GENERAL CATALOG

NO. 105

GraybaR

ELECTRIC COMPANY

CATALOG NO. 105

As the owner of a Graybar Catalog No. 105 you have in your possession the most complete catalog of electrical supplies and equipment yet published. We estimate that approximately 65,000 items are listed covering nearly all the commonly used products and many specialties. However, the scope of the Electrical Industry has increased so rapidly that even this book cannot be complete. If you don't find what you want listed, please call our nearest office and warehouse (see last page for location).

**PRICES IN THIS CATALOG ARE
APPROXIMATE LIST PRICES AT THE TIME OF PUBLICATION AND

PRICE OF THIS CATALOG \$10.00 POSTPAID

WHAT YOU CAN EXPECT

. . . all the products you need from a single source.

Graybar offers the largest variety of electrical supplies and equipment available from any single source. On standard items, even on items which are not usually stocked, we can give you the fastest possible delivery. More than 100,000 electrical products for the home, the office, industry and government, are available through Graybar to fill your electrical requirements—emergency or normal. One order, one responsibility will save you time and money.

. . . the quality and reliability you want (and get) from the nation's leading electrical manufacturers.

The Graybar tag is a symbol of quality and dependability. We have a reputation for distribution of top grade, top value supplies and equipment designed to do any kind of electrical job. Long term association with nationally known leaders in electrical manufacturing (many relationships existing for close to and, even more than, half a century) has established Graybar as THE place to come for the right products to answer your electrical needs. You can purchase with confidence, when you buy from Graybar.

. . . the specialized help you require to assist with your problems.

It's not enough to sell the best products—at least that's the way we feel. Graybar offers, as well, know-how in the correct use and application of these products. Our specialists in cooperation with our Suppliers' engineers and technicians are available to help you with unusual electrical problems. They have a thorough knowledge of the materials and equipment best suited to your requirements. Call Graybar first when you need special help. It's the place to get it!

FROM Graybar . . .

. . . a localized service with national resources.

Graybar service can be had from coast to coast, border to border. It is a localized service with national scope and resources. In more than 130 locations established strategically throughout the country, you can get "home town" service from your local Graybar house. It's as near as your telephone—and waiting for your call. For emergency needs . . . for special help . . . for complicated orders . . . for routine purchases, call Graybar first! It's the sure, fast, convenient way and only an arm's length away.

. . . service that's sure and satisfying.

The guesswork is taken out of your delivery dates when you plan your purchasing with Graybar. You get the materials you need when and where needed. Through our unique, speedy, service set-up, the materials you order are shipped from our widely diversified local warehouse stocks immediately. Out of stock items will be expedited from other of our branch warehouses or direct from our numerous, loyal sources of supply. Billing is fast, too! No long wait to learn the exact status of your account.

. . . seasoned experience backed by streamlined operation.

Graybar's experience predates much of the vast electrical industry as we know it. Yet in product lines, methods and specialized services, we endeavor to keep a step ahead of today's requirements. Founded in 1869, we have kept pace of rapid developments in the electrical and electronics fields. Actually the name Graybar is only thirty-two years old but company tradition extends back into the beginning of the Western Electric Company and the electrical industry itself, giving us eighty-nine years of electrical heritage and know-how.

. . . a personal interest in serving you and serving you right.

Graybar people own their company. That's why they are anxious to give you the kind of service you expect. They have a personal interest in wanting to maintain customer good will, for it not only protects their jobs, it protects *their* company. Graybar employees purchased their company in 1929 from Western Electric and have made a success of it ever since because of this personalized service. Whatever your requirements, be they catalog information or quotation service, counsel on problems or delivery of an order, you get this friendly, efficient service from *every* Graybar House.

to Jacksonville, Florida _____ From Dallas, Texas . . . to Duluth, Minnesota

PRICES . . .

Prices found in this catalog are revised to agree with the latest lists at the time of going to press. It is understood that they are subject to change or correction without notice and are, therefore, not offered by us as a quotation. It is contemplated that all prices are for shipment from our warehouse unless otherwise specified.

ORDERS . . .

Where possible, we have placed opposite each article a catalog number. When ordering give the catalog number and description of the article required.

You are requested to specify the routing over which you prefer shipments to be made. In the absence of specific instructions, we shall use our best judgment in selecting the route, but we are not responsible for extra trucking expenses at destination.

TERMS . . .

Our terms are 30 days net from date of invoice.

Payments may be made by check, bank draft, postal or express money order, drawn to the order of or endorsed to the order of the Graybar Electric Company, Inc.

Payments in currency through the mails even if registered are not recommended and are at sender's risk. We are not responsible for loss or miscarriage of the mails.

Receipts are not issued for remittances unless requested. Our endorsement on remittance is acknowledgment of the receipt of the funds.

We solicit new accounts on a credit basis and in order to give prompt service, request (if you are not well rated by the Commercial Agencies) that you forward bank and trade references or other information of a credit character with your order. These will be immediately acted on and the results held in strict confidence for our sole use. When reasonably satisfactory, shipment will follow with all possible dispatch.

To avoid the delay incidental to communicating with references, etc., when immediate shipment is desired, it is suggested that you send cash in advance or authorize us to ship your first order C. O. D. or sight draft bill-of-lading attached, through a local bank. This will permit us to make immediate shipment of your initial order and communicate with you as quickly as possible relative to the establishment of credit, if you desire open account facilities for future convenience.

RETURNED GOODS . . .

We can take no responsibility for any material returned without our authorization. Where we give shipping instructions for returning goods, they should be carefully followed so that credit may be issued promptly.

SHIPMENTS . . .

As experienced packers are employed, and as reasonable care is used in packing, we cannot be held responsible for breakage in packages which are delivered in "good order" by the carrier.

Shipments of glassware are made at your risk.

Goods ordered to be shipped by parcel post will be sent only at the purchaser's risk of loss or damage.

Goods are sold f. o. b. shipping point unless otherwise specifically stated.

RESPONSIBILITY . . .

All statistical information contained in this catalog, pertaining to *Strength* and *Proper Working Loads* of material, tools or machines is derived from tables compiled by the Manufacturers thereof, and is reprinted by us for the convenience of the buyer. This information is necessarily based upon *use under proper working conditions*. We assume no responsibility by this reprint, and in no way do we give you a guarantee, expressed or implied, on any material.

Phelps Dodge Building Wire and Cable

Single Conductor—600 Volts N.E.C.

**Thermoplastic Insulated
Habirdure—Type TW**

Insulated with Habirdure, a synthetic resin possessing high dielectric strength. Braided covering is not necessary because of the toughness of this insulation. Habirdure is practically non-aging, is highly resistant to moisture, oil, acids and alkalis and is easy to pull. Omission of braided covering reduces outside diameter to a minimum.

Type TW: Approved by N.E.C. for general purpose wiring and also for use in wet locations at 60° C.

Phelps Dodge Building Wire and Cable
Single Conductor—600 Volts N.E.C.
Rubber Insulated Fibrous Covered Types R, RH, RW and RHW

Type R: Code grade, approved by Underwriters' Laboratories for use in dry locations at temperatures not exceeding 60 C.

Type RH: Heat resisting grade, approved by Underwriters' Laboratories for use in dry locations at temperatures not exceeding 75 C.

Type RW: Moisture resisting grade, approved by Underwriters' Laboratories for use in wet locations at tempera-

tures not exceeding 60 C.

Type RHW: Heat and moisture resisting grade, approved by Underwriters' Laboratories for use in wet or dry locations at temperatures not exceeding 75 C.

Type RH-RW: RH wire except for sizes 14 and 12 AWG and all RW wire is approved and labeled as dual purpose RH-RW.

Concentric Stranded

For installations where greater flexibility is required than obtainable with solid conductors. Always recommended for larger sizes where solid conductors would make cable too stiff to handle.

Packaging on Reels

Reels, where used, will be charged separately and will be credited in full if returned in good condition, freight collect, within 12 months from date of shipment. Obtain return tags and shipping instructions from Graybar.

Phelps Dodge Service Drop and Entrance Cable

2- and 3-Conductor

Concentric bare neutral cable may be used economically for many types of installations, such as service drop cable from secondary wires at the pole to point of attachment at building, service entrance cable or combination service drop and service entrance permitting a non-splice connection between service wires at pole and service equipment.

Also has further use as a range cable and can be used for this service within the building up to range receptacle. Has a smooth moisture-resisting flame-retarding finish. Standard color for Style SD cable is black. Standard color for Styles SE-U and SE-A is neutral gray; however, other colors can be furnished upon request. The coverage of insulated conductors by the concentrically stranded bare neutral makes Phelps Dodge Service Drop and Entrance Cables virtually tamperproof.

Standard fittings are available for all types.

Type SD Service Drop Cable

Approved by Underwriters' Laboratories

Primarily a service drop cable for use from secondary wires at the pole to point of attachment at building. May also be used as a service entrance cable if protected by conduit.

Has either one or two insulated inner conductors over which is laid a concentric bare conductor protected by paper tape and moisture and flame-resisting braid. In 3-conductor cables, insulated conductors are coded for quick identification.

Type SE-A Service Entrance Cable

(Armored)

Approved by Underwriters' Laboratories as Type SE

Armored service entrance cable for use without conduit. Similar in construction to Type SE-U except for a flat steel armor tape applied directly over the bare neutral. Approved for the same service as Type SE-U without exception. Type SE-A cable is generally used on the exterior of a building where it may be subject to mechanical injury.

Size 12 Solid—Medium hard drawn.

Size 10 Solid—Annealed.

Other Sizes—Stranded soft drawn.

Type SE-U Service Entrance Cable

(Unarmored)

Approved by Underwriters' Laboratories as Type SE

Can be installed on exterior and interior of a building without conduit.

Approved by the Underwriters for service directly to the range receptacle; may be used for the entire service or any portion of the wiring between the pole line and the electric range or service receptacle.

The use of Type SE-U cable reduces the items required for any installation to a minimum and thereby effects savings where used.

Type SE-U entrance cables have either one or two insulated inner conductors over which is laid a concentric bare conductor protected by rubberized tape and a substantial weatherproofed cotton braid, finished gray or other suitable color if desired, and forming a smooth, moisture-proof covering.

Phelps Dodge General Purpose Type RR Cable For Direct-Burial and Duct Use—Neoprene Sheathed Habirprene

Single Conductor

2-Conductor

3-Conductor

Designed for use in ducts or for direct underground burial. Tough Habirprene (neoprene) sheath is resistant to moisture, alkalis, acids and abrasion, assuring long service life in underground installations.

Habirduct moisture resistant insulation is supplied for 600 volt cable, and Habirite ozone resistant insulation is supplied for 5,000 volt cable.

Habirprene sheath conforms to A.S.T.M. Specification D-752, latest issue. Habirprene sheathed cables conform to the dimensional requirements of I.P.C.E.A. specifications

for rubber or thermo-setting synthetic sheaths. Heavier sheaths for unusually severe service conditions can also be furnished.

Single conductor cables are assembled with sheath directly over insulation; multiple conductor cables have single rubber-filled tapes over individual conductors, and are assembled with suitable fillers and a rubber-filled tape over the assembly.

Cables of other sizes and voltage ratings are also available. For further information contact Graybar.

Phelps Dodge Varnished Cloth Insulated Cable

For connecting equipment of all voltages in power stations and substations. Used in buildings instead of rubber-insulated cable where special reliability is necessary, and instead of paper insulation in lead sheathed cable subject to crystallization from vibration.

Varnished cloth tapes are helically wound over conductors with mineral base grease between wraps of the insulation.

Coverings: Varnished cloth insulated cables are covered for various applications as follows: Apparatus Cable, with saturated cotton braid or varnished braid; Station Cable, with flameproof braid; Underground Cable, lead sheath; for building mains, with saturated cotton braid on rubber-filled tape and over-all saturated cotton braid; for outdoor structures, one rubber-filled cotton tape, two galvanized steel tapes with asphalted jute over each side of armor.

***Preferred voltage ratings" for general apparatus, recommended by N.E.M.A.—N.E.L.A. Joint Committee on voltage standardization.

Two-conductor cables will be furnished in round construction unless flat construction is specified on orders.

All cables in accordance with I.P.C.E.A. and A.S.A. standards.

For additional information, including prices, contact Graybar.

Phelps Dodge Non-Metallic Sheathed Cable

Underwriters Approved

Perma-Dure Thermoplastic Multi-Purpose Type UF and NMC Underground Feeder and Branch Circuit Cable

These new cables eliminate costly conduit and permit low cost installations in locations where resistance to moisture and corrosion are basic requirements.

Highly resistant to flame, moisture, rot and abrasion. Flexible, lightweight, simple to install, strip and connect.

Single Conductor—Type UF

PD-X Non-Metallic Sheathed Cable

Type NM—600 Volts

Inspected and Labeled by Underwriters' Laboratories, Inc.

Connections easily and quickly made. Insulation is clean and smooth. Paper armor is applied with a long twist. Quickly removed, no sticking. Barrier tape keeps finishing compounds out of the cable.

For use in new and old house wiring for all circuits beyond entrance where permitted by local code.

Phelps Dodge Flexible Cords

Type S or SO—600 Volts

Used as portable power supply cords for small electric tools and machinery. Listed by National Electrical Code as suitable for pendant or portable application in damp places for extra hard usage.

Type S has Buna-S synthetic rubber jacket; type SO jacket is neoprene.

Size A.W.G. No.	Two-Conductor		Three-Conductor		Four-Conductor	
	Approx. O.D. In.	Approx. Shp. Wt. 1000 FL	Approx. O.D. In.	Approx. Shp. Wt. 1000 FL	Approx. O.D. In.	Approx. Shp. Wt. 1000 FL

Type SP Cord—300 Volts

All rubber two conductor parallel rip type cord. Used for wiring lamps and other small devices. Available in two sizes, #18 A.W.G. and #16 A.W.G.

Phelps Dodge Lead Wire

For Motors, Transformers, Switchboards and Appliances

Furnished with tinned or alloy coated flexible stranded copper conductor, with paper separator.

Insulated with heat resistant rubber insulation and covered with cotton braid with heat resistant lacquer finish.

*Spools.

Prices on application.

Phelps Dodge Armo-Lok Interlocked Armor Cable

Varnished Cloth Insulated

Provides industrial plant and electric utilities engineers a unit package, metal-clad line of materials to replace cables in conduit or in underground ducts or metal clad bus.

System is made up of Armo-Lok power and control cables with a fully coordinated line of terminators, straight and branch joints and junction boxes, installed on racks, or in troughs or baskets with a pleasing over-all appearance.

Cables furnished with galvanized steel, bronze or aluminum armor.

Varnished Cambric Insulated

Phelps Dodge Neoprene Arc Welding and Power Supply Cable

Cable is made with a super flexible conductor composed of fine, soft-drawn, bare copper wires. Has paper separator for ease in stripping and greater flexibility.

Sheathed with a tough, durable neoprene compound that resists heat, oils, acids, alkalis. Cable meets full requirements of A.S.T.M. Specifications D-752.

2	66,360	3	.1487	.320	202.9	1,071	2913	2299	.1641	.1633

Note—Standard Weights, Resistances and Breaking Strengths are calculated and rounded off according to the methods prescribed in ASTM B-258 and the following formulas.

Weight, lbs. per 1000 ft. = C.M. × 0.00302699 × 1.02*
 Weight, lbs. per mile = C.M. × 0.0159825 × 1.02*

*The factor 1.02 in the above provides for the increase in weight due to stranding. Use 1.01 for conductors consisting of 3 strands.

Variations in the above weights are to be expected in commercial practice.

D.C. Resistance, ohms per 1000 ft. = $\frac{P}{C.M.} \times 11.8504 \times 1.02^{**}$

P = 910.15 ohms (mile, pound) for Hard Drawn Wire and 905.44 ohms (mile, pound) for Medium-Hard Drawn Wire.

**The factor 1.02 in the above provides for the increase in resistance due to stranding. Use 1.01 for conductors consisting of 3 strands.

The Resistance values are based on ASTM specifications; the values shown are maximum and thus higher than the average values for Commercial Cables.

Breaking Strength, lbs. = Tensile Strength, minimum psi.*** × C.M. × 0.7854 × 0.9**** × 10.6.

***Tensile Strength, minimum psi, as given in the appropriate ASTM specifications for Hard Drawn and Medium-Hard Drawn Wire for the respective diameters of the individual strands.

****The factor 0.9 provides for the decrease in tensile strength due to stranding.

Phelps Dodge Weatherproof Wire and Cable Type URC—Triple Braid

Made to conform to the requirements of ASA specifications for Weather-resistant Wire and Cable, URC Type, which are the recognized American Standard for this product.

Phelps Dodge Traffic Signal Control Cable

**Habirdure Insulated—600 Volts
Solid Conductors**

Designed for control wiring on traffic-signal circuits. It can be installed in conduit or ducts, in open air, or buried directly in the earth.

Can be easily and readily installed because color coding of the individual conductors facilitates circuit identification. The jacket of smooth Habirdure allows easy pulling into conduits and ducts. Habirdure cable is practically non-aging, is non-inflammable and is highly resistant to oils and corrosive chemicals.

Individual conductors are solid annealed bare copper insulated with 1/32-in. color coded Habirdure. The assembled conductors, with necessary fillers to make round and compact, are covered with a durable cable tape and overall is applied an extruded black Habirdure jacket.

Phelps Dodge Insulated Wires and Cables

General Information

Phelps Dodge wires and cables are insulated with rubber thermoplastic material, paper or varnished cloth.

Some of the special compounds regularly furnished by Phelps Dodge are briefly described. Complete specifications and information on these types of insulation will be furnished on request.

Code Grade Compound Underwriters' Type R

A standard compound, although designed primarily to meet minimum requirements of National Electrical Code, possesses superior electrical, mechanical and aging properties.

Habirite

Habirite is a high voltage compound of butyl rubber for use in circuits up to 30,000 volts in both single and multiple conductor constructions. It is corona-resistant and has remarkable aging qualities.

Recommended for installation at low voltages where cable is to be subjected to alternate wet and dry conditions up to 85 C. Habirite is furnished with any of the standard coverings such as lead sheath, neoprene sheath, cotton braid, asbestos braid, etc. Conforms to A.S.T.M. Specification D-1352 and I.P.C.E.A. Standard S-19-81 Appendix O ozone resistant butyl rubber insulation. The principal application is in medium voltage distribution circuits and series street lighting.

Habirdure

Insulated with a plasticized synthetic resin which is non-inflammable, highly resistant to oils and corrosive chemicals. Mechanically tough and requires no outer protective covering. Has exceptionally high dielectric strength and is highly corona-resistant. Habirdure insulation is practically non-aging as it does not oxidize. Made in a wide variety of fadeless colors. The clean, smooth, tough finish makes it easy to install. Conforms to A.S.T.M. D-734 and I.P.C.E.A. Standard S19-81.

Habirduct

Underwriters' Type RH and Type RW

A moisture and heat resistant rubber insulating compound. Conforms to requirements of Underwriters' Laboratories for Type RH and Type RW insulations and to the requirements of A.S.T.M. Specifications D-754 and D-755. It is the recommended insulation for secondary network cable and other low voltage constructions for installations requiring a heat and moisture resisting grade of insulation.

Cable is furnished with any of the standard coverings such as lead sheath, neoprene sheath, cotton braid, asbestos braid, etc. Habirduct wire and cable is suitable for operation at conductor temperatures up to 75 C.

Available also is a combination RII-RW type wire which is approved by Underwriters' Laboratories for use as Type RW at temperatures up to 60 C., and as RII up to 75 C.

Type RHW

A heat and moisture resistant rubber insulation compound incorporating the most modern development. It conforms to the requirements of Underwriters' Laboratories for Type RIIW insulation and is approved by Underwriters for use in either wet or dry locations with conductor temperatures up to 75 C.

Habirprene

Habirprene is a generic term for the neoprene compounds used as wire and cable coverings. Habirprene jacket provides a tough abrasion resistant covering for many types of cables. Not affected by weather or sunlight and can be used in locations where exposed to oil, acids and alkalis, conforming to A.S.T.M. D-752 and I.P.C.E.A. Standard S-19-81 Appendix K.

For additional information contact GRAYBAR.

Phelps Dodge Slow Burning Wire and Cable

Approved by Underwriters' Laboratories

Triple Braided

Supplied with three cotton braids, each thoroughly saturated with white fireproof compound. The compound used on the outer braid provides a hard smooth finish, with no sacrifice of conductor flexibility.

Recommended for use in furnaces, boiler rooms, foundries and other installations having continuously high temperatures.

Made to conform to the requirements of ASA specifications for Slow-Burning Wire and Cable, which are the recognized American standard for this product.

Contact Graybar for prices.

Phelps Dodge Rectangular Copper Bus Bar

Minimum Conductivity 98%.

Made to conform to the requirements of ASTM specifications which are the recognized American standards for this product.

Processed to a uniform temper and to meet close dimensional and straightness requirements.

Special sectional shapes furnished as specified.

Phelps Dodge Bus Tube

Extruded and Drawn—Seamless Copper

Minimum conductivity, 98%.

Made to conform to the requirements of ASTM specifications which are the recognized American standards for this product.

Tubular bus shapes are processed to a uniform temper and to meet close dimensional and straightness requirements.

These shapes are characterized by greater mechanical rigidity per square inch of cross-section, and provided for better heat dissipation, decreased "skin effect," lower corona losses and better efficiency of transmission at power frequencies.

Tubular shapes may be easily bent or flattened for application of terminals or to meet special installation requirements.

Anaconda Underground Service Cable

Type USE—Durasheath Jacketed

600 Volts

Approved by Underwriters for use as one cable from pole underground to house to meter.

Neoprene jacket construction furnishes a high degree of resistance to flame, sunlight, oils and soil acids and alkalis. On request, cable furnished with 60% rubber jacket instead of neoprene.

Conductor size should be adequate, particularly for buried cables, to reduce danger of mechanical trouble.

Insulation, Type RW, moisture-resistant.

Types USE and UF—600 Volts—Copper

Single Conductor

Anaconda Service Drop and Secondary Cable
2 Plus 2 Type N-SD and Type K—300 Volts

Type N-SD (2 plus 2)

Type K

2 Plus 2 Type N-SD: Insulated conductors are covered with a wall of rubber and another wall of neoprene, providing improved insulating quality and equal weathering properties.

Type K: Consists of two solid or stranded aluminum conductors; neoprene insulation on each, laid parallel, jute fillers, saturant and finish per ASA Standard C8.19, and a neutral conductor of hard-drawn aluminum ribbons applied concentrically over-all. Not approved by U/L. Inc.

Aluminum—2 Plus 2 Type N-SD

*Conductors insulated with vinyl resin thermoplastic compound.
 †Conductors insulated unless otherwise specified, with Type ANW (Heat-resistant) rubber compound. Other compounds can be supplied.
 ‡A vinyl resin thermoplastic compound.
 Based on IPCEA Standard S-19-81, 1st Edition, January 1946 with additions and corrections thereto.
 Conductor sizes listed are standard for control cables. Nonstandard sizes can be supplied to purchaser's specification. These conductor assemblies are representative. Others can be furnished if in quantity.
 These data are approximate and subject to normal manufacturing tolerances.
 Prices on application.

*Insulated with rubber compound.

**Insulated with Type AB (Anaconda Butyl) ozone and heat-resistant compound.

Durasheath cable with light jacket is recommended by IPCEA for use in conduit and underground ducts; with heavy jacket for aerial and direct burial.

*Insulated with Type AB (Anaconda Butyl) ozone and heat-resistant compound.

Based on IPCEA Standard S-19-81, 2nd Edition, February, 1951.

Heavier jacket thicknesses may be advisable where service conditions are unusually severe.

These data are approximate and subject to normal manufacturing tolerances.

*Tape or braid over individual conductor insulation.

†Three conductor, rubber power cable can be supplied, shielded up to 15,000 Volts.

‡For building wire, N.E.C. permits the use of a 3/4-inch wall of Types R and RII insulations on sizes No. 14 and 12 A.W.G. for 600-volt service.

§Lead thickness will differ in some sizes if underwriters' requirements are followed.

Based on IPCEA Standard S-19-81, 1st Edition, January, 1946 with additions and corrections thereto.

These data are approximate and subject to normal manufacturing tolerances.

Prices on application.

Conductors insulated, unless otherwise specified, with Type RII (heat-resistant) rubber compound. Other compounds can be supplied.

*Recommended insulation thicknesses apply to single-conductor and individual insulated conductors of multi-conductor cables.

Cables rated 2001 to 7000 volts are insulated with an ozone-resistant and heat-resistant compound, (Anaconda Butyl).

For two-conductor 600-volt concentric mining machine cable, 1/4 inch greater insulation thickness than shown above is recommended.

Anaconda Portable Power Cable
Securityflex—0-600 Volts
Single Conductor

Conductors are insulated, unless otherwise specified, with Type RH (heat-resistant) rubber compound. Other compounds may be supplied.

Steel wires not to exceed 10% of the area of the conductor may be substituted for copper when greater tensile strength is required.

†Based on 1000 foot lengths. Longer lengths can be furnished to purchaser's specifications.

All types and sizes of portable cables for mine use branded with the designation 102 BM, by authorization of Underwriters' Laboratories, Inc.

Instead of standard neoprene fillers, Type W cables will be manufactured to order with jute fillers for winding on very small diameter reels.

4-conductor Types W and G cables, 2001-5000 volts, can be supplied.

Special cables and cables with other numbers of conductors can be furnished.

These data are approximate and subject to normal manufacturing tolerances.

Prices on application.

Anaconda Portable Power Cable

Type SH—2001-7000 Volts

3-Conductor—Securityflex

Complies with U. S. Bureau of Mines and Pennsylvania Department of Mines Specifications

Manufactured in accordance with IPCEA Standard S-19-81, Second Edition February, 1951. Securityflex Neoprene Jacket highly resistant to abrasion, particularly to mechanical cutting. Also resistant to flame, moisture, oils and grease, acids and alkalis.

1000	25,193	1630	1.680	3770	4315

*Based on an ambient temperature of 40°C. Yield load factors of from about 32% for No. 2 A.W.G. to 23% for No. 3/0 A.W.G. and larger. Since ambient generally is below 40°C, load factor may then be much higher than indicated without overheating cable.

Based on IPCFA standard S-19-81, 2nd Edition Feb., 1951.

†Non-returnable Reels.

Conform to U. S. Bureau of Mines standards.

†Based on 1000-foot lengths. Longer lengths can be furnished to purchaser's requirements.

§Not included in U. S. Bureau of Mines standards since the Bureau does not approve operation of drills or remote control stations without grounding wire. All types and sizes of portable cables for mine use branded with the designation 102 BM, by authorization of Underwriters' Laboratories, Inc.

These data are approximate and subject to normal manufacturing tolerances.

Prices on application.

Anaconda Portable Cords

Approved by Underwriters' Laboratories, Inc.

**Securityflex—Type SJO
Light Duty—300 Volts**

Designed for hard usage, pendant or portable in either moist or dry places.

Conductors insulated, unless otherwise specified, with Type RH (heat-resistant) compound.

Prices on application.

Anaconda Copper Bus Conductors

Flat Bars—Tubes—Channels—Square Tubes—Bare Cable
Commercially Hard Drawn

Copper conductors, because of their low resistance, low losses, high thermal conductivity and excellent resistance to corrosion, are particularly suited for use in bus systems.

Supplied in several forms to provide mechanical and electrical characteristics required for the best and most economical performance of a particular bus system design.

Flat Bars

Shape provides maximum surface for heat dissipation. Capable of unlimited direct-current capacity in properly designed multibar busses.

Usually limited to 3000 amps on a-c systems. Available in a wide range of sizes.

For information, contact Graybar.

BARS

ROUND TUBES

Round Tubes

Provides relatively large cross-sectional area in minimum space. Rigid, suitable for bending and the long spans in outdoor switch yards.

Offers lowest impedance to a-c current; minimum corona discharge at high voltage.

May be internally cooled by oil or water.

Channel Busses

Arranged to form a hollow square tube with longitudinal ventilating slots vertically one above the other.

CHANNELS

Provide:

1. Greater rigidity than round tube, permitting longer span.
2. Good current distribution.
3. Large surface area for dissipation of heat.
4. Simplicity of arrangement for minimum installation expense. Available in lengths to 25 feet.

Round Solid Bars and Wire

Round Solid

Used for light loads, special types of construction, plug-in ducts.

SQUARE TUBES

Square Tubes

Stronger and more rigid than round tubes. Have the advantage of flat surfaces for joints.

Obtainable in ventilated or unventilated designs, in lengths to 25 ft., 3-in. to 8-in. square. Larger sizes furnished to meet special requirements. For additional information, contact Graybar.

CABLES

Cable Conductors

Particularly useful for extremely heavy currents in a confined space.

Provides flexibility. Frequently used in high capacity arc furnaces for connections from main bus runs to electrodes. For specifications, consult Graybar.

Channel-Square Bus Conductor

Notes: Variations from these values must be expected in practice.

ASTM Specification B 187, Copper Bus Bar, Rod and Shapes, controls dimensional tolerances, tensile and electrical properties, tests and inspection.

(a) D-C resistance for hard-temper channels corresponding to a conductivity of 98.4% IACS minimum, at 20 C.

(b) The skin-effect ratios are approximate and

were derived from the curves for square tubes, Electrical Coils and Conductors, H. B. Dwight, McGraw-Hill Book Co., 1945, page 223.

(c) 60-cycle current-carrying-capacity ratings were computed for 30 C temperature rise over 40 C ambient, bright mill surface finish, the conductor horizontal, in still air, and free from all external magnetic influences, conductivity 98.4% ICAS minimum.

NOTES: Sizes above and below those listed available. Variations from these values must be expected in practice. Tabular weights and resistances based on Density of 0.323 lbs. per cu. in.

- (a) D-C resistance for hard-drawn temper:
 - Diameters up to 1-in. inclusive, conductivity 96.60% IACS minimum.
 - Diameters over 1-in., conductivity 97.40% IACS minimum.

- (b) Skin-effect ratio at 60 cycles per second.

Prices on application.

- (c) For sizes up to and including 6-in. diameter, bare, the 60-cycle indoor current ratings are based on 30 C temperature rise above a 40 C ambient for copper pipe having conductivity of 98 per cent IACS. The nominal outdoor ratings take advantage of favorable conditions such as air currents, weathering of copper, etc. Both ratings in this table are from National Electrical Manufacturers Association Standards for Power Switching Equipment, Publication No. SG6-1954, Part 8, and other NEMA publications.

NOTES:

Variations from these values must be expected in practice. ASTM Specification B 188, Seamless Copper Bus Pipe and Tube, Controls the tensile properties, conductivity, tests and inspection. Dimensional tolerances are agreed between manufacturer and purchaser at the time of placing an order.

(a) D-C resistivity. The resistances are based on the ASTM Specification B 188. The conductivities of square tubes according to size are:

Up to 6-in. outside diameter and up to $\frac{3}{16}$ -in. wall thickness, conductivity 97.40% IACS minimum.

Up to 6-in. outside diameter and over $\frac{3}{16}$ -in. wall thickness, conductivity 97.80% IACS minimum.

All sizes over 6-in. outside diameter, conductivity 98.40% IACS minimum.

(b) Skin-effect ratio at 60 cycles per second.

(c) 60-cycle current-carrying-capacity ratings have been computed for 30 C temperature rise in still air at 40 C, conductor with new, bright, mill finish, horizontal and free from all outside magnetic influences.

Prices On Application.

*Subject to tolerance of ASA Specification.

†Slightly less for double-braid weatherproof.

‡For approximate outdoor current ratings, in horizontal cross-wind at 2 ft. per sec., multiply by 1.35 for sizes 250 MCM and smaller; 1.25 for sizes 350 MCM and larger.

§Current ratings apply to copper conductors only.

Anaconda Hy-Therm copper furnished when specified, instead of other commercial brands, for hard and medium hard drawn.

These data are approximate and subject to normal manufacturing tolerances.

Prices on application.

Manufactured in accordance with ASTM Specification B 229, latest edition.

*Hard drawn copper cable, 97.5% conductivity, IACS, having same D-C resistance as that of composite cable after allowing for increases in resistance due to stranding, based on Table 11, ASTM, B229-48T.

†High strength Copperweld, 40% Conductivity.

‡90% of the reels in any shipment shall have an average length of conductor not less than values shown, with no lengths more than 10% below value given. The remaining 10% of the reels (or one reel where the total number of reels is less than 10) may be in random lengths, but no such lengths shall be less than 50% of table value.

§Longer lengths can be furnished in some sizes. Information on request.

Anaconda Hy-Therm copper will be furnished when specified, instead of other commercial brands, for hard and medium hard-drawn.

These data are approximate and subject to normal manufacturing tolerances.

Prices on application.

†Current rating is for average tarnished surfaces, ambient temperature 25°C., conductivity 97.5% IACS, frequency 60 cycles. Values of current rounded off to nearest ampere 100 and below, nearest 5 amperes above 100.

‡Recommended maximum operating temperatures: Hy-Therm, 100°C.; other commercial grades, 75°C.

§Resistance values are for nominal sizes based on 97.5% conductivity, IACS; increased 2% to allow for stranding except for 3-wire cables where the allowance is 1%.

¶Inductive and capacitive reactance calculated for an equivalent spacing of 1 foot.

*These data are approximate and subject to normal manufacturing tolerances.

*Aluminum wires only.

**Ultimate strength is calculated as the sum of the minimum average ultimate strength of the aluminum wires plus the stress developed in the steel wires at one percent elongation in 10 inches.

††D-c resistance based on 17.011 ohms (mil, foot) at 20 C (68 F) for the nominal aluminum area of the conductors, with standard increments for stranding. ASTM B232-55T.

A-c resistance of ACSR having a single layer of aluminum wires is considerably higher than d-c resistance.

§The allowable tolerance shall be plus or minus 5 percent for all sizes larger than No. 1. For No. 1 and smaller shall be plus or minus 10 percent.

†Nonreturnable Reels.

These data are approximate and subject to normal manufacturing tolerances.

Prices on application.

General Cable Non-Metallic Sheathed

***Romex (Type NM) Cable
600 Volts**

For concealed or open work in locations that are reasonably dry. Inspected and labeled by Underwriters' Laboratories.

Romex (NM) has very high insulation value, both between conductors and to ground. There is no metal covering to become accidentally grounded or opened.

Insulated with thermoplastic compound, colored for polarity identification. Covered with a protective paper armor.

Overall covering of fibrous braid, finished with a flame and moisture-resistant compound, surface marked for identification.

Prices on application.

General Cable Messenger Type Service Drop and Secondary Cable

600 Volts

A self-supporting aerial cable suitable for service drop and secondary distribution application. Cable consists normally of one or two neoprene or polyethylene insulated conductors twisted around a straight messenger. The messenger offers mechanical support for cable and serves as neutral conductor. Advantages of this type of cable include economy of installation, excellent weather resistance, relief from strain on the insulated conductors and neat appearance.

Cables normally supplied with either copper or E.C. Grade aluminum power conductors and have either a hard drawn copper or copper covered steel neutral conductor; cables having aluminum power conductors are in addition available with E.C. Grade hard drawn aluminum or A.C.S.R. neutral conductor.

Typical Construction Details

Power Conductors: Copper conductors shall be uncoated annealed copper solid or stranded as indicated in the tables which follow, and conforming to A.S.T.M. Specifications B3 and B8. The aluminum conductors shall be uncoated E.C. Grade aluminum, solid or stranded as specified in tables which follow.

Neutral Conductors: Copper neutral conductors shall be hard drawn bare copper solid or stranded and conforming to A.S.T.M. Specifications B1 and B8 as may be applicable. The aluminum neutral conductors shall be "E.C." grade, hard drawn aluminum solid or stranded as indicated and conforming to A.S.T.M. Specifications B230 and B231 as may be applicable. The copper covered steel neutral conductor shall be stranded composite copper and copper covered steel conforming to applicable requirements of A.S.T.M. Specification B229. The aluminum conductor steel reinforced neutral conductor shall be composed of six aluminum strands around one steel strand conforming in all respects to A.S.T.M. Specification B232.

Insulation: Neoprene, a special weather resistant compound applied in the wall thicknesses specified in following tables. The Neoprene insulation conforming to requirements set forth by I.P.C.E.A. for this type of service. Polyethylene, an insulating compound having a high resistance to exposure to direct sunlight and the effects of weathering. Compound colored black and applied in the wall thicknesses specified in following tables. The polyethylene insulation shall conform to the I.P.C.E.A. requirements for service on this type of cable.

Assembly: One or more insulated conductors are twisted around the neutral conductor without fillers, and with a suitable lay.

General Cable Tree Wire

**Neoprene Jacketed
Thermax-W***

Tree wire is usually supported on insulators in same manner as ordinary weatherproof wires. Wire manufactured with a tough abrasion, ozone, and weather resistant neoprene jacket.

Tree wire mainly used by utilities for aerial urban or suburban primary feeders (occasionally for secondaries) and series street lighting circuits where bad tree conditions exist. Standard wall insulation thicknesses are recommended for use on secondary type wires, thin wall insulation is recommended for normal primary tree wire applications and is indicated in tables that follow.

Conductors: Medium hard drawn copper, tin or lead alloy coated, or hard drawn uncoated aluminum. No. 4 AWG and smaller solid; larger sizes stranded. Aluminum conductors will be supplied in sizes 8-4/0 AWG only.

For Power Circuits—Supported on Insulators

Rated Voltage, 0-600, Phase-to-Phase (Gnd. or Ungnd.)

**General Cable
Rubber-Insulated Power Cables**

These cables fall into three broad classifications—

1. Neoprene Jacketed Cables
2. Lead Sheathed Cables
3. Braid Covered Cables

The first group of cables has by far the widest field of application. Cables offer important advantages such as light weight, flexibility, ease of splicing and installation. Cables are not subject to rust, rotting, crystallization, induced sheath losses or trouble from stray currents. Rubber insulated neoprene jacketed cables available for operation at potentials up to 15000 volts and are designated as SUPERSHEATH* cables by General Cable Corporation.

Supersheath Cables

These cables are suitable for installation in conduit and underground ducts, for direct earth burial and may also be used aerially. Primarily these cables are designed for use in moist or wet locations; therefore, the principal requirements for this type of cable are:

1. An insulation of the moisture resistant type having stable physical and electrical properties, as, when the cable is installed in a wet location, moisture will in time find its way through the cable coverings and come in contact with the insulated conductors. To meet this requirement, SUPERSHEATH* Cables are supplied with any one of the following outstanding types of moisture resistant insulations THERMAX-W*, AQUASEAL*, GENCORONE* OR BUTARONE*. The latter two insulations are of particular importance where resistance to ozone is an additional essential requirement.

2. A tough, durable outer protective covering with strong resistance to rot or deterioration when in contact with moisture, earth acids, alkalies, or other earth chemicals. To meet this requirement, a tough heavy duty neoprene jacket having a suitable wall thickness for the service involved is provided on all SUPERSHEATH* Cables.

Lead Sheath Cables

Where the need for a completely impervious sheath outweighs the advantages of the non-metallic sheathed type, Graybar can supply a complete line of lead sheathed cables suitable for conduit, underground duct or aerial use and direct earth burial if suitably protected by outer coverings.

The grade of insulation employed on lead sheathed cables is dependent upon the operating temperatures and voltages involved. All grades of insulation are available.

Braid Covered Cables

Braid covered cables are suitable for conduit, underground duct, or aerial use. All grades of insulation are available on braid covered cables.

Detailed specifications follow. Engineering data and packaging information are available upon application. Contact GRAYBAR for all your requirements.

**General Cable Thermax-W* (RH-RW)
Insulated Neoprene Jacketed Power Cable**

Type Designation: Supersheath*—Thermax-W* (Heat and moisture-resistant insulation).

Operating Voltages: 600 to 3000 volts.

Conductors: Conductors are solid or stranded lead alloy coated annealed copper or uncoated E.C. grade aluminum. Coated copper conductors conforming to A.S.T.M. Specifications B189 and B8, solid uncoated aluminum conductors to A.S.T.M. Specifications B230 or B262, stranded to A.S.T.M. Specifications B231.

Strand Shielding: All cables having stranded conductors and rated over 1000 volts are to have a semi-conducting strand shielding tape applied directly over the conductor.

Insulation: Thermax-W*, suitable for operation in wet or dry locations at a maximum conductor temperature of 75°C. This insulation compound meets the requirements of A.S.T.M. and I.P.C.E.A. for Performance and Heat Resistant rubber insulation and further complies with I.P.C.E.A. Appendix N requirements when tested by Methods GM and EM-60 for moisture absorption and electrical stability.

Insulation Thickness: Insulation wall thickness is based upon conductor size and voltage rating in accordance with I.P.C.E.A. Standard S-19-81.

Polarity Identification: For two or three conductor cables colored fibrous coverings over the individual insulated conductors may be used, two conductor black and white, three conductor black, white and red. Single conductor cable may be supplied with colored jacket.

Cabling: Two conductor shall be twin flat or round construction, three conductor cables shall be round construction.

Jacket: Heavy duty neoprene meeting the requirements of I.P.C.E.A. Standard S-19-81 Appendix K. On single conductor unshielded cable a heavy wall jacket is normally supplied for direct burial or a light wall jacket for conduit or underground duct use.

Physical Properties—

Original: Tensile strength p.s.i. 1800 min.
Tensile strength 200% Elongation p.s.i. 500 min.
Elongation at Rupture % 300 min.
Set in 2 in. gage length, inches 3/8 max.

Aged:

After 168 hrs. Air Oven 70° C.
Tensile strength p.s.i. 1600 min.
Elongation % 250 min.

After 96 hrs. Oxygen Bomb 70° C.

**These tests apply to single conductor unshielded cables rated at 2 KV and higher.

Jacket Thickness: Jacket wall thickness is based upon I.P.C.E.A. Standard S-19-81.

**General Cable Aquaseal* (Low SIC)
Insulated Neoprene Jacketed Power Cable**

Type Designation: Supersheath*—Aquaseal* (Low SIC, heat and moisture-resistant insulation).

Operating Voltage: 600 to 3000 volts.

Conductors: Conductors are solid or stranded lead alloy coated annealed copper or uncoated E.C. grade aluminum. Coated copper conductors conforming to A.S.T.M. Spec. B189 and B8, solid uncoated aluminum conductors to A.S.T.M. Specifications B230 or B262, stranded to A.S.T.M. specification B231.

Strand Shielding: All cables having stranded conductors and rated over 1000 volts are to have a semi-conducting strand shielding tape applied directly over the conductor.

Insulation: Aquaseal* insulation compound is suitable for operation in wet or dry locations at a maximum conductor temperature of 75° C. Meets A.S.T.M. and I.P.C.E.A. requirements for Performance and Heat Resistant rubber insulation and complies with I.P.C.E.A. Appendix N requirements when tested by Methods GM and EM-60 for moisture absorption and electrical stability.

Insulation Thickness: Insulation wall thickness is based upon conductor size and voltage rating in accordance with I.P.C.E.A. Standard S-19-81.

**These tests apply to single conductor unshielded cables rated at 2 KV and higher.

Jacket Thickness: Jacket wall thickness is based upon I.P.C.E.A. Standard S-19-81.

**General Cable Gencorone* (Oil Base)
Insulated Neoprene Jacketed Power Cable**

Type Designation: Supersheath*, Gencorone* (Oil Base, Ozone Resistant Insulation).

Operating Voltages: 600 to 15000 volts.

Conductors: Conductors are solid or stranded lead alloy coated annealed copper or uncoated E.C. grade aluminum. Coated copper conductors conforming to A.S.T.M. Specifications B189 and B8, solid uncoated aluminum conductors to A.S.T.M. Specifications B230 or B262, stranded to A.S.T.M. Specification B231.

Strand Shielding: All cables having stranded conductors and rated over 1000 volts are to have a semi-conducting strand shielding tape applied directly over the conductor.

Insulation: Gencorone*, suitable for operation in wet or dry locations at a maximum conductor temperature of 75° C. for voltages 8 KV and less than 70° C. for higher voltages. This insulation compound meets requirements of A.S.T.M. and I.P.C.E.A. for Ozone Resistant Grade Insulation and further complies with I.P.C.E.A. Appendix N requirements when tested by Method EM-60 for moisture absorption and electrical stability.

Insulation Thickness: Insulation wall thickness is based upon conductor size and voltage rating in accordance with I.P.C.E.A. Standard S-19-81.

Shielding: For all single and multiple conductor cables rated over 3 KV grounded or ungrounded neutral the conductor insulation shall be shielded by means of a tinned copper shielding tape applied in suitable manner and conforming to the requirements of I.P.C.E.A. Standard S-19-81, Part 5.

Note: Cables intended for aerial use bound by a metallic binder to a messenger will be of unshielded construction up to and including 5 KV grounded neutral.

Polarity Identification: Color coding for polarity identification may be accomplished by use of colored tapes or by means of colored neoprene jackets. Standard coding for two conductor cables is black and white; for three conductor cables black, white and red.

Cabling: Two conductor shall be twin flat or round construction, three conductor cables shall be round construction.

Jacket: Heavy duty neoprene meeting requirements of I.P.C.E.A. Standard S-19-81 Appendix K.

On single conductor unshielded cable a heavy wall jacket is normally supplied for direct earth burial or a light wall jacket for conduit on underground duct use.

**General Cable Butarone* (Butyl Rubber)
Insulated Neoprene Jacketed Power Cable**

Type Designation: Supersheath*—Butarone* (Butyl Rubber Ozone Resistant Insulation).

Operating Voltage: 600 to 15,000 volts.

Conductors: Conductors are solid or stranded lead alloy coated annealed copper or uncoated E.C. grade aluminum. Coated copper conductors conforming to A.S.T.M. Specifications B189 and B8, solid uncoated aluminum conductors to ASTM Specifications B230 or B262, stranded to A.S.T.M. Specification B231.

Strand Shielding: All cables having stranded conductors and rated over 1000 volts are to have a semi-conducting strand shielding tape applied directly over the conductor.

Insulation: Butarone* suitable for operation at maximum conductor temperature of 90° C up to 5000 volts and 85° C for higher voltages. Exceeds I.P.C.E.A. Standard S-19-81 Second Edition, Appendix O, and A.S.T.M. D-574 and D-1352 requirements for ozone resistant insulation.

Insulation Thickness: Insulation wall thickness is based upon conductor size and voltage rating in accordance with I.P.C.E.A. Standard S-19-81.

Shielding: For all single and multiple conductor cables rated over 3 KV grounded or ungrounded neutral the conductor insulation shall be shielded by means of a tinned copper shielding tape applied in suitable manner and conforming to requirements of I.P.C.E.A. Standard S-19-81, Part 5.

Note: Cables intended for aerial use bound by a metallic binder to a messenger will be of unshielded construction up to and including 5 KV grounded neutral.

Polarity Identification: Color coding for polarity identification may be accomplished by the use of colored tapes or by means of colored neoprene jackets. Standard coding for two conductor cables is black and white, for three conductor cables black, white and red.

Cabling: Two conductor shall be twin flat or round construction, three conductor cables shall be round construction.

Jacket: Heavy duty neoprene meeting the requirements of I.P.C.E.A. Standard S-19-81 Appendix K. On single conductor unshielded cable a heavy wall jacket is normally supplied for direct earth burial or a light wall jacket for conduit or underground duct use.

Physical Properties—

Original
Tensile strength p.s.i. 1800 min.
Tensile strength 200% Elongation p.s.i. 500 min.
Elongation at Rupture % 300 min.
Set in 2 in. gage length, inches 3/8 max.

Aged
After 168 hrs. Air Oven 70° C.
Tensile strength p.s.i. 1600 min.
Elongation % 250 min.
After 96 hr. Oxygen Bomb 70° C.
Tensile strength p.s.i. 1600 min.
Elongation % 250 min.

Oil Resistance

After 18 hrs. in Oil 250° F.
Tensile strength % of original 60 min.
Elongation % of original 60 min.

Ozone Resistance**

After 3 hrs. exposure in a concentration of .015% at 25° C. No effect

*Trade Mark

**This test applies to single conductor unshielded cables rated at 2 KV and higher.

Jacket Thickness: Jacket wall thickness is based upon I.P.C.E.A. Standard S-19-81.

General Cable Series Street Lighting Cables

Engineering data and other information on the following products will be supplied upon application.

Rubber Insulated, Lead Sheathed

Rubber Insulated, Neoprene Jacketed

Gencaseal* Insulated

Polyethylene Insulated

General Cable Traffic Control Fire Alarm and Signal Cable

Engineering data and other information on the following products will be supplied upon application.

Rubber Insulated, Lead Sheathed Multiple Conductor Cable for General Use in Underground Ducts, Or For Aerial Use with Messenger

Rubber Insulated, Braid Covered Multi-Conductor Cable for Installation in Buildings and Stations

Rubber Insulated, Neoprene Jacketed Multi-Conductor Cable for General Use in Underground Ducts, Aerial Use With Messenger or for Installation in Buildings or Stations

Gencaseal* Insulated—Gencaseal* Jacketed

General Cable Power Cables

600 Volts—Bus Drop

Bus drop cables designed to provide flexible and extensible connecting circuits between overhead open or enclosed fixed bus structures and electrically-driven machinery and equipment in factories, mills, machine shops, etc.

Experience shows that bus drop cable installations are dependable, time-saving and economical because:

1. Conduits are not required.
2. Standard fittings are used.
3. Installations and connections are simply and rapidly made.
4. Cost of completed installation is low.
5. Cable adjustments are made quickly and with little expense when equipment is moved.

Bus drop cable in actual practice is usually connected directly to the overhead bus at upper end, and to a manual starter mounted on or near the motor or machine to be served at other end. A loop of several turns ordinarily held in place near the bus end of circuit provides desired reserve length in the bus drop connection and makes it unnecessary to cut cable if machine is moved.

Rubber Insulated Neoprene Jacketed Type RMN

Conductors: Conductors and ground wires are stranded lead alloy coated, annealed copper meeting requirements of A.S.T.M. Specification B189 and B8.

Insulation: Code Type R rubber insulation with color coded Guardian fibrous coverings.

Cabling: The insulated conductors are cabled with three ground wires arranged one in each interstice. Suitable fillers are employed to provide a rounded core and a core tape applied overall.

Jacket: Tough oil and flame resistant neoprene jacket meeting all requirements of A.S.T.M. Specification D752 and I.P.C.E.A. Standard S-19-81 Appendix K.

Gencaseal* Insulated and Jacketed—Type TMG

Conductors: Conductors and ground wires are stranded uncoated annealed copper, meeting requirements of A.S.T.M. Specifications B3 and B8.

Insulation: Gencaseal* insulation meeting all requirements for UL Type T, color coded for polarity identification.

Cabling: The insulated conductors are cabled with three ground wires one in each interstice. Suitable fillers are employed to provide a rounded core and core tape applied overall.

Jacket: Oil and flame resistant Gencaseal* jacket meeting all requirements of I.P.C.E.A. Standard S-19-81 Appendix J. Note: Regular coding colors for bus drop cables are black, white, red and will be furnished unless otherwise specified.

General Cable Drive-In Theater Cables

600 Volts

Designed for direct installation in the earth under outdoor motion picture theater lots to serve for sound distribution networks from the projection booth to speaker posts installed adjacent to the designated automobile parking station.

Two types of cable are available (1) Rubber insulated and neoprene jacket cable, (2) Gencaseal* uni-insulation and jacket cable.

Construction Data on Rubber Insulated and Neoprene Jacketed Type Cables

Conductors: Solid or A.S.T.M. Class B stranded coated annealed copper conductors, or when so specified may be A.S.T.M. Class K flexible bunch stranded.

Insulation: 3/4 in. wall of RW 755 performance grade moisture resistant compound.

Assembly: The two insulated conductors are laid parallel and bound with a suitable open braid or serve. Over the assembly so formed is applied a tough heavy duty neoprene jacket in a wall thickness of 3/4 in. and which complies with all the requirements of I.P.C.E.A. Standard S-19-81, Appendix K.

Circuit identification is obtained by means of two ridge tracers approximately 90 degrees apart on one edge (minor face) of the jacket.

Cond. Size A.W.G.	No. of Cond.	No. of Strand	Overall Dimen. In.	Net Wt. Lbs. Per M. Ft.	Std. Pkg. Ft. In. Reel	Ship. Wt. Package Lbs.

General Cable

Varnished Cambric Insulated Wire and Cable

Two Conductor Round Braided

Three Conductor Varnished Cambric Lead Sheathed

Three Conductor Individually Braided Interlocking Tape Armor

Available upon request is information covering a complete line of varnished cambric insulated wires and cables for building wiring for general power purposes and for special applications where varnished cambric insulation is the most suitable type to employ.

All the requirements are in compliance with the specifications of the Insulated Power Cable Engineers Association or the National Electrical Code.

**General Cable *Super Service
Type SO Cord**

Extra Tough Neoprene Jacket—600 Volts

2-Conductor

3-Conductor

4-Conductor

All General Cable Super Service products feature an extra heavy duty flame resistant mold-cured neoprene jacket with cord reinforcement, trademarked SUPERTUF.

Designed specifically for use where the toughest cable obtainable is required. Exceeds in every specification the requirements of N.E.C. for hard-service cords.

Meets all requirements of Pennsylvania Dept. of Mines and U. S. Bureau of Mines for flame-resistance.

Flexible or extra-flexible rope or bunch-stranded conductors of annealed copper, tinned or fibre-separated from vulcanized synthetic rubber insulation.

Cabled together with jute or cotton fillers, covered with cotton or glass reinforcement and jacketed in neoprene sheath. Identification by colored insulation.

For uses requiring shielding, Type SO cord is supplied with a flexible metallic shielding braid. Also available with un-insulated or insulated grounding conductor.

*Trade Mark.

Current Carrying Capacities N.E.C., 1956.

Color Coding: Insulation colors black and white; or black, white and green; or black, white, green and red for two, three or four conductor cords respectively.

Cords with more than four conductors not recognized by Underwriters' Laboratories for labeling.

The above data are approximate and subject to normal manufacturing tolerances.

**General Cable *Super Service Cable
Single Conductor—600 Volts**

For general portable power supply service where a heavy duty flexible cable is required. Particularly adapted to use in gathering reel locomotives in mines.

prices on application.

General Cable *Super Service Welding Cable

All General Cable Super Service products feature an extra heavy duty flame resistant mold-cured neoprene jacket with cord reinforcement, trademarked SUPERTUF.

Extremely flexible, light weight, tough and durable; for damp or dry locations. Construction data and other information covering a complete line of welding cables and welder power supply cables are available upon request.

The above data are approximate and subject to normal manufacturing tolerances.

The sizes of cable recommended by the Machine Group of the NEMA Electric Welding Section for standard hand welding equipment based on lengths up to 90 ft. that is, 45 ft. of welding cable and 45 ft. of return cable, are as follows:

100 Amp. Welder	4 AWG	400 Amp. Welder	2/0 AWG
150 Amp. Welder	3 AWG	500 Amp. Welder	2/0 AWG
200 Amp. Welder	2 AWG	600 Amp. Welder	3/0 AWG
300 Amp. Welder	1/0 AWG		

(1) The above values for current carrying capacity are based on a copper temperature of 60° C. and an ambient temperature of 40° C. and yield load factors of from approximately 32 per cent of the No. 2 AWG cable to approximately 23 per cent for the No. 3/0 AWG cable and higher for the smaller sizes. The IPCEA Standards cover only sizes 8-300 MCM, inclusive. The sizes of cables generally used range from No. 2 AWG to No. 3/10 AWG. In actual service the load factor may be much higher than indicated without overheating the cable as the ambient temperature will generally be substantially lower than 40° C.

Note: Size 8 to 300 MCM available in 250 ft. coils and 1000 ft. reels.

*Trade mark.

General Cable *Super Service Mining Machine Cable

Used principally in mines on cutting machines, gathering locomotives, shuttle cars, and other mine equipment, and are designed to have a maximum flexibility for this type of cable. Used also for general portable power cable use where size and weight are important considerations.

General Cable *Super Service Cable

Two conductor round, Type W and Type G, 600 and 1000 volts, used in mines for cutting machines, loaders, cranes and conveyor mining systems; recommended for general power supply purposes and various single phase portable machinery.

1000 volts, used for general power supply purposes: heavy portable tools and appliances, large portable lights, flexible jumpers and portable construction equipment; also in mines for cutting machines, drilling units, loaders and other mining machinery. Flexible, resilient and non-kinking.

Multi-conductor round type, Type W and Type G, 600 and

General Cable *Super Service High Voltage Cable

All General Cable SUPER SERVICE products feature an extra heavy duty flame resistant mold-cured neoprene jacket with cord reinforcement, trademarked SUPERTUF.

Service high voltage portable power cables — Supertuf jacketed designed for wide variety of purposes. In general their use covers transmission of power from the supply to the mobile electrical equipment — shovels, dredges, cranes and draglines. Used also as a temporary line during construction or repair work in generating stations and substations. Can be used to advantage in power distribution work to by-pass a faulty section of buried cable while repairs are being made. Super Service portable power cables are selected where arduous service and safety must combine for uninterrupted production and long cable life. Available for operating voltages up to and including 15,000 volts, in single and multi-conductor form, and in a wide range of conductor sizes.

There are three general types of Super Service high voltage cables:

Type W Cables — Without grounding conductors.

Type G Cables — With grounding conductors.

Type SH (Shielded) — With or without grounding conductors.

Super Service Type W — Supertuf: Jacketed, portable cables consist of rubber insulated flexible stranded conductors with neither shielding nor ground wires. Type W not recommended for service exceeding 3000 volts, although it can be furnished for voltage ratings up to 5000 volts. Where maximum safety is desired on voltages above 2000 volts, Type SH-D is recommended.

Super Service Type G Supertuf: Jacketed, portable cables are of same construction as Type W except they have flexible grounding conductors in each filler space. While cables operating above 2000 volts should preferably be shielded, the grounding conductors in Type G cables in effect provide some shielding and afford a certain degree of protection to operators when the grounding conductors are grounded at both ends of the cable length. In many instances Type G cables have proved satisfactory at 5000 volts, which is the maximum recommended rating. Where maximum safety is desired on voltages above 2000 volts, Type SH-D is recommended.

Super Service Type SH Shielded — Supertuf: Jacketed, portable cables are similar to Types W and G except for the addition of shielding braids and are recommended for operating voltages above 2000 volts to 15,000 volts. These cables are classified in four groups depending on the way in which the shielding is applied and whether or not grounding conductors are included.

It is considered good practice to employ grounding conductors in all shielded high-voltage portable cables. These grounding conductors are normally uninsulated to permit electrical contact with the shielding braids.

For operating voltages up to 6000 volts, a shield over the assembled conductors with the use of grounding conductors (Type SH-C) is sometimes used. For voltages from 7000 to 15,000 volts, shielding over the individual conductors with the use of grounding conductors (Type SH-D) is strongly recommended and is generally used.

†Standard package 1,000 ft. ‡Standard package 500 ft.

General Cable Flat-Twin TV and FM Transmission Lines

Polyethylene Insulated—300 Ohms

Low-loss, high frequency cable for service as a transmission line (antenna lead-in) between antenna and television or FM receivers. Useful for forming folded dipole antennas in attics, apartments, or wholly within receiver cabinets.

May be used for intra-receiver high frequency connections. Velocity of wave propagation, approximately 84%.

Supplied with dark brown insulation unless otherwise specified. Also available in natural translucent or frosty white polyethylene.

Size A.W.G.	Conductors		Diam. In.	Insulation Thick. On Edge In.	Major Axis	Minor Axis	Separation of Conductor Centers

20	14.5	285	4.3	0.83	1.22

Standard packages, 1000 ft. on spools; 5000 ft. on reels.

Longer lengths available on special order.

Also supplied with flame-resistant polyethylene when specified.

The above data are approximate and subject to normal manufacturing tolerances.

General Cable Standard Coaxial Cable

Polyethylene insulated conductor surrounded by braided return conductor which is provided with an overall covering. Widely used for carrying r-f power, up to 5000 watts at 100 Mc., between a transmitter and receiver and an antenna. For i-f and video transmission and applications where radiation or pickup must be reduced.

Engineering data and all other information available upon request. Contact GRAYBAR.

**General Cable Hinge Cable
Type TA—600 Volts**

Single Conductor—Extra Flexible Stranded

Recommended for swinging panel jumpers and connections and other applications where extra flexible construction is required.

Insulation: Wall of Gencaseal compound and a wall of felted asbestos saturated with flame heat and moisture-resisting compound; covered with a cotton braid finished with a flame and heat-resisting compound. Not recommended for use in temperatures lower than -10°C.

Prices on application.

General Cable Power and Rheostat Wire
Type AIA—Rated 600 Volts, 125°C
Single Conductor—Solid or Stranded

Recommended for higher voltage rated installations where moisture resistance is required. Similar to Type AA except for lowered temperature rating due to use of moisture resistant impregnant.

Conductors, untinned annealed copper; insulated with wall of felted asbestos saturated with flame, heat and moisture-resistant compound.

Saturated asbestos braid outer covering: Standard color, black.

General Cable Boiler Room Wire
Type AVA—Rated 600 Volts, 110° C

Single Conductor Solid

For general lighting and control circuits, either open circuits or in conduit. Also for switchboard wire where overall asbestos braid is required. Particularly adapted to locations subject to heat, flame, oil, grease or corrosive vapors.

Insulation: Saturated asbestos wall, varnished cambric tape, and saturated asbestos. Asbestos braid covering, finished with flame, heat and moisture-resisting compound (standard color—black).

General Cable Switchboard Bus Cable
Type AVB—Rated 600 Volts 90°C

Single Conductor, Stranded

Recommended for wiring switchboards and all other types of control apparatus where the conductor temperatures are high as a result of high current loading.

*Trade Mark

General Cable *Gencaseal Appliance Wiring Material 600 Volts

For machine tool, appliance and switchboard wiring. Underwriters' approved for operation at various temperatures and at 60° C. under all conditions. Machine tool and switchboard wire is rated at 90° C.; available in 18 to 4/0 A.W.G. Appliance wire rated at 105° C., sizes 18 to 8 A.W.G.; 90° C., sizes 18 to 4/0 A.W.G. and 80° C. for sizes larger than 4/0 A.W.G. Available with spiral stripe identification.

*Trade Mark.

**Sizes 16 and 18 AWG also supplied with 16 strands.

†Approved by Underwriters' for 60° C. operation under oil conditions and 80° C. in air—600 volts.

Standard Colors: #18 to #10 Black, White, Red, Blue, Green, Yellow and Orange. #8—and larger, Black, White and Red.

General Cable Square and Rectangular Bare Copper Wire

Soft or Annealed (A.S.T.M. Specification B 48-55)

GENERAL CABLE

Round corners, freedom from surface imperfections and control of bending characteristics during fabrication make this wire particularly suitable for use in the construction of transformers and other electrical apparatus.

Manufactured to customer specifications and to A.S.T.M. (Types A and B). When ordering, state type or use to which wire will be put.

Tensile Properties

Specified Thickness Inches	Maximum Tensile Strength Per Square Inch	Elongation in 10 Inches Minimum Per Cent
0.290 and Over.....	36,000	35
0.289 to 0.051.....	37,000	32
0.050 to 0.021.....	38,000	30
0.020 to 0.011.....	40,000	25
0.010 and Under.....	20

Permissible Variations in Dimensions

Specified Thickness Inches	Thickness	
	Tolerances, Plus or Minus 1.000 to 0.501 In. in Width	0.500 In. and Under in Width
0.501 and Over.....	1 Per Cent
0.500 to 0.301.....	1 Per Cent	0.003 In.
0.300 to 0.101.....	1 Per Cent	1 Per Cent
0.100 and Under.....	0.001 In.	0.001 In.

Specified Thickness Inches	Width	
	Tolerances, Plus or Minus	
0.501 and Over	1 Per Cent but Not to Exceed 0.016 In.	
0.500 to 0.301	0.003 In.	
0.300 to 0.101	1 Per Cent	
0.100 and Under	0.001 In.	

Radius of Corners

Specified Thickness Inches	0.189 to 0.750 Incl.	Specified Width, Inches	Up to 0.188 Incl.
0.689 and Over.....	3/16
0.688 to 0.439 Incl.....	3/32
0.438 to 0.226 Incl.....	1/16
0.225 to 0.166 Incl.....	3/64	3/64
0.165 to 0.126 Incl.....	1/32	1/32
0.125 to 0.073 Incl.....	1/32	1/64
*0.072 to 0.051 Incl.	Rounded Edge	1/64
0.050 and Under	Rounded Edge	Rounded Edge

*Square wire, 0.072 inches and under, shall have a corner radius of 0.012 inches, plus or minus 25%.

A rounded edge is produced by rolling round wire to the size specified either with or without edging rolls.

Density

For calculating weights, cross-sections, etc., the density of copper shall be taken as 8.89 grams per cubic cm. (0.32117 lbs. per cu. in.) at 20°C. (68°F.).

Resistivity

Resistivity is used in place of percentage conductivity. The value of 0.15328 ohm (meter, gram) at 20° C. (68°F.) is the international standard for the resistivity of annealed copper equal to 100% conductivity. This term means that a wire 1 mile in length and weighing 1 gram would have a resistance of 0.15328 ohms. This is equivalent to a resistivity of 875.20 ohms (mile, pound), which signifies the resistance of a wire 1 mile in length weighing 1 pound. It is also equivalent to 1.7241 microhms per cm. of length of a bar 1 square centimeter in cross-section.

Conductivity at 20°C. (68°F.), Per Cent.....	100.00
Ohms (Mile, Pound).....	875.20
Ohms (Meter, Gram).....	0.15328
Ohms (Mil, Foot).....	10.371
Ohms (Meter, Square Centimeter).....	0.017241
Microhm-Inch.....	0.67879
Microhm-Centimeter.....	1.7241

General Cable Concentric Stranded Cable
Bare and Tinned or Coated Copper—Soft or Annealed

Medium Hard and Hard Drawn
 ASTM Standard B 8-56

Class AA: Used for bare cable.

Class A: For weather-resistant (weatherproof), for a slow-burning and for weather-resistant slow-burning cable. For bare cable where flexibility greater than that of Class AA is required.

Class B: For cable insulated with various materials, such as rubber, paper, varnished cloth, etc. and for cable indicated under Class A where greater flexibility is required.

Class C and Class D: For cable requiring greater flexibility than that afforded by Class B cable.

For Class AA stranding and data for hard drawn and medium hard drawn and standard packages for overhead line conductors information available upon request.

Breaking Strengths: Based on nominal wire diameters and shall not exceed the total of the specified maximum tensile strengths of the component wires by more than 5 per cent.

Resistances and weights: Based on nominal wire diameters. Resistivity at 68°F. (20°C), 875.20 ohms (mile, pound), 100% I.A.C.S. Conductivity.

Increments for stranding for weights and resistances:	
2,000,000 C.M. and less	2%
Over 2,000,000 C.M. including 3,000,000	3%
Over 3,000,000 C.M. including 4,000,000	4%
Over 4,000,000 C.M. including 5,000,000	5%

Tolerances: Conform to tolerances in wire diameters. Total area of conductor shall be not less than 98% of the nominal listed area.

The above data are approximate and subject to normal manufacturing tolerances.

Prices on application.

General Cable Overhead Line Conductors

Bare Copper—Hard Drawn and Medium Hard Drawn

A.S.T.M. Standards B 1-56; B 2-56 and B 8-56

A complete series of bare overhead line conductors, covering the entire range of electrical and physical requirements necessary for all designs of transmission, distribution, signal and communications systems, is supplied by General Cable.

Copper conductors are available in a variety of tempers to provide the best combination of tensile strength and flexibility for a particular application. The conductivity of copper is higher than that of any other commercial metal.

Long, dependable service life, re-usability and high salvage value are characteristics of these conductors, maintained by copper's high degree of resistance to corrosion, fatigue and abrasion.

Modulus of Elasticity: (Lbs. per Sq. In.)

Hard Drawn:	Initial	Final
Solid wire.....	14,500,000	17,000,000
Stranded Conductor		
3 wire.....	14,000,000	17,000,000
7 and 19 wire.....	14,500,000	17,000,000
12 wire.....	14,000,000	17,000,000
37 wire.....	14,000,000	16,500,000
Coefficient of Linear Expansion per degree F. —	.0000094.	

Breaking Strength: Based on nominal wire diameters.

Weights and Resistances: Based on nominal wire diameters.

Increments for stranding:

3 wire cable.....	1%
7 to 37 wire cable, inclusive.....	2%

Tolerances: Conform to tolerances in wire diameters.

Total area of stranded conductors shall be not less than 98% of the nominal listed area.

The above data are approximate and subject to normal manufacturing tolerances.

Resistance: Based on the following A.S.T.M. resistivities at 68°F (20°C):

Hard Drawn:	Ohms (Milo Lb.)	I.A.C.S. Conductivity%
Diameters: .460-in. — .325-in. (Size 4/0 to 1/0 AWG).....	900.77	97.16
Under .325-in. — .0403-in. (Size 1 to 18 AWG).....	910.15	96.16
Medium Hard Drawn:		
Diameters .460-in. — .325-in. (Size 4/0 to 1/0 AWG).....	896.15	97.66
Under .325-in. — .0403-in. (Size 1 to 18 AWG).....	905.44	96.66

*Not listed in A.S.T.M.

Letters preceding the number of strands refer to A.S.T.M. class designation B8.

When lengths are not specified, random lengths will be included.

When lengths are specifically agreed upon for any item, ninety per cent of the reels shall have the specified length subject to a variation of 10% plus or minus; the remainder of the item may be shipped in random lengths of not less than 50% of the specified length.

†For Figure 8 and Figure 9 wire, dimensions given are nominal height of entire section and width of lower lobe.

Size 6/0 A.W.G. (336,200 C.M.) Grooved or Figure 8 will regularly be furnished in 350,000 C.M.

Weights: Based on nominal dimensions.

Tolerances: Round-Wire — Diameter ±1%. Grooved Wire — Dimensions, see Diagrams page 32. Weight ±4% of values listed. Figure 8 Wire-Dimensions, see Diagrams page 33. Weight ±5% of values listed. Figure 9 Wire-Dimensions, see Diagrams page 33. Weight ±5% of values listed.

Breaking Strengths: Based on nominal dimensions.

Resistances: Based on nominal dimensions, and on the following resistivity: 900.77 ohms (mile, pound) at 68° F. (20° C.) — 97.16% I.A.C.S. conductivity.

The above data are approximate and subject to normal manufacturing tolerances.

General Cable Copper Trolley Wire

A full range of copper trolley contact wires are available. In the manufacture of these wires special care is taken in rolling and drawing to obtain a surface free from imperfections and wire continuously true in shape. This produces a contact wire giving maximum life and freedom from operating trouble.

Wire manufactured in accordance with A.S.T.M. Specification B47, A.S.A. C7.6 and American Transit Association Specification D2. These specifications were prepared jointly by these associations in collaboration with the Association of American Railroads and are identical.

Round and Grooved

A.S.T.M. Standard B47-55
A.T.A. Engineering Manual Specification D2

Figure Eight and Figure Nine (Deep Section)

A.S.T.M. Standard B116-55

General Cable Copper Alloy Conductors

A.S.T.M. Standard B105-55

Bronze wires are copper alloyed with small amounts of tin and/or cadmium to provide high strength and electrical conductivity. They are highly corrosion resistant under atmospheric conditions and are, therefore, useful as line wires, guy and messenger strands, overhead ground wires or in combination with copper as composite conductors.

Nominal Modulus of Elasticity: Solid 16 x 10⁶. Stranded 10 x 16⁶.

Coefficient of Linear Expansion per Degree F: .0000094.

Alloy Conduc- tivity I.A.C.S.	Density at 20° C.		Minimum Tensile Strength 6 A.W.G. (1620") HD-Wire Lbs. Per Sq. In.	Max. Resistivity at 68° F. (20° C.)

85	8.89	.003027	74,700	1030	12.20

Characteristics:

Copper alloy characteristics compared to copper indicates:

- (1) **Weight:** Corresponds to copper.
- (2) **Strength:** 53% to 16% greater than Hard Drawn Copper.
- (3) **Conductivity:** 30% to 85% that of Annealed Copper.
- (4) **Modulus of Elasticity:** Approximately that of Hard Drawn Copper.
- (5) **Coefficient of Linear Expansion:** Corresponds to Hard Drawn Copper.

Note: Solid and stranded hard drawn copper alloy conductors and wires are available according to ASTM Standard B105-53 and information regarding these may be obtained upon request.

Prices on Application.

Weights, breaking strengths and resistances based on nominal wire diameters.

Resistances based on ASTM B230 resistivity of 17.002 ohms (mil-foot) at 20 C.

Increment of weight and resistance for stranding: 2%.

Tolerances: Wire diameter: Wires 100 miles and larger ±1%

Wires 99 miles and smaller ±1 mil

Area: Not less than 98% of nominal area.

Tolerances in other quantities conform to tolerances in wire diameters.

Letters preceding the number of component wires refer to stranding class designations of ASTM B 231-55T.

Nominal shipping lengths shown are subject to a variation of ±10%.

Ten per cent of the reels or coils may be shipped in random lengths of not less than 50% of the indicated nominal length.

*Sizes 6 through 4/0 standard lengths shipped on non-returnable reels.

The above data are approximate and subject to normal manufacturing tolerances.

Breaking strengths and weights based on nominal wire diameters:

Breaking strength is the sum of the minimum average breaking strengths of the individual aluminum wires as specified in ASTM B 230, taking 95 per cent of the total aluminum wire strength for the 18/1 constructions and 100 per cent for all other constructions, in accordance with ASTM B 232, plus the sum of the breaking strengths of the individual steel wires, based on the stress at 1 per cent extension as specified in ASTM B 232.

Weights are calculated using the following (ASTM B 232) increments for stranding.

ACSR Constructions	Increment, Per Cent	
	Aluminum	Steel
6/1 and 7/1	1.5	0
18/1	2.0	0
6/7	2.0	0.3
24/7 and 26/7	2.5	0.4
30/7	2.75	0.5
54/7	2.5	0.3
30/19	2.75	0.6
54/19	3.0	0.6

All conductors subject to dimensional tolerances of ASTM B 230, B 232, and B 245.

Nominal shipping lengths shown are subject to a variation of ±10% for conductors 1 Awg and smaller, and ±5% for conductors larger than 1 Awg. Ten per cent of the reels or coils may be shipped in random lengths of not less than 50% of the indicated nominal length.

*Sizes 6 through 4/0 standard lengths shipped on non-returnable reels.

The above data are approximate and subject to normal manufacturing tolerances.

*Resistances are nominal values corresponding to the requirements of A.S.T.M. B1-56, B2-52, B3-56 and B8-56.

†Breaking strengths represent minimum values for hard and medium hard drawn conductors and maximum values for soft drawn conductors corresponding to the requirements of A.S.T.M. B1-56, B2-52, B3-56, and B8-56 for bare conductors, adjusted in accordance with the provisions of the proposed revision of A.S.A. C8.18.

All weights are net and subject to A.S.A. specification tolerances.

Standard lengths are subject to a manufacturing tolerance of plus or minus 10%. Not more than 10% of the total quantity of wire on any given order may be shipped in random lengths not shorter than 50% of the listed standard lengths.

Sizes 8 to 14 A.W.G. inclusive also supplied in 100 lb. bundles of four coils, each weighing approximately 25 lbs.

Sizes 8 to 14 A.W.G. inclusive also supplied in 500 ft. cartons and Sizes 4 to 6 A.W.G. inclusive also supplied in 500 ft. coils.

The above data are approximate and subject to normal manufacturing tolerances.

General Cable URC Weatherproof Wires and Cables

“OK” and “Peerless” With Aluminum Conductors

Hard Drawn Aluminum and ACSR URC Weatherproof “O.K.” and Peerless Braided Types

Graybartel Wire

GRAYBARTEL Telephone Wires are constructed to specifications tried and proven in the independent telephone industry over many years. Combining the finest materials and

manufacturing experience, GRAYBARTEL assures the industry of a high quality, long lasting, dependable product, the leader in its field.

Drop Wire

Used to extend telephone circuit from open wire or distributing cable terminal on pole to subscribers' stations.

Furnished in parallel and twisted pair types with Copperweld or signal bronze conductors, high quality insulation, and a tough, abrasion and weather resistant neoprene jacket over insulation.

Reinforced types have a strong textile open braid or serve between insulation and jacket, adding desired strength without sacrifice of jacket to insulation adhesion. 1000 ft. in coil.

Twisted Pair—Neoprene

Parallel Reinforced—Neoprene

*214UI1666	14-2	Twisted Pair	.240	76
*212UI1666	12-2	Twisted Pair	.265	96

*750 ft. in coil.

For use either overhead or direct underground burial. Can be used even in locations where moisture is encountered. Low moisture absorption, low transmission losses at telephone frequencies in wet locations.

Interior Wire

Used inside buildings for extending circuits from arrestors or other terminating fixtures of outside lines to station sets. Furnished in plastic insulated soft copper conductors in twisted or twisted overall jacket types. With insulation and jacket of tough, abrasion resistant synthetic resin, this wire lends itself to fast, economical stapling gun installation. Packed 1,000 ft. in coil.

Diamond Wire Portable Cords

Types S, SJ and SV—Rubber Insulated, Rubber Jacketed
Types SO, SJO and SV Neoprene—Rubber Insulated, Neoprene Jacketed

Approved by Underwriters' Laboratories, Inc.

Heavy Duty Cord—Type S

Diamond Red-D Type S rubber jacketed cords, with rubber insulation, designed for hard, extra duty service. Though soft and pliable, the rugged, wear-resistant sheath protects against alkalis and acids as well as moisture. Very flexible construction prevents kinking in service.

Listed by Underwriters' Laboratories. Type S Rubber Jacketed Cord—60° C. Service. Canadian Standards Assn. Approved. 250 ft. coils (*250 ft. spools).

Light Duty Cord—Type SV

Diamond Red-D Types SV and SV-Neoprene are very flexible, small diameter, light weight cords with tough jackets overall. Intended for light duty service where frequent flexing occurs, and where ease of handling is especially desired. Type SV Neoprene recommended where there is possibility of exposure to oil, heat, sunlight or chemicals. Listed by U/L. For light duty appliances, vacuum cleaners, office machines, etc.

N150	18-2	16 x 30	3/64	5/64	7	.305	52
N151	16-2	26 x 30	3/64	5/64	10	.330	67

Note: 3 and 4 conductor also available.

Heavy Duty Oil Resistant Cord—Type SO

Diamond Red-D Type SO is a companion cord to Type S. Construction features such as durability, abrasion resistance and flexibility are similar. Outstanding for use when exposed to oil and grease, sunlight, ozone, most chemicals, solvents and acids. Tough neoprene jacket is practically unaffected by these enemies of natural rubber and general purpose synthetic rubbers. In addition, Neoprene has superior age-resisting qualities, is flame-retardant and heat-resistant. Listed by Underwriters' Laboratories. Type SO Neoprene Jacketed Cord—60° C. Service. Canadian Standards Ass'n. Approved. 250 ft. coils.

Diamond Red-D-Prene Cords

Type MD—(Mill Duty)

**Rubber Insulation
Red Neoprene Jacket**

The most advanced design in portable cord for heavy duty use throughout mill and plant installation both indoors and outdoors.

Constructed with a fine soft textile center, insuring a maximum uniform flexibility and moisture and abrasion resistance. Type MD is outstanding for use when exposed to oil and grease, sunlight, ozone, most chemicals, solvents and acids. Type MD Red Neoprene jacket has superior age-resisting qualities, and is flame-retardant and heat-resistant.

This cord was especially designed and created for fabricators, automotive industry, oil refineries, steel mills, chemical industries, food and meat packers, and textile plants.

Listed by Underwriters' Laboratories Type MD Neoprene Jacketed Cord—60° C. Service. Canadian Standards Ass'n. Approved.

Diamond Coiled Cords

The manufacture of spring type cords has a history of many years. However, it was in the middle and latter 1930's that the chemistry of rubber, neoprene and similar insulating and protective materials permitted the first commercial application of the coiled cords of the type most commonly used.

Retracted—3 Ft. Long

Extended—15 Ft. Long

The first applications of the concept of molding the jacket and insulating materials of a piece of wire into a helical construction, formed by winding the wire around a mandrel, resulted in the production of an expandible dog leash.

The first commercial applications of current-carrying coiled cords occurred after laboratory and development engineering work using the facilities of the Diamond Wire & Cable Company in the Chicago Heights plant, Chicago Heights, Illinois.

Thus, from the first commercial recognition of the coiled cord, the Diamond Wire & Cable Co. has been knowledgeable and has had experience in the field. In recent years, Diamond Wire Co. has been a major supplier of coiled cords to the telephone industry. It is participating in basic research on rubber, neoprene, and plastic insulations and jackets and methods of construction, that are resulting in the finest, most serviceable Retractable Cords made.

Coiled cords are engineered for specific application. Special oil, acid, and moisture resistant properties of the jackets, and the largest standard molding facilities for plug and conductor termination are available to customers. Contact GRAYBAR. Your quotation requests will receive immediate attention.

Diamond Display Racks

Assortment No. 1

Wire display merchandiser 16 in. deep, 17 in. wide and 27 inches high. Popular wire assortment all in one package. Complete shipping weight 53 lbs. Self-service measuring marker.

Consist of one plated wire merchandiser display stand; 250 ft. No. 18-2 SV Service Cord; 250 ft. No. 16-2 SJ Service Cord; 250 Ft. No. 18-2 SPT-1 (POT) Brown plastic Lamp Cord; 250 Ft. No. 18-2 SPT-1 (POT) Ivory Plastic Lamp Cord; 250 ft. No. 18-2 SP-1 (POSJ) Brown Rubber Lamp Cord.

Diamond Lamp Cord

**Type SP
Parallel Integral Construction**

Flexible cord with rib along one edge for polarity identification. Listed by U/L 60° C. Service. 250 Ft. Spools. Standard colors, brown and black.

Triangle Building Wire and Cable 600 Volts

Rubber Insulated—Glazon Covered Single Conductor

Maximum Copper Operating Temperature
Type R—60C Dry, Type RH-RW—75C Moist, 60C Dry
Type RHW—75C Wet or Dry

Glazon protective outer covering is smooth and flexible for ease of installation. Braid is made of continuous filament glass yarn which cannot rot, burn, absorb moisture, or deteriorate with age. Saturant, developed especially for this braid, bonds permanently to the individual fibers. Cannot chip, flake, or peel.

Triangle Duplex Cable
600 Volts

Rubber Insulated—Tape and Braid Covered
Maximum Copper Operating Temperature
Type RD 60° C. Dry
Type RHD/RWD 75° C. Dry, 60° C. Wet
Type RHWD 75° C. Dry or Wet
Tape and Braid Covered

Parallel conductors of tinned (alloy coated) copper, rubber insulation of each conductor wrapped with fibrous covering, saturated and finished. Over-all covering is cotton braid, paint and wax finished for ease of handling.

**Triangle Service Drop Cable
Self Supporting**

**Trioprene (neoprene)—Triolene (polyethylene) Insulated
Copper Conductor—Copper Messenger
2 and 3 Conductors—600 Volts**

Bare neutral supports cable weight leaving conductors free of tension so that installation and splicing operations can be accomplished easily. Available with either polyethylene or neoprene covering, both of which offer great resistance to sunlight and exposure to the elements.

Note: 3001-5000 available—contact GRAYBAR.

Triangle Parkway Cable

Rubber Insulated*—Lead Sheathed—IPCEA Type RLJFJ*
1, 2 and 3 Conductors—0-5000 Volts

Also available in 600-4000, 1001-2000 and 2001-3000 voltage ratings and in sizes up to 1,000,000 CM. For information contact Graybar.

Note: Internal (Strand) Shielding is used also on unshielded cable.

Unshielded braided cables of above 2000 volts rating are recommended only for installation in permanently dry locations or on full voltage insulators.

**Single Conductor
Shielded and Unshielded**

**For All Purposes,
Conduit and Duct, Aerial and Direct Burial
Neoprene Sheathed**

4001-5000 Volts

†Shielded constructions available up through 15,000 Volts.
Prices on application.

Simplex Anhydrex XX Cables
Anhydrex XX Insulation—Neoprene Jacket
For Power Circuits
Overhead, in Ducts, or Buried in the Ground

‡5,000 Volts, Nonshielded

Three Conductors

Construction Features:

Coated copper conductors.
 Simplex special strand shielding except over solid conductors.
 Simplex-Anhydrex XX heat-resistant, ozone-resistant, low water-absorptive rubber insulating compound.
 Cabled conductors protected by a specially compounded neoprene jacket.
 3-conductor cables have colored tapes for coding.
 Simplex Neoprene Jacket is resistant to abrasion, soil acids and alkalis, oils, sunlight and weather hazards.
‡Note: I.P.C.E.A. specifies a shield in cables operating over 3,000 volts.

5,000 Volts, Shielded

Three Conductors

Construction Features:

Coated copper conductors.
 Simplex special strand shielding except over solid conductors.
 Simplex-Anhydrex XX heat-resistant, ozone-resistant, low water-absorptive rubber insulating compound.
 Simplex Semiconducting Tape printed "SIMPLEX CONDUCTING TAPE—REMOVE WHEN SPLICING OR TERMINATING." Semiconducting tape is printed in different colors for coding.
 Tinned copper shielding tape over insulated conductor.
 Cabled conductors protected by a specially compounded neoprene jacket.
 Simplex Neoprene Jacket is resistant to abrasion, soil acids and alkalis, oils, sunlight and weather hazards.

Simplex Anhydrex XX Cables
Anhydrex XX Insulation—Neoprene Jacket
For Power Circuits
Overhead, in Ducts, or Buried in the Ground

‡5,000 Volts, Nonshielded

Single Conductor

Construction Features:

Coated copper conductors.
 Simplex special strand shielding except over solid conductors.
 Simplex-Anhydrex XX heat-resistant, ozone-resistant, low water-absorptive rubber insulating compound.
 Specially compounded neoprene jacket protects insulated conductors.
 Simplex Neoprene Jacket is resistant to abrasion, soil acids and alkalies, oils, sunlight and weather hazards.

†Note: I.P.C.E.A. specifies a shield in cables operating over 3,000 volts.

5,000 Volts, Shielded

Single Conductor

Construction Features:

Coated copper conductors.
 Simplex special strand shielding.
 Simplex-Anhydrex XX heat-resistant, ozone-resistant, low water-absorptive rubber insulating compound.
 Simplex Semiconducting Tape printed "SIMPLEX CONDUCTING TAPE—REMOVE WHEN SPLICING OR TERMINATING."
 Tinned copper shielding tape over each conductor.
 Specially compounded neoprene jacket protects insulated conductors.
 Simplex Neoprene Jacket is resistant to abrasion, soil acids, alkalies, oils, sunlight and weather hazards.

Make with Interlocked (Condex) Armor or Armor Wire coverings.

Simplex-Tirex Portable Cables

**3 Conductor—Type SH-D†
4001-5000 V.W.P.**

Selenium Neoprene Armored—Cured in Lead

Individual conductors shielded. Instead of, or in addition to, the three braided ground wires shown, one bare ground wire of suitable size may be used in the center of Type SH-D Cable, in direct contact with the conductor shields.

Simplex-Tirex Portable Cables

2-Conductor -600 Volts W.P.

Selenium Neoprene Armored—Cured in Lead

These cables bear approval P-101 of Pennsylvania Department of Mines. Also listed by U. S. Bureau of Mines.

Type W Cable (without Grounding Conductor)

Twin: Specially designed for shuttle car operation. Conductors are "ribbed" or "gear-shaped," providing greater adhesion between jacket and conductor insulation. Complies with U. S. Bureau of Mines Schedule 2-E.

Round: Recommended for mining machines, cranes, loaders and other mobile equipment. Suitable for d-c motors and single phase portable machines.

Type G Cable (with Grounding Conductor)

Twin: "Ribbed" conductor construction. Complies with U. S. Bureau of Mines Schedule 2-E.

Round: Twisted conductors. Grounding conductor, divided in two parts, in interstices. Conforms to new Federal Mine Safety Code.

2-Conductor Round

*Approximate values.

Grounding conductor is divided into two equal parts to avoid increasing diameter of cable. Total circular mil area of the two parts is that of the size listed.

To enable the workman to identify the size and type of wire, Simplex-Tirex Cables are provided with molded markings on the jacket. Being raised characters, these markings are provided at no sacrifice of jacket thickness. These molded characters will not rub off or separate from the jacket.

Prices on application.

Simplex-Anhydroprene Cables

Single Conductor—†600 Volts W.P.

For power circuits in conduits or ducts, or as open wire in buildings. The same cable used underground in ducts may be extended over walls and overhead in buildings.

Designed primarily to replace braided or taped cables, Simplex-Anhydroprene cables in many instances have proved to be more dependable than metallic sheathed types.

Construction

Conductors: Solid or stranded, tin or alloy coated copper.

Insulation: Low-water-absorption Anhydrex rubber. Possesses high dielectric strength and low specific inductive capacity. Suitable for use at operating temperatures as high as 75° C. (167°F).

Jacket: Neoprene, resistant to sunlight, oil, acids, fungus growth, mildew, heat and flame. Not subject to corrosion. Smooth finish facilitates pulling through ducts.

†Simplex-Anhydroprene cables are also available for voltages up to 17,000 volts. For Specification data, including weights and diameters, contact Graybar.

Prices on application.

Simplex-Tirex Portable Cables

Designed for portable service under extreme service conditions.

Conductors, flexible or extra flexible stranded and insulated with high-dielectric rubber.

Jackets of Selenium-Neoprene, cured in lead for maximum toughness, resistance to oil, moisture, abrasion, acids, alkalis and sunlight.

Motor Lead Cable

Single Conductor—600 Volts W.P.

For interior wiring of motors, mine locomotives and other installations requiring a flexible cable.

Simplex-Tirex Portable Cords

Selenium Neoprene Armored—Cured-in-Lead

Non-kinking, flexible, portable cord. Copper conductors stranded to provide extra flexibility and ease of handling. Individual conductor insulation is high-grade rubber compound, color-coded for identification and polarity marking.

Type SO: Heavy duty, designed for long-life, trouble-free performance under continuous rough usage. Used on portable tools wherever working conditions call for unusual stamina and endurance. Conductors protected from me-

chanical injury by heavy, tough Selenium Neoprene Armor.

Type SJO: Lighter and smaller in diameter than Type SO. Clean, non-fraying, smooth outer covering. Suitable for use in offices or in residences where a small, flexible conductor is required.

Hospital Silent Call Cord: Flexible stranded conductors. Two conductors with color-coded insulation for identification. Brown, smooth rubber sheath.

Conductors comply with ASTM Standard B-33.

Insulation complies with U/L Type RII-RW, ASTM Standard D-754, Federal Specification J-C-103 and IPCEA Specification Appendix C.

Sheath complies with ASTM Standard D-752 and IPCEA Specification Appendix K and Underwriters' Laboratories Standards.

Call Graybar FIRST For . . .

Type TW—Nepronol Thermoplastic

Listed by Underwriters' Laboratories, Inc.

For use in unusually moist or humid locations.

Possesses high resistance to moisture, acids, alkalis, oil and grease.

Available in a wide range of permanent colors, marked and measured.

National Electric 600 Volt Motor Lead or Apparatus Cable All-Asbestos—Type AIA

Flexible coated copper conductor. .045 in. black asbestos braid which is flame-heat- and moisture resistant impregnated. Dielectric test voltage Kv 1.5.

Recommended particularly for motor connections, crane and engine compartment wiring, electric furnace leads and other open wired high temperature installations where moisture is not a factor. Can be operated at temperatures up to 125° C (257° F).

National Electric Switchboard Wire 600 Volt—Asbestos-Varnished Cambric Type AVB

Recommended for wiring panel boards, switchboards and control equipment; also suitable for general purpose wiring in dry locations. Can be operated at temperatures up to 90° C (194° F).

Solid coated copper conductor; gray flame- and heat resisting finish cotton braid. Standard package 500 feet.

Varnished cambric thicknesses: Sizes Nos. 14 to 8, .030 in.; Nos. 6 to 4/0, .040-in. Size Nos. 14 to 8 subjected to 3 kv, and Nos. 6 to 4/0 4 kv, dielectric test voltage.

National Electric Braided Power Cable 5000 Volts—Asbestos-Varnished Cambric Type AVA-50

Recommended for wiring in the open or in conduit where subject to heat, oil and grease, fire hazard and corrosive fumes in boiler rooms, steel mills, power plants, factories etc. Permitted for operating temperatures as high as 100° C (212° F).

Stranded copper conductor. Black asbestos braid is flame-heat- and moisture resistant impregnated. Varnished cambric thickness .120 in., asbestos braid thickness .045 in. Dielectric test voltage Kv. 12.5.

National Electric Braided Boiler Room Cable
Asbestos-Varnished Cambric—Type AVA

Recommended for lighting and control circuits in boiler rooms, chemical and processing plants, steel mills, locomotives, furnaces, in the open, in conduit raceways, where exposed to heat, corrosive fumes, oil, grease, etc.

Can be operated at temperatures up to 110° C (230° F). Solid copper conductors. .030 in. thickness of varnished cambric; .045 in. thickness of asbestos braid; .020 in. thickness of second asbestos wall. 500 feet in standard package.

National Electric 600 Volt Motor Lead or Apparatus Cable

Asbestos-Varnished Cambric—Type AVA

Flexible coated copper conductor. Black asbestos braid is flame-heat-and-moisture resistant impregnated.

Recommended for coil connections, transformers, resistors, traction and mill motors, diesel and electric locomotives, etc. Can be operated at temperatures up to 110° C (230° F).

Thickness of asbestos braid .045 in. Thickness of varnished cambric .030 in. on sizes #14 thru 4/0 and .040 in. on circular mil sizes.

National Electric Motion Picture Cable

300 Volt—All-Asbestos—Type AA

Rope lay stranded plain copper conductor. .045 in. white asbestos braid which is flame and heat resisting. Subjected to 1.0 kv dielectric test voltage.

Recommended for motion picture projectors, arc lamps, spot lights and industrial applications. Can be operated at temperatures up to 200° C (392° F).

National Electric Station Control Cables

Type RR—Rubber Insulated—Neoprene Sheathed

For use in control circuits rated at 600 volts and less. Solid conductors can be furnished but flexible conductors are most desirable as they provide for a more flexible, easier to handle assembly, and also provide for greater flexibility on the individual conductors.

Specify National Thermo-Seal rubber insulation if moisture, high temperatures or other critical conditions are to be encountered.

Conductors are cabled round with fibrous fillers where

necessary and bound together with a rubber filled cable tape. Over this assembly is applied National's tough Neoprene sheath. This sheath provides resistance to oil, grease, moisture, heat, flame, acids, alkalis, oxidation, and abrasion to mention a few.

National Electric Nepcozone Flexlay Cable

**Type RR—5000 Volt—Non-Shielded
For Duct Installation**

Conductors of tinned soft drawn copper complying with ASTM Standard B-33, Class C stranding. Strand shielding of semi-conducting non-metallic tape. Insulation is Nepcozone butyl or oil base compound complying with ASTM Standard D-1352 or D-574 and LPCEA Standard S-19-81 Appendix O or D. Also Federal Spec. J-C-121.

Neoprene sheath complies with ASTM Standard D-752 and IPCEA Standard S-19-81 Appendix K.

National Electric Nepco-Lok Power Cables

**Type NE-1
Three Conductor**

**5,000 Volt Varnished Cambric Insulated
Nepconol-Jacketed Interlocked Armor Cable**

For 0 to 5,000 volt power circuits in industrial plants, sub-stations, and similar installations. The Nepconol thermoplastic sheath provides a water-seal making the cable suitable for outdoor installations.

Consists of untinned copper conductors, varnished Cambric tape insulation, color coded tape on each conductor, conductors cabled with jute fillers, cable tape, a Nepconol thermoplastic-sheath and single strip interlocked galvanized steel armor. Aluminum or bronze armor can also be furnished.

Type NE-2

**15,000 Volt Varnished Cambric Insulated, Shielded
Nepconol-Jacketed, Interlocked Armor Cable**

For 15,000 volt grounded neutral service for industrial and other power applications. Shielded to provide the protection necessary at such voltages. The Nepconol thermoplastic sheath serves as an adequate water seal which is recommended for installation in outdoor or damp locations.

Constructed with untinned copper conductors, varnished Cambric tape insulation, rubber filled tape on each conductor, tinned copper shielding tape, jute fillers, tinned copper shielding binder tape, Nepconol thermoplastic-sheath, and a single strip interlocked galvanized steel armor. Aluminum or bronze armor can be furnished.

*Can also be furnished in 1, 2, or 4 conductor cables.

National Electric Nepco-Lok Power Cables

**Type NE-3
*Three Conductor**

**600 Volt Varnished Cambric Insulation
Braided, Interlocked Armored Cable**

The most economical cable of the Nepco-lok line. Designed for 600 volt maximum service in indoor and dry locations. Does not have the overall protection of a Nepconol jacket and is not recommended for outdoor or installation in damp locations.

Constructed with untinned copper conductors, varnished Cambric tape insulation, color coded cotton braid or rubber filled tape on each conductor, cabled conductors are covered with asphalt impregnated fibertex tapes, all enclosed in a single strip interlocked galvanized steel armor. Aluminum or bronze can also be furnished.

National Electric Underground Service Entrance Cable

Listed by Underwriters' Laboratories, Inc.

Type USE—Style RR—Flexlay

Has unlimited application in the residential, commercial and industrial wiring field.

Can be buried directly in earth, installed in ducts or conduit, or in the open air for wet or dry conditions.

Ideally suited where both underground and overhead installations are required on the same line.

Neoprene sheath affords protection against the destructive forces encountered below the earth's surface and also gives outstanding protection when exposed to the sun and the weather.

14/3	20	125	314
12/3	20	125	376

For Open or Concealed Surface Wiring

Flat shape permits laying directly on walls or ceilings of tile, concrete or brick.

When necessary, Ovalflex may be covered with an ordinary thickness of plaster.

Bends easily, edgewise or flatwise, for snug fitting into corners around machinery, beams or offsets.

Furnished with anti-short bushings for dependable, safe bushing of cut ends of cable.

Regularly supplied with N.E.C. insulation and solid conductors; other insulation types and stranded conductors upon specification.

Kaiser Grizzly® Power Cables

Rubber-insulated, neoprene-jacketed Grizzly Power Cables are used for general power distribution. May be installed in conduit, underground ducts, or buried directly in the ground. When supported by a suitable messenger they may be installed aerially.

Cables conform to all applicable IPCEA and NEMA specifications. They have conductor shielding for operating voltages above 2,000 and are externally shielded for voltages above 3,000. Either annealed copper or three-quarter hard aluminum is available as the conductor.

Aluminum cables mean less weight and should be considered for use where weight is important, such as for aerial cable.

All insulations used on these constructions are resistant to heat, allowing the conductor to be operated at the maximum temperature permitted for rubber and rubber-like insulation. For cables used in duct installations and for direct burial, the insulations are resistant to both heat and moisture. Laytex insulation is available on the smaller sizes of 600 volt cables, resulting in cables with smaller diameters and less weight than can be obtained with the conventional extruded insulations. Ozone-resistant insulations of the oil base or Butyl type are available for all voltages. Both insulations, especially the Butyl type, show remarkable electrical stability and outstanding resistance to ozone, heat and moisture.

The neoprene jacket used on cables for operation at 2,000 volts and less conforms to A.S.T.M. Specification D-752. The jacket used on cables for operation at higher voltages conforms to this specification and, in addition, possesses ozone resistance which compares favorably with the requirements for oil base insulation.

Kaiser Service Entrance Cables

Aluminum Conductors

Concentric Uninsulated Neutral

Underwriters' Type SE, Style U

Rated for 75° C. Operation

Braided

Consists of two or three conductors, one of which is uninsulated. Conductors are aluminum insulated with RHW compound and covered with a color coded tape.

In the two conductor cable, the taped conductor is covered with an aluminum conductor in the form of a concentric wrap. Over the uninsulated conductor, a moisture seal is applied and then protected by a moisture resistant, flame-retardant braid with a gray finish.

The three conductor cable is constructed as above with the exception that two taped conductors are laid parallel before application of the concentric. Conductors 8 AWG and larger are stranded.

Neoprene Jacketed

Same as above except the completed construction is covered with a neoprene jacket, rather than braid.

Laytex Insulated
Specification 950—Braided

Consists of two or three stranded conductors, one of which is uninsulated. Conductors are annealed coated copper insulated with type RU11 90% unmilled grainless rubber insulation and covered with a color coded weatherproofed cotton braid. In three conductor cables two insulated conductors, one red and the other black, are laid parallel and covered with a treated paper tape. Over this assembly the uninsulated annealed coated copper conductor is applied in the form of a concentric wrap. Over the uninsulated conductor a moisture seal is applied and the whole assembly is protected by a moisture resistant, flame-retardant braid finished gray. In two conductor cables a single insulated conductor, colored black, is used.

Specification 952—Neoprene Jacket

Same as above except tape on individual conductors. On the three conductor construction, a paper tape is applied over the neutral (open wrap). On the two conductor construction, the jacket is applied over the concentric.

Laytex Kaiser Master Portable Cords and Cables

The Kaiser Master's rugged, lead-cured jacket of 60% neoprene assures highest protection against sunlight, heat, oil, acid, alkalies, etc. Fine strands of tinned copper are helically wound around a fibrous core for maximum resistance

to flexing, impact, abrasion and cord breakage. Patented Laytex® 90% natural rubber insulation guarantees unbeatable physical, aging and electrical properties.

Laytex Kaiser Master Portable Cords Fibrous Core Conductors—60% Neoprene Jacket— Cured in Lead Type SO—Specification 920 Heavy Duty—600 Volts—60° C.

A 3-mil wall of neoprene laytex over the insulation affords added protection. Insulated conductors are twisted with rayon tire cord fillers, then spirally wrapped with cotton and jacketed with neoprene.

Laytex Kaiser Master Cords conform with all industry practices concerning jacket thickness and over-all diameter. Listed and labeled by Underwriters' Laboratories, Inc. Patent applied for.

Laytex Kaiser Master Portable Cables 600 Volts—2-Conductors Parallel—60° C. Neoprene Jacketed—Cured in Lead

Designed for service demanding greater current-carrying capacity than permissible with portable cords. Standard constructions are: 2-conductor parallel cable, Types W and G; 2, 3 and 4 conductor round cable, Types W and G.

Sizes 8 through 1 give 600 volt service. Rubber fillers are used in all 3 and 4-conductor round Laytex Kaiser Master Cables. For the 2, 3 and 4-conductor round cables, the neoprene jacket is applied in two layers with an intermediate reinforcing fibrous braid.

Note: Cables approved by Pennsylvania Dept. of Mines.

Kaiser Master Laytex® Resin Utility Control Cables

Composed of 19-strand coated annealed copper conductors individually insulated with Laytex, an unmilled natural rubber compound protected by a three-mil colored synthetic resin coating, applied by the dip process, and firmly bonded to the insulation. The required number of conductors (2-18) is cabled together with suitable treated fillers, as necessary, and covered with a rubber-filled tape. The core thus formed is covered with a neoprene jacket.

Suitable for 600-volt service on the control circuits of the electrical systems of industrial plants, utility generating stations and similar installations. May be installed in conduits, ducts or trays, as aerial cable on a suitable messenger or buried in the ground. Specification No. 935.

Kaiser Master Laytex® Resin Supervisory Control Cables

Used in systems for the selective control and automatic indication of remotely controlled units, such as in municipal fire alarm, police signal and traffic control applications. Composed of solid annealed coated copper conductors individually insulated with 90% unmilled grainless rubber compound and protected by a three-mil colored synthetic resin coating firmly bonded to the insulation.

Required number of conductors (2 to 20) are cabled together with suitable treated filler, as necessary, and covered with compound-filled tape. Each layer of more than 8 conductors is covered with rubber-filled tape. The core thus formed is covered either with a neoprene jacket, a lead-alloy sheath, a lead sheath with armor or a rubber jacket.

Suitable for 600-volt service. Specification No. 933.

Kaiser Fluted Gold Welding Cable
Extra Flexible 60° C.

An entirely new and superior conception in the design of welding cable. Its rugged fluted jacket of yellow, 60% rubber is molded with fluting to increase ease of handling and over-all flexibility, to aid in dissipation of heat from the conductor. The yellow jacket provides an excellent contrasting color to black where two cables are required on a welding machine. Fluted Gold is easier to see and cooler to handle. Cable is lightweight and flexible, facilitating welding in cramped quarters.

Base of cable made of fine strands of bare copper, which are combined into a rope-stranded conductor and covered with a wrap of high-grade insulating paper tape. Special insulation of 60% rubber is applied over the paper tape. Heavy reinforcing braid is applied over the insulation, and the cable is completed with a rugged jacket of yellow 60% natural rubber, molded and cured in lead to produce a jacket of permanent smoothness and maximum ruggedness.

Designed for use on electrode holders. Available with aluminum conductor. Specification No. 751.

†The above values of allowable current carrying capacity are based on copper temperature of 60° C. and an ambient temperature of 40° C. yielding load factors of approximately 32 percent for No. 2 AWG cable to approximately 23 percent for No. 3/0 AWG cable, and higher for smaller sizes. The sizes of cables generally used range from No. 2 AWG to No. 3/0 AWG. In actual service, the load factor may be much higher than indicated without overheating the cable as ambient temperature will ordinarily be substantially lower than 40° C.

Note: The sizes of cable recommended by the Machine Group of NEMA Electric Welding Section for standard hand-welding equipment based on maximum length of 90 ft., that is, 45 ft. of welding cable and 45 feet of return cable, are as follows: 100 ampere welder—No. 2 cable; 200 ampere welder—No. 2 cable; 300 ampere welder—No. 1/0 cable; 400 ampere welder—No. 2/0 cable; 600 ampere welder—No. 3/0 cable.

Kaiser Master Welding Cable
Extra Flexible 60° C.

Rope-stranded conductor of fine strands of bare copper forms the base of this construction. Conductor is wrapped with a high-grade insulating paper tape and insulated with Performance compound. Heavy reinforcing braid is applied over the insulation, and the assembly is completed with a jacket of 60% neoprene, cured in lead for maximum toughness and continuously embossed for identification.

Designed for use on electrode holders. Its extra-flexible construction increases ease of handling. Available with aluminum conductor. Specification No. 752.

Kaiser Intercommunication Cables
Thermoplastic Insulation and Jacket

Cables are made with bare annealed copper conductors insulated with .015-in. of colored thermoplastic compound. Pairs and single conductors as required are cabled and a treated crepe paper tape applied over the conductor assembly. A jacket of brown thermoplastic compound .040-in. thick is applied overall. Finished cable is flameproof throughout. Specification No. 228.

Whitney Blake Dynaprene®

Approved by Underwriters' Laboratories, Inc.

Neoprene is a tough synthetic rubber. For all-around service, neoprene compounds provide the most dependable jackets available for flexible cords, because of their exceptionally good resistance to oil, aging, sunlight, chemical vapors and abrasion. Whitney Blakes' Dynaprene neoprene-jacketed cord is recommended where the exposure conditions or application demand a long-wearing, oil-resisting cord. Factories and garages where oil and grease are constant hazards to rubber jacketed cords are localities where neoprene-jacketed cord should be used. Sanders, portable tools, and food mixers which come into contact with oils and cleaning compounds in normal use are just a few of the products which require neoprene-jacketed cord if early replacement is to be avoided.

Construction: Annealed copper conductors stranded for flexibility; wound cotton separator over conductor to protect insulation from corrosive effects of copper; high dielectric strength natural or synthetic rubber insulation, color-coded for polarity; fillers for roundness and strength; textile covering for firmness and reinforcement; tough, abrasion, oil and flame-resistant, tire-tread type neoprene jacket — for rugged performance.

Whitney Blake Rubber Jacketed Portable Cords

Approved by Underwriters' Laboratories, Inc.

Natural or synthetic rubber, Buna type, provides a sturdy jacket for cords which are not used in greasy, oily locations or where they might be exposed to chemical fumes. Whitney Blake rubber-jacketed cords are of the finest quality, the jacket being carefully compounded for abrasion resistance and tear resistance.

Construction: Annealed copper conductor stranded for flexibility; separator over conductor to protect insulation from corrosive effects of copper; high dielectric strength natural or synthetic rubber insulation; fillers for roundness and strength; textile covering for firmness and reinforcement; tough, durable natural or synthetic rubber jacket for rugged performance.

Whitney Blake Teleprene®

Neoprene Jacketed Outside Telephone Wires

TELEPRENE telephone wires are designed to give long, dependable service. Conductors have Teleplate coating—lead to resist corrosion with an electroplated brass coating over the lead to provide enduring adhesion of the insulation to the conductor. Teleplate coating meets the Ammonium Persulphate Test for continuity of coating, in accordance with A.S.T.M. Spec. B-189. Insulation is high quality Buna rubber selected for its long life and excellent electrical characteristics. Jacket is a tire-tread type neoprene compound which provides excellent resistance to sunlight, abrasion, oils, acid fumes, alkalis and other corrosive chemicals.

Samples exposed to natural weathering for twelve years remain substantially unchanged in appearance and tests indicate that many more years of service can be expected;

Whitney Blake Teleprene®

Neoprene Jacketed Outside Telephone Wires

Type designations below indicate the size, conductor material and construction. The initial number indicates gauge size. Numerical suffix indicates number of conductors. When none is used, wire has two conductors. The following symbols are used:

- T Teleprene HC Hard Copper R Reinforced
 B Bronze BC Bridle Copper I Twin Parallel
 CW Copperweld P Parallel

Drop Wire

Used to extend telephone circuits from open wire or distributing cable terminals on poles to subscribers' stations. Furnished in parallel, twin parallel and twisted pair with either signal bronze or Copperweld conductors. Reinforced types have a tough textile wind between the insulation and jacket. Polarity identification is provided by double ridged tracer.

Parallel—Regular and Reinforced Types
 1000 Ft. Coils

All of the above drop wires conform to Section 8021, paragraph C-1 of the 1953 National Electric Code and may be used without insulating hardware under certain conditions as provided in Section 8021, paragraphs C-3 and C-4 of the Code.

Bridle Wire
 500 Ft. Coils

Used in ring wiring and in bridling open wire lines. Double and triple ridge tracers on neoprene jacket identify conductors in twisted pair and triple types.

14TBC2 similar to 14THC2 except it has soft copper conductors. Used for making connections between open wire lines and wire terminals or lightning arrestors and as leads on various types of apparatus.

Whitney Blake Teleseal® Wire

Teleseal was developed for long service in wet locations and for direct burial underground. Its low loss transmission characteristics and stability in wet weather guarantee dependable, trouble-free service even under severe conditions. Teleseal is used extensively by railroads where dependability is essential.

Construction: Hard copper conductor with Teleplate coating of lead to resist corrosion and brass to provide enduring adhesion of the insulation to the conductor. Insulation is specially developed low moisture absorbing compound equivalent in moisture absorption and electrical stability to submarine cable insulation. Jacket is tough weather resistant and abrasion resistant neoprene. It is resistant to sunlight, ozone, and flame. It provides lasting protection against the harmful effects of oils and grease as well as the destructive action of corrosive materials such as acid from cinders.

Whitney Blake Armored Teleseal®

Designed and built for direct burial without supplementary protection. Available in either polyethylene insulated, polyethylene jacketed or rubber insulated neoprene jacketed. Both constructions are one pair parallel No. 16 Awg. soft copper conductors protected with a served armor of flat steel wires.

Withstands the abrasive action of cinders and certain types of soils and also of moisture and other destructive forces underground. Particularly effective in areas infested with rodents and termites. Shipped on nonreturnable reels.

Standard package 5000 Ft.

Whitney Blake Parallel Distribution Wires

Designed for use in rural areas in place of open wire. Its tough jacket protects the conductors from the many conditions that harm open wire. Parallel Distribution Wire is economical because it can be installed with minimum labor, the need for cross arms is eliminated. It may be used to extend runs of rural distribution wire where only one, two or three pairs are required. In locations where atmospheric conditions are detrimental to open wires, such as the sea coast, insulated Parallel Distribution Wire is unaffected.

Construction: Extra high strength 30% conductivity Copperweld conductors. High molecular weight polyethylene insulation and jacket. Ridged one side for polarity identification.

†Modified for heavy duty. Can be used for direct burial.

**Whitney Blake Multi-Pair Distribution Wire
Polyethylene Insulation—Polyvinyl Chloride Covering Over Each Conductor**

Used primarily for extending service economically in rapidly growing rural and suburban residential areas. Made with high conductivity No. 19 AWG., No. 22 Awg. and No. 24 Awg. annealed copper conductors.

No. 19 Awg. and No. 22 Awg. are made with paired conductors, twisted with varying lays to minimize cross talk, are insulated with high dielectric strength, weather resistant polyethylene. Color coded with polyvinyl chloride plastite jacket. Pairs are cabled around a core of polyethylene-covered 109E galvanized steel.

No. 24 Awg. is made in the same manner as other two sizes except it is insulated with color coded polyvinyl chloride and has an over-all binder. Shipped on nonreturnable reels.

Note: Contact GRAYBAR for color coding.

Whitney Blake Telecable (Inside)

Construction: Solid bare soft copper conductors in No. 24 and No. 22 AWG insulated with tough semi-rigid polyvinyl chloride to a nominal wall of .014 in. Color coded for polarity and pair identification. Pairs are twisted with systematically varied lays to minimize crosstalk. Pairs are cabled without fillers into a round core. Free-stripping jacket is brown or ivory polyvinyl chloride with a nominal wall of .040 in. for all except 51 and 76 pair which have .050 in. nominal wall. Steel rip wire under jacket for easy removal of plastic covering.

Whitney Blake Telecable® (Outside)
Exchange Area Cable for Aerial and Duct Use

Totally new design using only copper, polyethylene and an aluminum shield. Polyethylene used for conductor insulation because of its low capacitance, high dielectric strength and generally excellent stability. Black polyethylene, properly compounded to withstand sunlight oxidation, is used for the jacket. REA approved per Specifications PE-14.

Construction: Each conductor is bare annealed copper with a nominal insulation wall of .010 on 24 AWG; .012 on 22 AWG; and .016 on 19 AWG. Its high dielectric strength insures satisfactory operation of cable even if sheath becomes damaged. Up to and including 76 Pair Cable, one pair of each cable has one red leg and one orange leg for use as tracer pair. All other pairs have one red leg and one natural leg.

101 Pair Cable has a center core of 50 pairs, 49 pairs with one leg red and one leg natural and one marker pair with one leg red and one leg orange. Around this core are cabled 51 pairs, 50 pairs with one leg blue, one leg natural and one marker pair with one leg red and one leg orange.

152 Pair Cable has center core of 52 pairs, 51 pairs with one leg red and one leg natural and one marker pair with one leg red and one leg orange. Around this core are cabled 62 pairs, 61 pairs with one leg blue and one leg natural and one marker pair with one leg red and one leg orange. Outside layer has 38 pairs, 37 pairs with one leg red and one leg natural and one marker pair with one leg red and one leg orange.

202 Pair Cable has a center core of 52 pairs, 51 pairs with one leg red and one leg natural and one marker pair with one leg red and one leg orange. Around this core are cabled 62 pairs, 61 pairs with one leg blue and one leg natural, and one marker pair with one leg red and one leg orange. The next layer has 41 pairs, 40 pairs with one leg red and one leg natural, and one marker pair with one leg red and one leg orange. The outside layer has 47 pairs, 46 pairs with one leg blue, one leg natural and one marker pair with one leg red, one leg orange.

303 Pair Cable assembled into 50 and 51 pair units, each having a red-orange pair in the outer layer. Five units—3 with blue-white pairs and 2 with red-natural pairs are cabled around one unit with red-natural pairs. Each unit is provided with an open spiral multiple and textile binder.

Whitney Blake Telecable Exchange Area Cable for Direct Burial

Construction of this cable is similar to Telecable Exchange Area Cable for aerial and duct use with the addition of a double layer of heavy gage aluminum armor applied spirally over the polyethylene belt. A sheath of black weather-resistant polyethylene is applied over the armor.

**Whitney Blake Teleduct®
Inside Telephone Wires**

Teleduct is the family name for Whitney Blake inside telephone wire and without jacket. Plastite and neoprene types are available. Teleduct is used inside buildings for extending circuits from arrestors or other terminating fixtures of outside lines to station sets. 500 Ft. Coils.

Construction: Soft copper conductors insulated with smooth Plastite polyvinyl chloride that has high dielectric strength and is tough, flameproof and highly resistant to abrasion, water, oil, alkali and most solvents. Colored rayon threads permit easy identification for polarity. Standard colors, ivory and brown.

Construction: Soft copper conductors, one tinned for instant polarity identification. High dielectric strength Plastite insulation. Web type construction for easy separation of insulated conductors. Wire requires less space than twisted pair type. Available in brown and ivory. Designed for low cost speedy installation by modified Bostitch type stapling gun. Lies flat for exceptionally neat and unobtrusive installation.

**Whitney Blake Teleduct®
Inside Telephone Wires**

Construction: Tinned soft copper conductors, color coded neoprene insulation, over-all brown neoprene jacket. Nominal wall of insulation is .022 in. Nominal wall of jacket is .028 in. Tough neoprene jacket is highly resistant to sunlight, heat, moisture, abrasion and compression loads. This wire can be used directly from the outside station protector to the telephone with complete safety.

Whitney Blake Telecord Replacement Sets

Telecord has excellent flexibility and is neat, clean and attractive. The neoprene jacket is highly resistant to abrasion, perspiration, humidity, oil and grease.

Has cadmium bronze tinsel conductors for improved conductivity and flex endurance, a protective separator and an essentially sulphur-free rubber insulation to eliminate the risk of tarnish. Conductors are parallel and paper wrapped.

Made from Telecord described above, the following standard cord sets are completely trimmed and equipped with solderless terminals and strain reliefs, ready for attachment to the equipment indicated.

Whitney Blake Shielded Sound System Wires—Plastic Types

These wires have solid or stranded conductors, as indicated, tough semi-rigid Plastite insulation for high resistance to crushing. Conductors are twisted together and covered with a braided copper shield. A ground wire is used on types which show "G" in type designation. Over-all braid, where used, is gray cotton. Jacket, where used, is black plastite.

These wires have excellent insulation resistance and electrical stability under high humidity conditions. Semi-rigid plastite insulation is tough, abrasion resistant and flame resistant.

Nominal insulation thickness is .015 in. for No. 22 and No. 20 AWG, .018 in. for No. 18 AWG with solid conductors; .021 in. for No. 18 AWG with stranded conductors and for No. 16 AWG. Nominal jacket thickness is .025 in. for No. 22, 20 and 18 AWG and .030 in. for No. 16 AWG.

Symbols Used in Type Designations

- SR—Semi-rigid plastite insulation
- B—Bare copper shield
- T—Tinned copper shield
- C—Over-all gray cotton braid
- J—Over-all plastite jacket
- F—Flexible stranded conductor (otherwise solid conductor)
- G—Ground wire

-------------	------------	----	--------	-----	------	----

Cat. No. 3527 is similar to Cat. No. 3513 but has a No. 22 AWG solid tinned copper ground wire run laterally under a tinned copper shield, a lateral paper tape and an over-all gray cotton braid.

Whitney Blake Shielded Wires and Cables Microphone Cable Semi-Conducting Textile Shield

Construction: This is a completely new cable design in which a close semi-conducting textile wrap and a stranded flexible drain wire replaced the conventional braided copper shield. Conductors are cadmium copper for improved flex life and insulated with high quality rubber. This cable is not subject to damage by twisting and by the pressure of heavy equipment running over it. There is no danger of the shield breaking as a result of continued flexing. The cord has a tough brown neoprene jacket which will resist abrasion, oil, grease, perspiration, sunlight and acid fumes. The cord is lightweight, handles easily and can be coiled easily without kinking. The use of the textile shield removes the objectionable stiffness inherent in copper shielded construction. Noisy circuits caused by intermittent opens with movement of the cable are non-existent in this new construction. Because of this construction this cord has longer service life.

Whitney Blake Telecable Self Supporting Exchange Area Cable

Available in 6, 11, 16 and 26 pair No. 19 AWG high strength 40% conductivity copperweld conductors with high molecular weight polyethylene insulation.

Insulated conductors are twisted into pairs with the lays varied to eliminate cross talk. Each cable has a tracer pair with one red leg and one orange leg. All other pairs have one red leg and one natural leg.

Cable core wrapped spirally with a non-hygroscopic tape and then covered with an aluminum shield. Jacket is black weather-resistant polyethylene.

Measured Electrical Characteristics

Mutual Capacitance: At 1000 cps. Average—.085 microfarads per mile.

Conductor Resistance: At 68° F. Maximum—117 ohms per mile of cable.

Insulation Resistance: Conductor to other conductors and shield—Minimum 1000 megohms 1 mile.

Dielectric Strength: Conductor to other conductors and shield—10,000 volts rms.

Attenuation: At 1000 cps. Nominal—2.01 db/Mile.

Transmission Distance: Non-loaded, based on 30 db loss Nominal—15 miles.

Whitney Blake Telecable Multiple Drop Cable

Provides a simple, fast method of installing multiple drops. Made with No. 19 AWG bare, medium hard copper, polyethylene insulated conductors twisted into pairs with length of lay systematically varied to provide minimum cross talk levels.

Color-coded pairs are cabled around a center filler core, then wrapped with separator tape over which is applied an aluminum shield.

Over-all black polyethylene jacket provides protection under all weather conditions. Shipped on nonreturnable reels.

Whitney Blake Teleframe® Distributing Frame, Jumper and Duct Wires

Teleframe is the family name for Whitney Blake distributing frame and jumper wires made with enamel and textile insulation, with Plastite insulation and with Plastite insulation and nylon jacket. 1000 Ft. Metal Spools.

Construction: Soft copper conductors, tinned for easy soldering. Insulated with high dielectric strength semi-rigid Plastite. Nominal wall of .015 in. Toughness and high resistance to crushing of semi-rigid Plastite permits small diameter. Semi-rigid Plastite is tough, abrasion resistant and flame resistant. Used on distributing frames and cross connecting racks and in ducts.

*Not U/L Listed.

**PWC Motor Plant Cord
(Maroon Jacket)**

Designed for extra hard usage in industrial plants where exposure to oil and grease is prevalent. A special composite stranding in the conductors assures extraordinary flexural endurance and increased breaking strength. It has excellent abrasion resistance.

Rated for 600 volts.

**PWC Super Safety Tool Cord
(Clear Vinyl Jacket)**

Designed for hard usage on high cycle and standard electric tools requiring three circuit conductors and a grounding conductor.

This is a safety cord with four additional uninsulated grounding conductors laid into the interstices of the insulated conductors.

A transparent vinyl jacket covers the cable assembly to allow visual inspection of the core and grounding conductors at all times.

Rated for 600 volts.

**PWC Multi-Conductor Flexible Control Cable
Rated 600 Volts**

A cable design, available in sizes #18 to #10 AWG with extra flexible stranding. The conductors are insulated with a high dielectric strength polyvinyl chloride and are fully color coded. Cabled for maximum flexibility.

A polyvinyl, hard service jacket offers ample protection from severe usage. Will not support combustion. Is abrasion and impact resistant.

**Plastic Wire and Cable Building Wire
60° C Type TW—600 Volts**

U/L Listed and Labeled

A thermoplastic insulated building wire designed for moist and wet locations. Excellent resistance to acids, alkalis, oils and grease. Available in wide color range.

**Plastic Wire and Cable Rur-A-Line
Polyethylene Insulated Telephone Line Wires
No. 214, No. 212, No. 083S**

A two conductor parallel line wire insulated with a tough, high-molecular weight polyethylene. Extra high strength copperweld or steel conductors allow span lengths up to 600 feet in light storm loading districts. Special preformed hardware has been designed for Rur-A-Line. Sag, construction and transmission data can be furnished upon request.

Recommended for rural telephone lines; railroad communications; forest telephone lines; yard communication systems and sea coast and corrosive locations.

Standard package 5000 ft. reels.

Plastic Wire and Cable Multi-Pair Inside Telephone and Intercommunication Cable Unshielded

Type 122 cables are manufactured in sizes #24, #22 and #19 AWG. The conductor insulation is a tough heat resistant vinyl compound. Twisted pairs have a systematically varying lay to minimize cross talk.

The cable assembly is bound with nylon binder tape. A special nylon rip thread is placed longitudinally under the jacket to facilitate easy jacket removal. A special vinyl jacket provides excellent protection against all types of installation conditions.

Conductor sizes 24 and 22 are insulated with a .012 in. wall of vinyl, and size 19 with a .015 in. wall of vinyl.

Recommended for inside telephone, switchboard, intercommunication and sound systems.

Packaged in 500 ft. coils or 1000, 1500 or 2500 ft. lengths on reels.

Plastic Wire and Cable Mining Machine and Shuttle Car Cables

Listed by U. S. Bureau of Mines and Dept. of Mines Pennsylvania as Flame Resistant and damage resistant. Listing No. P-124-BM.

These mining cables are the first of thermoplastic construction to be listed by the U. S. Bureau of Mines and the Dept. of Mines Commonwealth of Pennsylvania. In addition to meeting the flame resistance tests, these cables also meet the severe Damage Resistance Tests of U. S. Bureau of Mines.

Twin Type W Cable 600 Volts (Small Diameter) Color Orange

"Small Diameter" is explained by the fact that cable with a given conductor size has the same overall dimensions as the next smaller size in a conventional Type W construction. (i.e. a #2 AWG Small Diameter Type W Cable has the same diameter as a #1 AWG conventional Type W Cable.) This factor has two distinct advantages.

1. Using the same conductor size, at least 20% more cable can be reeled.

2. Using the same cable diameter, the next larger conductor size can be used, allowing greater strength, less voltage drop and reduced heating.

Integral insulation and jacket of special "PWC-DR" polyvinyl chloride compound. High dielectric strength, excellent flame, moisture, abrasion, crushing, and impact resistance. This compound is also resistant to oils, greases, acids and alkalis. Service temperature range, 0° F. to 180° F.

No.	AWG Size	Stranding No. Size	Minor In.	Major In.	Net Wt. Lbs. Per 1000 Ft.	Ft. In Reel
280-062	#6	266X#30	.510	.840	375	500
280-042	#4	420X#30	.560	.930	500	500
280-022*	#2	655X#30	.610	1.050	647	500

Twin Type G Cable — 600 Volts — Color Orange

Type G cable is constructed with extra flexible stranding and the newly developed "PWC-DR" Compound. The integral insulation-jacket design gives greater service life and performance; will not crack or come apart under the most severe service conditions.

Insulated Conductors: Bare soft annealed copper in AWG sizes #6, #4 and #2 only. Type K, extra flexible stranding per ASTM-B-172 except one conductor with reverse lay. Individual strands are #30 AWG size conforming to ASTM B-3.

Ground Conductor: Bare soft annealed copper conductors of Type K stranding. Size equals 50% minimum of the power conductor size.

Insulation: Integral insulation and sheath of special PWC polyvinyl chloride compound. High dielectric strength, excellent flame, moisture, abrasion, crushing and impact resistance. Compound is highly resistant to oil, grease, acids and alkalis. Service temperature range from 0° F. to 180° F. Standard feet on reel 1000 feet.

**Plastic Wire & Cable
Premium Aerial and Duct Cable**

PWC Type 150

Premium grade cable designed for aerial or duct installation. Manufactured in Nos. 19, 22 and 24 gauge sizes. The conductors are insulated with polyethylene. Pairs are semi-color coded and twisted with varying lays. Cable assembly bound with non-hygroscopic tape and shielded with .002-in. copper tape.

A long-aging, durable dark gray polyvinyl chloride jacket protects cable from moisture and weather.

**Plastic Wire & Cable
Rural Distribution Wire
REA Listed**

PWC Type 177 Wire

A self-supporting rural distribution wire designed for medium length spans. Offers an economical construction for rural extension runs. The pairs are fully color coded and assembled around an 1800 pound breaking strength polyethylene insulated steel messenger.

Conductors are insulated with polyethylene and individually jacketed with polyvinyl chloride. Stringing sag data for Rural Distribution Wire will be furnished upon request.

Standard Shipping Lengths: All constructions of Type 177 Rural Distribution Cable can be furnished in either 2000 or 4000 ft. lengths on reels.

**Plastic Wire & Cable
Exchange Cables**

PWC Type 190 Cable

Designed for aerial and duct installation.

Electromagnetic and electrostatic shielding is achieved with a helically applied aluminum tape. A black polyethylene sheath provides excellent mechanical protection and weathering resistance. REA listed and conforms to REA spec. PE14.

**Plastic Wire & Cable
Long Span Rural Distribution Wire**

PWC Type 180

A self-supporting rural distribution wire designed for long span installations. Particularly adaptable for joint use on long span power lines. Each conductor insulated with polyethylene and jacketed with highly moisture and weather resistant polyvinyl chloride compound.

The pairs are fully color coded and assembled around a polyethylene insulated .142-in. high strength steel messenger. (Breaking strength 3000 lbs.) Stringing sag data available upon request.

#19 AWG Wire

**Plastic Wire & Cable
Urban Distribution Wire**

PWC Type 183

A 16 pair No. 24 AWG self-supporting wire for urban distribution use. Offers an economical construction where a group of subscribers are to be served a short distance from the main pole line.

Conductors insulated with a .025-in. wall of polyvinyl chloride that is weather and abrasion resistant. The pairs are fully color coded and assembled around a 109E polyethylene insulated steel messenger.

Stringing sag data is available upon request.

**Plastic Wire & Cable
Direct Burial Telephone Cables**

PWC Type 166 Cable

Hard service double sheathed cable designed for direct earth burial. Manufactured in No. 24, No. 22 and No. 19 AWG sizes. Conductors are insulated with polyethylene. They are twisted into pairs with variable lays to prevent crosstalk. A polyethylene inner jacket provides additional mechanical protection necessary for direct burial as well as maximum dielectric protection from lightning surges.

A low resistance copper tape is applied over the inner jacket providing protection from induced power line noise. The outer jacket is polyvinyl-chloride; mechanically tough and resistant to moisture and earth acids.

Available up to and including 404 pairs.

**Plastic Wire & Cable
Buried Telephone Wire**

Types 163 and 164 designed for direct earth burial in rural areas by means of a cable plow. A single circuit wire that can be installed with total cost comparable to open line wire installation.

Type 163 Buried Telephone Wire—Unarmored

PWC Type 163 is a parallel line wire designed for direct burial. The conductors are No. 17 AWG special relief annealed, hard drawn copper individually insulated with polyethylene, one blue and one white. The conductors are jacketed in parallel with a .030-in. wall of tough, moisture resistant polyvinyl chloride, bright red in color.

163	17	.035	.030	.180 x .300	36	225	5000

Type 164 Buried Telephone Wire—Armored

Constructed with No. 17 AWG special relief-annealed hard drawn copper conductors. The conductors are insulated in parallel with black polyethylene. A ridged tracer provides tip and ring identification. A .005-in. bronze armor tape is applied longitudinally for both shielding protection and against rodent or insect damage. A special jacket of chrome yellow polyvinyl chloride gives a protective covering against water, oil, and earth alkalis.

**Plastic Wire & Cable
Self-Supporting Telephone Cables**

**PWC Types 130 and 132 with Polyethylene Jacket
PWC Types 160 and 162 with Polyvinyl Chloride Jacket**

Self-Supporting Telephone Cables designed for use in aerial spans without messenger support. Types 130 and 160 feature #19 gauge copperweld conductors for high tensile strength. Types 132 and 162 are made with #19 hard drawn copper conductors. In all types the conductors are partially color coded with a .015-in. wall of polyethylene.

Types 130 and 132 are jacketed with black hard service polyethylene compound. Types 160 and 162 feature a durable hard service polyvinyl chloride jacket.

Full sag and tension data will be furnished upon request.

Contact GRAYBAR for prices and additional types of Appliance wire.

Gavitt Miniature Instrument Wire

Features good high-voltage breakdown; high insulation resistance; low moisture absorption.

Temperature 40° C. to 105° C.; voltage 300 V. (rms), insulation extruded PVC—.008 in.—.010 in. wall, dielectric strength (1 min.) 1500 V. (rms), breakdown voltage in excess 5 KV (rms).

Graybar Type G52U

Note: A nylon outer covering can be added to produce high abrasion resistance.

Gavitt Spiral Shielded Jacketed Cable

No. 44

No. 43

No. 41

No. 42

Cable can be supplied in long lengths on spools or reels, or cut to specified lead lengths, with jacket and insulation stripped, with shield tails prepared to customers' specifications.

Although spiral shielding is preferred by many, because of the ease in preparing the shield tails for ground connections, there are many applications where a braided shield is desired.

Gavitt Harness and Cable Assemblies

Harness and cable assemblies are available from the smallest simple single lead to the most complicated assembly with a multiplicity of various wires, branch-outs, terminals and connectors.

Can be furnished from any standard wire constructions, or wire can be made to meet your own specifications.

Graybar can incorporate all standard terminals, plugs, sockets, connectors and wiring terminals in a harness or assembly; also can supply assemblies twisted in multiple conductor form or laid out in harness form... laced, taped, shielded, braided or molded.

Contact GRAYBAR for prices and additional information.

Gavitt Ribbonized Wire

Multi-Conductor Flat Cable

Ribbonized wire required minimum space; PVC insulated only with excellent adhering qualities and rip features.

Available in gage size No. 14 thru No. 28. Concentric insulation regardless of number of conductors. Any number of conductors up to 35 depending on gage, insulation and practical packaging.

Can combine any of the following 15 solid colors in any sequence: Brown, tan, red, pink, orange, yellow, dark green, light green, dark blue, light blue, purple, violet, grey, white and black.

Contact GRAYBAR for price and other information.

Times Extruded Teflon® Hook-Up Wires

Manufactured to the MIL-W-16878B specifications with a rating of -90° to +250° C., are available in 14 solid colors, and/or spiral striping. Conductor of silver plated copper. Solid Colors: Black, Yellow, Brown, Green, White, Tan, Pink, Red, Orange, Blue, Light Blue, Gray (Slate), Violet (Purple), Light Green.

*Sizes No. 6 and No. 4 can be supplied in 500-ft. coils.
 The standard lengths are subject to a manufacturing tolerance of ±10 percent. An amount not exceeding 10 percent of the total length of any one order may be shipped in random lengths with no piece less than 25 percent nor longer than 110 percent of the standard length. Reels will be marked to show length of each piece, and, in the case of reels containing random lengths, the number of pieces, footage of each piece and position on reel.
 Shipments to each destination will be made to the nearest package specified on each item ordered.
 Weights of covered conductors are approximate and subject to normal manufacturing tolerance.

The standard lengths are subject to a manufacturing tolerance of ± 10 per cent. An amount not exceeding 10 per cent of the total length of any one order may be shipped in random lengths with no piece less than 25 per cent nor longer than 110 per cent of the standard length. Reels will be marked to show length of each piece, and, in the case of reels containing random lengths, the number of pieces, footage of each piece and position on reel.

Shipments to each destination will be made to the nearest package specified on each item ordered.

Weights of covered conductors are approximate and subject to normal manufacturing tolerance.

**Nonreturnable reels.

*One phase wire identified by ribbing.

‡Quadruplex sizes No. 6, No. 4 and No. 2 can be supplied in 500-foot coils.

‡15-inch drum.

The standard lengths are subject to a manufacturing tolerance of ± 10 per cent. An amount not exceeding 10 per cent of the total length of any one order may be shipped in random lengths with no piece less than 25 per cent nor longer than 110 per cent of the standard length. Reels will be marked to show length of each piece, and, in the case of reels containing random lengths, the number of pieces, footage of each piece and position on reel.

Shipments to each destination will be made to the nearest package specified on each item ordered.

Weights of covered conductors are approximate and subject to normal manufacturing tolerances.

Alcoa Aluminum Bus Conductors

Aluminum bus conductors are available in alloys with a range of electrical and mechanical properties which meet the requirements for all bus conductor applications.

Mechanical Properties

Notes:

1. Area computations based on nominal dimensions. Weights computed using an aluminum weight of 0.098 pounds per cubic inch.
2. Tubular conductors in this range of diameters can also be furnished with dimensions in terms of outside or inside diameters and specific wall thickness.
3. If tolerances closer than pipe tolerances are desired, tubular conductors can be supplied to extruded tube tolerances.
4. Sizes, alloys and tempers other than listed are subject to inquiry.
5. For current-carrying capacity and other data, see booklet "Alcoa Aluminum Bus Conductors."

*Based on standard weight zinc-coated steel core wire.

†Have a high ratio of mechanical strength to current-carrying capacity. Used largely for overhead ground wires and for special construction such as river crossing spans.

Notes:

1. An amount not exceeding 10 per cent of the total weight of any one order may be shipped in random lengths, but no piece shorter than 50 per cent of the standard length will be shipped. No random length will be wound on the same reel with a standard length, and all reels will be marked showing number of pieces, length of piece.

2. The actual weight of cable will be held within a tolerance of plus or minus two per cent (2%) of the weights listed. Invoicing will be based on actual weight.

**Alcoa Weather Resistant-Line Wires
Polyethylene Type**

Note: The standard lengths are subject to a manufacturing tolerance of ± 10 percent. An amount not exceeding 10 percent of the total length of any one order may be shipped in random lengths with no piece less than 25 percent nor longer than 110 percent of the standard length. Reels will be marked to show length of each piece, and, in the case of reels containing random lengths, the number of pieces, footage of each piece and position on reel. Shipments to each destination will be made to the nearest package specified on each item ordered. Weights of covered conductors are approximate and subject to normal manufacturing tolerances. For further information contact Graybar.

Alcoa Parallel Groove Clamps

Universal—190 Series

Cap Screw Type—480 Series

U-Bolt Type—580 Series

Universal Parallel Groove Clamps will accommodate a range of conductor sizes in each groove. They are recommended for this convenience and for light-duty service. Not recommended for main circuit connections.

Heavy Duty Parallel Groove Clamps are recommended for main line connections and heavy duty service. These clamps offer maximum electrical efficiency. The groove contour and the aluminum hardware combine to make them the best parallel groove clamps for use where the current load is large or operating conditions are severe.

Heavy Duty Parallel Groove Clamps

480 and 580 Series

The following clamps are cataloged by a decimal system which denotes the groove sizes:

Example: ^(A) ^(B) A 481.2 Clamp

(A) has a Number 1 groove shown in the units figure (Range 0.292 — 0.502),

(B) has a Number 2 groove shown in the tenths figure (Range 0.464 — 0.743)

*Extensive field experience and exposure tests show that if a suitable grease type joint compound is liberally applied over and around the contact area, copper-to-aluminum electric connections can be made satisfactorily with aluminum clamps without copper bushings.

Copper bushings are available for all universal grooves—subject to inquiry.

In choosing a parallel groove clamp for connecting two different sizes of conductor, determine the groove and clamp required for the size of conductor.

Globetray Interchangeable Trays

For Cable Wiring and Tubing Support

Ladder Type

Cable-Strut Basket Type

Both Types Joined By Splice Plate

Interchangeability

These illustrations show the advantages of using Globetray (ladder type tray) in conjunction with Cable-Strut (basket type).

The cross channel design of Globetray provides natural drop out openings wherever needed. Globetray and Cable-Strut can be joined with the Universal Splice Plate at any point. They match perfectly, provide lower cost installation and are completely compatible. All straight sections and fittings are completely interchangeable.

These two trays were engineered for uniform and easy installation. There is complete interchangeability at any given location between the two types.

The Globetray (ladder type) is intended for use where festooning of cables is not a problem, while the Cable-Strut (basket type) is used for the support of communication wire, instrument tubing and control cables in automation applications. Both types available in steel or aluminum, with complete accessories for speedier installation and with offset locking channels to eliminate sharp edges and to add strength and rigidity.

Fittings:

All Globetray and Cable-Strut fittings are engineered to have the same load capacity as the straight sections.

All parts are produced and inspected to assure perfect alignment for faster installation.

Accessories:

This system carries a complete line of accessories in both types to speed installation and keep field manpower down to a minimum.

Load Charts:

Load charts for both types have been prepared by Pittsburgh Testing Laboratory and are to be found at the end of this section.

For complete information and prices contact your nearest Graybar office.

Globetray and Cable-Strut Fittings

Engineered to carry the same loads as the straight sections. All radii start at the ends of the fitting, therefore in critical locations a small amount of space is required to change elevations and make quick turns. This is accomplished by

furnishing straight, half curve and full curve splice plates.

Divider strips are available for all straight sections and fittings.

Splice Plates

Standard Type

Universal splice plates are made of No. 10 gauge steel, hot dip galvanized, or of 1/8-in. alloy 5052-H34 aluminum and come complete with four square shank button head bolts, washers and hex nuts (all hot dip galvanized). This splice plate can be installed as quickly as any hammer type connector or gimmick type connector—in many cases much faster. It is the strongest type connector made.

Note: Splice plates are ordered as a separate item.

Hinge Type Connector

Available where this type connector is desired; but no hinge type connector can carry the loads specified on load chart.

For complete information and prices contact your nearest Graybar office.

Globetray and Cable-Strut Accessories

Interchangeable on Both Trays

Globetray and Cable-Strut accessories are designed to speed installation and eliminate holes in cross channels to produce a smooth cable surface. Their use will eliminate

field labor almost entirely. The accessories on this page are available in either style tray.

Cable Clamps

Made from aluminum alloy 5052-50 (.50-in.) complete with cadmium plates No. 10-24 screws, washers and nuts. Supplied straight and easily bent in the field to cable curve.

Conduit Clamp Brackets

Holds conduit or cable when it is necessary for them to run over side of tray.

Divider Strip For Horizontal Elbow

Supplied in 6-ft. lengths and can easily be bent to any radius. It follows curve of the cable.

Wall Brackets

To support Globetray and Cable-Strut from walls, columns and available makes of channel framing.

Hold Down Clamps

Locks securely to side channels and can be bolted to most available makes of channel framing.

Globetray Cable Pulleys

Two sizes—for any bend larger than 45° the No. 144-24 permits curvature of the cable to a minimum radius of 24-in., while the No. 144-32 permits curves to a minimum of 32-in. radius.

Globetray Cable Rollers

For pulling cable into straight sections of tray. Reduces drag.

For complete information and prices contact your nearest Graybar office.

Side Channel Clamps

For fastening down tray when it is to be mounted flush with wall.

Drill Jigs

When sections are required to be cut in the field, this jig eliminates the necessity of laying out holes. Locks securely in position, guides drill perfectly.

Tray To Box Connector

Use 90° splice plate. Frame type connectors also available.

Divider Strip Cable Protector

Used where cables cross over divider strip. Made of rubber. Slips over top edge of divider strip.

Cover Clamps

Securely fastens cover on horizontal or vertical runs. Complete with (2) bolts, nuts and washers.

Straight Section Divider Strip

Quick, easy to install. Divider Strip Clamp includes bolts, nuts and washers cadmium plated.

Cable-Strut Hanger Channels

Will carry the full loads as shown on load charts. Punched with 9/16-in. diam. holes for 1/2-in. diam. rods. Hot dip galvanized or aluminum.

Cable-Strut Single Hangers

Will support tray so cable can be installed from side. For 3-in. and 4-in. Cable-Strut only. Galvanized.

Cable-Strut Double Hangers

Will support two trays. Cables can be installed from the side. For 3-in. and 4-in. Cable-Strut only.

Safe Uniform Loads for Globetray and Cable-Strut

(Pounds Per Lineal Foot)—Deflection (Inches)

Tested as a free beam. When tray is used as a continuous beam, deflection will be (two fifths) of that shown.

These load charts have been prepared by the Pittsburgh Testing Laboratory and are based on tests performed by them in their laboratory.

Tested as a free beam. When cable-strut is used as a continuous beam, deflection will be 2/5 (two-fifths) of that shown.

Koiled Kords

Retractable Cords of a Thousand Uses

Retracted—4-Ft. Long

Extended—25 Ft. Long

Eliminate trailing wires; always retract to their original length. Reduce cord replacements; Koiled Kords are not subject to the twisting or tangling of straight cords.

Neoprene jacketed; permanently coiled into a spring-like shape. Available with one to seven conductors. Supplied in mandrel lengths, cut and used like ordinary straight cord, or furnished according to specifications in combinations of coiled and straight lengths, with or without terminals.

Standard Types

Stock items consist of a full line of 48-in. mandrel lengths and a limited number of prepared coil sets. Where quantity is sufficient, cords will be furnished for shielded applications. Shielding is provided by a special tinsel. Facilities for specialty items are available.

In forwarding inquiries on cord sets, enclose either specifications indicating design and construction, or a drawing.

Appleton Portable Reelites

Schedule RE

7P Series

Newly designed 7P Series has all the features of the 7S Series.

Consists of a universal type mounting bracket which gives unlimited flexibility.

Adaptable for ceiling or wall installation. Rated 7 Amps. 250 v.

No.	Cord Lgth. Ft.	Cord Type	Each
7P2	28	18-2 SJO	\$17.95
7P2G	25	18-3 SJO	21.00

Vaporproof Type

Extra safety features are incorporated in this model.

Furnished complete with handlamp attached.

Rated 7 Amp., 250 volt. Has three conductor cord with one conductor being grounded.

Ideal for wet steamy areas. Equipped with heavy plastic handle, wire guard and vapor-proof globe.

Takes lamps up to 75 watts.

No.	Cord Lgth. Ft.	Cord Type	Each
7SV2	20	18-3 SJO	\$30.00

Appleton Air-Fluid Reels

Spring-Driven Lift Reels for Air and Fluid Hose

Types CA and CF—Light Duty

For light duty pneumatic tool, paint spray and blow-gun applications to keep hose free of kinks and out of the way.

Compact design makes this reel unit particularly valuable in places where head room is at a premium.

Furnished with 25-ft. of durable two-braid hose. Hose outlet is adjustable and should be set so that hose does not drag around rollers when mounted on wall or ceiling.

Reel diameter, 13 1/2 inches.

Type CA

Maximum Pressure: Air—150 lbs., Fluid—125 lbs.

No.	Service	Hose Size, I.D.	O.D.	Ship. Wt. Lbs.	*Each
CA11A	Air	1/4	9/16	27	\$72.00
CA22A	Air	3/8	7/8	32	80.00
CF22A	†Fluid Paint	3/8	1 1/16	32	76.00

†Hose has proper O.D. for DeVilbiss fittings. Paint-fluid hose is not recommended for air service as this use is usually severe on the specially compounded rubber necessary for paints and oil solvents.

*For ratchet device add \$3.00 to above prices. Ratchet designed for use where constant tension is unnecessary. For ceiling installations only.

Appleton Portable Reelites and Accessories

Automatic Reeling Devices for Extension Cords

Continuous Swivel Reelites

Furnish light—or flexible power source for electrical devices when and where you want it, while keeping cord neatly reeled up and out of the way. Continuous swiveling action reduces accident hazards and increases cord life by preventing kinks or other damage. Positive stop action holds cord at any desired length, yet a flick of the wrist lets the reel take up cord when the job is done.

Hanger plates fit neatly over any 4-in. octagonal outlet box; installation is quick and easy.

No. 7S2

7S Series

Double silver-alloy contact brushes permit free rotation of entire reel without power interruption or tangling of cord.

Totally enclosed steel construction keeps dust from moving parts. Furnished with durable, attractive baked hammertone finish. Reel Diameter, 7-in.

No. 7S2: Rated 10 amps., 250 volts. Maximum accessory weight, 20 oz.

No. 7S2G: Rated 7 amps., 250 volts. Maximum accessory weight, 20 oz.

No. 7SV2: Furnished complete with handlamp, as shown, with heavy plastic handle, heavy-duty wire guard and vapor-proof globe. Ideal for wet, steamy areas. Takes lamps up to 75 watts. Type SJO Cord, size 18 A.W.G., 3-conductor, has one conductor grounded to reel frame for added safety. Rated 7 amps., 250 volts. Maximum accessory weight, 30 oz.

No. 7SV2

No.	Cord Lgth. Feet	Cord Type	Each

Appleton Constant Duty Reelites

Spring-Driven Cable Lift Reels

Left: Constant Duty Reelite equipped with guide roller cable outlet.

Right: Type EG Constant Duty Reelite equipped with special 4-roller cable outlet.

Made of cast aluminum and steel, black enamel finish. Use of ball bearings throughout eliminates wear and provides long-life, trouble-free reeling.

Type EG Constant Duty Reelite is furnished with guide roller type cable outlet only. Other Reelites are furnished as standard with guide roller type outlets, but may be fur-

nished, at extra charge, with swivel or large roller type outlets. See Roller Cable Outlets on following page for descriptions and prices.

To Order

Specify catalog number, length, gage and number of conductors of cable. Order special cable outlets separately.

Appleton Type YS Reelites
Portable Power for Electric Hoists

Designed principally for automatic cord takeup on electric hoists operating on straight or curved tracks. Cord may be fed in any direction. Swivel range of 335° provides full track coverage with half cord length.

Enclosed current collectors, elimination of hazards from tangled cords and provisions for adequate grounding prevent electrical mishaps.

Grounding shunt furnished as standard.

Long-life power spring and self-lubricating bearings keep maintenance at a minimum. Supplied with swivel

base and Type S rubber-covered cord. Reel diameter, 12½ in.; overall height, 16¼-in. Finished in two tone baked enamel.

Appleton Retract-O-Reel

A convenient spring-operated balance reel for supporting tools directly over work. Recommended for portable tools, air and electrical devices weighing up to 10 lbs.

Adjustable cable clamp holds tools in exact position for easy reach and use. Wedge-type wire grip stopper maintains a positive grip without danger of damage to wire rope. No set screws used.

Spring tension adjustable through balance point; set at factory according to weight of tool to be used.

Furnished complete with 6-ft. of pre-formed wire rope, rubber bumper, cable clamps and eye loop with swaged-in thimble for quick, easy connection of tools.

Made of light-weight cast aluminum. Ball bearings are all of self-lubricating type. Net weight, 6 lbs.

No. A1-B21 Each \$1.65

Benjamin Grounding Reels For Static Discharge

Available for use in connection with the generation of static charges on fuel servicing equipment during the transfer of combustible fuels.

The use of a Grounding Reel is an added precaution in

eliminating the possibility of fire or explosion because of discharge of sparks in the vicinity of inflammable fuels or vapors. The Reel keeps the grounding cable off the ground where there is always the possibility of damaging or entangling it and making it useless.

When ordering specify preference in cable.

Benjamin Electric Extension Cord Reels

Supplied with two or three conductor electric cord and with or without a grounding wire and with various types of mounting arrangements.

The length of cord, that can be accommodated in the Cord Reel, depends on the number and gauge of the conductors and diameter of the electric wire.

*Deduct \$3.00 if furnished less Par 38 Lamp.

**For use with cloth cutting machines and with hand power tools.

Letters "JB" after model number indicates that Cord Reel is equipped with arrangement with cover plate for mounting Reel on any overhead 4-in. octagonal outlet box.

Letter "T" after model number indicates that handle is equipped with a tool tap.

Series 700 Cord Reels have the exclusive and unique level-winder feature.

Benjamin Electric Extension Cord Reels are available for Service Stations, Garages and Industry—Also available for original equipment purposes on Wringer Type Washing Machines, Floor Lamps, Ironers, Vacuum Cleaners, Projectors, Tape Recorders, Portable Television and Portable Radios, etc. Dual Action-Reels are also available for pull-up-and-down electric lighting fixtures.

Appleton Industrial Type Aireels

Spring Driven Lift Reels for Air Hose Lines

Types CWT and CTL

Type CWT

Automatically wind and maintain constant tension on air hose lines of portable air-driven tools.

Open type reel with adjustable outlet support arm to assure minimum friction when air hose is drawn through rollers. Can be mounted on wall or ceiling.

Furnished with positive, self-adjusting swivel air joint. Strong, closely braided air hose has ample strength to withstand high pressures and pulsation loads.

Reel diameters: Type CWT—19½ in.; Type CTL—30¾ in.
Max. Air Pressure—150 lbs.

No.	Hose Size, In.		Hose Lgth. Feet	Ship. Wt. Lbs.	\$Each
	I.D.	D.D.			
CWT11A	1/4	3/4	25	70	\$109.00
CWT21A	3/8	47/64	25	75	113.00
CWT31A	1/2	29/32	25	75	128.00
CTL31B	1/2	29/32	50	100	210.00
CTL41B	3/4	113/64	50	110	222.00

†Only 20-ft. of hose wound on reel drum; 5-ft. remain outside.

‡For ratchet device, specify on order and add \$4.00 for Type CWT Reels or \$9.00 for Type CTL Reels. Ratchets designed for use where constant tension is unnecessary.

Ericson Extension Cord Reels

10 Amp.—120 Volt

No. 2001

Designed for hard usage, where the cord will be pulled in and out many times a day.

Reels do not have any ratchets, pawls, or dogs to wear out or get out of order. Equipped with exclusive Scroll-Type Lock and extra heavy spring motor.

Carton Qty. 1. Std. Pkg. 4.

No.	Description	Pkg. Wt. Lbs.	Each
2001	25-ft. w/o wiring device	38	\$32.96
4001	45-ft. w/o wiring device	48	48.94

Note: Above reels are without wiring device but portable lamp guard can be installed.

Equipped with 16-2.SJO Type Cord.

Hykon Portable Extension Cord Reels

Provides Both Light and Power Up to 250 Feet Away

Portable, lightweight reels for extension cord service on all types power tools, lighting and wiring installation, commercial and home workshop applications.

Manual rewind, no springs. Cord won't twist, tangle or break off.

Models 15XC and 18XC equipped with 30 amp. 110 volt enclosed collector and 10 ft. 12-2 cord. Model 9XC has 8 feet 16-2 plug-in cord and enclosed collector.
Rated at 10 amps.

No.	Capacity	Each
15XC	400 Feet 16-2 Cord	\$32.50
15XC	200 Feet 11-2 Cord	32.50
15XC	150 Feet 12-2 Cord	32.50
18XC	300 Feet 11-2 Cord	34.75
18XC	250 Feet 12-2 Cord	34.75
9XC	125 Feet 16-2 Cord	19.95
9XC	150 Feet 18-2 Cord	19.95

Hykon Wiring Reels

Keep wire free from kinks and snarls; maintain correct tension. Save time, effort and wire on any wiring job. Wire may be reeled off top or bottom from any angle. Adjustable to different sizes of wire rolls. Furnished with holes, in edge of face plate, into which free wire end may be anchored. Turns easily, but will not coast. Available in gang units, or individually.

Showing simple method of loading Hykon reels.

Finished in durable black enamel.

Reel Specification

Hykon 15-inch reels take wire up to No. 8 A.W.G.; 18-inch takes larger diameter coils, such as loom wire, heavy wire and light cable.

	15-Inch Reel	18-Inch Reel
Disc Diameter (In.)	15	18¾
Coil Eye Adjustment (In.)	4½ to 12½	4½ to 13¾
*Coil Width (In.)	Up to 5½	Up to 6

*Coil width can be increased if desired.

In addition to standard sizes, larger sizes made up to meet special requirements.

Individual Reels

Fastens on any framework, on service trucks or in the storeroom.

Reel Size, In.	Ship. Wt., Lbs.	Each
15	11	\$11.50
18	13	13.50
25	..	24.25
30	..	34.00

Single Unit Reels

Handles unwieldy metallic cable or non-metallic cable. Cable comes off reel without a twist, ready to be laid.

Framework takes up little space, will take the heaviest roll of wire.

Reel Size, In.	Ship. Wt., Lbs.	Each
15	16	\$18.25
18	19	22.25
25	33	42.50
30	40	53.50

Double Unit Reels

Reels work independently of each other.

Can be used on all wiring jobs.

Easily carried by a convenient handle.

Reel Size, In.	Ship. Wt., Lbs.	Each
15	25	\$25.00
18	30	29.00

Gang Reels

Particularly valuable on jobs where a number of wires are pulled into conduit. Handles at ends provide easy holds for carrying.

Furnished in 4-gang and 6-gang units.

Reel Size, In.	4-Gang Unit		6-Gang Unit	
	Ship. Wt., Lbs.	Each	Ship. Wt., Lbs.	Each
15	46	\$45.75	72	\$66.00
18	58	\$4.50	90	79.25

Hykon Dispensing Reels

Keep broken coils compact and ready for immediate dispensing. Save time, money and material.

Wire is easily pulled off without kinks or tangles.

Takes up no more space than coils themselves. Can be used with Hykon Wire Meter as either pay-out or take-up reel.

Available only in 15-inch size, for coils of No. 8 and smaller wire. Adjustable for various size coils.

No. Reels	Shp. Weight, Lbs.	Each
1	44	\$45.75
6	68	66.00

Hykon Reelifts

A timesaving, easy way to handle bulky, heavy cable reels. A simple lift on the Reelift handles sets reel up, ready for unrolling the cable.

To load Reelift, insert axle through reel; slip fitting on the axle. Tilting the base lets handles be slipped through axle fittings to proper height. A lift on the handles sets up reel, ready to pull wire. One man can easily set up over 1,000 lbs., two men can raise over 2,000 lbs. Safe—will not tip.

Reel revolves on axle, broken flanges or other damaged reels, cause no trouble.

No.	Max. Reel Dimensions (In.)		Weight, Lbs.	Each
	Width	Diam.		
RL25	25	36	60	\$42.00
RL31	31	48	85	50.00

Hykon Wire Meter

Accurately measures wire, loom, etc. Will handle flexible material up to 1 inch in diameter and registers up to 1000 feet.

Dials are instantly reset to zero and are easy to read. By using this wire meter, errors and guesswork is eliminated.

Meter is well built for long life. Sold separately or with Store Room Reel.

Floor stand also available.

No.	Description	Each
WM	Meter 8 1/4-in. x 4-in.	\$27.50
MS	Floor Stand 21-in. high.	4.75

Hykon Wire Measuring Equipment

Unit, consisting of storeroom reel, wire meter and take-up reel, facilitates measuring and recoiling of wire, in the storeroom or in the field. Portable, easily handled by one man.

Wire Meter: For wire, loom, etc., up to 1-inch diameter. Registers up to 1000 feet. Easy to read dials. Instantly reset to zero. Eliminates errors and guesswork.

Storeroom Reel: Takes any size wire or cable without adjustment. Will not tip, but easily moved. Wire pulls off without kinks or tangles. Welded construction. Available with or without wire meters.

Take-up Reel: Unwinds wire from storeroom reel through meter, making a neat, compact coil. Outer disc slides off for easy removal of measured coil.

No.	Description	Shp. Wt., Lbs.	Each
SRM-18	Complete Unit, Incl. Wire Meter, Take-up Reel and Storeroom Reel.	59	\$91.50

TU	Take-up Reel, 18 in.	13	13.50
TUS	Take-up Reel Floor Stand, 20 in. high.	6	5.50

Hykon "Tums" Wire Measuring Units

Consists of meter and take-up reel mounted on a light weight but sturdy steel framework. Takes wire, rope and other flexible material up to 1-in. diameter. Accurate measurement guaranteed. Registers up to 1,000 feet. Instantly reset to zero.

Take-up reel has tapered cone for easy removal. Reel dimensions, 18 3/4-in. diameter, 7-in. wide. Capacity 1,500 feet of No. 14 wire. Other sizes accordingly.

No.	Description	Each
TUMS	Wire Measuring Unit.	\$52.25

Brady Perma-Code Wire Markers

For marking wires, harnesses, circuits, coils, panels, assemblies, terminals. Self-sticking. Apply to any wire. Permanent "around-the-wire" identification. Select from over 3000 different stock markers. Conform to NEMA and NMTBA specifications for a standardized wire identification system. Markers are Silicone Plastic Coated for maximum resistance to dirt, grease, moisture and abrasion. Markers come mounted on handy, catch-free Blue Streak® Dispenser Cards. Exclusive Brady Zip-Strip permits instant removal of one or all markers from dispenser card for quick permanent identification.

Brady Wire Markers come in a size for every wire, a marker for every purpose. Two different sizes in stock to fit your needs:

Order 1½-in. long markers for wire ¼ in. o.d. and over.
 Order ¾-in. long markers for wires under ¼-in. o.d. (Specify ¾-in. when ordering). ¾-in. markers give you twice as many markers at no extra cost.

1½-in. long markers on this consecutive Number Card are for wires over ¼ in. O.D.

Use ¾ in. long markers for wires under ¼ in. O.D. ¾ in. long markers furnished at no extra charge.

All-Temperature Vinyl-Cloth Wire Markers

These general purpose markers have black legends on white background. Withstand -300° F. to +300° F. Pulling thru conduit won't loosen markers.

All-Temperature Color-Code Wire Markers

Gives you two-way identification—both color and number. Numbers on all standard NEMA color backgrounds in stock.

Flame-Proof Aluminum Foil Wire Markers

Self-sticking 3 mil super-thin markers hug wires tightly in oil surroundings, elevated temperatures; won't discolor.

Ask your GRAYBAR salesman for samples and complete list of 3,000 different Wire Markers in Brady Bulletin #130.

Brady All-Purpose Numbers and Letters

For fast economical marking of areas, bays, columns, tote boxes, machinery, shelves, stock bins, parts, plant and office equipment. Positive, at-a-glance identification. Self-Sticking, no special skill or tools required.

Come mounted on handy, portable dispenser cards. Just peel from card, and press in place. Permanent. Cost as little as ¼ cent per Marker.

Five stock sizes from ½ to 5-in. Stock Markers come printed in bold black letters on bright Yellow background; specials made to your order.

Contact GRAYBAR for prices, samples and Bulletin #165.

Brady Self-Sticking Miniature Markers

Designed and "job-tested" for identifying small diameter wire under 5/32 in. O.D., miniature electronic components and sub-miniature circuits.

At-a-glance identification from any angle. Four bold legends per marker. White background with black letters and numerals.

150 individual markers (3/16 in. x 1/2 in.) mounted on Blue Streak ® Dispenser Card. Over 100 numbers and letters in stock.

Blank Miniature "Write-On" labels for on-the-spot marking of small parts and assemblies. Use pencil or ball point. Stock labels come mounted on Dispenser Cards in three sizes: 3/16 x 1/2 in.; 1/4 x 1/2 in.; 1/2 x 1/2 in.

Special Miniature Markers made to your order—any color, any size—any printing.

Contact GRAYBAR for prices, samples and Bulletin #130-2.

Brady Pre-Cut Quik-Masks

Pre-cut, self-sticking Quik-Masks. Protect nameplates, dials, plated or polished surfaces, holes, threads, etc. from paint spray, plating, machining, tumbling or from damage during shipment.

Reduce your masking costs, increase production and save inspection, re-work and clean up time. Quik-Masks are ready-to-use precision pre-cut pieces of self-sticking masking tape. Come mounted on handy Blue Streak ® Dispenser Cards or Zip-Off liners. Stock circles 1/4 in. O.D. to 5 in. O.D. ready for immediate shipment. Special Brady Pre-Cut Masks made in any size, any shape to your specifications. Select from over 300 different tapes.

Ask your GRAYBAR salesman for prices, samples and Bulletin #160.

Brady Card Holders

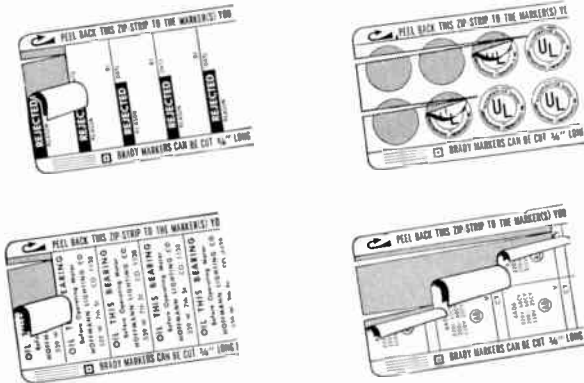

New, time-saving Card Holder reduces labor costs, speeds productions, saves motions. Use with card-mounted Brady Wire Markers, Special Quik-Labels, Pre-Cut Quik-Masks and Brady Printed Circuit Tapes and Shapes.

Card Holder eliminates all non-productive motions of picking up and putting down card each time a Marker or Mask is used. Worker uses both hands for speedy production.

No parts to wear out or replace. Ask your GRAYBAR salesman for demonstration, prices and Brady Bulletin #147.

Brady "Quik-Label"® Special Markers

Made to Order

Use Brady Self-Sticking Special Markers to instruct, inspect, identify and improve your product. Economical to buy and inexpensive to apply. Stick to any clean, dry surface without moistening. Silicone Plastic overcoating resists dust, dirt, grease and abrasion.

New write-on surface permits coding, dating, calibrating during assembly or installation.

You can get Special Brady Quik-Labels with any wording, trade mark, number or symbol . . . in any color, size, shape or material you specify.

Ask your GRAYBAR salesman for samples, case history file, prices and Bulletin #132.

Brady Quik-Plates

Self-Bonding Nameplates—.003-in. aluminum. Won't peel, chip or crack. Low cost. Any size, any shape, "all-over anodized."* Stick to flat, curved or crinkled surfaces. Fast to apply. No holes to drill, no fasteners required.

Four different self-bonding types meet MIL specifications. Trademarks, instructions, gauges, dials and diagrams made to your specifications. Ask your GRAYBAR salesman for prices, samples and Bulletin #177.

*Patent pending.

Brady Printed Circuit Tapes and Shapes Self-Sticking

Save engineering and drafting time. Make accurate and detailed inless layouts with Brady precision-slit black, photographic, self-sticking tape.

Stock Terminal Circles, Connector Strips, Fillets, etc. come mounted on Blue Streak® Dispenser Cards.

Stock Brady Connector Strips are furnished on Dispenser Cards in 9-in. lengths or in 18 yard rolls—all precision slit to exact dimensions for accurate reproduction.

Contact GRAYBAR for prices, samples and Bulletin #163.

Brady Self-Sticking Pipe Markers

The standardized method of identifying pipe contents and direction of flow. Low cost Perma-Code Pipe Markers conform to American Standards Assn. Standard #A-13, "Identification of Piping Systems". Pipe contents are clearly marked in large, bold letters on bright fade-proof backgrounds. Quick, positive identification for productive maintenance. Anyone who can read can identify pipe contents at-a-glance.

Use this "job-tested" Pipe Identification system to make repairs fast, reduce costly mistakes and guesswork. Save valuable production time in emergencies.

All standard A.S.A. legends and Directional Arrows in stock. Special Pipe Markers made to order.

Contact GRAYBAR for Pipe Marker Planning Kit, prices, samples and Brady Bulletin #135.

Brady All-Vinyl Aisle Markers

Outlast Painted Lines 5 to 1

Brady Dotted Line marked aisles save time, labor. Simple to apply, aisles are marked without interrupting traffic or material flow. Bright, all-vinyl Yellow.

Self-sticking all-vinyl Aisle Markers withstand severe truck, pedestrian traffic. Unaffected by oil, grease, acids, salts, moisture and many solvents.

Stick and stay stuck to any clean, dry surface.

Four stock diameters: 2, 3, 4 and 5 inch. Matching Yellow Directional Arrows also in stock for 2 to 5 inch sizes.

Contact GRAYBAR for prices, free testing samples and Brady Bulletin #141.

Brady Accident Prevention Signs Self-Sticking

Lower your accident rate by using low cost, longer lasting, easy-to-apply Self-Sticking Accident Prevention Signs. Stocked in over 400 different signs made to A.S.A. Standard Z 35.1 and National Safety Council Specifications.

Self-Sticking Signs stick to smooth or rough, curved or flat surfaces. No screws, tags, moistening or tools needed for application.

You can apply signs in seconds right at the point of hazard. Make up your own combination signs for caution, danger and plant housekeeping.

Contact GRAYBAR for prices, samples and Bulletin #145.

Sticka Black Friction Tapes

High quality friction tape, non-ravelling and suitable for all application where friction tape is indicated.

Strong, abrasion-resisting, and very adhesive.

Free from pinholes, will not dry out. Rolls packed in moisture-proof wrapping.

Roll Size No.	Min. Ft. Per Roll	Rolls Per Case	*Per 100 Rolls
4	30	200	\$20.00
8	60	100	38.00
†8	60	100	38.00

*Prices are for 3/4-in. wide tape in moisture-proof wrapping in a carton. For rolls in moisture-proof wrapping only, deduct \$1.00 per 100 rolls.

†Shop package. The convenient container has 10 rolls of tape, each heat sealed in moisture-proof wrapping.

Prices on widths other than 3/4-in. available on request.

Amazon ASTM Friction Tapes

High quality friction tape guaranteed to meet and exceed all ASTM and U. S. Government specifications.

Extremely abrasion resisting. Has excellent tensile and adhesive qualities. Long lasting, will not dry out, non-ravelling. Protected by moisture-proof wrapping in sturdy cardboard carton.

Roll Size No.	Min. Ft. Per Roll	Rolls Per Case	*Per 100 Rolls
4	41 1/4	200	\$25.50
8	82 1/2	100	49.00

*Prices are for 3/4-in. wide tape in moisture-proof wrapping, in a carton. For tape in moisture-proof wrapping only, deduct \$1.00 per 100 rolls.

Prices on width other than 3/4-in. available on request.

Victor Black Friction Tapes

An all-purpose friction tape of highest quality. Alike to Sticka Tape in all instances, except footage per roll.

Roll Size No.	Min. Ft. Per Roll	Rolls Per Case	*Per 100 Rolls
4	34	200	\$21.00
8	68	100	40.00

*Prices are for 3/4-in. wide tape in moisture-proof wrapping in a carton. For tape in moisture-proof wrapping only, deduct \$1.00 per 100 rolls.

Prices on widths other than 3/4-in. available on request.

Manson Friction Tape

Made only with new, naturally-tacky rubber which thoroughly impregnates and coats the strong, closely-woven cotton fabric.

Unequaled in true adhesiveness and in aging and weathering qualities. Provides lasting protection for joint.

Tape, 3/4-in. wide, containing an average of 82 ft. packed 1/2-lb. in white cans.

Per Lb. \$1.50

Amazon ASTM Splicing Compounds

Rubber Tape

Manufactured from a higher grade rubber compound.

Will meet and exceed requirements of all U. S. Government and ASTM specifications. Self-vulcanizing, will conform to all splices so as to give complete insulation. Strong in tensile and extremely flexible.

Dielectric strength: 350 volts per mil. of thickness.

Roll Size No.	Min. Ft. Per Roll	Rolls Per Case	*Per 100 Rolls
4	15	200	\$27.50
8	30	100	53.00

*Prices are for 3/4-in. wide tape in moisture-proof wrapping in a carton. For tape in moisture-proof wrapping only, deduct \$1.00 per 100 rolls.

Prices for width other than 3/4-in. on request.

Victor Splicing Compounds

Rubber Tape

An excellent quality Splicing Compound designed for use on all regular circuits.

Extremely strong and elastic. Seals splices against all moisture and dirt.

Dielectric strength: 300 volts per mil. of thickness.

Roll Size No.	Min. Ft. Per Roll	Rolls Per Case	*Per 100 Rolls
4	10 1/2	200	\$23.00
8	21	100	44.00

*Prices are for 3/4-in. wide tape in moisture-proof wrapping in a carton. For tape in moisture-proof wrapping only, deduct \$1.00 per 100 rolls.

Prices on widths other than 3/4-in. on request.

Okonite Rubber Tape

Compounded only from new, Up-River Fine Para rubber. When wrapped on the joint, fuses into a homogeneous wall of tough insulation, impervious to moisture, that stays elastic and resilient.

Insures highest electrical strength and permanence.

Roll, 3/4-in. wide, packed 1/2 lb. in yellow cans.

Per Lb. \$1.70

Ruberoid Insulating Tape

Waterproof, both sides adhesive. For use both above and below ground. High tensile strength; resist abrasion; acid and alkali proof. Will not dry, crack or harden. May be stored without deterioration.

Furnished in 1/2-lb. rolls, 3/4-inch wide. Other widths available.

Per Lb. \$0.85

"Scotch" Brand Electrical Insulating Tapes

Listed by Underwriters' Laboratories, Inc.

No. 33

Plastic Electrical Tape—.007 In. Thick

Has a stretchy, rubber-like plastic backing enabling it to do the work of two ordinary tapes. Goes on in one operation.

Stretchability and resistance to oil and moisture provide a wide range of uses in electrical construction and repair. Thinness is advantageous in eliminating "overstuffed" junction boxes. Has a dielectric strength of 9,500 volts.

Backed with the same synthetic resin used on Type T synthetic insulated wire. Provides complete electrical and mechanical protection.

Width, In.	Per Roll, Ft.	Packing Type	Shp. Wt. Per Ctn.	Per Roll
3/4	66	1/Can	50 1/2	\$1.50
3/4	20	12/Tube	14 1/4	.55
3/8	20	12/Tube	7 1/2	.35

All sizes packed 144 to carton.

No. 22

Plastic Electrical Tape—.010 In. Thick

Made in six standard widths, its extra mechanical strength and abrasion resistance make it a popular insulating tool for industrial construction and maintenance.

Used extensively for insulating large cable splices, transformers, circuit breaker connections, bus bars, etc.

Packed 1/Box and 12 to a carton except 1 1/2 and 2-in — 6/carton.

Width, In.	Per Roll, Yds.	Shp. Wt. Per Ctn.	Per Roll
1 1/2	36	5	\$1.95
3/4	36	7	2.40
1	36	8 3/4	3.00
2	36	17	6.00

No. 27

Glass Cloth Backing with Thermosetting Adhesive

Will stand up under high operating temperatures. Thermosetting adhesive sets at high temperatures forming a permanent bond of great strength.

An ideal insulation on pig tails of Hi-Heat wire, splices in enclosed fixtures and appliances, etc.

Dependable insulation in foundries, steel mills and other industrial locations where high heat is normal.

Width, In.	Per Roll, Ft.	Type	Packing Carton	Shp. Wt. Per Ctn.	Per Roll
1/2	66	1/Can	48	12	\$1.75

Elkhart Hydro-Proof Tape

Waterproof tape having an average dielectric strength per layer of 1850 volts.

Width, 3/4 inch.

Packed 21 yards per 8-ounce roll.

Per Pound..... \$1.02

"Scotch" Brand Electrical Tape

No. 49

A pressure-sensitive aluminum foil tape designed for use as a moisture vapor barrier on communication cable splices, also for shielding applications on cable splices.

Approved for use in REA Cable Splicing Specification TC-2 and TC-3.

Width, In.	Per Roll, Ft.	Packing	Boxes Per Ctn.	Per Roll
2	20	1/Box	24	\$1.75

Bishop Bi-Seal Self-Bonding Electrical Tapes

For Sealing, Splicing, Insulating

A permanent moisture sealing polyethylene base tape. Ideal for communication and power distribution wire and cable splicing; moisture proofing bi-metal connections; insulating high frequency electronic circuits.

All rolls 30-ft. by .020 thick. 1/2-in. rolls packed two per box. All others individually boxed.

Type 1, (Clear) — Type 2A, (Black) — Type 4, (Ivory).

Width In.	Rolls Per Case	Approx. Shp. Wt.	Per Roll	Width In.	Rolls Per Case	Approx. Shp. Wt.	Per Roll

1	36	18	1.81				

Bishop High Voltage Splicing Tapes

No. 30

Use this butyl rubber base tape for splicing high voltage cable operating at 2 kv. to 17 kv.

Exceptional resistance to corona and ozone plus outstanding aging properties insures a lasting splice that will equal or better the original cable insulation.

Recommended for operating temperatures of 90° C up to 5 kv., and 85° C up to 17 kv.

Rolls are 30-ft. by .030 thick. One cellophane wrapped roll per container.

Width In.	Rolls Per Case	Approx. Shp. Wt.	Per Roll	Width In.	Rolls Per Case	Approx. Shp. Wt.	Per Roll

1	80	64	1.20	2	40	64	2.40

Bishop Electrical Filler Tapes

No. 125

Synthetic rubber base. Good for cable splice build-up, cable end sealing, etc. Can be molded by hand to fit odd shapes.

Rolls 1 1/2-in. wide by 5-ft. long by 1/8-in. thick. 24 individually boxed rolls per case.

Per Roll..... \$1.17

Note: Special Case and Quantity prices available on request.

Bishop Bi-Prene Electrical Jacketing Tapes

Types C and H

A neoprene base jacketing tape excellent for splicing neoprene sheathed cables. Fuses into a solid mass to form a permanent weatherproof outer sheath. Protects against ozone, heat, moisture, and sunlight. Tape is flame resistant.

All rolls 30-ft. long by .030 thick.
1/2-in. widths packed two per box.
All others one per box.

Width In.	Rolls Per Case	Approx. Ship. Wt.	Type C	Per Roll	Type H*
1/2	160	62	\$0.60		\$0.70
3/4	80	52	.90		1.00
1	80	62	1.20		1.40
2	40	62	2.40		2.80

*Type H is designed for use with vulcanizing equipment.
Note: For red or yellow add 10% to Type H prices above.

Okolite High Voltage Tape

Specially designed for splicing cables insulated with ozone-resistant rubber compounds, particularly those operating at over 2000 volts between phases.

High electric strength, low power factor. Fuses into moisture-proof wall of insulation.

Tape, 3/4-in. wide, containing 30 ft. packed 1/2 lb. in red cans.

Per Lb. \$1.80

Okoprene Weather-Resistant Tape

Made with neoprene, provides permanent, non-fibrous protection for splices, in neoprene-sheathed cable.

Particularly designed for protecting splices in neoprene-sheathed cables. Eliminates need for friction tape and paint while adding electrical values.

Tape, 3/4-in. wide, containing 30 ft. packed 1/2 lb. in blue cans.

Per Lb. \$1.80

Permacel Electrical Tapes

All Permacel electrical tapes are both pressure sensitive and heat curing.

Permacel 21 Glass Cloth Electrical Tape

A glass cloth backed tape for applications requiring great mechanical strength and heat resistance such as taping coils in large motors and generators. Acceptable for NEMA Class B insulation. 60 yd. rolls. Tensile strength 150 lbs. per in.

Width Inches	Rolls Per Bulk Case	Per Roll	Width Inches	Rolls Per Bulk Case	Per Roll

5/8	60	5.23			

Permacel 201 Cotton Cloth Electrical Tape

For armature winding, transformer coils and anchoring heavy leads. Permacel 201 possesses low stretch features, excellent varnish-penetration properties and good conformability to irregular surfaces. 60 yd. rolls. Tensile strength 50 lbs. per in.

Permacel Electrical Tapes

Permacel 202 Sized Cotton Cloth Electrical Tape

Permacel 202 has a special non-corrosive adhesive, high tensile strength and excellent wear resistance. Suitable for anchoring heavy leads, coil wrapping and taping motor leads. Easy unwind permits quick hand or machine dispensing. 60 yd. rolls. Tensile strength 50 lbs. per in.

Permacel 201 and 202*

Permacel 241

Acetate Film Cloth Electrical Tape

Permacel 241 used in fine wire applications

Recommended for fine wire applications, where maximum corrosion resistance and dielectric strength is required. Made of electrical grade acetate cloth with a 0.88 film-laminated together and coated with a non-corrosive adhesive. 72 yd. rolls. Tensile strength 45 lbs. per in.

Width Inches	Rolls Per Bulk Case	Per Roll	Width Inches	Rolls Per Bulk Case	Per Roll

Permacel 24

White Acetate Cloth Electrical Tape

Excellent electrical properties and a high-hold, heat-curing adhesive make Permacel 24 especially suitable for fine wire applications. Its strength also permits its use in medium to heavy wire applications. Excellent coil wrapping tape. 60 yd. rolls. Tensile strength 45 lbs. per in.

Permacel 242

Colored Acetate Cloth Electrical Tape

Particularly suitable for outside wraps on transformers coils and solenoids. Same as P24 except for color. Available in black and brown. 72 yd. rolls. Tensile strength 45 lbs. per in.

Permacel 24 and 242

5/8	60	2.40			

**Permacel 25
Clear Acetate Film Electrical Tape**

Extremely thin with high dielectric strength and insulation resistance, Permacel 25 is ideal for holding and insulating fine wires in transformers and coil construction where a very limited space is required. 72 yd. rolls. Tensile strength 25 lbs. per in.

**Permacel 251
Orange-Yellow Acetate Film Electrical Tape**

The exceptionally high dielectric strength and thinness of Permacel 251 make it ideal for fine wire holding and insulating where maximum resistance to electrolytic corrosion at high humidities is required. The distinctive orange-yellow color makes Permacel 251 suitable for marking and anchoring the start and finish of wires in coil winding operations.

**Permacel 22
Black Crepe Paper Electrical Tape**

Permacel 22 is a purified kraft paper backed tape impregnated with an electrical grade saturating solution for uniformity and better electrical properties and a non-corrosive heat-curing adhesive. Features maximum stretch and "quick stick." 60 yd. rolls. Tensile strength 22 lbs. per in.

**Permacel 23
Black Flatback Paper Electrical Tape**

A paper tape with purified 100% rope paper impregnated with an electrical grade saturating solution. Recommended for all jobs that require an extra-strong tape. Has superior hold-value, excellent heat stability and maximum "quick stick." 60 yd. rolls. Tensile strength 50 lbs. per in. of width.

**Permacel 27
Yellow Flatback Paper Electrical Tape**

Constructed from an impregnated 4 mil rope paper coated with a heat curing pressure sensitive adhesive. Excellent for applications which require an easy handling tape with high tear and tensile strength. 60 yd. rolls. Tensile strength 50 lbs. per in.

**Permacel 28
Yellow Crepe Paper Electrical Tape**

Recommended for application to irregular shaped surfaces. Excellent for protective jobs requiring a flexible electrical tape and applications where the tape must withstand pre-bake cycles at elevated temperatures without softening and must have improved solvent resistance and higher adhesion after baking. 60 yd. rolls. Tensile strength 22 lbs. per in.

Permacel 22, 23, 27 and 28

Permacel Electrical Tapes

**Permacel 252
Orange-Yellow Polyester "Mylar" Film Electrical Tape**

An orange-yellow film tape made with a 1 mil electrical grade "Mylar" film and a heat curing non-corrosive adhesive. An ideal insulating tape in small construction where space is an important factor. High heat stability is provided together with a thermosetting adhesive. Particularly suited for units operating at high temperatures. 72 yd. rolls. Tensile strength 20 lbs. per in. of width.

**Permacel 253
Clear Polyester "Mylar" Film (1 mil) Electrical Tape**

A "Mylar" film backed tape with a heat curing adhesive, free of corrosive agents. Excellent resistance to the attack of varnish and paint solvents. The high insulation resistance and complete lack of corrosibility make Permacel 253 ideal for holding and insulating applications where the finest gauge wires are used. 72 yd. rolls. Tensile strength 20 lbs. per in. of width.

*Du Pont's registered trade-mark.

Permacel Paper Tapes

**Permacel 71
All Purpose Crepe Masking Tape**

A crepe paper backed masking tape for masking near-white and pastel finishes. Treated to minimize the possibility of staining or discoloring surfaces to which it is applied. 60 yd. rolls. Tensile strength 18 lbs. per in. of width.

**Permacel 718
All Purpose Flexible Flatback Masking Tape**

Specially processed flatback masking tape with high flexibility, internal stretch and solvent and moisture resistance. Adheres well under forced oven drying conditions. Stain resistant on white or pastel finishes. 60 yd. rolls. Tensile strength 20 lbs. per in. of width.

**Permacel 73
Hi-Temperature Crepe Masking Tape**

A crepe paper backed masking tape especially developed for use in masking operations that require a baked finish at temperatures of 250° F. or over. Good adhesion and flexibility allows conformability to curved and irregular surfaces. 60 yd. rolls. Tensile strength 17 lbs. per in. of width.

**Permacel 77
Crepe Paper Masking Tape**

A general-purpose tape used widely for masking in spray painting. Specially treated backing unaffected by solvents in paints, varnishes, and enamels. Extreme thinness and good flexibility. 60 yd. rolls. Tensile strength 18 lbs. per in. of width.

Permacel 71, 718*, 73*, and 77

**Permacel 717
Black Crepe Paper Masking Tape**

A lightly-creped, black paper tape with transparent firm adhesive, for use in all plant work. Heat resistant to hold at normal or forced drying oven temperatures. 60 yd. rolls. Tensile strength 21 lbs. per in. of width.

**Permacel 72
Stain Resistant Flatback Masking Tape**

A rope fibre paper backed tape treated to resist moisture and common solvents. Principally used in straight line and stencil painting to produce sharp, clear edges. Stain resistant, extra-high adhesion and tensile strength. 60 yd. rolls. Tensile strength 55 lbs. per in. of width.

**Permacel 721
Low Tack Flatback Masking Tape**

A rope fibre paper backed tape, with good heat and stain resistant qualities. Permacel 721 is printable, and easily removed from the job. 60 yd. rolls. Tensile strength 55 lbs. per in. of width.

**Permacel 728
Hi-Strength Flatback Masking Tape**

Specially processed rope paper backed masking tape, with high tear resistance, thinness, and stain resistant qualities. High adhesion to a wide variety of surfaces. 60 yd. rolls. Tensile strength 45 lbs. per in. of width.

**Permacel 75
Solvent-Resistant Crepe Masking Tape**

Specially developed crepe paper backed tape for masking operations in the plastics industry. Specially treated backing highly resistant to solvents in cement, paints and lacquers. 60 yd. rolls. Tensile strength 27 lbs. per in.

Permaccel Plastic Tapes

Permaccel 29 used as Insulation in a wire splicing application.

Permaccel 29 Plastic Electrical Tape

A specially formulated vinyl plastic backing, with a pressure-sensitive adhesive, free from corrosive agents. Carefully balanced adhesion and easy stretch. Flame resistant for greater safety as an electrical insulating material. 20 and 66 ft. rolls. Tensile strength 20 lbs. per in. of width.

Permaccel 291 Plastic Electroplating Tape—Yellow

A clear vinyl plastic backed tape specially compounded for electrical properties. Elongation and conformability with ease of handling are assured by carefully controlled formulation. Moisture proof and resists acid, oil, gasoline and salt water. 36 yd. rolls. Tensile strength 22 lbs. per in.

Permaccel 30 Heavy Duty (Electrical Grade) Plastic Tape (Black, Grey)

A vinyl film tape with a vinyl film backing and a high-hold non-corrosive adhesive. Extremely high dielectric strength and maximum insulation resistance. Other features include exceptional strength and elongation, high adhesive firmness. 36 yd. rolls. Tensile strength 30 lbs. per in. of width.

Permaccel 29, 291 and 30

Width Inches	Rolls Per Canister	Per Roll	Width Inches	Rolls Per Canister	Per Roll
1/4	24	\$1.50	3/4	8	\$2.40
3/8	16	1.72	7/8	6	2.70
1/2	12	1.95	1	6	3.00
5/8	8	2.18			

Permaccel 32 Colored Plastic Tape

A colored vinyl tape with high resistance to abrasion for marking safety aisles, work or danger areas. Waterproof and washable, it is more durable than paint. Resists grease, oil and solvents, and adheres firmly to clear, dry floor surfaces. 36 yd. rolls. Tensile strength 18 lbs. per in. of width.

Width Inches	Rolls Per Canister	Per Roll	Width Inches	Rolls Per Canister	Per Roll
1/2	12	\$1.95	1	6	\$3.00
5/8	8	2.18	2	3	6.00
3/4	8	2.40	3	2	9.00
7/8	6	2.70			

Permaccel 29 A Display

A colorful display box containing 12 rolls 1/2 in. by 150 in. black plastic electrical tape. Each roll is cellophane wrapped to insure clean, fresh stock. A handy size for minor electrical repairs and numerous other applications.

Per Roll.....\$0.39

Permaccel 29 C Display

Contains 12 rolls of 3/4 in. by 20 ft. plastic electrical tape in a sturdy, eye-catching display box, cellophane protected from dust and handling. It is a job size roll ideal for antenna wiring, repairing frayed cords, electrical splicing, etc.

Per Roll.....\$0.55

Permaccel Plastic Tapes

Permaccel 29 D Display

Each display contains 12 rolls 3/4 in. by 66 ft. plastic electrical tape. Each roll is packed in a metal can for maximum protection. A free plastic cutter bar is included with each roll. Permaccel 29 D is the ideal shop and service kit size tape roll, for insulating splices, harness wrapping, protecting tool handles, splicing in junction boxes, etc.

Per Roll.....\$1.50

Permaccel 306 Heavy Duty (Pipewrap) Plastic Tape

A vinyl film non-electrical tape made specifically for use where high chemical and abrasion resistance, strength and conformability are needed. 100 ft. rolls. Tensile strength 30 lbs. per in. of width.

Per 100 Sq. Ft.....\$23.33

Permaccel 307 Extra Heavy Duty (Pipewrap) Plastic Tape

A vinyl film tape with a superior aging high-hold adhesive. Maximum abrasion resistance and good conformance is obtained with this flexible tape. Has a nonconductive fungi, bacteria resistant backing and adhesive. 100 ft. rolls. Tensile strength 40 lbs. per in. of width.

Per 100 Sq. Ft.....\$37.33

Permaccel Acetate Fibre and Film Tapes

Permaccel 97 Tru-Color Acetate Fibre Tape

A moisture-resistant colored tape especially designed for use in packaging. Will provide a moisture-resistant and colorful closure. Printable to serve as a message-carrying closure. Available in white, yellow, light blue, cream, light gray, silver, gold, red, orange, green, blue, black, orange-yellow and brown. 72 yd. rolls. Tensile strength 35 lbs. per in. of width.

Permaccel 98 Moisture-Tight Colored Acetate Fibre Tape

An opaque moisture-tight acetate fibre tape whose colors are derived from pigments in the laminating adhesive. Backing is cellulose acetate film combined with a strong but thin rope-fibre paper. Has strong adhesive qualities. 72 yd. rolls. Tensile strength 34 lbs. per in. of width.

Width Inches	Rolls Per Case	Per Roll	Width Inches	Rolls Per Case	Per Roll
1/4	144	\$1.11	3/4	48	\$2.20
3/8	96	1.38	1	36	2.76
1/2	72	1.65			

Permaccel 90 Clear Acetate Film Tape

A transparent acetate film backed tape with excellent aging properties. It is more water resistant than cellophane. Has excellent ultra-violet transmission properties, both backing and adhesive being resistant to ultra-violet effect on aging qualities. 72 yd. rolls. Tensile strength 25 lbs. per in. of width.

Permaccel 99 Moisture-Tight Transparent Acetate Fibre Tape

A cellulose acetate film and thin rope-fibre paper backed tape which is semi-transparent, and highly moisture-resistant. Laminated backing gives high tensile strength and tear-resistance. 72 yd. rolls. Tensile strength 38 lbs. per in. of width.

Permaccel 991 Low M. V. T. Transparent Acetate Fibre Tape

A thin semi-transparent highly moisture-resistant tape especially designed for packing and packaging under Government specifications. 72 yd. rolls. Tensile strength 38 lbs. per in. of width.

Width Inches	Rolls Per Case	Per Roll	Width Inches	Rolls Per Case	Per Roll
1/4	144	\$0.93	1	36	\$2.28

3/4	48	1.82			

Permacel Cotton Cloth Tapes

Permacel 66 Extra Strength Tape

An ideal general-purpose cloth tape, with high flexibility, great tensile strength and comparative thinness. 60 yd. rolls. Tensile strength 50 lbs. per in. of width.

Permacel 663 Heat-Resistant Extra Strength Tape

A cotton cloth backed tape suitable for general industrial applications requiring conformability and strength, combined with resistance to moderately high temperatures. Has good stain resistance. 60 yd. rolls. Tensile strength 50 lbs. per in. of width.

Permacel 66 and 663

Width Inches	Rolls Per Case	Per Roll	Width Inches	Rolls Per Case	Per Roll
1/4	96	\$0.70	7/8	52	\$1.26
3/8	96	.81	1	48	1.40

5/8	76	1.02	3	16	4.20
3/4	64	1.12	4	12	5.60

Permacel 67 Extra Strength Tape

An extra strong cotton cloth tape with high tensile strength, thinness and flexibility. 60 yd. rolls. Tensile strength 50 lbs. per in. of width. Available in black and other colors.

Permacel 63 Stain-Resistant Extra Strength Tape

A sturdy, flexible cloth backed tape with tensile strength combined with thinness and flexibility. Will not tend to stain, tarnish or discolor white or pastel shades of synthetic lacquers or enamels under normal conditions. 60 yd. rolls. Tensile strength 50 lbs. per in. of width.

Permacel 67 and 63

Width Inches	Rolls Per Case	Per Roll	Width Inches	Rolls Per Case	Per Roll

3/4	64	.96	4	12	4.80

Permacel 50 Double Faced Tape

A high grade cotton sheeting backed tape with a back sized calendered cloth interliner. Adheres easily and quickly to almost any surface. Heavy adhesive coating holds firmly, providing a cushion between brittle or breakable materials. 25 yd. rolls. Tensile strength 40 lbs. per in. of width.

Width Inches	Rolls Per Case	Per Roll	Width Inches	Rolls Per Case	Per Roll
1/2	48	\$1.41	2	16	\$4.34
3/4	32	1.74	3	12	6.51
1	24	2.17	4	8	8.68

Permacel 68

Extra Strength Colored Waterproof Tape

A cotton cloth tape waterproofed with a plastic coating which permits the use of an adhesive with maximum "quick-stick" for ease of application and "high hold" value for lasting adhesion. 60 yd. rolls. Tensile strength 60 lbs. per in. of width

Permacel 681

Extra Strength White Waterproof Tape

A white cloth tape waterproofed with a plastic coating. Ideal for those applications requiring printing of tape. Use of plastic coated backing permits use of tackier adhesive and results in high "quick stick," better conformance to irregular shapes. 60 yd. rolls. Tensile strength 60 lbs. per in. of width.

Permacel 68 and 681

Width Inches	Rolls Per Case	Per Roll	Width Inches	Rolls Per Case	Per Roll

Permacel "Texcel" Cellophane Tapes

Texcel 44

Clear Cellophane Tape

A clear cellophane backed tape with high adhesive qualities. Is extremely thin, and break-resistant to a high degree. Resistant to grease, oil and solvents. 1296 in. and 2592 in. rolls. Tensile strength 27 lbs. per in. of width.

2592-Inch Lengths

Width, In.	1/4	3/8	1/2	5/8	3/4	1	1 1/2	2
Per Roll	\$0.53	\$0.67	\$0.92	\$1.18	\$1.34	\$1.76	\$2.64	\$3.52

Width, In.	3/8	1/2	3/4					
Per Roll	\$0.56	\$0.68	\$0.90					

Texcel 45

Tru-Color Cellophane Tape

A clear cellophane tape coated with a pigmented opaque adhesive mass. Is extremely thin, has high adhesive qualities, and possesses greater tensile strength than many paper tapes. Available in red, white, black, green, light green, yellow, orange-yellow, light blue, blue, gold, silver and orange. 1296 in. and 2592 in. rolls. Tensile strength 27 lbs. per in. of width.

2592-Inch Lengths

Per Roll	\$0.85	\$1.04	\$1.42	\$1.99	\$2.60

Permacel "Texcel" Cellophane Tapes

Texcel 46

Hi-Tack Cellophane Tape

A cellophane tape designed for industrial uses involving rough surfaces where an extra adhesive cushion is required. Also ideally suited for sealing and holding applications. 2592 in. rolls. Tensile strength 27 lbs. per in. of width.

Width, In.	1/4	3/8	1/2	5/8	3/4	1	1 1/2	2
Per Roll.	\$0.53	\$0.67	\$0.92	\$1.18	\$1.34	\$1.76	\$2.64	\$3.52

Permacel Texcel Dispensers

Texcel 5 A

Desk Dispenser

For both office and home use, is available in black, satinwood, blue spruce and mahogany and holds tape up to 1 in. wide and 2 3/4 in. in diameter.

Per Dispenser **\$1.98**

Texcel 5 B

Counter Dispenser

For storeroom, shipping room or sales counter use, is available in French Grey and Sea Spray. A heavy duty, all purpose dispenser, it holds tape up to 1 1/4 in. in width and 6 1/4 in. in diameter.

Per Dispenser **\$3.95**

Texcel 5 C

Industrial Dispenser

For production line, and shipping room is available in Gunmetal. The roll width capacity of 2 1/4 in. and roll diameter of 7 3/4 in. makes this the ideal dispenser for high speed production work.

Per Dispenser **\$6.10**

Call Graybar **FIRST** For

Kester Acid Core Solder

For General Soldering

Quickly forms permanently strong joints. Acid flux flows evenly, in right amount.

No paste or additional flux necessary.

Standard size, 1/8-inch. Approximately 25 feet per pound.

Pkg.	1-Lb. Spool	5-Lb. Spool	20-Lb. Spool
	Prices on application.		

Kester Plastic Rosin Core Solder

For Electrical and Radio Work

Non-corrosive plastic rosin flux, flows evenly in correct amount.

Forms perfect solder joints.

No pastes or additional flux necessary.

Standard solder size 3/32-inch.

Approximately 50 ft. per pound.

Spool Size in Pounds	1	5	20
	Prices on application.		

Dunton Solders

Gem Rosin Core

For Electrical and Radio Work

Made of virgin tin and lead—no scrap metals used. Rosin flux.

Approximate size of solder, .093 inch standard gage.

Supplied in spools of 1, 5, and 20 pounds each.

Ideal Acid Core

Made of virgin tin and lead—no scrap metals used.

Superior acid soldering flux. Approximate size of solder, No. 8 standard gage.

Supplied in spools only of 1, 5, and 20 pounds each.

Nokorode Core

For General Soldering

For all kinds of soldering. Replaces acids or resin core solder. Ready for instant use.

Quick-working; forms permanently strong joints.

Metals, virgin tin and lead. Core completely and uniformly filled with solid flux. Flux will not run out on heating; no waste. Supplied in 1, 5, and 20-lb. spools.

Prices on application.

Allen Aluminum Solder

Complete, solder and flux combined. Requires only heat to permanently join aluminum to itself or other metals.

Supplied in 1/8-inch (11 gauge) square wire, or triangular 1/4 and 1-lb. bars.

Prices on application.

Kester Bar Solder

Tin-lead alloy solder. Bar form particularly convenient for heavier soldering jobs.

Prices on application.

Allen Stainless Steel Solder

Hi-Luster. Supplied in wire form, provides close-matching, non-dulling joints. Particularly desirable on decorative work.

Prices on application.

Extra-Strong

Forms joints of unusual strength. Designed for general stainless steel soldering. Bar forms only.

Darkens slowly with age, but does not lose strength.

Prices on application.

Allen Soldering Paste

Approved by Underwriters' Laboratories, Inc.

Standard Formula

Convenient, corrosion-free, soft form of flux.

Fast working; adheres to surface during soldering.

Makes solder self-fluxing.

Size Can.....	2 oz.	4 oz.	1/2-lb.	1-lb.	5-lb.
No. in Carton.....	24	24	12	6	1
Each Can.....	\$0.13	\$0.20	\$0.50	\$0.70	\$2.75

Ezy-Flow Torch Formula

Special soldering paste for torch and "sweat joint" soldering. Also works well with soldering iron.

Size Can.....	2 oz.	4 oz.	1/2-lb.	1-lb.	5-lb.
No. in Carton.....	24	24	12	6	1
Each Can....	\$0.13	\$0.25	\$0.50	\$0.70	\$2.75

Burnley Soldering Paste

2 oz.	*\$1.80	5 lb.	\$0.60
4 oz.	*2.70	50 lb.	.50
1/2 lb.	.80	500 lb.	.40
1 lb.	.75

*Per dozen cans

Nokorode Soldering Paste

Will flux all metals except aluminum.

Takes the place of acid in all soldering jobs. Non-corrosive; safe as resin, rapid as acid. Not affected by heat; will not splatter.

This solder will not turn dark after using.

2-Oz. Cans

Supplied in cartons of 12; 144 cans to a shipping case.

2 Oz. Can.....Per Gross \$20.00

Size Can (Lbs.)	Standard Package	Per Pound
1	6 to Carton.....	\$.85

Allen Soldering Sticks

Acidless non-corrosive flux. Fuses solder rapidly; just a touch to the hot metal does the work.

Made to "Samson" formula, or to superior "Allen" formula. Sticks per carton, 24.

Formula	Size, In.	Each
Samson	1x5	\$.15
Allen	1x5 1/4	.30

Brach Solderall

Combined Metal Solder and Flux. Not a cold solder.

Small quantity applied to joints to be soldered will, when heated, flow and unite the parts the same as wire and bar solder.

Solderall is available in tubes or cans.

No.	Description	Each
SL2	No. 2 Size Tube	\$0.69
SL2	1-lb. Can	2.94

Dunton Electro Soldering Flux

Prepared especially for the Electronic, Radio, Television and other branches of the Electrical Industry. Has been certified for Army, Navy, Air Force and Signal Corps Specification MIL-S-6872, and is both non-corrosive and non-conductive.

Free from acid and safe as Rosin. Especially effective on cable and wire having cloth or plastic coverings.

Available as Electro Plastic Core Solder.

Size Container, Gals.	Standard Package	Approx. Net Wt.	Per Gal.
1	1 jug per case.....	12	\$5.00
5	1 can per case.....	40	4.90

Dunton Rosin "X" Flux

Completely non-corrosive and electrically non-conductive. An activated flux which has been certified for Army-Navy and Air Force Specification MIL - S - 6872. Especially adapted for the Electronics, Radio, Television and Electrical Industries. Free from acid reaction, safe as rosin, fast as acid.

Available in cored solders.

Size Container Gals.	Standard Package	Per Gal.
1	1 jug per case.....	\$5.00
5	1 can per case.....	4.90

Dunton Neutro-14 Flux

Contains no zinc or ammonium chloride nor strong acids. Has no rosins or other synthetic resins or waxes. Non-fuming and non-toxic.

Residues are non-corrosive, non-conductive and non-hygroscopic. Readily water soluble. Contains special wetting agent to give maximum wetting properties to the flux.

Not designed for use on Inconel, tarnished stainless steel, aluminum nor zinc.

Size Container Gals.	Standard Package	Approx. Net Wt.	Per Gal.
1	1 jug per case.....	13	\$8.00
5	1 jug per case.....	65	7.00

Allen Soldering Flux

"All-Sol" Stainless Steel

Fast flux which makes soldering of stainless steel as easy as soldering tin plate.

Works with all solders. Available in a special odorless formula where less strength is required.

Size	No. Per Ctn.	Each
Pint	6	\$1.60

Allen Silver-Brazing Flux

Rapid working product that enables operator to fuse silver with itself or with other metals. Strong, ductile and will not discolor silver in any way. This flux meets Army, Navy and Military specifications.

Size	No. Per Ctn.	Each
1 Lb.	6	\$1.35

Allen Neutral Rosin Liquid Flux

Absolutely safe for electric motor, telephone, radio, commutator and instrument work, or on fine wires.

Will not corrode, even if spilled on work and allowed to stand.

Neutral, moisture-free flux, non-conductive to electric current.

Size Can.....	1 Qt.	1 Gal.
No. per Carton.....	3	1
Each Can.....	\$1.00	\$3.50

Allen Soldering Salts

Non-acid flux in convenient powder form. Takes a quick bite and makes solder hold on. Solders all metals but aluminum.

For old metals, use 3 parts water to 1 part salt; for new metals, 5 parts water to 1 part salts.

In bottles or metal container.

Size.....	1/2 Lb.	1-Lb.	5-Lb.
No. in Carton.....	12	6	1
Each.....	\$.40	\$.59	\$ 2.50

Burnley Soldering Salts

For all metals. Made of pure chemicals.

Reliable Testing Clips

For temporary connections to insulated wires. Made of heavy bronze with hard sharp insulation puncturing points and perfectly registering teeth.

No. 1

Fitted with screw, nut, spike, and washer for attaching to instrument cord.

No. 1.....each \$0.26

Nos. 2 and 3

Same as No. 1 with exceptions as noted. Preferred where connection to cord is to be soldered.

No. 2 No screw, nut or washer.....each \$0.24
No. 3 Without spike.....each 0.24

No. 5

A light, sturdy clip with a strong spring. Convenient for temporary connections in radio, telephone and signal work.

Particularly good for congested telephone equipment. Ample space for soldering flat cord terminals.

No. 5.....each \$0.14
No. 5T Fitted with Tip.....each .22

Quantity prices on request.

Mueller Universal Test Clips and Insulators

No. 24-A Clip Only

No. 45 Clip with No. 47 Insulator

For electrical work requiring quick temporary connections. A complete line of test clips and flexible insulators.

Clips are packaged in standard quantities of 10 and 100. Sizes 24-A, 21-A, and 11A are packed half marked plus, half plain to indicate polarity.

Flexible insulators provide convenient protection against electric shock, and prevent clips from shorting against each other. Color coding offers quick identification of different leads. Packaged in standard quantities of 10 and 100 in red and black, half of each color.

All Mueller products may be assorted to obtain quantity prices.

Screw Connection

Mueller Alligator Clips 60 Series

No. 60-S

No. 60-HS

Small, slim-nosed clips, popular, with many uses. Fine meshing teeth, round thumb grip, and barrel connection for banana plug. All these clips have jaw opening of 3/16 in., weight approx. 1 1/4 lb. per 100.

No.	Description	Len., In.	Net Price Each
60	Solder connection, cadmium plated...	2	\$0.07

Mueller Insulation for Alligator Clips

No. 60-S Clip with No. 62 Insulator

No. 63

No.	Description	Net Price Each
62	Separate flex. insulator for 60, 60S, 60CS clips..	\$0.07
63	Clip 60S equipped with tough, close-fitting, flexible insulation (red or black).....	.28
63C	Same as No. 63 except solid copper (60CS)....	.30

Mueller Miniature Clips

No. 30 Clip with No. 32 Insulator

No. 88 Clip with No. 93 Insulator

No.	Description	Spread of Jaw, In.	Wt., Lbs. Per 100	Net Price Each
30	The smallest alligator clip ever made. Only 1 1/16-in. long. Ideal for test work in close quarters. Solder connection. Cadmium plated.....	3/16	1/4	\$0.07
30-C	Same as No. 30 except solid copper	3/16	1/4	.08
32	Thin-walled flexible insulator for clips 30, 30-C. Special tip slot permits full jaw opening without exposing teeth.....		1/4	.11
88	Slim flat jaws, phosphor bronze, entirely non-ferrous. Ideal for coils and high frequency test work. Length 1 1/16-in.....	5/32	3/4	.22
93	Flexible insulator for clip No. 88..		1/4	.10

Crocodile Clips, Needle Clip

No. 85 Clip with No. 87 Insulator

No. 50-C Needle Clip

No.	Description	Spread of Jaws, In.	Wt., Lbs. Per 100	Net Price Each
85	Long thin nose provides for tests in deep recesses. Teeth mesh entire length of jaw. Cadmium plated.....	5/16	1 1/2	\$0.08
85-C	Same as No. 85 except solid copper	5/16	1 3/4	.16
85-T	Same as No. 85 except equipped with standard phone tip on one jaw.....	5/16	1 1/2	.21
87	Flexible insulator for clips 85, 85C, 85-T.....		1	.07
50-C	A rugged solid copper clip equipped with needle in one jaw. Ideal for making quick connection through insulation of wire. For telephone men, connecting truck trailer lights, and many other applications. Length 2 1/4 in....	1/2	2 1/2	.25
51-C	Same as No. 50-C except without needle.....	1/2	2 1/2	.17
49	Flexible insulator for clips 50-C, 51-C.....		2	.10

Ideal "Wire-Nuts"

Solderless-Tapeless Wire Connectors

Approved by Underwriters' Laboratories.

1. Strip Wire. 2. Screw-on—that's all. "Wire Nut" threads on to wire just like a nut on a bolt. The coil shaped spring insert presses (does not cut) clean threads into the stripped wires as the Connector is applied. Wires are tightly compressed and automatically twisted together by powerful grip. Molded composition shell completely protects against shorts, grounds and corrosion such as develop in loose solder and tape connections. Solid or stranded.

No.	Size	Description	Per 100	Per 1000

"Scotchlok" Pre-Insulated Wire Connectors

Have the same positive holding power as "SCOTCHLOK" Electrical Spring Connectors.

Constructed with tough spring steel, rugged vinyl cover plus metal armor cap which prevents fracture or crushing in a crowded junction box.

Have "live" reserve strength and ability to absorb stress of electrical loads.

WIRE RANGES: Solid Stranded

Type Y	#12 to #18 AWG
Type R	#10 to #16 AWG
Type B	# 6 to #12 AWG

B	50	16	5.25

Ideal Crimp Connectors

With "Wrap Cap" Insulator

Underwriters' Laboratories Approved

Made of steel for maximum strength, cadmium plated for corrosion resistance. Gives greater holding power than any other crimp connector used for pigtail splices.

Handles all wire combinations from No. 14 through No. 10. Compact, strong, vibration-proof.

No.	Per 100	Per 1000
30-410.....	\$1.00	\$9.00

"Wrap-Cap" Insulator

Assures perfect insulation on every connection. Deep skirt insures greater safety, even when wires are not evenly stripped.

Made of the same vinyl insulating material used in TW wire, providing excellent ageing characteristics and resistance to corrosive atmospheres, sunlight, water, alcohol and even gasoline.

Listed for maximum temperature of 165° F., easily workable at 10° F.

No.	Per 100	Per 1000
30-415.....	\$1.80	\$16.00

Sherman Fixture Connectors

Listed by Underwriters' Laboratories, Inc.

Bronze, "No-Torch" type. Divided wall, wedge lock.

For fixture connectors, motors, neon signs, etc.

One group of wires can be disconnected without disturbing others. Can be cut through center, making two small compact connectors. Connects all wires up to No. 12 either end.

No.	Car- ton	Std. Pkg.	Wt. Lbs. Per 1000	Per 100
501	100	500	25	\$13.11

Sherman Set-Screw Connectors

No. 74

Made from solid brass rod; all dimensions held to accurate size and proportions, other sizes available.

Screws heavily rust-proofed. Neatly boxed and plainly labeled.

For Stranded Cable (With Dividing Wall)

*Furnished square end unless specified round. Not made seamless.

†Furnished with $\frac{3}{32}$ or $\frac{11}{32}$ -inch stud hole at no extra charge. Standard lugs furnished blank (without stud hole) at no extra charge.

Lugs which are to be bent should be specified "Annealed," 10% extra plus set-up charge.

Quantity prices on request.

Sherman Heavy Duty Soldering Lugs

N.E.L.A. Standard

Best quality seamless copper tubing. Blank lugs furnished when specified; otherwise regular bolt holes as listed. Special drilling may be had at extra cost. Straight lugs regularly furnished. Angle lugs 45 and 90-degree when specified at extra price. Plain finish unless otherwise specified.

Special finishes as follows at added prices: Rosin dipped, cadmium plated, and tinned all over. Special dimensions may be made to order with dimension E other than regular or special drilling of stud holes, at added cost.

Note—Dimensions E in larger sizes will be found slightly larger than specified to allow for bending in the field.

Quantity prices on request.

Sherman Heavy Duty Soldering Lugs

2-Hole

Two-hole lugs are made of seamless tubing and furnished square end, unless otherwise specified.

Flat portion (E) may be made to order either longer or shorter but tubular portion (D) cannot be changed.

Sherman Solderless Lugs

Type SS

Low silhouette design, ideal for installing in close quarters. Corrosion-resistant copper alloy.

Open end in barrel insures proper insertion depth. Only six sizes required for No. 14 through 1,000,000 CM cable.

T&B Lock-Tite® Lugs

Approved by Underwriters' Laboratories

One Bolt Hole Tongue

One-piece design lugs. Uniform pressure all-around provides direct contact and high conductivity.

For all types of conductors-stranded, solid, flexible, etc., from No. 4 A.W.G. to 1000 MCM.

Proven in tests to make up tight, stay tight and to run cooler than cable.

No.	Description	Use Key Wrench No.	Unit Quan.	Per 100
31003	14 Sol. to 8 Sol.		20	\$ 71.50
31005	8 Sol to 4 Str.		10	91.00
31007	4 Sol. to 1 Str.	30	10	123.00
31009	1 Sol. to 2/0	30	5	194.00
31011	2/0 to 4/0	30	5	277.00
31013	4/0 to 300 MCM	50	2	344.00
31015	300 to 500 MCM	50	2	530.00
31017	500 to 750 MCM	50	1	904.00
31019	750 to 1,000 MCM	50	1	1056.00

Two Bolt Hole Tongue

Bolt holes and spacings listed are standard, but lugs with blank tongues will be furnished, if specified, without extra charge.

No.	Description	Use Key Wrench No.	Unit Quan.	Per 100
32003	14 Sol. to 8 Sol.		10	\$141.00
32005	8 Sol. to 4 Str.		10	147.00
32007	4 Sol. to 1 Str.	30	10	162.00
32009	1 Sol. to 2/0	30	5	227.00
32011	2/0 to 4/0	30	5	302.00
32013	4/0 to 300 MCM	50	2	403.00
32015	300 to 500 MCM	50	2	595.00
32017	500 to 750 MCM	50	1	904.00
32019	750 to 1,000 MCM	50	1	1160.00

For Hex-head screw, prefix above numbers with "H."
Prices are same for both types.
Special connectors can be supplied. Prices and information on request.

Key Wrenches For Lock-Tite Lugs

No.	Std. Pkg.	Wt. Per 100	Per 100
30	1	9	\$16.00
50	1	30	24.00

T&B Lug-It®

Approved by Underwriters' Laboratories

For solid or stranded wire. Double thickness at thread gives double thread strength and locking action. Serrated copper tongue for high conductivity. Bronze body provides strength.

No.	Wire Range	Bolt Size	Unit Quan.	Std. Pkg.	Wt., Lbs. Per 100	Per 100
35301	14 to 6	1/4	100	500	2 1/2	\$15.10

35601	1/0 to 4/0	3/8	10	50	28	90.50

T&B Sta-Kon® Pressure Terminals

Approved by Underwriters' Laboratories

Provide solderless, high conductivity connections, mechanically as strong as the wire itself.

Copper tongue comes into direct contact with wire, and secure mechanical grip is produced by the staking, which runs parallel to the strands. Complete terminal is hot-tinned. Staking pressure may be applied by hand or power operated tools. Available in many forms for wires from No. 18 A.W.G. to 250 MCM.

Sta-Kons® For The Production Line

Additional tongue sizes, bolt sizes, and a wide variety of special shapes and designs of Sta-Kon Terminals and Connectors are available. Full information is available on request from Graybar.

Where large quantities are required, Sta-Kons can be supplied packed in bulk for direct shipment at lower prices than the standard stock packing shown above. Specific inquiries are invited.

For high-speed production installation there is a broad line of power tools available, hydraulic or air actuated. They make consistently uniform installations at speeds up to one thousand per hour. Complete details will be furnished on request.

†Main indicates the size of cable running through the tap. ‡Branch indicates the size of cable to be connected to the main.

Hinjon® Junior

For Mains No. 8 to 1000 MCM—For Small Wire Branches No. 14 to No. 1

Compact, small and easy to tape. Twelve fittings take the entire range of sizes shown above.

Self-adjusting jaws grip main and branch cable all around, providing a perfect electrical and mechanical connection.

To make a tee tap, just bend the branch. Quickly installed with screw driver or pliers.

35120	750 to 1000 MCM	14 to 1	1	976.00

Burndy Hydent Connectors

Hydent connectors are of one-piece, pure copper construction. They are indented onto conductors with simple and easy-to-use Hytools and Hypresses as listed on following pages. Due to the one-piece construction and uniform barrel thickness of Hydent connectors, the indent can be placed anywhere on the circumference of the barrel.

**Solderless and Secure
Electrically Efficient
Electro-Tinned
Easily Inspected.**

Hydent connector sizes include the smallest used on wiring harnesses, electronic equipment, etc., to the largest

required for industrial applications. Those listed below and on the following pages are the most commonly used types and sizes carried in stock. Applying the Hydent method to the many wiring needs can effect economies of both time and expense. Standard Hydent connectors meet the requirements of:

**Underwriters' Laboratories, Inc.
Canadian Standards Association.
U. S. Air Force.
Army Signal Corps.
Ordnance Department.
U. S. Navy.—
Bureau of Ships
Bureau of Aeronautics
Bureau of Ordnance
Civil Aeronautics Authority.**

Hydent Cross-Section. Note how the cable strands have been formed into one solid mass.

Burndy Hylugs

Listed by Underwriters' Laboratories, Inc.

For No. 22 Through No. 8 Commercial and Aircraft Conductors

For Cable to Flat

Hylugs are compact, one-piece solderless pure copper terminals that provide dependable and rapidly made connections. Electro-tinned surfaces minimize corrosion. Holes in back of barrels permit quick visual inspection for proper insertion of cable. Insulation grips are provided on many terminals listed below.

A complete line of terminals with tongue sizes and shapes conforming to special specifications is available.

Available in new flip-top box for sizes from No. 22 through No. 8
In sturdy corrugated boxes through 2000 MCM.

Burndy Double Indent Connectors

Type YS

Type YA

On large conductors, particularly from 300 MCM through 2000 MCM, multiple indents are sometimes desirable for severe operating conditions. Long barrel Hydent connectors are especially designed for this purpose.

For complete information, contact Graybar.

Burndy Flag-Type Hylugs

Listed by Underwriters' Laboratories, Inc.

Type YBV

For No. 20 through No. 9 Commercial and Aircraft Conductors
For Cable to Flat

Fig. 1

Fig. 2

Fig. 3

These flag or side entrance type terminals are of pure copper, one-piece construction. Electro-tinned surfaces minimize corrosion. Provide dependable and rapidly made connections. Installed onto conductor with Hytools and Hypresses.

Available in new flip top box for sizes from No. 22 through No. 8

Burndy Clasps and Clasp Lugs

Listed by Underwriters' Laboratories, Inc.

Type YZ-H Type YZ-H1 Type YZ Type YZ-1 Type YZA

The Burndy Clasp is a quick disconnect composed of two identical halves for joining commercial or aircraft cable sizes from No. 22 through No. 9. Cannot be separated by direct tensile stress. Clasps can be supplied with insulation grips as well as locking tabs that lock the connection against accidental loosening. Terminal connection is made by Burndy Clasp Lug which connects to the clasp.

Clasps and Clasp Lugs are installed onto conductors with standard Hytools and Hypresses.

For complete information and prices, contact Graybar.

Burndy Belled Hydent Connectors

Type YS-LB

Type YA-LB

These belled entrance connectors are available for efficient insertion of flexible, extra-flexible, and welding cables. Deep Hypress indentations made during installation provide low-resistance, high-strength connections.

For complete information and prices, contact Graybar.

Burndy Hyseal Connectors

Hysealplug Type YE-LH

Hysealug Type YA-LH

Hysealink Type YS-LH

For preventing electrical faults that arise from the admission of water, moisture or acid vapors into the conductor strands or under the insulation. Made of pure copper, one-piece, and fit a variety of cable sizes and insulations.

Typical Applications of Burndy Hyseal Connectors

Hysealugs: For battery jumpers that seal cable against acid vapors. Also used in mines.

Hysealinks: Provide moisture-proof end-to-end connections.

Hysealplugs: For primary metering connections that prevent seepage of water at the connection and through the cable strands into the meter boxes.

These connectors are installed with Hypresses. The connector barrel is indented onto the bare conductor providing an excellent mechanical and electrical connection. The skirt or shroud provides a watertight connection by firmly gripping the cable insulation (synthetic or natural rubber compounds). Hyseal joints resist water pressures in excess of 50 psi.

For complete information and prices, contact Graybar.

Burndy Shielded Cable Terminations

Type YIC and YOC

YAV Hylug

Outer Ferrule

Braid

A single or double ferrule is used for tapping braid on shielded cable. This connector can also be used to anchor the braid ending, thereby preventing it from slipping or fraying.

For complete information and prices, contact Graybar.

Burndy Solderless Terminals

Listed by Underwriters' Laboratories, Inc.

Hylugs—Type YA-L

For Commercial Stranded Cable No. 6 Through 2000 MCM
For Cable to Flat

Fig. 1

Fig. 2

Burndy Hydent Installation Tools

Electrical connectors are only as dependable as the tools which install them. Here is a wide variety of practical, tested, well-designed tools whose uniform performance assures dependable electrical connections.

These tools are made for manual, pneumatic or hydraulic operation. For small connectors, where quantity high-speed production is not required, Hytools in the form of hand pliers are employed. For quantity production, both manually-operated Hytools and power-actuated Hypresses are available.

Each tool has been designed to insure: Simple operation by unskilled personnel, rapid low-cost-unit installation—as many as 1000 small-wire connections per hour can be made with a pneumatic Hypress; Uniformity of installation—the release valve feature of Hypresses and the close tolerances built into all Burndy tools control the depth of indentation.

Burndy Hytools

Type Y10M

This popular all-purpose hand plier cuts the wire, strips the insulation and installs Hydent Connectors on conductor sizes No. 22 through No. 10. A single indenting die installs connectors on this entire conductor range. Other features are wire strippers, bolt cutter, thread chasers, and dies for closing insulation grips.

Type Y10M—Weight each 3/4 Lbs. Ea. \$3.95

Type MY29

A simple hand-operated Hytool that installs Hydent Connectors on conductor sizes No. 8 Stranded through 250 MCM without requiring the removal of dies. Unique indenter and nest which is adjustable to cable size scale on side of the Hytool gives this extensive range.

Type MY29—Weight each 6 1/2 Lbs. Ea. \$36.00

Burndy Hylugger

Type Y8ND

A light weight, compact, fast acting pneumatic tool.

Air pressure of 90 psi. is augmented by internal cam action to provide more than 3000 lb. crimping force. The built-in full cycle valve assures ram cannot return until it has completed its full forward motion. Thus crimping is uniform.

Convenient trigger location. Uses same dies as the M8ND. Dies must be ordered separately.

Head dimensions: 1 1/2-in. wide, 3/8 in. thick, 3/4-in. from terminal to end. Overall length 9 1/2-in. complete with hose.

No.	Weight 2 3/4 lbs. Description	Each
Type Y8ND	Hylugger, without dies	\$183.00

Burndy Pneumatic Hypress

Type Y10NCP

A high-speed, bench-mounted, foot-actuated Hypress, furnished with pneumatic pressure unit, foot-pedal and body. Installs Hydent Connectors on stranded cable sizes No. 22 through No. 8, and on solid wire sizes No. 22 through No. 6. Dies are extra. Tool angle and adequate jaw spacing,

plus foot-actuated pneumatic operation permit fast feed of assemblies into the die.

An air-line pressure of 90 psi., developing over 2000 lbs. total force is required for operation of this Hypress over its entire range. For smaller connectors lower pressures will be satisfactory.

Type Y10NCP—Without Dies; wt. ea., 10 1/2 Lbs. Ea. \$270.00

Burndy Hydent Installation Tools

**Burndy Manual Hydraulic Hypress
Type Y34A**

A manual Hypress weighing 9 lbs. that delivers a 9-ton force. Ideal for close-quarter operation; head rotates 90°. Installs Hydent Connectors on cable sizes No. 6 to 500 MCM. Tool is neoprene covered. Dies are quickly placed into the head—all dies must be ordered separately. Pumping the handle operates the Hypress. An overload valve controls the depth of indent on each size connector and its operation is indicated by an audible click and a drop in force when the indent is correctly completed. The indenter is returned to starting position by opening a release valve. Complete with metal carrying case.

Type Y34A—Without Dies; Weight each, 9 lbs., Each **\$155.00**

**Burndy Foot-Operated Hydraulic Hypresses
Type Y-B**

Made in five types as illustrated. Includes foot-pump, 8-ft. flexible hose, Hypress head, and metal carrying case. All dies must be ordered separately. Flexible hose and swivel joint permit use of head at any angle, making the Hypress suitable for both bench and field installation. An overload valve controls the depth of indent on each connector size, and its operation is indicated by an audible click and a drop in force when the indent is correctly completed.

Air and electric units are also available to replace foot-pump units. Graybar invites your inquiries.

Type Y34B—For Cable Sizes No. 6 through 500 MCM.....Each **\$275.00**

**Type Y34B
(Neoprene-Covered Head)**

Type Y29B—For Cable Sizes No. 9 through 250 MCM.....Each **\$228.00**

Type Y44B—For Cable Sizes No. 1/0 through 1000 MCM.....Each **\$366.00**

For Overhead Line Work

Type Y35—For Cable Sizes No. 6 Through 400 MCM.....Each **\$195.00**

Type Y48B—For Cable Sizes No. 4/0 through 2000 MCM.....Each **\$492.00**

Burndy Hylug Kit

This kit contains assorted Hydent Connectors for No. 20 through No. 10 wire, packaged in new flip-top boxes. One Burndy Hytool No. Y10M for cutting wire, stripping insulation and for installing the connectors.

Designed for electrical contractors, automotive, radio, industrial maintenance, motor and appliance men.

No. 11—Wt. ea., 3 Lbs.....Ea. **\$6.50**

For additional information on any of the products listed on preceding pages the following Burndy catalogs are available:

- General Catalog No. 50**
- Industrial Catalog No. 52**
- Hydent Catalog No. Y58**
- Hysplice Catalog No. OH157**
- Underground Catalog No. Z47**
- Grounding Catalog No. G47**

Graybar Invites Your Inquiries.

Burndy Cable Terminals
Qiklug Type Q2A and Type Q3A

Type Q2A

Type Q3A

Type Q2A: A compact clamp type connector with two clamping elements for joining two cables to bar or flat pad. Connection is quickly made by inserting cables into Qiklug cable eyes and tightening nuts. Qiklugs can be used.

Type Q3A: A Qik connector for terminating three cables to bar or flat pad. Cables are securely held in place, forcing a high pressure contact with terminal, by merely tightening nuts on clamping elements.

Burndy Cable Terminals

Listed by Underwriters' Laboratories, Inc.

Qiklugs—Type QA-B

For Range of Cable to Flat

A high-copper alloy, heavy duty terminal for rapid termination of cables. Quickly installed with an ordinary wrench. Accommodates a range of cable sizes and is supplied with, one, two or more holes in the terminal pad. They maintain their full salvage value.

†By carton quantities.

Scrulugs—Type KPA

For Range of Cable to Flat

A low-cost compact terminal especially suited for light duty industrial installation. Unexcelled for terminating cable in confined space — at safety switches, relays, electric control equipment, test blocks, etc.

Each size takes a convenient range of conductors.

No.	Conductor Range		1947 N.E.C. Conduc. Rating	Quan. In Ctn.	Wt. Per 100 Lbs.	Per 100
	Min.	Max.

†Type R insulation—single conductor in free air.

§For 1-4 carton quantities.

Burndy Cable Terminals

Kalug Type KA

A low cost lug of high conductivity copper alloy, compactly designed with Allen Head screw, for easy terminating at service switch, terminal block, etc. where space and cost are the important factors. Each lug takes a convenient range of conductors.

One hole tongue. For copper conductors, cable to flat.

No.	Copper Conductor Range		Approx. Ship. Wt. Lbs. Per 100	Ctn. Qty.	Per 100

Burndy Aluminum Hylinks

Type YS-A

For Aluminum Cable End-To-End

Aluminum Hylinks for making end-to-end connections of aluminum cable from #12 str. to 2000 Mcm. Supplied factory filled with Penetrox A and capped so that there is no need to apply this corrosion inhibiting and oxide penetrating compound as a separate operation.

The staked plug which forms cable stop in center of hylink provides maximum insertion of the conductor and proper distribution of Penetrox A through the strands.

To make installation, insert aluminum cable in each end and crimp with recommended installation tool and ide.

Contact GRAYBAR for price and further information.

Burndy Aluminum Hylugs

Type YA-A-TN

For joining aluminum cable to flat. Tin-plated aluminum Hylugs recommended wherever it is necessary to terminate aluminum cable to a copper or aluminum surface.

Supplied factory-filled with Penetrox A, a corrosion inhibiting and oxide penetrating compound.

Easy to install, simply insert the aluminum conductor and crimp with recommended installation tool and dies. U.S. standard flat washers recommended for use under the heads of the clamping bolts when installing these Hylugs.

Contact GRAYBAR for price and further information.

Call Graybar **FIRST** For . . .

Burndy Cable Connectors

Listed by Underwriters' Laboratories, Inc.

Versitaps—Type QPX

For Range of Copper Conductors

An all-purpose connector used to make parallel taps, T-connections or end-to-end connections.

Made of high strength, high conductivity copper alloy, it consolidates the functions of a number of connector types into one low-priced device.

Variety of QPX Connections

No.	Conductor Range				Tap	Quan. In Ctn.	Wt. Per 100 Lbs.	Per 100 (By Ctn.)

Oklips—Type KVS

For Copper Conductors

A husky connector for heavy duty copper to copper service connections. Takes a wide range of conductors.

Made of high strength, high conductivity alloy, its compact construction permits quick and easy taping. No loose hardware,—rubber-like rings capture bolts, thus preventing their loss.

No.	Conductor Range				Tap	Quan. In Ctn.	Wt. Per 100 Lbs.	Per 100 (Ctn. to 99)
	Min.	Run	Max.	Min.

Burndy Flat Bar and Tubular Bus Fittings

Illustrated on this and following pages are typical Burndy bus connectors available through Graybar. Connectors for flat, square, angle or tubular bus, for cable and for connections between the various conductor types can be furnished to meet your particular installation requirements. For complete information on these and other types, contact your nearest Graybar office or warehouse.

Flat Bar Fittings

Bar clamps distribute pressure over a wide area. Available for flat bars, or for flat bar to cable, tube or special shapes. Connectors for taps from multiple bars also available.

Either the 4-hole and cap, or special clamping eye and cap elements are recommended for joining cables to flat bar. Contact Graybar.

Burndy Connectors for Special Bus Shapes

A complete line of heavy-duty connectors is available for channel, angle and square tube bus. High-pressure contact areas are set up by the clamping bolts, providing these connectors with excellent electrical characteristics and the ability to withstand the large short-circuit forces encountered in high-current buses.

Burndy Connectors for Underground and Industrial Systems

Provide compact, secure, insulated connections with full cable insulation protection at low installation cost.

Another feature of this equipment is its flexibility in providing for future additional loads which can be installed rapidly and inexpensively.

Efficiency Non-Adjustable Supports

Type K

Type K

Malleable iron. Case hardened set screw. Designed for supporting porcelain and glass insulators to beams and angles in open steel construction of all kinds. Made in four sizes for standard insulators. Has numerous applications. Does not require burning or drilling holes.

Complete information and prices on request.

Type X

Type X

Malleable iron, extra heavy head. Case hardened cup point set screw and nut. Set screw tightens on nut, if thread is stripped, replacement can be made with common steel nut.

Designed for use where no more than two insulators or fittings are required, and where these fittings may be placed in either an upright or horizontal position. Adaptable to mount various designs of cable racks.

No drilling or burning holes in beam is required. A great variety of uses can be found for this support.

Complete information and prices on request.

Steel City Universal Insulator Supports

Malleable iron, electro-galvanized. Case hardened cup pointed set screw.

For securing porcelain or glass insulators, knobs, cleats, brackets, or pipe in any open construction.

Easily attached to I-beams, angles, channels, etc., or to round, square or flat bars, edges of tanks, pipes, etc.

One set screw design, providing a three-point contact that holds the support securely and rigidly to the steel framework. Vibration will not loosen set screw.

Screw holes for fastening insulator to Universal Insulator Supports are tapped standard as indicated.

Special tapping can be specified when required, at no extra cost.

Machine screws for fastening porcelain insulators to Universal Insulator Supports are furnished only when specified and at additional cost.

Steel City Marchand Clamps and Plugs
For Stranded Wire Cable

Assembled view showing "dead-ending" Clevis Clamp attached to strain insulator and clamp end of 1,000,000 CM stranded copper conductor.

Safest and most efficient wire clamp on the market.

Simple in design. Saves labor and material. Easily and quickly installed. The only Single Clamp that can be used for maximum strain. Does not crush the strand—each wire of strand gripped separately and carries equal load. Standard designs meet all conditions of construction. Only one clamp required for each connection. Sherardized finish.

Clamps and plugs only. Insulator not included.

For use with 7-Wire Guy Strand

Efficiency Time Saver Cleats

Unique design. Base is mounted permanently with one bolt, and forms a solid support or shelf for the wire or cable. Cap is bolted as a separate operation. Wire groove diameters $\frac{1}{8}$ -inch to $1\frac{1}{8}$ -inch. Also available with mounting for lag screw, machine bolt, toggle bolt or expansion plug.

Complete information and prices on request.

Efficiency Cleat Racks

For Time Saver Cleats

Made in 2, 3, 4, 5 and 6 cleat types and 3 phase cleat rack. Wire size $\frac{1}{8}$ -inch and $1\frac{1}{8}$ -inch. Base of Time Saver cleat is mounted permanently with one bolt and forms a solid support or shelf for the wire or cable. Cap is bolted as a separate operation. Furnished with or without adjustable beam supports. When ordering give outside diameter of wire or cable over insulation.

Complete information and prices on request.

Efficiency Bushing Supports

Type V

Malleable Iron. Independent mountings for cable and wires. Type VB requires only one bolt to be tightened to hold porcelain bushing and clamp to base. In both supports the bushing is completely surrounded by metal. Mounted with one bolt; the circular base is adjustable to any angle. For a-c service, a brass half is furnished to prevent induction. For wire sizes $\frac{1}{8}$ -inch to $2\frac{3}{8}$ -inch. When ordering give outside diameter of wire or cable over insulation. Complete information and prices on request.

Type G

Adaptable for mounting on Steel, Wood, Concrete, Tile, Brick or Stone.

Malleable Iron. For a-c service a brass half is furnished to prevent induction. For wire sizes $\frac{5}{16}$ -inch to $2\frac{3}{8}$ -inch. When ordering give outside diameter of wire or cable over insulation. Toggle or machine bolts, lag screw or expansion plug are extra.

Complete information and prices on request.

Efficiency Bushing Messenger Supports

Type GM

Designed to suspend wire or cable from messengers where beam mounting is not possible. A combination of Type G Bushing Support with strip steel messenger attachment. Furnished complete as illustrated. For wire sizes $\frac{1}{8}$ -inch to $2\frac{3}{8}$ -inch. For a-c or d-c service.

When ordering give outside diameter of wire or cable over insulation. Also size of messenger.

Complete information and prices on request.

Efficiency Conductor Racks

U.S. Patent No. 1,837,259

A patented cable support of fundamental and extremely simple design. Tightening one bolt clamps porcelain bushing firmly and fulcrum surfaces transmit the pressure to the flanged foot which engages the sides of the hole in the rack. Engagement is positive and will not loosen by

vibration or shock. For a-c or d-c service. Wire sizes from $\frac{1}{8}$ -inch to $2\frac{3}{8}$ -inch. Complete prices and information on request.

Nested Conductor Rack—Type U

Two Conductor Rack

Relieves impedance. Compact and scientifically designed to carry conductor equidistant from center to center.

Three Conductor Rack

One bolt supports the bushing and clamps the bushing support to the rack.

Each fitting is a separate unit and permits installation of each cable line independently.

Five Conductor Rack

Rack is standard rolled steel channel.

Bushing supports are malleable iron.

Six Conductor Rack

For a-c or d-c service. For a-c service a brass half is furnished to prevent induction. For wire sizes $\frac{1}{8}$ -inch to $2\frac{3}{8}$ -inch.

Complete information and prices on request.

Efficiency Hangers

2 or 3 Wire Cleat Mounting

This fitting is furnished complete with No. 150 Adjustable Support, malleable iron cleat fitting, 2 or 3 wire glazed porcelain cleats and all bolts. Wire sizes from 2 to 14. Also available without adjustable support.

Complete information and prices on request.

No. 150-334

Efficiency Bushing Racks

Type B Adjustable

Only one bolt required to support the bushing and clamp the bushing support to the rack. Each fitting is a separate unit and permits the installation of each line of cable independently.

Rack is standard rolled steel channel, sizes $1\frac{1}{2} \times 1\frac{1}{2} \times \frac{1}{8}$ -inches and $2 \times 1\frac{1}{2} \times \frac{1}{8}$ -inches, varying according to size of bushings and number of mountings to each rack. Bushing supports are malleable iron. Bushings are glazed porcelain, extra large and heavy, and designed to allow a minimum of leakage.

These racks can be furnished with any required number of bushing mountings.

The bare rack can be attached permanently to the structure and mountings can be added later as required.

B-700S to and including B-702S are spaced 4 inches center to center of bushing.

B-703S to and including B-705S are spaced 5 inches center to center of bushing.

B-706S to and including B-710S are spaced 6 inches center to center of bushing.

Any desired spacing of bushings, from center to center, other than above specified, can be furnished.

Two Bushing Rack

Four Bushing Rack

Six Bushing Rack

Made in 2, 3, 4, 5, and 6 bushing racks. For a-c or d-c service, wire diameters from $\frac{1}{8}$ -inch to $2\frac{3}{8}$ -inch. For a-c service a brass half is furnished to prevent induction.

Available with or without single or double adjustable beam supports. Complete information and prices on request.

Efficiency Adjustable Insulator Supports

With Time Saver Cleat

Showing How Wires May Be Run Above Or Under The I-Beam, or Carried At The Side Parallel With The Beam

Designed to carry insulator and fittings at any angle, either above or below the beam. Permits the mounting of several conductors on one support, or any combination of wires or cables by the addition of various fittings. Slot permits movement of 120° from vertical position. Support clamps tightly to beams or angles without drilling or burning holes.

Malleable iron frame with case hardened cup point set screw.
Complete information and prices on request.

Porcelain Products Cleats

Style A

Style R (Regular) cleats have wire grooves 1/2 in. from surface of both cap and base.

Style A wire grooves are 1 in. from surface of base and 1/2 in. from surface of cap.

Style B wire grooves are 1 in. from surface of both cap and base.

Porcelain Products Split Knobs

Alligator Nail Assembled

Provide an insulating support in interior wiring, both open and concealed.

Made of hard vitrified porcelain, either glazed or unglazed.

Assembled with 12d wire nails, held in position by a steel washer and cushioned with a leather washer. Size of wire, 12-14.

Height, 1 3/4 In. Diameter, 1 1/8 In.

Packed in cartons of 100 and 500.

Weight per 1,000, 160 lbs.

Republic Rigid Threaded Conduit, Couplings and Elbows

Easy-bending steel raceway, produced by "continuous weld" process. Uniform; free from "burnt" or hard spots which might cause cutting, threading or bending problems. Welds will not open even under severe abuse. Cuts free-running threads easily and cleanly. Inside surface is smooth and free of burrs and rough spots.

ENAMELITE® Finish

Red Label: Protected inside and outside with a heavy, baked-on coating of tough, wear-resisting black enamel. Coating is highly resistant to acid types of corrosion, particularly where sulphuric fumes are present.

GALVITE® Finish

Blue Label: Hot-dip galvanized inside and outside, with a special coating of baked-on lacquer applied inside and outside to further insure high corrosion-resisting properties.

6	20.037	19.800	6.625	6.065	.280	8

All dimensions shown above are nominal. Conduit is furnished in accordance with American Standards Association specifications C80.1 or C80.2 and Federal Specifications WW-C-581 or WW-C-571, latest revision.

Conduit is furnished in 10-foot lengths, threaded both ends, with coupling screwed on one end and thread protector on the other.

Conduit is always designated by its nominal inside diameter.

Triangle Rigid Steel Conduit, Couplings and Elbows

Hot-Dipped Galvanized or Black Enameled Finish

Conforming to Federal Specifications WWC 581A (Galvanized) and WWC 571 (Enameled)

Hot-Dipped Galvanized

In hot-dip galvanizing each length of Triangle conduit is immersed in a bath of molten virgin zinc (99.85% pure), thoroughly galvanizing the interior as well as the exterior surfaces.

Intimate contact of the surfaces of the tube with the molten zinc results in an alloying action which thoroughly bonds the pure zinc coating to the pipe.

Further protection against corrosion is provided by submerging the conduit in a bath of specially prepared linseed oil base lacquer. A thorough baking of the lacquer produces a smooth, even, continuous finish.

Black Enameled

Finished with high quality, tough, elastic black enamel. Thoroughly baked to produce a durable black luster.

Conduit

Furnished 20 or 10-ft. lengths, plain ends.

All dimensions given above are nominal.

Lightweight, easily suspended. Particularly useful as overhead conduit in corrosive atmospheres.

*Sizes manufactured on special order.

National Electric Rigid Steel Conduit Couplings and Elbows

"Sheraduct"

A high grade, rigid steel conduit that has been galvanized by a dry process of galvanizing known as Sherardizing. The steel conduit and commercially pure zinc dust are heated together at a very high temperature. In this process, the zinc combines with the steel to form zinc-steel alloys which become a part of the steel wall. Being an intergal part of the steel conduit wall, the galvanized coating cannot flake or scale; even the threads are Sherardized.

Additional interior, exterior protection is provided by National Electric's new MVC-1 enamel. This enamel coating is composed of a modified vinyl copolymer and is plasticized and pigmented. MVC-1 vinyl enamel is highly impervious to all chemical attacks; it also withstands extreme mechanical abuse without fracture or skinning of the coating. MVC-1 enamel has elasticity that allows bends and general working of conduit without damage to the interior bonded coating of enamel.

Sheraduct with its new MVC-1 enamel coating guarantees double corrosion protection.

"Superduct"

Completely new, Superduct was specially designed to answer a definite need for a protective electrical conduit for locations where corrosion is both severe and costly. Like Sheraduct, this conduit is made of high quality steel, rigid, with threads, couplings and conduit zinc-coated by the sherardizing process of galvanizing.

After the galvanizing process, Superduct is then coated, inside and out, with a special vinyl chloride-acetate copolymer, pigmented and plasticized enamel finish. The vinyl enamel resists the corrosive and deteriorating action of practically all chemicals, greases, oils, moisture, salt water and severe weather conditions.

"Xduct"

The improved Xduct rigid threaded steel conduit now has a new interior finish which is a baked-on-coating of aluminum enamel. The outside surface is also new; a heavy and uniform coating of electrolytically pure zinc is deposited on the outside surfaces of the conduit by an exclusive end-suspension technique. This insures a zinc coating which adheres to the basic steel and has exceptional resistance to both corrosion and to flaking during bending operations.

A special brightening agent, applied over the pure zinc electrogalvanizing, gives Xduct conduits a highly-polished appearance and makes it ideal for exposed-to-view installations.

Twice as easy to start pull, and 66% easier to continue pulling wires, as proved by actual test results.

Economy Enamelled Conduit

Made of homogeneous, fine-grain steel.

Tough, flexible, enamel applied by immersing conduit.

Clean, scale-free surfaces prepared before immersion eliminate any possible cracking off of enamel. Threads are kept clean by protectors during enameling.

Threaded on both ends and shipped in lengths of 10-feet, including coupling.

Anaconda Everdur Electrical Conduit

High-strength, corrosion-resistant conduit, composed of non-magnetic copper-silicon alloy. Possesses high strength, exceptional ductility and fatigue-resistance.

Suitable for use in installations where unusually corrosive conditions are encountered.

Seamless Rigid Conduit

Listed by the Underwriters' Laboratories, Inc.

Supplied in nominal sizes from 1/4 to 4 inches. As ordinarily supplied, the 10-foot lengths are threaded both ends with one Everdur coupling attached.

Nom. Size In.	Outside Diameter In.	Inside Diameter In.	Wall Thickness In.	Wt. Per Foot Lbs.

Alcoa Aluminum Rigid Conduit, Couplings and Elbows

Approved by Underwriters' Laboratories, Inc.

Lightweight, corrosion-resistant aluminum conduit for longer service life, easier handling during installation and more efficient performance of electrical systems.

The lower reactance of aluminum conduit systems results in a lower voltage drop than that of systems using magnetic conduit. Conductors of a single or polyphase system may be enclosed, regardless of the electrical load, each in a separate aluminum conduit.

Aluminum conduit cannot discolor or stain adjacent surfaces. Painting is not necessary except under severest service conditions.

Furnished in 10-ft. lengths, one end fitted with a coupling.

For use with standard threading fittings, of aluminum or galvanized or cadmium-plated iron or steel.

Easily bent with rigid conduit bending tool for sizes 1-in. and larger and with thin-wall conduit bending tool for size 3/4-in. and smaller.

Alcoa Aluminum E.M.T.

Approved by Underwriters' Laboratories, Inc.

Lightweight, easily handled aluminum tubing. Highly corrosion-resistant for long life, indoors or out.

Cannot discolor or stain adjacent surfaces.

Furnished in 10-ft. lengths, not threaded.

Trade Size In.	O.D. In.	I.D. In.	Length Ft.	WL Per 100 Ft. Lbs.

Triangle E.M.T. Conduit and Elbows

Conforming to Federal Specification WWT-806A

Electro-Galvanized

Produced from flat cold-rolled steel, oxy-acetylene welded to form a perfectly true tube of uniform thickness and strength.

Tubing, which is threadless and much lighter in weight than heavy wall conduit, is first thoroughly pickled and cleaned to remove all scale and foreign substances adhering to its surfaces and is then immersed in a bath of molten virgin zinc (99.85% pure.)

Tubing sizes up through 2-inches are approved by N.E.C. for use on circuits where the conductor size does not exceed No. 1/0 and where the voltage does not exceed 600 volts.

Conduit furnished in 10-ft. lengths.

Conduit

Size In.	I. D. In.	O. D. In.	FL Per Bundle	WL Per 1000 Ft. Pounds

90° Elbows Without Couplings

Size, Inches	1	1 1/4	1 1/2	2
Weight, per 100 lbs.	100	144	180	277

Also available in 45° elbows. Elbows are of same high-grade material as tubing, and are protected against corrosion by the same process of cleaning and coating.

Call Graybar FIRST For . . .

Republic Electrunit® E.M.T. and Elbows
Lightweight Rigid Steel Raceway—Threadless

High-strength, ductile E.M.T. for protection of electrical conductors.

Requires no thread cutting. Galvanized, vibration-proof compression fittings slip over tube without disturbing the corrosion-resisting zinc coating.

Easily bent and formed; “Inch-Marked” and “Guide-Lined” for convenience. Knurled inner surfaces make wire pulling as much as 30% easier.

Approved by N.E.C. for exposed, concealed or concrete slab construction. Particularly suited for use in close quarters, such as narrow spaces between pans in concrete work.

ELECTRUNIT E.M.T. is furnished in galvanized finish in accordance with American Standards Association Specification C80.3. Federal Specification WW-T-806 and Underwriters’ Laboratories Standards.

Republic *Electrunit®
“Dekoron-Coated” E.M.T.

Polyethylene Coated Rigid Steel Raceway

“Dekoron-Coated” E.M.T., standard galvanized electrical metallic tubing protected by an extruded covering of polyethylene, provides an economical means of eliminating corrosion damage to electrical raceway systems. The chemical-resistant polyethylene coating protects E.M.T. against unusual corrosive conditions, that exist in chemical plants, meat-packing plants or sewerage disposal plants.

“Dekoron-Coated” E.M.T. needs no special tools for installation. Standard E.M.T. fittings or, by the use of a connector, threaded conduit fittings are used.

Standard chemical-resistant tapes available permit completely corrosion-resistant systems to be provided by forming atmosphere-tight wrapping over fittings and couplings.

In addition to the excellent chemical resistance of polyethylene, it possesses toughness, good weathering characteristics, insensitivity to moisture, flexibility and dimensional stability over a wide temperature range.

For further information, prices and technical data, contact Graybar.

® Trade Mark.

National Electric Xduct Junior E.M.T. and Elbows

Electro-Galvanized

Uniform unbroken zinc coating produced by electro-galvanizing.

Inside surfaces furnished additional protection by a complete covering of aluminum enamel. Enamel will not crack or break down even under severe baking and bending. Not affected by weather. Provides permanent protection against abrasion, moisture and corrosion.

American Brass Sealite®
Flexible, Liquid-Tight Conduit

Flexible, liquid-tight conduit for protecting electrical conduit from moisture, oil, grease, dirt, chemicals, corrosive fumes, abrasion, etc., in both indoor and outdoor connection. Reduces burnouts, downtime. Construction: Flexible galvanized steel core over which is extruded a polyvinyl chloride cover. Supplied in corrugated cartons on non-returnable reels; can be cut and assembled on the job. Takes standard liquid-tight connectors.

Three general types: U.A. (Underwriters’ Laboratories Approved) C.S.A. (Approved by Canadian Standards Association) E.F. (Meets J.I.C. (Joint Industry Conference requirements). Colors: Black, gray. (Black only on C.S.A. type).

STF-100	1	1	50	3.5	24.00

Note: Sizes 1/4, 1/2, 2, 2 1/2, 3 and 4-in. available.

Installation

Screw Ferrule and Sleeve Assembly (A) on end of Liquid-Tight Flexible Conduit. Insert Flexible Conduit with Ferrule attached into connector body.

Tighten nut onto connector body. (Important—nut must be tightened as far as possible to complete compression action which assures liquid-tight seal.)

Cross section of completed connection shows how tapered end of nut performs compression action on Ferrule wall, and gives positive ground between flexible conduit and connector.

Ferrule Assembly as seen when nut is loosened and end of Liquid-Tight Flexible Conduit with Ferrule attached is withdrawn from connector body.

Pyle-National CT Series Connectors

**For Use with LIQUID-TIGHT Flexible Conduit
(Sealtite or Equivalent Products)**

"CT" Series connectors can be installed assembled . . . no parts to lose . . . no wasted time. Available in straight, 45 degree and 90 degree types for 3/8" to 2" liquid-tight flexible conduit. Meet U/L and J.I.C. standards.

1. Displaced Bending Action

Tapered grounding shank elongated to extend beyond gland nut, thus avoiding short radius bends which shorten life of the conduit sheath and more important the permanency of the joint.

2. Highly Efficient Ground

Less than 10 millivolt drop.
Tapered grounding shank, integral with connector body, makes a firmly wedged contact with the flexible metal conduit.

3. Extra Strong Grip

Compression force is supported—not by the conduit alone—but also by the body shank, making a vise-like clamp. Gripping is well behind end of flexible conduit for firm anchorage against creeping loose.

Pliable seamless sleeve makes a plastic-to-plastic grip with the conduit sheath . . . thereby avoids cutting and abrasion common to metal sleeves.

High safety factor of compression range more than compensates for tolerance in the outside diameter of the flexible conduit.

4. Permanent Seal

Plastic sleeve and conduit sheath have equivalent physical characteristics therefore the seal will last the life of the conduit, unimpaired by temperature variations within the limits of the conduit.

Straight Type—Exploded View

See Complete Listings at Right.

**For Use with LIQUID-TIGHT Flexible Conduit
(Sealtite or Equivalent Products)**

**Protects Wiring from Oil, Grease, Water and Dirt
Designed to Meet Underwriters' Laboratories and
J.I.C. Standards**

Seamless, oil-proof, highly pliable plastic ring provides positive gripping and sealing. Tapered inner wedge integral with body assures positive grounding and supports clamping pressure of plastic ring or gland.

Gland nut has tapered seat on wedging flange resulting in a clamping action against tapered grounding wedge of the body well beyond the termination of the resilient conduit sheath.

†Has Phenolic compression nut and rustproofed steel body.

*Maximum size cord will not pass through body without removing outer covering.

Male Thread

Complete with rustproofed ferrous alloy body, plain aluminum compression nut and single hole rubber grommet.

Conduit Pipe Products
Special Large Radius Elbows

Hot-Dip Galvanized

The approximate weights shown are for 90° Elbows. To arrive at weight of 60°, 45° and 30° Elbows, deduct the same percentage from the weight as for arriving at the price.

Fairmount Cast Iron Caps

Used for making connections between U-cable guards and iron pipe bends or conduit couplings where they emerge from ground adjacent to pole or wall surface.

Size Cap.	Dimension in.			Wt., Lbs.
	A	B	C	
2-2	2 5/8	1 3/4	2 1/8	1.1
2-3 1/2	4 1/8	1 3/4	2 1/8	2.7
3-3 1/2	4 3/8	2 3/4	2 1/8	2.1

Fairmount Conduit Couplings

Iron couplings used for making connections between conduit, pipe and bends. Various types and sizes available.

Prices on request.

Fairmount Cast Iron Bends

Six types of iron bends available for making turns in subsidiary ducts of underground conduit construction.

Conduit Running Thread Pipe

3-Foot Lengths

A real convenience to the contractor where indefinite dimensions are encountered.

Can be cut to length to meet different installations.

Type A: Raw Black; threads raw black.
Type B: Raw Black; threads electro-galvanized.
Type C: Hot-dip galvanized; threads electro-galvanized.
When ordering, specify Type desired.

Conduit Pipe Products Nipples
Hot Dip Galvanized

Underwriters' Labeled

Provide fast, easy assembly.

Make tight, weather-and corrosion-proof assemblies.

Clean, accurately cut threads. Starting threads correctly chamfered.

Appleton Tiger-Grip Bondnuts

Schedule LB

Galvanized Finish Only

1/2- and 3/4-Inch

Provide a lock-tight spring action between threads and the surface of the box. Sharp, beveled teeth cut into the outlet or switch box, insuring positive metal-to-metal grounding. Bondnuts lock with a firm, permanent grip; will not slip or loosen through vibration.

Shoulders permit tightening from all angles, with fingers, pliers or wrench.

Thorough cadmium plating eliminates rusting.

No.	Size Inches	Ctn. Qty.	Std. Pkg.	Std. Pkg. Wt. Lbs.	Per 100

T&B Insuliner® Sleeves

Approved by Underwriters' Laboratories

Can be used in any raceway outlet.

(Overlapping ends automatically adjust "Insuliner" to normal variations to conduit diameters—either standard heavywall, or thinwall conduit (E.M.T.).

The smoothly rounded mouth covers the bushing and long skirt shields end of conduit.

18857	1	1 1/4" Flex.	1 3/8	20	20	7	166.65

Economy 2-Piece Connector

For new or old work. Only one wrench needed to install. Leaves extra wiring room inside box.

Knurling on chamfered connector body eliminates need for locknut—bites into K.O. rim and prevents slippage. Approved for all inside work or for imbedding in concrete.

Install by cutting conduit to extend 1/16-in. inside box for 1/2-in. conduit; 3/32-in. inside for 3/4-in. conduit and 5/32-in. inside with 1-in. conduit.

Adapters

Cadmium Finish

For Use with Threaded Unilets

Adapter

Adapter Installed in Type C Rectangular Threaded Unilet for Use with E. M. T.

Adapts any Appleton threaded Unilet or similar fittings of other manufacturers, to take E.M.T. Adapter screws into the hub of any 3/8- to 2-inch threaded fitting, gripping the conduit securely, and forming a no-thread fitting. No other special parts needed.

No.	Size In.	Carton Qty.	Std. Pkg. No.	Wt. Lbs. Per 100	Per 100

For Use with Standard No-Thread Unilets

Showing Adapter Which Replaces Regular Contracting Sleeve in No-Thread Unilets.

Designed for use in the hubs of 1/2- to 2-inch No-Thread Unilets for heavy wall conduit. By removing contracting sleeve normally furnished with No-Thread Unilets and inserting Adapter, fitting is adapted for use with E.M.T. Knurled nut screws down to hold E.M.T. firmly.

T&B Threadless Couplings and Connectors
For Heavy Wall Conduit

Approved by Underwriters' Laboratories

Coupling

Connector

For standard rigid conduit. Easy to tighten; made ready with fingers—then a turn with a wrench and the connection is permanent. Made of malleable iron and steel.

T&B Tite-Bite® Combination Couplings

Approved by Underwriters' Laboratories

To connect flexible conduit and standard threaded rigid conduit.

Tite-Bites saddle holds flexible conduit securely with a double grip.

With a Chase Nipple this fitting will connect flexible conduit to outlet boxes, allowing more wiring space in the box than the usual connector.

O. Z. Split Couplings

Type SP

A union for joining conduit in indoor installations where conduit cannot be turned or where space is limited.

It can be slipped over the conduit when in the open position to permit butting of ends of conduit.

T&B Short Elbows
For Standard Rigid Conduit
Approved by Underwriters' Laboratories

Threaded

T&B Short Elbows (90° Angle Adapters) are well bushed, with clean machine-cut threads. Malleable iron, Tabolite galvanized inside and out.

Conduit sizes: 1/2-inch to 2-inches.

Short Elbows (90° Adapters)

T&B Insulating Bushings

For Standard Rigid Conduit

Meet NEC requirements for protection against damage to cable sheath or wire insulation from burred or unevenly cut conduit. Takes minimum space in a cabinet or pull box.

Bushings constructed wholly of cellulose acetate butyrate. Provide a smoothly rounded surface where wiring emerges from conduit.

*Holes accommodate maximum size cable according to code.

Note—Set screw type fittings for threadless conduit can be furnished. Can be supplied for thin wall conduit (E.M.T.) and fibre conduit on request at additional charge.

Holes other than standard can be drilled according to specification.

For hot dipped galvanized finish add 25% to price.

O. Z. Insulated Bushings

Threaded Type

Set Screw Type

Type SBT

These bushings, using bakelite as an insulator, will prevent disastrous grounds. The insulating material is molded and locked into the casting of high grade malleable iron. All are

capped. In set screw type, the bushing is securely fastened to conduit by case-hardened cup-point set screws.

Threaded Type—For Heavy Wall Conduit

T&B Entrance Caps

For Service Entrance Cable

Approved by Underwriters' Laboratories

Has only two parts, weather-proof aluminum cap and phenolic insulator.

One clamping screw holds cable and insulator, and grounds cap to the bare neutral.

Deep hood shields end of the cable from all weather. One screw mounting.

One-piece molded composition insulator eliminates threading of conductors.

Appleton Sill Plates

Schedule OF

For Service Entrance Cable

Provides metallic protection at the point where the service entrance cable enters the building.

Eliminates unsightly bends, making a neater, safer installation.

Made of aluminum and furnished with two hot dip galvanized screws.

Can be furnished with DuxSeal weatherproof compound for filling and sealing the entrance hole. Compound is compressed around cable, and fills up the hole when the sill plate is screwed down. Permits hole to be drilled on a downward angle and allows longer sweep bends to be made in cable.

With DuxSeal Weatherproof Compound

Appleton Entrance Cable Fittings

Entrance Fittings

Schedule OF

For Underwriters' Types SEA or SEU (Oval) Cable

OF-1

For use with oval bare neutral concentric service entrance cable and for oval armored service entrance cable.

Combine greater convenience with increased weather protection. One-piece cast bodies eliminate need for fastening a separate cover on top of entrance head; eliminate danger of losing covers.

OF-2

Clamping plate secures cable, locks insulating covers in place, and provides slot for passage of ground wire.

Only two screws are loosened and retightened in making installation.

T&B Entrance Ells

Approved by Underwriters' Laboratories

Designed for straight pull in either direction. Mounts flush on wall, eliminating any need for bending conduit.

Has no sharp edges; carefully bushed to protect the cable. Cover is held in place with one screw which does not come out. A turn of the screw and the cover slips out. Made of heavy cast iron, plated with Tabolite.

No.	Size In.	Unit Pkg.	Std. Pkg.	Wt., Lbs. Per 100	Per 100

**Messenger Straps
For Conduit Boxes**

Made of zinc-plated steel or Everdur alloy. Fits all standard outlet boxes and 3/8-inch messenger cable. To be used in conjunction with the Minerallac messenger hanger for messenger cable installations.

Recommended stove bolt size, 1/4 x 1/2 inches.
Standard package, 100.

Size Cable.....inches 3/8
Approximate Weight per Standard Package.....pounds 3 1/4

*Steel.....per std. pkg. \$ 3.50
*Everdur.....per std. pkg. 10.50

*Prices do not include stove bolts.

Messenger Hangers

For Messenger Cable Installations

Strong, durable hangers made of zinc-plated steel or Everdur metal. Quickly and easily installed. Design and construction saves time, material and installation costs.

Standard package, 100.

Cable and Conduit Hangers

Made of zinc-plated steel or Everdur alloy.

Quickly and easily put in place.

Open wiring, conduit and cable may be run rapidly and arranged compactly.

For voltages above 550 volts, the hanger should be used with insulating bushings.

Korns Conduit Supports

Galvanized or Black Enamel Finish

Parallel Type

Right Angle Type

Edge Type

For attaching conduit easily and securely to steel framework without drilling holes.

Eliminates the necessity of designing special rigging for either permanent or temporary work.

Made of malleable iron with a piece of tool steel inserted into one end. Edge of tool steel bites into structural steel member to which it is attached, providing a non-slip grip.

T&B Conduit Supports

Approved by Underwriters' Laboratories

Malleable

Will fit any beam flange up to $\frac{5}{6}$ inch thick. Pointed set screw bites into the beam, insuring permanent tightness and a good electrical ground.

Tough, malleable iron body holds standard rigid conduit or E.M.T.

No.	Conduit Size	Unit Pkg.	Std. Pkg.	Wt. Lbs. Per 100	Per 100
690	$\frac{1}{2}$	10	100	42	\$112.00

693	$1\frac{1}{4}$	10	50	62	184.00

T&B Adjustable Conduit Hangers

Approved by Underwriters' Laboratories

Will fit any flange from $2\frac{3}{4}$ to 12 inches. They are universal in the range of beam flanges they fit, the number of pipes they accommodate, and the various angles at which the pipe may be run.

Adjustable for varying plaster lines, and will support any number of conduits, from one to eight.

Beam Clamps

No. 700—Fits flanges from $2\frac{3}{4}$ to $7\frac{3}{8}$ inches. Including bolts; standard package, 100. Weight per 100, 31 pounds.

Per 100..... \$150.40

No. 701—Fits flanges from 7 to 12 ins. Including bolts; standard package, 100; weight 58 pounds.

Per 100..... \$240.00

No. 703—Bolt and 3 Nuts, Standard Package 100, Weight per 100—6 pounds.

Per 100..... \$26.40

T&B Disconnect Hangers

Approved by Underwriters' Laboratories

Provides a safety disconnect for light and power circuits. Designed primarily for mercury vapor lighting units. Can be used equally well with other types of industrial lighting fixtures.

Each hanger consists of a locking hook with 10-amp., 250-volt polarized receptacle and a bushed loop.

Made of tough malleable iron, they support the fixture or pendant outlet and cannot be unhooked until the plug is out and the fixture "dead." The plug closes the hook so the loop cannot be removed while the plug is in place.

No.	Description	Std. Pkg.	Wt. Lbs. Per 100	Each
6140	Complete Assembly	10	120	\$9.60

Parts for Making Up Other Sizes of Disconnect Hanger Assemblies

Sherman Heavy Duty Cast Ground Clamps

Listed by Underwriters' Laboratories, Inc.

No. GF13B

For copper water pipe connections. Fits 1/4 to 3/4-inch pipe and 1/2 to 1-inch ground rods of any shape or material. Body of cast copper alloy, no loose parts to handle.

No.	GF13B
Carton	10
Standard Package	100
Weight per 1000	pounds 260
Per 100	\$36.11

O. Z. Insulated Bushings

Grounded Type BL

These are standard insulated bushings equipped with combination lug, and can be used for through type ground connections as well as for end use.

They afford the protection of insulated bushings and provide a means of making quick, positive ground connections. The insulating material is molded and locked into the casting of high grade malleable iron. A cup point set screw locks the casting in any desired position. Cadmium plated.

Mueller Ground Clamp

CLAMPPIPE™

The exclusive patented feature of a U-shaped cross section in combination with a U-shaped clamp gives rigidity and effectiveness to the ClampPipe.

The ClampPipe will not bend or lop over when applied to a pipe. The point of the large case hardened screw, cuts through rust, paint or corrosion into clean, fresh metal, insuring a good contact. The Clamp may be installed on a pipe lying flush against a wall. Will not spread open. Applicable to pipe 3/8" to 1 3/8" outside diameter.

Packed 10 in a box.

No. 58..... Each \$0.20

For No. 8 or No. 6 Bare Armored Ground Conductor

Made with adjustable top clamp to accommodate No. 8 or No. 6 bare armored ground conductor, and for grounding to 1/2, 3/4 or 1-inch water pipe or 1-inch ground rod.

No.	Size Bare Armored Ground Wire	Size of Water Pipe Inches	Ctn. Qty.	Std. Pkg.	Std. Pkg. Wt., Lbs.	Per 100
9445	8 or 6	1/2, 3/4, 1	5	25	10	\$56.65

Type GCWC

Has deck with a hole drilled to accommodate ground wire. The screw, when tightened, wedges the wire into a cup in the center of fitting, making a good bond and positive grip. Adapted for No. 8, 6 or 4 bare or insulated copper wire.

No.	Water Pipe Size, In.	Ground Rod Size Inches	Ctn. Qty.	Std. Pkg.	Std. Pkg. Wt., Lbs.	Per 100
9489	1/2, 3/4, 1	1	5	25	11	\$56.00

Type GCAR

Swivel Type—Adjustable

Adapted for No. 8, 6 or 4 B&S armored ground wire.

No.	Water Pipe Size, In.	Ground Rod Size Inches	Ctn. Qty.	Std. Pkg.	Std. Pkg. Wt., Lbs.	Per 100
9448	1/2, 3/4, 1	1	5	25	15	\$61.60

Type GCP

Takes wires No. 8, 6 or 4 either solid or stranded. The wire fastening device consists of a 3/8-inch bolt with a 1/4-inch hole through it. In connecting the wire, put the end of the wire through the hole in the bolt, then tighten the nut, clamping the wire with the bolt. Made of malleable iron.

No.	Water Pipe Size, In.	Ground Rod Size Inches	Ctn. Qty.	Std. Pkg.	Std. Pkg. Wt., Lbs.	Per 100
9491	1/2, 3/4, 1	1	5	25	8	\$38.55

Type GCNS

Non-Swivel

Furnished with "V" shaped clamp. Fits Nos. 8, 6 or 4 B&S Armored Ground Wire and takes 1/2 to 1-inch Water Pipe or 1-inch Ground Rod. May also be used with Nos. 8, 6 or 4 bare or insulated copper wire.

No.	Water Pipe Size, In.	Ground Rod Size Inches	Ctn. Qty.	Std. Pkg.	Std. Pkg. Wt., Lbs.	Per 100
9493	1/2, 3/4, 1	1	5	25	7 1/2	\$60.00

Type GCIC

With Tite-Grip Contacts

For 8, 6 or 4 bare or insulated copper wire and armored wire. Furnished with Tite-grip contacts; will not injure the copper ground wire. Has a heavy screw through the center of clamping member that forms a contact when tightened.

No.	Water Pipe Size, In.	Ground Rod Size Inches	Ctn. Qty.	Std. Pkg.	Std. Pkg. Wt., Lbs.	Per 100
9446	1/2, 3/4, 1	1	5	25	13	\$56.00

Type GCRC

For bare or insulated copper wire. Especially designed for ground rods. Make a very neat, secure ground installation.

Ground wire is wedged against the rod by tightening the screw and is permanently set by running down the locknut.

No.	Takes Bare or Insulated Copper Wire Sizes, B&S	Ctn. Qty.	Std. Pkg.	Std. Pkg. Wt., Lbs.	Per 100
9447	8, 6 or 4	5	25	3 1/2	\$39.20

Type GCH

For Rigid Conduit

Equipped with flat, brass washer. Rigid clamp jaws hold securely to water pipe.

Adapted for No. 8, 6 or 4 B&S bare or insulated copper wire.

No.	Size Conduit Gnd., In.	Water Pipe Size, In.	Ground Rod Size Inches	Ctn. Qty.	Std. Pkg.	Std. Pkg. Wt., Lbs.	Per 100
9402	1/2	1/2, 3/4, 1	1	5	25	10	\$104.00

Type FGF

Flexible

Has an 8-inch flexible copper strip that can be bent, twisted or turned into any position. Particularly useful where water pipe or ground rod is not easily accessible. If the ground conduit should by chance be a little too long or too short, the flexible strap can be formed to meet the conduit. Furnished with vise-grip clamp.

No.	Size Conduit Gnd., In.	Water Pipe Size, In.	Ctn. Qty.	Std. Pkg.	Std. Pkg. Wt., Lbs.	Per 100
9481	1/2	1/2, 3/4, 1	5	25	18	\$144.00

Type GCGF

Flexible

Solderless, adjustable type, furnished with "V" shaped clamp.

Fits any 1/2-inch ground conduit and takes 1/2 to 1-inch ground rod.

Can be bent, twisted or turned into any position.

No.	Size Conduit Gnd., In.	Water Pipe Size, In.	Ctn. Qty.	Std. Pkg.	Std. Pkg. Wt., Lbs.	Per 100
9494	1/2	1/2, 3/4, 1	5	25	22	\$144.00

Appleton Ground Fittings

Cadmium Finish

For Grounding Service Wire and Conduit Systems

Schedule GF

Type GCVG

For Rigid Conduit

Vice-grip clamp enables fitting to be clamped to pipe that is closely secured to a surface; an attachment not possible with other type clamps.

Adapted for Nos. 8, 6 or 4 B&S bare or insulated copper wire.

No.	Size Conduit Gnd., In.	Water Pipe Size, In.	Ground Rod Size Inches	Ctn. Qty.	Std. Pkg.	Std. Pkg. Wt., Lbs.	Per 100
9492	1/2	1/2, 3/4, 1	1	5	25	19	\$92.00

Type LGC

For Large Size Water Pipe Adjustable

The deck of these large size clamps has a heavy brass washer. By placing ground wire under the lug a positive bond is formed.

Adapted for No. 8, 6, or 4 B&S bare or insulated copper wire.

No.	Size Conduit Gnd., In.	Water Pipe Size, In.	Ctn. Qty.	Std. Pkg.	Std. Pkg. Wt., Lbs.	Per 100
9482	1/2	1 1/4, 1 1/2, 2	5	25	20	\$149.00
9483	1/2	2 1/2, 3	5	10	15	480.00
9484	1/2	3 1/2, 4	2	5	9	544.00

Type LGCH

For Large Size Water Pipe V-Shaped Clamp

Furnished with a hole through the deck to take No. 8, 6 or 4 bare or insulated copper wire. Ground wire is held in place by the center screw.

No.	Water Pipe Size, In.	Ctn. Qty.	Std. Pkg.	Std. Pkg. Wt., Lbs.	Per 100
9497	1 1/4, 1 1/2, 2	5	10	5	\$ 96.00
9498	2 1/2, 3	5	10	11	400.00
9499	3 1/2, 4	5	10	15	455.00

Grounding Water Meter Shunt

Consists of two grounding fittings with screws connected to a 24-inch length of flexible copper strap.

Takes water pipe sizes 1/2, 3/4 and 1-inch or, ground rod sizes 1/2 to 1-inch.

No.	Ctn. Qty.	Std. Pkg.	Std. Pkg. Wt., Lbs.	Per 100
9486	5	25	25	\$160.00

GB400	4	1	5	6	832.00

*Cadmium finish only.

Grounding Locknuts

Eliminates the use of grounding bushing and jumper wire. Used in place of ordinary locknut.

The set screw wedges its way between the knockout and conduit, cutting into the steel and forming a perfect bond. Cadmium finish only.

Bonding Meter Ring

Type GR

Designed for grounding the meter box to a driven or artificial ground, when a water pipe or other grounding electrode is not available in the building.

Meter ring is placed between the watertight connector and the meter box, after which the ground wire is placed through either the vertical or horizontal hole and the screw is then tightened. This makes a good tight connection and a positive bond; requires no soldering.

No.	Size Inches	Ctn. Qty.	Std. Pkg.	Std. Pkg. Wt., Lbs.	Per 100

Crouse-Hinds Groundulet Safety Circuit Equipment

Type GCH

For use where conduit is employed to protect the grounding conductor. Grounding conductor is connected to conduit-hub part by swivel bolt. Conduit can be brought in from any angle. Malleable.

For Threaded Heavy Wall Conduit With Swivel Feature

No.	Conduit	Size, Inches Water Pipe	O. D. Grounding Electrode	Each
GCH1	1/2	1/2-1	1/2-1	\$1.80

Type GCH for Threaded Heavy Wall Conduit Without Swivel Features

No.	Water Pipe	Size, Inches O. D. Grounding Electrode	Each
GCH 13	1/2 to 1	1/2 to 1	\$1.80

Type GCH with Clamp Connection for Ground Conductor

For Nos. 8, 6 or 4 Armored or Unarmored Ground Conductor.

In this type the grounding conductor passes through the bolt and is clamped between the under side of bolthead and upper face of square cavity. A set screw holds armor in place and effectively grounds it to clamp. Malleable.

No.	Water Pipe	Size, Inches O. D. Grounding Electrode	Each
GCH08	1/2 to 1	1/2 to 1	\$1.80
GCH086	1 to 2	1 to 2	3.10

For Nos. 8, 6, or 4 Unarmored Ground Conductor and No. 2 Solid Copper Wire.

GCH91	1/2 to 1	1/2 to 1	\$1.60
-------	----------	----------	--------

Type GCE Strap Clamp Terminals

GCE012	1/2 to 2	5/8 to 1	\$1.95
GCE014	1/2 to 4	5/8 to 1	1.70
GCE016	1/2 to 6	5/8 to 1	1.90

Type GC Strap Clamps

For bonding and grounding equipment in wiring systems.

No.	Material	Each
GC101	Steel	\$0.45
GC102	Brass	1.00

Type GC Grounding Straps

For bonding and grounding equipment in wiring systems. Flexible Copper.

No. GC100	1 to 10 Coils of 50 Ft.	Each . . . per Coil	\$44.75
No. GC100	11 to 25 Coils of 50 Ft.	Each . . . per Coil	40.60
No. GC100	26 to 50 Coils of 50 Ft.	Each . . . per Coil	38.50
No. GC100	51 or More Coils of 50 Ft.	Each . . . per Coil	37.50

T&B Ground Fittings Hub Type

Approved by Underwriters' Laboratories

Complete fittings, consisting of hub and waterpipe clamp. Available with hub for grounding standard rigid conduit, or with hub for use with armored ground wire. Each size water-pipe clamp makes positive ground connections quickly and neatly on a range of pipe sizes.

For Standard Rigid Conduit Fixed-Length Hub

Solderless grip takes ground wires from No. 8 to No. 2 A.W.G.

Tongue of ground wire clamp extends into hub, protecting ground wire against mechanical damage.

For 1/2-Inch Conduit

No.	Water Pipe Size In.	Unit Quan.	Std. Pkg.	WL. Lbs. Per 100	Price Per 100
3932	1/2, 3/4 or 1	5	25	68	\$ 104.00

3955	4, 4 1/2 or 5	2	4	250	1055.00
3956	6	..	1	400	1440.00

Adjustable-Length Hub

Hub has 8-inch length of No. 4 wire, forming a flexible connection of variable length, between end of conduit and waterpipe.

Wire, fastened to waterpipe clamp with a solderless grip, can be bent to position or varied in length to meet installation conditions.

No.	Water Pipe Size In.	Unit Quan.	Std. Pkg.	WL. Lbs. Per 100	Price Per 100
3972	1/2, 3/4 or 1	5	25	76	\$ 176.00
3973	1 1/4, 1 1/2 or 2	5	10	80	208.00

3965	4, 4 1/2 or 5	2	4	250	930.00
3966	6	..	1	300	1312.00

T&B Ground Fitting Parts

Approved by Underwriters' Laboratories

The interchangeable hubs and waterpipe clamps listed below will assemble to do any type of grounding job required; for conduit, armored wire or unarmored wire ground connections.

Waterpipe clamps are complete ground fittings for unarmored wire.

Conduit Hubs

No.	Size	Unit Quan.	Std. Pkg.	Wt., Lbs. Per 100	Per 100
3930	1/2" Conduit	5	25	24	\$ 40.00
3940	3/4" Conduit	5	20	25	136.00
3950	1" Conduit	5	10	40	272.00

6	6-In.	1	1	300	1040.00

T&B General Purpose Ground Clamp

Approved by Underwriters' Laboratories

Cast from enduring bronze or malleable iron. No loose parts and only one screw to tighten.

Easy to install in dark corners.

Powerful jaws make a positive ground, yet cannot crush copper tubing.

Fits 1/2 to 3/4-inch copper tubing or waterpipe; 1/2 to 1-inch ground rod.

For Unarmored Wire—No. 6, No. 4.

No.	Water Pipe Size	Std. Pkg.	Unit Quan.	Wt., Lbs. Per 100	Price Per 100

3847	1/2", 3/4" Bronze	50	5	22	61.00

Burndy Grounding Connectors

Listed by Underwriters' Laboratories, Inc.

Burndy Groundem

Type GH

For Cable to Driven Rod or Pipe

An economical, non-corrosive ground clamp for driven rod or pipe. Can be slipped over the top of the rod as a one-piece assembly, or from the side when the head of the rod has been mushroomed from driving.

No.	Electrode Size Rod, In.	I.P.S., In.	Conductor Range Min. Max.	Quant. In Ctn.	Wt. Per 100, Lbs.	Per 100 (1 to 4 Ctns.)

GH165	1	3/4	8 Sol. 2 Str.	25	30

Type GAR

Parallel or 90° cable connection to rod or pipe with the same connector.

Easily installed—the connection is completed by merely tightening the two nuts on the U-bolt. High copper alloy cast body with silicon bronze U-bolts, nuts and lock washers permit entire connection to be buried in the ground without danger of corrosion.

As Parallel Connector

As Cross Connector

Burndy Grounding Connectors

This wide variety of connectors for grounding are designed and manufactured as accurately as those which are called upon to carry current continuously. They are cast of high copper alloy and assembled with durium hardware. High strength and corrosion resistance are combined to provide permanently tight connections which may be buried as required. The all-bronze non-magnetic construction is also advantageous in the safe conduction of high frequency oscillatory lightning discharges.

The reliability and convenience of using these connectors for grounding is witnessed by the fact that they are specified in grounding standards of leading utilities and consulting engineers in the refining, mining and chemical industries.

Burndy Ground Connectors

Type GB

For Cable To Flat Bar

For clamping ground lead cable to supporting flat metal surface or equipment casing. Head of bolt has oval shank to prevent turning. Only one wrench required for installation.

Cast copper alloy body accommodates a range of cable sizes. Bolts, nuts and washers made of high strength, corrosion resistant silicon bronze.

A standard silicon bronze bolt will grip 1/4-in. bar. For heavier bar longer bolts will be supplied on request.

No.	Min.	Conductor Range	Max.	Approx. Ship. Wt. Lbs. Each	Price Each
GB4C	8 Sol.		4 Str.	.25	\$1.50
GB26	4 Sol.		2/0 Str.	.40	1.65

GB39	550 Mcm.		750 Mcm.	2.0	6.90
GB44	800 Mcm.		1000 Mcm.	2.3	8.10

O. Z. Ground Connectors

Type "ABG"

A high strength copper alloy ground connector connecting a ground wire either parallel or at right angles to a ground rod or pipe. A positive ground is assured by the clamping pressure that can be applied by the high strength silicon bronze U-bolt, nuts and lock washers.

O. Z. Ground Connectors

Type CG

For grounding cable to pipe, either parallel or at 90°.

Has a reversible plate which permits ground wire to be connected either at right angles or parallel to ground pipe.

Everdur U-bolt, nuts and lock washers. Makes a positive, strong and corrosion-proof ground.

No.	I.P.S. In.	Conductor Range		Wt. Ea. Lbs.	Each

Steel City Grounding Bushings

Malleable iron, galvanized.

No. 390

Completely assembled with 2 screws. Smaller pointed screw acts as a bond. Heavy screw secures ground wire in slotted shoulder.

Grounding Bushings

No.	Size Inches	Unit Pkg.	Std. Pkg.	Wt. Lbs. Per 100	Std. Pkg. Per 100

Squeeze Type Cadmium Finish

No. 7265V

Nos. 7480V to 7483 With One Screw

Nos. 7485 to 7488 With Two Screws

Made of heavy malleable iron. Available in sizes from $\frac{3}{8}$ -inch up to 3 inches, to take all sizes of armored cable, flexible metallic conduit and armored service entrance cable.

Sizes $1\frac{1}{2}$ to 3 inches are furnished with two screws, providing a double grip on the cable and eliminating any danger of the cable slipping out on short bends.

Furnished with E-Z-On Locknuts.

For Armored Cable Sizes—14-2, 14-3, 14-4, 12-2, 12-3, 14-2L; Flexible Steel Conduit Sizes— $\frac{1}{8}$ -inch to $\frac{3}{8}$ -inch.

T&B Duplex Clamp Connectors

Approved by Underwriters' Laboratories

Designed to accommodate two armored cables in the same knock-out—saving labor, time and materials.

Fitting has a single opening. Both cables securely clamped by a single screw.

Made of malleable iron, Tabolite galvanized.

Holds, 14W2, 14W3, 12W2.

T & B Connectors
for Non-Metallic Sheathed Cable
Approved by Underwriters' Laboratories

Two-Screw Connectors

Precision made. All edges rounded; no sharp burrs to harm conductors.

The screws thread into the saddle, not the body. Made of steel, Tabolite galvanized.

No. 3302: Fits non-metallic sheathed cables. Non-Met. Cable—14-2, 14-3, 12-2, 12-3, 10-2. Serv. Ent. Cable—12-2, 12-3, 10-2, 8-2, 6-2, 4-2. Or any non-metallic cable .250" to .650" diam.

No. 3303: Fits non-metallic sheathed cables. Non-Met. Cable—14-3, 12-3, 10-3, 8-2. Serv. Ent. Cable—10-3, 8-3, 6-2, 6-3, 4-2, 2-2. Or any non-metallic cable .450" to .720" diam.

No. 3304: Fits non-metallic sheathed cables. Non-Met. Cable—8-3, 6-2, 4-2. Serv. Ent. Cable—8-3, 6-3, 4-3, 2-2, or any non-metallic cable .530" to .950" diam.

Appleton Cable Clamps

Schedule CF

For Exposed Industrial Wiring

No. 18990

No. 18993

No. 18997

No. 18992

Connector No. 15233

Provide secure support for power cable branch feeder circuits from main distribution systems. Flexibility of arrangement and mounting particularly suited for mass machinery installations in modern industrial plants.

Quarter-bend cable clamp provides proper bending radius without injury to cable. Mooring clamp anchors cable at supply and output ends, without stress to cable.

O. Z. Cable Supports

Type S

For Two or More Wires

For supporting electrical cables in vertical conduit risers.

Use with standard rubber, synthetic, plastic, varnished cambric or lead covered cables. (For soft synthetic rubber covered cables use Type "R" below.)

No.	Cond. In.	Body Only Each	2 to 4 Same Size Wires		5 or More or Different Size Wires		Wt. Ea. Lbs.

Finish—Malleable iron, cadmium plated. For hot dipped galvanized add 25% to price.

Can be furnished for thin wall conduit (E.M.T.) and fibre conduit on request at additional charge.

When ordering, specify type of conductor, number of conductors in conduit and outside diameter of each.

Split Type D

For use where the cables are already installed in the conduit.

Use with two or more standard rubber, synthetic, plastic, varnished cambric or lead covered cables.

When ordering, specify type of conductor, number of conductors and outside diameter of each.

No.	Conduit, In.	2 to 4 Same Size Wires Each		5 or More, or Different Size Wires Each		Wt. Ea. Lbs.

O. Z. Cable Terminators
Types CUC,* CAC,* CUN,* and CAN*

For Lead Covered Cables

For use with two or more single conductor cables.

Types "CUC" and "CUN" are used where the wires installed in a conduit are small enough to allow sufficient space for bellling purposes in a pot-head the same size as the conduit.

Type "CUC" With Top Cover

Type "CAC" With Top Cover and Adapter

Types "CAC" and "CAN" are used where larger wires are installed in the same size conduit according to standard code requirements.

Fittings available with taping cones. Filling compound not included.

Types CUN and CAN are same as types CUC and CAC except with conduit threads in top of body for the extension of conduit or greenfield connector.

*Finish—Malleable iron bodies, cadmium finish. For hot dipped galvanized add 25% to prices.

When ordering, specify size of conduit, number of conductors, diameter over lead sheath and diameter over insulation under sheath.

O. Z. Cable Terminators

Types CLC and CLN

For Lead Covered Cable

For use with a multiple or a single conductor cable.

This fitting seals the cable and grounds the lead sheath. The body of fitting screws directly on the conduit, clamping the lead sheath to a bronze bellling ring which has been previously set into the end of the conduit. Fittings available with taping cones; filling compound not included.

CLC600	33.85	CLN600	26.50	6	4.50	7 3/8	6 3/4	19.0

Note—Type CLN is same as Type CLC, except with conduit threads in top of body for the extension of conduit or greenfield connector.

Finish—Malleable iron, cadmium plated. For hot dipped galvanized add 25% to prices.

When ordering, specify size of conduit, diameter over lead sheath, number of conductors and diameter over insulation of individual conductors.

Type J

For Lead or Rubber Covered Cables (as below)

This compact device permits termination of the cables and the sealing of both conduit and cables outside of cabinets without disturbing the installed conduit.

Can be used as a terminating and sealing fitting or a pulling and splicing chamber.

Filling compound not included.

Finish—Hot-dipped galvanized.

When ordering, specify size of conduit, number of cables and outside diameter of cables.

O. Z. Cable Terminators

Types CRC and CRN

For rubber covered and other braided cable.

Fittings available with taping cones.

Conductors are sealed by neoprene rings placed over cables, set into canvas bakelite seating disc and compressed by a pressure disc.

Filling compound not included.

T&B Cable Clips

For Armored Cable

Made of galvanized round steel wire. Needle sharp points will stick even in hard wood when pushed in with the fingers. Will hold 14-2, 14-3, 14-4, 12-2, 12-3, 12-4, 10-2, 8-1, 6-1, 4-1; Lead 14-2, 14-3, 12-2.

No.	Size	Std. Pkg.	Wt. Lbs. Per 100	Per 100
90	3/8	10,000	1 1/4	\$0.59

For Non-Metallic Sheathed Cable

All inside surfaces are rounded to prevent damage to cable. Shorter than Cat. No. 90, this clip suits the smaller diameter of unarmored cable. Will hold 2 #14, 3 #14, 2 #12, 3 #12, 2 #10, or 3 #10.

91	3/8	10,000	1 1/4	\$0.59

Steel City Concrete Box Rings and Plates

Galvanized

4-Inch Octagonal Rings

No. 54551 Box

Furnished standard with four 1/2-in. and four 3/4-in. K.O.'s. Can be furnished with combination 3/4 and 1-in. K.O.'s if desired.

Knockouts fit snugly around conduit and are properly spaced for locknuts and bushings—eliminating any possibility of concrete entering the box.

Knockouts are so arranged that any combination for 1/2 or 3/4-in. conduit is easily obtained merely by setting box in the desired position, eliminating necessity and expense of reaming or reducing knockouts.

Furnished with punched lugs for fastening to wood forms.

Appleton Safety Swivel Hangers

Schedule OB

Type SSH

For Use with 1½- to 4-In. Deep Concrete Boxes and 4-In. Octagonal Boxes 1½- or 2¼-In. Deep

Hanger Installed in Concrete Box

Assures safe suspension of extra heavy fixtures, such as those used in industrial lighting installations.

Furnished with ½ hub for a ⅜-inch fixture stud.

Entire weight of the suspended fixture is borne by the stud instead of relying on the screws and screw ears of the box or ring for support.

Steel plate furnished to serve as a cover for 1-in. octagonal boxes and concrete ring. Properly installed when notches in the cover engage the ribs on the swivel ball.

For Use with 4-In. Octagonal Boxes and Concrete Rings 1½-In. and 2-In. Deep

No. 11355: for octagonal boxes 1½-in. deep having a ⅜-in. fixture stud in bottom of box.

No.	Hub Size Inches	Standard Package	Weight, Lbs. Per 100	Per 50
11355	½	50	50	\$197.45

For Use with Concrete Rings 2½- to 4-In. Deep

Designed for concrete rings having Appleton No. OCF⅜ stud bottom plate.

Standard package, 50.

No.	Stud Size Inches	Wt., Lbs. Per 100	Per 50
11360	½	50	\$259.60

Appleton Ball Type Swivel Hanger Covers

Schedule OB

Provide a free-swing of 30 degrees in all directions from plumb. Furnished in two styles, with and without cushion, for use with 3¼ or 1-in. octagonal boxes, for 4-in. square boxes or for concrete rings.

Cushion type cover particularly designed to increase bulb life in installations subject to vibration.

Appleton Solid Conduit Gang Switch Boxes and Covers

Schedule OB

Galvanized

Boxes can be furnished with either 1/2 or 3/4-in. K.O.'s. All orders must specify which size is wanted.

In addition to one K.O. for each gang, two additional K.O.'s are provided in each side of the 2-gang to 8-gang boxes. For example, a 2-gang box has four K.O.'s in each side, and a 3-gang box has five K.O.'s in each side.

Deep Type—Form 1

All 2-in. deep two and three-gang have five 1/2-in. K.O.'s in center of bottom. All 2-in. deep four to ten-gang boxes inclusive, have two sets of five 1/2-in. K.O.'s in bottom.

Galvanized finish only.

Instructions for Ordering:

To describe combination give designating letters from left to right in order of arrangement desired. State whether 2, 3, 4, 5 or 6-gang. Example: An order for 50 three-gang covers for flush mounting, for push-button switch, pilot lamp and round flush receptacle, arranged right to left in the order given, should read, "50 flush covers, combination "FRK" for three-gang solid switch boxes."

The price of any combination cover is the sum of the prices of the component covers listed on this page, plus a flat charge of **\$0.07** net per gang.

Combination Boxes

For Flexible Steel Conduit and Armored Cable

No. 571L

Have clamps on the outside, providing more room for wiring and for splicing and reducing the danger of any injury to wires.

Clamps are riveted to boxes, insuring a positive ground. Screws in clamps are staked to prevent removal or falling out in transit. Furnished with ears.

With Two CL-18 Outside Clamps

No.	Diam. In.	Depth In.	Std. Pkg.	Wt. Lbs. Per 100	Per 100
571L	4	1½	50	82	\$44.00

Combination Boxes

With Side Mounting Ears

No. 560LXE

No. 561LXE

Boxes with side mounting ears meet the requirements of many territories where the installation of outlet and combination boxes require furring strips at each ceiling outlet to support cut ends of laths.

As furring strips afford an ideal support for outlet boxes, the mounting ears permit boxes to be attached directly to the strips and eliminate the additional expense of bar hangers.

Boxes with mounting ears will not tip or rock after installation, avoiding the hazard of cracked plaster.

All boxes are 1½-in. deep.

For Non-Metallic Sheathed Cable and Non-Metallic Flexible Tubing

No.	Diam. In.	21/32-in.	No. of K.O.'s in Bottom ½-in. Conduit	Clamp Types	Wt. Lbs. Per 100	Per 100

Appleton Bar Hangers and Bar Sets

"Expandable"

Approved by Underwriters' Laboratories

Easily installed. Simply fasten outlet box to bar hanger with 2-piece Hanger Stud. Slip the bar stud through box knockout and engage box stud. Two-piece stud travels length of bar hanger enabling box to be tightened in correct position.

Concealed "nail" prongs eliminate possibility of injury, grab studding quickly and hold firmly until Bar Hanger is positioned.

VB Bracket Switch Boxes—No Lath Support

No. 95VB

No. 44VB

No. 383VB

Simplifies the electrician's work in installations using wall board or veneer board. The flat type "VB" Bracket spot-welded onto the long side of a Standard Switch Box, provides an easy means of solidly mounting the switch box to the wide side of a two-by-four, eliminating the need for channeling out the wall board or the studding. The "VB" Bracket Switch Box is easily fixed into place so that the edges of the switch box come perfectly flush with the outer surface of the board.

May be used under 3/4-inch Celotex or boards having a thickness up to 7/8-inch.

44VB boxes have two 2 1/2-inch knockouts in ends and sides; one 1/2-inch knockout in bottom for conduit.

95VB box has two 2 1/2-inch knockouts in end corners.

383VB box has two 2 1/2-inch knockouts in ends, two 2 1/2-inch knockouts in sides, and four 2 1/2-inch and one 1/2-inch knockout in bottom.

Appleton Switch Box Supports

"Loxbox"

For mounting switch boxes in beaverboard, sheetrock and other types of "dry wall" installations.

Easily snapped into position. Pre-determined tension prevents slipping or sliding during installation.

No.	Std. Pkg.	Wt. Lbs. Per 100	Per 100
892	500	2	\$6.30

Appleton Switch Box Supports

Original "Kruise" Switch Box Supports

For any standard switch work. For new work.

No.	Description	Std. Pkg.	Wt. Lbs. Per 100	Per 100
897	Two 16 1/2-inch Strips and Lath Support	500 Sets	40	\$21.40
897LLS	Two 16 1/2-inch Strips. No Lath Supports	500 Sets	35	21.30
898	Two 18 1/2-inch Strips and Lath Support	500 Sets	50	22.20
898LLS	Two 18 1/2-inch Strips. No Lath Supports	500 Sets	45	22.10

Appleton E-Z-In Switch Box Supports

For mounting switch boxes to beaverboard, sheetrock, metal laths, etc. or old house wiring using lath and plaster. Will take standard switch boxes of any number of gangs.

Cut opening in wall just large enough for switch box, insert E-Z-In Switch Box Support, one on each side of opening for switch box and bend over the two projections against the wall on the outside which serve to fasten the Switch Box Support temporarily until the box is inserted.

Insert Box in wall in the usual manner, press ears of box firmly against the wall, then while still pressing against box, bend the projections of the Switch Box Supports down over the sides into the box, securely anchoring the box in the wall constructed of any material. It is unnecessary to countersink the ears of the box and no screws are required. The switch or receptacle plate will lie flat on the surface of walls.

No.	Std. Pkg.	Wt. Lbs. Per 1000	Per 100
896	1000	43 1/2	\$4.02

Quantity prices on request.

Steel City Sectional Switch Boxes

Made of 14-Gauge Steel—Galvanized Finish

For Non-Metallic Flexible Tubing or Non-Metallic Sheathed Cable

For all standard flush switches and receptacles.
Removable sides; no obstructing partitions between the sections. Nail holes each side.

Switch Boxes Using C-1 and C-13 Clamps

C-1 Clamp
With Clamp Screws Through Beveled Corners

C-13 Clamp
With Clamp Screws Through Bottom of Box

Switch boxes with C-1 and C-13 clamps will take Types T and R non-metallic sheathed cable, sizes 14-2, 14-3, 12-2 and 12-3.

T&B Cast Iron Junction Boxes and Covers

Flanged and Unflanged Types

Approved by Underwriters' Laboratories

Flanged

Unflanged

Heavy walled boxes designed to meet the most rigid requirements of subway, industrial, marine, underground work, etc. Watertight and weather-proof when gasketed.

Thinner walled boxes may be furnished, if desired, at less cost.

Standard finish, black enamel. Hot dip galvanized finish can be furnished. Drilling and tapping extra—to order.

Hope Cast Iron Boxes
Underwriters' Laboratories Approved

Unflanged Junction Boxes Type H2200
Weatherproof Surface Mounting NEMA III, IV, V

Standard Construction: Cast Iron Box and Cover; Hot Dip Galvanized finish; Rubber gasket; Brass Machine screws.
Special Construction: Drilling; Tapping; Bosses for five threads; Mounting lugs; Interior buttons; Special gaskets; Panels.

Type H2200 boxes are equipped with overlap cover and retained gasket. Specify bossed conduit entrances to ensure raintight and dust-tight engagement. Mounting lugs add to ease of installation. Interior mounting buttons, tapped blind to specified centers, required for installation of panels or apparatus.

Hinged Cover Junction Boxes Type H3200
Weatherproof Surface Mounting NEMA III, IV, V

Standard Construction: Cast Iron Box and Cover; Hot Dip Galvanized finish; Retained rubber gasket; Brass with bronze hardware.

Special Construction: Drilling; Tapping; Bosses for five threads; Mounting lugs; Interior buttons; Special gaskets; Hasp.

Retained rubber gasket, adequate pressure hinges and brass wingnut provide thorough weathertight and dust-tight closure. Bossed and tapped conduit entrances recommended. Mounting lugs for ease of installation. Ideal for enclosing panels, transformers, relays and many diverse types of electrical equipment.

Hope Cast Iron Boxes
Underwriters' Laboratories Approved

Sidewalk Boxes Type H5800

Weatherproof Flush Mounting NEMA III, IV, V

Standard Construction: Box, Flange and Cover of cast iron; Hot Dip Galvanized finish; Rubber gasket; Monel hardware.

Special Construction: Drillings; Tappings; Bosses for five threads; Special gaskets.

H5800 type boxes widely installed in sidewalks and walkways of bridges, dams, tunnels, approaches and airports. The checkered non-slip cover, flush with finished concrete, is cross-ribbed for heavy pedestrian traffic. Flanges and covers are replaceable without disturbing box and conduits when heavy vehicle damages installation. Monel cap screws, set down in counter-bore, assure weathertight closure.

Floor and Sidewall Boxes Type H7000
Weatherproof Flush Mounting NEMA III, IV, V

Standard Construction: Box and plain cover of cast iron; Hot Dip Galvanized finish; Rubber gasket; Galvanized checkered steel cover if specified on order.

Special Construction: Drillings; Tappings; Bosses for five threads; Mounting lugs; Special gaskets; Plain brass or checkered bronze covers.

Intended for flush mounting in side walls or parapets, or in concrete floors where light pedestrian traffic is encountered. For industrial floors, checkered galvanized steel covers should be specified to carry moderate hand-truck traffic. Non-adjustable.

Hope Cast Iron Boxes

Explosion Resisting Housings Type H6000

Class I Group D Surface Mounting NEMA VII

Standard Construction: Box and cover of cast iron; Hot Dip Galvanized finish; Retained rubber gasket; Mounting lugs each long side.

Special Construction: Five thread tapping; Bosses with five threads; Interior mounting buttons; Bronze hinges.

Manufactured to the standards of the Underwriters' Laboratories but not tested by that agency. Specifying engineers recognize the rugged construction with bolt-on type covers as wholly adequate for installation in Class I hazardous locations of explosive vapors in refineries, chemical and powder plants, paint, varnish and solvent manufacture.

Hope Cast Iron Boxes

Terminal Cabinets Type H3200-T

Weatherproof-Dust-tight Surface Mounting NEMA III, IV, V

Standard Construction: Box and cover of cast iron; Hot Dip Galvanized finish; Retained rubber gasket; Mounting lugs; Brass with bronze hardware; Terminal blocks mounted on buttons.

Special Construction: Drilling; Tapping; Bosses for five threads; Special gaskets; Hasp.

Hinged terminal cabinets enclosing rugged terminal blocks in a variety of sizes to meet differing wiring conditions. The blocks, rated at 30 amps, 750 volts, are mounted on blind tapped buttons raised above back of box to provide air gap; each has white target strip for marking circuits. Ample wiring gutters. Ideal for thermocouple and telephone circuits; instrumentation.

Steel City Cast Bronze Nozzles
For Use With All Types of Floor Outlets

No. 468-H

Threaded 1/2 inch to fit all cover plates or bases with 1/2-inch female opening. Can also be furnished with 3/4-inch stem at no extra cost. Specify when ordering. Available in horizontal or vertical type. Add suffix "H" for horizontal type, "V" for vertical type.

- No. 468 with duplex receptacle, approximate weight, 16 ounces..... Each **\$ 7.50**
- No. 468-A with single receptacle, approximate weight, 16 ounces..... Each **\$ 7.00**
- No. 468-B with two duplex receptacles, allowing four connections, approximate weight, 14 ounces.. Each **\$10.50**

Steel City Telephone Pull-Box Nozzles
For All Types of Floor Outlets

No. 469 Nozzle
 No. 461 Base

No. 470 Nozzle
 No. 461-A Base

No. 474 Nozzle
 No. 473-A Base

Steel City pull-boxes and nozzles for telephone work are designed for use in all types of floor boxes, underfloor duct systems, and telephone ells and tees. Especially suited for low potential wiring and will serve from 1 to 15 telephones at an individual desk. The 1/2-inch size takes 5-pair braided cable; the 3/4-inch size takes from 5 to 20-pair braided cable for inter-telephone or annunciator service.

For all pipe fittings up to and including 2 inches. Removable top permits snaking and pulling wires with ease, eliminates twisting and breaking of wires after installation.

- Telephone nozzles furnished with or without bases.
 - No. 469 — threaded 1/2-inch. Takes 5-pair braided cable. Approximate weight, 10 ounces..... Each **\$5.00**
 - No. 470 — threaded 3/4-inch. Takes from 5 to 20-pair braided cable. Approximate weight, 14 ounces. Each **\$5.25**
 - No. 474 — Low tension nozzle, threaded for attachment to any 3/4-inch opening. Height, 3 1/4-inches. Approximate weight, 14 ounces..... Each **\$2.75**
- Prices of nozzles do not include cover plates or bases.

T & B Rectangular Gang Floor Boxes
Adjustable and Watertight Boxes for Light, Power and Communications

Boxes have double mechanical adjustment: floor form adjustment by adjusting screw in ear at each corner of box; floor level adjustment by adjusting screws in cover frames. Covers have no unsightly screws. Cover is metallically grounded to the box. Boxes are heavily gasketed.

Standard equipment of these boxes is a combination 1/2-inch and 2-inch cover plate with each gang. Receptacles, nozzles and other accessories extra. Underwriters' Laboratories Approved.

Adjustment: 5/8-inch vertical; 10° angular. Minimum height overall 3 3/8 inches; width 4 5/16 inches.

Quantity prices on request.

Appleton Unilets
Malleable Iron, Cadmium Finish
Series "GRUJ" — Universal
Explosion-Proof and Dust-Tight Fittings

Type GRUJ-2
With Cover Removed Showing
Close-Up Plugs In Certain Threaded Openings

This is a Universal Fitting and can be used as a junction box because practically any combination of outlets can be made with the use of close-up plugs, reducers and connectors.

The GRUJ-2 and GRUJ-4 have 4 conduit hubs on back which are on the same centers as the knockouts in a 4-in. square outlet box No. OB-4S, commonly known as the 1900 box. As many old gasoline pump wiring installations are made with conduits entering through the back knockouts of the 4-in. square outlet box, changing over to an explosion-proof installation is comparatively easy. It is only necessary to remove the old outlet box, attach union connectors to the existing conduits and make connections to the unilet. Requires no cutting or bending of conduits to meet the openings in the unilet.

With Threaded Hubs and Close-Up Plugs
Close-Up Plugs Furnished In All But Three Hubs

Appleton Unilets

The "35" Line

Unbreakable malleable iron castings, clean-cut in every detail, smooth and free from scars, holes and blemishes. Cadmium finish insures positive resistance to rust and corrosion.

Have no cover ear lugs and can be used where specifications require fittings without ear lugs. Wide, flat cover surfaces, drilled and tapped at each end for cover screws.

Conduit hub edges are chamfered assuring straight and accurate tapping—no sharp or rough edges.

Blank metal covers are reinforced and slightly raised.

Porcelain and composition covers are perfectly flat and smooth.

Moulded receptacles are specially designed for convenient and easy wiring.

Threaded types listed below; for information and prices on No-Thread types, contact Graybar.

Threaded type in all popular styles. Sizes 1/2 to 6 inches.

No-Thread type in all popular styles. Sizes 1/2 to 6 inches. For complete information, contact Graybar.

Appleton Explosion-Proof Expansion Unions

**For Class I, Groups C and D;
Class II, Groups E, F, and G**
Listed by Underwriters' Laboratories, Inc.

"UNY" Series

These completely new Expansion Unions are more compact, are safer and easier to install than conventional union fittings.

Union is shipped as one assembled unit, and is never taken apart, either during installation, or while performing maintenance after initial installation.

The reduced external diameters permit easy installation in places where you might ordinarily encounter difficulty.

The union remains completely explosion-proof at all times, regardless of its position (full retraction to maximum extension, or any point between).

The close tolerances to which these unions are manufactured and a specially designed phosphor-bronze spring insure positive grounding at all times.

Appleton Explosion-Proof Lighting Fixtures AA51 Series — Vented Type With Reflectors

A new explosion-proof design, featuring improved vented design, safer and easier installation and maintenance, increased light output and cooler operating temperature.

Canopies are standardized; interchangeable for any size fixture in the line, 100- to 500-watt, without rewiring.

No wiring in canopies; collector ring method of energizing permits instant removal of entire fixture.

Canopy has five full threads engaged whenever contact is made or broken . . . confining any arcs in approved explosion proof method, even if fixture were accidentally left energized during maintenance.

Entire lower edge of hood serves as a continuous louver, and interiors are of porous metal, providing even heat distribution and lower operating temperatures. Gives longer bulb life.

Malleable iron, cadmium finish on Ceiling Unilets; aluminum, satin finish on Canopy, Globe Holder and Guard. Hood is steel. Type AAC has explosion-proof junction fitting, with four threaded hubs for 1/2 and 3/4-in. conduit—three of which have close-up plugs.

Reflectors are porcelain enameled, green outside, white inside.

Listed by Underwriters' Laboratories, Inc., for Class I, Groups C and D Hazardous Locations

Appleton Explosion-Proof Lighting Fixtures

AA-51 Series—Vented Type

Listed by Underwriters' Laboratories, Inc., for Class I, Groups C and D Hazardous Locations

Malleable Iron, Cadmium Finish on Ceiling Unilets and Brackets: Aluminum, Satin Finish on Canopy, Globe Holder and Guard. Hood is steel. Types AAC and AALB have an explosion-proof junction fitting, with four threaded hubs for 1/2 or 3/4 in. conduit—three of which have close-up plugs. 200 watt types AALB and AASB Fixtures take deep bowl and 30° angle reflectors only.

*For suspending AA-51 series from GRU series Unilet bodies having internal threads for cover.

Quantity prices on request.

Appleton Vaportight Lighting Fixtures

Series "V-51" Convertible

For use with Rigid Conduit (Heavy Wall)

These fixtures have been re-engineered throughout and incorporate advantages to the user beyond all previous designs.

Relamping is simple, and removing or replacing reflectors is a matter of seconds — no clamps or set screws, no tools required.

Malleable Iron Unilets — 1/2 or 3/4 in. hubs in pendant, ceiling or bracket types. Has vaportight gasket; connecting block with line wire terminals and spring leaf contacts for globe adapter. Takes either 100 watt or 150-200 watt adapters.

Globe Adapter — Die cast aluminum; 100 watt and 150-200 watt sizes; complete with shock-absorbing socket; collector ring assembly; vaportight gasket. Threaded for Navy standard globes; two cavities to receive snap-type guard.

Reflector — Steel, with green porcelain enamel exterior and white interior. Standard dome, shallow dome, deep bowl or angle types.

Neoprene Rubber Ring — Attaches reflector to Unilet with slight twisting pressure... cushions against vibration.

Guard — Die cast aluminum, with two sealed ball plunger units that snap securely into cavities in globe adapter. When turned counter-clockwise, the guard acts as a tool for easy removal of adapter and globe assembly.

Appleton Type EFUX Explosion-Proof X-Ray Film Illuminator With Explosion-Proof Switch

Class I, Group C and D

**To Take Two 15 Watt T-12 Fluorescent Lamps
Furnished with 110-125 Volt 60 Cycle Ballast**

Type "EFUX" Explosion-proof X-Ray Film Illuminator, flush mounting in tile wall

The Type "EFUX" Explosion-proof X-Ray Film Illuminator is designed for flush mounting in Hospital Operating Rooms.

The fixture is compact and includes an Explosion-proof switch which eliminates the need of an additional switch Unilet. The handle of the Explosion-proof switch extends through the panel within convenient reach of the operator. Glass cover panel. Four chrome plated roller clips at top of glass to hold the X-Ray film. Two extended hinge clips support the wet film holder. A drip tray can be easily adapted to two of the four lower clips which hold the panel.

A threaded hub for 3/4-inch rigid conduit is provided in cabinet. Two cabinet styles, one shallow and one deep, are available as illustrated in dimensional drawings below.

shallow and one deep, are available as illustrated in dimensional drawings below.

When installing, the metal cabinet should first be mounted in the wall. The fixture is mounted in cabinet with the use of a union (which is furnished). Line wires are connected to the connection block located under screw cover in lower housing. All other wiring and sealing is completed at the factory.

To relamp, remove switch handle, loosen one cover screw and remove plastic glass panel cover. Tip fixture out of the cabinet by releasing tension of spring clip (no tool is necessary for this operation) then remove screw cover and pull out lamp.

Type "EFUX" Explosion-proof X-Ray Film Illuminator with cover removed

The Type "EFUX" Explosion-proof X-Ray Film Illuminator is designed for bottom entrance of conduit, however the complete unit can be inverted when mounted in the wall to allow for conduit entrance at the top. When cabinet is mounted with hub at top, the switch handle will be at the bottom. If a drip tray is to be used on inverted installation, specify and a handle with an extension is included. This handle is located under the drip tray for easy elbow operation.

Flush Mounting For 6-inch Walls or Larger With Opal Plastic Glass

Hub Size	Drip Tray	Wt., Lbs. Each	No.
3/4"	No	40	A182-A

Prices on application.

Appleton Fluorescent Lighting Fixtures

Type EFU — Explosion-Proof

Class I, Groups C and D

Class II, Groups E, F and G

Made in Two Sizes: For use with Two 40-Watt, 48 in. T12; also for Two 100-Watt, 60 in., T17 Fluorescent Lamps.

Type "EFU"

Explosion-Proof Fluorescent Lighting Fixture suspended more than 12 inches from fixture canopy, with "GRU" Flanged Unilet, Fixture Canopy and Type "ESD" and "ESS" Swivels

Modern fluorescent lighting for hazardous locations.

Hospital operating rooms, volatile fuel and chemical refineries, powder manufacture and shell loading, flour and grain mills are a few of the many locations where fluorescent lighting can now be safely applied.

The advantages of fluorescent lighting include new working comfort due to low brightness and lack of glare: high efficiency when compared with incandescent lamps of equal wattage and the ever important safety of operation in explosive atmosphere due to cooler operating temperature.

They are designed to be suspended horizontally or at 45 degrees. No external seals are necessary as all seals and internal wiring are completed in manufacture. Line connections are made to terminal block in junction chamber.

Are easily relamped by lowering at chain end (if an extra 3 in. of chain is provided when fixtures are installed). Relamping from either end is possible by swinging fixture out of line with the use of a Type "ESS" Swivel.

The National Electrical Code, Article 500, calls for flexibility in the form of a fitting or flexible connector to be used when lighting fixtures are suspended more than 12 in. from fixture canopy. Types "ESS" and "ESD" Swivels shown in illustration above will give the fixture this flexibility.

Standard equipment of all Appleton Fluorescent Lighting Fixtures includes the following:

High power factor two-lamp ballast.

Necessary auxiliary equipment.

Two-piece reflector, with high-reflector factor; Inside white, outside gray.

Reflectors — B/F Steel; White Inside, Gray Outside

Ballast Size: One Two-Lamp of 95% Power Factor

LAMPS ARE NOT INCLUDED

Appleton Unilets

Malleable Iron, Cadmium Finish

Series "AL" — Flexible Fixture Hangers

For Pendant Fixtures

(Threaded Stem takes 1/2 in. or 3/4 in. Rigid Conduit)

Designed in two styles — Ball and Cushion — and provide a flexible suspension for electric fixtures.

The suspension is from a universal joint which permits the fixture to swivel to an angle of 20 degrees in any direction from the perpendicular and assures the fixture hanging plumb at all times. This also prevents breaking of fixture stem at point of suspension caused by unusual strain, accidental or otherwise.

Appleton Unilets
Malleable Iron, Cadmium Finish
Series "AL" — Flexible Fixture Hangers
For Pendant Fixtures

(Threaded Stem takes 1/2-in. or 3/4-in. Rigid Conduit)

By removing the cover of the Unilet the entire fixture can be removed as a unit, so that it is only necessary to disconnect the fixture wires and slide the supporting nipple completely out of the groove in the Unilet.

Cushion type fixture hangers differ from the ball type in that they are equipped with a spring which gives according to weight of the fixture, thereby absorbing any shocks due to vibration.

Appleton Unilets

Series "ER"
Malleable Iron, Cadmium Finish
With Threaded Hubs

(Dotted lines in bottom of illustrations indicate hubs)

Explosion-Proof and Dust-Tight Fittings

Designed in the rectangular shape to provide as narrow a fitting as practical with ample wiring space. For use as a junction box in all hazardous locations. Cover and Unilet body have a ground surface where the two parts join each other. Covers attached by screws, which are fixed in place to prevent loss when installing. Hubs threaded standard for conduit.

Form 1

Type "ERC" — Form 1

Length exclusive of Hubs 5½ in.

Appleton Panelboards

For Class I, Groups C and D;
Class II, Groups E, F and G; and
Class III, Hazardous Locations

Type "ELP"
Explosion-Proof and Dust-Tight

Complete with Connection Block and
Thermotype Circuit Breakers
15, 20 and 30 Ampere Ratings

Designed as a convenient control and distribution center for lighting circuits or single phase motor circuits. Has many improvements, such as lighter weight, simplified wiring installation, easier access for inspection or maintenance, new locking switch handles, provision for identifying circuits, etc. Wired complete—factory wiring terminates in a connection block located for field connections.

The 4 to 8 circuit panelboards have a 1 1/2 in. main center hub, a 1 1/2 in. side hub, and seven 1 in. hubs for branch circuits; for installations requiring bottom or straight-thru feed a Special Junction Box Unilet can be furnished.

The 10 to 16 circuit panelboards are furnished complete with Center Junction Unilet having two 3-in. hubs allowing for top or bottom entrance or straight-thru feed; one 3-in. close-up plug furnished for unused conduit opening.

*14 to 16 Circuits, Single Pole; 8 Circuits Double Pole

Appleton Lighting Fixture Swivels
Type "ESD" — Explosion-Proof

Class I, Groups C and D
Class II, Groups F and G

Designed to introduce flexibility for suspension lighting fixtures in hazardous locations.

The National Electrical Code, Article 500, calls for flexibility in the form of a fitting or flexible connector to be used when lighting fixtures are suspended more than 12 in. from fixture canopy.

This light weight, smooth fitting will give the fixture the flexibility to meet those requirements.

Gray Iron, Cadmium Finish.

Dimensions: 3 1/8 in. high, 2 7/8 in. wide.

No.	Size In.	Wt. Lbs. Per 25 Pcs.	Each

Quantity prices on request.

Appleton Unilets

Malleable Iron, Cadmium Finish

Series "CPSI" — Explosion-Proof

Dead-End Receptacles and Plugs
For Industrial Plants

15 Amp. or 1 Hp., 115 or 230 Volts, 60 Cycles A-C

Type "CPSIC" Unilet Complete with Lift Cover (Closed)

For use in industrial plants where hazardous fumes and explosive atmosphere exist. The dead-end receptacle isolates the exposed, outer contacts from the live, inner contacts and affords a safety measure which proves indispensable in hazardous locations.

An extra ground is furnished to carry off any accumulated charges in either plug or receptacle. Should always be installed with cover hinge in downward position.

2-Wire, 3-Pole

Form 5 and 10 — O.S. Diameter 3 1/8 in. Depth over all 4 1/8 in.

Appleton Receptacles and Plugs

Unilets Malleable Iron, Cadmium Finish.

Receptacle and plug housings are made in aluminum.

Form "B" and "C" Unilets may be used with this receptacle equipment.

Series "AE"

Complete with Interiors

30 and 60 Amperes

250 Volts O-C — 600 Volts A-C

If specified on order, 30 amp. receptacles can be furnished for use with old style "QE" Unilet installation. Add suffix "QE" to number at an advance in price. The suffix is not necessary for 60 amp. receptacles.

Type "AEE"—With Unilet Bodies Type "AE"—Less Unilet Bodies

Type "AEP"—Plug

Style 1
Grounded Through Shell

Style 2
Grounded Through Extra Pole Only

For use with Receptacle of corresponding rating listed on this page.

Appleton Unilets

Series "CES" — Explosion-Proof
Malleable Iron, Cadmium Finish

Dead-End Receptacles and Plugs

For use mainly in commercial and industrial plants where a receptacle must comply with the safety requirements as prescribed for fittings to be installed in explosive atmospheres.

Added safety was introduced in the development of the dead-end receptacle. That is, an intermediate, current carrying receptacle normally isolated from the line until the plug is inserted, turned to the right and seated fully; actual re-establishment of the circuit does not take place until the plug is pushed in as far as it will go.

The Unilet body upon which the "CES" receptacle is fastened, is designed for wall mounting with a 15 degree tilt to the plug outlet. Both the plug and receptacle are ruggedly constructed of materials to stand up under wear and strain consistent with its usage. All sliding members are made of metal. Unilets have three hubs, two of which have removable close-up plugs.

Appleton Unilets

Malleable Iron, Cadmium Finish

Type "FSQX"

Explosion-Proof and Dust-Tight

Interlocking Safety Switch and Plug Receptacle

Hub Size, in.	A	B	C
3/4	4 15/16	4 5/8	1 1/8
1	5 5/16	5	1 3/8

Type "FSQX" Unilet with Type "FP" Plug

This Unilet comprises an Interlocking Safety Switch and Plug Receptacle mounted in a malleable iron body, cadmium finish, with threaded type cover. The receptacle and switch are interlocked so that the plug cannot be inserted or withdrawn unless the switch is in the "off" position. Likewise, the switch cannot be operated until the plug is fully inserted.

The receptacle, as well as the "FP" plug, is polarized and the contacts are self-aligning. Each 2-Wire and 3-Wire receptacle and "FP" plug is provided with an additional terminal which is expressly designed for grounding only. These ground terminals are also connected with the shell of the plug and receptacle, making an effective ground throughout the entire conduit system.

Furnished complete with two fastening lugs for attaching to a wall, machine, etc. Two types are available: one having four outlets for 3/4-in. conduit, and one having four outlets for 1-in. conduit. Three of the outlets are equipped with removable close-up plugs.

Type "FSQX" Unilets are furnished with Interlocking Switch and Receptacle Housing — Without Plug. Will take Type "FP" Plugs.

2-Wire — 3-Pole
30 Amp., 250 Volts 2 Hp., 230 Volts; A-C
1 Hp., 460 Volts A-C

†Take type BP plugs.

Crouse-Hinds Plugs and Receptacles

**Type BP Plugs
For Flexible Cable**

For use with types BRD, BRG, BRME, BRP, BRY, and plug receptacle housings. The 30-ampere plugs are arranged for soldered terminals. The 20-ampere plugs are equipped with binding screw terminals. Plugs so equipped with binding screw will not take wires larger than No. 12; consequently, these plugs are rated at 20 amperes. Otherwise, the 20 and 30-ampere plugs are exactly alike.

Grounding—Provision is made on these plugs for an extra grounding conductor in the cable for grouping the frame of the portable device to the shell of the plug.

The grounding or safety circuit is completed through the shell of the plug, the detent spring, the receptacle housing, and the conduit system. The detent spring in the receptacle has three branches, two of which make contact before and break contact after the main circuit contacts. This method of grounding is N.E.C. standard.

With Cable Clamp—Without Clamping Nut

Furnished with cable clamp. With composition handle (non-watertight).

Crouse-Hinds Plugs and Receptacles

Types CES and CESD Delayed Action Arktite Plug Receptacle Condulets

Explosion-Proof Class 1, Group D*

Includes Condulet, Receptacle, and Receptacle Housing—Takes Type CPH Plugs

Style 2—Grounded Through Extra Pole and Shell

Interchangeability: Types AP and APJ Arktite circuit-breaking plugs cannot be used with types CES and CESD delayed action Arktite receptacles. Type CPH delayed action Arktite plugs can be used with regular style 2 receptacles of the same rating and pole arrangement. This fact may be utilized in a plant having hazardous and non-hazardous locations as follows: Types CES or CESD delayed action receptacle Condulets can be installed in the hazardous areas.

Regular Style 2 Arktite receptacles rated 30 or 60 amperes, 2-wire, 3-pole or 3-wire, 4-pole can be installed in non-hazardous areas.

Portable equipment suitable for use in the hazardous areas may be equipped with type CPH delayed action plugs. Such equipment may then be used anywhere in the plant, including the non-hazardous areas.

Portable equipment not suitable for use in such areas may be equipped with regular types AP and APJ Arktite plugs and such equipment can then be used in any non-hazardous location in the plant, but there is complete assurance that it cannot be connected to a receptacle in the hazardous areas.

Type CES Condulets have three hubs, one on each side and one at the top, and two threaded pipe plugs. Type CESD Condulets have vertical through feed hubs and one threaded pipe plug. There is a threaded opening in the top with a cover which may be removed to facilitate pulling wires.

Pyle-National Triploc Plugs and Receptacles

Listed by Underwriters' Laboratories, Inc.

Interchangeability: The universal construction of the Triploc line permits thousands of plug and receptacle assembly combinations. The wide variety of styles and sizes allows meeting individual requirements for any portable electrical equipment rated within the capacity of the line.

Triploc contact units (1 to 12 poles) are all of one standard size and shape to fit in the same plug shells and receptacle housings. The line includes receptacle housings for standard conduit fittings and sheet metal boxes. Because of the many possible assembly combinations, all plug shells and receptacle housings are listed less contact units which must be ordered separately.

Reversibility: Either male (fuseless) or female contact units can be assembled in the plug shell or receptacle housing, depending upon which is the live side when the plug is withdrawn.

Automatic Locking: Fuseless and fusible plug shells are provided with a bayonet lock which automatically engages a lock post on the receptacle housing.

Manual Release Type: Positive locking. A slight turn of the outer sleeve releases the lock.

Automatic and Manual Release Type: Same as manual release type except lock releases with heavy strain on portable cord.

Triploc Plug Shells—Fuseless

Less Contact Units

Fit Types AR and XR Receptacle Housings. Contact Units must be ordered separately. Use only grounded contact units when equipment ground wire is required. Take only Type AP Fuseless Male and Type AR Female Contact Units. Pressed steel, galvanized.

Pyle-National Environmental Neptune Series Electrical Connectors 7 to 100 Poles

Service "A" Rating
(MIL-C-5015-B operating voltage limits at sea level: 700 volts DC-500 volts AC rms)

An entirely new line of electrical connectors for universal application in military and industrial use, with extraordinary new characteristics of construction and performance never before combined in compact, light, standardized connectors.

Designed to meet and exceed Class A, B, C and E of military specifications MIL-C-5015C also NEC requirements, these connectors will provide design engineers with new possibilities for power, lighting, control, telemetering and coaxial connector systems.

These connectors have been thoroughly tested for satisfactory performance under Neptune Class W conditions listed below. Being of far more rugged construction they are not interchangeable with military connectors of the AN type.

Environmental Limits

Temperature: -80° F. to 225° F. Consult factory for higher limits.

Pressure: 300 PSI External—200 PSI Internal.

Chemical Resistance: Oil, most acids and alkalis.

Corrosion Resistance: Salt spray: 300 days, no failure.

Dust Resistance: Exceeds requirements of Mil C 5015 C. Also suitable for NEC Class 11, Groups E, F and G Hazardous Locations.

Shock Resistance: 50 G Minimum. Consult factory for higher limits.

Vibration: Exceeds 20 G to Method II of Mil-C-5015 C.

Humidity and Moisture Resistance: Exceeds Class E Spec of Mil-C-5015 C.

Air Leakage: Meets Class E Spec of Mil-C-5015 C.

R & S Delayed Action Receptacles, Plugs and Connectors

**Type EFS—For Surface Mounting
Explosion-Proof—Class I, Groups C and D
15 Amp., 125 or 250 Volts A.C.**

Two and Three Wire with One Pole for Grounding Polarized

**Maximum Horsepower Ratings:
Two Wire, Three Pole—1 Hp., 1-Phase, 125 or 250 Volts, A.C.
Three Wire, Four Pole—1½ Hp., 3-Phase,
125 or 250 Volts, A.C.**

No. 4462

No. 4464

Factory Sealed

The delayed action feature requires the turning of plug shell on withdrawal to allow time for extinction of the arc and cooling. Equipment grounding is provided by means of a separate pole which makes contact before and breaks contact after the circuit poles.

**Receptacles With Enclosures—
Less Plugs**

Crouse-Hinds Condulets

Graybar distributes the complete line of Crouse-Hinds Condulets. The extensive listing on the following pages is sufficiently complete for most applications. When more complete information on Condulets is needed, ask your Graybar representative or refer to Crouse-Hinds Catalogs 3000 or 3100.

Discount Schedule: Unless otherwise specified, Condulets carry Crouse-Hinds CD Schedule of terms and discounts.

Finish: Unless otherwise indicated, the standard finish is cadmium-galvanized.

Material: Unless otherwise indicated, all Condulets are made of Feraloy, a special Crouse-Hinds alloy. Crouse-Hinds "complete line" is more than just a range of sizes—there is a Condulet for every need and purpose.

Feraloy is a special alloy having the desirable characteristics of both cast steel and gray iron. It is the result of many years of study and development. Feraloy possesses high tensile strength and unusual resistance to corrosion.

Condulets will be found to stand up under the trying conditions of installation and subsequent use.

(Condulets are made only by Crouse-Hinds)

Drilling and Tapping Information

These Condulets can be drilled and tapped on the job or if specified will be drilled and tapped at the factory for the following prices per opening: 1/2 or 3/4 inch, \$0.10; 1 inch, \$0.20.

Crouse-Hinds Condulets

FS and FD Series Condulets

Take covers and accessories or plug receptacle housings. Overall dimensions, exclusive of hubs: FS—Length, 4⁵/₁₆" ; width, 2³/₄" ; depth, 1⁷/₈". FD—Length, 4⁵/₁₆" ; width, 2³/₄" ; depth, 2¹/₁₆". FS Condulets can be furnished with flat face (4¹/₂x2¹/₁₆x2¹/₁₆ inches) to take standard wall plates at the same list prices; add suffix S24 to catalog number.

FS Series take devices 1⁵/₈" deep or less. FD Series take devices 2³/₈" deep or less.

**Threaded for Rigid Conduit (Thick Wall)
Type FS or FD**

If specified on the order, CPS series Condulets will be furnished with fastening lugs at an advance of \$0.20 in the list prices.

Outside dimensions of body, exclusive of hubs:
Diameter—Form 10, 3 1/2 inches. Form 20, 4 5/8 inches.
Depth—Form 10, 2 1/2 inches; Form 20, 2 1/16 inches.

Universal Junction Condulets

Explosion-Proof and Dust-Tight
Types GU, GUE, and GUB

These Condulets can be equipped with threaded or union hubs located as required. When ordering refer to information tables below and furnish a sketch showing the size, location and type of hubs required on each Condulet. Add price of hubs selected to price of Condulet. GU and GUE Condulets take CB1124, four-wire connection block.

Crouse-Hinds Condulets

Types EJB and GUB Junction Condulets With Terminal Blocks Explosion-Proof and Dust-Tight

Class I, Group D; Class II, Groups E, F, and G; and Class III

**GUB036 and GUB039 Without Hubs
Cover Removed Showing Terminal Block**

**EJB1184 and EJB1185 with Main Hubs and Branch Tapping
Cover Removed Showing Terminal Block**

**GUB036 With Main and Branch Conduits and Wires In Place
for Motor Control Panel Assembly
(Motor Controls not Shown)**

Use: The EJB and GUB explosion-proof and dust-tight junction Condulets with terminal blocks provide convenient means for making taps of branch circuits for main feeders.

They are exceptionally useful in making up explosion-proof bus assemblies for groups of motor starters, branch circuit breakers, or combination starters and breakers. One such junction Condulet provides a means of tapping the main feeders to accommodate up to ten branch circuits.

One compact EJB or GUB junction Condulet with terminal block takes the place of one or more large junction boxes at as little as one-third the cost.

Design: These Condulets are standard types EJB and GUB, listed elsewhere in this section, except that they are provided with terminal blocks.

The blocks are equipped with heavy duty cast copper alloy pressure connectors for the main feeders. They are so arranged that the main cables may be pulled through unbroken and need only be skinned where they are clamped between halves of the pressure connectors.

The upper half or top clamp of each main pressure connector is arranged for attachment of standard branch circuit wire lugs.

3-Wire

Basic Condulet	Range of Main Pressure Terminals	Maximum Number per Terminal and Range of Branch Lugs*	Condulet Without Hubs With Terminal Block† Each		Terminal Block Only Each

*Standard solder or solderless lugs can be used but these are not included in the list prices of the Condulets. They can be supplied and prices will be quoted on request.

†Sketch showing conduit arrangement required with order. Refer to pages 332 and 334 for prices.

Crouse-Hinds Condulets

Type ESC Pull Condulets
For Pulling or Splicing Conductors
Explosion-Proof and Dust-Tight
Class I, Group D; and Classes II and III

For use in hazardous locations, and designed to afford a convenient opening in the conduit system for pulling or splicing conductors.

The body is cylindrical with a long and wide opening in the front between the threaded end portions.

No.	Overall Length, In.		Size Hub In.	Each
	Condulet Pulled Open	Opening Only

ESC10	84 1/8	38	4	200.00

Type LBH Condulets
For Pulling Cables
Explosion-Proof and Dust-Tight

Particularly well suited for pulling large conductors or conductors that are stiff because of their lead sheathing. Especially useful at motor locations. Covers are domed, which provides room for an easy bend in the conductor, thus avoiding undue strain upon the insulation or lead sheath.

Particularly well suited for pulling large conductors or conductors that are stiff because of their lead sheathing. Especially useful at motor locations. Covers are domed, which provides room for an easy bend in the conductor, thus avoiding undue strain upon the insulation or lead sheath.

Type ECD Drain and Breather Valves
Explosion-Proof—Class I, Groups C and D

ECD Drain

ECD Breather

The ECD breather valve is similar to the ECD drain but is designed to be installed in the top of explosion-proof housings, allowing air to pass in or out as conditions vary. The labyrinth handle is a rotating cap to prevent dirt from interfering with the action of the valve.

For Water Only No.	For Water Under Oil No.	For Air Only No.	Size Pipe Thread In.	Each

Crouse-Hinds Type EC Flexible Couplings

Explosion-Proof, Dust-Tight and Watertight Class I, Group D; and Classes II and III

For use in hazardous locations where it is necessary to employ flexible fittings, as at motor terminals. Provide a safe means of making connections. They are made to withstand explosion pressures and to provide ample mechanical and electrical protection.

Also watertight, and are, therefore, suitable for use in damp locations or under water, such as connections to underwater floodlights and fountain lights.

CGE398	.875 to 1.000	1	1	2 9/32	4.50

*Use schedule numbers for identification of connectors, when consulting Underwriters' Laboratories' list of inspected electrical appliances.

†A—Inside diameter in inches of rubber bushing which takes round flexible cord or cable.

§B—Size in inches of Condulet hub with which connectors can be used.

||C—Inside diameter of hole through nipple of connectors.

Crouse-Hinds Type CGB Connectors

Straight—Male Thread

The smaller sizes of connectors are made of steel; larger sizes, of cast Feraloy.

With Tapered Rubber Bushing

Schedule 1

For connecting round flexible cord or cable to Condulets, outlet boxes, plug handles, or rigid conduit. Cord or cable will pass entirely through the connector without removing outer covering.

No.	†A	Dimensions, Inches		Each
		‡B	¶C

Type EZD Inspection and Drain Sealing Condulets
Explosion-Proof

For Sealing Vertical Runs of Conduit

The National Electrical Code requires that conduit systems in Class I Hazardous Locations be provided with means by which the systems can be drained of water, if there is a likelihood of water accumulation. Type EZD Drain Seals and EZD Inspection Seals listed below make compliance with this rule simple and inexpensive.

Inspection Seal Condulets

No.	Size In.	Length In.	Turning Radius† In.	Internal Volume	Each
EZD1C	1/2	4 3/16	2 1/16	5	\$2.70

Crouse-Hinds Lighting Fixtures EV Series

Explosion-Proof Class I, Groups C and D

Hoods are cast aluminum with etched Alzak aluminum inner reflectors. Globe holder assembly consists of clear, heat-resisting, impact-resisting, glass globe, equipped with sheet aluminum gasket and cast aluminum mounting and retaining rings. Cast aluminum guards are held to globe mounting rings by machine screws. Furnished without reflectors.

Type EVA—Pendent Type

Complete with a Condulet body for pendent mounting on a conduit stem. A set screw in hub may be tightened against unthreaded part of conduit to prevent unscrewing from conduit when relamping. May be suspended by a conduit stem from GUA or GUF series Condulets with three-inch cover opening and GUA fixture covers or canopies.

‡ Lamps are not included in the list price.

Type EVH Hand Lamps

Explosion-Proof and Weather Resistant (Raintight) Class I, Groups C and D

Globe with Holder

Guard

Furnished with lamp receptacle, globe and guard. Designed and constructed to provide the utmost safety, durability and ease of wiring.

Non-sparking metals are used. Laminated bakelite handle is firmly secured to the cast aluminum body, in which is mounted a keyless, composition lamp receptacle.

Diameter of cord, .375 to .625 inch.

75-Watt, Takes 25, 40, 60 or 75-Watt A19 Lamps

No.	Description	Each
EVH40§	EVH Hand Lamp	\$42.00

200	EVS82	60.20	EV720	37.00	16.70

† Globes must be assembled in the threaded holder at the factory. Used holder assemblies, when sent to the factory accompanied by a repair and return order, will be fitted with new globes at the list prices indicated above. The holder must not be damaged to such an extent that an explosion-proof assembly cannot be made.

‡ The EVH100, formerly listed on this page, can still be furnished where required by government specifications or where needed for match-up and replacement.

Price on application to GRAYBAR.

§ The EVH40 is also suitable for Class II, Group G locations when used with 25 or 40-watt lamps.

Crouse-Hinds VM Series Vapormaster® Vaportight Lighting Fixtures

VM Series VaporMaster lighting fixtures provide the user with greatest convenience in installing and maintaining a vaportight lighting system. A variety of Condulet bodies in pendent, ceiling, and bracket types are available. Any style or size VM VaporMaster fixture can be assembled in a few seconds. All fixtures can be made up from a stock of only 33 items.

Unit construction simplifies relamping, changing reflectors, and changing from one lamp size to another; reducing maintenance time to a minimum. VM VaporMaster fixtures offer a choice of relamping methods—replacing the lamp only, or replacing the whole assembly of lamp, globe, and adapter. Any Condulet body will take either a Form 100 or Form 200 adapter without disturbing wiring. Form 100 VM Series fixtures take up to 150-watt, A-23 lamps; Form 200 up to 300-watt, medium base PS30 lamps.

Features of the VM Series include: aluminum adapter-guard assembly fitting all Condulet bodies; guard is part of adapter and is not removed for relamping. Stainless steel retaining spring holds reflector. Gaskets make vaportight seal between globe and adapter, reflector and body, adapter and reflector. Pear-shaped globe adds to effectiveness of shock-absorbing receptacle—lamp cannot strike side of globe. Globe clamping spring opens for relamping. Condulet body equipped with receptacle base has set screw in hub to lock on conduit. Shock-absorbing receptacle has “universal” action—absorbs shock from any direction. Porcelain enameled steel reflector.

Accessories for Type EFHC

No.	Description	Each
CB308	2-Wire 20-A., 125-V.	\$0.70

Suspension attachment for type EFHC Condulets can be furnished for 3/8" max. diam. supporting rod or span wires. Add suffix S1 to cat. no. and \$.40 to list price.

Crouse-Hinds AL Series Flexible Fixture Hanger Condulets

For Pendant Fixtures

AL series Condulets provide a flexible suspension for electrical fixtures. The fixtures are suspended from a universal joint which assures that the fixture will hang plumb.

This universal joint permits the fixture to swing through an angle of about 20 degrees in any direction from the perpendicular.

Threaded for Thick Wall Conduit

Crouse-Hinds Fixture Hangers

For Pendent Fixtures

**EC Series Flexible Lighting Fixture Supports
Explosion-Proof, Dust-Tight, and Watertight
Class I, Group D; Class II, Groups E, F, and G;
and Class III**

The National Electrical Code requires the use of a flexible member for fixture stems longer than 12 inches. This flexible member must not be more than 12 inches from the point of attachment to the supporting Conduit. (Section 5019 N.E.C.)

1/2-inch EC series flexible fixture supports are also suitable for Class I, Group C locations. 3/4-inch supports, suitable for Class I, Group C locations, can be supplied and are made up using heavier flexible tubing. Add suffix DB to the catalog numbers and \$.60 per inch of flexible length.

Permit fixtures to assume vertical positions by gravity, thus protecting the conduit and connections from lateral stresses caused by fixture sway.

†EC series flexible fixture supports can be furnished with longer flexible lengths. Prices and catalog numbers on application to GRAYBAR.

Crouse-Hinds AL Series Flexible Fixture Hanger Suspension Attachment

For Horizontal Span Wire or Vertical Support Rod

**S1
Suspension
Attachment**

AL series flexible fixture hanger Condulets can be furnished with a malleable iron loop fastened to the top of the Condulet body to provide means for suspending fixtures from vertical support rods or horizontal span wires. The loop will take a wire or cable with a maximum diameter of 3/8 of an inch. The boss on the top of the loop is tapped 3/8-16, for a threaded rod. When this suspension attachment is required, add suffix S1 to the AL series catalog number and \$.60 to the list price.

Cushion Hangers for fixtures weighing up to 64 lbs. can be furnished. Information on request to Graybar.

Crouse-Hinds Condulets

Type WMK Enclosed Safety Switch Condulets
Watertight
NEMA Types III, IV, and V

Type WMK Condulets are furnished with switches and are especially suited to locations where a strong, durable case and switch mechanism are required. May be used indoors or outdoors, and in all places except hazardous locations. An interlock is provided which prevents the opening of the enclosure except when the switch is in the "off" position. These Condulets are furnished with one drilled and tapped conduit opening at the top and one at the bottom equipped with threaded-in bushings. Removal of the bushing permits the use of the next larger size conduit. Other arrangements or sizes available. Information on Request.

Type FLS General Use Switch Condulets

Explosion-Proof, Dust-Tight and Weather Resistant (Raintight)

**Class I, Group D (NEMA Type VII);
Class II, Groups E, F, and G; and
Class III (NEMA Types IX, V,
and III)**

Furnished with No Fuse Switch

Type FLS Condulets with single throw and double throw fuseless switches with no "off" position, rated in amperes, are general use enclosed tumbler switches for hazardous locations. Double throw and motor reversing fuseless switches with "off" position, rated in horsepower, are for use as motor circuit switches in hazardous locations.

General use switches are quick-make and quick-break. Motor circuit switches are slow-make and quick-break. Slow-make permits proper control of handle for jogging.

Type ERS Replacement Switch Units

For Replacement of Non-Explosion-Proof Flush
Mounted Switches in Hazardous Locations
Includes tumbler switch with sealed housing and cover

In existing buildings it is frequently impractical to remove, in their entirety, non-explosion-proof switch outlets and replace them with full explosion-proof types. In such instances, a considerable degree of safety can be had by enclosing switches in explosion-proof chambers. Type ERS replacement units provide such explosion-proof chambers, but will not bring an electrical installation into full conformity with the National Electrical Code.

Type GUSC Condulets

Explosion-Proof, Dust-Tight, and Weather
Resistant (Raintight)

Class I, Groups C and D (NEMA Type VII); Class II,
Groups E, F, and G; and Class III
(NEMA Types IX, V, and III)

Type GUSC switch Condulets have a rectangular body with a round, threaded opening in the front equipped with a threaded cover. They are furnished with through feed hubs for threaded conduit, and external mounting lugs with fastening holes, and tumbler switches.

No.	Style	Rating	Size Hub In.	Each
GUSC1061-AH	1-Pole	30-Ampere, 250-Volt	1/2	\$20.40

EFD Series Push Button Station Condulets
Factory Sealed

Explosion-Proof and Dust-Tight

Class I, Groups C and D (NEMA Type VII); Class II, Groups E, F, and G; and Class III (NEMA Types IXA, IX, and V)

EFD series Condulets utilize heavy duty, 600-volt A-C, factory sealed, single button universal push button stations. Each push button station may be connected for one circuit normally closed, one circuit normally open or two circuits, one normally closed and one normally open. One unit may be used for jogging service or two may be used to make up a "Start-Stop" push button station.

The name plate marking for each push button station must be specified.

Certain standard markings are available at no extra charge. Special markings will be furnished at \$1.00 per word list additional. The standard markings available are as follows:

START RUN TEST FORWARD UP RAISE
STOP JOG HAND REVERSE DOWN LOWER
ON RESET AUTO OPEN IN LGT. ON
OFF TRIP EMER. CLOSE OUT

Crouse-Hinds Condulets

EFS and EFD Series Selector Switch Condulets§

Explosion-Proof and Dust-Tight

Class I, Group C and D (NEMA Type VII); Class II, Groups E, F, and G; and Class III (NEMA Types IXA, IX, and V)

EFS and EFD series selector switch Condulets are provided with rotary type, maintained contact selector switches. Both two and three-position, two-circuit switches are used. These are especially useful in conjunction with motor control equipment. The name plate marking for each selector switch must be specified. Standard markings are available at no extra charge. Special markings will be provided at \$1.00 list additional per five letter word or abbreviation. The standard markings are as follows:

Two-Position

RUN, JOG
AUTO, HAND
FORW., REV.
FAST, SLOW
OPEN, CLOSE
UP, DOWN
OFF, ON

Three-Position

RUN, OFF, JOG
AUTO, OFF, HAND
FORW., OFF, REV.
1, OFF, 2
OPEN, OFF, CLOSE
UP, OFF, DOWN
FAST, OFF, SLOW

EFS Series Combination Push Button Station and Pilot Light Condulets

Explosion-Proof and Dust-Tight

Class I, Groups C and D (NEMA Type VII); Class II, Groups E, F, and G; and Class III (NEMA Types IXA, IX, and V)

Furnished with motor control push button stations, both standard and heavy duty, in combination with pilot lights. Push button stations are rated 600-volts A-C maximum. Pilot lights are equipped with candelabra base lamp receptacles and 125-volt, 6-watt type S6 clear bulb lamps, for use on 110-125-volt circuits.

*Order by catalog number. Use type and form number for identification of Condulets for hazardous locations when consulting Underwriters' Laboratories, Inc., List of Inspected Electrical Equipment.

†Two-circuit push button stations are provided with a removable jumper for common line connection. It can be quickly removed for independent connections.

‡Indicating plate marking must be specified.

*Catalog numbers listed above include red pilot light jewel (J1) in all cases. Where a different color is required substitute the proper color symbol. Example EFSC225-J1 with amber jewel is EFSC225-J6.

Type EGP Condulets

Explosion-Proof, Dust-Tight—For Panel Mounting
Factory-Sealed

Class I, Groups C and D (NEMA Type VII); Class II, Groups E, F, and G;
and Class III (NEMA)Types IXA, IX and V)

Furnished with 1-inch through-feed hubs. Pilot Light: Pilot light Condulets are equipped with candelabra base lamp receptacles, 125-volt, 6-watt, type S-6 clear bulb lamps, for use on 110-125 volt circuits; and colored or clear glass jewel.

Push Button Stations: Heavy duty, 600-volt A-C, factory-sealed, single button universal push button stations are used. Each push button station may be connected for one circuit normally closed, one circuit

normally open, or two circuits, one normally closed and one normally open. One unit may be used for jogging service or two may be used to make up a "Start-Stop" push button station.

Type GUSC Line Starter Condulets

Explosion-Proof, Dust-Tight, and Weather Resistant (Raintight)

Class I, Groups C and D (NEMA Type VII); Class II, Groups E, F, and G; and Class III (NEMA Types IXA, IX, V, and III)

Furnished with across-the-line manual motor starting switches for starting D-C or single and polyphase A-C motors.

They provide thermal relay time limit overload protection but do not provide undervoltage or short circuit protection.

They are furnished with 3/4" through-feed hubs for threaded conduit, and external mounting lugs with fastening holes.

Manual Across-the-Line Motor Starters—Sizes 0 and 1

Type FLF Condulet for Square D

The type FLF Condulets listed have two 1" through-feed conduit hubs. The 1" size as listed is standard and will be supplied unless otherwise specified. Other hub arrangements can be furnished; prices on application to Graybar.

Square D Starters—Class 2510

Size	Poles	Max. Hp.			Condulet with Starter		Condulet without Starter	
		110 V.	220 V.	440-550 V.	No.	Each	No.	Each

1	2(D-C)	1½	2	...	FLF189-D20	75.00	FLF189	44.00

Type GUB Line Starter Condulets

Magnetic Across-The-Line Motor Starters

Type GUB Condulet Remote Control

Furnished with external push button for operating manual reset over-load relays.

Starters are opened and closed by push button "start-stop" stations located at convenient points. Types EFD, EFS, and EGP series air break push button stations and type OFC oil immersed push button stations are recommended for this service.

¾" threaded hubs with integral bushing, two on the bottom and one on the top, are supplied. Other sizes, arrangements or union hubs can be furnished if specified. Prices on application to Graybar.

Square D Starters—Class 8536—3-Phase, 60-Cycle

Size†	V.	V.	Condulet with Starter		Condulet without Starter	
			No.	Each	No.	Each
0	2	2	GUB182-D6230	\$124.50	GUB182	\$75.00
1	5	7½	GUB182-D6231	130.00	GUB182	75.00

Types FLF and GUB Condulets are also available with General Electric, Westinghouse, Allen-Bradley, Arrow-H.&H., and Trumbull starting switches; information on request to Graybar.

**Also available for 110 and 550 volts at the same prices. †For larger starters and Combination Starters refer to listings of Type EPC Condulets.

Ordering Information: When ordering complete type FLF or GUB Line Starter Condulets, give complete catalog number and specify hp., voltage, frequency, number of phases, r.p.m. type, and full load ampere rating of motor. If complete motor data is not available, specify ampere rating of heater required.

Heaters: Two-pole motor starters are furnished with one heater; three-pole and four-pole starters are furnished with two heaters.

Crouse-Hinds Condulets

FS Series Push Station Condulets

Furnished with Motor Control Push Button Stations
Rocker Type Operating Handle

Watertight

*To catalog number add suffix for jewel color: -J1 for Red, -J3 for Green, -J6 for Amber, -J8 for Opal, -J10 for Clear, -J11 for Blue.

Crouse-Hinds Condulets

Type EMP

Explosion-Proof and Dust-Tight—Panel Mounting

Class I, Groups C and D (NEMA Type VII);
Class II, Groups E, F, and G;
and Class III (NEMA Types IXA, IX, and V)

Type EMP Condulets are designed for mounting on panelboards so that pilot lights, push buttons, and switch handles are flush with the front of the panel, and bodies are in back of the panel. Threaded necks of EMP Condulets are provided with locking nuts to firmly clamp the Condulets in place. This permits easy alignment with conduit and other Condulets on the panel.

EMP Condulets are compactly designed to require the absolute minimum panel space consistent with explosion-proof construction. For this reason they are ideally suited for flow chart panels.

Condulet bodies have through-feed 1" conduit hubs. They are fitted with flat ground joint covers fastened with heavy screws. Large covers give maximum accessibility to interior.

EMP Condulets are furnished in two styles: Style 1 for 125-volt pilot lights only—Factory Sealed; Style 2 for push button stations, selector switches and pilot lights with transformers, or combinations of these—Not Factory Sealed.

Condulet parts extending beyond the face of the panel have dull black instrument finish. External seals are required when push button stations and/or selector switches are used.

Single-Gang 1" Hubs

No.	No. of Push Button Stations	No. of Pilot Lights	No. of Selector Switches	Circuit	Body Style	Each

GUSC2041-33-†	1	230 A-C	1 to 35-A.	3/4	30.50
GUSC2041-51-†			1/4 to 1-A.		
GUSC2041-53-†			1 to 35-A.		

†Insert ampere rating required (Any rating within limits shown in listing above). Example: Cat. No. GUSC2041-13-2 covers a Condulet with auxiliary breaker for 115 volts a-c and with 2 ampere rating.

Crouse-Hinds Panelboards With Circuit Breakers

Type EDP Explosion-Proof, Dust-Tight, and Weather Resistant (Raintight)

Class I, Group D (NEMA Type VII); Class II, Groups E, F, and G; and Class III (NEMA Types IX, V, and III)

Furnished with Thermal Branch Circuit Breakers, Main Lugs, and Terminal Connection Blocks.

Type EDP panelboards are especially designed for use in hazardous locations. They may also be used in non-hazardous locations where corrosive vapors, non-combustible dusts, or moisture are present.

All EDP panels are wired complete. Connections between terminal blocks and circuit breakers are made at the factory. Each circuit breaker compartment is sealed from the "T" section.

All EDP panelboards are provided with 3" through feed main hubs. Size 1 panelboards have 12 1" branch hubs while Size 2 panelboards have 16 1" branch hubs.

*15-Ampere Branch Circuit Breakers (E Frame)

Type EQP Explosion-Proof and Dust-Tight

Class I, Groups C and D (NEMA Type 7CD)

Furnished with Thermal-Magnetic Branch Circuit Breakers Main Lugs, Terminal Connection Blocks and Breathers and Drains.

Type EQP Condulet is similar to type EDP panelboards except that circuit breaker housing covers are of bolted, flanged joint construction permitting complete accessibility from the front.

All EQP panelboards are wired complete. Connections between terminal blocks and circuit breakers are made at the factory. Each circuit breaker compartment is sealed from the "T" section.

All are provided with 3" through-feed main hubs.

15-Ampere Branch Circuit Breakers

*Panelboards with all 20 or 30-ampere breakers can be furnished at the same list prices. 40 or 50-ampere breakers, or combinations of 15 through 50-ampere breakers, can be furnished. Prices on application to Graybar.

†Condulets with 20 or 30-ampere breakers can be furnished at the same list prices.

★Single-Gang GUSC Condulets are also suitable for Class I, Group C locations.

‡These panelboards may be used on 250-volts A-C. They are labeled for 125-volts as this is the highest voltage available at Underwriters' Laboratories, Inc., for short circuit tests of these breakers in explosion-proof enclosures.

*Panelboards with all 20 or 30-ampere breakers can be furnished at the same list prices. 40 or 50-ampere breakers, or combinations of 15 through 50-ampere breakers, can be furnished. Prices on application.

†Single-gang Condulets with 20, 30, or 40-ampere breakers and two-gang Condulets with 20 or 30-ampere breakers can be furnished at the same list prices. ★Single-gang GUSC Condulets are also suitable for Class I, Group C locations.

Type DLP Panelboards With Circuit Breakers
Dust-Tight and Weather Resistant (Raintight)
Class II, Groups E, F, and G; and Class III (NEMA Types IX, V, and III)

Furnished with Thermal-Magnetic (Quicklag) Branch Circuit Breakers, Pressure Type Main Lugs, Neutral Terminal Connection Block, and Conduit Openings.

Cast Aluminum Housings

Prices of DLP panelboards include a maximum of one conduit opening for each branch circuit and one for main conduit. Tapped conduit openings with threaded-in bushings will be provided. Orders should be accompanied by a sketch showing the number, size, and location of openings desired.

Type EPC Condulets are available with ITE, Westinghouse, and Trumbull circuit breakers; information on request to Graybar.

*Available in \$100.00 Condulet with 1¼" hubs.

Type EPC Circuit Breaker Condulets

Air Break Circuit Breakers

Explosion-Proof, Dust-Tight, and Weather Resistant (Raintight)

Class I, Group D (NEMA Type VII); Class II, Groups E, F, and G; Class III (NEMA Types, IX, V, and III).

These Condulets with air break circuit breakers are suitable for service entrance, feeder, or branch circuit protection, for lighting, appliance, and motor circuit conductors. For manual closing, opening, or resetting, an external handle is provided. Four threaded hubs are provided, two at the top and two at the bottom.

Crouse-Hinds Condulets

Type EPC Line Starter Condulets Magnetic Across-The-Line Motor Starters

Explosion-Proof, Dust-Tight, and Weather Resistant (Raintight)

Class I, Group D (NEMA Type VII); Class II, Groups E, F, and G; and Class III (NEMA Types IXA, IX, V, and III)

**Type EPC
Line Starter Condulet
Air Break**

Oil Immersed

Listed for both air break and oil immersed starters. Oil immersion is especially useful in corrosive locations. Type EPC Condulets arranged for oil immersed starters are explosion-proof regardless of whether or not the oil level is properly maintained.

Air break starters have thermal overload relays arranged for manual reset. For this purpose, a reset push button is mounted upon the front of the body.

Oil immersed starters have thermal induction overload relays arranged for automatic resetting; therefore, no external reset buttons are furnished.

The starters are opened and closed by push button "start-stop" stations located at convenient points. Types EFD, EFS, and EGP series air break push button stations and type OFC oil immersed push button stations are recommended for this service. Push button stations are not included.

4	100	2 1/2	EPC627-D643	580.00	EPC627	270.00

Catalog numbers of oil immersed starters do not include oil.

§Two-speed starters are also available for 550 volts at the same prices.

**Also available for 110 and 550 volts at the same prices.

Heaters: Air break motor starters are furnished with two heaters; oil immersed starters are furnished with two induction temperature overload relays with relay coils. Reversing starters are furnished with two heaters; two-speed starters are furnished with four heaters.

*Maximum horsepower ratings shown for two-speed starters are at the high motor speed.

Type EPC Condulets are also available with General-Electric, Westinghouse, Allen-Bradley, Arrow-H.&H., and Trumbull starting switches; information on request to GRAYBAR.

Ordering Information: When ordering, select complete Cat. No. above and specify HP., voltage, frequency, R.P.M., type, and full-load ampere rating of motor. For two-speed motors, give full load ampere rating at each speed. If complete motor data is not available, specify ampere rating of heaters.

Heaters: Air break starters are furnished with two heaters; oil immersed starters are furnished with two induction temperature over-load relays with relays coils. Reversing starters are furnished with two heaters; two-speed starters are furnished with four heaters.

Two-Speed Starters†

For Two-Winding, Constant or Variable Torque, Star Connected Motors Only

For use only with two-winding, constant or variable torque, star connected motors. Combinations for constant horsepower applications or open delta connections can be supplied. Information on request accompanied by complete details. Write GRAYBAR.

Compelling or accelerating relays can be supplied but require larger Condulets. Prices on application.

*Circuit breakers are selected for average motors.

**Also available for 110 and 550 volts. Information on request to GRAYBAR.

Push button stations are not included. Types EFD, EFS, EGP, and OFC are recommended.

Catalog numbers of oil immersed starters do not include oil.

†Maximum horsepower ratings shown for two-speed motors are at the high motor speed.

§Two speed starters are also available for 550 volts. Information on request to GRAYBAR.

Type EPC Condulets are available with General Electric, Westinghouse, Allen-Bradley, Arrow-H.&H., and Trumbull starting switches and ITE, Westinghouse, and Trumbull circuit breakers; information on request to GRAYBAR.

Square D Spin Top Enclosures Class 9990

For Hazardous Locations

Class 9990 NEMA 7 and NEMA 9, (Class I Groups C and D, Class II Groups E, F, and G) Spin Top threaded joint explosion proof enclosure consist of a collar section, mounting frame, long or short tanks, and miscellaneous hardware. They are available in three forms:

(1) Complete unit with starter and circuit breaker (if used) in the enclosure ready for installation.

(2) Completely assembled enclosure only for customer mounting of starter and circuit breaker (if used).

(3) Individual component parts for versatility of stock. For a comprehensive list of complete devices, complete enclosures only, and component parts refer to nearest field office.

R & S Interlocked Switch Receptacles and Plugs

Type ERI—Explosion-Proof and Dust-tight

Class I, Group D

30 Amp., 250 V., A-C—20 Amp., 575 V., A-C

Two and Three Wire

No. 4240C

For use in chemical plants, oil refineries, distilleries, solvent areas, etc., under Class I locations. Plug interlocks with switch and cannot be withdrawn or inserted under load. Rotating member of plug throws switch to "on" or "off" position. Separate ground pole which "makes" first and "breaks" last.

Receptacle Enclosures—Cast iron, corrosion resisting baked enamel finish.

Plugs—Steel, cadmium plated. Furnished with aluminum alloy cable clamp and neoprene cable bushing.

Type C—Without Flap—Receptacle Less Plug

Description	Single Gang		Two Gang	
	No.	Each	No.	Each
2 wire, 3 pole	4240C	\$42.50	4240C2	\$85.00
3 wire, 4 pole	4242C	43.50	4242C2	87.00

Can be furnished with combinations of 1, 2 or 3 pole breakers having same or varying capacities of 15, 20, 30 or 50 amps. Specify requirements. Prices and complete details on request.

R & S Circuit Breaker Cabinets

Types SWC and DWC

Waterproof and Dust-Tight

Class II, Groups E, F and G;

Class III—NEMA Types 3, 4, 5 and 9

Type SWC—With Single Pole Branch Circuit Breakers, 125 Volts, A.C. or D.C.

Type DWC—With Double Pole Branch Circuit Breakers, 250 Volts, A.C. or D.C.

No. SWC615—Complete with Six Circuit Breakers

Conduit Drilling—Regularly furnished drilled and tapped for conduit as follows: Main—one 1½-inch outlet in bottom; Branches—three 1-inch outlets in top. Other sizes and combinations of conduit drilling can be furnished if specified on order. All conduit outlets are provided with dust caps.

Finish—Corrosion resisting.

Note—Cabinets are furnished with insulated neutral strip, so that circuit breakers may be used independently or as a panelboard.

Circuit Breaker Frame Sizes and Data

Frame Size	Amp. Range	NEMA Amp. Interrupting Cap.	Trip Unit
100-E	15-100	10,000	Non-Interchangeable
100-F	15-100	15,000	Non-Interchangeable
100-G	50-100	15,000	Interchangeable
225-J	70-225	15,000	Non-Interchangeable
225-K	70-225	25,000	Interchangeable
600-L	125-600	25,000	* Interchangeable

Voltage

100 amperes frame size—240 V. A-C, 125/250 V. D-C.
100 to 600 amperes frame size—600 V. A-C, 250 V. D-C.

Enclosure Data

All enclosures have precision ground joints and are constructed of high tensile alloy with a corrosion resisting finish. Cover bolts are stainless steel. Enclosures are designed to allow generous gutter space between the breaker and all four sides of enclosure for through wiring, and permit easy connection to breaker lugs of customer's in-coming and out-going lines. Enclosures for G, J, K and L frames are provided with hinged covers. All covers are removable, exposing entire breaker and gutter space.

Conduit Outlets

Enclosures are provided with heavy pads for conduit tapping on sides as well as top and bottom. Specify size and location of outlets when ordering.

Operating Data

Operating handles are of exceptionally rugged design and have means for padlocking in both the "ON" and "OFF" position. Substantially built slide mechanism on inside of cover transmits an in-line thrust to the breaker handle.

Complete details, listing and prices on application to Graybar.

Additional printed information on these and other products not listed is available on request to GRAYBAR.

‡3-position selector switch.

*Insert symbols for colors of lenses as a suffix to catalog number as follows: A—amber, C—clear, G—green, R—red.

*Pilot Light — S-6 bulb; 6 watts, 120 volts regularly furnished. For higher voltages use of a transformer is recommended. One transformer is required for each lamp and requires space occupied by one light.

Push button rocker arm can be furnished with Mushroom Head Extension Button. Specify location and add suffix "E" to catalog number. Price on application.

Special Contact Push Buttons can be furnished. Prices on application to Graybar.

Name Plate — Stop-Start, On-Off, Hand-Off Auto regularly furnished. Other markings will be furnished; specify marking required.

Enclosures — Cast iron, corrosion resisting baked enamel finish. Covers are provided with holes to accommodate padlock for locking buttons in depressed position.

Outlets — Unless otherwise specified, furnished with one 3/4-inch outlet in top. Additional or larger outlets charged extra. Maximum conduit 1-inch, top and bottom. Specify size and location.

Protection—Quick Make and Quick Break

No. EC032

Enclosures — Cast iron, corrosion resisting baked enamel finish. Can be furnished with lock-type cover to permit locking in either "on" or "off" position. When so required, add suffix "L" to catalog number of the starter. Prices on application.

Outlets — Unless otherwise specified furnished with one 3/4-inch outlet top and bottom. Additional or larger outlets charged extra. Maximum conduit

— size A: one 1-inch top and bottom, size B: two 1-inch top and bottom. Specify size and location.

*When ordering Type DS — Dust-Tight, substitute DS for WS in catalog number.

CATALOG NUMBER consists of above listed FORM NUMBER with the proper suffixes to designate the type of operation and interiors required as indicated below:

For Automatic Reset overload suffix "AR" to the Form number. Deduct \$6.00 from listed price.

For Manual Reset overload suffix "MAR" to the Form number. Price as listed.

For Local Stop-Start Push Button in cover add final suffix "L" to the completed catalog number. Add \$20.00 to listed price.

Reversing and two speed starters also available. Complete details and prices on request.

R & S A.C. Combination Starters

**Style CBS—Explosion-Proof and Dust-Tight
Class I, Group D—NEMA Type 7**

**Style DBS—Dust-Tight
Class II, Groups E, F and G—NEMA Type 9
Style CBSW—Waterproof and Dust-Tight
Class III—NEMA Types 3, 4 and 5**

Types CBS Combination Starters combine an air brake circuit breaker with a line voltage magnetic starter in a single, convenient cast iron enclosure with hinged cover. Corrosion resisting baked enamel finish. Furnished with over load heaters.

When ordering, specify catalog number, horsepower, voltage, phase, cycles, full load current rating of motor and circuit breaker trip amperes.

Outlets — Unless otherwise specified, furnished with one outlet at top and bottom, size as listed. Additional or larger outlets charged extra. Maximum conduit: NEMA sizes 0, 1, 2 and 3 — 2-inch at top and bottom, 1½-inch at sides; NEMA size 4 — 4½-inch at top and bottom, 4-inch at sides. Specify size and location.

Type EPC Condulets are available with ITE, Westinghouse, and Trumbull circuit breakers; information on request to GRAYBAR.

*Available in \$100.00 Condulet with 1¼" hubs.

Crouse-Hinds Condulets
Type FLB Circuit Breaker Condulets
Air Break Circuit Breakers

Explosion-Proof, Dust-Tight, and Weather Resistant (Raintight)

Class I, Group D (NEMA Type VII); Class II, Groups E, F, and G; and Class III (NEMA Types IX, V, and III)

The Condulets with air break circuit breakers are suitable for service entrance, feeder, or branch circuit protection, for lighting, appliance, and motor circuit conductors. For manual closing, opening or resetting, an external handle is provided. Two threaded through-feed hubs are provided. Other sizes and arrangements can be furnished. Prices on application to Graybar.

Crouse-Hinds Condulets
Type DVS Circuit Breaker Condulets

Air Break Circuit Breakers
Dust-Tight and Watertight
Class II, Groups E, F, and G; and Class III (NEMA Types IX, V, IV, and III)

These Condulets are suitable for service entrance or branch circuit protection, for lighting, heating, appliance and motor circuits. They provide maximum safety and convenience of installation in Classes II and III hazardous locations, and give complete protection where exposed to corrosive vapors, abrasive dusts, or weather.

Two threaded through-feed hubs are provided. Other sizes or arrangements can be furnished. Prices on application to GRAYBAR.

Crouse-Hinds Condulets

Type EMH Instrument Condulets

Explosion-Proof and Dust-Tight

Furnished with Mounting Plate and Supports for Instruments.

Four mounting lugs with fastening holes are provided at the back for surface mounting or at the front for flush mounting.

Bodies are equipped with mounting plates and posts to support the instruments near the cover window.

Surface

Flush

General Electric, Hickok, Westinghouse, and Weston instruments can be mounted in type EMH Condulets.

Conduit Openings	No.	Size In.	Each
EMH-			
One in Side	521-10000	1/2	\$34.00
	521-20000	3/4	34.00
One in Back	521-00001	1/2	34.00
	521-00002	3/4	34.00
Two in Sides (Through Feed)	521-10100	1/2	34.50
	521-20200	3/4	34.50
One in Side	511-10000	1/2	36.00
	511-20000	3/4	36.00
One in Back	511-00001	1/2	36.00
	511-00002	3/4	36.00
Two in Sides (Through Feed)	511-10100	1/2	36.50
	511-20200	3/4	36.50

Over-all Dimensions: Diameter of body, 5 3/4 inches; depth of body, 2 3/4 inches; height of cover, 3 inches.

Type TCH Electric Clock Condulets
Factory Sealed

Explosion-Proof and Dust-Tight

Class I, Groups C and D; Class II, Groups E, F, and G; and Class III

Type TCH explosion-proof and dust-tight self-starting synchronous motor operated clock Condulets are for use in hazardous locations.

The dial is 13 inches in diameter. A resetting knob protrudes beyond the bezel. The motor and all electrical connections are enclosed in an explosion-proof and dust-tight housing. The gear train is enclosed in a gasketed dust-tight chamber located directly in front of the explosion-proof housing and is attached to the back of the dial assembly.

With Enclosing Band

Two styles are available: one for flush mounting, and one for surface mounting. For surface mounting, a sheet metal notched band can be supplied for enclosing the space between the wall and back of dial assembly.

No.	Motor	Watts	Size Hub	Style	Each
TCH2110	{ 115-Volt, 60 Cy. A-C	2.50	3/4	Flush	\$140.00
TCH2220				Surface	130.00
TCH202	Enclosing Band for Surface Mounting				6.00

25 and 50-cycle clocks can be furnished at an advance of \$10.00 in the list price.

Type HRC Thermostat Condulets

Explosion-Proof and Dust-Tight

Class I, Group D (NEMA Type VII); Class II, Groups E, F, and G; and Class III (NEMA Types IX and V)

Furnished with Thermostat, Thermometer, and Mercury Tube Switch

An external lever permits any temperature setting within the calibrated range. †The thermostats will operate on a three-degree Fahrenheit differential. An accurate Fahrenheit thermometer is attached to the front for indicating room temperature.

Equipped with single pole switches. In units for refrigeration and air conditioning the switch makes contact on temperature rise. In units for heating the switch makes contact on temperature fall.**

Type HRC—Through Feed§

Have 1/2-inch union hubs.

No.	For	Fahrenheit Temperature Range of Thermostat	Each
HRC126	Refrigeration	25 to 60°	\$60.00
HRC137	Heating	38 to 70°	60.00
HRC158	Heating	56 to 80°	60.00
HRC169	Air Conditioning	65 to 90°	60.00

Furnished With Thermostat and Thermometer

The Condulets for air conditioning and/or heating are provided with single-pole, double-throw switches.

Connected for heating, the switch makes contact on temperature fall.

Positive-Off lever can be supplied on HRC42B and HRC42B-25 only.

Add suffix H1 to the catalog number and \$1.50 to the list price.

Positive-On lever can be supplied on HRC42A-23 only. Add suffix G1 to the catalog number and \$1.50 to the list price

No.	For	Fahrenheit Temperature Range of Thermostat	Size Hub	Each
HRC42B-23	{ Air Conditioning and/or Heating }	42° to 75°	3/4	\$60.00
HRC42B-25		66° to 95°	3/4	60.00
HRC42A-23	Heating	42° to 75°	3/4	60.00
HRC42A-24	Heating	56° to 84°	3/4	60.00

Type ECT Transformer Condulets

Explosion-Proof, Dust-Tight, and Weather Resistant (Raintight)

Class I, Group D (NEMA Type VII); Class II, Groups E, F, and G; and Class III (NEMA Types IXA, IX, V, and III)

Furnished with 50-133-cycle transformers.

25 and 50-volt-ampere transformers are provided with tapped primaries for 230, 460, or 575 volts and 115-volt secondaries.

75 to 750-volt-ampere transformers, inclusive, are provided with single voltage primaries for either 230, 460, or 575 volts and 115-volt secondaries. The voltage required must be specified.

Transformers for other secondary voltages can be furnished.

Information on request.

No.	Volt-Amperes (50-133 Cycles)	Size Hub	Each
ECT211	25	3/4	\$29.60
ECT215	50	3/4	50.00

§These HRC Condulets are furnished with threaded cap, GUH10, which can be used to close either hub.

**A manual "Hand—Off—Automatic" selector switch can be furnished. Add suffix MS to the catalog number and \$5.00 to the list price.

†Thermostat case is brushed silver bronze.

Crouse-Hinds Condulets

Type ESR Bell Signal Condulets

Explosion-Proof and Dust-Tight

Class I, Group D; Class II, Groups E, F, and G; and Class III

Furnished with either 6, 8, or 10-inch diameter gong and with vibrating or single stroke hammer.
25 to 60-cycle A-C.*
Size hub— $\frac{3}{4}$ ".

Type WH Horn Signal Condulets—Weather Resistant (Raintight)

Type WH With Grill

Type WH With Single Projector

Type WH With Double Projector

Housings are provided with mounting feet and a hub for $\frac{1}{2}$ -inch threaded conduit. The construction of the grill style is such that the hub may be placed at the top, bottom, or either side. The horns with projector may be mounted with the hub at either the top or the bottom.

A gasket is furnished between the housing and horn assembly to make the joints raintight. Projectors may be rotated in a horizontal plane through 180° to direct the sound as desired.

With Grill

Wiremold Surface Wiring Systems

Standard Wiremold Finish

Listed by Underwriters' Laboratories, Inc.

No. 200 Wiremold Raceway

.025-inch steel. Furnished in 5-foot lengths, with couplings, 100 feet to a carton. Weight per 1000 feet, 150 pounds.

Wire No.....	6	8	10	12	14	16	18	19
Single Conductor Capacity:								
Type R, RH.....			2	2	4	4
Type T, TW, RU.....			3	3	4	4
Twisted Pair Capacity:								
Type R or RH.....			2	2	2	
No. 200.....	per foot \$.155							

No. 500 Wiremold Raceway

.040-inch steel. Furnished in 10-foot lengths, with coupling, 100 feet to a carton. Weight per 1000 feet, 320 pounds.

Wire No.....	6	8	10	12	14	16	18	19
Single Conductor Capacity:								
Type R or RH.....		2	2	3	6	6
Type T, TW, or RU.....	2	3	4	5	10	10
Twisted Pair Capacity:								
Type R or RH.....					2	2	3	
No. 500.....	per foot \$.188							

No. 700 Wiremold Raceway

.040-inch steel. Furnished in 10-foot lengths, with coupling, 100 feet to carton. Weight per 1000 feet, 360 pounds.

Wire No.....	6	8	10	12	14	16	18	19
Single Conductor Capacity:								
Type R or RH.....		2	3	4	10	10
Type T, TW, or RU.....	3	5	6	8	16	18
Twisted Pair Capacity:								
Type R or RH.....					4	4	4	
No. 700.....	per foot \$.211							

No. 1000 Wiremold Raceway

.040-inch steel. Furnished in 10-foot lengths, with coupling, 100 feet to carton. Weight per 100 feet, 62 pounds.

Wire No.....	6	8	10	12	14	16	18	19
Single Conductor Capacity:								
Type R or RH.....	4	5	6	10	10	24	24	..
Type T, TW, or RU.....	5	8	8	10	10	40	50	..
Twisted Pair Capacity:								
Type R or RH.....						10	10	11
No. 1000.....	per foot \$.439							

Use 32-Tooth Hack-Saw Blade to cut all sizes of Raceway.
Prices slightly higher in nine Western States.

No. 1900 Plugmold Multi-Outlet System

Permits the installation of any number of electrical outlets exactly where they are needed.

1900B, Base .025-inch steel. Base has screw knockouts at approximately 8-inch centers. Furnished in 10-foot lengths, without couplings, 100 feet to a carton. Weight per 100 feet, 18 pounds.

No. 1900B (Channel) . . . per foot \$.143

1900C, Cover .025-inch steel. Furnished in 5-foot lengths, 100 feet to a carton. Weight per 100 feet, 11 pounds.

No. 1900C (Cover) per foot \$.105

Wire No.....	6	8	10	12	14	16	18	19
Single Conductor Capacity:								
Type R, RH, T, TW or								
RU with Receptacles ..			3	3
Without Receptacles ..			3	3	10	10
Twisted Pair Capacity:								
Type R, RH, T, TW or RU								
Without Receptacles ..					10	10	10	

Plugtrim

.025-inch steel. Standard Wiremold finish. Furnished in 5-foot lengths. Use with 1900 Plugmold as baseboard trim, chair rail trim, and to carry low potential wiring. Weight per 100 feet, 9 pounds.

No. 1900T per foot \$.116

Mounting Clip

No. 1903T per 100 5.40

Blank End Fitting

No. 1910BT per 100 12.20

Internal Elbow

No. 1917T per 100 30.10

External Elbow

No. 1918T per 100 29.20

No. 1900 Wired Plugmold

Prewired, packaged, available in two lengths. Wired with two No. 12 Type TW conductors. One end of each run of Wired Plugmold is equipped with a connector block and the opposite end has stripped wires ready for connection.

No. 19306 3 foot length, 6 outlets,
6 inches on centers per 100 \$590.00
Carton 1, Std. Pkg. 10, Std. Pkg. Wt., Lbs. 12 1/2.

No. 19606 6 foot length, 12 outlets,
6 inches on centers per 100 1120.00
Carton 1, Std. Pkg. 10, Std. Pkg. Wt., Lbs. 23 3/4.

No. 19618 6 foot length, 4 outlets,
18 inches on centers per 100 660.00
Carton No. 1, Std. Pkg. 10, Std. Pkg. Wt., Lbs. 22 1/4.

Prices slightly higher in nine Western States.

Wiremold Surface Wiring Systems

Listed by Underwriters' Laboratories, Inc.

Snapicoil Standard Wiremold Finish For Use with No. 1900B Channel

Snapicoil, furnished as coils of standard No. 1927 Plug Receptacles wired at the factory with two No. 12 Type TW conductors is your answer for wiring homes, apartments, hotels, stores and factories. Just attach No. 1900B channel to surface, snap in wired receptacles, insert factory-cut cover sections.

No.	Description	Wt. Lbs. Per Coil	Per Coil
19C03	13-in. length with 6 brown receptacles and one 1930 connector block	1 1/2	\$ 5 30
19C03V	Same as 19C03 except receptacles are ivory	1 1/2	6 00
19C12	25-ft. coil with 25 brown receptacles wired 12-in. on centers. 1900C cover sections furnished	5 1/2	24 00
19C12V	Same as 19C12 except receptacles are ivory	5 1/2	26 80
19C18	50-ft. coil with 33 brown receptacles wired 18-in. on centers. 1900C cover sections furnished	9 1/4	37 40
19C18V	Same as 19C18 except receptacles are ivory	9 1/4	41 10
19C24	50-ft. coil with 25 brown receptacles wired 24-in. on centers. 1900C cover sections furnished	9 1/4	30 90
19C24V	Same as 19C24 except receptacles are ivory	9 1/4	33 70
19C36	50-ft. coil with 16 brown receptacles wired 36-in. on centers. 1900C cover sections furnished	8 3/4	25 10
19C36V	Same as 19C36 except receptacles are ivory	8 3/4	26 90

No. 1500 Wiremold Pancake Galvanized

.040-inch steel, galvanized. Base has screw knockouts at approximately 8-inch centers. Furnished in 10-foot lengths, without couplings, 100 feet to carton. Weight per 100 feet, 47 pounds.

Wire No.	6	8	10	12	14	16	18	22
Single Conductor Capacity:								
Type R or RH	4	4	6	8				
Type T, TW or RU	4	4	6	8	10	14		
Twisted Pair Capacity:

No. 1500	per foot \$.347							

*No. 2600 Wiremold Pancake

Cover, .050-inch steel; Base, .040-inch steel, galvanized. Base has screw knockouts at approximately 8-inch centers. Furnished in 10-foot lengths, without couplings, 50 feet to carton. Weight 44 pounds.

Capacity: Two 26-pair telephone cables.

No. 2600 per foot \$.535

*Not Listed by Underwriters' Laboratories, Inc.
Prices slightly higher in nine Western States.

No. 2100 Plugmold Multi-Outlet System Standard Wiremold Finish

2100B—Base, .040-inch steel.
Furnished in 10-foot lengths, without couplings, 100 feet to carton. Weight, per 100 feet, 43 pounds.
No. 2100B (Channel)... per foot \$.253

2100C*—Cover, .040-inch steel.
Scored every 3-inches. Furnished in 5-foot lengths, 100 feet to a carton. Weight per 100 feet, 19 pounds.
No. 2100C* (Cover)... per foot \$.174

*Cover can be furnished unscored on special order—no additional cost.

Wire No.	6	8	10	12	14	16	18	22

Type T, TW, or RU, without Receptacles	5	8	10	10	10	40	50	
Twisted Pair Capacity:								
Type R or RH, without Receptacles							10	10 11

*See individual listings in catalog.

No. 3000 Wiremold Raceway Standard Wiremold or White Finish

Has a wide application in industrial plants as a branch circuit feeder system, a multi-outlet wiring system to serve small motors, electric tools, etc., and is ideal for wiring infrared heating and drying units. Also serves as a basis for the Wiremold Fluorescent Lighting Units.

3000B Base, .040-inch steel. Furnished in 10-foot lengths, without couplings, 50 feet to a carton. Weight, per 100 feet, 80 pounds.

No. 3000B (Channel)... per foot \$.487

3000C Cover, .040-inch steel. Furnished in 10-foot lengths, 50 feet to a carton. Weight, per 100 feet, 43 pounds.

No. 3000C (Cover)... per foot \$.250

Wire No.	6	8	10	12	14	16	18	19

National Electric "Lopo-Trim" Raceways

No Fishing—Just Tuck the Wires In.

Finish Trim for "Plug-in" Strip

A hollow steel quarter-round raceway used to carry low potential wires such as telephone, inter-communication and television antenna leads on top of the baseboard. Lopo-Trim has a neutral satin gray finish, matching "Plug-in" Strip, and harmonizes with all tones used in interior decoration. It can be quickly repainted to match baseboard, floor or walls.

Lopo-Trim fits neatly on top of any standard baseboard or on top of National Electric "Plug-in" Strip and held in place by projecting steel prongs. It is easily lifted to provide change of telephone placement or addition of wires. The design and positioning of steel prongs exert a tension that holds the trim snugly in place. No muss or fuss or scarred walls when installing Lopo-Trim for there are no nails, screws or fasteners of any type used. Approved by telephone companies, Lopo-Trim may be installed—

- As a baseboard trim
- As a toe-plate where wall or baseboard meet
- As a low potential wiring raceway at chair-rail moulding
- As a quarter-round trim above or beneath (or both) installations of National Electric "Plug-in" Strip.

Low potential wiring can be brought out of Lopo-Trim anywhere! Merely drill a hole through the rounded surface—insert a standard grommet and bring wires out. The 5-foot 8-inch sections of Lopo-Trim match perfectly for continuous installation. Sections are cut to fit and corners mitered identically like wood quarter-round.

Standard package: 18 lengths, 5 foot 8 inches long. Standard package weight, 20 pounds.

Per length..... \$1.54

Quantity prices on request.

National Electric "Plug-In" Strip Fittings

No. CF2-616-L

No. CF2-616-R

For bridging doorways, fireplaces, etc., or used as an end circuit feed. 1/2-inch conduit KO in base. Furnished with Crimp-Connectors and Insulator Tubes. Overall length 6 3/8 inches. Packed 5 in a unit package, 20 in a standard package. Standard package weight, 5 pounds.

No. CF2-616-L	Each	\$0.64
No. CF2-616-R	Each	.64

Straight End and 90° Junction Boxes

No. CF2-617-L

No. CF2-617-R

For use as a surface mounted feed, especially for light commercial installations. 1/2-inch conduit KO's on end and rear of base for connection to any kind of wiring. Furnished with Crimp Connectors and Insulator Tubes. Packed 5 in a unit package, 20 in a standard package. Standard package weight, 4 1/2 pounds.

No. CF2-617-L	Each	\$0.64
No. CF2-617-R	Each	.64

Quantity prices on request.

**B. F. Goodrich Rubaduct
For Low Tension Wiring**

WALL ELBOW

Rubaduct and Wall Elbow

Rubaduct is cemented to floor, thus eliminating the necessity of drilling cement floors and mutilating floor coverings. Installation requires minimum of labor, dirt, confusion and work interruption. May be taken up and relaid elsewhere without injuring surface on which originally applied. Furnished in Linoleum Brown. Takes cables up to 5/8-inch diameter, 8 pair, 5 triple or 5 quad telephone wire.

Size of Duct: 3-inches wide, 3/4-inch high, 3-feet long with aperture 1-inch x 5/8-inch.

Packed 50 to 56 lineal feet per case. (A maximum of 10% less than full length pieces per case is permitted). Weight, 1-pound per lineal foot.

Per lineal foot.....\$0.41

Rubaduct Fittings

OUTLET

DUCT

JUNCTION

DUCT

Outlet for protecting wires emerging from duct under desks and tables. 1 1/4-inch outside diameter, 3/4-inch inside diameter, 4 1/4-inch base diameter, 3 inches high.

Each.....\$0.55

Wall Elbow for protecting wires entering duct from walls. 3-inch long arm, 2-inch short arm.

Each.....\$0.55

Junction Box for right angle turns, or for joining main and lateral turns of duct. 4 1/4-inch outside diameter, 1-inch height, plus an allowable manufacturing tolerance of 1/8-inch.

Each.....\$0.55

10 Outlets, 10 Wall Elbows, and 5 Junction Boxes are packed in a combined case weighing 10 pounds.

B. F. Goodrich Plastikon Cement

For installation of Duct and Fittings. Holds securely without injury to floor surface. One gallon covers approximately 450 lineal feet. Quart containers packed 12 to a case. One gallon containers packed 6 to a case.

Per quart.....\$0.75

Per gallon.....2.00

**Winders & Geist Flexible Rubber Floor Ducts
"Flexiduct"**

A superior floor duct designed to solve problems of over the floor wiring. Flexiduct is easily and quickly applied on any floor and solves your over-floor inside wiring problems effectively and economically. Available in black or brown. Please specify.

Flexiduct is moisture proof; also a non-conductor. Hugs the floor, making it completely stumbleproof as each inch is cemented down. Tools are not required.

No. 1

No. 2

No. 1 Flexiduct: Is 2 3/4-in. wide at the base and rises from 1/2-in. at the outer edge to less than 1/2-in. high at the apex. This size accommodates from one to eight conductors. In 10 ft. lengths packed 100 ft. to a carton. Weight per carton 38 lbs.

No. 2 Flexiduct: Is 3 1/2-in. wide at the base and rises from 1/2-in. at the outside edge to less than 3/4-in. high at the apex. This size will accommodate up to fifty conductors or twenty five pair cloth cable. In 5 ft. lengths packed 50 ft. to a carton. Weight per carton 39 lbs. All fittings are one size and can be adapted to either No. 1 or No. 2 flexiduct.

Flexiduct Fittings

No. 3 Riser

Used with lip overlap on No. 1 duct. Butts against No. 2 duct by cutting away lip. Dimensions: 3 5/8 x 3 1/16 x 3 3/16-in. high. Packed 75 to carton. Weight 23 lbs.

No. 4 "L" Joint

For corner fittings has lip to overlap No. 1 duct, cut away lip and butt against No. 2 duct. Packed 150 in carton. Weight 41 lbs.

No. 5 "T" Joint

Has lip to overlap No. 1 duct. Cut-away tip to butt against No. 2 duct. Packed 75 to carton. Weight 25 lbs.

No. 6 Rubber Cement

A 5 ounce tube covers approximately 30 ft. of No. 1 duct. Tubes packed 6 in carton also 36 in carton.

No. 7 Quarter Round

Will accommodate #14 romex. 3/4-in. high 5/8-in. wide. 1/2-in. x 3/8-in. chase. Available in black and brown. 5 ft. lengths. Packed 240 ft. in carton. Weight per carton 44 lbs.

National Electric Nepcoduct

Standard System of Convenience Outlets in the Floor

Listed by Underwriters' Laboratories, Inc.

Installed under Article 354 of National Electric Code.

No. 7055H

Nepcoduct is a steel raceway system which provides convenience outlets at the floor surface. Standardization on one size raceway for both high and low potential wiring eliminates multiplicity of fittings. Nepcoduct may be used as a single duct system or it may be used in multiples of two or three ducts. For additional capacity and to provide separate wiring facilities for light, power, telephone, and signal circuits.

No.	No. of Outlets Per 10' Length	Diameter of Outlet
7005	None	Blank
7055L	5	1.900"
7055K	5	2.385"
7055H	5	2.385"

Junction Boxes

Nepcoduct Junction Boxes are castings with cross-overs, incorporated with completely separated high and low potential compartments.

Junction boxes may be brought to correct floor level conditions by the use of adjusting screws for leveling and rough height adjustment. Adjustable steel tops form a finer adjustment for height to meet newly finished floor elevations such as linoleum, cork or rubber. Ducts are secured to the boxes by tangent bearing set screws, assuring positive mechanical and electrical contact.

No. 7515

No.	Description	Conduit Size In.	Wt. Lbs. Each

		4-1 1/4	41 1/2

Adjustable Hand-Hole Boxes

No. 7525

The No. 7525 Hand-Hole Box can be placed wherever necessary in a line of duct. The box is furnished with a 1/2-inch conduit knockout on one side and 3/4-inch conduit knockout on the opposite side. The steel top is adjustable for elevation with 3/8-inch range of adjustment. Leveling is accomplished

by the use of Nepcoduct saddle supports on either side of the cast aluminum box.

Standard Saddle Supports

No. 7455-A

The Saddle Support is a two-piece assembly which harmonizes with progressive methods of installation, wherein the "layout crew" establishes all measurements and lines of duct by installing the base. The base also serves as an indicator to all tradesmen, warning against interference, which is a very important item in costs. It can be installed as early in the building schedule as desired and withstand abuses of normal construction operations.

System Components

Marker Screw and Escutcheon

No. 7140-L

Zinc coated steel cap.

Shipping weight per 100 pcs., 7 pounds.

No. 7140-L Red finish.
No. 7141-L White finish.

Couplings

No. 7165

Formed of one-piece metal and welded for strength.

No. 7165 Shipping weight per 100 pcs., 55 pounds.

Duct to Cabinet Connectors

No. 7755

Assures maximum duct capacity and positive grounding connections between duct and cabinet. Smooth interior serves as bushing inside cabinet.

No. 7755 Shipping weight per 100 pcs., 31 pounds.

End Blanks

No. 7715

Closes off ends of duct runs and prevents ingress of concrete.

No. 7715 Shipping weight per 100 pcs., 29 pounds.

Duct Opening Plugs

No. 7745

For closing unused duct openings in Junction Boxes.

No. 7745 Shipping weight per 100 pcs., 12 pounds.

Prices on application.

Walker "Preset Locked-In" Underfloor Distribution Systems

For New Office Buildings and for Modernizing Existing Buildings

Phantom View of "Preset Locked-In" Underfloor Distribution System

A "Walkerduct" system is a network of one or more steel ducts with inserts cast in the concrete floor, forming continuous, concealed raceways for power, telephone, or signal wiring circuits. By means of closely spaced, "Preset" inserts formed in the duct during manufacture, convenient outlets for each service can be quickly provided to serve any desk or machine that may be placed anywhere on the floor area.

This planned method of underfloor distribution of electrical services is practical, economical and convenient. "Preset" steel raceways meet the highest standards of safety by insuring the continuity of the metallic ground throughout the system. Out of sight and under the floor, this system does not disturb the appearance of your office, presents no ob-

struction to a smooth floor surface, and yet offers immediate availability for any additional services required, or to meet the needs of office rearrangement. Confusion, dirt, and noise are practically eliminated in making connections during the occupancy of the building.

The advantages of the system are not limited to new construction. The "Flushduct" system has been designed to make it entirely practical to secure the same desirable features in existing offices and buildings.

The flush type of duct may be installed in finished floors quickly and efficiently; and once accomplished, will make it possible to secure the important advantages of the standard Underfloor Distribution Systems.

Duct

This is the new, large duct that is available for use in Walkerduct Systems. It has the large capacity required to meet today's electrical requirements and still have room for additional wiring in the future.

14-gauge steel protected inside and out by a layer of sherardized zinc and a specially formulated, corrosion-resistant outer coating. Furnished generally in 10-foot lengths and with five factory pre-set inserts spaced on 24-inch centers.

Inserts on No. 2 duct are 1.9-in. or 2 3/8-in. in diameter; No. 4 duct inserts are generally 2 3/8-in. in diameter. Open end of each insert sealed with removable steel cap, recessed to receive concrete.

Inserts are threaded on inside to provide secure fitting connections. Blank duct (without inserts) is provided for home runs to distribution panels or cabinets. Shipping weight No. 2 duct, 200 lbs. per 100 feet; No. 4 duct, 370 lbs. per 100 feet.

Prices and detailed information on request.

Walker "Preset Locked-In" Underfloor Distribution Systems

Junction Boxes

Sherardized grey iron castings, with chemical-resistant finish. Openings on 4 sides for either 1, 2 or 3 ducts. Adjustable top assembly to suit types of floor and height of inserts. Adjusting screws for leveling. All corners are drilled for conduit feeders.

Circuit Breaker Plug-in Units can be plugged in any opening of a plug-in duct.

†For 2 Pole 250 V. d-c in the 100 A. frame size, add suffix letters d-c following catalog number in this group.

*Catalog numbers preceded by asterisk indicate ML frame.

Clamp-On Units—Circuit Breaker Type

	550	SD-69658	760.00	SD-69758	916.00	SD-69458	946.00
	600	SD-69666	760.00	SD-69766	916.00	SD-69466	946.00

Circuit Breaker Clamp-On Units may be bolted to busses of plug-in duct between any two straight sections or at end of plug-in duct run. When used at end of run, order an end closure.

When ordering clamp-on units specify end or center type and rating of duct to which units will be connected.

Clamp units can be supplied as lug to bus main breakers by adding suffix letters "LB" to above catalog numbers.
