; Power Supply 117/125 volts, 50/60 cps, 140 watts; External Power available 380 v. d-c at 10 ma, 6.3 vac at .6 a.

No.	Height In.	Width In.	Depth In.	Wt. Lbs.	Each
128A	8¾	19	8	18	\$260.00

Available accessory No. 4665 "plug-in" transformer..... Each \$27.00

Altec Lansing Amplifiers

A 260 watt amplifier of low distortion and wide frequency range for public address and industrial control applications.

Protected by thermal cut-out. Filament warm-up period controlled by delay relay, permitting remote full on-off control.

Instantaneous on-off control of tube plates available by installing additional relay powered externally.

Designed for rack mounting; accessory brackets permit mounting to wall.

Specifications

Gain 50 db; 30 db, bridging 600 ohm line; input sensitivity 1.2 v rms/600 ohms; power output 260 watts @ less than 2% thd, 45 cycles—15 kc; frequency response @ 10 watts ±0.5 db, 20-20,000 cps; ±3 db, 5-70,000 cps; source impedance 500/600 ohms and 5,000 ohms bridging; load impedance 9, 19, (70 v line), 65 (130 v line) ohms; output impedance less than 12% of nominal load impedance; noise level—16 dbm; 70 db below rated output; power supply 105/117/125 v, 60 cycles, 600 watts.

No.	Height In.	Width In.	Depth In.	Wt. Lbs.	Each
260A	18	19	14¼	186	\$860.00

Available accessory No. 12156 wall mounting assembly. Each \$74.00

Altec Lansing Limiter Amplifiers

Allows higher average level recording, broadcast, and public address amplification without danger of distortion, feedback, or damage to speaker load.

Operates as true linear amplifier up to a specified level and limits the volume output beyond this point. The 100% db limiting meter may be used for tube testing.

Both input and output gain controls are provided and a switch that provides equalization for the NARTB high frequency recording pre-emphasis.

Specifications

Gain 68 db at 1,000 cps, equalizer out; 60 db at 1,000 cps, equalizer in (31 db less gain from bridging input); Limiting Threshold normal, +25.2 dbm, high 33.2 dbm; Frequency Response ± 1 db, 20-20,000 cps, equalizer out NARTB recording characteristic, equalizer in; Source Impedance 600 ohms; Load Impedance 600 ohms; Attack Time .0002 second; Limiting Ratio 10:1; Noise Level -37 dbm; 62 db below normal limiting threshold; Power Supply 275 vdc at 100 ma regulated, 6.3 vac at 2.0 a.

Finished in metallic gray.

Altec Lansing Power Supplies

Regulated d-c power supply designed to accurately maintain a value of high voltage direct current over wide range of primary voltage variations as found in commercial power lines.

This rack mounting unit particularly suited for use with the 322C Limiter Amplifier which requires accurately regulated plate supply for stable operation and is ideal whenever a closely regulated supply of fixed voltage is needed.

Specifications

Power Supply 105/117/130 volts, 50/60 cps, 120 watts; External Power available 275 vdc at 100 ma, and 6.3 vac at 3.0 a., d-c output regulated to 1% from no load to full load, and $\pm 10\%$ line voltage change. Less than .001 v. ripple on d-c output at full load.

Finished in blue gray.

Altec Lansing Compressor Amplifiers

Self-powered unit capable of driving any Altec power amplifier to full output from low impedance microphone.

Occupies 3 1/2-in. of rack space and equipped with level control, power switch, fuse, pilot light and compression meter mounted on a hinged front panel.

Provided with two inputs: a microphone input and a bridging input.

For use in automatic level control applications in recording, TV broadcasting and public address systems.

Specifications

Gain 90 db from microphone input; 40 db bridging 600 ohm line; input sensitivity 6.5 millivolts on bridging input to reach compression threshold; maximum compression 30 db (50 db change in input results in 20 db change in output); power output +19 dbm at 30 db compression; +21 dbm as straight amplifier; frequency response +1.5 db, 40 to 10,000 cps; input impedance bridging, 20,000 ohms unbalanced; source impedance microphone input, 30/50 ohms; load impedance 150 and 600 ohms; power supply 117 volts, 60 cps, 22 watts.

Available accessory No. 12495 cabinet.

Altec Lansing Compressor Amplifiers

No. 436A

Small, self-powered PA and industrial amplifier providing line level output and automatic gain control.

Occupies 3 1/2-in. of rack space and contains a front panel meter to indicate db of compression, a power switch, fuse and pilot light.

Specifications

The input employs a high impedance transformer which can bridge a 600 ohm line or the output of the 1510A and 1511A preamplifiers. The output transformer provides load taps of 150 and 600 ohms or may be operated directly into the high impedance input of the 1520A or 1530A amplifiers. Frequency response is ± 1.5 db, 30-15,000 cps. Gain is 56 db from 15,000 ohm source: 42 db bridging 600 ohm line. Maximum compression is 30 db (50 db change in input results in 20 db change in output). Harmonic distortion at 25 db compression is less than 1.5%, 35-15,000 cps; at 30 db of compression, less than 2.5%, 35-10,000 cps. Power output is +19 dbm at 30 db compression; +26 dbm as straight amplifier. The attack time is approximately 50 milliseconds with 63% recovery in 1 second.

No. 436A	Each	\$168.00
----------	------	----------

Altec Lansing Amplifiers

Compact 20 watt amplifier and control preamplifier for paging and music distribution systems in offices, factories, churches, restaurants, nightclubs, and wherever sound is required.

Features individual gain controls for each channel which may be pre-set so that the proper level is established automatically when the selected button is pushed.

Has separate bass and treble controls and an a-c line switch. The three inputs may be used for phono, microphone, tuner, tape, telephone line programing, or music distribution service. Phono input is equalized for standard RIAA curve.

Altec 4665 Transformer may be plugged in for use with balanced lines.

Specifications

Gain: phono 95 db 1 KC tone controls flat, microphone 95 db 1 KC tone controls flat, line 82 db 1 KC tone controls flat; Input Sensitivity: phono 0.02 volt for rated output, microphone 0.0085 volt for rated output, line 0.16 volt for rated output; Power Output: 20 watts at less than 2% THD; Frequency Response: ± 2 db 20-22,000 cps; Load Impedance: 8, 16, 250 ohms (70 v. line); Output Impedance: Less than 20% of nominal load impedance; Noise Level: phono 50 db below rated output, microphone 54 db below rated output, line 74 db below rated output; Controls: Push button switches select phono, microphone, or line output, individual volume controls for each channel, separate bass-treble controls and a-c line switch; External Power Available: 117 volts 60 cps 85 watts; Tubes: 2-12AX7, 1-6CG7, 2-E184 and 1-EZ81; Special Features: Printed circuit board with eyelets for components; Accessories: One 3 prong male connector supplied with equipment. No. 12116 cabinet in blonde or mahogany may be ordered separately. No. 4665 Plug-in Transformer is available.

Altec Lansing Monitor Amplifiers

Provides power to a monitor loudspeaker. Not supplied with any sort of case and must be mounted inside the 625 monitor speaker cabinet or some other suitable enclosure.

Specifications

Gain 43.5 db from a 10,000 ohm source; Input Sensitivity 1.2 volts rms for rated output; Power Output 3 $\frac{3}{4}$ watts at less than 5% thd, voice frequency range; Frequency Response ± 1 db, 40-20,000 cps; Input Impedance 10,000 ohm potentiometer; Load Impedance 8 ohms; Noise Level -22 dbm; 57.8 db below rated output; Power Supply 117 volts, 50/60 cps, 30 watts.

Finished in gray hammertone.

Altec Lansing Amplifiers

A wide-band, general purpose amplifier of very low distortion similar in appearance to the 340 Amplifier used in High Fidelity music systems.

Adapted to a variety of applications including public address and commercial sound systems.

Plug-in transformer No. 4665 may be used to convert immediately to low impedance inputs.

Specifications

Gain 63.5 db; Input Sensitivity 1.2 volts rms (across input potentiometer) for rated output; Power Output 35 watts at less than 0.5% thd, 25-20,000 cps; Frequency Response ± 0.5 db, 5-50,000 cps; Input Impedance 100,000 ohm potentiometer; Source Impedance 30/50, 125/150, 250/300, 500/600 ohms with "plug-in" input transformer; Load Impedance 8, 16 ohms and 70 v. line. Output Impedance less than 3.5% of nominal load impedance; Noise Level 85 db below full output; Power Supply 117 volts, 60 cps, 160 watts.

Available accessory No. 4665 "plug-in" transformer.

Altec Lansing Preamplifier Mixers

Constructed with two low noise input channels with individual gain controls on each channel and a single output circuit for use in public address and commercial sound systems.

May be mounted in the 1560A console or 10956 assembly.

Specifications

Gain 47 db into a 100,000 ohm load; Power Output 23.0 volts rms maximum into a 100,000 ohm load; Frequency Response ± 1 db, 30-15,000 cps; Source Impedance each channel 30/50, 125/150, 250/300, 500/600 ohms. Center tap available for 125/150 and 500/600 ohm connections. Load Impedance 10,000 ohms minimum; Output Impedance 10,000 ohms nominal; Noise Level, output noise -73 dbm into a 100,000 ohm load. Equivalent input noise -120 dbm; Power Supply required 300 vdc at 5 ma, 6.3 vac at 0.45 a.

Finished in gray hammertone.

1510A	5 $\frac{3}{16}$	4 $\frac{7}{16}$	5	2 $\frac{3}{4}$	\$99.00

Altec Lansing Preamplifiers

Provides a single phono input equalized for variable reluctance pickups with gain control and bass and treble controls. Input No. 2 can be used as bass and treble tone controls to serve all elements of 1500 series amplifier system.

Can be mounted in 1560A console, or rack mounted on 10956 mounting assembly with 530A power supply in custom installations.

Specifications

Gain: Input No. 1, 43 db voltage gain into 100,000 ohm load at 1,000 cps, tone controls normal. Input No. 2, 0 db voltage gain into 100,000 ohm load, tone controls normal; Power Output 15 volts rms, maximum into 100,000 ohm load; Frequency Response: Input No. 1, equalized for magnetic pickup. Input No. 2, flat response; Input Impedance: Input No. 2, 200,000 ohms; Source Impedance: Input No. 1, magnetic pickup; Load Impedance not less than 10,000 ohms; Output Impedance cathode follower, 1,000 ohms nominal; Noise Level equivalent input noise —100 dbm; Power Supply 300 vdc at 12 ma, 6.3 vac at 0.6 a.

Finished in gray hammertone.

No.	Height In.	Width In.	Depth In.	WL Lbs.	Each
1511A	5 ³ / ₁₆	4 ³ / ₁₆	5	1 ³ / ₄	\$85.00

Power can be supplied by the 530A power supply. The 1511A can mount in rack on 10956 rack mounting assembly, or in 1560A console.

Altec Lansing Line Amplifiers

Two-stage line amplifier featuring low distortion and high signal-to-noise ratio.

Provides the ideal microphone to line mixing amplifying system when used with the 1510A preamplifier.

Capable of feeding telephone or other transmission lines which require levels up to +25 dbm.

Mounts on 10956 assembly. Finished in gray hammertone.

Specifications

Gain 65 db from a 100,000 ohm source; input sensitivity 56 millivolts rms for +20 dbm out; power output +22 dbm at less than 2% thd, 20-20,000 cps; frequency response ±1 db, 20-20,000 cps; input impedance 100,000 ohm potentiometer; load impedance 62.5/75, 125/150, 250/300, 500/600 ohms. Center tap available on 500/600 ohm connection; noise level —55 dbm; 80 db below rated output; power supply 300 vdc at 12 ma, 6.3 vac at 0.45 a.

Finished in gray hammertone.

288B	6 ¹ / ₂	4 ⁷ / ₈	20	\$138.00

Altec Lansing Horns

No. 31A

For use with Altec driver loudspeakers. Notable for their heavy weather-resistant construction that keeps them free from all resonances and vibrations.

Sectoral type horn for use with 720A and 730A driver speakers. Distribution 40° x 120°; low frequency cutoff 300 cycles.

No. 31A with No. 27A Throat

Available with 27A throat.

No.	Length In.	Width In.	Height In.	WL Lbs.	Each
31A	15	23	9	9 ¹ / ₂	\$58.00

Altec Lansing Horn and Driver

No. 50A

New wide range public address speaker for either outdoor or indoor use. Based on a new technique in speaker design, the 50A combines an "Acoustic Filter" with a long air column to give an extremely good low frequency response and is flat through the higher register.

Provides excellent reproduction of both speech and music under any critical conditions. May be easily used in large numbers from a single

system without loss of frequency response or efficiency.

The transducer, containing a heavy magnet, durable phenolic diaphragm, and a high impedance voice coil, is integrally mounted on a high impact plastic horn with a three-foot air column.

Facilities are included for encasing the Altec 15075 Transformer within the weatherproof housing.

Specifications

Power: 30 watts; Frequency Response: 175 to 12,000 cps; Impedance: 16 ohms; Horizontal Distribution: 90°; Vertical Distribution: 50°; Mounting Facilities: Arranged for mounting at any vertical or horizontal angle; Acoustical Cross-Over: 1000 cps.

Altec Lansing "Biflex" Loudspeakers

Nos. 408A, 412B, 415A

No. 408A

Small light speaker using a large magnet and carefully designed magnetic structure to achieve outstanding efficiency. Guaranteed frequency response 60 to 16,000 cycles. Power 15 watts; impedance 8 ohms; mounting hole diameter 6½-in.

No. 412B

Employs Altec multiple concentric compliances to obtain outstanding efficiency, quality of reproduction, smoothness and breadth of frequency response. Guaranteed frequency response 40 to 15,000 cycles. Power 20 watts; impedance 8 ohms; mounting hole diameter 10¼-in.

No. 415A

Designed to provide full bass and wide range high fidelity reproduction. Utilizes the Altec Biflex principle of multiple concentric compliances to achieve amazing performance. Guaranteed frequency response 30 to 14,000 cycles. Power 25 watts; impedance 8 ohms; mounting hole diameter 13¼-in.

Altec Lansing Duplex® Loudspeakers

No. 604D

No. 604D

Improved 15-in. cone and newly designed exponential multi-cellular horn and 1600 cycle network makes it possible for this unit to have a guaranteed frequency response from 30 cycles to 22,000 cycles. Handles 50 watts of peak power without distortion. Power 35 watts (50 watts peak); Impedance 16 ohms; horizontal distribution 90°; vertical distribution 40°; mounting hole diameter 13¼-in.

No. 601B

Combines 12-in. low frequency speaker with high frequency driver unit and horn and a 3000 cycle crossover network. Frequency response 40 cycles to 22,000 cycles. Power 20 watts (30 watts peak); impedance 8 ohms; horizontal distribution 90°; vertical distribution 40°; mounting hole diameter 10¼-in.

No. 602B

Companion piece and identical to the 601B, except it is mounted on 15-in. frame with larger low frequency magnet and new high frequency driver and horn. Power 25 watts (30 watts peak); impedance 8 ohms; horizontal distribution 90°; vertical distribution 40°; mounting hole diameter 13¼-in.

Altec Lansing Portable Consoles

Meets all requirements for field use in AM, FM, and TV remote pickup. Wired for high level mixing, it incorporates two 1510A preamplifiers, one 1540A line amplifier, 530A power supply, a large illuminated VU meter and a master volume control providing control of four microphone inputs.

May be operated from either 110 v. a-c or from an external battery supply. Facilities are provided for headphone monitoring.

May be ordered with either AB carbon or Daven mixing potentiometers.

Specifications

Gain 102 db maximum, each channel; power output +25 dbm at 2% thd, 50-7,500 cps; frequency response ±1 db, 30-15,000 cps; source impedance 30/50, 125/150, 250/300, 500/600 ohms, each channel; load impedance 125/150 or 500/600 ohms; power supply 117 v., 50/60 cps, 50 watts or 270 v and 6 v batteries.

Altec Lansing Console Mounting Assemblies

This assembly houses the complete 1500 system in a console-type enclosure for use on a desk or table.

Accommodates one 1568A or one 1569A power amplifier and the equivalent of four 1510A, 1511A, or 1550A units, or any combination of these units.

Finished in blue gray.

No.	Height In.	Width In.	Depth In.	Wt. Lbs. Without Amplifiers	Each
1560A	10 $\frac{1}{4}$	24	21 $\frac{3}{4}$	40	\$135.00

Altec Lansing Consoles

Exceeds F.C.C. standards of quality. Hinged front panel permits fast servicing of mixing pots, switches, tubes and immediate access to the plug-in power supplies.

Eight low level microphone or turntable inputs are controlled by four mixing knobs. The other two knobs control four line inputs providing a control of twelve inputs with facilities for mixing six at any one time.

The output channel can be switched to either of two output lines and automatically connects the control room telephone to the unused line.

The eight watt monitor amplifier normally used for talk-back and public address can be switched to replace line amplifier in case of emergency.

The large VU meter monitors program output channel, remote lines, or the plate supply and relay supply voltages.

Cue in circuits provided on the line input controls. The console is completely self-contained.

Specifications

Gain 100 db, microphone inputs: 45 db, line-level inputs; power output +20 dbm at $\frac{1}{2}\%$ thd, 30-15,000 cps; +24 dbm at 1% thd, 30-15,000 cps; frequency response ± 1 db, 20-20,000 cps, any input to program output; source impedance 30/50, 125/150, 250/300, 500/600 ohms, mic. inputs. 600 ohms, line level inputs (150 or 600 ohms if repeat coils are used); load impedance 150 or 600 ohms, line outputs 2, 4, 8, 16 ohms, loudspeaker outputs; noise level 74 db below +24 dbm (mixer and master controls adjusted for 70 db net gain)—equivalent input noise—120 dbm; power supply 117 volts, 60 cps, 100 watts; external power available 12 vdc for relay operation.

Finished in blue gray.

230B	9 $\frac{3}{4}$	36 $\frac{1}{4}$	18	90	\$1980.00

Altec Lansing Consoles

No. 25DA

Contains five 428B preamplifiers for microphone preamplification, two 428B preamplifiers for boosters, two 429B line amplifiers, and one 429B, 8 watt monitor amplifier, two 522B power supplies, and one 523B power supply. These provide a total of nine mixing controls and eighteen input channels.

As equipped, five of the mixing controls connect with ten low level microphone inputs. Each of the other four mixers connect to one line input and one utility input. Two of these line inputs can be converted for microphone use by insertion of two extra 428B preamplifiers in the pre-wired receptacles.

The output of any of the mixer controls can be switched to either of two output channels. Each output channel has its own master mixing control and illuminated VU meter and phone jack for headset monitoring.

An independent channel for loudspeaker monitoring of either output, any of the incoming lines or the cue circuits, is provided. This channel may also be used to feed cue programs back to the remote line circuits or for talk-back or either of the two studio loudspeaker circuits.

Console wired for four 15036 line input repeating coils. Controls are color-coded according to function and placed for efficient and convenient operation.

Tube checking facilities provided. Console completely self-contained.

Specifications

Gain 100 db, microphone inputs: 60 db, utility inputs: 40 db, remote line inputs; power output +20 dbm at less than $\frac{1}{2}\%$ thd, 30-15,000 cps; +24 dbm at less than 1% thd, 30-15,000 cps; frequency response ± 1 db, 30-15,000 cps; source impedance 30/50, 125/150, 250/300, 500/600 ohms, mic. inputs. 600 ohms all other inputs (150 or 600 ohms when repeat coils are installed); load impedance 600 ohms, line, audition or cueing outputs 2, 4, 8, 16 ohms, loudspeaker outputs; noise level 70 db below +18 dbm output (mixer and master controls adjusted for 68 db net gain); power supply 117 volts, 60 cps, 200 watts; external power available 12 vdc for relay operation.

Console finished in blue gray. Table top finished in dark green.

Note—Dimensions and weight include table.

Webster Teletalk Intercommunicating Systems and Speakers

Listed by Underwriters' Laboratories, Inc.

Teletalk Systems

Dependable, economical two-way intercommunications systems. Save time; relieve congestion of telephone lines; provide crystal clear, sensitive intercommunication at the flick of a switch.

Available in designs to meet the specialized needs of all businesses. All models are housed in attractive cabinets to harmonize with the finest office furniture.

Master Stations

1100 Series: A master station in walnut grain plastic cabinet, with gold tone front and back metal panels. Sessions clock mounted on front panel. Operates on 110-125 volts, 60 cycle current only. Models of from five to ten station capacity available.

No. **1000 Series:** Same as the 1100 series but without Sessions clock. Models of from five to ten station capacity available.

No. **W606M Series:** Similar to 1000 Series except for wall mounting.

Administrative 2000 and 2100 Series

Available in two great new units; the new 2000 Series Vacuum Tube Models and the new 2100 Series Transistor Models. Both series have a host of custom features styled-in, at no extra cost; Printed Circuits;

Telear Central Control that provides, at the option of the user, completely private conversation or "remote reply" without manual operation; separate Busy Signal Light and Pilot Light; Built-in Silencing Circuit; incoming signal Volume Control; Executive Priority for rush calls; Plug-in Junction Box Connectors for easy replacement of units. Additional optional features available are Visible and Audible Annunciators, All-Call, Three Position Selector Keys, Handset and Booster Amplifier Connectors.

Units housed in Brooks Stevens styled cabinets, in driftwood or walnut finish, with rich gold-tone grille and transparent controls.

Available in a wide range of models with facilities for connecting from 6 to 60 stations.

Executive 3000 and 3100 Series

Provides instant contact with key people, however complex the organization.

Available in the 3000 Series vacuum tube models or the 3100 Series transistor models with all the fine custom features styled-

in to the Administrative Series as well as these additional optional features; Visible and Audible Annunciators and Three Position Selector Keys, Handset, and Booster Amplifier Connectors.

May be equipped with telephone-type handset for private conversations. Up to 60 stations can be obtained in standard models. Greater capacities available upon request.

Available in walnut or driftwood finished cabinets with gold-tone grilles.

Teletalk Speakers

For use with Teletalk Master Stations

Model 3D45

Flush mounting 3-in. Speaker combined with push button for operating bell, chimes, buzzer or other signaling device. Push button operates independently of speaker.

Weather-proofed construction permits installation on door jambs and other exposed areas.

Model 5G45

Has 5-inch speaker housed in a molded bakelite cabinet, simulated walnut finish.

For use in most indoor locations where noise level is not excessive.

Can be used with all master station models in the M series for receiving and replying to calls, and with the S series for receiving calls.

Also available with push buttons for use with annunciator-type master stations, with switch for originating calls by voice, or with switch to operate in connection with silencing circuit system.

Model 4H45

Type P.M. Dynamic (Alnico V) speaker. Equipped with silencing switch on top of cabinet.

Chassis diam. 4-in. Speaker size: Width 6 $\frac{3}{8}$ -in.; Height 3 $\frac{3}{8}$ -in.; Depth 6 $\frac{1}{2}$ -in. Power Capacity Maximum 5 watts.

Cabinet has walnut finished Side Panels and Gold-tone Grille. Can be placed on desk or hung on wall. Also available with call-in switch on left side of cabinet and push button on top of cabinet.

Model 5E45

A flush-mounting 5-in. speaker for interior locations where only a moderate area is to be covered and where the noise level is relatively low.

Face plate is finished in white enamel with a plastic grille over speaker opening.

Also available with annunciator push button and silencing circuit switch (Model 5E15BS).

Model 8C45-2

Type P.M. Dynamic (Alnico V) speaker. Furnished with Universal wall mounting bracket.

Moisture Proofed Cone Chassis 8-in. in diam. Speaker size: Depth 5-in.; diam. 8 $\frac{3}{4}$ -in.

Cabinet is round metal housing with baked brown crackle finish. Power Capacity Maximum 8 watts.

Any Standard Symbol as given above with the addition of a lower case subscript letter may be used to designate some special variation of Standard Equipment of particular interest in a specific set of architectural plans.

When used they must be listed in the Key of Symbols on each drawing and if necessary further described in the specifications.

Panels, Circuits and Miscellaneous

Symbol	Description
■	Lighting Panel.
▨	Power Panel.
—	Branch Circuit; Concealed in Ceiling or Wall.
---	Branch Circuit; Concealed in Floor.
⋯	Branch Circuit; Exposed.
→	Home Run to Panel Board. Indicate number of Circuits by number of arrows.

Note: Any circuit without further designation indicates a two-wire circuit. For a greater number of wires indicate as follows: +++ (3 wires) ++++ (4 wires), etc.

— Feeders. Note: Use heavy lines and designate by number corresponding to listing in Feeder Schedule.

Ⓢ Underfloor Duct and Junction Box. Triple System. Note: For double or single systems eliminate one or two lines. This symbol is equally adaptable to auxiliary system layouts.

Ⓢ	Generator.
Ⓢ	Motor.
Ⓢ	Instrument.
Ⓢ	Power Transformer. (Or draw to scale.)
Ⓢ	Controller.
Ⓢ	Isolating Switch.

Auxiliary Systems

□	Push Button.
□	Buzzer.
□	Bell.
◇	Annunciator.
◀	Outside Telephone.
◀	Interconnecting Telephone.
Ⓢ	Telephone Switchboard.
Ⓢ	Bell Ringing Transformer.
Ⓢ	Electric Door Opener.
Ⓢ	Fire Alarm Bell.
Ⓢ	Fire Alarm Station.
Ⓢ	City Fire Alarm Station.
Ⓢ	Fire Alarm Central Station.
Ⓢ	Automatic Fire Alarm Device.
Ⓢ	Watchman's Station.
Ⓢ	Watchman's Central Station.

Aluminum Conductors. For aluminum conductors, the allowable current-carrying capacities shall be taken as 84 per cent of those given in the table for the respective sizes of copper conductor with the same kind of insulation.

Bare Conductors. If bare conductors are used with insulated conductors, their allowable current-carrying capacity shall be limited to that permitted for the insulated conductor with which they are used.

Application of Table. For open wiring on insulators and for concealed knob-and-tube work, the allowable current-carrying capacities of Table 2 shall be used. For all other recognized wiring methods, the allowable current-carrying capacities of Table 1 shall be used unless otherwise provided in the code.

More Than Three Conductors in a Raceway. Table 1 gives the allowable current-carrying capacity for not more than three conductors in a raceway or cable. If the number of conductors in a raceway or cable is from 4 to 6, the allowable current-carrying capacity of each conductor shall be reduced to 80 per cent of the values in Table 1. If the number of conductors in a raceway or cable is from 7 to 9, the allowable current-carrying capacity of each conductor shall be reduced to 70 per cent of the values in Table 1. Exceptions to the foregoing are permitted in the code for certain applications.

Neutral Conductor. A neutral conductor which carries only the unbalanced current from other conductors, as in the case of normally balanced circuits of three or more conductors, shall not be counted in determining current-carrying capacities as provided for in the preceding paragraph. (In a 3-wire circuit consisting of two phase wires and the neutral of a

4-wire, 3-phase system, a common conductor carries approximately the same current as the other conductors and is not therefore considered as a neutral conductor).

Ultimate Insulation Temperature. In no case shall conductors be associated together in such a way with respect to the kind of circuit, the wiring method employed, or the number of conductors, that the limiting temperature of the conductors will be exceeded.

Use of Conductors with Higher Operating Temperatures. If the room temperature is within 10°C of the maximum allowable operating temperature of the insulation, it is desirable to use an insulation with a higher maximum allowable operating temperature; although insulation can be used in a room temperature approaching its maximum allowable operating temperature limit if the current is reduced in accordance with the table of correction factors for different room temperatures.

Voltage Drop. The allowable current-carrying capacities in Tables 1 and 2 are based on temperature alone and do not take voltage drop into consideration.

Overcurrent Protection. If the standard ratings and settings of overcurrent devices do not correspond with the ratings and settings allowed for conductors, the next higher standard rating and setting may be used, but not exceeding 150 per cent of the allowable carrying capacity of the conductor.

Deterioration of Insulation. It should be noted that even the best grades of rubber insulation will deteriorate in time, so eventually will need to be replaced.

Number of Conductors in Conduit or Tubing

The following applies only to complete conduit systems, and does not apply to short sections of conduit used for the protection of exposed wiring from mechanical injury.

1 to 9 Conductors
Rubber Covered: Types RF-32, RUF, R, RH, RW, RU and RUW
Thermoplastic: Types TF, T and TW

Definitions of Electrical Terms

- Alternating Current**—Current which reverses its direction of flow twice in each cycle.
- Ampere**—The unit of measurement for electrical current. That amount of current which will be caused to flow in a circuit of one ohm resistance when a potential of one volt is applied.
- Arrester**—A device to conduct lightning surges to the ground and limit the following line current, thus protecting the line and associated equipment.
- Carrier**—In telephony, a carrier wave impressed on a metallic circuit making possible the transmission of more than one conversation simultaneously.
- Circuit**—The complete path of an electric current including the originating device, the using device and a means of opening or closing the circuit.
- Common Battery**—A single battery, usually in the central office, which supplies direct current to all of the associated telephone circuits.
- Condenser**—(Also a capacitor) A device to introduce capacitance into an electrical circuit. Commonly used to correct low power-factor.
- Contactors**—An electro magnetic switch which may be operated by a control circuit from a remote point. Generally not fused.
- Controls**—Generally motor controls which include switches for starting, stopping, reversing and regulating the speed of electric motors.
- Cut-Out**—A fused switch for disconnecting the primary circuit from a distribution transformer.
- Decibel**—A unit of measurement for sound.
- Delta**—An alternating current, three-phase power source connected in the form of the Greek letter Δ or Delta.
- Direct Current**—Current which flows steadily in one direction in a circuit.
- Distribution Line**—The conductors with laterals serving transformers which feed secondary circuits.
- Follow Current**—That line current which tends to follow a lightning discharge through an arrester to ground.
- Footcandle**—A unit for measuring illumination. The illumination produced at a surface, all points of which are at a distance of one foot from a standard candle.
- Footlambert**—The average brightness of any surface emitting or reflecting light at the rate of one lumen per square foot.
- Fused Disconnect**—Generally an air break switch with a fusing unit in the blade. For opening and closing high voltage circuits.
- Grounded Circuit**—In telephony, a circuit where the current flow in one direction is through a metallic conductor while the return is through the ground. In power use a circuit is grounded when one wire of the circuit is connected to ground at one or more points.
- Kilowatt**—A unit of measurement equivalent to one thousand watts.
- Line Loss**—The voltage drop resulting from the passage of electrical current through the resistance of the line.
- Lumen**—The total amount of light falling on an area of one square foot, all points of which are one foot from a source equal to one standard candle.
- Metallic Circuit**—In telephony, a two wire or completely metallic circuit, no part of which is through the ground.
- Microwave**—A very high frequency radio transmission with line-of-sight characteristics. Now replacing long distance telephone lines.
- Motor Starter**—A switch with current limiting characteristics or delayed fusing to accommodate the high initial current of motors being started.
- Network**—An assembly, usually consisting of capacitors and resistors, to provide the required electrical characteristics in a telephone circuit. The network in the base of a telephone set is a very good example.
- Normally Closed**—Contacts which open when the switch is operated.
- Normally Open**—Contacts which close when the switch is operated.
- Ohm**—The unit of electrical resistance or the resistance of a circuit in which a potential difference of one volt will produce a current of one ampere.
- Panel**—Commonly a device to provide individual switching and circuit protection to circuits branching from the consumers service entrance.
- Power Factor**—The ratio of active power to apparent power.
- Protector**—A device to protect a telephone circuit from the effects of lightning or other high voltages accidentally impressed on the line.
- Receiver**—The telephone device which transforms the transmitted electrical impulses back to audible sound waves.
- Recloser**—A cutout which automatically recloses a specified number of times after each operation of the fuse element.
- Resistor**—A device used to limit or reduce the flow of current in a circuit.
- Ringer**—In telephony, the signalling bell which rings to indicate there is an incoming call on the line.
- Secondary Line**—The conductors connected between the secondaries of distribution transformers and the consumers service entrances.
- Single Phase**—A two-wire circuit energized by a single alternating electromotive force.
- Sub-Station**—An assemblage of equipment for changing transmission voltages to distribution voltages. Generally includes transformers, switching and protective equipment, support structures and enclosing fence.
- Three Phase**—A combination of three circuits energized by alternating electromotive forces that differ in phase by 120 degrees or one-third of a cycle.

Definitions of Electrical Terms

Concluded

Three Phase, Four Wire System—A three phase four wire system is a system of alternating-current supply comprising four conductors, three of which are connected as in a three-phase three-wire system, the fourth being connected to the neutral point of the supply, which may be grounded.

Transformer—An electrical device without continuously moving parts which transforms electrical energy from one circuit to another with changed values of voltage and current.

Transmitter—The telephone device into which a person speaks and which transforms the voice into electrical impulses for transmission.

Transmission Line—The conductors which transmit electric power from generating station transformers to remote transformers feeding distribution lines.

Volt—A unit of electromotive force which, when steadily applied to a circuit whose resistance is one ohm, will produce a current of one ampere.

Voltage Regulator—A device for maintaining a constant voltage on a line.

Watt—The electrical unit of measurement for power which is roughly equivalent to the work done by one ampere of current at a potential of one volt.

Wye—An alternating-current three-phase power source connected in the form of a Y.

Equivalent Values of Electrical, Mechanical and Heat Units

Unit	Equivalent Value in Other Units
1 Watt =	1 joule per second 0.001341 hp. 3.415 heat units per hour 0.73756 ft.-lb. per second 0.0035 lb. water evap. per hour 44.254 ft.-lb. per minute

Electrical Formula for Determining Amperes, Horsepower, Kilowatts and Kilovolt-Amperes

Alternating Current

Desired Data	Single Phase	*Two-Phase Four-Wire
	$I_x E_x \cos. \Theta$	$I_x E_x 2x \cos. \Theta$
Kilowatts	$\frac{1000}{I_x E}$	$\frac{1000}{I_x E_x 2}$
Kva.	$\frac{1000}{I_x E_x \% \text{Eff.} x \cos. \Theta}$	$\frac{1000}{I_x E_x 2x \% \text{Eff.} x \cos. \Theta}$
Horsepower Output	$\frac{746}{I_p x 746}$	$\frac{746}{I_p x 746}$
Amperes when Hp. is Known	$\frac{E_x \% \text{Eff.} x \cos. \Theta}{Kw. x 1000}$	$\frac{2x E_x \% \text{Eff.} \cos. \Theta}{Kw. x 1000}$
Amperes when Kilowatts is Known	$\frac{Kva. x 1000}{E}$	$\frac{Kva. x 1000}{2x E}$
Desired Data	A-C. Three-Phase	D-C.
Kilowatts	$\frac{I_x E_x 1.73 \cos. \Theta}{1000}$	$\frac{I_x E}{1000}$
Kva.	$\frac{I_x E_x 1.73}{1000}$
Horsepower Output	$\frac{I_x E_x 1.73x \% \text{Eff.} x \cos. \Theta}{746}$	$\frac{I_x E_x \% \text{Eff.}}{746}$
Amperes when Hp. is Known	$\frac{746}{I_p x 746}$	$\frac{746}{I_p x 746}$
Amperes when Kilowatts is Known	$\frac{1.73x E_x \% \text{Eff.} x \cos. \Theta}{Kw. x 1000}$	$\frac{E_x \% \text{Eff.}}{Kw. x 1000}$
Amperes when Kva. is Known	$\frac{1.73x E_x \cos. \Theta}{Kva. x 1000}$	$\frac{E}{Kva. x 1000}$
	$\frac{Kva. x 1000}{1.73x E}$

*In two-phase, three wire circuits the current in the common conductor is 1.41 times that in either other conductor.
 Note: E = Volts; I = Amperes; % Eff. = Per Cent Efficiency; Cos.Θ = Power Factor.

Wiring Formula For Copper Wire

For determining the correct wire size for a particular installation, an adaptation of ohms law may be used. The formula below permits such a determination, and considers the effect of voltage drop. To use it, the distance of the circuit one way (D) must be known, and the allowable voltage drop (V) must be selected. The conductor area in circular mils, then is:

$$C.M. = \frac{2DxCxR}{V}$$

Where r is the resistivity (ohm-circular mil per foot) of the conductor. For annealed copper conductors used r=10.8; for hard drawn copper conductors use r=11.06. Note: these values are based on a temperature of 30°C, and will be larger at higher temperature.

For allowable current carrying capacity for the selected conductor size, consult the National Electric Code.

Miscellaneous Information

- Latent heat of vaporization of water = 970 BTU per lb.
- Latent heat of melting of water = 144 BTU per lb.
- To evaporate 1 lb. water from and at 212° = 16.859 Kw. minutes.
- To evaporate 1 lb. water from and at 212° = 0.281 Kw. hours.
- Weight per cu. ft. of water = 62.42 lb.
- Weight per gallon of water = 8.33 lb.

Units of Measure

The following mechanical units of the Metric system are International Standards. From these Metric units electrical units are derived and converted for engineering use.

Meter—The fundamental unit of length in the Metric system; one ten-millionth of the distance along a meridian from the pole to the equator; approximately 39.37 inches.

Gram—The fundamental unit of mass or, practically, of weight. Equals the weight of a cubic centimeter of water at a temperature of 4 degrees Centigrade.

Second—A unit of time, 1/60 of a minute; a unit of angular measure, 1/60 of a minute of arc.

Electrical Units

Volt—The practical unit of electromotive force; the electrical pressure which will cause a current of one ampere to flow through a resistance of one ohm. The force which will charge a condenser of one farad capacity with a coulomb of electricity.

Ohm—The practical unit of the resistance of a material to the flow of current. That resistance which will permit the flow of one ampere when a voltage of one volt is imposed across the resistance.

Ampere—The practical unit of the rate of flow of electrical charge; one coulomb per second across any given cross-section of a circuit. The current that will flow in a resistance of one ohm when an electromotive force of one volt is impressed across the resistance.

Coulomb—A quantity of electrons; the quantity of electrons passing any given cross-section of a circuit when a current of one ampere flows for one second. The quantity of charge stored in a condenser of one farad when subjected to an e.m.f. of one volt.

Farad—The practical unit of electrical capacity. The capacitance of a condenser whereby a stored charge of one coulomb produces an e.m.f. of one volt.

Watt—The practical unit of electrical power. The rate of expenditure of electrical energy. One joule per second.

Joule—The practical unit of energy or work. The work done to raise the potential of one coulomb one volt.

The Circular Mil

The standard unit of wire cross-section in English and American wire tables. Equals the area of a circle whose diameter is one mil (0.001 inch).

To obtain the number of circular mils in a solid wire of a given diameter, express the diameter in mils and then square it.

To obtain the diameter of a solid wire having a given number of circular mils, take the square root of the circular mils and the result is the diameter in mils.

One circular mil equals 0.7854 square mils.

Ohm's Law

The relationships between current, voltage and resistance in a circuit are expressed by Ohm's law. Where I = current in amperes, E = voltage in volts, and R = resistance in ohms, the following relations permit any one value to be found when the other two are known:

(1) To find the current through a circuit when the voltage across the circuit and the resistance of the circuit are known:

$$I = \frac{\text{Voltage}}{\text{Resistance}} = \frac{E}{R}$$

(2) To find the voltage across a circuit when the resistance of the circuit and the current through it are known:

$$E = \text{Current} \times \text{Resistance} = IR$$

(3) To find the resistance of a circuit when the current through it and the voltage across it are known:

$$R = \frac{\text{Voltage}}{\text{Current}} = \frac{E}{I}$$
