“Composer” Matrix 4-Channel
Built-in composer circuitry that recovers 4-Dimensional sound already present in most 2-Channel stereo records, tapes and FM broadcasts. Also decodes 2-channel records especially encoded with 4-channel information.

With this SQ decoder you can convert your present home stereo equipment to play SQ records. The SQ 4-Channel Quadraphonic record, developed by Columbia Records, is the latest development in 4-channel high-fidelity components. With separate signals in each of 4 channels, the SQ record provides a startling and brilliant listening experience. It puts the listener right into the room where the performance took place. The result is the most natural sound possible in the home. SQ records can also be broadcast on FM stereo radio and received in the home as 4-channel sound with the SQ adapter. A conventional 2-channel stereo system requires adding the SQ adapter, and additional stereo amplifier, and 2 more speakers.

Present 4-channel systems not incorporating SQ circuitry only require an SQ Decoder. The SQ-M Decoder also includes the exclusive Lafayette Composer Circuit for deriving 4-dimensional sound from 2-channel records, tapes, and FM broadcasts. A Master Gain Control adjusts sound level for all 4 channels. Also includes a magnetic input for use with amplifiers or receivers not incorporating a magnetic phone input feature. Size: 6W x 2¼H x 7¼"D. For 105-120 VAC 50/60 Hz, imported.

- A 2-Channel Stereo System Requires Adding The SQ-M Decoder, An Additional Stereo Amplifier, and 2 More Speakers
- 4-Channel Systems Not Incorporating SQ Circuitry Only Require the SQ-M Decoder
CONVERT to a Derived 4-Channel Stereo System with the LAFAYETTE QD-4 4-Channel Adapter

- Derive 2 Extra Channels from Your Records, Tapes, and FM Broadcasts
- Compatible with 4-Channel Encoded Records
- Features Exclusive Lafayette Geared Control Mechanism

Add the Lafayette 4-Channel Stereo Adapter and two additional speakers to any existing stereo amplifier or receiver and enjoy multi-dimensional derived 4-channel stereo sound from regular 2-channel stereo records, tapes, and FM broadcasts. QD-4 adapter actually recovers "reflected" sounds that already exist on regular stereo recordings but are "hidden" during conventional 2-channel stereo playback. During a stereo recording session, the microphones pick up two types of sounds: direct and reflected, both of which are always included on a stereo recording. Because of the limitations of a conventional stereo system with 2 speakers in the front only, the reflected sounds are not reproduced. The Lafayette QD-4 recovers these "reflected" sounds and reproduces them thru two additional rear speakers along with the direct sound from the existing front speakers. Now, the acoustics of the original recording location have actually been introduced into your own listening room. This adds a dramatic new dimension to all existing 2-channel stereo programs—the sound literally envelopes you and becomes astonishingly "live". Unlike other matrix adapters, the QD-4 preserves full channel separation and does not require an additional stereo amplifier. Connects to any standard stereo amplifier or receiver and 4, 8, or 16 ohm speakers. For even better results from your records, we recommend the Lafayette/Pickering Phase 44 magnetic stereo cartridge (See page 27). The adapter has a 4-position function switch (Balance, 4CH, Front Speakers, Rear Only), plus a Rear Speaker Level Control. Phono jacks on rear for easy hook-up to 4 speakers and amplifier/receiver, 3 pairs of cables supplied with phono plugs at one end. One 6 ft. pair for adapter to receiver, one 15 ft. pair for adapter to front speakers, one 25 ft. pair for adapter to rear speakers. Dimensions: 5¼Wx4½Dx2½H. Imported. Lafayette Cat. No. 723
This 100-watt stereo receiver is one of Lafayette's finest with its distinctive styling and advanced solid state circuitry, truly a thing of beauty with top-notch stereo performance. The large tuning panel is black when the power is off, thus blending harmoniously even with the most luxurios decors. When the power is turned on, the tuning meter, FM Stereo Indicator and AM and FM dials light up and are revealed with the utmost clarity, thus enhancing the attractive appearance of the LR-775 and that of the room in which it performs.

Another styling innovation is the aluminum and black knobs which contrast nicely with the gold oxidized brushed aluminum panel trim. The LR-775's sensitive FM Stereo circuitry will receive even the weakest signals while maintaining excellent fidelity and freedom from distortion. The AM tuner section offers very good selectivity plus a built-in, flexible-mount ferrite loopstick antenna for optimum sensitivity. A meticulously designed amplifier section gives faultless reproduction with more than adequate volume from any program source. Output transistors are fused for full overload protection. The LR-775 also has a selector switch for Aux, Phono, FM, MPX Filter, and AM; Front and Rear panel jacks for tape outputs; Rear panel stereo inputs for magnetic and ceramic phono, Aux, Tape Record, and Tape Play; and one switched plus one unswitched AC convenience outlet. SOME OF THE PROJECTS YOU CAN BUILD

The Logix electronic computer provides an introduction to computer technology by means of numerous experiments and programs. Its fundamental principles correspond to those of infinitely larger computers systematically shown what makes them work and how they can be used. "Snap-in" type parts simplify assembly of the console. Once assembled its manual details 39 different programs, progressing from very simple to more and more complex ones. Setting up a program simply involves connecting wires on the top side of the console exactly as shown in a wiring scheme. With each program is learned the logic that goes with it. You can play computerized games with an opponent, or match wits with the computer. Computerized weather forecasting is obtained by use of weather input. Similarly, the computer can diagnose illness and recommend therapy. You can program airline bookings, routing of long distance telephone calls, mixing of complex colors, translation of languages, detection of criminals and investigation of cybernetic problems. Nine advanced programs deal with the binary system, complex mathematical calculations, Venn diagrams and the law of sets as well as playing a game of simulated chess. In addition provisions are made for individuals own creative programming. Kit is complete with 112 page manual, less flashlight batteries. Imported. Wt. 24/5 lbs.

THUMLERS TUMBLER

Here is an authentic, educational and yet entirely safe rocket kit for modelers and hobbyists which demonstrates the principles of rocket propulsion. The propellant releases in a safe, non-flammable, non-explosive manner. A 18½ inch long Valkyrie-2 which blasts off to 1000 feet, can be safely held in hand. Uses durable polished aluminum rocket, engine and parts, with real working valves, separator and parachute. At lift-off, the rocket starts slowly at 4 “C’s,” with acceleration in about 10 “G’s”. A timer assures deployment of the parachute which returns the rocket for another launch. May be either mechanically or electrically launched (not supplied). Complete kit includes rocket, engine, timer, separator, parachute, balsa nose cone, fins, loading valves, and electric firing assembly, launch stand, one of can of propellant, accessories and instructions. VIKING TWO STAGE ROCKET KIT

The Viking is a complete, high performance, functioning two stage rocket with staging mechanism for in-flight separation. The first stage boosts the rocket to about 75 feet where a “burn-out” signal triggers the second stage engine. This accelerates to a velocity of 300 feet per second (200 miles per hour) while the first stage drops away. This velocity carries the second stage well over 1000 feet, where the parachute is automatically deployed to return it. All parts are recovered for future flights. Both engines are the same—re-loadable, highly polished aluminum construction, pre-assembled and factory tested, each using 2 ounces of propellant per flight. Kit is complete including launching, 15 ounce can of propellant, clear, concise instructions and a booklet on the principles of multi-staged rockets. Size: 20” long x 1” dia. Shpg. wt., 3 1/2 lbs.

The bright red Baron Rocket Plane is a combination of a rocket and a plane. The rocket carries the plane up hundreds of feet, then catapults the plane free, at the height of its flight. While the Baron glides high in the sky, the booster rocket parachutes to earth. The aluminum booster rocket engine uses a non-flammable, non-explosive aerosol propellant and may be launched alone. The kit is complete with factory assembled and tested engine, fins, nose cone, parachute, 7 oz. can of propellant, decals, etc. and clear illustrated instructions. Size: 22½ long x 1” dia. Lafayette Telsat SSB-50 Mobile Two-Way Radio
TRUE SINGLE-SIDEBAND PLUS AM

*FEATURES*
- Suppressed Carrier on Sideband for Greater Talk Power
- "Range-Boost" and Automatic Modulation Control
- Dual Conversion Superheterodyne Receiver with Sensitivity of 0.5 µV on AM and 0.15 µV on SSB
- Built-in Product Detector for Outstanding SSB Reception
- Continuously Variable Fine Tuning for Clarifying SSB

In addition to the deluxe features that result in exceptional conventional 23 channel crystal-controlled AM transmission and reception, the Telsat SSB-50 incorporates True-Single Sideband features that result in the addition of 46 more channel modes of operation with much greater effective transmit power, as well as in low noise, highly sensitive reception with a minimum of interference. Its powerful "true" single sideband transmitter, instead of dissipating its power in the carrier and duplicate sidebands, concentrates all its power in the single selected upper or lower sideband. You get 100% talk power with far greater effective output and range! The transmitter also features internal RANGE-BOOST circuitry and adjustable antenna loading for maximum RF output as well as an adjustable TVI filter for minimum TV interference. In addition to the 23 crystal controlled AM channels, the dual conversion superheterodyne receiver receives 46 frequency modes on single sideband (23 on upper and 23 on lower sidebands) and features a crystal lattice filter that provides excellent signal-to-noise ratio and selectivity resulting in far greater usable sensitivity while rejecting adjacent channel interference. The receiver also features a built-in product detector for superior reception of SSB transmissions, continuously variable fine tuning to clarify reception of SSB transmissions and to improve reception of AM stations, as well as unique RF noise silencing circuitry to minimize ignition type noise interference. The Telsat SSB-50 also includes output jacks for external speaker or headphone, tape recorder, and PA remote speaker; and input jack for tuner, record player, tape player, etc. Supplied complete with Push-to-Talk Dynamic Microphone, DC Power Cable, Mobile Mounting Bracket, and FCC License Form 505. NOW...Sharper Than Ever!

Lafayette’s superb dual band, FM monitor receiver has been especially
engineered for outstanding performance and dependability. The
PF-200A covers both the high and low VHF communication bands,
is fully tuneable and can be crystal controlled for reception of
any two frequencies in either band. It also tunes to and receives
162.55 MHz U.S. Weather Bureau reports in parts of the country
where these reports are broadcast. The PF-200A features a highly
sensitive superheterodyne circuit that includes tuned RF and mixer
stage with F.E.T. for excellent sensitivity throughout the complete
band, 3 ceramic IF filters for exceptional selectivity, and an inte-
grated circuit for efficient FM detection. Its 100% solid-state de-
sign offers top reliability and instantaneous monitoring of, and
response to, emergencies. Built-in universal power supply assures
continuous monitoring under any conditions since it operates on
both 117 VAC and 12 VDC (negative ground only). The front panel
features two large individual tuning dials for low and high bands,
2 selector switches for Xtal or tuneable reception, one for each
band, and a variable Squelch control that lets you silence the re-
civer during no signal conditions. The PF-200A is also distinguished
by professionally designed neatly contrasting front panel, knobs
and enclosure. A large built-in speaker, an external phone jack for
private listening and a tape recorder output jack are also included.
