रि व

NOTICE After an effort of nearly two years, I (Dan Ferguson) have finally found someone to take over the work of handling NASWA HOQS and getting FRENDX published and mailed. The next issue of FRENDX (May, 1975) will be the last to be mailed from the Charleston, WV, area. Beginning with the June, 1975, issue FRENDX publishing will be handled by Alan Mayer of Park Forest, Illinois. Headquarters mail, renewals, etc., will be handled by Mac Leonhardt, who is currently editor of the E section, of Log Report. I will continue to keep the Box in S. Charleston, and will forward any mail received to Mac Leonhardt for handling.

If your membership expires <u>after</u> the May 1975 FRENDX (i.e., if your last scheduled issue of FRENDX is June 1975, or later), your renewal can be sent to Mac Leonhardt at the address given on the heading for the B section of Log Report. If your last issue of FRENDX is scheduled to be the April, 1975, or May, 1975, issue, it will simplify matters if you will send your renewal to the South Charleston address on the back of this bulletin.

ABOUT FLASHSHEET Getting FRENDX published is quite enough for one person. However, Alan Mayer has indicated that he will try to handle FLASHSHEET publishing also, if it is changed to only one separate mailing per month. FERHAPS ONE OR MORE OTHERS IN THE GENERAL AREA OF PARK FOREST, ILL., CAN PROVIDE SOME HELP WITH THE PUBLISHING OF FLASHSHEET AND/OR FRENDX. Publishing help needs to be within reasonable distance of Alan Mayer, since he will have the addressing machine, used for addressing both FRENDX and Flashsheet. Alan will be in contact with members in Illinois/ Indiana. YOUR HELPING IS IMPORTANT::

I am expecting to redo my listening set-up during the summer, and hope to be listening and reporting to the various sections of FRENDX during the next DX season. Perhaps, from time to time, I'll be able to put together an article for SWC as well.

THE LOUDENBOOMER REPORT

One of my excursions this past summer had me exploring the delights of Peru, a tour more frequently taken by our European DX friends.

It would be impossible in the paltry amount of space alloted to me here, to cover my trip fully, but you will be interested in at least one Andean account T'm sure.

One of my stops was a delightful day spent in Huancayo. I arrived on a Saturday afternoon, checked into the Hotel Turistas, bought a map of the city, had a pisco sour and sat down to study the lay of the land.

As you well know, there are several broadcasters in Huancayo, among them, Radio Negativo. I had sent a sufficient number of reports to this outfit to know that the station was located on Calle Real and I had every intention of paying them a visit. Another pisco sour, and I was ready.

A few minute's walk found me in front of a two story structure of some considerable age. A small sign announced "Radio Negativo." So this was it!

I entered a hallway and to my right I could see a man seated behind a control board playing records. Another man came out of an office to my left. I introduced myself and said that I was one of their listeners from Estados Unidos. The man, who turned out to be Sr. Alfonso Nunca V., the gerente, lit up in a brilliant smile. Obviously he was delighted to see me and I had hopes of success at last in obtaining my long-sought QSL.

After a quick tour of the single studio and office, we went up to the second floor which served as Sr. Nunca's apartment. And, over pisco sours, I asked him why DX'ers so seldom received replies from Radio Negativo.

"Ah, the mail here is no so good as it perhaps is in your country. We do not get much mail from outside Peru."

I asked him about the few he did receive.

"Well, we reply to those but perhaps it is that those do not get out. Besides, the time available to do these favors is not much. For example, tonight I have to run the station so my assistant can have an evening off, and tomorrow I will have to go to Ayacucho."

"I see", I said, "Well, do you think you could give me a QSL before I leave? I have my report right here." "Certainly my friend," the gerente replied. "But first, another pisco

sour!"

We sat talking awhile and then the announcer came in carrying a huge basket full of bits of paper, leaving a trail fluttering behind him. "Ah, here are the requests for tonight," said Sr. Nunca, stirring them

around with his hand.

"That's guite a few," I remarked.

"Si. Tomorrow is Sunday, fair day, so the city is already crowded. We shall be on the air late tonight!"

I picked up a handful and looked at them. They were small printed forms with space for the name of the song requested, artist and name of the person for whom the song was to be played. I turned one over and on the back saw the words "I would be happy to receive..." The reverse side of a second one had "NPO 34333" typed on it! I began to get an inkling of what was really happening here! I downed the rest of my pisco sour and said that I thought I'd better be getting back to the hotel and what about my QSL?

"Ah si, I'll type it right up for you. Have another pisco sour while you wait."

I did. And Sr. Nunca began to plunk away at his typewriter. With a flourish he signed, stamped and handed me a viewcard of Huancayo on fair day which said "This QSLs your receipt of Radio Negativo, Huancayo, 5.835 kcs.

I thanked him, we said goodbye and I walked out into the late afternoon sun, headed back to the hotel. The crowds were already gathering and somehow, in the effort of dodging oncoming people, my QSL slipped out of my pocket and was lost!

I fumbled my way back to the hotel, had a sorrowful dinner and drowned my sorrows in you-know-whats.

Next morning, I had a train to catch and I'd overslept. I was late, so I couldn't take the time to do anything about the youngish European fellow buying postcards at a souvenir stand near the hotel. One of them seemed to have something typed on the back.

Too bad. If I'd had the time, I'd have invited him to have a pisco sour with me!

73.

Charlie

Shortwave Center

Down Memory Lane arles H. Brunner, Jr.

Circa 1922 my father received a home made radio set from a friend, who, incidentally, was a chief surgeon. Undoubtedly his surgical skill was put to a different use when wiring the set. Even though the set had no cabinet, it consisted of a bakelite panel, some tubes and operated on big dry cell batteries - arranged in series.

The panel had three spider-web coils for its tuner; the middle one being in a fixed position, and the ones on each side were hinged so they could be swung out and back with both hands until a station was heard. Each coil was many windings of copper wire on a piece of thin fiber board.

The set had an on/off switch and a volume control - but, of course, no calibration. We used a phone jack for at least two different stages, and by plugging in our 4 headsets in series we were all able to hear signals. In 1924 we listened to the 103 roll calls for Presidential Nomination at the Democratic Convention.

About this time, medium-wave DX-ers had a ball. Each night the MW stations in the Eastern Time Zone shut down at a set time, and we heard the Mid-West or Central Zone Stations: Chicago, St. Louis, the famous Kansas City Night Hawks and Ft. Worth. An hour later they shut off and the Rocky Mountain stations were heard. Then the stations in this zone closed down and we listened to the Pacific Coast: KFI - Los Angeles; KGO - San Prancisco, etc. I do not remember if all stations had to sign-off, but the process gave us clear channels for DX-ing. One night my rather heavy aunt shook the floor and a spider web coil moved slightly and we jumped from WOO in Philadelphia to KDKA in Pittsburgh!

Then we bought a Garrod Neutrodyne set with a separate powered upright horn speaker. This, as I recall, was powered by house current and created a lot of squeals in neighborhood sets.

In 1934 I bought a Philco Table Radio. It has SW bands 2.3 to 2.5 and 6.5 to 18.0 with vernier tuning. The I got QSL cards from 2LO - London; Einhoven, Holland; and an EAQ - Spain; and also Switzerland. Among other things, the Depression helped to curtail my DX-ing around 1935.

In June 1973 I bought a Zenith Trans Oceanic D7000Y and with it have logged 110 countries using mostely its attached whip antenna, but sometimes a long vertical wire which carries my VHF/UHF leads from my 56 foot tower. I still use the beautiful Philco. I have even used 2 fourteen foot traverse curtain rods as a dipole.

Yes, the old days were easier for many DX-ers: nothing like the high powered mess nowadays

FACTS ABOUT

**** *** *** *** *** ***

AS RELATED BY NASWA REPORTER

David C. Mackes in conjunction with a trip to Greenville, N.C.

The Edward R. Murrow Transmitting Station is located near the city of Greenville, North Carolina. The station is divided into three parts: transmitter sites A and B, and the manager's office and receiver plant at site C. The three sites form a triangle with sides of 25 miles.

When you drive up to the gate, you must get out of your car, call in on the gate telephone, and explain your business. Then the gate is opened electrically by remote The first place I visited was site C. I signed the guest book and was then control. introduced to Mr. William Harmon, the station manager. He told me about VOA, and Greenville in particular.

Sites A. and B. are transmitter stations. They are both identical. Each station covers 2500 acres. At each site there are 3x500kw, 3x250kw, and 3x50 kw transmitters or broadcast use. In addition, each plant has 2x40kw Independant Side Band (ISB) for polink-to-point use. Power comes in at 465 kv, stepped down to 4.6kv for direct use by the 500kw transmitters. The voltage is reduced even further for other transmitters.

The 500 kw transmitters were made by Continental Electronics and use the Doherty high efficiency amplifier circuit. The modulator and final tubes, of which there are 8, are cooled by water flowing at 30 gpm. The 250 kilowatters were made by General Electric and are vapor cooled, i.e., the tubes which dissipate a lot of power sit in insulated containers and constantly boil water into steam. The 50 kw transmitters are Gates units. It is interesting to note that transmitter heat is used to warm the building in winter.

Right next to the transmitter building is the switchhouse. The high power RF enters through screened feeders. It is then connected to the correct antenna. All antennas are fed by means of 300 ohm open transmission line.

At each of the transmitter sites there are 14 dual and triple band slewable curtain arrays with a gain of 20 db. Site A has 21 rhombics and 2 log periodics, which are used for point-to-point. Site B has 20 rhombics, 2 log periodics, and 1 dipole antennas.

Greenville is partly responsible for coverage of Europe, the USSR, South America, and part of Africa, by direct broadcast. The 40 kw ISB transmitters broadcast program material to the WOA's European and African relay stations. Usually one sideband is program material and the other sideband carries RTTY. This is because Greenville is the main hub of the teletype network between Washington and the overseas sites.

Site C is the program distribution and receiver center. Here the programs are distributed to a designated transmitter after coming off the microwave link from Washington. In addition, there is a large antenna farm which is used for dual diversity (space diversity) with segmented audio reception of the BBC.

The VOA relays BBC programs into South and Latin America; in return, the BBC relays WOA programs from Ascension Island.

When talking to the station manager, Mr. Harmon, I found the answers to several questions about VOA operation:

Electricity for Greenville costs about \$3,000 per day, but, more importantly, their *fuel adjustment charge has gone up as fast and as far as ours. In fact, this charge is almost \$25,000 per month in addition to the basic electricity cost. For this reason, broadcasting time was being cut. How much of this time was not known at the time I was there. I was told that the cut would be as large as necessary to get the station back on "its budget.

The next thing I asked about was the VOA AM transmissions people have heard in the point-to-point bands. This is not true as the WOA does not use AM in the utility bands. At certain times on certain propagation paths the 40kw ISB transmitter cannot deliver a signal of high enough quality to the relay sites. When this happens, one of the broad-cast transmitters are used. When this transmitter is used for relay, it utilizes the "Kahn compatible single sideband system". The Kahn adapter allows a regular AM transmitter to transmit a SSB signal with a vestigal carrier. It is this vestigal carrier that allows a receiver to demodulate the signal when the receiver is in the AM mode. It should be noted that by far the greatest majority of signal power lies in the SSB portion.

In summation I can say this about the Greenville site: the station personnel are very competent and really understand the business of International SW Broadcasting, Politics, interdepartmental and otherwise, is non-existent. An efficient cost reduction program is in effect so that more program hours can be used efficiently. In addition, they showed me every courtesy during my visit, no matter how busy they happened to be during the time 1 was there. I think we are very lucky to have such a dedicated group of people running this important international broadcasting operation.

USIA EXHIBITION: The U.S. Information Agency maintains a public exhibit tour at the headquarters of the Voice of America, on the second floor of 330 Independence Avenue, S.W., Washington, D.C.

During the free, guided tour, visitors watch broadcasts take place, see excerpts of USIA motion picture and TV programs, learn about Agency publications distributed in multiple languages around the world and of USIA's libraries, reading rooms and bi-national centers in other countries.

Forty-five minute tours are given at 9:00, 10:00 and 11:00 a.m., 1:00, 2:00 3:00 and 4:00 p.m. Mondays - Fridays except on holidays. Groups of ten or more should make reservations in advance through USIA's Office of Public Information, Area code 202 755-4744.

SWC editor's note: the USIA tour is quite fascinating. I would suggest that if you are in the DC area on your summer vacation to drop into the VOA Washington studios. I did it several months ago (and was going to write an article on it, but my tape broke and...) and met Pat Gates while she was doing the Breakfast Show taping and many other interesting people. The view of the control room was worth the whole trip - especially when I begged to be allowed inside for a few minutes!

Communication History

MOODY AFB, Ga. — During the past few years, collecting has become a hobby with many people, and many different things are being collected. A new one has been discovered in the 2024th Comm Sq., but upon investigation we find that it is not so rare. Indead, "Insulators" have quite a background. John-K. Young, son of MSgt. and Mrs. John F. Young, has been collecting for approximately one year. Most of his insulators have been found in South Georgia

CROWN JEWELS. John K. Young, son of MSgt. and Mrs. John F. Young, examines one of the numerous insulators he has found in southern Georgia and Canada. When the family moves to the southwest next year, young John hopes to add to his collection of more than 400 "Crown Jewels of the wire."

and in Canada during summer vacation. Insulators have been with us for many years and have been important to communications since the first telegraph was installed in 1838. For all who are not familiar with insulators, they are the glass or porcelain objects installed on telephone and telegraph poles, and protect the lines from electrical leakage to ground.

In the beginning, the necks of glass bottles were used until several companies were started to manufacture what we know as insulators. The original ones were usually dark green color, but over the years many different materials, styles and colors were developed. They are now categorized in a manner similar to coins with respect to age, condition, color and rarity. All of the original manufacturers have long since gone out of business.

There are different designs peculiar to each part of the country. For example, the insulators used in the mines of the old West had a very different design from those used in Eastern cities.

In these modern times, the older telephone lines are being replaced with underground cables and microwave systems, with the result that insulators are becoming relatively rare. Many types, such as pyrex carnival glass, are very rare and difficult to find. Prices vary widely, as with all antiques, and range in price from 50 cents to 125 dollars. Of course, the most fun of collecting comes from finding them yourself. Downed poles usually abound along abandoned railroad lines.

John enjoys his hobby, and corresponds with other collectors throughout the country. He will be moving to the Southwest next year and is looking forward to adding to his collection of over 400 "Crown Jewels of the Wire".

ELECTRONIC QUICKIES

""" Q R P TOTAL S""""

NASWA member Alan H. Roth of New York submits his totals:

- SOUTH AMERICA: Ecos de Pto. Mart. in Colombia, 5560: 90 watts
- NORTH AMERICA: Calgary, Canada, 6030: 250 watts

OCEANIA: V R H, Fiji, 5980: 250 watts

ASIA: Turkish Met. 6900: 2500 watts

EUROPE: R. Mediterrano, Spain, 6995: 1000 watts

AFRICA:

Voz de la Isla, Canary Islands, 7350: 350 watts

TOTAL: 4,290 watts

Very good, A1: Where, now, are the QRP veries from all the rest of you?????

National Bureau of Standards, WWV, Fort Collins, Colorado—next tone begins at three hoursfifteen minutes, Greenwich Mean Time."

A method of coupling two circuits so that only the currents and/or voltages that change with time are passed from one to the other, often by the use of a capacitor or transformer, is called AC coupling.

Another method of AC coupling is to stand in a few inches of water and insert a finger into a light socket. Note the change in time as you pass from here to THERE.

S W C - 4 APRIL 1975

Observations on a personal visit to

NASWA Traveller: Dan Robinson

Trans World Radio

As many of you already probably know, TRANS WORLD RADIO - SWAZILAND, is now on the air from a transmitting site just outside of Manzini in that small land-locked country. Currently, TWR and Swazi Music Radio are the only stations on short wave from Swaziland. In this two part article, I will try to give you some idea of radio broadcasting in Swaziland as I experienced it this name.

It was an ordinary day in March or April of 1974, and I had just gone out (dashed out!) to fetch the day's mail. There was nothing there except the usual TWR news letter and envelope. But this news letter was different: It described the new stations which were under construction in Swaziland and Guam. After so many nights of futile listening for Swazi Music Radio. was I finally to have a chance to log Swaziland??? . Little did I know that not only was I to have a chance to log Swaziland, but in

four months from that moment - I would be winging my way to Johannesburg, South Africa,

THE AUTHOR AT A LUNCH BREAK AT TWR SWAZILAND

on my way to Mbabane, Swaziland, for the most incredible 2½ months of my life. I suppose it has to be luck, but in the past two years I have travelled to the Soviet Union (to visit Radio Moscow and Radio Kiev), and to Southern Africa (visiting TWR, SMR, and the SABC). This past summer I spent over two months living and working in Swaziland under the American Field Service.

My location in Swaziland for the better part of my stay was at a boarding school just outside of Mbabame, the small but very nice capital of this country. It was from here that I did my DX-ing and made my contacts for my first visit to TWR - Swaziland. The construction site is located outside of Manzini about 8 miles on a good paved road, and another 10 on a very rough and rocky dirt road with deep culverts and holes. It was easy to see where the bulldozers simply drove through the brush and trees to make the road. After a long, bumpy ride, we arrived at the station. I was accompanied by David Fisher, and several other people involved with the station. At the time of my visit, which was during the month of August, the site consisted mainly of the following:

- The aluminum storage building which held all the equipment to be installed at the station was the main attraction. It held the transmitters as well.
- 2. There was a small building housing the diesel generators that will be used to supply power for the transmitters.
- 3. Besides these buildings, there were many small houses for the Swazi workers helping with the construction, a tool shed, and an office inside a trailer.

I wanted to make myself useful, so, amid the constant drone of the diesel generator, I went to work almost the moment I got there helping Dave (who is one of the station technicians, and now a good friend) string wires for the transmitter (made by GE) on a wooden model. Lunch was about 1:00, and after a full morning of stringing electrical wire I was ready to eat anything. At lunch time, there is always a devotional, when thanks are given for the safety of those working and those travelling, and also a reading from the Bible. Lunch is a nice break in the hard work that is necessary all day.

After lunch is over, work continues, and among the many activities going on during my three visits to the station were pouing concrete for the floors, making bricks for the walls of the transmitter and studio building, and conducting tests on the transmitter. Only one of the transmitters was actually working when I was there, but by now I assume the second one is about to be put into operation. On the last day I was at the site, the first owni-directional antenna went up with the help of all of us, and it was a sight to behold! While we were trying to hoist it up between two towers, a thunderstorm was passing overhead, and later it sent bright sparks of lightening dancing across the wires.

Helping with the construction were a group of Swazi men who take care of most of the really tough work like pushing wheel barrows of concrete to and from the transmitter building where the floors are being flattened and formed. They also make bricks, which is a whole other job in itself, and they deserve a lot of credit.

Most of the current frequency detail is now well publicized, and I have listed some of it in LN in FRENDX. I hope the illustrations with this article will give you some idea

VIEWS OF THE SITE WITH ANTENNAS ON THE POREGROUND

of the mammoth job it is to erect a radio station in the middle of Swazi bush country. There are five antenna masts scattered in close proximity to the buildings and these will be sending programs to Capetown, North to Malawi, and North-cast to Angola.

The following information was received from David Fisher in Manzini:

"Our present operation is on 6070 from 0330 to 0700 GMT, extending to 0845 on Sunday. We are also on 6070 in German from 1615 to 1645. Then we operate on 3365 from 1655 to 2000 GMT. We are now using the Log Periodic Antennas, using the omni during most of the hours on the first transmitter. The second

transmitter will probably divide its time between the north antenna and the Cape Town vicinity antenna".

In my many conversations with people on the staff of TWR, it became clear that letter from SWL's and DX-ers will be welcomed, but until dedication on 4 December 1974 and during the first few months of operation I would not doubt that replies will be slightly longer in coming here.

In conclusion, I owe many thanks to the entire staff of TWR-Swaziland for their hospitality and help in writing this article (via a large amount of station information), and for frequency changes, technical information, and scheduling. For further flashes re-garding TWR Swaziland, READ LN in FRENDX:

PART II: SWAZI MUSIC RADIO

Tucked back in the thick woodland of Swaziland amid pine and eucalyptus trees is the first radio station to offer a short wave voice of this small country in Southern Africa. When one lives in Swaziland for a while, he learns that where people say something is, does not necessarily mean that it is in that particular place. And, so the same with Swazi Music Radio. After over two and one half grueling hours crawling over dirt roads, rocks, streams, and ditches, I had my first look at the transmitting site of Swazi Music Radio.

As I have previously mentioned in LN, the site is situated almost directly on the border between South Africa and Swaziland - one can walk to South Africa if the fence lining the border were not there. As for the location itself, I could not think of a better location for a radio station. It is situated on the top of a small hill surrounded by other hilly country, but there are no really high mountains in the area and the antennas seem to have a 1st of breathing room. There are five MW masts at a height of 173 feet, each forming lobes to Natal and the Transvaal for 1376 kHz. By now, there should be an additional antenna up at a height of about 140 feet for SW. Each MW antenna is ac-tually what is called a "hot" antenna - in that it is a vertical half-wave dipole with

copper mesh and a spark gap (for lightening), so I did not venture much nearer than necessary.

Stan Gobbi and his wife were very nice to me and to those with me and gave us a complete tour of the entire station and much technical information. Due to the isolation of the station, the Gobbi's spend much of their time at the station, and when visitors come, it is a welcomed, if not invasive, occasion. I had the opportunity to look at some letters sent by overseas DX-ers from countries like Sweden, Norway, England, and the U.S.A. There are three giant diesels for power and two giant 6000 gallon tanks for fuel to supply the generators. Twenty-four Swazis work at the site along with 2 Europeans and, of course, Stan and his wife.

Perhaps the high point of the visit was going into the transmitter room, where I saw the MW and SW transmitters - named "Mama", "Pipsqueak", and "Big Shorty". I believe the new 100kw transmitter was "Big Shorty" because it did not look large enough to handle 100kw. It was not yet in operation, but Stan said that it soon would be. To be exact, he told me that beginning in September or October (1974) the new 100kw transmitter would be put into service and programming would go to 18 hours a day. The frequencies can be found in the November (1974) issue of FRENDX, but as of November 30, the GATES transmitter that I saw at SMR is not in operation or else is just not coming across to the U.S. With that kind of power in that location, I cannot imagine why, but perhaps by the time you read this, SMR will be fairly well heard in North America. At any rate, the whole Operation is extremely efficient and professional. Unfortunately, I have no black and white photos of the site, only color.

I hope all the above has made for interesting reading as it sure was a heckuva lot of fun being there in person!!

Alexander Borell and Radio Luxembourg

The Los Angeles Times

"Do LUXEMBOURG you have a problem? Do you need advice? Alexander Bor-ell helps you."

Borell's deep, authorita-tive voice rings through the kitchens and across the highways of German-speaking Europe every Friday, as he publicly counsels five of the many distraught or neurotic people who write him each week. The 61-year-old author, jack-of-all-trades and amateur psychiatrist is the newest star of the liveliest and probably most profitable communications medium in Europe: Radio Luxembourg.

A privately owned opera-tion, Radio Luxembourg is a rarity in a Europe domi-nated by state-controlled radio and television net-works, virtually all of which pile up' massive deficits. Compared to its bureaucracy-ridden rivals, Radio Luxembourg operates on a shoestring, beaming out a mixture of pop, chatter and dreary soap advertisements over the most powerful medium wave sender on the continent

Rainer Holber, a refugee from the West German state radio and television network and the man who brought Borell, the "mailbox uncle," to Radio Luxembourg, is typical of the young, insou-ciant people who make the station a success.

"For every job here, there are 10 in the West German network," he said.

The accent is on pep and cheer with a delightful infor-mality to Radio Luxem-bourg's programming. Newscasts can run 1 or 10 minutes, depending on news.

For the housewife, a steady stream of advice and information ranges from new recipes to beauty hints, For the driver, the program is peppered with the latest reports on weather condi-tions and - equally important - how to avoid the daily highway traffic jams.

Radio Luxembourg's service to motorists is so good vice to motorists is so good it recently led to a govern-ment crisis in North Rhine-Westphalia, the biggest German state. Dissatisfied with the service put out by the state's own radio net-work Interior Wither With work, Interior Minister Willy Weyer offered Luxembourg full facilities in the state's traffic control center.

Political objections were raised and an angry debate took place in the state legis-lature. Weyer, a strong man in the Free Democratic Party, threatened to resign. Rather than see the govern-Social ment break up, the Democrats capitulated, and Radio Luxembourg is still reporting on traffic condi-

tions directly from the control center.

Every summer, the station, as a special service for vacationers, broadcasts messages to tourists ranging as far from home as Yugoslavia and Spain, urging them to contact home or office because of emergencies. Usually included are a description of the car and the license number so motorists who are listening can alert others to emergencies.

Such services give it a massive audience. Borell's listeners every Friday morning are estimated at 2 million. And Radio Luxembourg also broadcasts in French, English, Flemish and Italian.

Radio Luxembourg first went on the air in 1935, when a backyard tinkerer named Mathias Felten put together the first small transmitter and began broadcasting. Today, it operates from 1 park in downtown Luxembourg, in an ancient stone tower which was once the powder magazine for the city's medieval fortifica-tions. Felten, now an elderly patriarch, is still its director general.

Its popular appeal can be understood best in the con-text of the deadly dull programming of Europe's state-run communications media. Nothing illustrates this better than a current controv-ersy over advertising in football stadiums.

Borell is no learned psy-chiatrist, but nonetheless considers himself ideally qualified for his job as "life adviser," His father was a stiff Prussian officer, his

mother only a servant of her man, and he left home at 18. Since then, he has been a

racing car driver, a zoo keeper, a production line worker and an author of several dozen novels. some of his novels are detective stories based in Los Angeles, a city he has never visited.

He has been married four times, the last time for 22 years.

He writes advice columns for five magazines, three of them under female pseudonyms, and has unbridled contempt for the run-of-the-mill professional psychiatrist.

"You can't learn about life from books," he said. "Too many psychiatrists are dis-turbed people themselves.

becker autoradio ADD SHORTWAVE TO YOUR CAR RADIO and drive around the world as you drive to work!!!!

APRIL 1975

A NASWA EXCLUSIVE REVIEW by

Dennis Patrick Driscoll

When you drive to work in the morning does your body start to twitch and a pain shoot into your gut? If so, you are just one more radio junkie going through DX withdrawal. It happens everytime that you part company with your receiver for longer than five minutes. Once you have tasted DX you will never be the same again. You just can't get enough of that shortwave radio.

SWC - 7

Are your families just about ready to sign your commitment papers to the funny farm because of your all-night SWL'ing? Or because of that night when you almost axe murdered the neighbor who started running his '57 Chevy just as you heard a conch shell IS on 5045? Well, convince them that you are totally bananas. Install a Becker Reims Short Wave Adapter (Model #10) in your car. Cruise the town to the strains of R. Moscow, R. Habana, or even HCJB! The folks will have you crated off to the nut house in no time flat. How could anyone who listens to short wave every waking moment be same? They just don't understand the cravings of a radio junkie!

Dan Henderson's fantastic "Travel Log" article in the January 1975 <u>FRENDX</u> was only half of the traveling DX story. Why wait until you arrive at your destination? Why not listen to short wave while on the road? If your ears hurt because of the fast talking DJ's on AM and the Muzak on FM, install a shortwave adapter and find real variety in radio.

The Becker Reims Shortwave Adapter is a ten band, solid state converter that can conmect to any AM car radio. It covers the 90, 75, 60, 49, 41, 31, 25, 19, 16 and 13 meter bands. It can run on 6 or 12 volts, negative or positive ground. The unit is 1½ tall, 7" wide, and 4" deep. It weighs 34 ounces. It has eleven push buttons (one on/off switch and ten band selector switches).for easy operation. The price is \$61,24 (this includes mounting hardware, connection cables, and a six month warranty). It can be ordered directly from: Becker AutoRadio, USA, Inc., 613-19 South 24th Street, Philadelphia, Pa., 19146. If you pay with a certified check or money order, the unit will be shipped immediately upon receipt of the order). (I ordered mine on a Wednesday and received it via UPS on the following Tuesday). Becker provides prompt and courteous service.

Installation is a dream. The unit can be mounted either under the dash or in the glove compartment. I chose the latter to keep it out of sight of theives. The signal from the antenna is run directly into the Adapter. When the Adapter is switched off the signal

bypasses the Adapter and allows normal AM reception. This is accomplished by a short cable connected between the Adapter and the AM radio jack. The only other connections are the power and ground. These two are quite simple, as they can be hooked to the existing power/ ground connections on the AM radio. All instructions for installation (including diagrams) are included along with the necessary equipment. Becker, as you may know, is the German company that makes radios for the Mercedes-Benz automobile company. Their quality is very excellent.

Tuning of the Adapter (to match it to the antenna and the AM radio) is accomplished by the adjustment of two screws. One is the output trimmer and the other is the antenna trimmer. First, trim the antenna on the AM band. Then, trim the output trimmer and the antenna trimmer with the Adapter on the middle of the 41 meter band. These simply adjust the signal and unit to peak. Longer tuning instructions are supplied with the Adapter, but these are for the rejuvenation of an old Adapter..not for the simple tuning adjustment required by a new Adapter.

Operation of the Adapter is quite like selecting radio stations with the push buttons on most AM car radios...Once the AM radio is turned on, simply depress one of the buttons on the Adapter to select a short wave band. Then tune the SW band on the AM radio dial just as one would normally tune. Only one thing to get used to when using the Adapter: it tunes backwards! Most radios increase in frequency as you dial right-to-left. The Adapter decreases in frequency. Example: If, on the 31 meter band, WWV (10 mHz) shows up at 700 kHz on the AM dial, then Radio Cairo (9805 kHz) will be at about 900 kHz on the dial. If you remember this one fact, finding stations will be no problem. The 200 kHz spread on the AM dial will still mean a 200 kHz spread when tuning shortwave. (You can use your present receiver to determine the exact frequencies of stations heard in the car and then make calibration charts. This will allow you to obtain good calibration of your car radio).

Reception has been quite good with the Adapter. All of the super power stations offer "clear channel" reception. Stations with about 50 - 250 kW power are obviously no problem; 10 - 50 kW stations are very good but not as booming as their big brothers. This is true of all short wave radios, so it is nothing new. There are more audible stations in the car than one may think. In the one week that I've owned the Adapter, I've also heard a number of good 60 m.b. catches. These include Togo on 5047 and Turks Island (VSI8) on 4788. It was quite a strange feeling to hear these while driving around town !!! This is not a unit restricted to receiving the VOA and CBC. The sensitivity is greatly improved over earlier Becker models. It is comparable in quality to many good shortwave receivers. I have made simultaneous comparison tests between the Adapter in my car (using the regular AM car radio antenna) and a Drake SPR-4 (using a Musch 86-D dipole antenna). Obviously, the SPR4 far outweighs the Adapter in selectivity, but I was quite impressed with the sensitivity of the Adapter. There have been a number of stations whose signal was stronger in the car! Yet, crowding is quite apparent on the Adapter bands.

If you are indeed tired of AM radio or can't get enough of shortwave --- try the Becker Reims Short Wave Adapter (Model #10) for added listening enjoyment. At the very least you can scare the h--- out of hitch hikers when they jump into your car and hear Radio 73's, and keep your eye on the road! Moscow booming away.

YES, WE NEED A NAME by Morgan Monroe

When Ed Shaw took off for the Pacific, he left me the assignment of reporting suggestions and comment stemming from the December FRENDX article: Do We Need A Name? Response hasn't been heavy, but among replies are some thought-stimulating comments.

Carl Rozycki, Patchogue, NY, agrees that our hobby urgently needs a name, but believes that "the priority is not identification, but survival". In expressing his concern, Carl employs this formula: "No listeners identified as a group = less transmissions; less tran smissions = less receivers; less and less receivers = fewer members of NASWA (or any other group); eventually: zero". His name nomination is: "World Radio Communications Monitor".

Jimmy C. Jones, Nashville, TN, shares Carl's concern for the hobby's future and thinks a "generally acceptable name" would aid in spurring greater public recognition and participation. "There's strength in numbers," reminds Jimmy. "Witness government and public participation and encouragement of the hobby in Scandinavian countries where it is enjoyed by a much larger percentage of the population." He believes the term "International Radio" could stand alone once it is understood and accepted.

Lawson Booker, Columbus, OH, came up with four name nominations. They are: "Radio Transmission Monitor", "Foreign Broadcast Monitor", "Radio Communications Monitor", and (hang on!) "International Radio Communicologist". (SWC ed note: the last title would evenly encompass LW, MW, SW, UTE, ARO, etc., Dxers quite well).

R. A. MacLeod, Erie, PA, feels a suitable name should extend beyond the international concept. "We also monitor such things as ships at sea, aircraft, and even space craft, he writes, suggesting as his candidate: "Universal Broadcast Monitors".

A. L. Garrou, Valoese, NC, proposes "Worldwide Radio Monitor" and the acronym "WORM". He explains that the acronym "has a catchy touch to it and is easy to say". (SWC: yep!)

Several members thoughtfully sent along their endormements of my "International Radio Monitoring"suggestion. They are Mrs. M.M. "Grandma" Greene, Bell CA; Carroll R. "Pat" Patterson, Decatur GA; L.P. Benjamin, Lompoc, CA; and Ken Barhart, Allentown, PA.

So, we have a total of 10 name possibilities including "International Radio Enjoying". Considering NASWA's size, that's not many. But it's a beginning - one that could at last lead to a descriptive identifying name for our hobby. All who wrote agree that we do, indeed, need a name.

But unless NASWA's full organizational weight is placed solidly behind this need, it may be filled by others. QUESTION: Shall we meet this challenge or sit on the bench while some other organization picks up the ball and scores? What do you think? Drop me an 8¢ postcard with a brief summary of your ideas and thoughts on the matter. Morgan Monroe, 1225 Pine Street, Sandpoint, Idaho, 83864, USA.

• The grand daddy of all DX shows was started in 19 September 1922 over

Officio • WBAY-AM New York. The ATT station broadcast between 1630-1730 and known • as "The Radio Digest". Hested by George F. Thompson, it was mainly a news show, but questions from listeners about radio were read and QSLd.

Why would anyone in their right mind undertake a project like building his own "Communications Receiver"? Receivers of almost any size and shape, with an assortment of desirable operating features are available commercially in a number of price ranges. Anmost any feature you want is available somewhere. The rub comes when you start combining desired features for the receiver YOU want. As you add to your list of features, the field of choice becomes smaller and smaller, until one last feature drops them all out of the picture, and the only way to get the receiver you want is to really design it and build it yourself. That is what happened in my case. As a second benefit, the price is lower

What features make this receiver difficult to duplicate? First, plug-in ganged coil assemblies, as in the National HRO. They have inconveniences, but any one who has ever seen what a high "Q" antenna coil in a good shield will do for a receiver signal-to noise ratio above 10 mHz will think long before he packs a receiver full of bandswitch and coils.

Next, remember the old Hammarlund Super-Pro with the variable coupling I-F transformer which gave continuously variable selectivity, controlled from the front pane1? I wanted that, too, as well as double conversion (for image response red-

uctions), a "hole pusher" type noise silencer, A.G.C. which worked for telephone or code reception, a built in crystal calibrator, and enough audio to sound fairly good when signals justified its use.

The block diagram at the end of this article shows what finally evolved from my requirements, and the photo (above) shows the general appearance of the 90 pound monster which finally took shape.

The National "PW" dial gives a 12 foot scale length for calibration; used HRO and HRO Jr coil sets, retracked for the 2747.5 kHz first I-F, provides high Q plug-in coils for complete general coverage, and bandspread sets if desired. The first I-F feeds the second mixer and a 3010 kHz crystal oscillator yeilds the second I-F of 262.5 kHz. A crystal filter provides added selectivity, but is mostly used for its rejection notch to remove heterodynes. This is followed by four stages of gain at 262.5 kHz. The agc is taken off before the detector, so is usable for cw and as well as phone.

One stage of audio gain and a cathode follower feed the headphone jack, a jack for the tape recorder and a phase inverter which drives two triode connected 6V6GT's in the push-pull for good loudspeaker volume.

The "hole-puncher" noise silencer is in the first I-F and the amplified noise pulse is used to turn off a buffer amplifier between the 3010 kHz crystal oscillator and the second mixer. A little unconventional, but it works.

Also included is a 100 kHz crystal calibrator controlled by a panel switch. With a vernier index on the dial, it provides calibration to about 2 kHz at 20 mHz from the dial readout which is adequate for most needs.

The variable coupling 262.5 kHz I-F transformer were built at home, too, using Miller coils, air dielectric trimmers and lots of elbow grease.

The use of octal tubes may surprise some, but looking back on the service record of tube replacements I think it was a good choice. The tuner uses miniature tubes for short leads and low electron transit times, which are important above about 10 mHz, but few of them seem to last more than a year or so, while many of the octal tubeshave been in the same old socket for over five years. The final results have borne out my hopes and expectations. Good sensitivity, excellent selectivity - I only hear an image response about once a year, and it is reliable and easy to use.

Now, for the \$64 question: Would I recommend <u>you</u> building your own receiver? Well, yes and no. If you know enough electronics to do the necessary design work, are enough of a craftsman to convert the design to good hardware and can't find what you really want on the market - yes.

Otherwise: NO!!

-0-

Werner J. Selby lives not too far from Bill Davis and sometime ago went over to his house to check out the receiver himself, as he was curious to know more about a "homebrew" that he kept seeing after Bill's name in the Log Report columns. A little polite arm twisting and we see the results of Bill's handywork. Werner says, "Nothing against a Drake SPR-4...but...we hooked up my Drake which I brought along, at his antenna - what an embarrassement! Not only was there hardly any receiver noise on his "homebrew" but the stations came also in much stronger and his 'S' meter was far more sensitive than mine:" Thanks to both Bill and Werner for providing NASWA with an item of top-notch interest:

QSL REPORT

CLANDESTINE PATRICTIC VOICE RADIO: (anti-Burmese Gov't Cland.) Look for this one fm 0030-0115 and 1230-1315 in BB on 7240,7235,7230,7198. This sta was once known as "Nat'l United Liberation Front Radio" and also as the "Patriotic Youth Front Radio"

VOICE OF THE NATIONAL FRONT OF CAMBODIA: This pro-commie Cambodian lang clandestine station is now sked'led fm

 Oldi-Ogo 1030-1230 all on 12005v,10120v,10080v,9985v,7015v,6142v, and
 Oudi-Ogo 1330-1430 on 4675v. (by permission, BEC MS)
 VOICE OF NATIONAL UNITED FRONT OF KAMPUCHEA, a Cambodian speaking sta,
 appeared in late Jan and disappeared in late Feb. Freq's were 7285, then 7325, then later on 7300 and it was sked'led fm 1257-1330. The ID and opening mx are the same for this sta and the pro-commie VNUFK. Maybe this is a black clandestine sta?? (via DX'er Isao Ugusa, Japan) PHNOM PENH NATIONAL UNITED FRONT OF CAMBODIA: This is a new sta b/c'ing

in Cambodian fm 0100-0130, 0700-0730, and 1300-1330 on 7287. Material fm this sta is anti-Phnom Penh Gov't. (by permission, BBC MS) VOICE OF THE PEOPLE FROM THE HEART OF THE ARABIAN PENINSULA: This is

an anti-Saudi clandestine sta which uses the 25 meter band outlet of 11800 for its xnsm fm 0400-0500 and 1200-1230. (by permission, BBC MS)

VOICE OF TRUTH: This Greek-lang pro-commie sta and that its xsmns were to be discontinued. The VOT was 1st hrd on Mar. 20,1958, using a Leipzig SW xmtr on 9730, and in April, two more xmtrs, believed to be located in Romania, became operational. The sta had been b/c'ing 13 times a day on two xmtrs believed to have been located in East Germany. The last VOT b/c was at 1120 on Jan 14, and, therefore, it must be assumed (by permission, BBC MS) that the sta has closed down.

<u>COLUMBIA</u> R Neuva Grande is installing two 15 KW xmtrs which should be in operation by 1976. (via Mide Peraaho, MN)

<u>CLANDESTINE</u> OPPS!, out of order. The Korean lang cland. sta, Radio -Echo of Hope, has extended their sked. They now b/c fm 0200-0500 and 1230-1530 on 6348. (many thanks Isao...Isao Ugusa, Japan)

NASWA-FRENRX_____APBIL_1975

ECUADOR Escuelas Radiofonicas Populares is located in the city of Riobamba in central Ecuador. Riobamba, capital of the province of Chimborazo, is a city of 30000 people nestled in the Andes close to Mt. Chimborazo (20577 ft). Some of the most beautiful scenery in Ecuador is to be found in this area. The region is chiefly agricultural although skilled craftsmen are also found in the area who produce folklore items and various other things. In addition to pgms of music, the sta b/c's courses of basic education directed primarily toward the peasant populat-ion. Escuelas Rdf Populares has been noted with a good signal on 3985 after 1000. (very good Joe...Joe Di Leo, CT) If some of you all after 1000. (very good Joe...Joe Di Leo, CT) If some of you all would like to make similar contributions to LN, "write on", they will be quite welcome. Maybe this could be a regular thing if we has enuff support. ECUATORIAL GUINEA R. Santa Isabel has been noted carrying EE news at 2030 on 6250. (by permission, BBC MS)

TIMOR Dili continues to be hrd on 3668, contra to the listing in Feb's LN. In fact, Dili is probably the most consistent stations hrd in Perth; consistent monitoring of Dili confims that is has not changed to 3268. This noted by Craig Tyson, Australia.

UNITED STATES OF AMERICA Although the brand new 1975 WRTH says that Radio Sta KCEI, La Voz de La Amistad, in Calif., accepts reception rpts from "target zones only", it is possible to get a QSL fm them if you live outside of the "TZ". The station quotes, "We preferrpts fm LA and the Far East and require two IRC's for a surface mail response and six IRC's for airmail. Within the US, rpts will also be acknowledged with a QSL card; include 22¢ in <u>stamps</u> for airmail and 16 cents in stamps for surface mail. No IRC's fm the USA please!" Their latest sked has EE slated on 5980 fm 0700-0800 and 1000-1100. (via Kerryn Brandt, NY)

USSR The March IFRB Tentative HFBC Schedule lists much USSR usage with Central Asia locations which check out precisely with the observed hours and beams for the Winter period. Some usage changes noted so far in March and more will probably be made in early April. Signal strength and fading charactoristics indicate Central Asia locations. The listed QTH's there-fore appear to be accurate. The following were hrd in VA during Feb., mainly fm 1100-1300, particularly on days of <u>moderate ionospheric</u> disturbances. They are dropping down now (March), but some still are holding up, particularly 9720.

NASWA-FRENDX APRIL 1975 The following is something that might be of interest to some of our Pacific area DX'ers. Scott Reeves, ND, has sent an interesting clipping from the WALL STREET JOURNAL'S February 10th edition which gives some good information on the Timor/Indonesian situation.

Portuguese to Leave, 'And Colony Isn't Sure It Wants Them to Go

Island Sees Need for Help; Some Back Indonesia Tie; Does Region Face Chaos?

Tourists at a Hippie Hilton

By WILLIAM D. HARTLEY

. Stoff Reporter of THE WALL STREET JOURNAL

DILI, Portuguese Timor - When time began, the Manbal people say, the younger of two brothers on Timor left to make his life overseas. When the older brother could no longer control the warring tribes, he went in search of his brother, seeking a sign of authority. He returned with the Portuguese flag.

It was in the early 16th Century that the Portuguese first came ashore here to buy sandalwood from the natives and convert em to Christianity. Over the years, despite an occasional interruption such as occupation by the Japanese in World War II, the Portuguese influence has become perva-sive. As the Manbai tale illustrates, Portugal has crept into a mystical role in religion and myths, a role that won't easily be cast off by new rulers.

But new rulers there will be, because Lisben is getting out of the business of run-ning ether lands. "Timor." a visiting Portu-guese official has said, "will be what the majority of the people want it to be." The prospect is disquieting to this most

remote, most ignored, least developed col-ony of Portugal, asleep for generations, knowing little of the outside world and caring less.

Little Thought of Freedom

The Timorese are still struggling with the idea of change. Few had given freedom much thought before last April 25, the day an army coup in Lisbon overthrew the dictatorship of Marcel Castano, the last of the European colonists. The government press and radio here had never told of independence movements elsewhere, and a deliberate policy of nondevelopment and isolation. kept political aspirations nil.

What there is of an active political elite is concentrated in Dili, the capital, and there are so few politicians that leaders of competing parties are sometimes related. Some of these men want to stay with Portugal, at least until they are sure Timor is ready to go it alone. Others want early independence. A third group would join Indonesia. About the only agreement right now is that the people are too immature, the economy too weak, to stand without some kind of a

The political parties, all formed after April because any political activity before then ended with a jail term or deportation flood the government radio with their mes sages and tour villages seeking converts Locals flock to the banner of the party making a plea one day, only to change alle giance when the next arrives.

A House Without a Roof

"Timor has been a house for 450 years with everyone locked inside," says Antonio

Muniz de Silva, a native Timorcse who fol-lowed the custom of adopting a Portuguese name on baptism. Mr. Muniz de Silva is a "lural," which is a sort of hereditary su-preme chief of a large area. "Now," he adds, "they've pulled the root off the house and everybody is going in different directions."

The people have always done what the Portuguese told them to do, and making a decision is strange to them. Before that momentous day in April, there was a servile council to advise the governor but "the gov-ernor would say "This is what I want" and they'd say 'It is okay." says Mario Lemos Pires, the newly appointed governor, who is trying to create a new council. "Now I ask for advice and they say 'You decide,'" he says. "The people aren't prepared to make decisions."

Soon they must: Lisbon and Gov. Pires talking of an October election of an assembly to draw a constitution.

Impact on Indonesia Seen

If the only thing at stake were the future of the 650,000 persons in this colony about the size of Connecticut, the rest of the world could ignore the place. But there are those who believe that what happens here could affect the stability of the largest nation in Southcast Asia, Indonesia, and in general cause chaos.

Timor, an island of 13.071 square miles. sits near the end of the chain of Islands arcing eastward from Java. Portugal occupies the eastern half of Timor. Indonesia occuples the western half except for the tiny Portuguese enclave of Ocussi on the north-ern coast. Indonesia considers the whole area within its sphere, though as long as Portugal was here, the Indonesians' didn't WOTTY.

But an independent Portuguese Timor; the Indonesian leaders are believed to think, would provide a bad example for their coun-try. Indonesia is, after all, less a nation than conglomeration of 125 million people of в different cultures, races and languages, often with little in common.

"There is independence talk in the Celebes and the Moluccas (parts of Indone-sia)," says one diplomat familiar with the area. "These people could say that if Timor is independent, then why not them?" Some

say the Indonesian half of Timor might be trat to yo.

A fracturing Indonesia could add to uncertainty in an area that already sees a ess-than-stable Papua-New Guinea about to separate from Australia and a growing se-ressionist movement in Muslim Mindanao in the Philippines. Huge oil and mineral in-

vestments in Indonesia would be threatened. Indonesians publicly decry talk of separation as nonsense, but some do express their worry that an independent Portuguese Timor would be a vacuum-unstable, ungov-ernable and broke. Not the least of their worries is that Lisbon's new leftist leaders have made overtures to Peking. Currently Portugal recognizes Taipei and

there is a Nationalist Chinese consulate in Dill watching over the 14,000 Chinese here, nearly all of whom carry Taiwan passports, A charge could put a Communist Chinese consulate in its place. Indonesia, which foesn't recognize either China and sees, ac-cording to one analyst, "Reds under every bed" since an attempted Communist coup in the mid-1960s, isn't happy with the prospect.

The Indonesians may have thought their 'ears were justified when Maoist slogans vere painted on a monument of Princ Henry the Navigator in a Dill park a wh back. Then it was discovered that the p'

ing was the work of Portuguese soldiers who wanted to go home and who figured that signs of unrest might prompt the government to pull out precipitately.

Most outsiders dismiss Indonesla's fears. They say that China is trying to improve its relations with Southeast Asla, not subvert the region. Nor is there much, if any, Communist influence among local Chinese, it is believed.

In any case, Indonesta clearly would like Portuguese Timor to join up. Radio Kupang across the border in Indonesian Timor constantly broadcasts propaganda to this half, (alling on Timorese to "join your brothers." political party here called Apodeti, which ۵ vors union, admits, according to its secre-"hat it is financed by "private people" In In-donesia. The party doesn't seem to have widespread support.

One political leader in Dill, assessing the possibility of an Indonesian invasion after he end of Portuguese rule, says, "When the Portuguese leave, we will ask the Amerilans to come in and guard our borders.

That sort of naivele in the wake of Viet-iam isn't unusual here, for the Timorese now little of the outside world or of what ias happened in the past few decades. Mainly, they know Portugal. In some parts of the colony, the Portuguese flag is sacred; to stand in its shadow is sacrilege.

In little ways the natives in the mountains adopt Portuguese customs, Visitors must be given thick, sweet coifee in demitasse cups. Catholicism gets mixed with the native animism and in one village a statue of the Virgin Mary has become something of a weather deity used to appease the gods who would let the river rise and flood in the wet season.

The Portuguese discovered Timor beween 1510 and 1515, and today it is one of

the last remnants of their once wide influence in Asia. Portuguese carrying cross and cashbox opened much of Asia to the West; they were the first Europeans to visit Japan. Along the way they founded their colony of Macao on the coast of China and settled along the Malacca Strait in what is now Malaysia. Some small fishing villages there still speak a corrupted form of Portuguese.

In Timor the Portuguese mostly let the natives follow the old ways as long as it didn't interfere with the colonial government. Blood feuds and vendettas remain common, anthropologists say, because the Portuguese never really cared if one native killed another. Up to a few decades ago, they say, open tribal warfare was tolerated. By design (locals weren't allowed to travel without a pass, and passes were seldom given) and by nature (the island's soaring nountains make movement difficult), the colony developed as a collection of isolated tribes and villages-what one man calls "an anthropologist's delight"-speaking some 35 separate languages.

In the towns, secret police, which have gone under many names but most recently were called the "General Direction of Security," or DGS, kept order with an iron hand. The police haven't any power now, but most Timorese still shy away from disc. inp them. "Sometimes we'd be talkin with friends about governmyoung man who will idwith his pre-baptism

the next day the "Half the of DGS," could tru same p when didr fo7

Timorous Timor: The Portuguese Will Leave, and Colony Is Uneasy

Portugal ignored development until re-Gov. Pires, "It's only been in the last the standard stan

money." It has been only in the past four years that primary schools were built out-suie Dill. There still is only one high school, and although there are about 75 university students from Timor in Portugal, half of those are in their first year. There are only one or two university graduates among Ti-morese on the island. The illiteracy rate is put at 9352

Portugal hasn't taken much from the island, though. Lisbon supplies more than half the current \$8.5 million budget and all the the current 3-5 million budget and all the 23 million for a five-year plan to improve reads and communications. Timor consis-tently runs a trade deficit, which Lisbon abo makes up. "As a business, Timor is mothing," says Luis Eleardo, a government official. "It is hopeless." The main export is a rich coffee, but the quantity is small. Development lear bitmer as small, define

a incn corree, but the quantity is small. Development plans hings on small indus-'try and tourism. Timor now gets about 6,000 tourists annually but officials sniff that these aren't the kind Timor wants. Mostly they are the barefoot backpack crowd from Australia who see Timor as the first stop on the road to Southeast Asia - and spend little.

Many stay at what locally is called the "hippie Hilton," a bare beach-house where for only \$1.20 a traveler can flop his sleep ng bag on the concrete floor for as long as his visa lasts. Drawing more affluent travel-ers, even those attracted by the island's raw beauty will be attracted by the island's raw beauty, will be difficult until there are decent hotels and roads.

The Portuguese are trying to build up ag-iculture as well, believing that the island practice "slash and burn" cultivation: They burn down trees and underbrush, use the area for a year or two, then move on, and it is hard to change the practice.

Gov. Pires would like to develop a mest industry for export-there are tens of thou-unds of head of builfalo and the Balinese tow here-but since these are considered wealth and are particularly valuable when young men have to pay the "bride price" to the family of their girl, natives are reluc-tant to slaughter until long past the time the meat is any good.

Outsiders are becoming interested in Timor, though, and so local hopes are high. Broken Hill Proprietary Ltd., the largest company in Australia, is exploring for a variety of minerals, including manganese, chromium and gold.

Most encouraging are plans to drill for oil in Timor's offshore waters starting next May. Geologists know there is oil around be cause for decades natives have scraped seepage off bonds and used it for lighting

Thanks to all of those who contributed to LN this month. All contrib-utions to LN are most welcome. If you desire the return of your sked, please enclose a SASE with your report. Please, all times in GMT.

73 and Happy Listening,

HELPING HAND

FOR SALE - or trade Hallicrafters S-38E general coverage receiver, excellent electrical condition ... \$30. Also, AMECO AC-1, 15 watt QRP transmitter, excellent condition, coils for 40/80 meters, crystals for 3825, 3980, 7120, 7250 KHZ ... \$20. Also, Heath RF Generator, 190-220 MHZ...\$35. ...You pay postage ... Write Tony Fields, 124 South Shore Drive, Portage, Mich, 49002.

NEBRASKA DXERS TO MEET April 20, Sunday, from 2:30-5:30 pm CDT at Commercial

Federal Savings & Loan, 12255 West Center Road, Omaha, Nebraska From all appearances it should be one of the largest state-wide get-togethers ever held, For further details contact Marv Robbins, 6922 Spring St.,

207, Omaha, Nebraska 68106 ... Main thing is to be there:

BC221-C FREQUENCY METER w/crystal and original calibration boak & w/regulated ac power supply. Also copy of appropriate sections of original technical manual. \$40 plus shipping or make offer....Write Tom Overcamp, 5107 57th Ave. #302. Bladensburg, MD 20710/....

Planning to revamp entire listening set-up, including new equipment. The following for sale ..

Hammarlund HQ145A receiver, general coverage, \$120. Allied AX-190 with modified bandswitch so that it now has 3 bands on upper range, rest on lower .. \$170.

Heathkit SB310 receiver plus Heathkit SB620 Scanalyzer (gives 'scope display of received signal and spectrum on either side of received signal). Receiver has crystals for 90/60/49/41/31/25/20/19/16 meters. Receiver has 5 KHZ AM filter. Both for \$270 Have CW and Deluxe SSB filters for the receiver, both for \$50.

AMECO PCL-P RF Preamp ... \$25 GILFER A-20 Preselector ... \$30

Audio filters...MFJ CMF-2BX \$18 (750 Hz center fqy) (400 Hz center fqy) MFJ CWF-2BX \$18 MFJ LPF-1 \$10 lo pass audio filter (all filters used abt 2 hrs)

DATA ENGINEERING FMS-3 Frequency Marker Standard -\$20

5825N BANGLADESH. RB. 1600-1630 Hindi //7385. Odd freq (Willis 2/27).

HONDURAS. Voz de H. 0208-0255 fast SS talks, mx interludes, clear ID (Fino). 5875

With business continuing to slack off as we leave the DX season behind, this might be a good time to review our reporting procedures for the benefit of new members (and a few not so new). Your adherence to our format makes the editor's job easier and also, in the long run, means that you'll get your copy of Frendx faster. Please observe the following when you report to Section A:

- ### Make sure your report gets in the mail to reach me no later than the 15th.
- ### Include only items in the 1605-5899 kHz range.

Don't report utility stations or harmonics, just SWBC. (Harmonics can be reported if identifying them clears up confusion about SWBC, however.)

Although it is not necessary that items be in strict frequency order, they should be grouped according to the first digit in the freq (i.e., 2-3-4-5).

- ### If your report contains ten or more items, please cut them apart before submitting. (Fewer than ten, too, if you want to.)
- ### Put your last name at the end of each item -- they are cut apart, so there's no way we can identify the reporter otherwise.

If you have to print, take care to make it legible. No hieroglyphics, please! ### Use only standard abbreviations.

Follow the editorial format of LR-A: times first, then languages, then content, then parallels, then quality of reception. Rearranging items takes more time than any other single step in the editorial process.

Particularly in the case of Latin-American stations, try to include specific details. Endless listings of "IA mx, SS talk" become stupefyingly dull after a while!

It is not necessary to specify a man announcer or, in the case of LA's, Spanish language. These can be assumed unless otherwise stated.

Use paper 8" or 82" wide. Odd-size paper causes problems.

Leave the equivalent of one typewriter space between items -- and try to keep the amount of vertical space they consume to a minimum. The bigger, physically, an item is, the harder it is to sort and mount, and it gobbles up a lot of space. An ideal item size would be about 8" wide by 1" high -- obviously dependent on the nature of the item, of course.

In general, try to report what you consider your best DX each month. Let's keep our quality of loggings #1 among clubs!

73, good DX -- CU next month,

LOG REPORT

EDITOR:

M. R. LEONHARDT P. O. BOX 13 LIBERTY, IND. 47353

Deadline; 12th of month .

000

First of all, apologies to Headquarters for being a couple of days late in getting this mailed, but on Friday March 14 a freak snow storm dumped eight inches of snow here in Eastern Indiana making it impossible to get to the Post Office to pick up the final reports until Monday. This being the case, the entire week end was lost as far as getting started on LR-B. Better late than never!

Bob Padula of Australia mentions his report is in two parts. Where his location is listed as Indonesia, those items were logged while on a trip to Indonesia from either Bandung, Java or Denpasar, Bali using a simple portable receiver with only the internal antenna. Unfortunately I misplaced the part of his note that named the equipment (MRL - 3/25/75)

DX LIMERICKS

I dialed slightly to the left, then right, The needle almost jumped out of sight, For at forty over nine, Burundi came in fine, (Alas, 'twas only a dream in the night!)

(Ed Ricchezza, Philadelphia, PA)

An eccentric DXer named Slaughter, Whose receiver was powered by water, Was never dejected, (As might be expected), When his light bill was only a quarter. (Jack Jones, Jackson, MS)

LOG REPORT - C 4-75

A single contributors list is being compiled at headquarters this month, so the comments I made last month regarding receiver notations will be done to suit DF. I do suggest, however, that it will be a good idea if each of us clearly indicates the make and model of our receivers in our reports so there will be no confusion. Also, please please put your surname after each item. I forgot to correct this omission in one set of reports this month and somebody lost his credits.

Solar activity continues to decline and it is difficult to pick a peak. Solar activity picked up about March 2 and continued through March 19. The average activity was less that the previous month, yet several periods of active geomagnetic disturbances were noted. These took place on February 24, March 6, and March 10-11. The A-index reached 40 on march 11, the highest since last October. I don't know if there was good DX during that time as I was out of town. Another low peak in solar activity may occur about the last of April with high geomagnetic field activity a few days before and after.

One possible way to satisfy your curiosity regarding propagation conditions and reception conditions is to use your receiver S-meter to measure signal strengths of known stations and plot this on a graph with the A-index or solar activity. Graphs shown below were constructed by monitoring a set group of stations daily at a set time. Signal strengths as indicated by the S-meter and the ambient noise level varried from day to day. The same antena/receiver set up was used each time. These data are plotted on the graphs along with the A-index. Monitoring was at 0300-0400 and involved mostly easy to hear Central and South American Stations in the 60m band. You can draw your own conclusions. In one case reception to the south appears to be enhanced by a high A-index, in the other the reception appears to be depressed. These variations probably occur because of changes in the strength and height of the ionospheric F and E regions in the equitorial zone. They also show the dificulty of making generalizations about propagation conditions for good reception on a particular path.

APRIL 1975

ADDRESS CORRECTION REQUESTED

NASWA dues are \$12 per year, for members in North America, and for delivery via First Class Mail. Airmail is not available in North America. Overseas dues are the same, but airmail is available overseas. The following is the additional fee for airmail overseas: Central America and the Caribbean \$5; South America and Burope \$6; Asia and the Pacific \$7. **First Class**

<u>NASHA's FLASHSHEET</u> is compiled & mailed twice monthly, giving the DAr the very latest DX news while it is still hot news. The FLASHSHEET is edited by veteran DKar AL NELACK. All reports for the Flashsheet go directly to Al, at 420 SHELBY STREET, VINCENNES, IND. 47591.... The FLASHSHEET is available to NASHA members in North America for \$4 per year. It airmailed overseas for \$8 per year. These fees are, of course, in addition to the annual membership dues.

Checks/money orders for dues and/or the FLASHSHEET should be mailed to NASWA, BOX 8452, SOUTH CHARLESTON, WV 25303 USA. All remittances should be in US funds.

Reports for all sections should go to the individual section editors, not to NASWA headquarters. Editors are:
