A true 2-way bookshelf-type speaker system that offers impressive hi.fi sound, yet measures only $19 \mathrm{~W} \times 85 \% \mathrm{D} \times 103 / 6^{\prime \prime} \mathrm{H}$. Contains two separate speakers. A heavy-duty 8 - inch woofer with a 32.602 . magnet structure and a ribbon-type voice coil edge wound on an aluminum form provides reproduction of the low and mid-range frequencies. A 4 -inch cone-type tweeter with a 3.7 02. magnet structure provides reproduction of the high frequencies (to beyond audibility). Electrical crossover at 3000 Hz . The enclosure is a bass-reflex design using a ducted port of the tube type to provide proper acoustic "tuning" of the enclosure with the speakers used. The tube provides a special path for the low frequency sound waves radiated from the rear of the woofer so that they emerge "in-step" with those radiated from the front of the speater. This provides substantially greater bass sound power from the system. Finished on all four sides in a rich, hand rubbed oiled walnut veneer and tastefully framed in an ebony and gold picture frame molding with white and gold acoustic grilil material. Rated at 30 watts. Designed for vertical or horizontal placement. Overall response: $35-18,000 \mathrm{~Hz}$. Nominal impedance: 8 ohms. Imported. Shpg. wt., 28 lbs.

## SYSTEM DESIGN

> The enclosure is a bass-reflex design using a ducted port of the tube type to provide proper acoustic "tuning" of the enclosure. The tube provides a special path for the low frequency sound waves radiated from the rear of the wooter so that they emerge "in-step" with those radiated from the front and thus provides substantially greater bass sound power from the system. Solid wood construction, plus the use of sound absorbent material ensures an extremely rigid enclosure, free of undesirable resonances. A Dowerful 10 -inch speaker with a 4 lb .6 oz magnet structure provides reproduction of the low frequencies. A 4 -inch cone-type tweeter provides reproduc tion of the mid-range and high frequencies (to beyond audibility) and is of the closed back type to prevent interaction with the 10 -inch speaker. Smooth transition is achieved by means of electrical crossover at 2800 Hz .

Sound columns contain specially designed, matched and balanced speakers stacked in a vertical array. Sound columns are most desired where difficult acoustics exist. This is accomplished by widely directing sound in a horizontal plane so as to cover a large audience, and by narrowing the vertical plane in order to reduce normal acoustic feedback and reverberation from floor and ceiling reflections, resulting in crystal.clear voice and music reproduction.

\title{
RCA and GE Receiving Tubes
}

DOUBLE BRANOEO TYPES: Tubes with double-type numbers will replace both types. Example: \(6805 / E L 84\) replaces elther \(6 B 05\) or EL84. REPLACED TYPES: Older types are replaced by later versions ending in an additional letter \(A\). B or C. Example: 12AX7A replaces 12AX7; 5U4GB replaces \(5 U 4 \mathrm{G}\) and 5 C 4 GA . Some tubes for imported sets (indicated') may not be of GE or RCA manufacture.

\section*{12 MONTH GUARANTEE}

All receiving tubes are guaranteed for 12 months from date of purchase. We will replace any tube that does not give efficient performance for a full 12 month's period. This of course does not apply to burned out or broken tubes.
ASSORTMENT PRIVILEGE: TUBES MAY BE ASSORTED FOR QUANTITY PRICE

versatile VECTOR CURRENT TEST ADAPTERS make possible tube circuit current or voltage measurements without cutting leads or making computations. They have two spring test tab elements for each pin. These test tab elements break the circuit when a dual-sided probe is inserted in test position. Probes are gripped by the test tabs and need not be held in position. Current is read at the meter where the two test leads are connected. The same test adapters and probe also permit voltage and wave form readings on any pin position merely by connecting the leads jointly to the meter. The adapters have mica-filled shell and keyways, and may be used in a horizontal or vertical position. Stock No. Mif. No. Tite Trive Not Ea. \begin{tabular}{l|l|l|l|}

- Smallest 1 KW \& 2 KW Controls Available OHMITROL solid-state power controls are adaptable to a variety of applications because the built-in trimmer sets the starting point of the control voltage anywhere between 0 and 70 volts for 1 KW models; \(0-200 \mathrm{~V}\) on 2 KW models. Smooth control from start to full line voltage. On-off line switch at end of control knob rotation. 2-way terminals accept quick-connectors or soldering. Output is RFI filtesed. Component models mount with \(\geqslant *-32\) bushing on aluminum panel for heat sink. Portable models are self-contained. Sizes: component models \(134^{N}\) sq. \(x 1^{\prime \prime}\) behind panel; portable models: \(41 / 4 L x 31 / 4 W x l^{113 .}{ }^{\prime \prime}\). Average shpg. wt., 1 to 3 lbs .

MILLER COMMUNICATIONS I.F. TRANSFORMERS
Designed for experimental use in communications equipment where selectivity and stablility are important. The 100 kHz I.F. transformer and BFO coll are intended for tube application, while the 455 kHz crystal filter I.F. transformers have taps on the winding to allow for use with both tubes and transistors. The 1800 kHz I.F. transformer offers the best possible " \(Q\) " with stability to give a degree of selectivity that compares with lower frequency I.F. transformers. This transformer is for use with tubes only. Type number 1770 is a double tuned I.F. transformer having taps on both Primary and Secondary winding. Dimensions: \(1 / 4^{\prime \prime}\) by \(1 / 4^{\prime \prime}\) by \(2^{\prime \prime}\) high. Average shpg. wi., 502.

RPM scales allow preclse setting of carburetor air/fuel mixture and engine RPM in four separate scales: 8 or 6 -cylinder (low) 0-1,200, (high) \(0.6000 ; 4\) cylinder (low) \(0-2400\). (high) \(0-12,000\). Measures amps from -5 to +90 . Re. sistance scale from \(0 \cdot 100,000\) ohms. High voltage coil and spark test scale from \(0-30,000\) volts. Operates on single " \(D\) " cell battery. Complete simple operating instructions allows anyone to use this instrument to its fulf capablities. Detalled information supplied by make and model. \section*{NEW "COLOR-WEDGE" FOR SUPER POWER COLOR CH 2.83 AND FM STEREO}

- Delivers Superb Color Fidelity and Perfect Black and White
- Exclusive Built-In Cartridge Housing
- Optional Solid State Preamplifier Loads instantly into Housing
- Single Downlead Into House
- Gold Anodized Throughout
- Super Rugged Truss Construction

Winegard Color-Wedge high gain, 82 channel anten. nas provide supert color fidelity, perfect black and white pictures ans exce!!ent FM sterec_reception even in deep fringe areas. Extremely high front-toback ratio and sharp directivity insure ghost-free reception. Narrow vertical reception lobe prevents antenna from picking up such interferences as airplane flutter, Ignition noise, and harmonic radiations from citizens band or amateur transmitters. Antennas feature perfect, no-loss coupling between VHF and UHF sections and precise impedance match to downlead terminals for excellent signal transfer to TV set. Wedge design of VHF elements provide maximum VHF capture area for increased gain ... up to \(50 \%\) shorter than most all-channel antennas with comparable gain. Antenna is gold anodized and performance is not affected by moisture. Super-rugged truss construction holds elements in perfect alignment and withstands the most severe weather conditions. Completely pre-assembled, easy to install. For extra power, use Super Colortron Cartridge Amplifier. See listing below.

\section*{HIGH GAIN 82-CHANNEL SUPER COLORTRON ANTENNAS FOR VHF-UHF-FM}

Extremely high uniform gain for VHF-UHF.FM reception. Three models with pin-point directivity. High front-to-back ratio for sharp, clear color and black and white reception Exclusive impedance correlators allow each model to be much more compact for easier installation and less wind resistance. Features vertical resonant UHF reflectors for very high UHF gain. FM controt elements allow user to peak antenna for extra long distance FM and FM stereo. Exclusive built-in cartridge housing holds 300 ohm terminal board (included) for weather-tight down-lead connection. For extra power, use Super Colortron Cartridge amplifier listed below.

(A) \(131 / 4^{\prime \prime}\) VECTORLOG \({ }^{*}\) SLIDE RULE

For Communications Engineers and Physicists
- Laminated Bamboo Construction - P, P', and Q Scales - For Dlrect Vector Addition - Hypertolic sine and Tangent Scales. Two Sine Scales-One Marked in Degrees. One Marked in Radians - 5 Log Log Scales Plus a Voltage DB Scale - Complete with Belt Carrying Loop and Leather Case - With \(10^{*}\) Scale
The Lafayette VECTORLOG Slide Rule provides a new concept in scientific calculation, incorporating scales and arrangement designed for quick-easy-manipulation. Twenty-seven (27) scales Incorporate the many problems encountered in Electrical Engineering and Physics. The unique \(P, P^{\prime}\), and \(Q\) scales allow direct right angle vector addition. No longer are several settings required to obtain right angle vector sums-these scales work in the same manner as the \(C\) and \(D\) for muitipilication. The two Hyperbolic sine and one Hypertolle Tangent Scale, the voltage do scale, and the five log log scales, provide maximum coverage of these dynamic fields. VECTORLOG is the result of extensive tests for ease of manipulation. Several of these features are: \(C\) and \(D\) scates on both the front and back of the rule; Sine scales in both degrees and radians removing the necessity of bothersome conversion of unlts: a probiem-tested location of scales; and adjusted screws to aliow variable tension on the slide. Scales include: (FRONT) Tr.1, TR-2, P', P, Q, ST, S.1, S-0, C D, LL01, \(\mathrm{LLO2}, \mathrm{LLO3}\) LL1; (REAR) Sh-1, Sh-2, bF,' A, B, Cl, CF, Th, C, D, LL3, LL2, ob.
