    AUDIO TRANSFORMERS \\ CHICAGO STANDARD TRANSFORMER CORPORATION
    }
    

    H-TYPE
    MOUNTING

    S-TYPE MOUNTING
    

    Chicago's No. CMS-1 Modulation Transformer and matching Driver Transformer No. CDS-1, at right, are ideally suited for use in ham and commercial speech transmitters. No. CMS-1 will deliver 250-350 watts of Class 13 audio power from P-I 203A's, 211 's, 805 's, 75 TL 's, etc. to a Class C load with response variations not exceeding \(\pm 1 \mathrm{db}\). over the stated frequency range. Primary impedances, \(9000 / 6700\) ohms ct; secondary, \(8000 / 6000 / 4000\) ohms. Case size 26 (see page \(\mathrm{N}-18\) ). Wt., 22 lbs.
    No. ('MS-1 . . . . . . . . List I'rice, \(\$ 49.50\)
    

    MODULATION TRANSFORMER CMS-3

    Delivers 500-750 watts of Class B audio power from 810 s, 822 s , etc. to a Class c load. Frequency response is within \(\pm 1 \mathrm{db}\). over the stated voice range. Primary imperlance, \(18,00012,000\) ohms CT; secondary, 6,250 ohms. FS-Tyne mounting, size 65 (see page \(\mathrm{N}-18\) ). Wt. 43 lbs .
    No. CMS-*
    List Price, \(\$ 89.50\)

    COMMUNICATIONS RANGE AUDIO TRANSFORMERS

    \section*{Frequency Response within \(\pm 1 \mathrm{db}, 200\) to \(\mathbf{3 , 5 0 0}\) Cycles}

    HERMETICALLY SEALED TRANSFORMERS

    \section*{LOW LEVEL AUDIO Transformers}

    Triad low-level audio transformers have been adopted as standard by many manufacturers of the finest in audio equipment. No other transformers offer such wide frequency range and such effective magnetic shieldiny in such small size. Shielding up to 95 db . is attained by multiple "Trialloy" cases interleaved with heayy copper shading rings. These transformers are solidily constructed. rinidly mounted with welded stainless stee! studs. and hermetically sealed to MIL-T- 27 specifications. Beautiful appearance, unmatched performance. long life, minimum size, are outstanding features of these quality transformers.

    \section*{TRIAD TRANSFORMER CORPORATION}

    \section*{POWER COMPONENTS}

    \section*{HERMETICALLY SEALED}

    Triad 'HS' series power components are designed to meet the most stringent operatinty conditions in military and commercial service. They are hermetically sealed in heavy deep-drawn MIL standard cases. rigidly mounted with brazed stainless steel studs, liberally designed with highest quality materials, and beautifully finished in baked grey enamel. Both 50-60 tycle and 380-1500 cycle designs meet all the requirements of the MIL-T-27 specification for Grade 1, Class A service. Among the qualification requirements are: \(40^{\circ} \mathrm{C}\) maximum temperature rise, 10000 mejohm insulation resistance, 10 day humidity and vibration cycle. alternate plus \(85^{\circ} \mathrm{C}\) and minus \(55^{\circ} \mathrm{C}\) temperature cycling. These are the finest transformers available!

    \section*{HIGH FIDELITY OUTPUT TRANSFORMERS}

    \section*{TUBE TO LINE-TUBE TO VOICE COIL LINE TO YOICE COIL}

    \section*{HIGH LEVEL OUTPUT Hermetically Sealed}

    TRIAD "HS" Series Output Transformers represent the application of the most modern techniques in the design of fine audio equipment. Use of annealed arainoriented core materiais, combined with multiple interleaved coil structures, have resulted in an open circuit inductance to teakage inductance ratio of 10.000 representing a frequency response range of better than 13 octaves. These trans: formers will deliver fulf rated power output within 1 db . from \(7-50000\) eycles. Full DC plate current can be carried through the primary windings. but every effort should be made to balance the two plates in push-pull circuits to obtain optimum results at the extreme low frequencies.

    \section*{For High Fidelity Reproduction HF-3—Preamplifier and Equalizer}

    Includes complete punched sectional aluminum chassis and complete assembly instructions. plus R-..6.A. A-75.J and two C-1X transformers Net Weight. 5 pounds.

    List Price \(\$ 32.80\)

    \section*{HF-12-10 Watt Power Amplifier Kit}

    The IIF-12 kit includes a completely punched sectional aluminum chassis and complete assembly instructions. plus R-14.A, C-13X. A-7.J. and S-31A transformers. Net Weight. \(141 / 2\) pounds. List Price \(\$ 50.40\) HF-12A Kit-Same as HF-12 kit. except HSM-81 hermetically sealed output transformer is used instead of the s -311
    Net Weight. 1 s pounds
    List Price \(\$ 69.90\) HF-12B Kit-Same as Hir-12 kit. except S- 2 A output transformer is used. This kit will be used where line impedances are required of \(500 / 250 / 12 \%\) ohms
    Net Weight. \(141 / 2\) pounds.
    List Price \(\$ 50.90\) HF-12C Kit-Same as HF-12 kit, except HSD-8: hermetically sealed output transformer is used
    Net Weight, \(1 \overline{5}\) pounds
    List Price \(\$ 68.90\)

    \section*{HF-18 'Williamson Type" All Triode Amplifier} HF-18 lit includes a completely punched sectional aluminum chassis with complete assembly instructions. plus R-5SA. C-14X. \(\mathrm{C}-1 \mathrm{X}\) and \(\mathrm{S}-148\) transformers. Net Weight, \(200^{3 / 4}\) pounds

    List Price \(\$ 63.65\) HF-18A Kit-Same as HF-1S kit, except HSN-189 hermetically sealed output transformer is used instead of S-148A transformer
    Net Weight, 22 nounds.
    List Price \(\$ 77.40\) HF-18C Kit-Same as HF-18 kit. excent HSN-190 hermetically sealed output transformer is used instead of the S-148A. The HSM-190 output transformer secondary matches \(5010 / 250 / 125\) ohms
    Net Weight, 22 pounds.
    List Price \(\$ 77.40\)

    \section*{HF-40-40 Watf Auditorium Amplifier}

    HF-40 kit includes punched sectional aluminum chassis and complete instructions, plus R-46A, C-17. and S-42 1 transformers. Net Weight, \(35^{1 / 2}\) pounds

    List Price \(\$ 78.35\) HF-40A Kit-Same as HF-40 kit except HSM-94 hermetically sealed output transformer is used instead of S-42A transformer. Net Weight, \(359 / 4\) pounds

    List Price \(\$ 116.60\) HF-40C Kit—Same as HF-40 kit, excent JIS.IT-9:, hermetically sealed output transformer is used instead of S-12A transformer.
    Net Weight. 35 , \(3 / 4\) pounds.
    List Price \(\$ 116.60\)

    \title{
    TRIAD TRANSFORMER CORPORATION
    }

    \section*{P ULSE}

    These miniature blocking oscillator transformers are now in quantity production for manufacturers in a number of applications and with outstanding results. Their multiple winding construction makes them available for a variety of circuits and their fast rise time ( .03 microseconds) makes them excentionally useful. Positive hermetic sealing prevents deterioration of performance with time (absolutely neces. sary for long shelf life).

    \hline PL-4 & \$15.00 & 2 equal windings. Pulse widths .35 to 1.2 microseconds. Duty cycle .01 nax. Dismensions \(4^{\prime \prime}\) dia. by \(.625^{\prime \prime}\) long. \\
    \hline PL-5 & 17.50 & 3 equal windings. Pulse widths 35 to 1.2 microseconds. Duty cycle .01 max. Dimensions \(.5^{\prime \prime}\) dia. liy \(.68^{\prime \prime}\) long. \\
    \hline PL-6 & 15.00 & 3 equal windings. Pulse widths 35 to 1.2 microseconds Duty cycle .01 max. Dimensions (Transformer only) W' \(^{\prime}\) dia. by \(34^{\prime \prime}\) long. Mounts with \(8.32 \times 1 / 2^{\prime \prime}\) stud. \\
    \hline
    \end{tabular}

    \section*{POWER}

    \section*{Combined PLATE and FILAMENT Transformers} Primary 115 volts \(50 / 60\) cycles
    Triad power components are liberally designed to best meet average design suecifications and to ensure maximum utility for each desiun. All units are beautifully finished in baked grey enamel and have all connection data permanently marked oin the case.
    All types are "Climatite" treated both coil and core. for protection ajainst moisture and for elimination of lamination chatter. Although they are small in size, the high quality materials used keen losses to a minimum and hold tempera. ture rise below \(55^{\circ} \mathrm{C}\). Only copser foil static shields, frounded to the case and core are used Leats are of a type approved by UL for high temperature operation:

    \section*{Instrument POWER SUPPLY Transformers}

    Intelligent design and construction of measuring instruments involves consideration of many factors normally neglected in electronic circuits. Regulation of power supply voltages, limitation of external magnetic fieids by minimum flux density. multiple static shields to limit capacitive coupling, multiple filaments where tubes must operate at different potentials, all become necessary to obtain peak performance. The transformers on this page are a series of special designs which have been developed for instrument design.

    For PREAMPLIFIERS, VTVM, ete.

    \section*{REPLACEMENT POWER}

    Triad replacement power transformers are designed as closely as possible to meet the electrical and physical specifications of the transformer for which they are a replacement. Where possible. these transformers take advantage of better materials to operate at a lower temperature and thus to increase effective life. All Triad replacement powers are "Climatite" treated, both coil and core, for moisture protection and elimination of lamination chatter. All are beautifully finished in grey baked enamel and are permanently marked with connection data. Copper foil static shields are used for maximum isolation. Leads are of a type approved by UL for this service.

    \section*{Replacement POWER Transformers \\ Combined PLATE and FILAMENT}

    Electrostatically shielded-Primary 115 volts \(50 / 60\) eyeles
    

    R-318C 27.00 des 16
    R.31A and R-31BC are designed or a great many of the 28 to 30 tube chassis where a 5 V damper tube is used.

    \section*{AUDIO}

    \section*{REPLACEMENT OUTPUT Transformers}

    Triad audio transfermers for replacement are constructed wherever possible to fit iuto the exact location of the original transformer. For this reason a wide range of sizes and mountings are available. In every case the transformer is designed to deliver the best response which call be built into this size. Quality of wcrkmanship and materials is identical with the more expensive Triad transformers and better gerformance with greater life should result from use of these replacements. All Triad replacement transformers are "Climatite" treated!

    MODULATION TRANSFORMERS - THE "FIVE" SERIES
    SNC universol modulation tronsformers ore specifically designed to provide moximum opplicotion possibilities per type. All units ore provided with two indenticol secondory windings, permitting series of parollel operotion. Chonges in the rotio con be reodily accomplished, when desired, without removing the unit from the chossis. Most units ovoiloble in either oir cooled or compound fitied coses.

    \section*{INPUT TRANSFORMERS}
    

    See next page for
    Case Dimensions

    Modern high fidelity hroadcasting and transcription apparatus require the utmost per－ formance and reliability in the audio transformers used in their circuitry．The Freed ＂Quality Grade＂audio transformers are wide band．high fidelity components featuring astatic construction，longitudinal halance，low harmonic distortion，uniform response， high efliciency，and constant impedance match thoughout the audio frequency spectrum． Maximum neutralization of stray fields is accomplished by use of humbalanced coil structures and multiple alloy shielding．High fidelity is achieved on every tap of universal impedance winding without line reflection of transverse coupling．
    All Quality Grade Components are thoroughly impregnated in a special non－hygroscopic varnish，and fully encapsulated in a moisture proof，high－melting point compond．

    \title{
    precision FREED TRANSFORMERS puâurr
    }

    \section*{FREED DELAY LINES}

    Freed Miniature and Standard Delay Lines are available in uncased cased, hermetically sealed and encapsulated units.

    A wide variety of lines are available incorporating the following desirable features:
    Wide Band Wirltl
    Low Insertion Loss
    Excellent Transient Response
    Reflection as low as \(5 \%\)
    Wide 「Temperature Range
    Extreme Stability
    Characteristic impedance from 25 olms to 10.000 ohms are available with time delays from 0.1 microseconds to 10 microseconds.

    Engineering and production facilities are avalable to design and package delay lines to your physical and electrical reguirements.

    \section*{FREED FILTERS}

    Freed Standard Filters are Hermetically Sealed miniature high performance components designed for both production and laboratory apparatus in the Communications and Electronic industry. In order to achieve attenuation lefuirements not obtainable with one single filter, one can combine several standard filters of different transmission claracteristics.
    Wide Band Pass characteristics are obtainable by combining low and high Pass ['nits. The astatic construction of inductive components together with special shielding reduces the hum pick-up of the standard filters. The standard filters are available in Low Pass. High Pass and Band Pass Filters.
    LOW PASS FILTERS: The attenuation characteristics of Low Pass Filters are 6 db at cut-off frequency, 35 db at 1.5 cut-oft frefuency and 40 db at 2 cut-off frequency.
    ILP—Interstage Low Pass Filter. Characteristic impedance 10.000 ohnts.
    LLP—Line Low Pass Filter. Characteristic Imperdance \(500 / 600\) ohms.
    HIGH PASS FILTERS: The attenuation characteristics of High Pass Filters are 6 db at cut-off freguency, 35 db and 40 db at 0.67 and 0.5 cut-ofi frequency.
    IHP—Interstage High Pass Filter. Characteristic Impedance 10,000 olims.
    LHP—Line High Pass Filter. Characteristic Impedance 500-600 olmms.
    BAND PASS FILTERS: The attenuation characteristics of Band Pass Filters are 2 db at plus or minus \(3 \%\) of center frequency. 40 db at 0.5 and 2 center frequency.
    IBP—Interstage Band Pass Filter. Nominal input impedance - 10.000 ohms. Nominal output impedance 5 megolnms or grid of vacumm tube. Effective voltage step-up 2:1.
    LBP-Line Band Pass Filter. Nominal input impedance 500-600 ohms. Nominal output impedance 5 megohms or grid of vacuum tul)e. Effective voltage gain 9:1
    

    STOCK FILTERS
    Frequency is indicated by numbers following filter designation:
    

    Special filters in all six types are avallable for any frequency from 300 to 20,000 cycles.

    For Freed Precision Laborafory Test Instruments see Section G, Pages G-106 to 116

    \footnotetext{
    STACO Transformers are compact and modern in design. Only the highest quality silicon lamination steel is used which assures cool operating transformers. Each coil is layer wound with the best quality enameled wires, each layer is insulated with heavy insulating material, each coil is varnished impregnated and high temperature baked. High Voltage Breakdown Test is performed on each coil and transformer in accordance with existing RMA Specs. This combination of high quality materials plus the finest workmanship is assurance of better and lasting performance at highest operating efficiency, yet costs no more than average.
    Finishes: Mount type \#1, Black baked enamel, Mount type \#2, Black baked enamel, Mount type \#3, Natural Buffed Aluminum, Mount type \#4, Black Wrinkle baked enamel.
    }

    \section*{FERRANT|transformers}

    This group of transformers are hermetically sealed in standard Mil-T-27 case sizes, and are designed to meet the full requirements of the Mil-T-27 specification. They provide the highest standard of quality necessary for professional and military requirements.

    The range includes the specific types stan-
    dardized by the Armed Services Electro Standards Agency for universal military use, as well as a group of standard types for 400 cycle power supplies.

    Use of these standard high quality components in experimental equipment will avoid the necessity for redesign for production

    \section*{Standard Audio Transformers}

    All units are hermetically sealed in Mil-T-27 case size AJ and are designed to meet the full requirements of the Mil-T-27 specification.

    Use of these standard units in equipment at the experimuntal stage will avoid the necessity of redesign for production.

    See dimension chart for AJ case details.

    \section*{LINEAR STANDARD AUDIO TRANSFORMERS}

    \section*{LINEAR STANDARD AUDIO UNITS FEATURE:}

    UNIFORM FREQUENCY RESPONSE . . . at low frequencies, is effected through the use of HIPERM-ALLOY, a STABLE nickel iron alloy of very high initial permeability. Uniform high frequency response is the result of multiple section interleaved windings arranged in a semi-toroidal coil structure. This, plus special winding methods and insulations, assures a minimum of distributed capacity and leak. age reactance.

    UTC LINEAR STANOARO transformers are the ONLY audio units with a GUARANTEED uniform response . . . \(\pm 1\) DB from 20 to 20,000 cycles.

    MINIMUM HUM PICKUP . . . is accomplished through the use of a hum balanced, semi-toroidal, coil structure which affords maximum neutralization of external fields. In addition, all units employ high conductivity outer case for maximum shielding. For very low level applications, units whose code numbers end in \(X\) employ multiple alloy shielding, making possible a transformer with extremely low inductive pickup.

    NEGLIGIBLE WAVE FORM OISTORTION . . . is a function of proper impedance matching, minimum phase shift, and low flux density. These elements have been given great attention in the design of Linear Standard units. It is interesting to note that an output transformer reasonably flat from 20 to 20,000 cycles may show serious distortions at 30 to 10,000 cycles. For this reason, UTC high level units have a frequency range better than guaranteed value, generally 7 cycles to 50,000 cycles (see poge \(\mathrm{N} \cdot 91\) ).

    MULTIPLE TAP WINOINGS . . . make possible a wide combination of impedance terminations without impairing fidelity or efficiency. Precision winding methods result in winding accuracy of \(.1 \% \ldots\) perfect balance of inductance and capacity . . . exact impedance reflection.

    OEPENOABILITY . . . is a function of external and internal structure. Linear Standard units are housed in rugged die cast cases of precise dimension with reversible mounting to permit above chassis or subchassis wiring. The solid terminal posts on low absorption bakelite are arranged in a circular layout so that a round chassis hole will clear all terminals. Coils are vacuum baked and impreg. nated. Semi-hermetic sealing is accomplished through the use of a high adhesion compound poured through the large opening opposite the terminal board after controlled preheating of the unit for full compound penetration.

    \title{
    LINEAR STANDARD POWER EQUIPMENT
    }

    In choosing power components for broadcast and commercial equipment, the first factor to be considered is dependability. Linear standard power components are very conservatively designed for maximum reliability. Designs provide for low temperature rise, and high insulation safety factors.
    Only the finest of materials and workmanship are used throughout.

    The low power components of the Linear Standard series are housed in the familiar rectangular LS case with top or bottom mounting facilities. High power components are housed in end castings which completely protect the winding, while directly exposing the laminations for maximum heat trans. fer.

    All units have a deep grey finish to obtain the highest heat radiation coefficient. Large components (up to 250 KVA) are housed in oil tanks.

    \section*{HIPERM ALLOY TRANSFORMERS}

    The UTC Hiperm alloy audio and power trans formers are specifically designed for port able and compact service. While light in weight, neither dependability nor fidelity has been sacrificed. The frequency characteristic of the Hiperm alloy audio units is uniform from 30 to 20,000 cycles. They in corporate a Hiperm-alloy nickel iron core and hum balanced coil structure. The rugged die cast case is of high conductivity alloy finished in grey, arranged for mounting with the terminals either up or down. DC in Prim'y shown is maximum unbalanced.

    \section*{ULTRA COMPACT AUDIO UNITS}

    The UTC UItra compact audio units are small and light in weight, ideally suited to remote amplifier and similar compact equipment. High fidelity is obtainable in all individual units, the frequency response being \(=2 \mathrm{DB}\) from 30 to 20,000 cycles.
    All units except those carrying DC in Primary employ a true hum balancing. coil structure, which combined with a high conductivity outer case, effects good inductive shielding. The die-cast case provides for top or bottom mounting. Maximum operating level +7 DB.

    \section*{OUNCER AUDIO UNITS}

    \section*{STANDARD AND PIUGIIM TYPES}

    UTC OUNCER components represent the acme in compact quality transformers. These inits, which weigh one nunce, are fully impregnated and sealed in a drawn aluminum housing \(7 / 8^{\prime \prime}\) diameter . . . mounting opposite terminal board.

    Ouncer items are ideal for portable broadcast, hearing aid, aircraft, concealed service, and similar applications. High fidelity characteristics are provided, uniform within approximately \(I D B\) from 30 to 20,000 cycles, except for \(0 \cdot 14,0 \cdot 15\), and units carrying \(D C\) which are intended for voice frequencies. Maximum level 0 DB.
    " \(P\) " series units are identical to the UTC OUNCER units but are sealed in bakelite housings with plug.in base to fit standard octal socket. While of submersion proof design, these units weigh but two ounces. Oversize pins in the base make it impossible to dislodge these units from their sockets.

    \section*{MICROPHONE CABLE TRANSFORMERS}

    UTC Cable transformers are designed to be inserted in the cable circuit, and are ruggedly constructed to with. stand mechanical abuse. The cable conmections (supplied less cable) are made thrnugh spring strain relicf to terminal boards inside the end caps. \(11 / 2^{\prime \prime}\) diameter . . . \(2 V_{2}\) " long ... \(V_{2} \mathrm{lb}\).
    Type MC-1-primary tapped \(30 / 50\) and \(200 / 250 \mathrm{ohms}\), secondary to grid, standard fidelity.
    Type MC-2-primary tapped \(30 / 50\) and \(200 / 250\) ohms, secondary to grid, high fidellty.

    \section*{hermetically sealed components}

    For over fifteen years UTC has been the largest supplier of transformer components for military applications, to customer specifications. Listed below are a number of types, to latest military specifications, which are now catalogued as UTC stock items.
    Terminals on items \(\mathrm{H} \cdot 20\) through \(\mathrm{H} \cdot 24\) are neoprene-ceramic assemblies. All other units employ glass bead headers, but can be supplied with neoprene-ceramic terminals where required. For printed circuit use, wire terminals on glass header units can be straightened out without injury. Straight wire terminals available on production orders.
    The frequency response ratings are based on military requirements. Actually, most of the units that do not carry \(D C\) are appreciably better in response than the range shown.
    The level ratings are maximum level for reasonable distortion at the lowest frequency specified. For higher frequencies considerably higher levels are permissible.
    The impedance ratings are listed in standard manner. Obviously, a transformer with a 15,000 ohm primary impedance can operate from a tube representing a source impedance of 7700 ohms, etc. In addition, transformers can be used for applications differing considerably from those shown, keeping in mind that impedance ratio is constant. Lower source impedance will improve response and level ratings . . . higher source impedance will reduce frequency range and level rating.

    \section*{HERMETICALLY SEALED \\ PULSE TRANSFORMERS}

    Because of the wide variety of blocking oscillator, interstage, and modulator pulse applications, the bulk of UTC pulse transformers are designed to customer's specifications. Through versatile design, however, the stock pulse transformers listed below take care of most low level applications. The units are hermetically sealed and tested to MIL-T-27 Specifications. Wide ranges of pulse duration, loading, and level are obtainable by variations in tha manner of connecting the balanced coil structure windings. An engineering sheet accompanies each unit, providing data for typical applications.
    The \(H-40\) and \(H-41\) units employ identical windings suitable for different applications because of the manner in which the windings are brought out to the terminals. These units have two windings for 250 ohm impedance, and two windings for 1,000 ohm impedance. Pulse widths from .1 to 5 microseconds are realized with excellent fidelity. At 5 microsecond operation the maximum working voltgges for the \(\mathrm{H}-40\) and H .41 are 175 volts peak for 250 ohms . . . 350 volts for 1,000 ohms. These voltages can be increased at lower pulse widths.
    H-42 and H-43 are highly miniaturized hermetically sealed....MIL-T-27 units. They incorporate threz equal windings capable of being inter-connected fog wide versatility in blocking oscillator, interstage, and impedance matching service. The wound Hipermalioy core is uncut to effect maximum efficiency. Peak working voltage is 175 voits per winding.
    

    MAGNETIC AMPLIFIERS FOR SERVO MOTOR APPLICATIONS
    

    FIG \({ }^{-2}\)
    GRIO GIRCUIT
    MODIFICATION FOR MODIFICATIO
    OG INPUT

    The MAT 1-4 Magnetic Amplifiers are exceptionally stable units designed for the control of 2 phase 400 cycle servo motors. They are compact . . . hermetically sealed . . . magnetically shielded . . . and meet MIL-T-27 and MiLL-E. 5400 Specifications. The output is sinusoidal, amplitude variable, and phase reversible. Control is provided by a dual triode such as a 12AU7operating with a plate voltage of 115 volts, 400 cycles, or higher. The signal to the triode grids can be polarity reversible \(D C\) or phase reversible 400 cycles with or without suppressed carrier modulation. These units eliminate \(O C\) power requirements as well as temperature sensitive dry disc rectifiers. The high input impedance provides minimum loading on sensing elements and high power gain. Ringing at low load level has been reduced to a minimum through high internal damping factors. The power output figures are conservative . . . power gain of the MAGNETIC STRUCTURE is approximately 40 . . response time aproximately 7.5 milliseconds. The maximum null voltage is 3 volts RMS. For single phase supply voltage the load capacitor should effect \(90^{\circ}\) phase shift with motor load . . . for 3 phase, \(30^{\circ}\) phase shift. The chart values shown are approximate.)

    For AC signal control the circuit of Figure 1 is employed. For DC signal control Figure 2 applies. Figure 3 shows the use of a power transformer (MAT-5) which provides higher plate voltages and eliminates the input transformer (MAT-6). The typical response curve of Figure 4 applies to all units, the larger units feeding heavier loads.

    \section*{NEW "M" TYPE TOROIDS \\ AXIMUM 0 \\ II inimum size}

    UTC Permalloy Dust Toroids have been the standard of the industry for over 15 years. The MQ series of colls provide the highest \(Q\) factor in their class (see curves below), with miniaturized dimensions. All units are hermetically sealed to MIL.T-27 Specifications.

    The stability is excellent. For the MQE-7 the inductance change is less than \(1 \%\) for voltages from .1 to 3 volts The MQA-13 change is less than \(1 \%\) for applied voltages from 11 to 20 volts. The MQB-5 change is less than \(1 \%\) for applied voltages from 1 to 50 volts. DC is permissible through the coil (values listed below). Inductance is virtually independent of frequency temperature and vibration.

    Hum pickup is extremely low due to the toroidal winding structure, with windings uniformly spread over the core. The case is of high permeability, affording additional shielding such that close spacing of units can be effected, the coupling attenuation being approximately 80 DB.

    Other values of inductance than those listed are available on special order at the price of the next higher listed value.

    UTC type VIC variable inductors offer a revolutionary approach to the problem of tuned audio circuite. By adjusting a set screw in the side of the case, an inductance value of \(+85 \%,-45 \%\) from mean value is obtainable. Setting is positive, Effective \(Q\) for a wide frequency range and variation of inductance with applied \(A C\) voltage are shown on the illustrated curves, for a typical VIC unit.

    The VIC inductor is housed in a rugged die cast case \(1^{11 / 22^{\prime \prime}}\) long, \(11 / 4\) " wide and \(11 / 14^{\prime \prime}\) high with mounting centers on terminal board side \(11 / 10^{\prime \prime}\) by \({ }^{2} \% / 12^{\prime \prime}\) : Weight is \(51 / 202\).
    
    -DC MA shown is maximum recommended... wilt effect some reduction in inductance ond \(Q\).

    \hline
    \end{tabular}

    UTC variable inductors have served as the ideal solution to many filter, oscillator, equalizer, and tuned am. lifier problems-for over a decade. Extended development has now made possible the new HVC series of inductors with improved characteristics. They are hermetically sealed to MIL-T-27 specs . . . extremely com. pact . . . wider inductance range . . . higher Q's . . . lower and higher frequencies... superior voltage and temperature stability.

    Adjustment of set screw in top of case permits chang. ing inductance \(+300 \%+0-70 \%\) of nominal value shown. Setting is positive. Effective \(\mathbf{Q}\) for a wide fre. quency range and variation of inductance with applied AC voltage are shown on the illustrated curves, for a typical HVC unit. Case dimensions are \(14 / 8\) long, \(2 / / 3\) : wide \(1^{1 / 1 / 2 "}\) high. The two terminals and two \(4 / 40 \mathrm{mo}-\) unting studs are on opposite diagonals- \(1 \% 10\) spacing.
    
    

    \section*{LOW FREQUENCY HIGH Q COILS}

    Permalloy dust toroids are not suited to providing high \(Q\) at low frequencies. The MOL series of laminated Hipermalloy coils were specifically designed for this class of service. The unique structure employed provides exceptional \(Q\) and stability. Inductance values are laboratory adjusted to \(2 \%\) tolerance at 1 volt, 60 cycles. Stability with voltage is excellent, for MQL-3 inductance variation is less than \(1 \%\) from . 1 V . to 1 V. 60 cycles. Temperature stability is exceptional, total inductance swing being less than \(3.5 \%\) for the wide range of \(-55^{\circ} \mathrm{C}\) to \(+85^{\circ} \mathrm{C}\). A hum reducing lamination structure plus heavy Hipermalloy shielding provide very low hum pickup . . . 240 microvolts/gauss for MQL. 3 series connected. Two identical windings brought out to four terminals permit series, paraliel, center tapped, or transformer type connections.

    \section*{HIGH Q PRECISION INDUCTANCE DECADES}

    UTC DI inductance decades are invaluable instruments for design and experimental work with tuned circuits, wave filters, and equalizers. They set new standards of Q, stability, frequency range, and convenience. The low hum pickup toroid coits employ a new permalloy dust core which, combined with special winding methods, provides very high \(Q\), excellent voltage and temperature stability, and high self resonance frequency. The switch employed is a new low capacity type which lab tests have proven for low contact resistance after 100,000 operations. The inductance values are laboratory adjusted to better than \(1 \%\) precision.
    BI inductance decades are housed in a compact, rugged, die cast case with control on a sloping panel, ideally suiting these units to laboratory use. Ganging panels are available for mounting two, three, or four decades together. It is merely necessary to unscrew the four rubber feet at bottom of decade to attach to panel.
    \begin{tabular}{|c|c|c|c|c|c|}

    \end{tabular}

    UTC standardized filters have been designed to take care of many present day filter requirements through stock units. The interstage type filters have a nominal impedance of 10,000 ohms, and lend themselves to effecting gain simul. taneously with their frequency discrimination.
    BMI units (Band Pass) have \(2: 1\) gain. They are sharply peaked, having approximately 2 DB attenuation at plus or minus \(3 \%\) from center frequency and attentuation of 40 DB per octave as shown. Input 10,000 ohms, output to grid. HMI units (High Pass) have a loss of less than 6 DB at cutoff frequency, and an attenuation of 35 DB at .67 cutoff frequency. Input and output 10,000 ohms.
    LMI units (Low Pass) have a loss of less than 6 DB at cutoff frequency, and an attenuation of 3508 at 1.5 cutoff frequency. tnput and output 10,000 ohms. HML (High Pass), and LML (Low Pass) filters are simifar to the interstage filters, in all characteristics, except that they are intended for an input and output impedance of \(500 / 600\) ohms. 8NL (Band Pass) have input of \(500 / 600\) ohms, output to grid.
    All of the standard filters are housed in hermetically sealed cases, shielded to reduce hum pickup to 150 MV per gauss at 60 cycles.
    In addition to the stock filters listed, any of the six types are available as special units for any frequency from 100 to 12,000 cycles. Order by type followed by frequency, as LMI-2500, designating low pass interstage filter-2500 cycles cutoff frequency. These special units are priced at \(\$ 35.00\) net.

    \section*{BROADCAST AND RECORDING EQUALIZERS AND FILTERS \\ 500/600 onms}
    

    \section*{3AX UNIVERSALEQUALIZER}

    The universal eharacteristics of the UTC 3 MX equalizer have made it the most popular item for broadcast and pecording equalization. Thls unlque unit, with which most communications engineers are olfeady famillar. Is an accurately caltbrated, quickily adjustable, comblned low and high trequency equalizer. The low trequency controls lnclude a switch for adjusting the maximum equalization frequency to 25,50 , or 100 cycles and a calibrated T -pad for exact adjustment of the amount of equalization. The high frequency portlon of this unit lincludes a switeh to set maximum equalization point at \(4000,6000,8000,10,000\) or 15,000 cycles, and a simltar callbrated control reading directly in O8. Equallzation up to 25 ol avaliable at any frequency selected.
    

    Ihrough unique arrangement of compensating pads, changes in adjustment of the \(3 A x\) equalizer do not affect the apparent aural level. This permits changes in tone color, with negligible change in volume. Where rapld changeover Is roqulred in service from one line to another, or from recording to play back, it is merely necessary to predetermine the required setting. The actual adjustment of the controls can be taken care of almost instantaneously. The constructlon is of the depressed chassls, etched panel, rack mount troe. Thoroughly shielded against inductive pickup with UTC Trlalioy Shielding. Dimensions of Danel \(342^{*} \times 19^{\prime \prime}\). Depth \(7 \operatorname{lig}^{\prime \prime}\) weight 15 los.

    \section*{3A UNIVERSAL EQUALIZER}

    The \(\mathbf{3 A}\) equalizer is Identical to the \(3 A x\) described above, except that it coes not incorporate the compensating pads for constant insertion loss. The Insertion loss is roughty proportional to the amount of equalization employed. All other characteristics Identical with the \(3 A X\) unit, this item weighs 10 los.

    \section*{4C SOUND EFFECTS FILTER}

    The use of filters to obtain unusual sound effects is now finding wide application in broacast technique. The Model 40 filter was ofiginally developed for one of the large broadcasting chains, and is now used extensively by most broadcast statlons. Two controls are provided by the \(54 / 4 \times 19^{\prime \prime}\) panel, which is similar in appearance to the \(3 A x\) unit. The welght of the 4 C unit is 20 los.

    The low pass switen can be set for cutoff frequencies of 100, 250, 500, 1000, 2000, 3000, 4000, or 5000 cycles. The high pass switch has identical frequency points. The great number of cutoff frequencies provides for a wide latitude of tone control. If desired, though not normally necessary, external potentiometers may be Inserted In the circuit for attenuation control.

    \section*{COMMERCIAL GRADE COMPONENTS}

    \begin{abstract}
    The commercial grade series of transformers incorporate conservative design and rugged construction to assure dependability under continuous service
    \end{abstract}
     operation in industrial and commercial grade communication equipment. These units are mounted in uniform drawn cases finished in light grey enamel, and intended for chassis mounting. All items are poured with special sealing compound in addition to vacuum impregnation of coll structures. Type numbers are identical with the PA units except for the prefix "CG."
    CG-134. 135 and 136 are of the hum-bucking type to assure low tum prek.up. All audio components are linear. \(=11,2\) DB from 40 to 10,000 cycles tno unbalanced D.C.), except CVL and CVM units . . . 40 to 6000 cycles. Parallel feed low level interstage units with 50.000 ohms and .25 mld .200 ohm windings on input Iransformers are balanced and may be usec for 150 to 250 nhm circuits.

    \section*{NEW UNIVERSAL INTERSTAGE EQUALIZER-CGE-1A}

    The UTC CGE-1A is the ideal device for any application where frequency response control is desired. Incorporating the latest deveiopments in design and manufaciure, this new unit provides the ultimate in control and flexibility. This equalizer is not a simple R-C tone control, but employs resonant circuits in a unique arrangement providing equalization characteristics unobtainable by conventional circuits. Designed to work from a low or medium impedance source (0 to 20,000 ohms) to a high impedance ( 500,000 ohms or open grid), the CGE-1A affords continuously variable equalization over a 30 DB range at either end of the spectrum, while introducing only 18 DB total insertion loss. (See curve above). Complete independence of high frequency and low frequency contrals permits a wide variety of settings without affecting the over-all volume level. Because of its low insertion loss, this unit may be incorporated directly in many amplifiers. If existent gain is low, a single medium-mu triode stage will provide both proper gain and source impedance. The mechanical construction permits mounting with case on panel directly behind controls, or with case separated from controls and panel. An etched, calibrated panel is provided.
    CGE-1A Panel Dim. 23/8" \(\times 31 / 2^{\prime \prime} \times 21 / 2^{\prime \prime}\) deep. Wt. 2 lbs.
    DYNAMIC NOISE SUPPRESSION INOUCTOR
    Incorporates two accurate High a coils \([8\) hy. and 2.4 hy. . for use in dynamic noise suppression circuits. Excellent circuit accompanies unit.

    \end{tabular}

    \section*{CG VARIMATCH LINE}

    \section*{TO VOICE COIL TRANSFORMERS}

    The UTC VARIMATCH line to voice coil iransformers will match any voice coil or group of voice coils to a 500 ohm line. More than 50 voice coil combinations can be obtained, as follows:
    \[
    \begin{aligned}
    & \text { ows: } \\
    & .2,4, .5,-62,1,1.25,1.5,2,2.5,3,3.3,3.8,4,4.5, \\
    & 5,5.5,6,6.25,6.6,7,7.5,8,9,10,1,12,14,15, \\
    & 16,18,20,25,28,30.31,40,47,50,63,69,75 .
    \end{aligned}
    \]

    Where speakers are to be connected in groups to one transformer, it is preferable that parallel connection be used to eliminate the possibility of multiple resonance pedance speaker wili develop greater power. If connected in sefies, the higher impedance speaker will develop greater power.

    \title{
    COMMERCIAL GRADE COMPONENTS
    }

    UTC CG power transformers, Varimatch units and chokes are designed to A.I.E.E. commercial standards. Ratings are conservative for continuous duty. Designs provide temperature rise less than 55 degrees \(C\). Units are tested for breakdown at twice maximum working voltage plus 1000 volts. Plate trans. formers are given a surge test of \(250 \%\) normal voltage at 200 cycles. All items are vacuum impregnated and sealed with special insulating compound. The conservative design and manufacturing procedure of these units make them suitable for virtually all types of commercial equipment as well as ideally suited for quality amateur and public address service.

    \section*{CG PLATE TRANSFORMERS}

    Primaries for 105, 115, 220, 230 volts, \(50 / 60\) cycles. For reduced power. seconoary voltages can be reduced to half by using 220 V . Pri. on 110 volts. These transformers may be used on 25 to 43 cycles if 220 V . Prt. is used on 110 volts. Secondary voltage

    \hline
    \end{tabular}

    UTC Special Series transformers are specifically designed for amateur and popular-priced PA service. The Special units are finished in a rich, commercial iype medium gray enamel. A recessed terminal strip is provided permitting above chassis or breadboard wiring in addition to standard chassis type wiring. The universal windings provided on driver, matching and output transformers assure a maximum of flexibility. Modulator output units will carry the \(D C\) current of the class \(C\) stage for any of the impedances available and will match practically any audio tubes to any RF load within the power rating of the transformer. Large components are housed in formed cases with top or bottom mounting. All units are vacuum impregnated-compound filled.

    \section*{TYPICAL MODULATOR COMBINATIONS} S.18-12 WATTS max.

    DRIVER TUBES: In the combinations shown below, typical suitable driver tubes are: 6C5, 6E6, 6N7, 6J5, 6C4, 12AU7, 6P5, 6J7-TR, 6SJ7.TR.

    (Refer to Page N-88 for UTC Prices)

    \section*{SPECIAL SERIES POWER EQUIPMENT}

    UTS Special Series power supply components are designed specifically for amateu and popular-priced PA service. The ratings are based on such applications and camporents should be employed. Tapped coil structures on power, GGd or LS grade iransformers afford maximum flexibility, permitting a given transformer to be used with many circuits and types of tubes. Stand by service should not be obtained by interrupting h:gh voltage center tap.

    \section*{SUBOUNCER UNITS}

    FOR HEARING AIDS...VEST POCKET RADIOS...MIDGET DEVICES

    UTC Sub-Ouncer units fulfill an essential requirement for miniaturized components having relatively high efficiency and wide frequency response. through the use of special nickel iron core materials and winding methods, these miniature units have performance and dependability characteristics far superior to any other comparable items. They are ideal for hearing aids, miniature radios, and other types of miniature electronic equipment.

    The coils employ automatic layer windings of double Formex wire . . . in a molded Nylon bobbin. All insulation is of cellulose acetate. Four inch color coded flexible leads are employed, securely anchored mechanically. No mounting facilities are provided, since this would preclude maximum flexibility in location. Units are vacuum impregnated and double (water proof) sealed. The curves below indicate the excellent frequency response available. Alternate curves are shown to indicate operating characteristics in various typical applications.

    STEP DOWN AUTO.TRANSFORMERS
    With 6 foot cord and lemale receptacle 220.240 to \(110-120\) Volts \(-50 / 60\) Cycles
    

    \section*{PHOTO FLASH TRANSFORMERS}

    Can be used for either standard (Amglo type) or trigger (Sylvanla type) multiple flash bulbs. Circult details included with transformer.
    Pf. 1 Primary for 115 volts, 50/60 cycles. Secondaries for power supply delivering 2200 volts OC to condenser up to 100 Mfd . Compound sealed in \(\mathrm{G}-3^{\circ}\) case \(21 / 4 \times 23 / 4\) ( \(53 / 4\) including flanges) \(\times 21 / 2\) inches high. Weight 2 lbs .
    pl-2 For portable service. Primary tapped for 4 volt or 6 volt battery (full valve vibrator). Secondary for power supply dellvering 2200 volts OC to condenser up to 60 Mmd . Compound sealed In G-3* case. Weight 2 lbs.

    Pf-3 Trigger Transformer 15 KV pean. \(9 / 6\) O.D. \(\times 3^{\prime \prime}\) long. weight \(20_{2}\).
    PFA Dual Pri. for either 4 V battery or 1135 V 50/60 cycles. Secondary for power supply delivering 900 volts \(D C\) to condenser up to 150 Mfo . G. \(3^{\circ}\) case, 2 tb.
    -See Page N - 104

    VOLTAGE BOOSTERS

    The constantly inceasing appliance load in home and office presents a serious low line voltage problem to which the UTC voltage booster is a perfect answer, These autotransformers are designed to operate from a 95 to 110 V. \(50 / 60\) cycle line. They boost the voltage air conditioners. Complete with line cord and receptacle.
    
    R. 87
    

    \section*{ISOLATION TRANSFORMERS}

    Ideal for isolating line noise, \(A C-D C\) sets, etc. Exceltent electrostatic shielding. 1500 volt breakdown test. Six foot cord and female receptacle.

    Primary \(110-120\) volts, \(50 / 60\) eyeles-Secondary \(110-120\) volts
    

    \section*{LINE VOLTAGE ADJUSTERS WITH METER}

    The perfect answer to abnormal of fluctuating line voltage. Adjust switch so that meter reads at red line and you know that your equipment is working at correct voltage.

    These units combine a tapped auto-transformer with a switch and meter in a compact, rugged assembly.

    The nine tap switch provides for line voltage of 60 to 140 volts on 115 volt output models and 160 to 240 volts on 230 volt output models.
    

    All units are designed for \(50 / 60\) cycle service and come complete with 6 foot input cord and plug and outlet receptacle.

    Pimary 119.120 valts, \(50 / 60\) eycles-Secondory 4, B, 12, 16, 20. 24 volts
    High power transformers suitable for operating relays, sirens, horns, gongs, etc. from 115 V. \(50 / 60\) cycle line. These units have four secondary terminals providing \(4,8,12,16,20\) and 24 volt output. The volt ampere rating is based on the 24 volt secondary tap with corresponding reduction at the lower voltages. Underwriters' approved primary leads are employed, and screw-type binding posts.

    \section*{REPLACEMENT TYPE COMPONENTS}

    UTC replacement type transformers (Pri. \(117 \mathrm{~V} .50 / 60\) cycles) represent the culmination of years of development in this field. All units are low temperature rise, vacuum sealed against humidity with special impregnating materials to prevent corrosion and electrolysis. Shells and brackets are finished in attractive high lustre black enamel.

    \title{
    REVOLUTIONARY LINEAR STANDARD AMPLIFIER
    }

    \section*{NEW HEIGHT OF FIDELITY 20 WATTS...KIT FORM}

    The Linear Standard amplifier climaxes a project assigned to our audio engineering group a year ago. The problem was, why does a Williamson circuit amplifier which tests beautifully in the laboratory seem to have considerable distortion in actual use? It took a year to fully determine the nature and cause of these distortions and the positive corrective measures. This new amplifier not only provides for full frequency response over the audio range but, in addition, sets a new standard for minimum transient dirtortion.

    An inherent weakness of the Williamson circuit lies in the fact that its negative feedback becomes positive at subsonic and supersonic frequencies. The resultant instability in use lends to parasitic oscillation at the high end and large subaudio cone excursions both of which produce substantial distortions. The Linear Standard Amplifier uses Multiple Loop Feedback and network stabilization to completely eliminate these instabilities. The oscillagrams below show comparative performance. The flat frequency response and extremely low intermodulation distortion provided by 36 db feedback, are self evident from the curves shown.

    In addition to providing an ideal amplifier electrically, considerable thought was given to its physical form. A number of points were considered extremely important: (1) Size should be minimum (power and audio on one chassis). (2) Each kit must have identical characteristics to lab model. (3) Rugged, reliable, structure is essential.

    This resulted in a rather unique construction employing a printed circuit panel as large as the chassis with virtually all components pre-assembled and wired. The result is that each kit, which comes complete, including tubes and cover, can be fully pretested before shipment. Additional wiring involves only the connection of 17 leads to screw terminals for completion.

    COMPARATIVE PERFORMANCE

    \section*{困 microtran company \\ Transformer Division Crest Laboratories, Inc.}
    

    \section*{LVS-153 line voltage stabilizer}

    A quality voltage regulator that automatically stabilizes line voltage for TV, Radio or industrial use. Popularly priced.
    Output 115 volts \(\pm 3 \%\).
    Input 9510130 valts, 60 cycles Universal use. . only one model covers 100 to 300 watt range. Automatically operated . . . Regulator never needs adjustment and turns on with sel.
    Pure waveshape, free from distortions and line frequency sensitivity of resonant type regulators.
    Size . . \(10^{\prime \prime} \times 5^{\prime \prime} \times 91_{2}^{\prime \prime}\) high.
    Finish . . . mahogany wrinkle.
    Weight . . . 10 lbs.
    

    \section*{LVB-117 line voltage booster}

    Engineered to safely and accurately restore valtage to any TV set or electrical appliance. Insures fuil strength, width, and height of TV picture when low line voltage weakens and shrinks piclure. Corrects low line voltage sync and oscillator drift troubles.
    350 Watt rating . . . ample for most requirements, restores line voltage of 90 through 135 valts to 117 volts output. Simple plug-in installation. Automatically operated . . . furns on and off with set or appliance. Multi-tap Selector Switch and Calibrated Neon Indicator permit exact voltage boost. Overload fuse protection... protects against unsafe line voltage increase. \(1 — 43 / 8^{\prime \prime}, W-31 / 4^{\prime \prime}\), H— \(3 \% 8^{\prime \prime}\). Mig. Cirs. \(-2 T^{\frac{3}{6}}{ }^{\prime \prime} \times 2 \frac{1}{2} 2^{\prime \prime}\). Weight 4 lbs .

    \section*{LVB "Jr" economy voltage booster}

    Reliable budget priced unit. Single switch control . . . provides 10 Volt Boost, drop, or straight-through line. 350 Watt rating ... simple plug-in installation. \(\mathrm{L}-2 \frac{1}{\mathrm{~m}^{\prime \prime}}, \mathrm{W}-314^{\prime \prime}, \mathrm{H}-37 \mathrm{~m}^{\prime \prime}, \mathrm{Mrg}\). Ctrs.\(1+!"\) к \(21 / \mathbf{2}^{\prime \prime}\). Weight 3 lbs .

    FP-WP Dry Elecirolytic Capacifors
    For use at ambient temperatures up to \(85^{\circ} \mathrm{C}\) in filter and by-pass circuits in radio, TV and industrial electronics. Sealed in aluminum cans with twist-prong, lug construction. FP types have Mallory exclusive Fabricated fates. WP impedance and minimum coupling between acctions. Separate anode terminals. Case is common cathode. For hardware, see page 11, Mallory Capacitors Section, of this catalog.

    \section*{Ceramic Trimmer Capacitors}
    

    Small, electrically stable capacitors for use in high frequency FM-TV circuits. Each capacitor consists of fired silvor electrodes on a ceramic rotor and base. They have a \(360^{\circ}\) rotor with a substantially constant capacity change and are completely sealed from dust and dirt. Single or dual units are available.

    Solder type lugs at each end of cat pacitor.
    Two clearance holes are provided in each capacitor for screw mounting.

    Single Units-Overall size \({ }^{21 / 32^{\prime \prime}} \times{ }^{27} 32^{\prime \prime} \times{ }^{3} 8^{\prime \prime}\) thick. Voltage Rating-600 VDC

    \section*{Fixed Ceramic Capacifors}
    (Voltage Rating-600 VDC)
    

    Mallory tubular, fixed, ceramic capacitors are manufactured in 3 types. UC is general purpose type for by-passing, coupling and other applications where a moderate capacitance change with temprature change can be tolerated. \(/ 2 T\) is zero temperature type, the nominal capacitance of which remains substantially constant over a temperature variation from \(-55^{\circ} \mathrm{C}\) to 8.5"(\% N"l is negative temperature type with a negative coefficient of 750 parts/million/degrees C. 'There capacitors are supplied with a dipped phenolic insulation for protection against moisture and have radialiy placed bare, tinnedcoppor leads approximately \(11 / 4^{\prime \prime}\) long.

    Voltage Rating-600VDC.

    \section*{Mallory Noise Filters}
    

    Type X
    

    Type W
    

    Type Z
    

    Type Z8A
    

    Type LC
    

    Type LB

    For reducing or eliminating radio frequency interference caused by various electrical appliances.
    Type \(\mathbf{W}\) has dual capacitors housed in metal tubes. Common lead of capacitors connected to case, except WSP type which has shocklimiting capacitor from common lead to case. Designed for direct mounting. Type \(X\) has single and dual capacitors housed in round metal case, except X6 which is housed in rectangular plastic case. Designed for plug-in mounting. Type Z-Single and dual inductancecapacity filters housed in round metal container and designed for
    insertion between appliance and electrical outlet. Types Z6 and Z8 have terminal for return lead to ground of appliance. Type Z8A designed for direct mounting and is equipped with \(5^{\prime \prime}\) flexible leads. Type LC-combination inductance-capacity filter housed in rectangular metal case. Equipped with line cord and plug as well as outlet for appliance. Type LB-heavy duty choke-capacity, combination filters sealed in rectangular, standard, heavy-gauge metal cut-out boxes. Equipped with heavy, flexible insulated wire leads for splicing with house or motor wiring.

    Case Size: \(41 / 18^{\prime \prime} \times 234^{\prime \prime} \times 21 / 8^{\prime \prime}\) (Minus Terminals).
    Capacity tolerance \(\pm 20 \%\).

    \section*{Instructions for use of RETMA Color Code}

    Hold capacitor with arrow pointing to right. From left to right, that first dot shall always be white to indicate standard IRETMA molded mica capacitor. The second and third dots become the first two sie. nificant figures in the capacitance. The second row is read frons right to left. The lower right dot should be the multiplier. The louer second dot indicates the tolerance and the lower left dot iadicates the class.
    

    Example shown above \(=1300 \mathrm{mmfd} . \pm 2,500\) V.W.
    The key to color significance is as follows:
    \begin{tabular}{|c|c|c|c|c|}
    \hline Color & Sig. Fig. & Mult. & Tol. & Class. * \\
    \hline Hlack & 0 & 1 & \(\pm 20 \%\) & A \\
    \hline Jrown & 1 & 10 & & 8 \\
    \hline led
    Orange & \(\stackrel{2}{3}\) & 100
    1000 & \(\pm 2^{\text {con }}\) & C \\
    \hline Yellow & 3 & 1000
    1000 & \(\pm 3 \%\) & D \\
    \hline Green & 5 & & \(\pm 5 \%\) & \\
    \hline Hlue & 6 & & & \\
    \hline Violet & 7 & & & \\
    \hline Gray & 8 & & & \\
    \hline White
    Gold & 9 & & & J \\
    \hline Silver & & 0.1 & \(\pm 10\) & \\
    \hline
    \end{tabular}
    * Denotes various electrical characteristics,
    Voltage ratings vary with capacitance as shown in RMA Specifica.
    tion-April, 1946.

    \section*{METAL-CLAD AND TANTALYTIC* CAPACITORS}

    \author{
    
    }

    \section*{SUBMINIATURE METAL-CLAD TUBULAR CAPACITORS}
    subminature metal-cad tubular capacitors are awailable with Permafil solid dielectric for operation at \(+5^{5} \mathrm{C}\) and +125 C. Silicone end seals of all-welded construction provide maximum resistance to thermal and physical shock and permit soldering up to the bushing without danger of seal damage. Butt-welded leads can he supplied either axially or at right angles. Permatil mits combine small size and no liquid leakage with high insulation resistance and ability to withstand extreme temperature cycling.
    These units meet performance requirements of MlL-C\(2 \bar{A}\) and can be supplied in standard case sizes in either tab or extended foil designs. Ratings range from 10.001 to \(1.0 \mu^{\mathrm{P}}\) in voltages of 1610.2011 . 300. 400 , and fon d-c working.

    \section*{Write for Bulletin GEC. 987 .}
    

    \section*{FOR LOW-VOLTAGE USE}

    The Tantalytic capacitor is designed for certain directcurrent applications up to 150 WVDC where alumimm electrolytics and paper capacitors are not entirely satisfactory, and is suggested for use where superior characteristics and ultimate size reduction in the highquality electrolytic field are of prime importance.
    This capacitor is a tantalum-electrode electrolytic unit. similar in construction to an ahminum electrolytic capacitor, hut smaller in size because of the characteristics of the tantalum. The Tantalytic capacitor has lower leakage currents. longer shelf life. and a wider range of temperature operation ( -55 C to +85 C ). withont derating. than the conventional aluminum electrotytic capacitor. Tantalytic capacitors. in a wide range of ratings. are currently being used in telephone equipment and military conmmication and ordnance equipment.
    Write for Bulletin GEC-808.

    \section*{MICRO-MINIATURE TANTALYTIC CAPACITORS}

    Microminiature Tantalytic capacitors are desimned for low-voltage d-c applications where long shelf life. electrical stability and ultimate size reduction are of prime importance. Widely used in hearing aids and other subminiature assemblies employing transistors. microminiatures are rated as high as 4 volts. \(\delta \mu f\) in the in inch case: higher ratings can he achieved in the \(1 / 2\)-inch case. Capacitance tolerance for all units is \(-0 \%+200 \%\).
    The microminiature employs a tantalum anode enclosed in a silver case and impregnated with a nonacid electrolyte. A synthetic plug is roll-crimped into the end of the case and a solderable tin-coated nickel lead is lap-welded to the projecting tantalum anode lead. This permits connection up to the bushing. The case itself is the cathode and is equipped with a tin-coated nickel lead soldered to the case. The unit is of the polarized type.
    
    .

    \section*{PYRANOL CAPACITORS}

    \section*{CAPACITORS TO MEET MILITARY SPECIFICATION MIL-C-25A 100 to \(\mathbf{1 2 , 5 0 0}\) Volts D-c - 0.01 to 15 Microfarads}
    

    CP 53.54-Bathtub style CP 61, \(63,65,67,69\)-Miniature Rectangular

    Intended primarily for feeder. by-pass. and blocking purposes. these units are qualified for applications where the alternating-current component of the impressed voltage is small with respect to the direct-current rating.

    All case styles are available in Characteristics \(l l, E\), and \(r\). Single-section units are supplied with a capacitance tolerance of \(\pm 19\) per cent (K), and two- and three-section units with a capacitance tolerance of +20 per cent, - 10 per cent (V). Spade-lug and footed momnting brackets are available for use with capacitors on which the mounting bracket is not an integral part.

    In addition to their regular applications, these units may also be used at higher temperatures, with higher voltages for shortlife applications, and with a-c voltages. Write to the nearest G-E Apparatus Sales Office for Bulletin GEC-810.

    \section*{ENERGY-STORAGE DISCHARGE CAPACITORS}
    
    G.E light-duty energy-storage capacitors are made in a wide rance of ratings to fit practically every requirement of high-speed fash photography, as well as home and industrial weiders for light photography, as construction, hich-quality materials, and skillful design contribute to long life and efficient operation.
    Write for Bulletin GEA-4646.

    CAPACITOR NETWORKS
    
    

    These capacitor networks are designed for radar and industrial efuipment where the normal (exponential) capacitor discharge shape is not suitable and where an impulse having a definite energy content and duration is required.
    General Electric pioneered in the development of mineral-oil-treated paper dielectric capacitor net. works for air, sea, and land radar, and is a prime supplier for the government services. The products supplied vary from the miniature types in use with aircraft and guided missiles to the large designs for land-based radar.
    Write for Bulletin GEA-4996.

    \section*{PYRANOL CAPACITORS}

    \section*{STANDARD COMMERCIAL TYPES}

    For A-c and D-c Applications - Fixed Paper-dielectric Capacitors
    

    A-c/d-c dual-rated Pyranol capacitors for motors. controls, luminous-tube transiormers. electronic equipments, and other applications will reduce inventories, simplity design problems, and increase standardization. Capacitors in the voltage ranges 236 througn 660 volts, a-c, and 400 through 1500 volts, d-c, are now dual-rated and can be used for either a-c or d-c applications. Other a-c and d-c ratings available: 0.01 to 75 microfarads, 236 to 660 volts. a-c, and 400 to 100,000 volts, d-c.

    Because of the high dielectric strength, high permittivity, and exceptional stability of Pyranol. its use as a treating material has made possible a capacitor whieh is much smaller in size, and far superion to those formerly available.

    \section*{Design Advantages}
    (1) Units are small and compact. because of the use of Pyranol.
    (2) A wide range of ratings is available in rectangular, cylindrical. and oval cases.
    (3) Three styles of mounting brackets are available and are supplied separate from the units. Units may be operated in any position.

    Write to the nearest G-E Apparatus Sales Office for Bulletin GEC-809.

    \section*{Case Style 70}
    

    Case Style 70 units with various types of terminals and removable mounting brackets
    'These Fyranol tixed paperdiclectric capacitors in Case style 70 are hermetically sealed in rectangular cases. 'lhis line includes standard ratings, ranging from very small units weighing only three ounces to large high voltage units weighing up to 175 uounds.
    All are of singlo-capacity construction, with a capacitance toloranco of \(\pm 10\) per cent. Dases are isolated and the two bushings are brought out through the cover. Units in 600 , 1000 -, and 1500 -volt ratings are available with either solder-lug terminals or with pillar-insulator terminals. All higher-voltage ratings have pillareinsulator terminals. These units may be operated in altitudes up to 7500 feet.
    Up to 600 volts d-c, bushings with solder-lug terminals are made of G-E silicone; above this rating, they are of phenolic-cup construction. Bushings with pillar- PYRANOL CAPACITORS

    \section*{Case Style 70 (Cont.)}
    insulator terminals are made of molded phenulic ur porcelain of the highest quality. All bushings arre thoruaghly bonded to the container lo provile a yer manent liquid-tight seal.

    All units can be supplied with removable mounting brackets. Both spade-lug and L-type are available. Brackets can be attached to either the top or the bottom of the units to permit umight or inverted mounting.
    Write to the nearest G-E Apparatus Sales Office for Bulletin GEC-809.

    \footnotetext{
    *Mid-point connected to case
    }

    Case Style 60
    

    These small rectangular-case fixed-paper-dielectric units are of narrower width than the "bathtub" units, and will fit into a very restricted panel surface, where case height is not the limiting dimension. Removabletype mounting lugs are of very sturdy construction.

    These units have solder-lug terminals, and are available in either single- or dual-section construction for all circuit diagrams.

    The metallic containers are hermetically sealed. and of deep-drawn construction.

    Case Style 60 units have no brackets. but removable brackets of either the footed or spade-lug type can be supplied.

    \section*{CAPACITORS FOR OSCILLATOR TANK CIRCUITS}
    

    This line of fixed paper-dielectric capacitors has been developed primarily for grid and plate blocking service in the electronic oscillator circuits of hinh-flequency induction-heating equipments. They can also be used to ad:antage in other high-frequency oscil:ato circuits of a similar nature.

    G-E high-voltage paper-dielectric capacitors are of relatively high capacitance ( \(0.01 \mu \mathrm{f}\) ) for high-frequency units, yet they are more economical than conventional highfrequency units of considerably smaller capacitance values. They can, therefore. be applied with savings in cost as well as reduced losses and lower voltage drop across the capacitor.

    \section*{features}

    Hermetically sealed in metallic cases.
    Single-bushing construction for minimum size.
    Removable mounting brackets.
    Intcrinal lead connections arranged for minimum inductalnce.
    Write for Bulletin GEA-4388.

    \section*{SCREWBASE ELECTROLYTICS}

    Type PLS-Capacitor sections have separate positive leads and common negative lead
    Type LS-Positive terminal is lug connection, can is negative terminal
    Type SC-For use where high peaks may occur . . . lug connection is positive, can is negative
    Type CL-Same as Type SC, but with can insulated from Sections . . . Separate positive and negative leads
    Type WR-Designed to replace wet electrolytics... Will withstand extremely high A.C ripples ... Has lug terminal
    Type AP-For high voltage applications. . . Sections are connected in series ... Insulated leads

    \title{
    SPRAGUE CAPACITORS
    }

    \section*{CERA-MITE* CERAMIC CAPACITORS}
    
    - Tiny, Tough, Dependable In Every Application
    - Low Self-inductance Of Silvered Flat-plate Design Means Very High By-pass Efficiency In All TV Circuits
    - Flat-plate Construction Permits Higher Selfresonant Frequency Than Tubular Ceramic Or Molded Mica Capacitors
    - Tough Moisture-proof Coating Protects Against Short-circuiting And Assures Good Performance Under Severe Conditions Of Humidity And Vibration
    - Cera-mite Capacitors Easily Fit Into Tight Spaces, Even Across Subminiature Tube Sockets
    - Designed For \(85^{\circ} \mathrm{C}\left(185^{\circ} \mathrm{F}\right)\) Continuous Operation

    \section*{GENERAL APPLICATION TYPES}
    - Excellent Where Temperature Coefficient Is Not Important, Such As By-pass and Coupling Applications
    deal For Replacing Older Types Of General Application Capacitors Such as Molded Micas, Tubular Ceramics, and Paper Tubulars
    \begin{tabular}{|c|c|c|c|c|c|c|c|c|c|c|c|c|c|c|}

    \section*{hi-voltage DOORKNOB CERAMICS}
    

    \section*{CUP CERAMICS}

    These precision capacitors are widely used in high stability r-f oscillators where frequency control is important. Tolerance on capacitance can be held to \(\pm 1 \%\). and on temperature coefficient to \(\pm 10\) ppm. Hermetically sealed construction and low self inductance are noteworthy as are high \(Q\), capacitance stability, and retrace characteristics.

    Available in \(500,1000,1500\) volt ratings for all standard temperature coefficients from P100 to N750. Write on company letterhead for complete details.
    

    Cotyriaht by C.C. P..Inc

    Copacitor Sody has Female Threads for Interchangeable Screw-in Terminals.
    - Molded in Non-Flammable, Moisture-resistant, Thermosetting Plastic.
    - Molded Guard Rings Lengthen Surface Creepage Path.
    Comes Complefe with 7 Terminals, as illustrated. (Packaged 2 per plastic box, with 14 terminals.)
    - 300K-T5 is Supplied with 2 Terminols, as per Style Marked " \(A\) "
    \begin{tabular}{ccccr}
    \multicolumn{4}{c}{ Marked } & \\
    \hline MMF & KV & Dia. \(\times\) Length & Cot. No. & List \\

    \hline
    \end{tabular}

    \section*{PRECISION \\ CERAMIC}

    For exacting circuitry in electronic instru. mentation and high stability oscillators. The same stacked disc construction as metal cup ceramics but with higher sapacitance range.
    Hermetically sealed in plated metal rubes for moisture protection. Rated for \(-55^{\circ} \mathrm{C}\) to \(+85^{\circ} \mathrm{C}\) operation as are cup ceramics.
    Available in \(\pm 1 \%\) capacitance tolerancesl Available in \(500,1000,1500\) volt ratings for all standard temperature coefficients from pl 100 to N750. Write on company letterhead for complete details.

    Widely used in precision circuitry where maximum stability is required. Unlike ordinary low cost trimmers, the special construction of these top-quality
     units prevents corrosion, permits mounting against chassis, and guarantees long, trouble-free life.
    Write on letterhead for complete details.

    INTERFERENCE FILTERS \\ FILTEROL \({ }^{\text {T}}\) TYPES \\ IF TYpES
    }
    
    - Suppress Man-made Radio and TV Interference
    - Small, Completely Self-contained
    - Quickly, Easily Installed

    Filteral Types 1, 2, and 3-Designed for connection in series with power supply lines to interference-producing devices... A 3-terminal network with the case as one terminal . . . The selected filter should have a rating higher than the continuous operating current of the offending device . . . A single Filterol connected to the high side of the line is usually sufficient . . . In severe cases a Filterol in each leg of the power line may be necessary. . . For three or four-wire systems, a Filterol in each wire is necessary.

    Filterol Type 4-A new, exclusive Sprague development incorporating a Sprague HYPASS \({ }_{\text {® }}\) Capacitor . . . Provides exceptionally high attenuation at frequencies above 5 megacycles . . . Intended for small devices with continuous current ratings up to 20 amperes.
    \begin{tabular}{lcccr}
    \hline Cat. No. & Amps. Volts \(A C\) or \(D C\) & Size & List \\
    \hline Filterol 1 & 1 & 115 & \(7 / 8 \times 11 / 4 \times 13 / 4\) & \(\$ 13.50\) \\
    Fitterol 2 & 10 & 115 & \(11 / 8 \times 2 \times 2\) & 14.80 \\
    Filterol 3 & 35 & 115 & \(11 / 8 \times 27 / 8 \times 31 / 8\) & 27.40 \\
    Filterol 4 & 20 & 115 & \(1^{\prime \prime}\) dia. \(\times 13 / 16^{\prime \prime}\) long & 3.05 \\
    \hline
    \end{tabular}
    

    IF-15-TRIPLE-SECTION FILTER for all small motor-operated devices such as food and drink mixers, vacuum cleaners, fans, drills, etc. Especially designed to prevent accidental shocks from discharge of filter capacitors.

    IF-11-DUAL HIGH-CAPACITY FILTER with campletely enclosed safety construction. Designed for use on motors over 1 horsepower and up to 220 volts AC or DC. Also used on high-current arcing or sparking devices.
    IF-2 1-COMPACT DUAL FILTER for use across brushes of fractional horsepower motors with the can grounded to motor frame. May also be used across line terminals of motors.
    IF-S I-SINGLE SECTION 2-LEAD FILTER with can completely insulated. For use across make-and-break contacts, such as thermostats, circuit breakers, door-bells, buzzers, relays, etc.
    IF-37-3-SECTION DELTA-CONNECTED FILTER especially designed for fluorescent fixtures. Only one IF-37 required for each offending fixfure. Also effective on make-and-break governor-type motors. Underwriters' Laboratories approved.

    \section*{SPRAGUE CAPACITORS}

    \section*{TO-4 TEL-OHMIKE \({ }^{\text {® }}\) CAPACITOR-RESISTOR ANALYZER}
    

    PRICED SO YOU CAN AFFORD IT!

    The handiest instrument you can buy! Modern service shops find it a must. Although moderately priced for radio and television repair shops, it offers you the quality and the accuracy required by the nation's outstanding laboratories.

    The TO-4 comes complete with step-by-step instruction manual and capacitor guide.
    - CAPACITANCE BRIDGE measures up to 2000 mf in five overlapping ranges. The special 1 mmf to 100 mmf range is exclusive with the Sprague Tel-Ohmike.
    - INSULATION RESISTANCE directly read on large meter up to 20,000 megohms for paper, ceramic, and mica capacitors. No guessing with neon lamps.
    - LEAKAGE CURRENT of electrolytics measured directly on meter, with exact rated voltage up to 600 v . applied from continuously adjustable power supply. Two ranges: \(0-6-60 \mathrm{ma}\). No guessing on eye-width or counting lamp blinks when you use a TO-4!
    - POWER FACTOR of electrolytic capacitors measured by Wien Bridge up to \(55 \%\) in three ranges.
    - RESISTANCE BRIDGE measures from 2.5 ohms to 25 megohms at line frequency.
    - MAGIC-EYE TUBE simplifies bridge balancing for capacitance, power factor, and resistance measurements.
    - PUSH-BUTTONS for instant range selection, also discharge capacitors for safety automatically upon release.
    - MODERN CASE finished in two-tone gray; measures \(87 / 8^{\prime \prime}\) high, \(145 / 8^{\prime \prime}\) wide, \(61 / 8^{\prime \prime}\) deep. Weight only \(121 / 2\) pounds.
    \begin{tabular}{|c|c|c|}
    \hline MODEL TO-4 & 115 VAC 50-60 cy & \$73.50 net \\
    \hline Model TO-4X & 115-230 V/25-60 cy & \$79.50 net \\

    \end{tabular}

    MODEL TO-4
    \(115-230 \mathrm{~V} / 25-60 \mathrm{cy}\)
    \(\$ 79.50\) net

    \section*{KT-1 KWIK-TEST \({ }^{\circledR}\) CAPACITOR CHECKER}

    An IDEAL supplement to the TO-4 Tel-Ohmike. With 75 to 100 capacitors in each set, here's a quick, easy way to check them all in a jiffy, for the KT-1 tests capacitors while they're wired in a set. NO NEED TO REMOVE THEM FROM THE CIRCUIT! The KT-1 instantly tells you whether or not a capacitor is open, shorted, or intermittent. This is the hottest thing we've ever offered to the service trade!
    - Simply press a button and magic eye tube tells you if a capacitor is open, shorted, or intermittent.
    - Checks by-pass, blocking, and coupling capacitors from 30 mmf to 2000 mmf , even when capacitor under test is wired in parallel with a resistance as low as 60 ohms. Capacitors between . 1 mf and 2000 mf
    may be tested even when in parallel with resistance as low as 2 ohms.
    - Sturdy steel case with medium gray wrinkle finish. Light gray front panel with clear black markings.
    - Overall size of the KT-1 is \(9^{\prime \prime}\) high \(\times 6^{\prime \prime}\) wide \(\times 51 / 4^{\prime \prime}\) deep -Net weight, 6 lbs.

    MODEL KT-1....... 115 VAC/50-60 cy....... \(\$ 34.50\) net
    MODEL KT-1X..........115-230 V/25-60 cy........ 39.50 net

    \section*{ERIE GENERAL PURPOSE CERAMICONS \({ }^{\circledR}\)}

    \section*{TYPES GP1 - GP2 - GP3}

    ERIE CERAMICONS are small fixed capacitors con. sisting essentially of a ceramic dielectric with silver electrodes which are fired on at a very high temperature. Erie Ceramicons are outstanding because of their excellent high frequency characteristics, small size, rugged construction and availability in a wide range of capacity values.
    GP1 CERAMICONS - The performance specifications of Type GPI Ceramicons are identical with those of temperature compensating types of Ceramicons. A GP desig. nation does allow the capacitor manufacturer added flexibility in selecting ceramic body. These capacitors meet performance specifications of RETMA Standard No. REC. 107-A, Class 1, Characteristic U2.

    GP2 CERAMICONS - The capacitance of GP2 Ceramicons will not vary more than \(+10 \%\) or \(-35 \%\) from \(+25^{\circ} \mathrm{C}\). value, as the temperature is varied from \(-40^{\circ} \mathrm{C}\). to \(+85^{\circ} \mathrm{C}\). These capacitors meet the performance specifications of RETMA Standard No. REC-107-A, Class 2, Characteristic Y5Y.

    GP3 CERAMICONS - The capacitance of GP3 Ceramicons will not vary more than \(+25 \%\) or \(-50 \%\) from the \(25^{\circ} \mathrm{C}\). value, as the temperature is varied from \(+10^{\circ} \mathrm{C}\). to \(+75^{\circ} \mathrm{C}\). These capacitors meet the performance specifica. tions of RETMA Standard No. REC-107-A, Class 2, Characteristic Z5Z.

    \author{
    For Dimensions see page 5 of this Catalog.
    }

    \section*{"GP" \({ }^{\text {® }}\) GENERAL PURPOSE CERAMICONS}
    are ideally suited for such applications as coupling and by-passing, in circuits whers temperature coefficient is not important - in other words for all receiver applications except in frequency determining circuits. Working voltage - 600 volts D. C. Use Exie "GP' Ceramicons as replacements for molded mica and paper tubular capacitors.

    Available in both molded and phenalic insulated styles

    DISC CAPACITORS TO MIL-C-IIOI5A SPECIFICATIONS ARE ALSO STOCK ITEMS

    \section*{ERIE HIGH VOLTAGE DISC CERAMICONS \({ }^{\circledR}\)}

    Designed to employ the same basic diameters that have been standardized in 600 volt capacitors. Careful and detailed life testing has been accomplished over a long period of time to establish required dielectric thicknesses
    to assure conservative ratings in the high voltage line. They differ in appearance from lower voltage units in having greater thickness, the degree of difference depend. ing on voltage rating.

    \section*{TEMPERATURE COMPENSATING CERAMICONS \({ }^{\circledR}\)}

    Erie Ceramicons are capacity-sensitive to temperature in varying pre-determined degrees, and because of this characteristic have found wide-spread application as temperature-compensating elements in circuits which must
    be frequency-stabilized over wide temperature ranges. They are also manufactured with practically no thermal sensitivity for use in applications requiring a capacitor whose value is not affected by temperature.

    \section*{NPO TEMPERATURE COEFFICIENT CERAMICONS \({ }^{\circledR}\)}

    NPO Temperature Coefficient Ceramicons are highly recommended for frequency determining applications where no capacity change with change in temperature is desired. " \(Q\) " for NPO Ceramicons above 30 mmf is 1000
    or higher. Below 30 mmf " \(Q\) " decreases slightly as capacity decreases. Working voltage - 600 volts D. C. Recommended as replacements for silver-mica capacitors.

    PARALLELING TC AND CAPACITIES

    A wide range of capacitance values and temperature coefficients can be obtained by using Erie NPO capacitors in parallel with either N330 or N750 units. The following
    formulae are used in determining the capacitance of the various temperature compensating units that are required to obtain any desired temperature coefficient and capacitance:
    \(\frac{\text { 1. (Capacitance in MMF) (Temp. Coef. Required) }}{{ }^{*} \text { 750 }}=\)
    Capacitance in MMF of the N750 unit to be used (use nearest standard capacitance value)
    2. (Total Capacitance Required) minus the value found in step 1 = capacitance in MMF of the NPO unit to be used.
    3 The total desired capacitance and temperature coefficient are obteined by connecting the units found in steps 1 and 2 in parallel.
    -If an N330 unit is to be used in parallel with an NPO unit, substitute 330 tor 75 v in this equation

    \section*{ERIE RESISTOR CORPORATION-ERIE, PA.}

    \section*{ERIE STAND-OFF CERAMICONS \({ }^{\circledR}\)}

    Stand-off Ceramicons, an original Erie development, are now widely used for the dual purposes of by-passing R.F. current to ground, and of mechanically supporting other circuit elements. They are especially suited for V.H.F. and U.H.F. applications, due to their low-inductance electrical paths and resultant high resonant frequency.

    \section*{ERIE FEED-THRU CERAMICONS \({ }^{\circledR}\)}

    These very practical feed-thru capacitors are highly recommended for by-passing R.F. to ground in feed-thru applications. Wire terminals of Style 362 and hook type terminals of Style 327 are sufficiently rugged to serve as tie points for several connections, for supporting other circuit elements, and long enough for point to point wiring. Style 327 is hermetically sealed and ruggedized, and is primarily for military and similar commercial usage. Nut supplied.

    \section*{ERIE SUPPRESSORS}

    Erie Suppressors are ruggedly constructed to withstand motor temperatures, vibration, and road shock. There are no soldered contacts in the assembly to open circuit due to engine heat. Every unit is sealed, making it impossible for water, grease or dirt to affect its operation.

    The change in resistance of Erie Suppressors after 1000 hours in \(100 \%\) humidity at \(40^{\circ} \mathrm{C}\). is well within usual tolerances specified by radio manufacturers.
    Many suppressors will drop considerably in resistance value after a few thousand miles of use, thus decreasing their suppression efficiency. The drop in Erie Suppressors is very small.
    L.Type Suppressors are held firmly on the spark plug ferrulea by the pressure contact at two points. The bottom of the bakelite uppressor case presses against the top of the plug ferrule and the crimp in the suppreasor sleeve against the side of the ferrule.

    Type 5-5 Suppressor Insfalled on Distributor Cable
    The Type S-5 Suppresaor is installed by twisting the wood. type screws into the ignition cable. The base of the woodscrews in all types of Erie Sup. pressors is a hexagon which is recessed in a hexagonal cavity to prevent its turning when the cable is being installed.
    

    Type L-7 Suppressor Insfolled on Distributor
    The bottom of the two rings extending around the metal terminal of the Type L. 7 Sup. pressor snapsinto a correspond. ingly positioned groove in the distributor head socket, forming a secure lock. If desired, a rub. ber akirt can be used to cover this diatributar head opening.

    Type 5-14
    Suppressor Installed on Magneto-Cable

    S-14 Suppressor is especially made for mounting into the magneto in certain types of ig. nition systems. The apring fits directly into the magneto. The other end has the wood screw for cable mounting.

    \section*{ERIE CERAMICON \({ }^{\circledR}\) TRIMMERS}

    These trimmers have been well known for years for their stability under the most exacting conditions. The top of the base and underside of the titanium dioxide rotor are lapped optically flat, thus eliminating air space variations with temperature. Fired silver electrodes are applied to top of base and rotor, so that capacity is changed by varying the
    amount of overlap. Capacity change per degree of rotation is approximately constant, resulting in a smoothness of adjustment not possible with compression type trimmers, where the greater part of capacity change is concentrated close to one end of adjustment.

    \section*{ERIE TUBULAR TRIMMERS}

    These are compact, economical Tubular Trimmers that are ideal for applications calling for a low minimum capacity and a high ratio of maximum to minimum capacity. Styles 532 and 535 have molded plastic dielectric. Styles \(3115-01\) and \(3139-01\) have ceramic dielectric.

    Order by Catalog Number from Table Below STOCK ITEMS - 500 VDCW

    CD "Blue Beavers" have became the service industry's mast papular tubular electralytic—being DESIGNED EXPRESSLY AND EXCLUSIVELY FOR SERVICE REPLACEMENT APPLICATIONS. Type BR is the campact unit in aluminum can with cardbaard auter sleeve. Fits neatly inta the cramped quarters of a chassis-self-supparted by means af rigid tinned sapper leads. The larger sizes may be further supparted by means af a metal strap. NEGATIVE TERMINAL IS GROUNDED TO CAN.
    TEMPERATURE RANGE-Ha \(+85^{\circ} \mathrm{C}\) except 500 V. D.C. to

    MULTI－SECTION TUBULAR ELECTROLYTICS
    

    A new series of compact，fubular metal－cased，cardbaard sleeved electra－ lytics－specially sealed against heat and humidity．

    Feafuring－
    －Direct－fo－terminol internal lead construction reduces possi bility of shorts．（Pure oluminum wires crimped securely to－ gether with outer leads within oluminum stud terminals．）
    －New high－insulation vinylite covered leads－generous 7 inches long．
    －Sections seoled in aluminum tube for profection ogoinst moisture getting in，or electrolyte drying out．
    Wax impregnoted cardboard outer insulotion sleeve．
    －Rubber diophrogm．type vent insures ideal vent action under all conditions．
    －ideal for operation at temperatures up to \(85^{\circ} \mathrm{C}\)

    \section*{TYPE ERH}

    8RH compast lubular electrolytic capacitars are widely emplayed in portable radio power rectifying circuits, electric fence devices, telephone and D.C. Himing circuits. Mermetically sealed in pure aluminum cans with an external cardboard insulating sleeve, these units are provided with melal mounting strap and bare wire leads for convenient wiring into any sircuit assembly.

    \section*{SELENIUM RECTIFIER CAPACITORS}

    Type UPE are etched anode and cathode units especially engineered to prevent capacity drop due ta high ripple and surge cuprents normally encountered in selenium rectifier circuits. A pratective series-resistor of approximately 50 ohms far a 100 ma. load, and af least 10 ahms for a 250 ma . load, should always be used to protect both the rectifier and filter capacitors.

    Use only type UPE in selenium rectifier circuits.

    capacitar unequaled by any malded fubular heretafare developed. The 'CUB'" passesses characteristics that will meet the wide and demanding applicatians faund in critical industrial, militory and experimental electranic equipment.
    this is the unit recommended far general replocement service.t The "CUB" is malded igh laugh, durabl the unil is processed by specic impregnatian-the 200 and 400 vall series are impregnated with HT campaund and the 600 valt and up series are impregnated with ail (Dykanal "C").
    In countless productian test runs, the "CUB" has survived an average of 30 cycles of the punishing JAN and MIL Temperoture and Immersian Cycling Test
    The "CUB" is dry assembly pracessed ond sealed immediately affer impregnatian. This technique results in life lang high insulation resistance, law pawer factar, and exceptianal capacitance stability. Each unit is tested at several times its rated valtage ta insure high dielectric strength.
    At least a \(50 \%\) greater resistance to humidity and o 15\%-25\% greater valtage breakdawn aver comparable malded tubulars, is built into the C.D 'CUB'
    Extra strang capper-weld leads eliminate breakage during as. sembly and thraughaut service life. The leads are salder sealed securely to the unit

    \section*{corivinh（d）DU：ThFI：}

    \section*{STEATITE－CASED tUBULAR CAPACITORS}
    

    C－D＂BUDROC＂capacitars are made with nan－inductive paper and extended foil elements haused in the finest grade ceramic （steatite）tubes with Polykane end－seals．
    The steatite tube provides exceptional protection against heat and humidity．The Polykane end－fill is tightly banded to the steatite tube and lead wires，cannot soften，melt or flow at any rated operating temperature．This assures a permanent seal to moisture and humidity besides providing a rigid support for the lead wires．Miniaturized versions of the BUDROC（Type STT）are available in capacitances from .0005 to 0.1 mfd ．and in voltages \(100,200,400\) and 600 VDCW．See Eng．Bul． 159.

    \section*{TEMPERATURE RANGE：}
    ＂BUDROC＂capacitors rated up to and including 400 VDCW are impregnated with high quality HT compound \(-40^{\circ} \mathrm{C}\) to \(+90^{\circ} \mathrm{C}\) ．Units rated above 400 volts VDCW are impregnated with C．D Vikane \(\left(-55^{\circ} \mathrm{C}\right.\) to \(+100^{\circ} \mathrm{C}\) ）．

    \section*{METAL CASED DYKANOL PAPER CAPACITORS}
    

    TYPE TMJ．．．．4P
    C－D type TMJ－4P is a non－magnetic metal－cased，ungrounded section，tubular paper capacitor，the body of which is covered with a non－hygroscopic plastic insulating tube．The unit is also available with a mounting strap＊on request．
    The TMJ is impregnated with Dykanol＂C＂（oil）and meets MIL－C－25A temperature Characteristic＂\(E\)＂．
    STANDARD TOLERANCE：\(\pm 20 \%\)
    TEMPERATURE RANGE：\(-55^{\circ} \mathrm{C}\) 10 \(+85^{\circ} \mathrm{C}\)

    \section*{MINIATURE METAL-CASED TUBULARS} ' \({ }^{\prime}\) DEMCONS'
    

    The Cornell-Dubilier series of "DEMICON" copocitars affer miniaturized tubular metal-cased units designed ond pracessed to meet rigid and severe aperoting requirements particularly where space limitatians are an impartant factor.
    Unique and improved manufacturing pracesses hove contributed to a product of unusual stability, dependability, and longevity. as attested to by field-test proven service over a lang peried of time.
    Cornell-Dubilier DEMICONS are hermetically sealed in metal cases, with glass-to-metol seal terminals and are available in o wide variety of maunting styles, impregnants, toleronces, and internal construetion. See Bulletins NB.i47 and NB.1sI.

    COMPACT METALIZED－PAPER CAPACITORS
    

    Cornell－Dubilier self－healing，metalized poper capacitors have bettep electrical choracteristics and extra long service life． Units are light and compoct．
    ＂PUP＂units have bare wire leads securely onchored in metal end－caps，wax－impregnated and dip－sealed against humidity． All units are extended foil－non－inductive waund for low im－ pedance of high frequencies，have high insulation resistance， low power factor and small capacity change with temperature and life．
    ＂METAPUPS＂ore one piece metal iubular cosed，prearure sealed by spin－over on synthelic rubber goskets．
    ＂SEALPUPS＂ore o high quality metelized peper cepacitor， designed for smellest size ond positive seal ogoinst moisture． They are hermetically seoled in metal coses with solder－ seal glass terminals．Especiolly recommended in militory and commersial equipment where miniature size and light weight are poramount．

    For further dato on C．D metalized copacitors，wite for Bulle． tins 142－3－4 and NB－152．

    \section*{HIGH TEMPERATURE Metalized-Paper CAPACITORS}
    - POLYKANE-IMPREGNATED: This impregnonl insures excelient electricol properties aver long service life
    - MOISTURE RESISTANT: MTX fubuiors have the finest gioss-to-metal solder seal terminals for maximum protection against moisture. MPX fubulors have POLYKANE-impregnoted poper fubes, bonded securely to the POLYKANE fill. An external flash wax dip provides an increased moisture seal far extra long storage and service conditions under extremes af humidity.
    - NON-LEAKING: "POLYKANE" is a solid thermosetting plastic that will nat soften, crask, or leak at the maximum lemperature. No oil or wax is used internally with these units.

    \section*{CERAMIC CASED HIGH POWER MICA CAPACITORS}
    

    C-D Ceramic-cased transmitter copacitors are built to handle the high kva requirements of radio and television transmitters as well as special applications within the electrical ratings of the units.
    Used in grid, plate blocking, coupling, tank and bypass applications. Mica sections are enclased in low.loss ceramic tubes with cast aluminum end terminals which permit mounting in any position. Parallel or series combinations may be accomplished by bolting or strapping the terminal flanges fogether

    MOLDED MIDGET "SILVER-MIKE" CAPACITORS
    

    HIGH-STABILITY "SILVER-MIKE"* UNITS
    Type 22R miniolure "Silver-Mike" capocitars are especially odapted for use in circuits where accuracy and stobility af capocily is af prime impartance. They are roted at 500 valls D.C.W. and tested of 1,000 volts D.C.. malded in law-lass red plastic and fully protected against physical domage ar changes in characteristics due to varying atmospheric canditions.
    STANDARD TOLERANCE \(\pm 5 \%\), but in na instance less than ذ 1 mmf . Far copacity Talerance of : \(20 \%\) deduct \(10 \%\) from list; \(10 \%\) deduct \(5 \%\) from List; \(3 \%\) add \(10 \%\) ta List; \(2 \%\) odd \(15 \%\) ta list; \(1 \%\) add \(25 \%\) to list.

    Nofes On Ordering 5R, IR, IDR Units
    standard caparity tolarance is \(5 \%\). Also ovoiloble, an special order, in talerance rotings of plus or minus \(3 \%\), add \(10 \%\) to list prices, \(2 \%\) odd \(15 \%\) to list prices ond \(1 \%\) odd \(25 \%\) to list prices, for within 1 mmfd whichever is greoter). All types con olso be supplied in plus or minus \(10 \%\) and \(20 \%\) talerances of lower prices. - Reg. U.S. Paf. Of.
    
    

    TVPE IR•X-jTHICK TYPE 100.X S'THICK TYPE IR \& IDR
    

    TYPE 5R

    Types 1R, 1DR, and 5R "Siver-Mike" silvered mico capacitars are designed for use in high \(Q\) electranis circuits where fre. queney stability and minimum lass must be mointained. They are ideolly suited far use in circuits where the LC praduct must be mointained canstant, and particularly adapled far use in funing IF Iransfarmers, push-bultan luning circuits and ather similar applicatians. Standard units are malded in law-lass red plastic.
    
    *When JAN-C-5 uniss must be supplied, ordes occording to specific CM type designations listed in C-D Mico Bulletin-5eries 422.

    \section*{FEATURES OF "TINYMIKE" DISC-TYPE CERAMIC CAPACITORS}
    - Smoll. spoce-saring and lightweight.
    - Adapted for wide variety of applicotions.
    - Available in all popular ca. pocities.
    - Guoranteed minimum ca. - Law inductance, stable, de pacity tolerance.

    Minimized eddy current losses due to construction.
    - Law inductonce, stable, de pendable performance.
    - Available with temperature campensating characteristics.

    }

    QUIETONE R.F. ATTENUATION FILTERS
    

    The Quietone Capacitor Filters listed in this catalog have been selected for their adaplability to a wide group of filter applications. Many odditional types in bath Feed-Thru and Pi
    circuit design for special application problems are fully covered in 12 page Bulletin NB-148.
    NOTE: See Page 37 of this cotalog for "Universal". Quietone Filters designed for TV, Rodio ond Appliance opplications.

    \section*{FEED-THRU CAPACITOR FILTERS}

    The FEED-THRU capacitor filter is a three-terminal network with internal construction and lead connectians orranged for minimum impedonce. Cornell-Dubilier FEED.THRU copacitars closely follow the reactance curve of an ideal capacitor of all fre. quencies up to 400 megacycles and even beyond.

    FEED-THRU capocitar filters ore available in single and multiple circuit ratings from 1 ampere to 350 amperes in bath \(D C\) ond AC applicotians and frequencies up to 2000 cycles. The CarnellDubilier FEED THRU capacitor filter gives maximum insertion loss per unit volume, weight ond cost of any similar type af device.

    PI FILTERS

    Cornell-Dubilier PI filters are ovoilable in a wide range of insertion lass characteristics to suit the requirements af every application. Several hunded standard designs have been estoblished in single and multiple circuits with current ratings up to

    350 amperes and in voltage ratings both \(D C\) and \(A C\) up 10 2000 cycles. Designed to pravide maximum insertion loss af oll frequencies from 14 kilocycles up to 1000 megacycles.

    }

    \section*{DUR-MICA The NEW MICA CAPACITOR}
    
    1. The new "Dur-Mica" is a silvered mica capacitor coated with a specially developed plastic coating for extra durability.
    2. Operating temperature range \(-55^{\circ} \mathrm{C}\). to \(125^{\circ} \mathrm{C}\).
    3. Improved moisture resistance particularly in the higher temperature range.
    4. New reduced size makes "Dur-Mica" the smallest mica capacitors.
    5. Temperature coefficient approaching the "NPO" range.
    6. New radial lead construction for reduced inductance, plug-in circuitry, and automatic assembly techniques.
    7. A versatile capacitor that gives precision performance with substantial savings in cost.
    8. The "Dur-Mica" meets or exceeds all applicable MIL and RETMA standards for mica capacitors.

    \section*{DIMENSIONS}

    DM15 \(-7 / 16 \times 9 / 32 \times 5 / 32\) to \(7 / 32\) thick
    DM19 \(-5 / 8 \times 13 / 32 \times 5 / 32\) to \(7 / 32\) thick
    DM20 - \(23 / 32 \times 13 / 32 \times 5 / 32\) to \(7 / 32\) thick

    Standard Tolerances \(\pm 10 \%\)
    Voltage Rating 500VDCW
    Except Starred (*) Items 300VDCW

    For closer tolerances: DM15 DM19, DM20 \(\pm 5 \%\) add \(10 \%\) add \(10 \%\) \(\pm 2 \%\) add \(30 \%\) add \(20 \%\)
    \(\pm 1 \%\) add \(60 \%\) add \(50 \%\)

    }

    \section*{MINIATURE}

    MICA CAPACITORS

    \section*{''Smaller than your fingernail but SKY HIGH IN PERFORMANCE!"}
    
    

    Known the world over for their reliability under all operating conditions, El-Menco Capacitors are chosen by manufacturers who want successful performance and long life from their products.

    El-Menco fixed mica dielectric capacitors are compact, precision made. Manufactured in accordance with American military standards to meet Army and Navy MIL-C-5A Speciftations. All impregnated and MIL or RMA color coded. Standard specifications limits are shown.

    Moulded in low loss bakelite, tested at double the working voltage. Tests for dielectric strength, insulation resistance. temperature co-efficient and capacitance drift, humidity and life tests atcoording to MIL and RMA STANDARI)S. All units are wax dipped for salt water immersion seal.

    Far law valtage circuitry, higher copacities are available at 100 VDCW rating.

    \title{
    ARCO ELECTRONICS, ING. EL-MENCO CAPACITORS
    }
    

    \section*{STANDARD TOLERANCES:}

    Regular mica \(\pm 20 \%\) ( \(A\) and \(B\) Characteristics) For \(\pm 10 \%\) tolerance add \(10 \%\) to list price. For \(\pm 5 \%\) tolerance add \(25 \%\) to list price.
    Silvered Mica \(\pm 5 \%\) (C, D and E Characteristics) For \(\pm 2 \%\) tolerance add \(15 \%\) to list price. For \(\pm 1 \%\) tolerance add \(25 \%\) to list price.

    \section*{NOTE:}

    CM19 capacitors available only up to 1500 mmf .
    CM20 and CM25 available to 2000 mmf .

    \section*{ANNOUNCING A NEW MOLDED MICA EL－MENCO CAPACITOR}

    \section*{CM－42}

    A higher capacity molded mica which can be wired in cirectly without need of additional mounting facilities．
    

    \title{
    ARCO ELECTRONICS, ING. EL-MENCO CAPACITORS
    }

    \section*{TELEVISION • TRANSMITTINC • INDUSTRIAL HIGH VOLTAGE MICA CAPACITORS DC WORKING VOLTAGES: FROM 1000 TO 2500 VOLTS \\ Molded in CM-20, CM-35 and CM-40 Cases}

    \begin{abstract}
    Demand for smaller units in higher voltages designed to meet the requirements for Television, Power Amplififrs, Low Power Trangmitters, and various Indestrial. Uses has increased. EL-MENCO designed and produced units listed below are especially adaptable to compact circuits where space is an important factor. Their acceptance has been overwhelming by the various manufacturers of Television Receivers.

    In many cases, these units will do the work of capacitors molded in CM-45, CM-50, and CM-55 cases without breaking down. No Special Mountings Are Negessary; just wire right into the circuit.

    The capacitors are molded in low-loss bakelite and tested at double the branded voltage. They are tested for dielectric strength, insulation resistance, temperature coefficient, capacitance drift, susceptibility to humidity, and length of life, according to RCM Standards. All units are wax-dipped for protection against salt water immersion.
    \end{abstract}

    \title{
    PAPER DIELECTRIC \\ CAPACITORS
    }
    

    El-Menco CP type paper tubular capacitors are sealed into Steatite Tubes which serve to insulate the canacitor elertrically as well as against moisture and heat. The rabacitor insert is impregnated with Mineral Oil. therehy assmoing long life at \(85^{\circ} \mathrm{C}\) operating conditions. This feature insures successful operation at the high ambient lemperatures existing in small. compact enclosmes.

    The Non-lnductively wound paper and foil units are sealed in the Ceramic Tubes by means of baked Synthetic Resin lind Fills which commot melt at any conceivable operating temperature. The end fills will not dissolve in wax. permitting the capacitors to be potted without damage to the insert. Leads are of timned copper 21/4" long.

    \section*{MINERAL OIL IMPREGNATION NON INDUCTIVE WINDING SYNTHETIC RESIN END SEALS - STEATITE CASE}

    The Steatite tube and baked synthetic resin end-fill provide a seal which rivals that of hermetically sealed constioction, resulting in a dependability and longevity previously unpqualled. Whether in operation or on the shelf, this paper tubular capacitor will maintain its excelhent chararteristice for years,

    ARCO ELECTRONICS，INC． EL－MENCO CAPACITORS
    }

    \section*{Single and Dual PADDERS}

    El－Menco Pabiding Condensers have been acclaimed by engineers as the finest development in adjustable mica condensers．
    The construction is such as to completely enclose and protect the delicate enges of the mica films，made of the finest quality clear India ruby mica．

    The phosphor bronze adjusting plates assure permanent resilience and freedom from mechanical fatigue．All parts are heavily plated to resist corrosion．

    \section*{CM-15 MINIATURE MICA CAPACITOR KIT}

    FOR EXPERIMENTAL WORK Don't Get Caught Short...
    

    \section*{ALWAYS HAVE THE CORRECT}

    CAPACITY ON HAND
    This Handy Kit consists of 46 most commonly used Capacitors.. . five of each capacity as listed on page P. 62 packed in individual tuck boxes, properly identified capacity as listed on
    for permanent use.

    \section*{SPECIAL KIT LIST PRICE ONLY}

    THESE MINIATURES FIT INTO THE SMALLEST AREA CAPACITOR SIZE \(\left(9 / 32^{\prime \prime} \times 1 / 2^{\prime \prime} \times 3 / 16^{\prime \prime}\right)\)

    The complete set of capacitors amounts to \(\$ 113.00\) at list prices. You get the entire set during this introductory offer, for only \(\$ 90.00\).

    COMPARE COST!

    \section*{Type 46 Trimmer and Type 30 Padder Kits}

    A complete stock of trimmers and padders is provided in these compact, easily handled, and readily accessible kits. Alwavs have a full line of El-Menco trimmers and padders available for immediate use.
    

    TYPE 46 TRIMMER KIT
    Provides a capacity range from \(11 / 2\) to 780 mmfd . Twenty-four units of each size available in type 46 trimmers (see P-41).
    The total list price for all units included in the kit is \(\$ 130.80\).
    Yet you may have this complete kit for only
    Special Kit List Price \(\$ 100.00\)
    

    TYPE 30 PADDER KIT
    Provides a capacity range from 15 to 3055 mmfd ( \(30 \mathrm{M}: 15\) to 2525 mmfd .)
    Twelve units of each size available in type 30 or type 30 M (see P-40).
    The total list price for all units included in the kit is \(\$ 191.40\).
    Yet you may have this complete kit for only
    Special Kit List Price \(\mathbf{\$ 1 4 5 . 0 0}\)

    \section*{TC TEMPERATURE COMPENSATING TUBULARS}
    

    Designed especially to limit frequency drift in r.f. circuits where temperature variations are prevalent. These capacitors ore constructed with a ceramic body which chonges capacities as the temperature varies. Use Centralab TC Hi-Kaps when servicing superhet receivers-replace older types in oscillator and detector circuits in TV, AM and FM receivers. 1,200 volts D.C. test; 600 volts D.C. working. Comply to JAN-20-A specifications.

    \section*{TCZ TUBULAR HI-KAP \({ }^{\text {B }}\)}

    All TC Hi-Kaps conform to JAN-C-20A specifications. NPO Units (JAN-CH-CJ-CK) which show zero copocitance chonge over temperature range - \(20^{\circ}\) C. to \(+85^{\circ} \mathrm{C}\).

    CERAMIC CAPACITORS (Cont.)
    }

    \section*{1000 V.D.C.W. STANDARD DISC HI-KAPS}
    - The most complete line of standard disc capacitors available.
    
    - All units 1000 VDCW \(-100 \%\) tested at 2000 V.D.C.
    - All units thru .005 mmf . built to Underwriters' Labs test specifications for use in A.C. lines.
    - Close tolepances-smallest available sizes.
    - Double coating of Durez phenolic insulation to give maximum breakdown strength.

    \section*{RESISTOR-CAPACITOR} COLOR CODE CALCULATOR

    Makes it easy to read the coding on tubular or dise ceramic capacitors and radial- or axial-lead re sistors. Printed in 11 colors for quick identification. Available only from Centralab distributors.

    Sugg'd. Dealer Net \(\$ 0.25\)

    \section*{MOLDED DISC CERAMIC HI-KAPS \({ }^{1}\) For Byposs, Coupling and General Applications}
    

    Molded disc ceramics feature highest available breakdown to ground, highest lead strength, and resistance to mechanical damage, closest tolerance 'MD's" can be placed directly against a chassis, or adjacent to high voltage leads without danger of flashover or breakdown. Low inductance makes these units highly efficient in high frequency circuits. They are not recommended for use in resonant or tuning applications. Voltage Rating: 1,000 V.D.C.W. to 5,000 \(\mathrm{mmf}, 600\) V.D.C.W. over \(5,000 \mathrm{mmf}\). Maintain high capocity and stand up under \(+85^{\circ}\) C. operation. Insulation - Molded Centrathene†. 2,500 V.D.C. breakdown to ground. Electrical properties constant to 3,000 megacycles. Insulation resistance of molding 300,000 megohms. Moisture absorption \(.005 \%\). Power factor of molding \(.02 \%\). Fungus resistant. Unaffected by ozone, salt water, any known acid, or solvent at room temperature. Will not become brittle at \(-55^{\circ}\) C. Leads - No. 22 tinned copper \(11 / 2^{\prime \prime}\) lang. All units one size - \(11 / 16^{\prime \prime}\) diameter, \(3 / 16^{\prime \prime}\) thick, maximum. Packaged - 5 units per polyethelene bag. 5 bags (25 units) per carton.

    For Bypass, Coupling and General Applications
    

    Malded disc ceramics feature highest available breakdown to ground, highest lead strength, and resistance ta mechonical damage, closest talerance. "MD's" can be placed directly against a chassis, ar adjacent to high valtage leads withaut danger af flashover or breakdawn. Low inductance makes these units highly efficient in high frequency circuits. They are nat recammended for use in resonant ap tuning applications. Valtage Rating: 1,000 V.D.C.W. to 5,000 \(\mathrm{mmf}, 600\) V.D.C.W. over \(5,000 \mathrm{mmf}\). Maintain high capacity and stand up under \(+85^{\circ}\) C. aperation. Insulation - Malded Centrathene†. 2,500 V.D.C. breakdawn to graund. Electrical properties constant to 3,000 megacycles. Insulation resistance of molding 300,000 megahms. Maisture absorption \(.005 \%\). Pawer factor of molding \(.02 \%\). Fungus resistant. Unaffected by ozone, salt water, any known acid, or solvent at raam temperature. Will not become brittle at \(-55^{\circ}\) C. Leads - No. 22 tinned copper \(11 / 2^{\prime \prime}\) long. All units one size - \(11 / 16^{\prime \prime}\) diameter, \(3 / 16^{\prime \prime}\) thick, maximum. Packaged - 5 units per palyethelene bag. 5 bags (25 units) per carton.

    \section*{TV ATTENUATOR SWITCH CAT. No. PCH-4 PRINTED ELECTRONIC CIRCUIT H PADS}

    The Centralab PCH-4 Television Attenuator Switch is designed as a service tool to determine the amount of attenuation required to secure best IV reception. it is also valuable for permanent installation in receivers. The switch incorporates Centralab's exclusive Printed Circuit TV H-Pads.

    \section*{ADVANTAGES OF SWITCH}

    The switching arrangement makes it possible to attenuate each station as much or as little as necessary depending on daily conditions such as weather or existong inferference, and allows for proper attenuation to balance two or more stations. Switching also eliminates the "hit-or-miss" method of installing H-Pads. Switch is installed in series with 300 ohm-twinlead. PCH-4.

    \section*{STEATITE}

    Centralab has been producing fine ceramics since 1928 ... primarily for its own use in fixed resistors, ceramic capacitors, switches, and more recently, printed electronic circuits. Often called upon by other manufacturers to produce many "standard" and custom designs, some very intricate. Centralab is some very intricate. Centralab is the only ceramic manufacturer capable of producing many of these in quantity. All items listed are Grade L-s Steatite, approved with-
    out Che. Characteristics: Uniform white appearance, high dielectric use. Characterisics: low loss at high frequencies, and strong mechanstrength, exceedingly ically. impervious to moisture and common acids, will not warp. withstands high temperatures; harder than hardest quartz.

    SANGAMO CAPACITORS
    }

    \section*{ELECTROLYTIC CAPACITORS}

    TYPE MT－MTD－MTH
    

    SANGAMO Type MT＂Chieftoin＂electrolytics are especiolly designed for televisian and other electronic applicotions where operation at \(85^{\circ} \mathrm{C}\) ．temperatures is required．They are hermetically sealed in round aluminum containers which are encased in heavy insulating sleeves on which polarity is clearly indicated．Being small in physical size they are most popular where mounting in limited space is required－They will fit anywhere and can be mounted in almost any position．Double－thick paper spacers as－ sure adequate breakdown characteristics and all sections are tightly held in place within the container．Multiple staking con－ nects the terminol tabs to the electrodes ond provides permanent low resistance contact throughout the life of the capacitor．Low voltage units utilize etched cathodes to maintain uniform capacity when they are subjected to combined conditians of heat and high ripple currents．

    TYPE FM
    

    The SANGAMO Type FM＂Arrowhead＂electrolytic capocitors are similar in design to the Type MT＂Chieftain＂in every respect except leads．The Type FM is equipped with flexible，insulated wire leads and stud terminals eliminating the problem of crossed wires and the necessity for the use of insulating sleeves．They ore much smaller than the wax－end filled types with insulated leads． The capocitors themselves are housed in round aluminum con tainers which are encased in heavy insulating sleeves．They are especially designed for the rugged television requirements where \(85^{\circ} \mathrm{C}\) ．operating temperatures are encountered．

    TYPE MMT
    

    MINIATURE TUBES
    SANGAMO Type MMT miniature tubular electrolytic capacitors are designed for use in miniaturized equipment and are ideally suited to meet the precise operoting require－ ments of low valtage circuits．They are small in physical size and are self supporting by means of strong bare tinned copper wire leads． The Type．MMT capacitors are contained in drown aluminum tubes encased in a fitted cardboard insulating sleeve．Polarity of all units is clearly marked on the cardboard sleeve．

    SANGAMO CAPACITORS
    }

    ELECTROLYTIC CAPACITORS

    TYPE PL FOR TELEVISION AND OTHER ELECTRONIC APPLICATIONS

    The SANGAMO Type PL "Warrior" electrolytic capacitors are specially designed for all television and electronic applications requiring long life and dependable performance at \(85^{\circ} \mathrm{C}\) under conditions of extreme ripple currents and high surge voltages. They are sealed in round aluminum cans and have iwist-prong tabs for washer or direct chassis mounting. The capacitor element current carrying tabs are securely clamped and staked to the terminal lugs, providing permanent, low resistance connections. In all cases the aluminum can is negative and the mounting ring provides the negative electrical connection.

    The Type PL has been specially engineered for the rigid TV replacement applications found in all of the leading television receivers manufactured in the industry.

    \section*{ELECTROLYTIC CAPACITORS \\  \\ TYPE BTE \\ }

    The SANGAMO Type BTE electrolytic capacitor is ideally suited for filter and bypass circuits in marine， aircraft，geophysical and many other applications． The Type BTE cartridges are first sealed in aluminum lubes and then encased in sturdy－corrosion－resistant， hot tinned steel cases providing a complete hermetic seal under extremes of weather conditions．All units are equipped with glass－to－metal sealed terminals． Mounting flanges with \(3 / 16^{\prime \prime}\) holes are provided at each end．

    \section*{TYPE TS}
    

    Ideally suited for all applications where quick capacitor changes are required，the SAN－ GAMO Type TS units are equipped with a four－pin octal base mounting for use with standard octal base tube sockets．The special design of the bakelite octal base insures that the aluminum con－ tainer will not contact the mounting surface and the connections to the brass pin terminals are imbedded in this bakelite base．The base pins are nickel－plated to prevent corrosion and insure good contact with the socket terminals．

    \section*{Telechié－}

    \author{
    PLASTIC MOLDED TUBULAR
    }
    

    The SANGAMO＂Telechief＂is molded in Sangamo HUMIDI－ TITE to provide more stable caparity values，unsurpassed mois－ ture resistance，exceltent seal choracteristics，and operation up － \(85^{\circ} \mathrm{C}\) ．temperature．Small in physical size，and rugged in onstruction，this rubular is especially adaptable to television， auto radio，small AC－DC set，and other uses．The leads are firmly imbedded in the hard plastic case and have been especially designed to resist breckage．The＂Telechief＂assures operating dependability under extremes of heat，humidity and physical stress．

    SANGAMO CAPACITORS
    }

    \section*{PAPER CAPACITORS}
    

    The Type 50 paper capacitors are pri－
     marily intended for bypass application． They are non－inductively wound，are sup－ plied in fractional capacity values，and will provided efficient and continuous oper－ ation in R．F．and A．F．bypass，audio fre－ quency coupling，and other A．C．circuits． These units are impregnated and filled with mineral oil and may be operated under severe humidity conditions at tempera－ tures up to \(+85^{\circ} \mathrm{C}\) ．

    \section*{SANGAMO CAPACITORS}

    \section*{PAPER CAPACITORS} TYPE 71 Seminale

    SANGAMO Type 71 diaclor impregnated and filled paper capacitors have the advantage of light weight，and are smaller than the case size specified by JAN－C－25．Diaclor＊is a spe－ cially compounded，chemically purified chlorinated dielectric oil．This synthetic impregnant，whose characteristics can be controlled with great uniformity，possesses a high dielectric constant，high volume resistivity，low power factor，high dielec－ tric strength，and is non－inflammable and non－explosive．Type A mounting brackets are supplied with each capacitor as standard equipment．If Type B or C brackets are required，they must be specified when ordering．Either composition rivet or stand－off parcelain terminals can be supplied，and the type desired should be specified．

    SANGAMO CAPACITORS
    }

    \section*{NEW MOLDING COMPOUND FOR}

    \section*{SANGAMO WIRE LEAD MICAS}

    All SANGAMO wire-lead micas are molded in HUMIDITITE, a new molding compound developed by Sangamo, that gives them moisture resistance characteristics far superior to any others on the market. The standard moisture resistance test described in MIL-C-5A (proposed) Specification requires mica capacitors to offer at least 100 megohms of insulation resistance after ten 24-hour cycles in a humidity chamber at \(\mathbf{9 0 \%}\) to \(95 \%\) relative humidity. The best competitive micas barely meet this requirement . . . but Sangamo HUMIDITITE Micas, under the same conditions, all tested in excess of 50,000 megohms! For additional information about HUMIDITITE, write for Engineering Bulletin No. TS-111.

    Type G ceramic cased capacitors are intended for service where highest voltage and R.F current ratings are required, such as in commercial transmitting or induction heating applications. All possible stens are taken in design and manufacturing operations to insure permanence of quality. Current ratings of these four sizes as well as detailed information on the Type G5 will be supplied upon request. Ferminal plates are designed to permit any usual connecting or mounting practices

    BRAND NEW CATALOG OF COMPLETE AEROVOX LINE (CATALOG DC-359)
    Space limitations prevent us from listing the complete Aerovox line of capacitors, resistors and filters. As a result, the Aerovox listing on the following pages contains only those industrial items that are of immediate interest to you. However, if you would like a complete catalog of the entire Aerovox line, simply write on your letterhead for Aerovox Catalog DC-359, illustrated here. This brand new edition lists all items
    for service and industrial applications including hundreds: DC-359, illustrated here. This brand new edition lists all items
    for service and industrial applications including hundreds of new items never before listed.

    \section*{AC CAPACITORS (Catalog MS-55-10)}

    A complete catalog and replacement guide for the users of AC capacitors for motor-start and motor-run applications. Includes a complete section on airconditioning capacitors with up-to-the-minute replacement information.
    

    \section*{JAN MICA CAPACITORS \\ (Catalog DM-542)}

    Complete listing of the more popular commercial and military mica dielectric capacitors. Cross-referenced with JAN specifications. Inclucles molded and transmitting mica capacitors along with important color-code information.

    \section*{JAN PAPER CAPACITORS (Catalog DJ-5.41)}

    A complete listing of paper-oil capacitors as manufactured to specification JAN-C-25 and MIL-C-25A. All items cross-referenced with JAN specifications. All items listed are oilfilled. metal cased units, and are immersion proof and hermetically-sealed to meet all applicable JAN and MIL specifications.

    \section*{AFH \\ ELECTROLYTIC CAPACTORS (Catalog AFH-355)}

    The most complete line in the industry . . 738 twist-prong electrolytic capacitors, all rated for \(85^{\circ} \mathrm{C}\) operation. Listing includes 81 single units, 132 clual units, 281 triple units, and 244 quadruple units. In addition, a complete listing of PRS tubular electrolytics and SRE miniature Bantam electrolytics.

    Tiniest of the Aerovox electrolytic capacitors, handles fullsized loads. Especially suitable for cramped and limited space applications in hearing aids, miniature radios and similar applications. Hermetically sealed in aluminum can and furnished with cardboard insulating sleeve. Negative grounded to can. Especially useful in low voltage miniaturized circuits.

    TYPE AEP

    \author{
    Plug-in Electrolytic Capacitors
    }

    Hermetically sealed, dry electrolytic capacitor furnished in round, aluminum can and 4 -pin, octal-base mounting. For quick changes, readily removed and replaced in a standard octal-base tube socket.

    For use where continuous service is important. They are ideally suited for experimental testing, juke boxes and communication receiver uses. These units are the commercial equivalents of Type CE51's, 2's and 3's, as listed in JAN Specification JAN C62.

    Operating temperature to \(+65^{\circ} \mathrm{C}\). Quadruple element units furnished with ground lug for cathode connection.

    \section*{TYPE P88N 'DURANITE}

    \author{
    Duranite Blue Moulded Tubular Capacitors
    }

    Toughest capacitors ever offered for radio-electronic equipment, DURANITE capacitors are entirely new - in design, impregnant, processing, and casing. New technique glove fitting contact and seal throughout. DURANITE provides a permanent, non-varying, rock-hard caslng, does not dry out, does not develop cracks or fissures. Pig-tail leads firmly imbedded, won't pul out, won't work loose. Moisture-proof; operate from sub-zero to over 2120 F Exposure to temperatures of \(250^{\circ} \mathrm{F}\). will not impair life or performance, no deterioration on the shelf.

    \author{
    Ceramic-Cased \\ Tubular Capacitors
    }

    New ceramic (densesteatite) encased paper tubular for performance above that of conventional paper tubulars. New thermosetting end-seals for exceptional humidity protection -250 hour humidity test as per REC-118. Firmly imbedded terminals will not work loose or pull out. Operating temps are -550 C to \(+85^{\circ} \mathrm{C}\). Meets all requirements of RETMA Spec. REC-118, hi-temp range, class M.

    TYPE P89

    \section*{Oil Filled}

    Tubular Capacitors
     saving tubes. Ideal for vibrator applications, coupling and by-pass unctions in transmitters, high-voltare and in test equipment. Fully sealed against oil leakare or moisture penetration. Case is insulated not connected to the capacit or section. Supplied with mounting strap and outer insulating tube

    For size over insulating tube add \(1 / 16^{n}\) to dianeter and \(3 / 16^{n}\) to length. These units are sinilar to CP25-29 series of MILC25A, for exact CP rumbers see catalog DJ-541

    All sizes shown are can sizes.

    \section*{PAPER}

    \section*{TYPE JP09 'HYVOL}

    Immersion-proof in sturdy rectangular metal can. Highvoltage screw type pillar terminals fitted with soldering lugs. Use of "HYVOL" allows exceptionally compact size for capacity, working voltage, and safety factor. Intended for heavy-duty continuous service in transmitters, amplifiers, etc. Type MB bracket is supplied unless otherwise specified, except on units with base sizes 3-3/4" \(\times 3-3 / 16^{\circ}\) and \(3-3 / 4^{\circ} \times 4-9 / 16^{\circ}\) where Type MS bracket is supplied. MSB is available for all types upon request.

    TYPE JP30
    Bathtub Case Hyval Capacitors
    

    High-quality bypass capacitors furnished in drawn metal bathtub cases, hermetically-sealed with neoprene bakelite terminals. These units are Hyvgl M impregnated for operation at temperatures from \(-55^{\circ} \mathrm{C}\) to \(+85^{\circ} \mathrm{C}\). They are especially recommended for applications where high reliability and superior performance is required. Typical applications for these rugged units would include marine, aircraft and tropical climates.

    \section*{QEROUDR}

    \section*{METALLIZED-PAPER}

    \section*{TYPES PI23ZG and PI23ZNG Metal-Cased Capacitors}

    Metallized paper tubulars hermetically sealed in metal tubes with glass end seals soldered for positive moisture seal.

    These units are designed to meet critical cperating temperatures and meet the need for increased reliability in the electronic field.

    The P123ZG is manufactured to meet operating temperature range of \(-55^{\circ} \mathrm{C}\). to \(+70^{\circ} \mathrm{C}\). without derating and up to \(100^{\circ} \mathrm{C}\). with derating of \(75 \%\).

    The P123ZNG - Aerolene impregnated - is similar to the P123ZG, with the additional feature that it will operate up to tem:eratures of \(100^{\circ} \mathrm{C}\)., at full voltage rating and \(125^{\circ} \mathrm{C}\). with voltage derating of \(75 \%\).

    Standard units ( P 123 ZG or \(\mathrm{P}_{123 \mathrm{ZNG} \text { ) are of case-grounded }}\) type. For case insulated, specify P123Z or P123ZN and add \(\$ 0.50\) to list price (add \(1 / 1^{\text {n }}\) to length).

    \section*{R-F NOISE CAPACITANCE SUPPRESSORS}

    \section*{TYPE INA.II6}

    These radio-notse suppression capacitors have been especially designed for use in millary or commercial, aircraft and vehicular applications. Primary application is as an \(r\)-f bypass capacitor from line to rround in low voltage de supply lines Units are es pertilly ireated to assure extremely long, nossefree file.

    Operating temperature rante is minus 55 degrees \(C\) to plus 35 degrees \(C\). For full 150 volt rating the operating temperature range is nimmus 55 degrees C to plus 50 degrees \(C\). Units may be used at operating voltages up to 120 vde over a temperature range of minus 55 degrees \(C\) to plus 71 degrees \(C\); and 60 vede
     C.

    \title{
    TYPES 1468 and 1469 \\ (Similar to CM20)
    }
    

    Compact, precision made mica dielectric capacitors made in accordance with MIL specification C-5. All capacitors are molded in low-loss bakelite, impregnated and color-coded. They are tested to meet MIL requirements for dielectric strength, insulation resistance, lemperature coefficient, capacitance drift, humidity and life test.

    ASESA approvals have been obtained and certificates of compliance can be furnished upon request.

    Type 1468 units are of the stacked mica and foil types and are made to meet the requirements of MIL characteristics A and B. Type 1469 units are silvered-mica and are available in characteristics C, D, and \(\Sigma\) of the MIL specification.

    (Similar to CM30 and CM35)
    

    TYPES 1464 and 1467
    These capacitors are the third smallest case size available in the MIL C-5 specification, and are molded in low-loss bakelite. Characteristics \(A\) and \(B\) refer to the mica and foll type conctriction Characteristics C D and E mefer to silvered-mica struction. Characteristics C, D and E refer to silvered-mica onstruction. These units are color-coded accordine MIO M-5 ASESA approval has been obtained and certificates of compliance will be furnished upon request.

    *Thickness 21/64"

    AEROVOX sulvered mica units for most critical applications where precise capacity values are required. Encased in red lowloss bakelite. Símilar in external appearance to standard bakelite molded mica units.

    Available with temperature coefficient and retrace characteristics as defined by characteristics A to \(\mathbf{F}\) inclusive of REC-115 and MIL-C-5 specifications for molded capacitors. Exceptionally high "Q". Mechanically protected against physical danage and changes in electrical characteristics due to varying atmospheric conditions. Wax impregnated externally. Ideal for circuits where inductance and capacity product must remain constant under all operating conditions.

    Ideal sor hirt-frequency application. Glazed porcelain zase, high temperature wax sealed. Heavy duty power terminals. Minimum power ioss due to dielectric absorption. No heating at full load.

    SIZE: \(4^{\prime \prime}\) overall by \(3^{\prime \prime}\) high;
    3-1/2" between mounting
    holes.

    \section*{TYPES I550L, 1570L and 1590L}

    \section*{Potted Transmitting Capacitors}

    These polted transmitting capacitors in thermo-setting case materials have. greater load-car"ying capacity than mold-ed-in-thermo-setting case maturial capacitors. Types :550 to 1590, iaclusive, not only have high woltage rating but afford highercurrent ratings than equivalent capacitances in thermo-setting case material units. Because of their construction they are made with higher capacitance stability. Furnished only in low-loss thermo-setting case material as standard. Bakelite cased mica stack capacitors. These units have highest quality mica sections stacked for greater load carrying capacity. The sections are potted in low. loss bakelite rases and permanently clamped with non-magnetic material.

    \section*{Stack-mounting Transmitting Capacitors}
    

    These stack-mounting transmitting mica capacitors are espectally intended for various transmitting applications such as grid, plate blocking, coupling, tank, and by-passing functions for higher-powered installation. They are made with a special cylindricallow-loss, glazed ceramic case providing a long creepage path betweenterminals. They aredesigned to eliminate coronar losses, inside and outside alike, and also provide uniform voltage gradient. The cast-aluminum terminal ends provide low contact resistance between units. These units are conservatively taci resistance been ung have extremely low power factor so that they can handle large KVA have extremely low power fa
    loads without overheating.

    \section*{Hi-Q TUBULAR FEED-THRU CAPACITORS}
    

    Hi-Q Feed-Thru Capacitors provide means to transmit thru shields or ground potentials and simultaneously by-pass unwanted frequencies. A good mechanical connection is provided by the silver-plated bushing. These are excellent dependable units even under severe mechanical vibrations as in aircraft, missiles and automotive re-

    \section*{Hi-Q TUBULAR STAND-OFF CAPACITORS}
    

    TYPE MCS
    

    Hi-Q stand-off capacitors are basically tubular, having as an integral part of their construction, a screw fixture for mounting to the chassis or common ground. Close coupling and their unique construction make them an excellent choice for by-passing high frequencies.

    All units are coated with a high temperature enamel, stamped for capacity and supplied with mounting nut, if desired.
    \begin{tabular}{l|c|r}
    \multicolumn{3}{c}{ Stock Items } \\
    \hline \multicolumn{1}{c}{ Iype } & Capacity Mid. & List Price \\

    CS-1B & 1500 & .60 \\
    CS-2 & 3000 & .60
    \end{tabular}

    The MCS is a quick mounting type which permits high speed mechanical installation. The ceramic tube is enclosed in a cadnium-plated metal case with a specially developed end seal for protection against humidity and temperature changes.

    All units are flash tested at 1250 volts D.C. The power factor is under \(3^{\circ} \mathrm{c}\) and the installation The power factor is under 3 and the installation resistance is above 7500 megohms.

    \title{
    CLOSE TOLERANCE POLYSTYRENE
    }

    For economy . . . for quality . . . wherever close tolerances are important . . . it pays to specify EFCON Plastic Film Miniature Capacitors. They have earned an enviable reputation for DEPENDABILITY and HICH LEVEL PERFORMANCF in filters, timing circuits, analog and digital computers . . . plus many other applications.

    Thanks to advanced engineering and special production techniques . . EFCON Capaciors are consistently made to wlerances closer than \(\pm 1 \%\). They are available in a range of capacitance values from . 001 to 2 Mfd. Non-standard values are made to customers' specifications.

    \title{
    Miniature Capacitors and "MYLAR"
    }
    

    FFCON Chose Tolerance Capacitors . . . both Polystyrene and "Mylar" . . . provide excellent stability over an extended temperature range. . . . Polystyrene has extremely high insulation resistance ( \(10^{12}\) ohms at \(25^{\circ} \mathrm{C}\) ). They have a negative temperature coefficient of less than minus \(100 \mathrm{PPM} /{ }^{\circ} \mathrm{C}\). In addition to a very low dielectric absorption . . . EFCON Capacitors feature the lowest dissipation factor of any film capacimors. They are tested at a DC voltage of at least 200 C; of rated voltage at \(25^{\circ} \mathrm{C}\).

    Both EFCON Polystyrene and "Mylar" Capacitors are mass produced in two styles: Polystyrene Type PC and "Mylar" Type MC feature a rigid, wax impregnated, tubular construction. Polystyrene Type PH and "Mylar" Type MHH are hermetically sealed in a metal case with glass-to-metal, solder-sealed terminals. Both types feature non-inductive extended foil construction with leads soldered directly to the foil assuring minimum contact resistance.

    test data and general characteristics. Also avail able is information about EFCON "Tefion" High Temperature Capacitors and Type S , moldec Silvered Mica.

    Smaller sizes of type MHH available for \(85^{\circ} \mathrm{C}\) operating temperature designated type MH. In quire for size specifications.
    

    \section*{PLASTICON DC RECTANGULARS}

    Mineral oil impregnated and filled. Hermetically sealed. Can be operated in any position, continuously at \(10 \%\) over rated voltage up to \(+40^{\circ} \mathrm{C}\). Tolerance \(10 \%\). Ambient temperature range \(-40^{\circ} \mathrm{C}\). to \(+85^{\circ} \mathrm{C}\). Insulators: Two ceramic type bushings for standard temperature range. Two solderedin metallized glass insulators for extended temperature range. All DC rectangulars have \(8-32\) screw and hex nut terminals with removable hot-tinned solder lugs. Case: Rectangular base, lead coated steel with heavy finish of grey organic lacquer.

    MANUFACTURERS：Glassmikes • Plasticon Capacitors • HiVolt Power Supplies • Pulse Forming Networks
    ＂Glassmike＂PLASTICON CAPACITORS Type LSC

    LSG type capacitors have llasticon Lilm－ silicone fluid impregnant in Glassmike style case．Designed to compete with mica capacitors． the LSG capacitors are more applicable for Radio Frequency．Special beneficial features include greater safety factor．lower RF losses． more conveniently mounted．utilize less chassis space．impervious to moisture and smaller in overall volume．
