When CHANNEL COMMANDER™ has a hand in it... adjacent channels are no problem

With good reason. The signal is changed to IF and completely controlled before being converted back to VHF for the set. You get complete control over signal levels and quality.

Channel Commander is a complete VHF channel processing unit. It enables you to use all 12 channels at once or just add a few at a time. It features a plug-in module for changing output channels. Its tuner end receives any VHF channel, changes it to IF and controls the signals completely. The crystal-controlled output can be delivered to any desired channel, including the original channel.

Channel Commander is easy to install, easy to

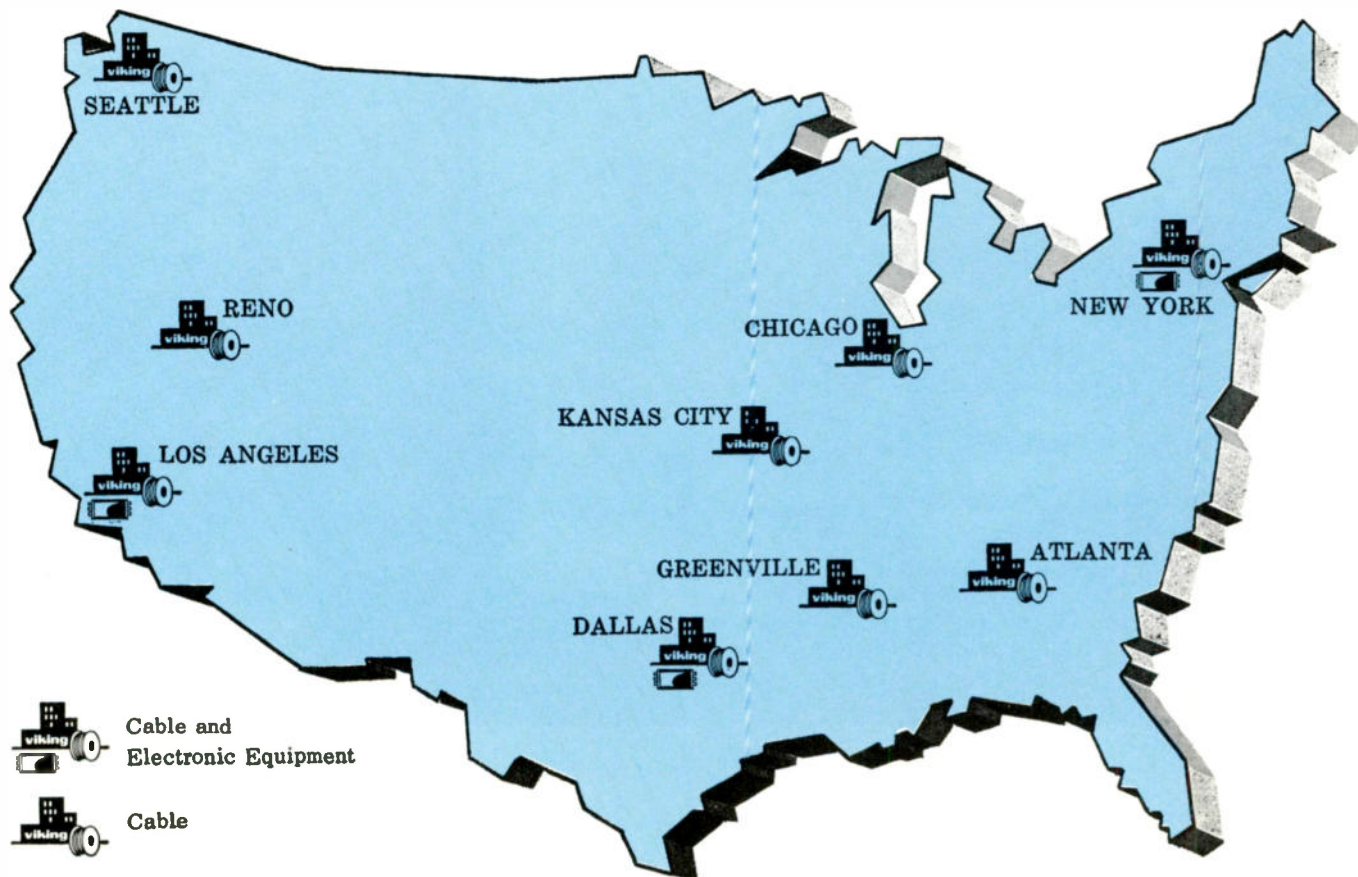

maintain, and easy to use. When you start with Channel Commander you take the first step toward vivid color and sharp black and white TV —without adjacent channel interference. For more information, write CATV Systems Division, Jerrold Electronics Corporation, 401 Walnut St., Philadelphia, Pa. 19105

JERROLD®

FIRST IN CATV • The nation's largest, most experienced manufacturer/supplier of CATV equipment and services

viking has warehouses throughout the United States ...to serve you faster !

When you need cable or electronic equipment, you generally need it in a hurry. That's why Viking set up warehouses all over the country. Each warehouse is stocked with the widest variety of cables in the industry. You get fast delivery . . . often within 24 hours of the time you place your order.

And, if you need any information on Viking products, it's always easy to contact your Viking salesman. Just call our Hoboken office — collect. All Viking salesmen keep in contact with our Hoboken and regional offices through mobile telephones in their cars. Service like this can save you a lot of irritation — and, make you a lot of money.

Whether you need aluminum sheathed cable, Futura amplifiers or just a few pressure taps, you're likely to get them at your nearest Viking warehouse.

Look the map over carefully. Chances are, you'll be surprised to discover just how close you are to a Viking warehouse.

Remember, we're fully stocked and ready to serve you fast. Why not call today and make us prove it?

...best TV we've ever seen!

Your customers will appreciate the reliable, clear picture when you use Ameco equipment. Ameco makes equipment to serve your system from your antenna to your customer's smile — reliably!

Solid-state "Channeleer" headend amplifier reduces the off-the-air signal to a snow-free, interference-free RF signal. This modern heterodyne amplifier holds your signal steady with an exceptional Automatic Gain Control circuit.

"Signaleer" provides single channel amplification with solid-state stability for color or monochrome. Automatic Gain Control action maintains signal out-

put constant within ± 0.5 db even with variation of up to ± 15 db!

"Pacesetter" solid-state mainline amplifiers reduce operating costs and increase system performance. Interchangeable circuit assemblies plug into a universal housing to provide high gain, high output capabilities in any system.

Keep your customers happy and your profits up with the Reliable Ones — Ameco! Call us now at 602-262-5500.

We'll show you tomorrow's amplifiers today!

Additional copies are available from the Publisher at \$6.95 each, postpaid. **Editorial Listings:** Contents of this Directory are compiled from material furnished by Federal agencies, and cable system operators, and from research by the Directory editors. All editorial listings are made without charge, and constitute the latest, most factual information available to the Publisher. Contents of this Directory, including the CATV Map Section, Copyright 1967, Communications Publishing Corporation.

**If longer lengths of
CATV cable can
simplify your installation,
save you money on splices,
improve system performance,
reduce system maintenance—**

call us.

Right now, only ITT can supply you with 75-ohm aluminum-sheathed CATV cable in extra-long lengths. Or in any short length you like, in .412", 1/2", or 3/4" diameters. Each length is **guaranteed** to deliver a minimum of 26 db structural return loss across all channels from 2 through 13, and that guarantee is backed up by a verified test report with each reel.

Another big difference in ITT's cable is the TIG welding of our pressure-sealed sheath. TIG welding delivers a homogeneous, high-burst-strength seam; free of the leak-likely pinholes and distortion-producing internal bead that are char-

acteristic of r-f welding. Add to this ITT's moisture-proof, controlled-foam polyethylene dielectric and you're assured of stable, predictable performance.

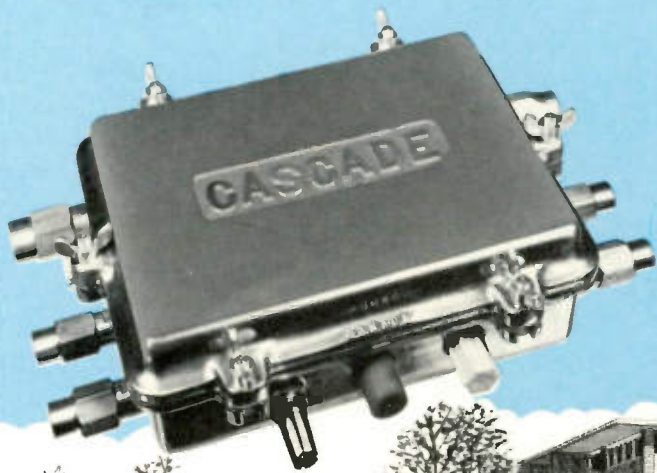

These cables are available also with impervious polyethylene jacket for underground use or for corrosive atmospheres; and polyethylene jacket with steel messenger for overhead suspension.

Delivery of any type, in long lengths from stock.

For information on ITT semiflexible coaxial cables write: ITT Wire and Cable Division, International Telephone and Telegraph Corp., Clinton, Mass. 01510

CATV COPYRIGHT REPRIEVE

House Passes Bill; CATV Section Stripped Out

The CATV industry won a potentially valuable reprieve last week as the House by an overwhelming 378-23 vote approved a new copyright revision bill after stripping out the section on CATV. The victory is only a limited one, and the eventual consequences are unknown; but at least the imposition of an unworkable CATV section was avoided and time was gained. The bill went to the Senate, which is still working on a similar bill. Both House and Senate will have to agree on the final form of the legislation, and it is uncertain at this time how the Senate will lean on the CATV question.

As reported in the Review last week, a major factor in the CATV copyright fight on the House floor was a jurisdictional dispute between the Judiciary Committee, which had worked on the bill for years, and the House Commerce Committee headed by Rep. Harley Staggers (D-W. Va.), who along with many of his committee members thought that the Commerce Committee should handle legislation governing CATV matters. Staggers and Judiciary Committee Chairman Emanuel Celler (D-N. Y.) resolved their differences, however, mostly in favor of Staggers. The upshot is that the CATV section of the copyright bill was pared out, while Staggers promised to consider overall CATV legislation such as his committee reported out last year (through a typographical error, last week's Review said the Staggers bill was favorable to CATV; it obviously was not, as it essentially restricted CATV activity and gave FCC large doses of jurisdiction over CATV). Staggers reportedly will take up the copyright question in the Judiciary Committee. Congressmen probably guard their own prerogatives, and in this case the pique of a man who thought his field was raided worked to the temporary advantage of CATV.

GENERAL TEL POLE AGREEMENT

Stricter Demands Made on Aerial Operations

The Review last week obtained a copy of what is reported to be the latest standard "CATV Pole Lease Agreement" to be offered by General Telephone subsidiaries. After its presentation to operators in at least one state, it was taken to the State Association's board of directors for serious study. The pole lease agreement contains the most stringent demands that the Review has published in any tele pole attachment agreement.

For example, in Article V (13) the agreement states that "the telephone company retains the right... to install, at the pole risk and expense of the CATV company, any and all attachments to the poles solely owned by the telephone company and poles jointly used by the telephone company and others... The CATV company agrees to furnish all such materials and equipment and further agree, on demand, to reimburse the telephone company for the entire installation cost thereby incurred." In Article VI (34), the agreement requires that "in the event that the telephone company or a joint user of the pole shall require the space occupied by the CATV company's existing attachments, the telephone company shall notify CATV company of such fact and of the estimated costs to the CATV company of replacing such pole with a pole which will accommodate the attach-

General Information Section

**CATV Associations • FCC Regulations • Guide to Federal Agencies
Congressional Committees • Top-100 Market List • Advertisers Index**

The following section is designed as a quick-reference source of miscellaneous information pertinent to CATV operation. The Directory of CATV Operators' Associations (beginning on this page) gives complete and up-to-date information on all such groups in North America. The Resume' of the Second Report and Order (beginning on page 12) provides an invaluable guide to the FCC's current CATV regulations. Federal agencies and personnel of interest to cable system operators are listed, with mailing addresses, as are pertinent Congressional committees, on page 20. The ARB "Top-100 List" which has become a part of the FCC's regulation of cable systems, is found in its latest form on page 22, along with an index of firms advertising in this Directory.

Michael Ganley, Phoenix. Association has 16 member firms.

Arkansas CATV Association

President, Fred J. Stevenson, Rogers TV Cable Inc., 317 N. 2nd, Rogers, Ph. ME 6-3400; Secy-treas. David P. Mooney, Cam-Tel Co., Box 835, Camden, Ph. TE 6-8111. Legal Counsel Ray S. Smith Jr., Hot Springs. Board of Directors: Fred J. Stevenson, Rogers; David P. Mooney, Camden; Jim Davidson Jr., Newport; Roy Jacobi, Russellville; Bob Wheeler, Harrison; T. C. Masters, Mena. Association has 20 member firms.

California CATV Association

President, Eugene A. Iacopi, Television Signal Corp., San Francisco; Vice-president, Willard A. Hargan, Central Calif. Communications Corp., Salinas; Sec. Keith Burcham, Coachella Valley TV, Palm Desert; Treas. Lee Stoner, Finer Living, Inc., Redding. Legal Counsel and general secy. Walter Kaitz, Oakland. Board of Directors: Edward M. Allen, Lafayette; Norman Boggs, Los Angeles; John G. George, Ventura; C. R. Gibson, Walnut Creek; Vernon R. Gill, San Clemente; Lewis L. Lemieux, Oroville; Richard A. Moore, Los Angeles; John S. Muir, Los Angeles; A. C. R. Stone, Los Angeles. Send all correspondence to Suite 1506 Latham Square Bldg., Oakland, California.

Colorado CATV Association

President, W. R. (Bill) Brazeal, Community Television Inc., Denver; Vice-president, J. Lynn Dougan, Communico, Salt Lake City, Utah; Secy-treas. Alan Harmon, Daniel & Associates, Denver. Board of Directors: Pete Ruiz, Trinidad Community TV, Trinidad; Fred Betz, Media Cable TV Systems, Lamar; Thos. C. Worster, ComTronics Cable TV, Grand Junction.

Florida State CATV Association

President, Harry Bennett Jr., Communicable Inc., 4311 Banana River Blvd., Cocoa Beach; Vice-president, Bill Harris, Community Cable Casting Corp., 130 Perry Ave., Ft. Walton; Second vice-president, Clark Swanson, Highland TV Cable, Sebring; Third vice-president, Richard Cox, Gulf Coast Television, Naples; Secy. Jay Demming, Universal Cablevision, Winter Haven; Treas. O. E. Brillante, Florida TV Cable, 700 New Haven Ave., Melbourne. Board of Directors: Harry Bennett Jr.; Orlando Brillante; Jay Demming; Richard Cox; Clark Swanson; William Hemminger, Port Charlotte; H. H. Harris Jr., Ft. Walton Beach. Association has 40 member firms.

Illinois-Indiana CATV Association

President, John Gwin, Robinson TV Cable Co., R.F.D. No. 1, Robinson, Illinois, Ph. (618) 544-2021; Vice-president, S. M. Aston, Greater Lafayette Cable, 602 Bypass 52 North, Lafayette, Indiana, Ph. 447-6886; Second vice-president, Royce Greer, Danville Community Antenna System Inc., 321 N. Vermillion, Danville, Illinois, Ph. 443-2941; Secy-treas. Douglas Phillips, Flora TV Cable, 118 E. North Ave., Flora, Illinois, Ph. (618) 662-5066. Legal Counsel Richard Eagleton, Robinson, Illinois. Board of Directors: Ted Filson, Indiana; Francis Sheridan, Illinois; Roy Bliss, Illinois; Marshall Henderson, Indiana; John Foster, Indiana; Earle Nelson, Illinois. Association has 70 member firms.

Kentucky Community Television Association

President Bill Betts, Cable Vision, P.O. Box 100, Maysville, Ph. (606) 564-3361; Vice-president, Tom Gullett, Tele-Caption, Winchester; Second vice-president, Bill Breeding, Montecello; Secy. Joe Simmons, Kentucky Cable TV, 214 W. Main St., Glasgow, Ph. (502) 651-3126. Board of Directors: Bill Breeding; Everett Akers, Martin; Fred Dupree, London; Bill Betts; Tom Gullett. Association has 67 member firms.

Louisiana Association of Cable TV Operators

President, B. Hillman Bailey Jr., KNOC TV Cable Company, Inc., Box 607, Natchitoches, Ph. (318) 352-2353; Secy-treas. Norman "Chick" Williams, Louisiana CATV, Inc., Box 1183, Monroe. Executive Committee: Virgil Evans, Alexandria; Wendell Powell, Ferriday; Ernie E. Bliss, Jr., Houma.

Mid-America CATV Association

President, Robert Lewis, Vumore Co., 823 Grand Ave., Ardmore, Oklahoma, Ph. (405) 223-9600; Vice-president, Raymond Baker, Manhattan Cable TV Services, Manhattan, Kansas, Ph. (913) PR 6-9381; Second vice-president, Peter Ruiz, Trinidad Community TV, Trinidad, Colorado; Secy-treas. Kenneth Schuelein, Western CATV Inc., Box 770, Elk City, Oklahoma, Ph. 225-3244. Legal Counsel Royce & Meacham, Elk City, Oklahoma. Board of Directors: Fred McElroy, Altus, Oklahoma; Hurshel Tyler, Chadron, Nebraska; Ralph Weir Jr., Junction City, Kansas; Weldon Johnson, Junction City, Kansas; Kyle Moore, DeQueen, Arkansas; Gaylon Gilbert, Neosho, Missouri; Harold

Phillips, Blackwell, Oklahoma; Lew Preston, Clinton, Oklahoma; John Morrisey, Durango, Colorado. Association has 83 member firms.

Mid-Atlantic CATV Association

President, Carl Gainer, Richwood TV Cable, Box 670, Richwood, W. Virginia, Ph. (304) 846-0031; Secy-treas. Bert Cousins, Fairmont TV Cable Co., Box 907, Fairmont, W. Virginia, Ph. (304) 366-2880. Legal Counsel Thomas Whyte, Fairmont, W. Virginia. Board of Directors: William Adler, Weston, W. Va.; Charles Erickson, Parkersburg, W. Va.; Sandford Randolph, Clarksburg, W. Va.; John Lewis, Winchester, Va.; Ralph Shepler, Elkins, W. Va.; Randolph Tucker, Staunton, Va.; William Turner, Welch, W. Va.; James Vickers, Harrisonburg, Va. Association has 143 member firms, from West Virginia, Virginia, Maryland, Kentucky, Ohio, and Tennessee.

Mississippi CATV Association

President, W. D. Gardner, Delta Cable, Drawer 1278, Greenville, Ph. (601) 332-0518; Vice-president, Thomas A. Dichiara, Aberdeen Telecable, Box 35, Aberdeen, Ph. 369-8550; Secy-treas. Mrs. Lucille Fennell, Vumore Co., Box 1106, Clarksdale, Ph. 624-6534. Legal Counsel Brig. Gen. Albert Lake, Greenville. Board of Directors: John Humphries, Biloxi; Grady Perkins, Greenwood; Joe Moritz, Natchez; J. Wolf, Cleveland. Association has 26 member firms.

Michigan CATV Association

President, Bruce G. Freel, American Microwave, 319 South State St., Oscada, Ph. (616) 739-9077; Vice-president, Richard Bur, Iron Range Cable Co., 519 Washington St., Marquette, Ph. 225-1151; Secy. Gilbert Clark, Great Lakes Cable TV, 413 Waukazoo, Petosky, Ph. (616) 347-4352; Treas. James Klumgness, Upper Peninsula Microwave, Iron Mountain. Association has 18 member firms.

Montana Cable Television

President, I. A. Elliot, Community TV System, 233 East Main, Bozeman, Ph. 586-2089; Vice-president, Robert Morrison, Great Falls Community TV Cable, Inc., 3015 Tenth Ave. South, Great Falls, Ph. 454-3439; Secy-treas. Stanley G. Stephens, Community TV Association of Havre, 426 First Street, Havre, Ph. 265-7731. Legal Counsel Alfred F. Dougherty, Helena. Board of Directors: Bob Scherpenseel, Kalispell; Clark MacLean, Big Timber; Glen Tarbox, Missoula. Association has 30 member firms.

Community Association of New England

President, Eugene F. Ellingwood, St. Johns Community TV Corp., 20 Maple St., St. Johnsbury, Vt., Ph. (802) 748-2870; Vice-president, Raymond E. Murdough; Secy-treas. Ed Robinson, Springfield, Vt., Ph. (802) 885-4551. Legal Counsel Cohen & Burfield, Washington, D. C. Board of Directors: Tom Richardson, Rumford, Maine; William Roberts, Claremont, N. H.; Richard Blaif, Berlin, N. H.; Paul Clark, Bennington, Vt.; Philip Lothrop, Burlington, Vt. Association serves states of Maine, New Hampshire, Rhode Island, Vermont, and Massachusetts.

New Jersey Community TV Antenna Association

President, Frank Scarpa, Garden State TV Cable Corp., Box 99, Vineland, Ph. (609) 692-2100; Vice-president, Peter Luccian, Alpine Cable TV Inc., 133 S. Main St., Pleasantville, Ph. 641-6700; Secy-treas. George Sisko Jr., Washington Cable Co., 100 E. Washington Ave., Washington, Ph. (201) 689-3421. Association has 15 member firms.

New Mexico Community Television Association

President, Don Schilling, Farmington Community Television, 1911 N. Butler Ave., Farmington, Ph. 327-9666; Vice-president Jim Deverieux, 201 - 1st St., Gallup, Ph. 863-3302; Secy-treas. J. Robert Bird, Vumore, 110 South Richardson, Roswell, Ph. (505) 623-2391. Association has 20 member firms.

New York CATV Association

President Harry Levin, Antennavision Inc., 11 Union St., Iliion, Ph. (315) 895-7704; Vice-president Dawn Fribley, 35 W. William, Corning; Secretary Lawrence Flinn, Vestal Video Inc., 132 Front St., Vestal, Ph. (607) 754-2530; Treas. Les Read, Elmira Video, Box 308, Elmira. Legal Counsel Cohen & Burfield, Washington, D. C. Board of Directors: Richard Sabrino, Saugerties; Jack Pryor, Hornell; Joel Fleming, Syracuse; Sterling Higley, Norwich. Association has 71 member firms.

North Central CATV Association

President, H. Clifton Kroon, New Ulm Signal Co., 220 1/2 S. Front St., Mankato, Minn., Ph. (507) 387-1179; Vice-president, Charles Persons, Marshfield Val Tronics Inc., Route 4, Marshfield, Minn., Ph. 384-9711; Secy-treas. Ralph Demgen, Willmar Video Inc., 518 W. Litchfield Ave., Willmar, Minn., Ph. (612) 235-1530. Board of Directors: Robert Loos, Dubuque, Iowa; Charles Persons, Marshfield, Minn.; H. Clifton Kroon, Mankato, Minn.; Ralph Demgen, Willmar, Minn. Association serves states of Iowa, Wisconsin, Minnesota, N. Dakota, S. Dakota, Michigan, Illinois, and Indiana.

BROAD NEW PERSPECTIVE IN CATV

Anaconda Astrodata's total systems capability brings a broad new perspective to the CATV industry. New in name, unique in approach, Anaconda Astrodata combines a heritage of communications and cable development with wide experience in advanced electronics systems design. Reliability and performance standards far transcending the traditions of CATV equipment are part of this broad new perspective. When planning your CATV system or expanding existing plant, consider these:

Electronic Equipment

You can select from a complete line of dependable, solid state extended dynamic range (XDR) amplifiers for trunk line, bridger or distribution applications, in either single or dual output models. Typical dynamic range is 87 dB with single output capability of 60 dBmV nominal.

Passive units, such as directional taps, splitters, combiners, attenuators and matching transformers are all value engineered for complete physical and electrical compatibility with any 50 to 220MHz component or system.

Coaxial Cable

Sealmetic is the first and only coaxial cable offering you an impervious moisture vapor barrier in a cable you can bend by hand without kinking. Electrically, structural return loss is guaranteed 26 dB or better.

Sealmetic is available in sizes of 412, 500, 625 and 750 and in configurations of aerial, duct and direct burial. A complete selection of weather-tight Sealcon connectors allows mating any cable and amplifier together.

Test Instruments

A totally new approach to CATV system measurement has been taken to provide you with this radically new, portable, all solid-state line of precision instruments.

The portable, compact, 75 ohm, Model 990 System Analyzer now provides sweep frequency measurements of gain, attenuation and return loss on a large screen display scope. Frequency is continuously variable from 10 to 230 MHz. Up to 30 dB of attenuation may be attained in steps of one dB each.

The Model 912 Signal Level Meter is a high accuracy RF voltmeter for CATV system signal measurements. It has a 12 position detent tuner for selection of channel 2 through 13, and a built-in AFC that locks onto video carrier frequencies ± 500 kHz. An integral RF probe prevents interference from entering the cable past the probe.

Write, call or wire Anaconda Astrodata Co for detailed specifications and ordering information on state-of-the-art CATV equipment or systems. Specify Anaconda Astrodata: your assurance of quality products.

A Summary of the FCC's Current CATV REGULATIONS

By John P. Cole, Jr.

INTRODUCTION

On Feb. 15, 1966 — slightly over one year ago — the Federal Communications Commission announced its assertion of jurisdiction over CATV systems. Despite the lapse of time, the CATV rules remain shrouded in uncertainty. Several challenges to the rules are pending before various courts and there continues to be the possibility of congressional action modifying the rules. Moreover, it is generally conceded that copyright legislation, predicted by some quarters to be reasonably certain of passage this legislative session, may drastically affect the FCC's regulatory approach.

Meanwhile, however, compliance with the FCC's CATV rules is required. The following brief summarization of the rules describes their effect on existing and proposed CATV operations.

I. CATV DEFINED

The rules define CATV as any facility which receives and amplifies "signals transmitting programs broadcast by one or more television stations and redistributes such signals by wire or cable to subscribing members of the public" for a fee. Exempted from the regulations is any such facility which (1) serves fewer than fifty subscribers or (2) serves only residents of one or more apartment dwellings under common ownership, control or management.

II. PROVISIONS OF THE RULES

In brief, the rules set forth (1) requirements relating to carriage of TV stations by CATV systems; (2) requirements relating to protecting local television stations from duplication of their programming; and (3) procedural rules to be followed in commencing new CATV services or improving and expanding existing CATV services.

A. Basis of Regulation

There are two principal bases for determining the procedures to be followed in commencing service and the degree of regulation to which a CATV system is subjected: (1) its relationship to the predicted service contours of television stations in its area and (2) the size of the television market within which it is located.

Predicted contour grades determine which television stations, if any, a CATV system may receive or cannot receive, and the extent of program exclusivity to be given local (Grade B or better) stations. The critical factor in determining whether a CATV must obtain FCC approval prior to receiving so-called "distant stations" (non-Grade B) is the CATV's relationship to the Top 100 Television Markets (See Sec. III (b), below). The market rankings used by the FCC are compiled by the American Research Bureau on the basis of net weekly circulation or viewership of television stations in the market.

B. Carriage Requirements

Under the rules, CATV systems are generally required to receive the signals of all "local" television stations which request, in writing, that they be received. The term "local station" means (1) any station within whose predicted Grade B or higher grade contour the CATV, or any part of the community in which it operates, is located, or (2) any 100-watt or higher power translator station located in the CATV community.

Cascade Covers

Clarity TV Inc., is a growing CATV system which depends upon CASCADE ELECTRONICS CATV AMPLIFIERS exclusively. Clarity TV relies upon CASCADE'S BIG SYSTEM CAPABILITY.

Now serving 2000 homes, Clarity will serve over 6000 homes when the system is complete, using over 15 miles of trunkline and 30 miles of distribution cable. This system supplies 11 channels of video (7 VHF, 3 UHF, and a weather channel) to its subscribers.

CASCADE is reliable — dependable. When service is required, plug-in circuit modules make fast, effective

service a reality. When a severe windstorm dropped a powerline across the Simi main trunkline, a charge of approximately 75,000 volts knocked out the system. Spare circuit modules were on hand and upon telephoning the factory more were shipped immediately. These circuits were installed and a CASCADE FIELD ENGINEER was soon at the system working with the technicians. This system was back in service within hours.

Mr. R. M. Akin, President of Clarity TV is convinced of the dependability and servicability of CASCADE EQUIPMENT. During this emergency when service was a

(1) CATV Systems With Limited Channel Capacity

Where a CATV cannot receive all "local" stations due to limited channel capacity, the stations must be carried in the following order of priority:

(a) First, all commercial and non-commercial educational stations within whose City Grade contours the CATV operates;

(b) Second, all commercial and non-commercial educational stations within whose Grade A contours the system operates;

(c) Third, all commercial and non-commercial educational stations within whose Grade B contours the system operates; and

(d) Fourth, all commercial and non-commercial educational translator stations operating, with 100 watts or higher power, in the community in which the CATV system operates.

(2) Exceptions to Carriage Requirements

Notwithstanding the provisions set forth above, certain exceptions may relieve CATVs from the mandatory carriage requirements:

(a) The CATV need not receive a local station if (1) that station's network programming is "substantially duplicated" by one or more stations of equal or higher priority (as listed above), and (2) receiving that station would, due to limited channel capacity of the CATV, prevent it from receiving an independent commercial station or a non-commercial educational station. By "substantially duplicated," the rules mean regularly duplicated by the network programming of one or more other stations, individually or collectively, during the hours of 6 to 11 P.M., local time, for a total of 14 or more hours per week.

(b) The CATV need not carry both a satellite and its parent station where it is located within the predicted Grade B or higher priority contour of both. Under these circumstances, the system must carry the station having the highest priority or, if the parent and its satellite are of equal priority, the CATV operator may select between the two.

(c) The CATV need not receive any translator station if (1) the CATV is receiving the originating station whose signals are being rebroadcast by the translator, or (2) a regular television station which must be received by the CATV substantially duplicates (4 or more hours per week between 6 and 11 P.M.) the translator's programming.

(3) Special Requirements in the Event of Non-Carriage

Where the CATV, because of limited channel capacity or any of the exceptions listed above, does not receive a station or translator which it would otherwise be required to receive, it must offer and maintain a switching device permitting the subscriber to select between CATV and other means of reception. This requirement does not apply if the CATV subscriber affirmatively states in writing that he does not want a switching device. The rules do not state that the CATV operator is required to install the switching devices at his own expense.

(4) Manner of Carriage

Stations required to be received by the CATV must be carried "without degradation" of signal quality. Moreover, upon request by the station it must (a) be carried by the CATV on the channel on which the station is broadcasting and/or (b) carried by the CATV on no more than one channel.

C. Non-Duplication Requirements

(1) Stations Entitled to Protection

Any station which must be received on the CATV is entitled to program exclusivity as against a lower priority station.

Where the CATV carries a station not otherwise entitled to carriage in lieu of a co-located, 100-watt translator which is rebroadcasting its signals — then the originating station is entitled to the same protection as the translator would be if it were carried.

This means that the CATV must blackout the programs of any station received which would duplicate the programs of a higher priority station received. Stations with equal grade contours are not entitled to protection from duplication of their programs as against each other.

(2) Request for Protection

A request for carriage does not automatically give the station the right of exclusivity. To be entitled to program exclusivity, the station *must* notify the CATV operator "as soon as possible" of the date and time of its programs not to be duplicated and the date and time of any other station's duplicating programs which must be deleted. Thus, the station bears the burden of comparing program logs for purposes of determining which of its programs are entitled to protection.

The notification must be given by the station at least 48 hours prior to the scheduled broadcast time for the program to be deleted. And, upon request of the CATV system, such notice must be given at least eight days prior to the date of the program to be deleted.

(3) Extent of Protection

The CATV must refrain from carrying programs which would duplicate those of a station entitled to program exclusivity during the "same day" that the program is broadcast by the station entitled to protection. "Same day" does not mean 24 hours protection. The CATV can duplicate a program the day before and the day after it is broadcast by the local station, but it cannot be duplicated the same day, meaning "broadcast day."

(4) Exceptions to Non-Duplication Requirements

(a) The CATV need not delete a network program if that would reduce the number of different network shows which could be simultaneously offered to CATV subscribers to less than two.

(b) The CATV need not delete a duplicating color program which is broadcast by the "local" station only in black and white.

(c) The CATV need not delete network programs which are scheduled for broadcast by the networks between 6 and 11 P.M. Eastern Standard Time, but which are carried by the local TV station in whole or in part outside of what is generally considered to be "prime time" for the area in which the CATV community is located.

(d) The CATV need not delete a program of topical or special interest, such as a speech, athletic contest or other event as to which the time of presentation is of special significance, unless that program is simultaneously broadcast by the station entitled to protection.

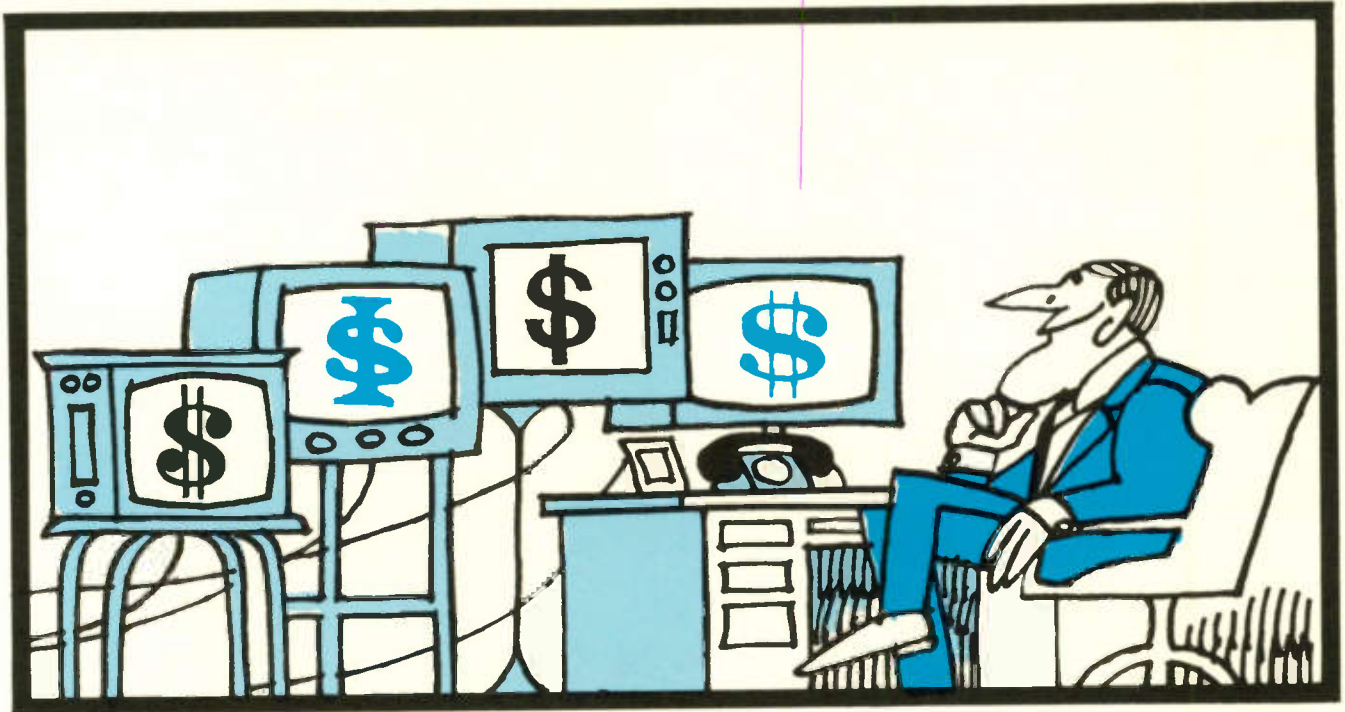

III. PROCEDURAL MATTERS

A. Commencement of New CATV Service

(1) Notification by CATV Systems

Before a CATV system commences service, the operator must first give 30-days notice to all local (Grade B or better) TV stations; and a copy thereof must be sent to the FCC. Moreover, an existing system must notify local stations of any extensions of its cable into a new community, if such service includes reception of a station which does not encompass the CATV community within its predicted Grade B or higher grade contour. The Commission has ruled that such notice must be given each time there is expansion into an area covered by a separate franchise.

Pruzan Same-Day Service will make money for you.

Yes, we said, "make money," not just save you money. Savings are switched on immediately by Pruzan's competitive prices on all items used in CATV construction. You make money with Pruzan's ability to help you on your system design and overall planning. You order only the materials you need (not more)—you receive them when you need them (not late). Your crews won't be held up, whatever their requirements may be. And here's the biggest money maker. Your subscribers will be connected on time—revenues will start immediately.

If you want the kind of knowledgeable, personal attention to your planning and supply requirements that will put extra profits in your CATV picture, phone Pruzan today.

What does Pruzan Company supply?

What you need to build and maintain a CATV system.

COAXIAL CABLE—From Phelps Dodge, developer of Foamtex and Helical Membrane aluminum-sheathed CATV cables, stocked in warehouses strategically located throughout the country. Also, RG-59U, plain and messengered, for your house drops.

ELECTRONIC EQUIPMENT—Amplifiers, taps, matching transformers and test equipment manufactured by the industry leaders.

FITTINGS—The complete Gilbert Engineering "Diamond G" line of coaxial cable connectors and fittings.

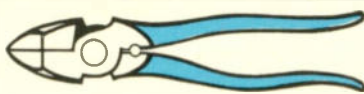

STRAND—Galvanized strand and wire available for immediate shipment to any part of the country. Alum-O-Weld and Copperweld strand and wire in stock, also.

POLE LINE HARDWARE—The nuts and bolts, clamps and fittings, anchoring and grounding materials required for aerial construction and house drops.

LASHING WIRE—The industry standard, .045 stainless steel lashing wire, or any special type you may require.

TOOLS—Whatever your men need to do their jobs properly; hand tools, lashers, hoists, ladders, power tools, everything!

SAFETY EQUIPMENT—The finest in linemen's equipment, warning signs and equipment, first aid kits, gloves, whatever you need for safe working conditions.

SPLICING MATERIALS—Electrical tapes, adhesives, epoxy, resin and silicon compounds, Sigmaform heat-shrinkable splice covers, waterproofing materials of all kinds.

UNDERGROUND MATERIALS—Conduit, pedestals, enclosures and underground splicing materials of all types.

The sole purpose of this notice is to evoke objections to the CATV service. Thus, even where microwave radio facilities are not employed, the CATV operator may be faced with frustrating delays even where wholly frivolous objections are raised by local stations.

(2) Content of Notice

The notice to "local" stations most include the following:

- (a) the name and address of the CATV system;
- (b) identification of the community to be served;
- (c) the television signals to be distributed; and
- (d) the estimated time operations will commence.

If any formal objection to the service for which notice is given is raised before the FCC within 30 days, then the CATV is precluded from commencing such service until after FCC approval. This requirement is applicable even in situations which do not involve proposed operations within the Grade A contour of a so-called top 100 market station.

B. Evidentiary Hearing in Top 100 Markets

(1) Effect of the Top 100 Market Rules

The rules prohibit a CATV system which proposes to operate within the predicted Grade A contour of a television broadcast station in the 100 largest television markets from receiving domestic television stations not placing a Grade B or higher grade contour over at least a part of the CATV community *except* upon a public-interest showing in an evidentiary hearing. In other words, the CATV operator must obtain FCC approval prior to commencing such services even in the absence of any objections to the services.

What the Commission is principally interested in under these circumstances is the effect that a CATV service bringing in "distant stations" would have upon existing and potential television stations in the area. Because of its expressed desire to foster optimum conditions for growth of UHF television stations, it has made known its particular interest in the potential effect a CATV might have on UHF stations which, due to the existence of three or more stations already in the area, would be unable to obtain a network affiliation.

(2) Grandfathered CATV Systems

Existing CATV systems which were furnishing distant signal service to subscribers on or before February 15, 1966, are "grandfathered" under the new Top 100 Market rules and may continue to receive those distant stations without FCC approval. However, existing systems in operation as of February 15 cannot now add new distant city signals to their systems nor extend to a new community without an evidentiary hearing before the FCC.

The grandfathering provisions do not relate to the Commission's carriage and non-duplication rules discussed in Section II. Every CATV system, regardless of age, is expected by the Commission to comply with the carriage and non-duplication provisions.

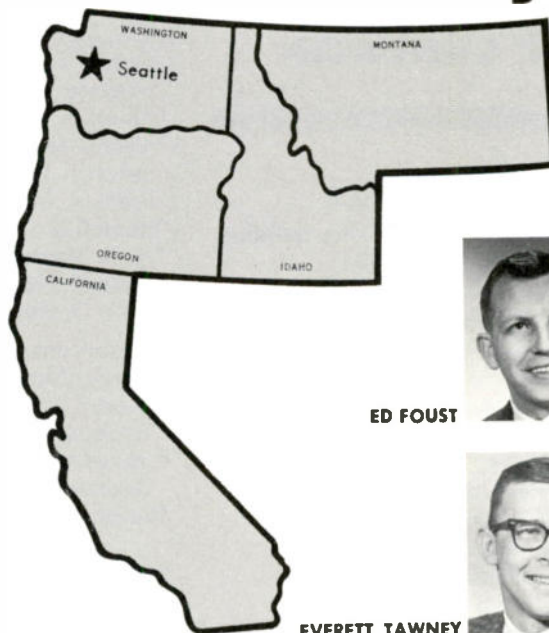

(3) Waivers of the Rules

The rules specifically provide for waivers of the rules where it can be demonstrated that exceptional circumstances exist. A petition for waiver of the carriage or non-duplication requirements must be filed within 15 days after a request by a television station for compliance with the rules. Until such a request is properly made, the CATV operator need not comply with either the program carriage or exclusivity rules described in Section II, Subsections B and C.

The most active CATV regulatory arena at the FCC has involved requests for waiver of the Top 100 Market evidentiary hearing requirements. As of Feb 27, 1966, more than 160 petitions had been filed requesting permission to carry so-called "distant stations" without being subjected to the evidentiary hearing process. □

ED FOUST

EVERETT TAWNEY

WITH THE MOST EXPERIENCED OPERATOR/SUPPLIER IN CATV

Reliable equipment, solidly backed by a staff with many years of experience in CATV operation . . . that's the key to the leadership role of CATV Equipment Co. Since 1955, when a group of system operators formed the forerunner of CATV Equipment Co., a continuous program of laboratory and in-the-field testing and evaluation has been conducted. Coupled with frequent visits to manufacturing plants by engineers from CATV Equipment Co. and affiliated systems, the test program has resulted in the improvement of many products and services for our customers.

CATV Equipment Co. offers you a unique and valuable service. We can meet your cable system supply needs at reasonable prices—based upon our high volume purchasing power. And, you will always have the extra confidence of dealing with men who are experienced in every phase of system operation . . . Call Ed Foust or Everett Tawney at CATV Equipment Co.

"Fort Worth gives you complete Tower Project service, highest quality materials and workmanship, and budget minded prices."

These three factors are the basis of every Fort Worth project proposal. Fort Worth's craftsmen have only one standard — to give you the best towers in CATV. This includes not only the tower, but the entire construction project. Twenty years of tower design and manufacturing experience assure you of a completely reliable product.

More . . . in addition to job-engineered towers, Fort Worth offers a complete array of support equipment, including head-end buildings, microwave domes, elevators, and many other related items. You get maximum performance with a perfect match of equipment and accessories.

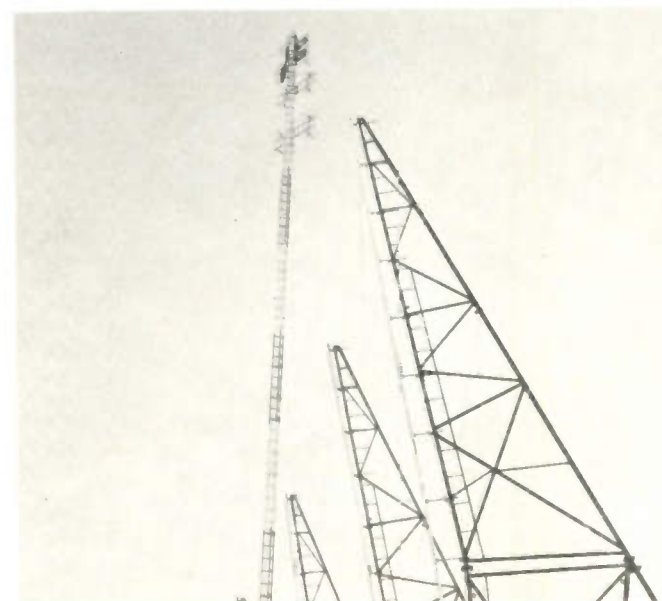

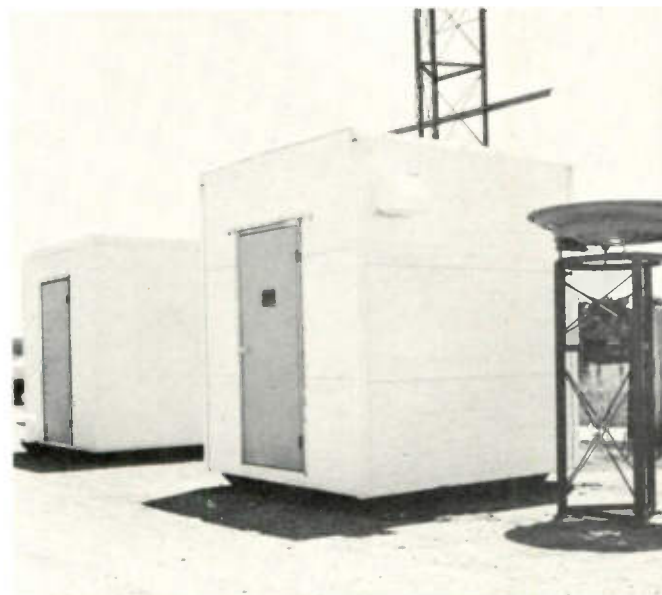

With this extra quality, Fort Worth CATV towers cost no more than other towers. There's no reason why you should have to pay extravagant prices for tower equipment and construction services. Let us give you our quotation on your tower project. You'll be interested to know how economical good CATV towers can be.

Fort Worth towers — the standard of quality in CATV.

CATV COPYRIGHT REPRIEVE

House Passes Bill, CATV Section Stripped Out

The CATV industry won a potentially valuable reprieve last week as the House by an overwhelming 279-23 vote approved a new copyright revision bill after stripping out the section on CATV. The victory is only a limited one, and the eventual consequences are unknown; but at least the imposition of an unfavorable CATV section was avoided and time was gained. The bill went to the Senate, which is still working on a similar bill. Both House and Senate will have to agree on the final form of the legislation, and it is uncertain at this time how the Senate will lean on the CATV question.

As reported in the Review last week, a major factor in the CATV copyright fight on the House floor was a jurisdictional dispute between the Judiciary Committee, which had worked on the bill for years, and the House Commerce Committee headed by Rep. Harley Staggers (D-W. Va.), who along with many of his committee members thought that the Commerce Committee should handle legislation governing CATV matters. Staggers and Judiciary Committee Chairman Emanuel Celler (D-N. Y.) resolved their differences, however—usually in favor of Staggers. The upshot is that the CATV section of the copyright bill was pared out, while Staggers promised to consider over-all CATV legislation such as his committee reported out last year (through a typographical error, last week's Review said the Staggers bill was favorable to CATV; it obviously was not, as it essentially restricted CATV activity and gave FCC large doses of jurisdiction over CATV). Staggers reportedly will then spin off the copyright question to the Judiciary Committee. Congressmen jealously guard their own precincts, and in this case the pique of a man who thought his field was raided worked to the temporary advantage of CATV.

GENERAL TEL POLE AGREEMENT

Stringent Demands Made and Agreed Upon

The Review last week obtained a copy of what is reported to be the latest standard "CATV Pole Lease Agreement" to be offered by General Telephone subsidiaries. After its presentation to operators in at least one state, it was taken to the State Association's board of directors for serious study. The pole lease agreement contains the most stringent demands that the Review has published in any tele pole attachment agreement.

For example, in Article V (13) the agreement states that "the telephone company retains the right... to install, at the sole risk and expense of the CATV company, any and all attachments to the poles solely owned by the telephone company and poles totally used by the telephone company and others... The CATV company agrees to furnish all such materials and equipment and further agrees, on demand, to reimburse the telephone company for the entire installation cost thereby incurred." In Article VI (24), the agreement requires that "in the event that the telephone company or a joint user of the pole shall require the space occupied by the CATV company's existing attachments, the telephone company shall notify CATV company of such fact and of the estimated costs to the CATV company of replacing such pole with a pole which will accommodate the attach-

U. S. CATV SYSTEMS

Listings for Individual Cable Television Operations

The following listings give detailed information on individual cable television systems in the U. S. Also included are listings of current franchises and for systems presently under construction. Data for these listings was taken from FCC forms 325, from supplemental information furnished to the publisher by system operators, and through research conducted by the Directory editors. Additional information on multiple system ownership and related system holdings can be found in the Multiple System Owners section of this Directory. Geographical location of each system within its state can be found in the CATV Map Service section of this Directory.

TYLER TIME/WEATHER BONANZA FOR 67!

Now the most complete line of time/weather systems in CATV offers a unit to fit every system need! R. H. Tyler Weather-Scan, Weather-Scan II and Roto-Scan units are designed to give you a real choice . . . with varied features to meet individual requirements. Check these popular units . . . see which one fits your system's needs.

1. WEATHER-SCAN Widely popular CATV time/weather system. Features famous Texas Electronics instruments plus the high-performance General Electric TE-20 camera. Includes 6 time/weather instruments, 3 large message panels. Camera is easily adapted for local origination programming. 80-slide carousel message programmer optional. Weather-Scan gives you top performance in any size system.

2. WEATHER-SCAN II All-new time/weather economy package. May be custom-ordered with up to six Texas Electronics instruments. High performance AFCO camera; General Electric TE-20 camera optional. Camera easily adjusted for local origination. Custom-select the features that will give your system maximum service . . . at the price best suited for you. Weather-Scan II - great new CATV economy package!

3. ROTO-SCAN Unique design for special requirements. Camera rotates, scanning circular instrument panel once per cycle. Compact size - 44" x 20" x 20" - makes Roto-Scan easy to install and move. All-around louvered paneling keeps out dust and light for better scanning. Same quality instruments; several camera options. Roto-Scan - the unique time/weather system.

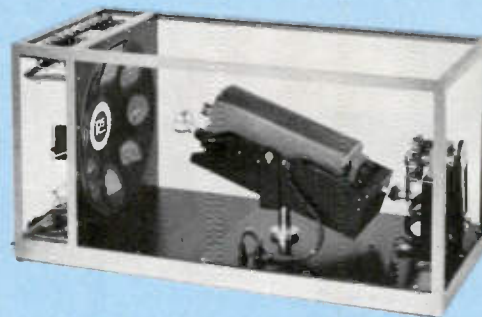

Which one of these precision-manufactured units fits your system? Enjoy highest quality from the pioneer manufacturer of time/weather systems for CATV . . . get flawless performance from an R. H. Tyler unit!

WHAT'S BEHIND THE GREAT NEW **COLORVUE** CATV TRUNK-LINE AMPLIFIERS?

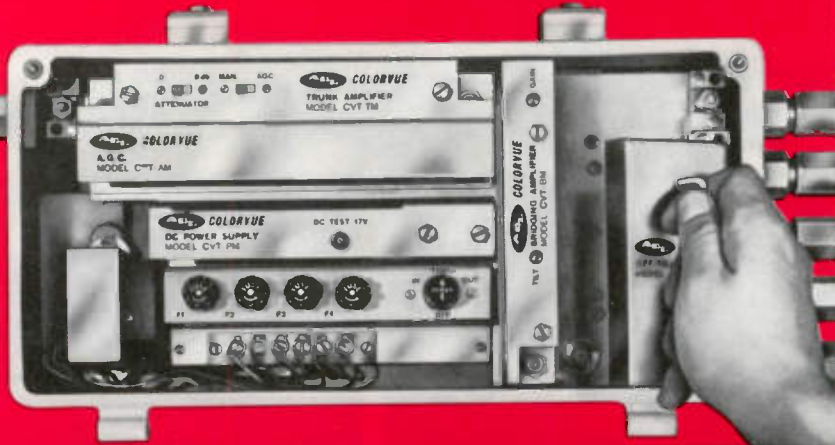

HERE'S WHAT:

It didn't take *all* of AEL's 234 engineers, 7 plants, 13 operating divisions and 1125 employees to come up with the fabulous new COLORVUE line of solid-state trunk-line amplifiers!

But . . . the availability of top engineering talent and unmatched research and design facilities made possible COLORVUE's high output, high gain, flat response, true modular design, and a great many more state-of-the-art characteristics.

Now, the payoff . . . economy! AEL's manufacturing expertise and complete production facilities add up to fast and easy maintenance—down-to-earth prices—for *you*.

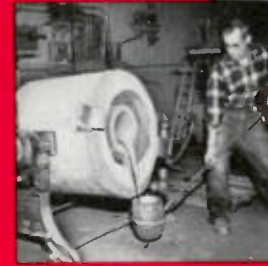

Want to know more about AEL and/or COLORVUE? Just drop us a line. Better yet, call us at 215/822-2929.

Three superior holding fittings are now available from PREFORMED to provide truly maintenance-free connections at feeder tap-offs and house drops. These helical fittings are the outgrowth of dead-end designs employed universally since 1951 by electric power and communications utilities and other industries. They offer the greatest dependability at lowest cost.

The dead-ends illustrated are for different applications; but all three provide the following common benefits:

1. Hold 100% of the rated strength of the wire or cable even under wind or icing conditions.
2. Stainless steel for corrosion resistance, and long bail life.
3. Unique gripping principle eliminates kinking and coiling of the cable.
4. Long-length design eliminates concentration of stresses; prevents fatigue damage and distorted pictures.
5. No burred edges to cut into the cable.
6. Fully proved under laboratory and field operating conditions.
7. Lowest installed cost. Long, trouble-free service life.
8. Easily adapt to any construction requirement. Result: reduced system maintenance.
9. One-piece construction.
10. Hand applied in seconds; uniform application every time.

OTHER CATV PRODUCTS, such as GUY-GRIP® dead-ends, Lashing Rods, False Dead-Ends, Splices, Plastic Guy Guards, and Spacers are furnished by PREFORMED for the construction of inexpensive, safe, dependable systems. Write to PREFORMED LINE PRODUCTS COMPANY, 5349 St. Clair Avenue, Cleveland, Ohio 44103.

A Total CATV Concept: design, engineering, package NOVACOR AMPLIFIERS

Like all C-COR amplifiers, the NOVACOR CATV line is built to last . . . and to perform at maximum efficiency. NOVACOR Bridging and Trunk amplifiers are modular in design, incorporate significantly different, and vastly improved circuitry . . . and deliver 10 db more output than any other CATV amplifier.

BRIDGING AMPLIFIERS

- Cast aluminum housing guarantees maximum weather and RF seal, reliability and performance.
- 10 db more output than other CATV amplifiers
- Systems-proven
- Modular in design
- New exclusive circuitry
- Direct feed and directional coupler feed

TRUNK AMPLIFIERS

- 10 db more output than other CATV amplifiers
- Low noise figure . . . 8 db
- Fully ALC'd
- Choice of 3 models for efficient cascading contributes to reduced investment cost
- Temperature compensated
- Cable powered

Before you build or rebuild, call or write C-COR.

C-COR Electronics, Inc.

TAP UNITS

NOVACOR Tap Units, a hybrid design for flattest response, are housed in a cast aluminum case, and come with pedestal mountings (TU) or messenger mountings (TM). These units feature true impedance match on service drops.

SPLITTERS

All NOVACOR Splitters are weather sealed with epoxy for long lasting, trouble-free performance. They feature a universal mounting for messenger or surface by use of a throw-away stud and messenger clamp assembly.

POWER SUPPLY

The PS-30 Power Supply is housed in a weather-proof aluminum case. Power feed and distribution is made through the connectors on the bottom of the case.

California cont'd.

Systems Company's Palisades Bowl, Box 1166, Malibu, Cal. 90265. Began June, 1963. Operator: B. G. Evans. Subs: 88 (approx. 325 Pop.) 9 ch. video; 12 ch. capacity; FM. Rates: \$3.25 mo.; \$10 inst.

Whose hues?

They're Collins', of course. Yours, too, when you relay color programming via Collins' new 5-watt, i-f heterodyne microwave system. Perfect color hues require low differential phase and gain. For the best color TV long-haul performance in the industry, specify Collins' new MW-109E microwave system.

The MW-109E is the most advanced microwave video system available today. In addition to excellent color performance provided by i-f heterodyne repeater techniques, a high-powered traveling wave tube provides superior propagation reliability and signal-to-noise ratio. Rack space and power consumption have been greatly reduced by all solid state circuitry (except TWT's) to ensure equipment reliability and low maintenance costs.

For technical information, call, write or wire Collins Radio Company Microwave Marketing, Dallas, Texas. Area Code 214. AD 5 9511.

Q. Which of these functions are critical in tower construction?

A. All of them.

Most makes of towers look pretty much alike. (No one has a monopoly on construction materials or the laws of physics.) You have to look closely to detect the differences. When you get right down to it, that's where Utility Tower Company shines — we know that the smallest details make the biggest difference in quality.

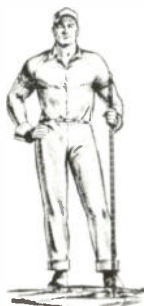

Utility design engineers treat every bolt, every weld as a critical pre-requisite for maximum durability and performance. From initial planning to final fabrication and

installation, every part and procedure is checked and rechecked. Without exception.

This "Certified Quality Control" covers Utility's entire CATV line — more than a dozen types of towers for every CATV use. And it's the kind of attention that makes Utility towers stand above all others in CATV.

Let us show you how Utility gives you more for your money . . . how the many details of a Utility tower are designed and built specifically to serve you better.

Call or write us for complete information.

You sly old fox...

**YOU'VE KNOWN ALL ALONG THAT TV CABLE SUPPLY
CAN DELIVER MORE ITEMS FASTER THAN ANYONE ELSE
SERVING THE CATV INDUSTRY!!**

Actually there are quite a few sly old foxes around. Those who know that the shortest distance between placing an order, and starting to make a profit, is a straight line to TV CABLE SUPPLY CO. We've lived with the day-in-day-out problems of CATV for many years and it's kept us tuned to the needs of the industry. By handling thousands of items, we've been able to compare quality, and stock only the best. Realizing that an order received today means expected delivery tomorrow, we rush most orders out in twenty-four hours. Through our long experience in the field, we can recommend equipment, procedures . . . or put you in touch with other expert advice. We're here to serve your needs . . . to do the impossible . . . when you need it most. Send for our free catalog today. (Now over 100 pages.)

All transistorized CATV head-end gives you 12-channel processing without demodulation

New CAS Channel Control has full head-end capabilities plus **duplication switching, local origination, remote emergency alert and "flash" announcements**... all from one versatile unit.

At last! Here's a head-end system with solid state reliability, a wide range of origination and remote capabilities and priced competitively with older conventional systems.

The CAS Channel Control receives any VHF TV channel (UHF if specified), eliminates adjacent channel interferences and *automatically* adjusts both picture and sound levels. A special external tuner (*inset photo*) provides for duplication switching of local channels.

Check these features!

- fully transistorized modular construction
- simple 19" rack mounting
- compatible with similar tube equipment
- passes full color
- operates on 117 vac, + 30 vdc or remote power
- regulated power supply
- front panel controls and test points

Send supply of CAS DIRECT ORDER forms

P.O. Box 47066 • Dallas, Texas 75207 | No Postage Necessary

Here's all the CATV spare parts warehouse you'll ever need . . .

. . . and you'll save money, effort and time
when you **ORDER DIRECT** from **CAS!**

Direct orders save you money

CAS low overhead direct selling means lower prices for you! Since CAS maintains no national sales force, savings are passed on to you. And, if you qualify, you save even more buying at Special System Operator Prices!

Direct orders are easier for you

Your CAS catalog is always present. There's no waiting for a salesman to call. Order right from your office, when you want to. CAS keeps your catalog up-to-date with electrical and mechanical specifications and prices of all equipment. Simply fill out an order blank and send it to CAS . . . you save time, eliminate errors by ordering when it's convenient for you.

Direct orders are faster

CAS anticipates customer requirements with ample inventories of the most wanted CATV equipment and accessories. Chances are your order will be filled the very day it is received. But, if you're really in a hurry, telephone your order directly to CAS. Off-the-shelf items can be shipped to you immediately by air!

CATV COPYRIGHT REPRIEVE

House Passes Bill; CATV Section Stripped Out

The CATV industry won a potentially valuable reprieve last week as the House by an overwhelming 379-29 vote approved a new copyright revision bill after stripping out the section on CATV. The victory is only a limited one, and the eventual consequences are unknown; but at least the imposition of an unworkable CATV section was avoided and time was gained. The bill went to the Senate, which is still working on a similar bill. Both House and Senate will have to agree on the final form of the legislation, and it is uncertain at this time how the Senate will lean on the CATV question.

As reported in the Review last week, a major factor in the CATV copyright fight on the House floor was a jurisdictional dispute between the Judiciary Committee, which had worked on the bill for years, and the House Commerce Committee headed by Rep. Harley Staggers (D-W.Va.), who along with many of his committee members thought that the Commerce Committee should handle legislation governing CATV matters. Staggers and Judiciary Committee Chairman Emanuel Celler (D-N.Y.) resolved their differences, however—mostly in favor of Staggers. The upshot is that the CATV section of the copyright bill was pared out, while Staggers promised to consider over-all CATV legislation such as his committee reported out last year (through a typographical error, last week's Review said the Staggers bill was favorable to CATV; it obviously was not, as it essentially restricted CATV activity and gave FCC large degree of jurisdiction over CATV). Staggers reportedly will then spin off the copyright question to the Judiciary Committee. Commerce men jealously guard their own prerogatives, and in this case the hope of a man who thought his field was raided worked to the temporary advantage of CATV.

GENERAL TEL POLE AGREEMENT

Stratigent Demands Amazo and Aztec Operators

The Review last week obtained a copy of what is reported to be the latest standard "CATV Pole Lease Agreement" to be offered by General Telephone subsidiaries. After its presentation to operators in at least one state, it was taken to the Rate Association's board of directors for serious study. The pole lease agreement contains the most stringent demands that the Review has published in any telco pole attachment agreement.

For example, in Article V (12) the agreement states that "the telephone company retains the right...to install, at the sole risk and expense of the CATV company, any and all attachments to the poles solely owned by the telephone company and poles jointly used by the telephone company and others...The CATV company agrees to furnish all such materials and equipment and further agree, on demand, to reimburse the telephone company for the entire installation cost thereby incurred." In Article VI (24), the agreement requires that "in the event that the telephone company or a joint user of the pole shall require the space occupied by the CATV company's existing attachments, the telephone company shall notify CATV company of such fact and of the estimated costs to the CATV company of replacing such pole with a pole which will accommodate the attach-

CORNWALL: Ottawa Cablevision Ltd., 1537 Merivale Road, Ottawa. Operator: J. Reid, mgr.

CATV

Antennas

The ASTROSCAT

This antenna, available in 20 and 30 foot models, is a compact, lightweight aluminum parabola designed for operation at frequencies up to 2400 Mc. The standard Astrocat antenna is provided as a package for CATV with feeds available for each band. Special broad-band feeds are provided for high and low band channels and for UHF (Channels 14-83). Astrocat antennas are easily portable and assemble quickly with minimum personnel.

CATV YAGIS

Twenty-six CATV yagis with 5, 8, or 10 elements, constructed of lightweight, high-strength aluminum, cover channels 2 through 13 and FM. All low frequency antennas have built-in vibration dampeners which reduce overall element deflection and increase element life. Constant impedance, weatherproof connectors assure uniform response and trouble-free, low VSWR performance under all weather conditions. A heliarc-welded feed input eliminates all possibility of intermittent contact. Standard mounts are available from Astro-Structures.

TOWERS

Easily erectable scaffolding towers, suitable for parabola antennas, and Crank-Up towers appropriate for Yagi types are also available from Astro-Structures. The lightweight aluminum Crank-Up tower is particularly suitable for site surveys.

Engineering services to handle specific system problems or installations are available from Astro-Structures and RF Systems facilities on both east and west coasts.

This is CATV Show Biz

...or how to make your system a box-office hit

Timatch[®] perfect match connectors

Cable: Available in seamless lengths up to 1/2 mile

TIMES
CATV CABLE & CONNECTORS

Putting a good show on the home screens of your subscribers is one part of CATV show business. Having the equipment to back up your programming—with clear, dependable pictures that don't ghost, fade or give up altogether—is another.

Times 30db CATV cable—and instantly-installed matching connectors—delivers award-winning performance to your subscribers' homes year after year. It's the surest way to keep them happy and put profits in your system's picture.

Times cable is trouble-free because of the way it's made:

in continuous seamless lengths up to 1/2 mile. This means fewer splices, fewer trouble points, less maintenance . . . and less labor cost. And because it's seamless, it's water and vaporproof . . . won't stop the signal short of target. All in all, you get improved electrical performance from Times cable and matching Timatch connectors. Long after so-called economy cable has been replaced, Times cable will still be a top performer, even while you're upgrading your system.

To take advantage of this direct way to assure your system's pay-out, contact Times or your local Jerrold sales engineer.

Why NCTA?

Survival, copyright, FCC, PUC, a future . . .

The reasons are many, the concept is essential.

Membership in NCTA is necessary for all companies concerned about their future in CATV. Your Association provides a national voice that is heard and respected in Washington. As a member, you help decide what that voice will say. Continuous liaison with members of Congress and the FCC keeps the policy makers aware of your problems and needs. NCTA legal assistance and guidance helps members make decisive business judgments while safeguarding their investments.

NCTA members receive weekly Membership Bulletins in addition to a constant flow of subscriber promotions. Effective management and technical information help upgrade and stimulate your business.

NCTA is working hard to help CATV grow and prosper. Your Association needs your help and your support, and you need the Association.

Each year NCTA hosts a national convention for the convenience of its members, who gather to exchange ideas and information. The latest technical and management techniques are explored in depth by recognized authorities. Associate members display the newest equipment and services available to the industry. Annual achievement awards are presented to individuals and companies; new officers elected and important policy decisions reached.

Grow with NCTA — it's good business

Multiple System Operators

A Directory of CATV System Group Owners in the U.S.

This section is intended as a guide to CATV system holdings of multiple system operators (MSO's). Information for these listings is compiled from FCC forms 325 filed by system operators; from information furnished to the publisher by the MSO's; and from research by the Directory editors. In addition to listing the systems owned or partially owned by each firm or individual listed, this section gives the home office location and principle officers of each MSO, and attempts to show cross-ownership among the MSO's and their principle stockholders.

WITHERELL, CARL: Lebanon, New Hampshire; owns 80% of systems in the following communities: Hanover, Lebanon/W. Lebanon, New Hampshire; Hartford, Vermont.

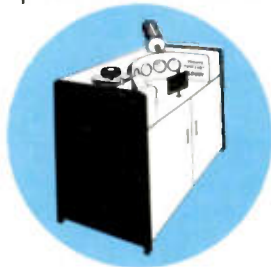

Cablecasting..

TELEMATION'S SYSTEMS CONCEPT

■ You wouldn't consider building a cable plant without a system design, nor would you want to use non-compatible components. In the absence of established industry standards, it is even more vital that you choose compatible local origination devices.

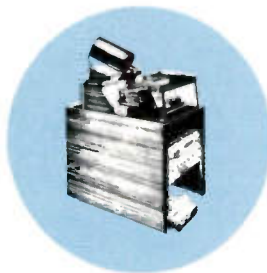

■ This is why TeleMation offers 18 separate products for CATV local origination, plus the choice of television broadcast equipment from over 150 manufacturers to provide you with an integrated local origination facility that is both compatible and complete.

How TeleMation's System Concept will benefit you:

- Your WEATHER CHANNEL™, old or new, can be used as a film and slide source.
- WEATHER CHANNEL™ and NEWS CHANNEL™ can be combined on a single system channel by use of the new SAV-A-CHANNEL™ or with CHROMA-CHANNEL™ to originate weather forecasts in color.
- Cameras equipped with a TeleMation TSG-1 Sync Generator can be integrated into a broadcast-like system for smooth,

professional operation with TeleMation's new CABLECASTER™ Video Control Center — a new concept in CATV origination. Cameras used with the CABLECASTER™ system can be used for outside use by merely disconnecting from the studio system — conversion to self-contained operation is completely automatic.

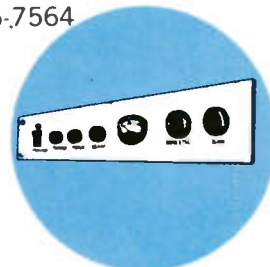

■ Video recordings made on TeleMation-supplied recorders are guaranteed interchangeable between machines.

■ TeleMation engineers have over 60 years' combined experience in the television broadcast field. Why not take advantage of this in planning your live and/or automated cablecasting facility?

CATV Map Section

The following section contains maps of individual U.S. States, showing the location within each of CATV-served communities. These communities are indicated by a green dot printed over the location of the community. Communities which are served by the same physical distribution system are connected on the maps with green lines between their respective locations. Also shown are those communities currently served by one or more television broadcast stations. Such communities are indicated by a green circle surrounding the location of the city or central urban indicator in the case of large municipal complexes. The States of Connecticut and Rhode Island are not included in this section—the former having no true CATV systems yet in operation, and the latter having only one operating system. The entire contents of this section are copyright 1967, by Communications Publishing Corporation and the George F. Cram Co., Inc.

NO CHANGE IN CATV PICTURE QUALITY

with

JERROLD
StarlineTM

You, Mr. CATV system operator, have only two major benefits to offer your subscribers. More program variety. And superior picture quality. Jerrold Starline CATV equipment makes sure your subscribers get both.

Even subscribers on the extremities of feeder lines will receive the same picture quality as every other subscriber with the all solid-state Starline system. It is the most conservatively designed, most reliable distribution system yet developed for maximum picture/sound quality.

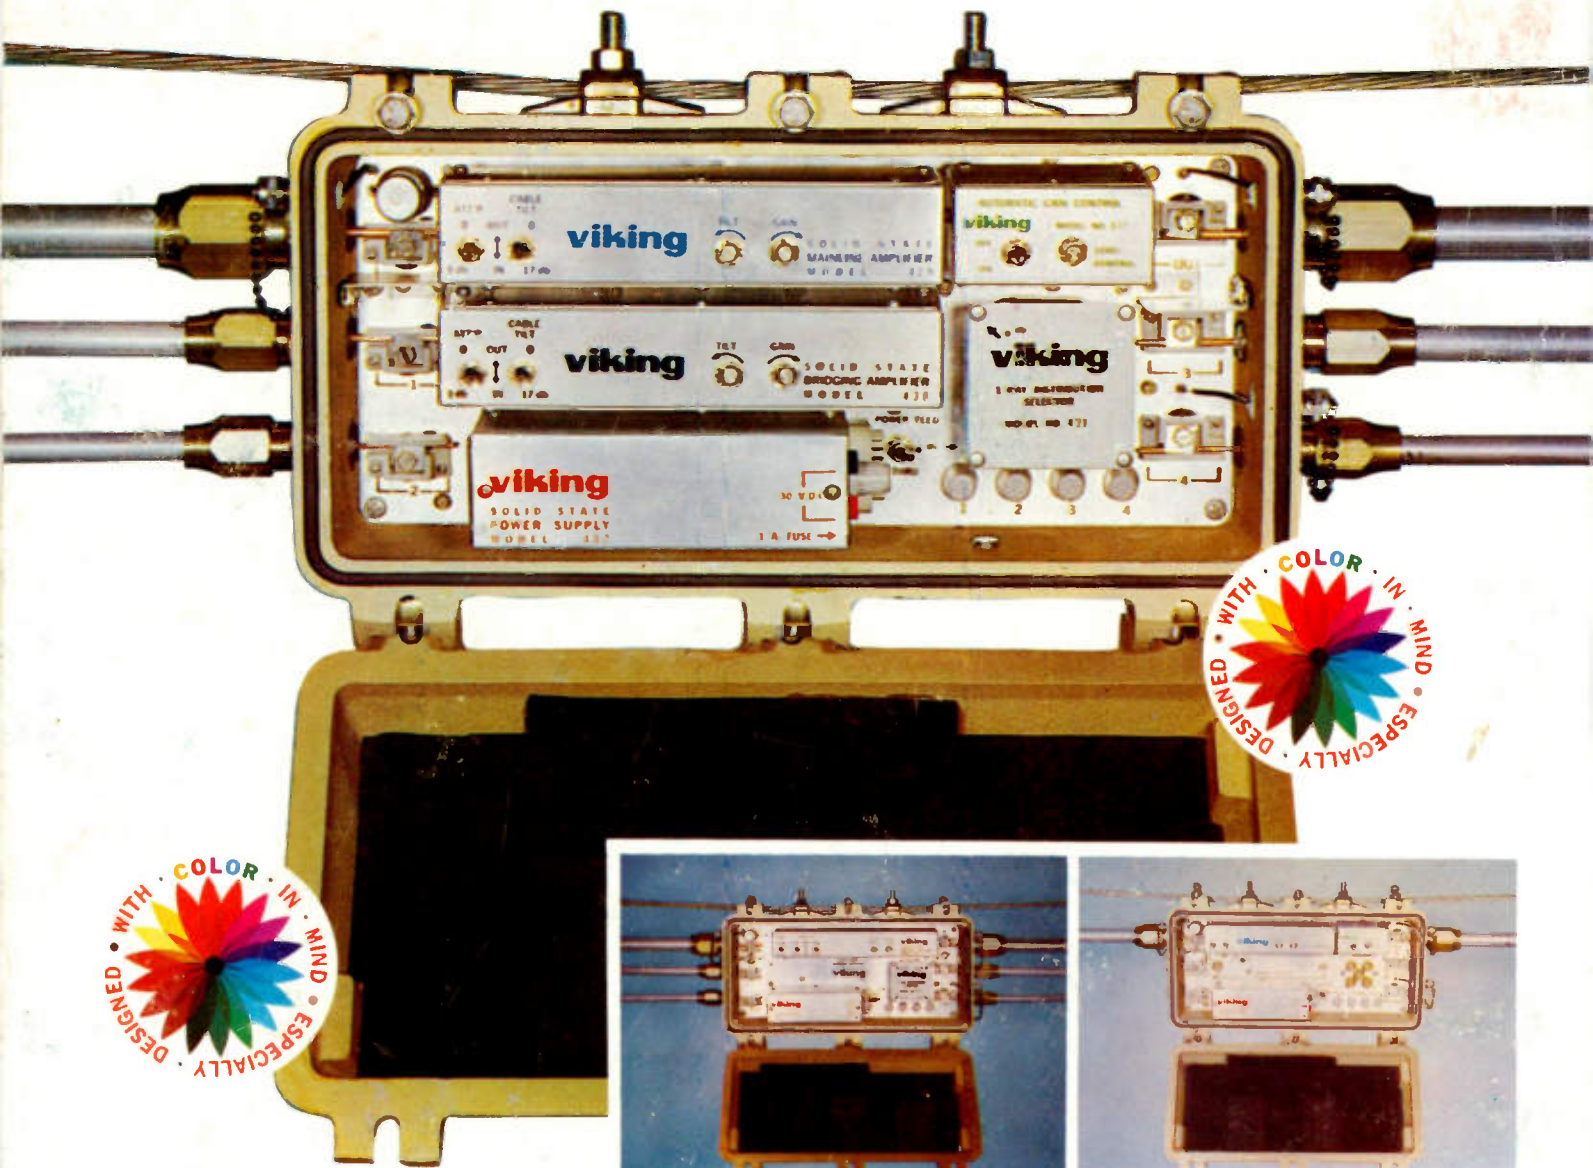

Starline provides maximum 12-channel cascade-ability with *minimum* degradation in signal quality.

Starline unitized CATV equipment is the best way to gear up for increasing subscriber demand with the best tool at your command—all-channel picture excellence. Talk with the man from Jerrold *now*, or write for complete information to: CATV Systems Division, Jerrold Electronics Corporation, 401 Walnut Street, Philadelphia, Pa. 19105

JERROLD[®]

FIRST IN CATV • The nation's largest, most experienced manufacturer/supplier of CATV equipment and services

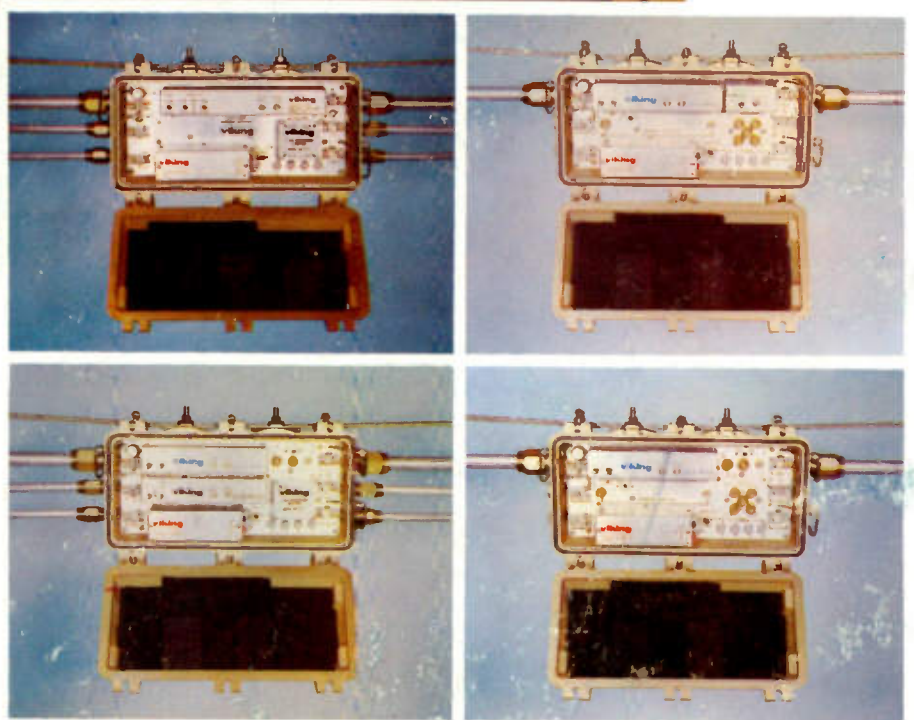

FOR MORE CATV PROFITS

... Step up to FUTURA

How can Futura help you to get and hold more CATV subscribers? By providing top quality color pictures on all channels . . . all the time. Futura reliability means fewer customer complaints and lower maintenance costs.

Whether you want to build a new CATV system or upgrade an old one, ask about Viking Turnkey Service. Call Collect Today.
