TESTED: SHERWOOD DD RECEIVER
POLK HOME THEATER SPEAKERS
PIONEER THX/DD RECEIVER MORE!
digital technology from ADCOM is the heart of a home theater system that integrates our award winning designs and performance with the latest breakthroughs in home entertainment audio and audio/video components.

Start with an all new "on-screen", "user-friendly" interface technology that will obsolete all your remote controls - it can operate basically every audio and video component you own (or ever will own), and almost any other remote controllable product you choose.

Now, integrate it with a complete home theater audio system designed around an ADCOM DOLBY Digital (AC-3) decoder with the latest and best (of course) MOTOROLA DSP devices to get the most out of the new DVD technology, an ADCOM Tuner/Preampifier with five Surround Sound modes including DOLBY ProLogic, and all powered by a world-class ADCOM THX certified amplifier that delivers over 130 watts of power into 5 channels.

And because ADCOM always builds products for tomorrow as well as today, THE BALL is HDTV upgradeable and can easily be customized to add and upgrade any or all of your components.

ADCOM, for more than 20 years, has been an industry leader in designing and building state-of-the-art, yet cost effective, home entertainment products. The first company to be consistently acknowledged for offering audio and audio/video components that outperform competitive products costing two, three, and five times as much.

So it comes as no surprise that when ADCOM develops a home entertainment system, it represents a whole new level of technology and innovation that offers a combination of performance, convenience, and features that everyone else can only envy.

But wait, there's more...
To have an ADCOM dealer contact you for a personal demonstration call 1-800-882-9296 today.
DVX8000 MULTIMEDIA HOME THEATER
Experience DVD movies, DVD-ROM gaming, even the Internet with intense sound and graphics. **DVX8000** manages and enhances your entire home theater set-up. Video line doubler, 3-D graphics accelerator and audio technology.
by Marantz® (including Dolby Digital™). All integrated with powerful multimedia PC functionality. It's entertainment to the extreme. Available at select dealers. For more info on Philips Extreme Home Entertainment call 1-888-486-6272 or visit us at www.mmhometheater.com

NEW FORMAT WAR?
Recent demonstrations of proposed DVD-Audio systems has fueled speculation about yet another format war. On one side, Sony and Philips are promoting the Super Audio CD, a dual-layer disc featuring a standard CD layer and a high-density layer encoded in the new Direct Stream Digital (DSD) format, which is said to accommodate 74 minutes of six-channel music with 120 dB dynamic range. The DSD process would require a new generation of recording equipment. On the other side, Pioneer, Matsushita (Panasonic and Technics), JVC, and Toshiba are plugging a system based on the 96-kHz/24-bit audio spec supported by the current DVD-Video standard, which they say offers superior sound quality.

Meanwhile, the International Steering Committee to coordinate evaluation of proposed systems and draft specs for a new DVD-Audio format by year's end is reportedly way behind schedule. Surprised?

HONOR ROLL
Home audio luminary Henry E. Kloss, who was a founder of Acoustic Research, KLH, Advent, Kloss Video, and Cambridge SoundWorks, received an Emmy Award for his pioneering work in developing projection TV. . . . Blues guitarist John Lee Hooker, 80, has been honored with a star in the Hollywood Walk of Fame.

DIRT CHEAP
Thanks to a recent ruling by the FCC, shock jocks like Howard Stern will save a bundle every time they utter what comedian George Carlin called "the seven words you can't say on TV," which refer mostly to lower body parts and activities associated with them. The FCC, which used to levy a $12,500 fine per violation, slashed the penalty to a mere $7,000 per dirty word.

A/V DIGEST
Matsushita, the parent company of Panasonic and Technics, recently began selling a Walkman-type cassette player in Japan that's said to run for 85 hours on a single battery charge and to have a top search speed forty-five times normal playback speed. . . . The SolarVerter from Patrick Technologies of Lisle, Illinois is billed as "the first completely portable indoor and outdoor solar power unit." Four models are available, ranging from a 3 x 6-inch, 4-volt unit ($25) to a 13½ x 6½-inch, 9-volt unit ($100).

PRESIDENTIAL CULTURE
President Bill Clinton may play a mean saxophone, but his musical tastes are not limited to pop. In fact, he and the First Lady attended the opening of the 1997-98 season of the Metropolitan Opera in New York (Carmen with Placido Domingo and Denyce Graves). Back in Washington, the Clintons presented the 1997 National Medals to twenty high achievers in the arts and humanities. Five of the honorees — all hand-picked by the President — represent a broad spectrum of American musical life: Don Henley, jazz singer Betty Carter, conductor James Levine (artistic director of the Met Opera), Latin percussionist Tito Puente, and bluegrass guitarist Doc Watson.

On December 7, the Clintons will host a reception for recipients of the Kennedy Center Honors for contributions to the performing arts: Bob Dylan, soprano Jessye Norman, Lauren Bacall, Charlton Heston, and dancer Edward Villella. Dylan (56) and Norman (52) are among the youngest performers to receive the honors. A gala performance following the reception will be taped for telecast December 26 on CBS.

OPERATION OPERA
If you were unable to attend the opening of the Met with President and Mrs. Clinton, don't fret. The 1997-98 Texaco-Metropolitan Opera International Radio Network will broadcast twenty Saturday afternoon Met performances live across North America and Europe and as far away as Australia and New Zealand. The season kicks off on December 6 with Mozart's La Clemenza di Tito. Others this month are Puccini's Turandot (December 13), Rossini's Barber of Seville (December 20), and Verdi's Don Carlo (December 27).
The VT-2 Home Theater System

Design:
Two user-selectable crossover topologies adapt to differing soundstage requirements of two-channel and A/V reproduction.

Coherency:
Tailored impulse response assures perfect synergy between stereo image and visual imagery.

Dynamics:
High power wide bandwidth equal to dynamic demands of fine home theaters.

Radiation:
Smooth, even response over wide range of listening positions.

As you begin your search for the ideal home theater audio system, ask yourself what’s important:

It has long been assumed that bigger equipment means better sound. Not anymore. Bose® Lifestyle® systems allow you to enjoy better sound with less clutter, less equipment and less complication. Unlike conventional “components,” every part of a Lifestyle® system is engineered to work together as a whole. For performance, each element is acoustically matched. For simplicity, many controls are automatic, which means you can do just about anything by pressing only one button. And everything is smaller. • A single, 2½” high music center replaces an entire rack of electronics and includes a built-in CD player and AM/FM tuner. • Tiny Jewel Cube® speakers are about the size of a computer mouse. And hidden away out of view is the Acoustimass® module for purer, more natural bass. Your favorite music, movies and sports programs will come to life in a way you simply cannot imagine. • Home Theater Technology summed it up by saying, “Everything is included and carefully thought out... The performance is awesome.” • Please call for your complimentary guide to our Lifestyle® music and home theater systems, and for Bose dealers near you. Then compare the size of Bose sound to the sound of the biggest equipment you can find.
Is it the size of the equipment?

Or is it the size of the sound?
"WOW, I can’t believe you have that CD!"

1-800-EVERY-CD is a wholesale music club. Members receive a 950-page catalog offering virtually every CD in print. All CD’s are offered at wholesale, which is guaranteed to be the lowest price you can find. We do not send unsolicited CD’s, and there is no minimum required to order. Call today or search our catalog now online at http://www.everycd.com. Whatever CD you last bought, chances are we’ll have it, too, for less. We’ll also have the items you’ve been wanting to buy but couldn’t find.

Good music selection is hard to find. We’re not.

Virtual Reality
In Home Entertainment

It’s a jungle out there in home-theater land!

Let Phase Technology be your guide to movies, music and more with critically acclaimed home theater, audiophile and in-wall speaker systems.

Now presenting our latest crowning achievement— the user-adjustable Model PC-3 multi-purpose speaker. It’s ideal for front, rear and center use in any multi-channel system.

Your hunt is over. Audition the Model PC-3 and experience sound so real, you can almost see it.

WE DESIGN ONE OF THE WORLD'S MOST
SOPHISTICATED RECEIVERS AND
THE REMOTE GETS ALL THE ATTENTION.

Four years creating a perfect receiver, and for
what? Introducing the FutureSet remote. It comes
with all of Kenwood's top AV receivers and, as hard
as it is for us to admit, it is pretty remarkable. Besides
having its famous red buttons, FutureSet can actually
download operating codes for new components, like
a new CD player or a DVD player, directly from a
touch tone phone, eliminating the possibility of it
becoming obsolete. So go ahead and buy our receivers
for the remote. We just don't want to hear about it.
For more information, visit the Kenwood website
at www.kenwoodusa.com or call 1-800-KENWOOD.

KENWOOD
**LETTERS**

**I Want My DVD**

Some of the reasons I want to buy a DVD player: lower prices than laserdiscs, slow motion (I like to "study" my movies), ultrafast bidirectional search, easier storage (DVDs will fit in most CD racks), the ability to fit an entire movie on one side (no turnover), and the ability to choose between letterboxed and pan-and-scan versions. But if the studios decide to "lock out" some of the best features, is DVD really worth buying? What can consumers do? VINCENT LINIA

Orlando, FL

If a studio doesn't make use of what you consider the best features of the DVD format, don't buy its releases. If enough like-minded viewers vote with their wallets and let studios know that they value certain features, they might get the message.

**Home-Theater Calibration**

I would like to calibrate my home-theater system to the reference audio level that soundtracks are mixed to (and supposedly screened to): 85 dB sound-pressure level (SPL), C-weighted. Slow response from each channel when measured with pink noise recorded at 0 dB. My receiver has Dolby Pro Logic decoding, I have the Delos Surround Spectacular test/setup CDs, and a laserdisc player is my primary source. What level were the pink-noise and channel-balance tones on the Delos set recorded at? Which of them would be best for this calibration? Also, what is the best way to hold the sound-level meter? PAUL GONG

Fresno, CA

The last four tracks on the Surround Spectacular CD were recorded at -20 dBFS (decibels referred to digital full-scale) and should, as you indicated, be reproduced by an amplifier in Dolby Pro Logic mode at 85 dB SPL to approach theatrical conditions. Because program peaks will, of course, be even louder, you might prefer to calibrate your system for 75 dB C-weighting, at the listening position, which won't distort the director's intention severely. Measure the level by holding the meter—at arm's length to minimize your body's effect—about where your head would be when listening.

**Down-Firing Subs**

In "What's New in Subwoofers" in August, Ian Masters wrote, "There is some disagreement as to which direction a subwoofer should aim." You can't "aim" soundwaves that are many, many times longer than their generating device. The major disadvantage of down-firing subwoofer designs is that gravity pulls the moving assembly (cone and voice coil) off-center, causing the equivalent of a DC bias and thus higher distortion, as well as downward, causing early aging and progressively degenerating sound. DREW DANIELS

North Hills, CA

Clever manufacturing can compensate for the downward pull, and the cone can be centered at its rest position. With modern materials, wear is less of a factor than it might have been fifteen years ago.

**Dolby Pro Logic Lives**

One year ago, after it became clear that mass-market Dolby Digital was still at least two to three years away, I bit the bullet and upgraded to Dolby Pro Logic. Yes, that's right, Pro Logic. I had resisted for a long time, thinking that when I upgraded for surround sound it would be to Dolby Digital.

I must say that I am thrilled with the performance of Dolby Pro Logic, and it has added tremendously to my enjoyment of movies and television. Movies sound as good as any Dolby Digital (DD) demo I have heard, and they certainly sound better than in any mall theater. I am sure there are many readers who think Pro Logic is a poorly performing technology (if you believe all the DD hype). Not so! You can enjoy excellent surround sound for a very small investment. I spent a total of $1,500 for a center speaker (Polk Audio), dipole surround speakers (Cambridge SoundWorks), a powered subwoofer (NHT), a Pro Logic receiver (Sony ES), and wiring (Monster Flat Cable). STEREO REVIEW's fine technical articles on proper surround installation, particularly Tom Nousaine's "Surround Sanity" in April 1996, helped me put it all together.

A year later, I am still happy with my decision, as DVD titles are very limited, expensive, and not available for rental. DD receivers are overpriced, and the future of DVD is still very much in question. Long Live Dolby Pro Logic! FRANK HEILIGER

West Lafayette, IN

**Anti-Elvis**

Far from blurring the racial lines, Elvis only emphasized them by giving a pale (no pun) imitation of the real thing. As a white boy growing up in the 1940s, I listened to Wynn- onie Harris, Roy Brown, Jimmy Wither- spoon, and others, and I recognized R&B as a close cousin of jazz: it swung. Rock swung like a rusty gate. It was lonesome, square. When Elvis arrived with those staccato hic- cups that sounded like someone was goos-
ing him, the standard crack was, "Either stop jerking the station dial or shut it off." We couldn’t believe anyone would sound like that on purpose.

Elvis Presley was a shitkicker who made good. The fact that a number of soundalikes rode in on his coattails is no grounds for deification. Two and a third octaves? A hound dog has that. No wonder he was propped up with a male quartet that couldn’t sing "Come to Jesus" in the key of C. Anyone would have sounded better by comparison, and certainly no one could have sounded worse, not even Elvis.

Joe Burnette
San Francisco, CA

In a Lighter Vein
Corey Greenberg’s "Stooge-o-phonics: More Better Stereo" in September ("The High End") was the most entertaining and humorous piece I have read in over twenty years of subscribing to STEREO REVIEW.

Al Johnson
Austin, TX

Telarc’s Pride
In an October letter about the article "Can You Believe Your Ears?" (August), reader Chuck Currie refers to a wonderful recording of Holst’s band suites by Frederick Fennell and the Cleveland Symphonic Winds. He said it was on Sheffield, but, in fact, it is a Telarc release.

Gregory Rose
Los Angeles, CA

You’re right — indeed, the direct-to-disc LP of that recording was the very first release by Telarc, and the CD is still in the catalog.

Learning from History
In his "Signals" column for September, "Use and Abuse of History," Ken Pohlmann says, "If the CD had been inferior [to the LP], it would have failed, as so many new ... products do." Well, the CD might be superior, but I’m not sure that’s the best argument by which to prove it. For example, Beta lost out to VHS even though Beta was visually superior. The public doesn’t always make quality its foremost criterion when it decides whether to embrace a new medium.

Jeffrey S. Menkes
Farmington, CT

Regarding Ken Pohlmann’s "Use and Abuse of History" (September "Signals"): While I agree that some of the early CD’s left something to be desired, the technology has come a very long way, and any new technology will always have growing pains. Of course, the quality of one’s playback system has a great deal to do with what finally meets the ears. The first CD I bought sounds better now than when it was new, with no visible or audible deterioration, because I have seriously upgraded my playback gear.

Mr. Pohlmann said that the CD is a superior product, and he is absolutely right. How nice it is to be able to simply insert a disc, hit play, and then sit back and listen to the music as it emerges from a pleasantly silent background, with details emerging clearly. And there’s no wear and tear on the discs! And with that marvelous little gadget called a remote control, you can remain comfortably ensconced on the couch and select any track you like, scan to your favorite part, set the player to randomly select the music, or avail yourself of a host of programming options. Try that with vinyl.

Never before has such a vast quantity and diversity of music been available. Many of my favorite vinyl recordings are now on CD, and in almost every case the transfer from the original is excellent. I only wish this technology had been around when I was collecting 78s back in the 1940s. What a library I’d have had now!

Don Charles
Mt. Pleasant, SC

Correction
The photo credit was inadvertently omitted for "Convergence Closeup" in September. The photographer was Jook P. Leung.

LED ZEPPELIN

BBC SESSIONS

Nearly 30 years ago, the group that continues to be the world’s biggest rock band gave four special concerts for a select group of lucky fans.

Some of these performances were broadcast by the BBC . . .
Some of them were never heard again outside the concert hall . . .
Two songs were never recorded on any of their studio albums.

It's all available now . . . And it's been worth the wait.

Over 2 1/2 hours of live classics
Compiled and mastered by Jimmy Page

www.adantle-recorbr.00m

THE ATLANTIC (11401 I. Clint?

P

A bullet-proof argument for the new B&W 600 Series.

The use of our patented Kevlar® cones is reason enough to choose the new B&W 600 Series. After all, Kevlar has always been the standard in B&W's best and most expensive loudspeakers.

But that's just the start of our bullet-proof argument. Because B&W's top-gun engineers loaded a barrage of technical innovations into an entire family of affordable, high performance speakers—the B&W 600 Series.

- Our metal dome tweeters—borrowed from the Matrix 801s—provide near-perfect response to well beyond audibility.
- Beveled cabinet edges and solidly braced enclosures minimize box resonance and the effects of diffraction for truly transparent sound.
- Gold-plated speaker terminals allow for biwiring to reduce component cross-talk.
- You can choose from a full line of speakers ranging from bookshelf to floor standing, center channel to surround sound, even an active subwoofer.
- Prices start at just $400 a pair.

Call 978-664-2870.
NEW PRODUCTS

ATLANTIC TECHNOLOGY
Atlantic Technology's System 450 THX speaker suite consists of one 453 C and two 451 LR speakers in front, two 454 SR surrounds, and a 452 PBM powered subwoofer. The front speakers have a 1-inch tweeter, two 3½-inch midrange drivers, and two 6½-inch woofers. Each surround has two asymmetrically oriented 5½-inch woofers and two ¾-inch dome tweeters. The 300-watt sub has a 15-inch driver. All are finished in a glossy black laminate. Price: $5,050. Atlantic Technology. Dept. SR. 343 Vanderbilt Ave., Norwood, MA 02062.

HITACHI
The Hitachi HDS-220S Digital Satellite System receiver has an interface for connection to a compatible D-VHS VCR like Hitachi's VTDX-815. The digital signal from the satellite can be recorded on the VCR, then fed back through the receiver without any loss of the original broadcast's picture or sound quality. The included dish antenna has two outputs. Price: $599. Hitachi. Dept. SR, 3890 Steve Reynolds Blvd., Norcross, GA 30093.

HARMAN KARDON
Harman Kardon's Signature 2.0 Dolby Digital preamp/tuner has two A/V inputs with both composite-video and S-video switching, four with composite-video only. Four digital inputs are provided. The tuner has thirty AM/FM presets and Radio Data System capability. Besides Dolby Digital and Pro Logic decoding, the Signature 2.0 has enhancement modes for classical music and mono programs and a two-channel bypass mode. Price: $1,499. Harman Kardon. Dept. SR, 80 Crossways Park W., Woodbury, NY 11797.

PHILIPS
The Philips Electronics DVX8000 Multimedia Home Theater is a one-of-a-kind product that combines a personal computer, a DVD player, a TV tuner, an FM tuner, and a Dolby Digital A/V preamp in one package. The PC, built around a 233-MHz Pentium processor with MMX technology, has a 3.1-gigabyte hard-disk drive and 32 megabytes of RAM, and it can access the DVD player as if it were a DVD-ROM or CD-ROM drive. Its PC video circuitry includes a 3-D graphics accelerator. The A/V section includes a Marantz preamp with five video and seven audio inputs; optical, coaxial, and RF digital inputs; a progressive-scan line doubler; and SVGA, composite-video, and S-video outputs. A Marantz RC2000 remote control and a wireless keyboard are included. Price: $5,000. Philips Electronics. Dept. SR, 1070 Aras-tradero Rd., Palo Alto, CA 94303.

NEW PRODUCTS

▶ NAKAMICHI
The Nakamichi AV-1s five-channel A/V receiver is rated to deliver 100 watts each to the three front channels and 50 watts each to the surround channels. It features Dolby Pro Logic decoding and Natural, Hall, and Stadium ambience-synthesis modes. Seven stereo inputs are provided as well as a six-channel input for connection to an outboard Dolby Digital decoder. The LFE input is passed through to a line-level output for a subwoofer. Price: $850. Nakamichi, Dept. SR, 955 Francisco St., Torrance, CA 90502.

▶ CHORD ELECTRONICS
The Chord Electronics SPM 400, a stereo power amplifier rated for 100 watts per channel into 8 ohms, has a high-frequency digital switching power supply that is said to help give it a quick, controlled response to bass frequencies and transients. Its electronic protection system uses magnetic current sensors to monitor constantly for open and short circuits. Thermal-overload protection is also offered. Price: $2,100. Chord Electronics, distributed by Audio Influx, Dept. SR, P.O. Box 381, Highland Lakes, NJ 07422.

▶ CANTON
The Canton Fonum AS 30 powered subwoofer includes a 100-watt amplifier and two 9-inch front-firing drivers. The ported bass-reflex enclosure measures about 10 x 24 x 16 inches and has a matte-black vinyl finish and a black fabric grille. Bandwidth is stated as 20 to 150 Hz, and the crossover frequency is adjustable between 50 and 150 Hz. A level control is also provided to help match the AS 30 with the system’s main speakers. Price: $995. Canton Electronics, Dept. SR, 915 Washington Ave. S., Minneapolis, MN 55415.

▶ AURASOUND
AuraSound’s Line Source Series comprises a wide variety of speakers. The LSB-527M ($300 a pair) and LSB-627M ($400 a pair) are two-way bookshelf models. Floor-standing models include the two-way LST-627M ($550 a pair), the three-way LST-827D ($700 a pair), and the three-way, four-driver LST-837D ($880 a pair). The LSC-537M is a center-channel speaker ($250), and the LSS-107A is a powered subwoofer with a 10-inch driver ($590). Aura Systems, Dept. SR, 2335 Alaska Ave., El Segundo, CA 90245.

▶ BLAUPUNKT
The Blaupunkt Toronto RDM126 car CD receiver won’t operate unless its matching KeyCard is inserted in a front-panel slot. Each receiver comes with two KeyCards, which also store a user’s station-preset, tone-control, and other preferences, allowing two drivers to set up the same car stereo system for their different listening habits. The DIN-size head unit features Radio Data System compatibility and is rated to deliver 35 watts each (peak) to four channels. Price: $570. Blaupunkt, Dept. SR, 2800 S. 25th Ave., Broadview, IL 60153.
“...by a wide and clearly audible margin, the Micro90t is the best small-satellite home theater speaker system I have ever reviewed.”
—David Ranada, Stereo Review, February 1997

The experts at Stereo Review listen to literally hundreds of home theater speakers each year. So it stands to reason that the Micro90t must be pretty special to warrant such praise.

The reason for this enthusiasm? Good old-fashioned engineering know-how.

Take the Micro90 satellites, for example. They feature a die-cast aluminum housing of incredible strength and rigidity. So the drivers' energy is projected as pure, clean acoustic output instead of being wasted as cabinet vibration. The result: a satellite that can fit in the palm of your hand, and still fill a room with astonishing sound.

Its anodized aluminum tweeter with AMD handles lots of power, yet reproduces highs with virtually zero distortion. And its swivel-mount pedestals make for simple shelf or wall mounting. The Micro90 powered subwoofer, with its clean 75-watt amp and 8-inch DCD™ bass unit, produces ample amounts of deep, tight, powerful bass.

Add the tonally matched Micro90 center channel and either direct or diffuse-field surrounds and you’ve got a system that beats all other satellite home theaters “by a wide and clearly audible margin.” You can test-listen the Micro90t at your local Boston dealer. But rest assured, you won’t be the first to listen with a critical ear.
NEW PRODUCTS

BOSE

The Bose VCS-30 speaker package, comprising a VCS-10 center-channel speaker (also available separately) and two surround speakers, is designed to upgrade a pair of stereo speakers for surround sound. The magnetically shielded VCS-10 has two 2½-inch drivers in a wide-dispersion array and two 2½-inch compound-loaded drivers in a dual-chamber enclosure that's 21½ inches wide and only 3¾ inches high. The VCS-30 surrounds, each with one 4½-inch full-range driver, measure 5¾ x 11 x 6¼ inches. Price: $399. Bose, Dept. SR, The Mountain, Framingham, MA 01701.

FISHER

The Fisher PCD-7900 portable CD player has a 16-megabyte buffer memory that can store up to 40 seconds of music data so jolts and jars that cause the laser pickup to mistrack won't interrupt playback. When the antiskip circuitry is engaged, music data is read from the disc at twice normal speed, stored in memory, and then fed out at normal speed for digital-to-analog conversion. A car adaptor kit, two Ni-Cd AA batteries, and an AC adaptor/charger are included. Price: $200. Fisher, Dept. SR, 21605 Plummer St., Chatsworth, CA 91311.

OEM

The AW-700 in-wall outdoor speaker from OEM Systems features a 6½-inch carbon-fiber woofer with a butyl-rubber surround and a 1-inch weatherized titanium-dome tweeter. The crossover network is silicone-sealed. The speaker has gold-plated spring-clip terminals, a rustproof painted-aluminum grille, stainless-steel hardware, and rubber gaskets and hardware seals. It measures 8½ x 12½ x 3¼ inches. Price: $300 a pair. OEM Systems, Dept. SR, 740 Freeport Blvd., Suite 106, Sparks, NV 89431.

DUPE-IT!

CD Dupe-It! from Corporate Systems Center makes it easy to copy or edit CDs or CD-ROMs. The built-in hard drive stores a bit-by-bit image of an entire CD or selected tracks from it. The data is burned onto a CD-R in a separate operation. More elaborate editing requires a Windows or Macintosh computer with a SCSI port. CD-editing software is included with CD Dupe-It! Price: $1,295. A rack-mount version is also available. Corporate Systems Center, Dept. SR, 1294 Hammerwood Ave., Sunnyvale, CA 94089.

CAMBRIDGE SOUNDWORKS

The PC Works three-piece multimedia speaker system from Cambridge SoundWorks consists of two 3-inch-cube magnetically shielded satellite speakers and a compact bass module that houses the woofer and a three-channel amplifier. Designed primarily for use with computers, the system can also be used with any audio source with a headphone-jack output. The system operates on either 120-volt house current or 12 volts DC (as from a cigarette lighter). Price: $100. Cambridge SoundWorks, Dept. SR, 311 Needham St., Newton, MA 02164.
"YOU ALREADY KNOW MY HIGH OPINION OF DVD..."
“...AND SONY IS LARGELY RESPONSIBLE FOR THAT OPINION.”

STEREOPHILE GUIDE TO HOME THEATER
Presenting the "REFERENCE STANDARD" in DVD Performance.

Studio-quality digital video. Multichannel digital audio. Superb convenience. Unprecedented versatility. DVD is an amazing entertainment medium — and one that imposes incredible new demands on home entertainment components.

To meet these demands, Sony has created a "reference standard" DVD playback system featuring our DVP-S7000 DVD Player and SDP-EP9ES Dolby Digital Processor. Taken individually, each component has won universal acclaim from the world's most demanding audio/video critics. But taken as a whole, they achieve a new level of sight and sound performance.

It was not mere coincidence that both of these components came from Sony. For years, Sony has accumulated expertise from co-inventing the Compact Disc, as well as from being one of the principal developers of the new DVD format. And Sony in-house expertise covers every aspect of DVD hardware and software, including everything from proprietary digital signal processing and laser optics to motion picture and concert video production, MPEG-2 encoding, disc authoring, mastering and replication.

Now you can benefit directly from this expertise and experience the full potential of DVD performance. Go with the only company that fully understands digital video and audio technology. Sony — Defining the Digital Future."
Critics who rarely agree on anything are unanimous in praising the Sony DVP-S7000 DVD Player. Video Magazine stated it “...sets the Reference Standard” and Widescreen Review declared it “...our reference DVD player...” Audio magazine hailed the S7000 for its “dead-on accuracy” and found it “the most nearly perfect video product I’ve had on my bench.”

Audio/Video Interiors called the DVP-S7000 “...the hot piece,” while Fi proclaimed that it “...has gained a reputation with videophiles as the best of the current batch of players...” And Stereophile Guide to Home Theater simply concluded “...using the Sony, I never felt the urge to change to another player. Its smooth-yet-sharp video performance results in truly film-like images and never disappoints.”

The DVP-S7000 achieves these unparalleled results by using unprecedented technologies. There’s Sony’s proprietary MPEG-2 decoder IC for superlative picture detail, plus 10-bit video D/A conversion to extract every ounce of tonal gradation. Component video outputs preserve every last drop of color resolution, while our Dual Discrete™ optical pick-up provides uncompromised performance for both DVD and CD. And audio circuitry straight from Sony’s most advanced CD players results in sonic clarity and detail far beyond the ordinary.

Now the DVP-S7000 has been joined by the more affordable DVP-S3000. It retains much of the performance and technology of its top-of-the-line sibling, including both coaxial and optical digital outputs, while adding a new feature: Audio Priority. This Sony exclusive automatically selects the 5.1-channel mode, regardless of where it’s embedded on the disc. Best of all, there’s no need to search through menus, making it the most convenient way to play.

Whether you choose the Reference Standard DVP-S7000 or the more accessible DVP-S3000, you’ll enjoy DVD Video performance that’s pure Sony. And you’ll have the ideal companion to one of our Dolby Digital processors or receivers.
THE REST IN TERMS AND PERFORMANCE.

HOME THEATER MAGAZINE
"The BEST AUDIO SYSTEM WAY I'VE FOUND OF FOR THE NEW SDP-EP9ES Dolby Digital Processor"
The Sony SDP-EP9ES Dolby Digital Processor has the critics applauding. Stereophile Guide to Home Theater declared that it "offers performance that approaches the state-of-the-art in digital surround processing..." while HiFi News & Record Review called it "a truly magnificent example of digital engineering..."

Furthermore, H-Fi Choice says that the SDP-EP9ES "seamlessly blends the digital sources of hi-fi and home cinema..." And Home Entertainment states it "could be the one product that finally bridges the gap between high end digital hi-fi and the best home cinema has to offer."

This remarkable component brings home all the excitement, impact and control options that Dolby Digital (AC-3) surround provides. Unlike Dolby Pro Logic decoding, Dolby Digital reproduces full bandwidth with more than 90 dB of separation between all six channels. So you hear movie soundtracks and concert videos that are more dynamic, more dimensional and more convincing. In short, it's a crucial part of the total DVD Video experience.

And only Sony provides Dolby Digital decoding with a difference. For added realism, our exclusive Digital Cinema Sound™ modes allow you to enhance DVD playback using soundfields that are exact acoustic replicas of actual Hollywood sound stages. You'll also hear Dolby Digital as it was meant to be heard, thanks to our higher performance 24-bit digital signal processing, as well as the same digital filters and D/A converters that are built into our acclaimed CD players.

Plus, unlike many Dolby Digital decoders, Sony products let you customize sound parameters to match your specific room requirements, including everything from digital equalization and dynamic range compression to bass redirection functions.

Finally, no one offers more Dolby Digital solutions than Sony. Both our reference standard SDP-EP9ES and our more affordable Dolby Digital Processor can be connected to any Dolby Digital-ready receiver. Or choose from four receivers with built-in Dolby Digital decoding, including our new flagship, the STR-DA900ESG. Each boasts the full bandwidth multichannel power and comprehensive control that you expect from Sony.

It all adds up to more ways to maximize your DVD experience.
At Sony, we understand that even reference standard components require cutting-edge software to achieve outstanding performance. So if you purchase a Sony DVD Player together with a Sony Processor or Receiver with Dolby® Digital decoding between October 1, 1997 and January 31, 1998, you can select two DVD Movies and two DVD Concert Videos from Columbia TriStar Home Video and Sony Music Entertainment for Free, from the titles listed below—a $100 Value. For Coupon and more information, see your Participating Sony Dealer.

It’s just one more reason why you should demand nothing less than Sony, if you want nothing less than “reference standard” DVD performance.

The December 1967 Letters department was filled with readers’ comments on recent "confessions" by our classical critics. "My Ten Favorite Composers" elicited this response: "How can you have so neglected my own particular favorite, George Frideric Handel? Here’s hoping I see you in a more favorable light on 'that day.' " It was signed, "The Messiah, Cincinnati, Ohio." Referring to "Ten Composers I Hate," in which James Goodfriend admitted that "the greater part" of Verdi "drives me right up the wall," Phyllis Gordon of Baltimore wrote, "I am curious to know if that was a padded wall." Reviewing Are You Experienced by the Jimi Hendrix Experience, Peter Reilly wrote, "I hear that during performances Hendrix often bites his guitar. I often found myself wishing it would bite him back."

Among new products was the Allied Model 1040 stereo open-reel tape recorder ($170) with two detachable speakers and two microphones. Components tested included the Rectilinear III speaker system ($269), whose 35-inch-tall cabinet housed a woofer, a midrange, two tweeters, and two super tweeters. The Hirsch-Houck Laboratories report concluded, "We have never heard better sound reproduction in our home. From any speaker of any size or price."

"Of course it was inevitable, but to have it happen this soon comes as a slight shock: the videodisc has gone audio," announced technical director Larry Klein and technical editor Ralph Hodges in the December issue. Products shown included Luxman’s DP-07 CD transport ($2,860). Meanwhile, at the Berlin International Audio and Video Fair, the showstopper was Silber-sand’s mono power amp with a cooling system in a Plexiglas tower that prominently displayed its blue-colored water.

Other new products included NEC’s AV-350 surround-sound amplifier ($579) and Kyocera’s top-of-the-line CD player, the DA-710CX ($800). In a special report, Julian Hirsch tested the a/d/s/R4 AM/FM receiver ($1,100), which he called "easily the most sophisticated product of its type."

Definitive’s Amazing BP 2000 & 2002 Are The World’s Most Highly Acclaimed Loudspeakers!

"The first speaker I have been able to audition in my own familiar surroundings that has given me that special thrill that usually costs ten or more times its price to obtain."

—Julian Hirsch, Stereo Review, USA

"Literally Staggering"

Top reviewers around the world agree that Definitive’s amazing BP 2000s & BP 2002s combine highly advanced technology and superior build quality in order to achieve unsurpassed sonic performance plus unequalled value.

"Astounding...The Stuff of Dreams"

—Home Cinema Choice, England

"Absolutely Unsurpassed"

—Prestige HiFi, France

Both music and movies are reproduced with outstanding purity, transparency and life-like realism. And the astounding high resolution imaging, magnificent soundstaging, awesome bass and explosive dynamic impact totally envelop you in sonic ecstasy. It is simply amazing!

"Amazing Music and Home Theater... Most Spectacular Speakers Ever"

—HiFi Review, Hong Kong

In addition to being an audiophile’s dream, the BP 2000s & BP 2002s are also the main speakers in Definitive’s Ultimate Home Theater Systems. These astonishing systems are absolutely the finest sounding available. They recreate a “you are there” virtual reality that actually puts you into the sound-space of the original cinematic action.

"The Best Performance You Can Get"

—V.T.V., England

Experts agree these complete Dolby Digital AC-3 ready systems deliver the ultimate listening experience. They combine BP 2000s or BP 2002s with perfectly matched center and rear surround speakers. Dual powered subwoofers are already built into the sleek towers. Experience them today!
Pay-Per-View DVD

In a capitalist democracy, citizens don't just vote in polling booths. They vote in stores; they vote with their pocketbooks. Over the next year, audio/video enthusiasts across North America will vote on the kind of home-video marketplace they want for the next decade. Specifically, they will be voting on Divx (pronounced div-ics), a pay-per-view version of DVD developed by Digital Video Express, a start-up company based in Virginia. Circuit City Stores owns 65 percent of Divx, while the other 35 percent is owned by a Los Angeles-based law firm.

In announcing the new format in September, Richard Sharp, chairman and CEO of both Circuit City and Divx, said that players and discs will be introduced in two test markets this spring, with a national launch scheduled for the summer. Zenith plans to introduce Divx players in time for the limited launch. Matsushita (Panasonic, Technics) and Thomson Consumer Electronics (RCA, GE, ProScan) say they'll introduce Divx players in time for the national launch. Although CEO Sharp said that Divx players will sell for $100 more than equivalent DVD players, predicting that the premium would fall to $50 as volume increased, hardware companies are on record as saying that the initial premium for Divx players will be $100 to $200. The machines will play regular DVDs as well as Divx discs; Divx discs, however, will be unplayable on standard DVD decks.

Four movie studios — Disney, DreamWorks, Paramount, and Universal — have announced support for the new format. Divx's agreements with these studios call for all their new video releases to be made available on Divx discs at the same time they are released on VHS. The studios will license their material to Divx, which will be responsible for replication and distribution. Divx claims that 100 titles will be available for next summer's launch and that 500 titles will be available within a year of the format's introduction.

The discs will sell for a suggested retail price of $4.99. For that amount, you'll get physical ownership of the disc but limited rights to its content. The initial price entitles you to a 48-hour viewing period starting from the first time you press play. During those two days, you can watch the movie as many times as you want. In short, it will work just like a regular DVD. After your two days are up, you can toss the disc away or put it on a shelf. If you watch it again, you'll be charged an additional fee, and you'll have the right to watch it for another 48 hours. Divx expects the "rental fee" for subsequent viewings to be around $3.

Before you can play Divx discs on a new Divx player, however, you must open an account with Divx. Among other things, you'll have to provide account information for a major credit card, even if you never intend to view discs after the initial 48-hour period. A Divx representative will guide you through the process of getting your player to call Divx's host computer using its built-in modem. The host computer will then validate the player's ability to play Divx discs.

Viewing activity will be stored in flash memory inside the player. Twice a month, the player will automatically transmit information on the discs you've watched to the company's host computers. Any charges you've incurred will be billed to your credit card.

With some titles, you'll be able to pay an up-front fee to Divx to have a disc "unlocked" so that you can view it without incurring additional charges. However, the unlocking option will be offered at the discretion of the studio involved. Not all discs will be unlockable, and viewing rights are limited even for unlocked discs. Owners of such discs can view them on their own players (or other players covered by the same account and connected to the same phone line) just like a regular DVD. But if you take an unlocked disc — or any Divx disc for that matter — to a friend's house so that you can watch a movie together, your friend will be billed.

The Good Side of Divx

Because Divx is such a departure from the way we normally buy things, it's sure to cause some confusion, and probably anger. But it does have some attractive features, one of the greatest of which is the participation of movie studios whose support of DVD has ranged from nonexistent (Paramount) to lukewarm (Disney and Universal).

Unlike rented tapes and DVDs, Divx discs don't have to be returned, so you'll incur no late charges. The disc just sits on your shelf, ready for the next time you want to "rent" it.

Supporters say Divx will increase the chances that brand-new hit movies will be in stock at the video store because the low price of Divx discs will make it easier for retailers to keep an adequate stock of high-demand titles.

For many people, obtaining movies on Divx will be more economical than buy-
"All Definitive's New Bipolar Towers Deliver Astounding Sound for Music & Movie Perfection"

The extraordinary new BP30, 10B, 8B and 6B (from $299) now have BP2000 Series technology for dramatically superior sonic performance!

"Truly Outstanding" — Stereo Review

Absolute sonic superiority and unexcelled value have made Definitive the leader in high-performance loudspeakers. We are now pleased to introduce a new series of incredible-sounding bipolar towers which incorporate drivers, pure aluminum dome tweeters, crossovers and cabinet technology developed for our flagship BP2000 Series.

These exquisitely styled, American-made, bipolar (front and rear radiating) systems totally envelop you in a symphony of sonic perfection. They combine lush, spacious sound-staging, lifelike depth-of-field, razor-sharp resolution, pinpoint 3-D imaging, powerful subwoofer-quality bass (to below 20 Hz), high efficiency and ultra-wide dynamic range for unsurpassed reproduction of music and movies in your home.

"Music and Movie Sound was Stunning" — Video Magazine

Combine the BP6B, 8B, 10B or 30 with our matching centers, bipolar surrounds and optional PowerField subwoofers for the most lifelike, spectacular "you are there" music and home theater available. All are completely Dolby Digital AC-3 ready.

The Leader in High-Performance Loudspeakers
The Divx Downside

Given Divx's benefits and powerful backing, it would be a mistake to dismiss the format. Even so, it will have a difficult time gaining acceptance. Divx has a fundamental problem: a lot of people hate it. And not without some justification.

Divx's first problem is lack of capability. As noted previously, you can play regular DVDs in a Divx player, but you can't play Divx discs in a regular DVD player. The content on Divx discs is encrypted using a scheme called Triple DES (Digital Encryption System), which is different from the encryption used on DVDs. A secure processor module inside the Divx decoder decrypts the signal.

There is no way to add Divx capability to a regular DVD player, which Circuit City's Sharp called "regrettable but unavoidable." He added, "In the consumer-electronics industry, new features come out every day. We regret that anyone would be unhappy that they purchased a DVD player, and . . . would now have one of these. But that kind of thing happens all the time in this industry."

But Divx isn't just a new feature, it's a new format. Early adopters accept the possibility of new features becoming available, just as they accept the likelihood that second-generation products will be less expensive than first-generation products. What they should not have to accept is restricted access to software.

While Paramount confirms that all new video titles it releases will be available simultaneously on Divx and VHS, it has announced no plans to support DVD. All but one of Disney's first eight DVDs, slated for December, will be live-action titles rather than its animated hits (the exception is The Nightmare Before Christmas).

Two of the new Disney DVDs (Scream, George of the Jungle) will arrive on DVD at the same time as the VHS sell-through release. Disney's agreement with Divx calls for release of all its new titles on Divx at the same time as the VHS rental release. In July, Universal announced ten DVD titles for release by February, all of it fairly recent family fare. Universal has also licensed fifty titles from its backlist to Image Entertainment, a third-party publisher of laserdiscs and DVDs from various studios. But all of Universal's new video titles will go on Divx.

To the extent that Divx restricts access of DVD owners to desirable software, it constitutes a betrayal of the trust a standard like DVD represents. When people purchase a DVD player, they purchase it on the reasonable understanding that the unit will play current and future software. No amount of fact-spinning by Divx and its supporters can obscure this.

You could argue that a different encryption system is required to support Divx's pay-per-view functions. But why is Divx also promoting a nonstandard disc, Divx Gold, as a straight sell-through medium? Divx Gold discs will work just like DVDs — except that you can play them only on a Divx player with an active account. Divx Gold discs use the same encryption system as regular Divx discs, so they can't be played on a regular DVD player. Let the format wars begin.

Paul Brindze, president of Divx Entertainment (a Divx subsidiary that handles licensing arrangements with movie studios), explains that studios have always been unhappy with DVD's security provisions. "While standards discussions were going on, a number of Hollywood studios were consistently saying that they were concerned about DVD piracy," he told me. "Some of them didn't get an answer they considered sufficient."

But most of the companies supporting Divx — including Disney, Paramount, Universal, Matsushita, Thomson, and Zenith — were involved in the formation of DVD's copy-protection systems through their participation in the DVD Forum's Copy Protection Technical Working Group (CPTWG). As with any such group, each party had its own agenda. Studios wanted an encryption system to maximize security. Hardware companies wanted one that was inexpensive to implement. The system they all agreed on — Matsushita's Content Scrambling System (CSS) to prevent digital copying, and Macrovision to inhibit analog copying — was secure enough for the studios and cost-effective enough for the hardware companies, according to Dr. Alan Bell, a project manager at IBM's Almaden Research Center and chair of the CPTWG.

Bell told me that other copy-protection systems, including DES, were discussed by the group. They were rejected mainly for cost reasons, but also because there is import and export restrictions on sophisticated encryption systems.

While Bell agrees that Divx's Triple DES is much more secure than DVD's CSS, he doesn't think that gives the system as a whole a better safeguard. "All the
"If you want truly incredible speakers at an unbelievable price, run and get this system."

—Jeff Cherun, Home Theater Magazine

Definitive’s remarkable $799 ProCinema sub/sat system features:
- Absolute State-of-the-Art Performance for Music and Home Theater Perfection
- 125-Watt Powered 10" Subwoofer
- Cast-Basket Drivers and Aluminum Tweeters
- Optional Timbre-Matched Center and Rears
- Dolby AC-3 Ready

TECHNOLOGY UPDATE

encryption does is protect the content on its way to the player,” he explained. “Once the disc is inside the player, you have to strip off the encryption in order to play it, and you have to output the content to the display device. If you make an S-VHS or Hi8 recording off an analog output from a digital master, you get a high-quality copy. The protection on analog is Macrovision, which can be defeated with widely available devices.

“When you think of the total security,” Bell continued, “you have to think of a chain made of links. One of the links is the encryption, another is the analog copy protection. There’s not a lot to be gained by having one link made of titanium if another link is made of aluminum.” So how much more protection does Triple DES offer studios than CSS? “In my opinion, very little, if any,” Dr. Bell said.

While Divx may not offer much more protection against small-scale analog copying than regular DVD, it may be much more effective in battling large-scale piracy because each disc has a unique serial number, and program content carries a digital “watermark.” That information could help investigators trace the source of pirated material made from a Divx disc.

In announcing Divx, Circuit City’s Sharp said studios wanted more secure encryption to protect movies in the early stages of release, when they’re most vulnerable to piracy. With perennially popular titles, Divx Gold extends the same protection. All this makes studios more comfortable releasing their most valuable material in pristine digital form. But Sharp also stressed consumer benefits. “Consumers would rather rent than buy [software],” he stated. “Divx moves DVD into the rental domain.” But getting consumers used to the idea that they have to pay to “rent” a disc that they bought at a store the week before might be an uphill battle.

The Divx Market

Divx’s Brindze thinks release patterns on Divx and DVD may mirror those on VHS. The first video release of a movie is almost always priced for rental, about $45 a tape wholesale. Six to eight months after the rental release, the movie is released at a sell-through price, usually around $20 retail. In a similar vein, new movies come out first on Divx, then later be released on regular DVD or Divx Gold. As long as they come out on DVD in the sell-through phase, the most serious concern of early adopters — lack of access to attractive software titles — would be addressed. Still, titles would come out later on DVD than on Divx.

Without Divx, it would take a long time for a rental market to develop for DVD, Brindze says, and that would slow the sales of players, limiting the DVD market to the size of that for laserdiscs.

But Jeffrey Eves, president of the Video Software Dealers Association (VSDA), maintains that the chances a DVD rental market will develop are “superb.” Many video stores have already started renting discs, he told me. And he noted that the $4.99 price for Divx discs is a couple of dollars higher than typical rental rates for tapes and discs.

Brindze pointed out that $4.99 is the suggested retail price. Retailers could sell Divx discs for a little over $4 and still make a dollar profit, he said. Of course, as a poison pill. It’s going to add to their inventory costs. They’re going to contrast their margin on Divx with the $3 they get now every time they rent a tape.”

Why Now and What Now?

An unfortunate result of the Divx announcement is that it gives potential DVD buyers reason to wait, slowing hardware sales. Cynics might suggest that this is the reason Divx made its announcement when it did. After all, the more DVD players sold between now and the time Divx is introduced, the lower the chances of Divx’s succeeding.

Divx did not want to make any announcements until it had achieved a critical mass of hardware and studio partnerships, Circuit City’s Sharp said. Over the past three years, Circuit City has invested $30 million in Divx. With the agreements in place, Circuit City had to invest an additional $100 million, which had to be reported to shareholders. Having disclosed the investment in Divx, it made sense to announce the Divx system.

Now that Divx has been announced, will consumers thinking about buying a DVD player sit back and wait? If enough consumers decide to sit on the sidelines until the smoke clears, it could have a profound influence on the market for home video hardware and software. Here are some things to consider:

Divx has powerful backing and some attractive features, but it faces major resistance from retailers and early DVD adopters.

with Divx software, the number of transactions and total profit will be much lower than with VHS until the installed base of Divx hardware grows. And whether it grows at all will depend heavily on how well Divx is accepted by retailers. With Divx, studios will receive royalties for subsequent viewings and conversions, but retailers will not. Their only take will be the profit they make on each Divx disc.

“I don’t see why any retailer would carry Divx for the paltry amount he’s going to make on a one-transaction basis,” John Thrasher, vice-president of video sales at Sacramento-based Tower Records/Videonet, told me. “It doesn’t afford us enough gross profit or enough volume to justify the floor space. For Divx to interest us, the cost would have to come down significantly. At that point, I don’t see how the people manufacturing it are making anything.”

VSDA’s Eves says that this response is typical. “I haven’t talked with a single retailer who has expressed any interest in Divx, and I think it’s extremely unlikely that video stores are going to want to carry this product. They’re going to view it as a poison pill. It’s going to add to their inventory costs. They’re going to contrast their margin on Divx with the $3 they get now every time they rent a tape.”
About the legendary gold dot dial:
Nathan George Horwitt, the artist, conceived of a watch without numbers as an experiment in pure, functional and "uncluttered" design.

New Museum Safiro™ Watch. The round black dial with its legendary gold dot framed by squared lugs finished in 18K micron gold. Flat sapphire crystal. Black calf strap. Swiss quartz. Water resistant to 99 feet. His or hers, $895.
Finicky CDs

Q I recently purchased a CD that would not play on my home player; even though there was no evidence of physical defect and my player has no trouble with several hundred other discs that I own. A replacement copy had the same problem, although it plays in both my car and portable players. Another disc I have refuses to play in my car but works fine at home. Is this a common problem? And is there anything I can do about it?

A A lot of people have had similar experiences, and, as in your case, it usually affects only one or two discs. It’s one of those audio mysteries.

One manufacturer’s representative told me that his company’s players seemed to have more trouble with the discs that came out of a particular pressing plant, and they thought it might have something to do with the shape of the leading edge of the data “pits.” But only some discs and some players were affected.

Several years ago, when I had a minor part in the production of a CD, a small but significant percentage of the discs were returned because they couldn’t be read by some buyers’ players. We sent them ostensibly identical discs, and they had no problems with those. When we had a second run, there were no returns.

My only advice would be to wait a while before buying a replacement disc, to increase the likelihood that the new disc you buy will be from a different batch and will work in your player. Unfortunately, there won’t be anything on the disc to tell you that it’s from a different pressing (unless it was manufactured in a different country).

Removing Clicks and Pops

Q I possess a sizable collection of vinyl recordings and still collect them. Some years ago, I heard a demonstration of a “click and pop suppressor” for electronically improving the sound from old, less-than-ideal discs. The results were spectacular. Does such a device still exist?

A I well recall one occasion where the demonstrator scratched a common nail across the surface of an LP and then played it through one of these processors with no audible ill effects. The results were dramatic, if a little gruesome to someone who was unprepared. I heard a demonstration of a “click and pop suppressor” for electronically improving the sound from old, less-than-ideal discs. The results were spectacular. Does such a device still exist?

es a number of different techniques to clean up old records, some reminiscent of the old click-and-pop devices. Whether you are willing to shell out $2,650 for it is another matter.

**Laser Cleaning**

My music system, which contains a dual cassette deck and a CD player, is several years old and has never been serviced. I haven't had any problems with it yet, but would it be prudent to have the CD player's laser checked and cleaned by a professional?

ANDREA M. DENNING
Phoenix, AZ

**Unshielded Speakers with TV**

I have a pair of favorite old speakers that I would like to connect to the B speaker outputs of the receiver in my home-theater setup and use for music listening. Do you have any guidelines for positioning these unshielded speakers on either side of my television?

WARREN KEATS
Milwaukee, WI

**Digital Surround on VHS?**

I understand that both the Dolby Digital and Sony SDDS digital surround soundtracks on theatrical releases of movies are recorded on the film, while a synchronized CD-ROM is used for the DTS surround sound. Would it be possible for the Dolby Digital soundtrack to be added to the edge of a VHS videotape?

JOHN SCIACCA
Orinda, CA

**But I wouldn’t hold my breath waiting for that to happen. If you want to get the benefit of Dolby Digital, you’ll have to switch over to one of the disc formats that have it — namely, laserdisc or DVD.**
Feel the Burn

In the same way that the Information Revolution is changing our society in the late twentieth century, the Industrial Revolution changed society in the early nineteenth century. During that age of invention, machines displaced manual labor, bringing a flood of low-cost, mass-produced consumer goods. For example, the British garment industry was transformed by the introduction of mechanized looms. However, this transformation devastated the lives of thousands of weavers, who lost both their jobs and their heritage of acquired skills. A few militant weavers, who came to be called Luddites (after a legendary eighteenth-century saboteur, Ned Ludd), rebelled against the new technology and demanded good jobs, fair wages, decent working conditions, and a voice in determining the quality of their cloth.

Their not unreasonable demands were ignored, and the Luddites began roaming the countryside, at first sabotaging equipment, then threatening factory owners and smashing their mechanical looms. Finally, after the violence had become bloody, the British government responded by arresting the Luddite leaders. The revolt was crushed, and the juggernaut of the Industrial Revolution was barely slowed. However, Luddites are remembered, and today their story still warns us of the consequences of unplanned growth and runaway technology.

The fabric of our modern society ripples with the question of how new technology affects us, and that includes the technologies of recorded music and other forms of packaged entertainment. For example, as the consumer is given more powerful ways to access and manipulate recorded content, there must be counter-balancing ways for content owners to protect their property. If the imbalance becomes too great, then the great machine of capitalism will inevitably respond, perhaps with negative consequences. If content is not protected, and free copying is allowed, then there will be little profit in creating content, and individuals and companies will likely stop creating it. Consumers would be left with fabulous technology and nothing to record or play back.

These issues have been debated for many years, and laws such as the Audio Home Recording Act have been passed, but the steady advance of technology requires that the issues be continually revisited. The rise of the Internet is forcing another rethinking. In addition, the advent of powerful new consumer recording technologies has again raised the issue of content ownership and copying. In particular, consumers can now purchase CD-R (recordable) and CD-RW (ReWritable) drives that allow digital recording of music, video, computer software, text, and any other kind of information or signal that can be represented as a binary file. A CD-R disc is a permanent recording that is playable on CD players and CD-ROM drives. A CD-RW disc can be erased and rerecorded and played on a CD-RW drive (which can also play regular CDs and CD-ROMs). CD-RW discs cannot be played on today’s CD players or CD-ROM drives, but the next generations of the drives will allow CD-RW playback.

The advent of CD-R revolutionized the computer industry. The ability to “burn” your own CDs, using dye-polymer technology, gave ordinary users the opportunity to turn their desktop computers into small-capacity, CD mastering and press-factoring facilities. Overnight, computer enthusiasts began using CD-R for all kinds of high-storage-capacity applications including multimedia publishing, software distribution, data backup, and archiving. In addition, individuals could burn their own music CDs. Whether they were making compilations from purchased recordings, copying recordings borrowed from friends, or selling pirated copies, they could make discs that were bit-for-bit identical to the real thing. Moreover, the advent of high-speed CD-R recorders meant that huge volumes of data could be copied very quickly.

The introduction of CD-RW, using phase-change technology, amplified the copying possibilities. A disc could be recorded, erased, and rerecorded an essentially endless number of times. Moreover, since a CD-RW drive can also burn CD-R discs as well as play back audio CDs and CD-ROMs, it is a “universal” drive. With the street price of some CD-R recorders below $250 and blank media below $3, and some CD-RW drives and discs priced at $50 and $25, many computer users can afford to make CDs.

The only complication has been the awkward premastering programs needed to make a recording. However, with the recent advent of packet-writing technology, you can now simply drag-and-drop a file onto a blank CD, which your computer treats as just another disk drive. CD-R and CD-RW recording is now affordable and about as easy as using floppy diskettes. Moreover, discord among manufacturers has created several incompatible formats for DVD-RAM (the rewriteable version of DVD) that will impede its growth. CD-R and CD-RW are thus serious products, and millions of units will be sold annually for many years to come.

Although the CD was originally an audio invention, most CD recorders have appeared as computer peripherals, in part because computer users have a more pressing need to write data. It is also because, historically, the computer industry has had a more laissez-faire attitude toward unlicensed copying. In contrast, the music industry has always taken a hard line against copying and pointedly uses the term “piracy” to describe the act of music copying. For those and other reasons, only a few consumer CD-R audio recorders have been marketed. However, at least one audio company appears ready to offer CD-RW audio recorders to consumers. These low-cost recorders will be able to play standard CDs, burn CD-Rs, and rewrite CD-RWs. They will thus offer the ubiquity of the analog cassette, the convenience of MiniDisc, and the sound quality of CD — unbelievable!

Clearly, new technology such as CD-RW is fabulously attractive to consumers. But the power of such technology must be appropriately restrained. In particular, prudent steps must be taken to prevent indiscriminate copying of copyrighted music. At the same time, however, legitimate use must be respected. In short, the owners of intellectual property and the manufacturers of recording hardware must find a middle ground on which both industries can prosper.

Given the power of today’s technology, and its potential impact on our society, failure to resolve the question of recording rights would ultimately lead to a modern tragedy as sad as the wrecked lives of skilled workers, and the sight of a countryside littered with smashed machines.
YOU CAN'T PICK YOUR RELATIVES.

BUT YOU CAN EDIT THEM OUT OF YOUR VIDEOS.

The coolest way to edit multimedia on your PC.

buz

So Uncle Floyd's belching talents on your home video aren't a hit. Well, lucky for you, there's Buz Multimedia Producer. The complete hardware and software package that lets you create home videos and add digital pictures and sound.

- The mouse-sized Buz Box gives you a single connection for your camcorders, VCRs, CDs, or DVD players on your desktop.

- Professional quality video: 720 x 480, 30 fps, 24-bit color, and NTSC/PAL.

- Includes a wide range of video, graphics, and audio software that gives your videos and pictures some really hot special effects.

- UltraSCSI Controller connects right to your scanner, DVD, CD-ROM, Jaz* or Zip* drive. 20MB/sec. transfer rate, plug and play, bootable.

So get Buz, because it looks like you're stuck with Uncle Floyd.

Visit www.iomega.com
Just add a TV to JBL's Simply Cinema" ESC550 and you'll have superb surround sound for TV, CD, FM and AM. ESC550 includes The Source" (left), a splendid Dolby Pro Logic" processor with CD player and tuner; as well as five self-powered speakers, subwoofer and remote. ESC550 is 250 watts of home audio at its best and most versatile. For literature/dealer locations: 1-800-336-4JBL.

Pioneer VSX-09TX Dolby Digital/THX Receiver

DAVID RANADA • TECHNICAL EDITOR

Pioneer has at last entered the Home THX fold, embracing with its VSX-09TX receiver a set of features and design guidelines set by Lucasfilm that are meant to improve the sonic quality of the home-theater experience.

While the standard set of Home THX features — re-equalization, surround-channel decorrelation, and surround-speaker timbre matching — serve to make soundtracks sound more theaterlike, Lucasfilm's design guidelines are actually more important. That's because they affect stereo as well as multichannel playback: to receive THX certification, a receiver has to meet stringent output-power, noise-level, and distortion requirements in addition to having a complete and correctly operating bass-management system.

The VSX-09TX's bass-management facilities, for example, include selectable frequencies for the crossover between the main-channel and subwoofer outputs, with a choice among 80, 100, and 150 Hz (80 Hz is the THX standard). It also allows you to apply a high-pass filter to any speaker output. The receiver's power specs are likewise generous, with 110 watts per channel into 6 ohms in stereo (0.09 percent distortion) or 100 watts per channel into 6 ohms in its multichannel modes (0.8 percent distortion). That much power should let you reach theaterlike sound levels, which are quite loud, in your home with typical-sensitivity speakers.

With the VSX-09TX we encountered for the second time a relatively new THX feature, the somewhat confusingly named Bass Manager. Not the same as Dolby Digital bass management, the Bass Manager is a programmable signal-limiter applied to the line-level subwoofer output to prevent any attached subwoofer (or subwoofer amplifier) from being overdriven. It is easy to set up, at least in theory. Using the receiver's on-screen menu system, you operate the cursor keys on the remote, or behind a fold-down door on the receiver's front panel, to activate a special subwoofer-output test tone, which turns on at a low level. You turn up the test tone until "just before distortion begins to appear," as the manual puts it, although in practice you have to actually hear some distortion before you can set the volume control to "just before." You then hit Enter, and that is the level to which the subwoofer output will be limited. The manual doesn't tell you this, but the way to de-activate the receiver's Bass Manager (which you might want to do if your subwoofer has its own limiter, as many do) is to turn the receiver's volume control up past its front-panel 0-dB marking during the setup procedure (I strongly recommend turning your subwoofer off while you're doing this). We deactivated the limiter for nearly all of our tests.

Aside from its THX features, the VSX-09TX is a conventional Dolby Digital receiver: It has six surround-sound digital signal processing (DSP) modes suitable for ambience enhancement of music programs (labeled Jazz, Dance, Theater 1, Theater 2, and Hall) as well as Dolby Digital and digital-domain Dolby Pro Logic decoding.
What you're looking for.

SURGEON GENERAL'S WARNING: Quitting Smoking Now Greatly Reduces Serious Risks to Your Health.
Along with the built-in thirty-preset AM/FM tuner, the VSX-09TX has connections and switching for four audio-only inputs, including CD, two analog recorders, and a moving-magnet phono cartridge. The five A/V inputs, with both composite-video and S-video connectors for each, include two VCRs, a DVD player or TV, a laserdisc or satellite-broadcast decoder, and a front-panel video input. The laserdisc/satellite input is provided with a coaxial digital audio jack as well as an RF input for receiving Dolby Digital signals from suitably equipped laserdisc players. The DVD/TV input also has a coaxial digital audio connector. Both the laserdisc and DVD inputs share the receiver's sole Toslink optical digital audio connector. All of the digital audio inputs can also accept Dolby Digital bitstreams, with the receiver's Dolby Digital decoder switching on automatically. The rear panel has spring connectors for the supplied AM loop antenna and FM wire antenna (no F-connector).

Rear-panel outputs include one for a TV monitor (composite- and S-video connectors) and five main speaker outputs (front left, center, and right, and surround left and right). There are also connections for a second pair of front left/right speakers, presumably for multroom operation. All speaker connectors are multiway binding posts that accommodate stripped or tinned wires or single banana plugs (they are spaced too far apart for double banana plugs). There is a complete six-channel set of line-level outputs, of which only the subwoofer output is likely to be used in most installations. There are three AC convenience outlets, two of them switched. Finally, there are the seemingly obligatory provisions for multroom operation: stereo and composite-video outputs as well as an input for an infrared sensor (Pioneer's MR-100).

Controlling everything is the receiver's remote control, which is of unusual — but very comfortable — shape and styling. In addition to selecting surround modes and tuning the radio by station frequency, the handset will also control other Pioneer components. For the other brand TVs, VCRs, laserdisc players, and CD players, you can either recall preprogrammed codes according to the component's manufacturer (using the on-screen menu system to guide you) or activate the handset's learning function, which enables it to memorize infrared commands from another remote. A rather complicated macro procedure lets the remote issue sequences of up to ten preprogrammed or learned commands at a time.

Except for its noise performance, the VSX-09TX did well on our test bench. As you can see from our measurements, in stereo the receiver had ample power reserves, especially into impedances of 6 and 4 ohms, more realistic than the nominal — and I do mean nominal — 8-ohm impedance rating of most speakers. With continuous power outputs this high, the small measured dynamic headroom is less important than it would be with lower-power receivers. Dolby Digital performance was very good, with adequately low noise levels and outstanding output power delivered to all channels simultaneously. Dolby Pro Logic decoding was also very good, with slightly higher noise levels than Dolby Digital, but these should not be bothersome with most program material. The VSX-09TX's bass-management facilities worked correctly but are optimized for THX-certified speakers, or similar models, by having asymmetrical high- and low-pass rolloffs and a response that's down 6 dB at the subwoofer crossover's rolloff point. Tuner performance was average overall.

The receiver's noise levels became noticeable when we used an analog input in any mode other than stereo with the front-panel Direct button pressed (this apparently bypasses some sources of internal noise). Noise was even more prominent when we used any DSP ambiance mode with any input. Playback in these modes can sound hissy if the volume is close to live or theatrical levels (any setting above 11 o'clock). Fortunately, the noise seemed to be plain, old-fashioned hiss, and while it was audible with program material of wide dynamic range, it was relatively benign.

Sharp-eared listeners with too much free time may eventually come across program material that activates an undocumented “feature” of the VSX-09TX’s line-level analog inputs: a noise “gate” that essentially mutes the receiver when an analog input signal falls below a certain very low level (approximately 0.23 millivolt) if any of the speaker settings are “small.” While I could hear the action of the muting with a specially constructed test tone, I wasn’t able to find program material that was clearly affected by its action. In any case, the receiver’s analog inputs would most likely be used for playback from LPs, cassettes, or videotapes, all media whose inherently high noise levels would never activate the noise gate. Our analog-input noise measurements were made with the noise gate deactivated to more closely simulate the noise levels encountered while listening.

The VSX-09TX sounded excellent, especially with Dolby Digital program material. The Pioneer VSX-09TX receiver sounded excellent, especially with Dolby Digital program material. Five-channel power output was outstanding.
Mirage ushers in the new millennium with a breakthrough in sound technology so radical it will revolutionize the way the world thinks about loudspeakers. Omnipolar® goes beyond bipolar to create a truly spherical 360° sound radiation pattern with no wrap-around distortion.

The new OM-6 delivers perfect imaging through its uniquely profiled cabinet design, the famous Mirage PTH™ tweeters, extraordinary new mid-range drivers and twin built-in 150 watt powered subwoofers. The result is outstanding spaciousness, sonic accuracy and unparalleled realism.

THE NEW SHAPE OF SOUND. OMNIPOLAR. ONLY FROM MIRAGE!
TEST REPORTS

usual, and the new THX surround-channel timbre-matching curve did, with the help of specially devised test tones, provide a closer sonic match between surround and front speakers. At times, however, the slight high-frequency rolloff of THX re-equalization dulled some soundtracks, forcing me to revert to straight Dolby Pro Logic (some THX components allow you to switch out re-equalization).

Their slightly elevated noise levels aside, the DSP ambience modes were sometimes too subtle in their operation. While this is better than the typical over-spacious exaggeration, I kept wanting to fine-tune each mode’s behavior, principally by turning the effect up, but no DSP adjustments are provided. Theater 1 and Theater 2 sounded very subtly different, and it took me an hour in the lab to determine why; the only difference is that the artificial reflections of Theater 2’s right surround channel come out in reversed polarity (phase) compared with the input. I preferred Theater 2’s effect, particularly for operas.

Setup guided by the on-screen menu was easy, and so was operation of the remote. However, you will find that the Bass Manager’s test tone stimulates all manner of in-room vibrations of loosely fastened objects, which could be confused with woofer distortion. I’d rely on a subwoofer’s built-in limiting, assuming it has any, and dial the Bass Manager off.

Overall, I liked Pioneer’s VSX-09TX receiver. It’s quite good looking, too. (For less money you can get the VSX-07TX, the same receiver without the wooden side panels or the spectacular copper-plated chassis.) It was smooth and easy to operate, with no major ergonomic difficulties. It is certainly one of the finest home-theater receivers ever made by Pioneer.

DOLBY DIGITAL (AC-3) PERFORMANCE

All data except frequency response obtained with Dolby Digital signals from Dolby Labs’ AC-3 test DVD using “small” speaker settings. Except for maximum output-power and channel-imbalance measurements, the speaker-balance controls and volume control were set together to produce 2.83 volts into 8 ohms from a -20-dBFS signal from all channels. All input signals were differed (which limits noise and distortion performance).

OUTPUT AT CLIPPING (1 kHz, into 8/ohms) one channel driven approx 10/114 watts all channels driven (10 seconds) 94/118 watts

DISTORTION AT 1 WATT (THD+N, 1 kHz) worst case (front left) 0.081%

NOISE (A-weighted) worst case (left out, front driven)>36 dB worst case (left out, center driven)>36 dB

"THE MOST SPATIAL REALISM OF ANY LOUDSPEAKER SYSTEM, REGARDLESS OF PRICE"

That's how one reviewer described our Home Theater System. We couldn't agree more.

The system begins with the pure power and sound fidelity of the Bipolar 95is Series, delivering uniform spectral balance and optimal dispersion, for a more lifelike soundstage with incredible 3D imaging.

Now add a pair of our full range Bipolar surround satellites as your rear speakers, an MC Series magnetically shielded center channel speaker, and a BPS Series Bipolar Subwoofer.

The combination is surely nothing less than awesome, elevating your enjoyment of both music and movies to dizzying new heights. Astounding sound, only from Mirage.

HI-FI NEWS & RECORD REVIEW

Setting a standard that has yet to be surpassed.
Most of the emphasis in consumer electronics in recent years has been on home theater, typically involving the use of sophisticated signal-processing circuitry, powerful A/V receivers, and several loudspeakers beyond the familiar stereo pair. Home theater has, at least to some degree, overshadowed the role of traditional hi-fi components. Nevertheless, new stereo components continue to make their appearance, albeit with somewhat lower frequency (no pun intended) than heretofore.

One of the most basic and familiar components of any audio system is its amplifier. A few decades ago, new amplifiers were announced almost daily (or so it seemed), often with inflated claims of superiority over previous designs. Nevertheless, new stereo components continue to make their appearance, albeit with somewhat lower frequency (no pun intended) than heretofore.

A host of technological developments have altered that situation. Much of the "magic" has been deleted from the design process, replaced by hard science, with the result that good amplifiers today are commonplace, although they are more often than not incorporated within a receiver and therefore rarely seen or appreciated by their users. "High end" separate amplifiers, of course, are very visible, and their (usually) high performance can inspire passionate feelings in their owners. These amps' correspondingly large dimensions, weights, and prices also distinguish them from more mundane and affordable products.

Fortunately, there are still affordable alternatives like the Model 3020 stereo integrated amplifier from AMC. In its high value/cost ratio, plain appearance, and simplicity of operation, the AMC 3020 is reminiscent of some of the popular amplifiers of bygone years, although its design and performance clearly reflect more recent technological advances.

The AMC 3020 is a compact, all-black component whose front panel contains a green power button, a headphone jack, and six knobs. The function of each knob is clearly labeled in white above it, and the volume knob is larger than the rest and placed at the far right.

Except for one unique twist, which we'll get to in a moment, the control functions are conventional, including balance, bass and treble tone controls (each center-detented), source/tape selection, and input selection. The input selector is a rotary switch whose six positions are marked Phono/Aux, CD, Tuner, Multimedia, DVD, and Mix. All of the inputs have identical gain and frequency-response characteristics, so if you want to hook up a turntable you will need an outboard phono preamp. The Mix setting, a feature that is foreign to conventional home amplifiers, allows the signals from any or all inputs to be combined in any proportion and delivered to the speaker outputs. This feature, intended for multimedia applications, allows you to listen to a CD and monitor computer-generated audio simultaneously, for example. The mixed signal also appears at the Model 3020's recording outputs so that it can be recorded or fed to a computer's sound-card input.

The rear apron of the AMC 3020 is populated by five pairs of RCA-jack inputs, a ground terminal, tape-recording in/out jacks, and preamp-out/main-amp-in jacks, which are fitted with removable jumpers. Above each of the main input terminals is a small Mix knob that adjusts the level of its source program; the Mix knobs have no effect unless the amplifier is in its mixing mode. The speaker outputs are insulated binding posts that accept wires, lugs, or single or dual banana plugs. The Model 3020 is designed to drive speakers with impedance ratings between 4 and 8 ohms.

About half of the top of the amplifier case is slotted to provide convection cooling for most of its active circuitry, including the power supply and the output stages with their heat sinks.
SAT 2:45 AM:
"Relax. The really fresh babes don't show up 'til later."
SUBWOOFER OF THE YEAR!

Audio/Video International
Grand Prix Product of the Year

Video Magazine's 1997 Home Theater System of the Year

"...A DOWNRIGHT AMAZING PERFORMER."  
Tony Nicolaou on the PS-1200, Video Magazine

"...POWERFUL AND IMPRESSIVE."  
Andrea Marshall on the PS-1200, Audio Idea Guide

"ROCK SOLID AND DEEP AS A CHASM, BASS NOTES CAME THROUGH AS I'VE NEVER HEARD THEM BEFORE."  
Jim Phillips on the PS-1000, Stereophile Guide to Home Theater Vol 2, Number 2

Almost overnight PARADIGM has become the new standard in high-performance subwoofers. As a world leader in speaker design, PARADIGM knows what it takes to make great sounding speakers - from best-value budget audiophile speakers right through to sensational PARADIGM Reference high-end systems. PARADIGM has applied this comprehensive expertise to design and build the finest subwoofers available, at any price! And when it comes to price, PARADIGM'S value is unmatched. In fact PARADIGM has been rated #1 in price/value for 7 consecutive years in surveys conducted by the distinguished trade publication Inside Track.

Sophisticated bass driver technology utilizes AVS - diecast heatsink chassis' for higher power handling and much lower distortion. Patented high current, high output amplifiers ensure full power delivery at all times. Add solid braced enclosures, full control features and what you have is the pure, clean, articulate and thunderous deep bass of PARADIGM'S sensational powered subwoofers.

We invite you to visit your nearest AUTHORIZED PARADIGM DEALER and experience these remarkable subwoofers today. The difference is... simply better sound!

During our operation and testing, the exterior of the case always remained at comfortable temperatures.

The AMC 3020 is rated to deliver 20 watts per channel into 8-ohm loads, with a clipping-level output of 33 and 42 watts into loads of 8 and 4 ohms, respectively. Our measurements showed that it is very conservatively rated, delivering 36 watts into 8 ohms and 46 watts into 4 ohms. Not only was it a first-rate performer in every important characteristic, but it proved to be a rugged and reliable amplifier that withstood being repeatedly driven to and beyond its limits without mishap.

With both channels driving 8-ohm loads at the rated 20 watts, the AMC 3020's distortion was about 0.01 percent between 20 Hz and 2 kHz, and it rose to only 0.025 percent at 20 kHz. At 30 watts, the distortion readings were similar above 100 Hz, but they increased appreciably at lower frequencies. The low-level frequency response (at 1 watt) with the tone controls centered was an excellent ±0.1 dB from 20 Hz to 20 kHz. The tone-control characteristics were conventional.

In summary, the AMC 3020 integrated amplifier offers unusual versatility at a very reasonable price. It can do justice to demanding program material, yet it is compact and inconspicuous, and its Mix feature will be especially attractive to computer users who want to add power and flexibility to their sound systems.

ASTONISHING!

"...smooth...refined...I've heard highly regarded $2,000 2-way 6-inchers that could not keep up with the Mini Monitor."

-Lorry Greenberg, Audio Magazine

As a world leader in speaker design, PARADIGM knows what it takes to make great sounding speakers - from superb best-value budget audiophile speakers, right through to sensational PARADIGM® REFERENCE high-end systems. And now PARADIGM brings it's comprehensive design expertise to an all new generation of the most affordable high-performance speakers the market has ever seen. Introducing the exceptional new MONITOR SERIES.

High-frequency drivers use our remarkable new PTD™ pure-titanium dome along with our exclusive controlled waveguide to provide outstanding, and utterly natural, high-frequency response.

Bass/midrange drivers utilize high-pressure diecast chassis' and our unique ICI™ injection-moulded copolymer polypropylene cones. This advanced cone design effectively eliminates unwanted resonances and standing waves.

Add minimum diffraction grills, solid braced enclosures, phase coherent crossovers, gold input terminals and what you have is the pure, clear and uncolored sound of PARADIGM'S astonishing new MONITOR SERIES.

We invite you to visit your nearest AUTHORIZED PARADIGM DEALER and experience any of our high-performance speakers today. The difference is... simply better sound!

CIRCLE NO. 29 ON READER SERVICE CARD
Every home theater receiver company is screaming about how great Dolby Digital is. So how come when you turn on their receivers the experience is more like so what than so cool?

The answer to that question lies not in technology, but in quality. From our Dolby Digital ready TX-SV444 up to our THX certified TX-DS939 with built-in Dolby Digital decoder, Onkyo quality makes the difference in Dolby Digital.

That means Low-Negative Feedback and Non-Negative Feedback circuitries to minimize noise and distortion, so that a bullet whizzing from the left to the right rear channel makes you duck. It means oversized transformers and capacitors that deliver enough power to handle even the most sophisticated intergalactic weapons of mass destruction.

Onkyo quality is why our new receivers consistently deliver high power levels into low impedance loads, with the greatest possible transparency. And you can hear Onkyo quality, whether you're listening to movies or music.

All you'll hear from our competition is excuses.

All of this extraordinary build quality means Onkyo receivers can bring you an extraordinary range of signal processing features. Like Lucasfilm's Cinema Re-EQ™ and Timbre Matching™ Cinema Re-EQ automatically insures soundtracks are properly equalized for home playback, so that high frequencies that sounded fine in a large theater don't make your fillings melt at home. Timbre Matching heightens realism by seamlessly blending the sound coming from the surround speakers with the front channels. And our top model, the TX-DS939, offers full THX certification.

High Definition DSP is another Onkyo exclusive. The result of the microprocessing capabilities of the Motorola Symphony chip and the programming wizardry of Onkyo, High Definition DSP lets you customize your room acoustics without having to take out a wall.

Until Onkyo invented Smart Scan, system setup and adjustment typically required wading through a confusing sea of presets. By simply rotating the Smart Scan controller, you can instantly select surround modes, parameters, output levels for all channels, delay times, center channel mode, subwoofer on/off and test signals.

Smart Scan is the fast, easy way to dial up perfect surround sound every time. And you'll never get a wrong number.

That's some inside information on what makes a great receiver. Your Onkyo dealer has the rest of the story. Along with a demo you won't forget.
Our inside quality doesn’t give other receivers an outside chance.

**NEW TX-DS939 DOLBY DIGITAL, THX RECEIVER**

In the October issue of *Stereo Review*, David Ranada reviewed the TX-DS939 and concluded that: "at present, no other AV receiver we’re aware of is clearly super or it may not even have any peers."
The flagship of the Onkyo line, the TX-DS939 is quite simply, the finest home theater receiver you can buy.

**NEW TX-SV545 DOLBY DIGITAL READY RECEIVER**

No other receiver offers the performance level of our TX-SV545 at such an affordable price. And it only gets better as you step up to its big brothers, the TX-SV646 and full Dolby Digital TX-DS747. So no matter what your home theater budget, there’s an Onkyo receiver that you can build around.
For decades, high-fidelity loudspeaker systems have followed a more or less standard pattern. They range from relatively small "bookshelf" designs, typically housing two-way two-driver systems, to floor-standing models whose larger size can accommodate a three-way or four-way driver configuration.

In recent years, in response to the growing popularity of home theater, low-bass performance has been enhanced by the availability of subwoofers that can extend the lower-frequency bass coverage of even a modest speaker system. While subwoofers can be purchased separately and added to existing installations, they are also frequently packaged with other speakers as a dedicated part of a three- to six-piece system.

An impressive variation on the latter theme is the "all in one" speaker, combining a full driver complement with a powered subwoofer in a single tower enclosure. This is one of the most space-efficient designs, requiring only the addition of a conventional amplifier or receiver to create a highly effective, state-of-the-art music system with a minimum of impact on the surrounding living space.

Until recently, the downside of this approach has been the bulk, weight, and cost of such speakers, which have restricted their appeal to a limited segment of the high-fidelity market. With the introduction of the Polk Audio RT1000p system, the basic advantages of the all-in-one speaker are now within the reach of a larger range of music lovers.

The RT1000p is a conventional-looking tower speaker whose cabinet is largely constructed of 3/4-inch medium-density fiberboard (MDF). The speaker baffle, 1 inch thick, is covered with an acoustically inert material called Velvin.

Functionally, the upper third of the cabinet is a separately enclosed and sealed speaker system covering the range from the upper bass through the high frequencies. Its 1-inch tweeter has a soft polymer dome with a vapor-deposited coating of stainless steel and aluminum, a design that the manufacturer says combines the stiffness of metal with the damping properties of softer materials.

The woofer, located just below the tweeter, is a 61/2-inch cone driver, operating below 2.3 kHz. Both drivers in the upper section are mounted on a raised bezel, weighing nearly 3 pounds, that is molded from a dense mineral-and-glass compound. This construction is designed to minimize diffraction and reduce unwanted reflections that could affect system imaging.

The RT1000p's separate upper section is, by itself, an excellent two-way speaker system. However, the bulk of the enclosure's volume is devoted to the powered subwoofer, which operates below 80 Hz and whose output is rated to be down 3 dB at 36 Hz.

The two compartments of the subwoofer structure extend over the full width, depth, and height of the cabinet except for the portion devoted to the built-in amplifier and its controls and to the upper drivers. The subwoofer section is heavily braced and gives the enclosure a rigidity reminiscent of a concrete block.

The Polk Audio RT-1000p Speaker System

JULIAN HIRSCH • HIRSCH-HOUCK LABORATORIES

DIMENSIONS: 42¼ inches high, 8 inches wide, 13 inches deep
WEIGHT: 63 pounds
FINISH: black woodgrain vinyl; real rosewood veneer (as shown) at extra cost
PRICE: black, $560 each; rosewood, $660 each
MANUFACTURER: Polk Audio, Dept. SR, 5601 Metro Dr., Baltimore, MD 21215; telephone: 800-377-7655
My car is one and a half tons of hard-tempered steel, blinding polished chrome and road-eating rubber undiluted by crappy paper speakers.

Most speaker cones are made from paper. Paper is the material used for speeding tickets. Paper does not rock.

Pioneer uses SMP (injection-molded polypropylene) technology to produce speaker cones from perfectly blended, advanced materials to create just the right cone for each frequency or music type.

Plus, they're more durable, remain unaffected by temperature or moisture, and can reproduce bass for long periods of time without wear. Bass, we might add, is the true test of your spleen.

They've got better linearity, less distortion and higher internal loss (a good thing—look it up).

Paper is also used for kitty litter coupons. Just thought you'd like to know.
TEST REPORTS

The subwoofer itself has a single 61/2-inch cone similar to the upper-bass/midrange driver. The low-bass frequencies exit through a 3-inch-diameter port and a conical deflector at the bottom of the cabinet, which is raised a couple of inches by the speaker's base, and emerge omnidirectionally at floor level. The 80-watt subwoofer amplifier is in a protected area of the cabinet’s rear panel, behind the bass driver.

The subwoofer control panel, which also serves as a heat sink for the amplifier, has its own speaker-level and line-level inputs, normally connected in parallel with the upper speaker with gold-plated jumpers, so that the system can be biwired. The amplifier can be left in its automatic mode and connected to a 120-volt AC line; it will come on automatically when a signal is present and shut off a few minutes after it ceases. Alternatively, it can be switched on and off manually. The subwoofer level is smoothly adjustable with a volume knob. The setting is not critical and should be made to satisfy individual taste.

Our room-response measurement of the PSW150 subwoofer has a built-in line-level input, I connected the PSW150 subwoofer to my system and set its level to complement the RT1000p speakers. In my listening room the RT1000p towers had a smooth and gently rising response characteristic with good low-frequency extension. Off-axis response remained smooth, and high-frequency response was strong even 60 degrees off-axis. The CS275 center speaker was less smooth (±7 dB from 73 to 20 kHz on-axis), and the woofer’s level was about 6 dB louder than that of the woofers. Like many horizontally arrayed systems I've tested, the CS275 had a serious notch (12 to 15 dB) near the crossover region at any angle more than 20 degrees off dead center. However, the response of the RT f/x surround speaker at the listening position was excellent (±5 dB from 46 Hz to 16.5 kHz), particularly considering that the measurement was made at an angle to the side of the speaker. Switching between bipolar and dipolar operation changes the polarity of one of the tweeters, which didn’t change the sound appreciably in my listening room.

The combination of three powered subwoofers, one in each main speaker plus the PSW150, gave the system excellent dynamism with program material. In the “Boom” scene from Clear & Present Danger, it delivered 110 dB SPL at my seat on the couch. Average peak output during my usual selection of low and loud music (Bass Erotica's Bass Ecstasy CD, the cannon shots from Telarc's 1812 Overture, and "Jurassic Lunch" from Telarc's The Great Fantasy and Adventure Album) was 108 dB SPL. While the infrasonic fundamentals were missing and the system was not a world-class couch mover, it was remarkably dynamic from 40

### POLK AUDIO RT1000 HOME THEATER SYSTEM

POLK AUDIO'S new RT1000 Home Theater System is built around the RT1000p tower speaker reviewed by Julian Hirsch. For $1,870 Polk supplies a pair of standard-finish RT1000p towers (black wood-grain vinyl; rosewood veneer is shown), a CS275 center-channel speaker ($300), and a pair of RT f/x surround speakers ($450 a pair). For extra oomph in playing movie soundtracks, Polk suggested adding the PSW150 10-inch powered subwoofer (not shown, $649).

The CS275 center speaker has two 5-inch horizontally arrayed woofers flanking a 1-inch tri-laminate-dome tweeter. The magnetically shielded, bass-reflex enclosure measures 6 x 18 x 8 inches and weighs 10 pounds. The top is "sliced" at the back so that you can turn the speaker upside down and mount it underneath a TV, angled upward. Rated frequency response is 80 Hz to 25 kHz, and rated sensitivity is 90 dB sound-pressure level (SPL) at 1 meter. Nominal impedance is 8 ohms.

The RT f/x surround speaker has a single 51/4-inch woofer and a pair of the same 1-inch tri-laminate-dome tweeter. The magnetically shielded, bass-reflex enclosure measures 6 x 18 x 8 inches and weighs 10 pounds. The top is "sliced" at the back so that you can turn the speaker upside down and mount it underneath a TV, angled upward. Rated frequency response is 80 Hz to 25 kHz, and rated sensitivity is 90 dB sound-pressure level (SPL) at 1 meter. Nominal impedance is 8 ohms.

The PSW150 subwoofer has a built-in 200-watt amp and a variable 50- to 150-Hz electronic crossover. The vented enclosure measures 121/2 x 17 x 20 inches, and it weighs 48 pounds. It includes a set of speaker-level and line-level inputs and outputs. Frequency response is given as 30 to 150 Hz. I installed the RT1000p towers well away from the side and front walls of my listening room and leveled them with their adjustable feet. I placed the RT f/x surround speakers on stands at either side of my main listening couch, 4 feet above the floor and 2 feet back from the rear of the couch. The CS275 center speaker, of course, went directly on top of my 51-inch rear-projection TV. I put the PSW150 subwoofer to my right rear corner of the room. Distances to the speakers were. Frequency response remained smooth, and the tweeter's level was about 6 dB louder than that of the woofers. Like many horizontally arrayed systems I've tested, the CS275 had a serious notch (12 to 15 dB) near the crossover region at any angle more than 20 degrees off dead center. However, the response of the RT f/x surround speaker at the listening position was excellent (±5 dB from 46 Hz to 16.5 kHz), particularly considering that the measurement was made at an angle to the side of the speaker. Switching between bipolar and dipolar operation changes the polarity of one of the tweeters, which didn’t change the sound appreciably in my listening room.

The combination of three powered subwoofers, one in each main speaker plus the PSW150, gave the system excellent dynamics with program material. In the “Boom” scene from Clear & Present Danger, it delivered 110 dB SPL at my seat on the couch. Average peak output during my usual selection of low and loud music (Bass Erotica's Bass Ecstasy CD, the cannon shots from Telarc's 1812 Overture, and "Jurassic Lunch" from Telarc's The Great Fantasy and Adventure Album) was 108 dB SPL. While the infrasonic fundamentals were missing and the system was not a world-class couch mover, it was remarkably dynamic from 40...
the Polk RT1000p was made by separately measuring and then averaging the outputs of the left and right speakers from a distance of 12 feet on the axis of the left speaker; the subwoofer level was set to its middle position, which our listening indicated was approximately optimum for balanced response. The resulting curve showed an overall variation of ±4 dB from 100 Hz to 12 kHz. Over most of that range the variation was about ±2 dB. Of course, since this is not a standard measurement, it is not readily repeatable under other conditions or in other rooms, but it does say something about the overall smoothness of the speaker's response.

Our close-miked measurement of the subwoofer response was a symmetrical curve with its maximum at 60 Hz and an overall ±6-dB variation between 35 and 60 Hz. This "response" is obviously affected considerably by the setting of the subwoofer level, making a meaningful definition of the speaker's low-frequency response an uncertain process. This is, of course, equally true of any speaker system with an adjustable subwoofer. In fact, when a separate subwoofer is used, it is totally impractical to define the low-bass response of the system.

Returning to the higher frequencies for the moment, quasi-anechoic MLS response measurements confirmed the essential results of our room-response measurement and the effectiveness of the system's design. The 2-meter on-axis response variation from 300 Hz to 20 kHz was only ±2.5 dB, about as good as it gets.

The system's impedance, rated at 8 ohms, was closer to 4 ohms at most frequencies, reaching the 8-ohm point only at 1.9 kHz (except for a maximum of 19.5 ohms at 80 Hz). Since the speaker is quite sensitive, rated at 90 dB and measuring 91 dB in our tests, the impedance figures have little practical importance.

Our measurements indicate that the Polk RT1000p is a first-rate speaker in every respect, and listening to it for more than a few moments fully justified that conclusion. It was quickly apparent that the treble/midrange portion of the RT1000p sets the standard of performance of the entire system. Its stereo imaging and frequency balance were excellent, with no sign of any systematic coloration or weakness.

The bass (subwoofer) portion of the spectrum should be more than adequate for 99 percent of the program material that the speaker will ever be called on to reproduce. In fact, while listening to it, it was hard to believe that its low-bass performance was the work of a single 61/2-inch driver.

The Polk RT1000p is unquestionably a topnotch speaker at a bargain price, well worth hearing even if you are not in the market to buy a new speaker.

— Tom Noussaine
Sherwood Newcastle R-925
Dolby Digital Receiver

DANIEL KUMIN • START LABORATORIES

Sherwood's R-925 joins the growing brigade of Dolby Digital A/V receivers that sell for $1,000 or less. Part of the company's upscale Newcastle line, it appears to have all the firepower necessary to play on what is rapidly becoming a very competitive field. The receiver's on-board Dolby Digital (DD) and digital-domain Pro Logic surround decoding are complemented by four DSP-powered music-surround modes, plenty of inputs and outputs, and several useful conveniences. The R-925 is rated to deliver 100 watts per channel in two-channel stereo mode and 125 watts in five-channel surround mode, which should be plenty of power in most cases.

Sherwood's first Dolby Digital receiver, the R-925 presents a relatively uncluttered face to the world, with large volume and input-selection knobs situated above three small bass, treble, and balance knobs. There's also a headphone jack and a set of A/V jacks for connecting a camcorder. The rest of the controls — pushbuttons — are grouped logically by function and distinguished by size and shape. The faceplate employs the currently fashionable gold-on-black panel lettering. It's not the most legible scheme, but Sherwood earns several points in my book for using labels that are larger and brighter than those found on most comparable receivers.

Around back, the R-925 proffers an all- RCA-jack selection of inputs and outputs — there are no S-video connectors, which is a bit surprising at this price level. Audio facilities include two tape loops and inputs labeled CD and phono. The audio/video complement includes input trios for four components, but only one (VCR1) is equipped with outputs to accommodate recording. Digital inputs comprise two jacks — one labeled RF AC-3 for use with a Dolby Digital-equipped laserdisc player, the other PCM/AC-3 for digital sources like a CD or DVD player — and one optical port, also labeled PCM/AC-3. The speaker outputs are multiway binding posts, sized and spaced for dual banana plugs — hallelujah.

Sherwood also supplies preamp-out RCA jacks for all six channels (including subwoofer) as well as main in-jacks for the left and right front channels, which are linked to their corresponding pre-outs by heavy jumper pins. All of this raises the R-925 substantially above the norm in terms of flexible expansion options. The receiver also has a pin-jack output to feed a Xantech-compatible multiroom controller, though no mention is made in the manual of how this might be used.

Remaining rear-panel features include two AC convenience jacks, a video-monitor output, AM and FM antenna terminals, and a pair of RCA jacks for Sherwood's Digi-Link remote-control system, which provides integrated "smart" control of additional Sherwood-brand components.

A peek under the R-925's hood revealed a main circuit board with vertically mounted cards (daughter boards) for the tuner, AC-3/DSP processing (this sports a Motorola 56000-family DSP engine), digital audio conversion, and analog audio and A/V input/output. Overall, the arrangement looks easily serviceable. The power-amp section employs ten identical output devices.

I set up the R-925 in my usual home-theater system, comprising B&W Model 803 Series 2 left/right front speakers, a B&W HTM center speaker, and Citation Model 7.3 dipole/bipole surrounds. A powered subwoofer is also part of this system, though as usual I initially omitted it to exercise the receiver's amplifiers with full-range front channels. Source material included Dolby Digital laserdiscs, CDs, and DSS broadcasts.

Setup was uneventful thanks to the R-925's manual, which is generally clear and straightforward. The receiver's solid-state volume control (a continually rotating knob) tracked very
How Do You Improve On Two Of The Most Highly Acclaimed Speaker Systems Of All Time?

Believe us, it isn't easy.
Our Ensemble and Ensemble II are among the most popular — and most critically acclaimed — speaker systems of all time. Designed by our co-founder, Audio Hall of Fame member Henry Kloss (founder of AR, KLH & Advent), they deliver very realistic, wide-range sound... without filling your living room with huge boxes. And because we sell them direct to you, the consumer, with no expensive middlemen, they offer an unprecedented combination of high performance and high value.

After almost 10 successful years, we are now introducing new, improved versions of these classic speakers.

New Ensemble & New Ensemble II.
In the new models, much remains the same. Ensemble's dual subwoofers and Ensemble II's single subwoofer haven't changed. In fact the overall tonal balance, dispersion and frequency range of the new models is essentially identical to the original speakers. And we've kept our affordable, factory-direct prices. Here's what's new:

New Satellite Design.
The satellites for New Ensemble and New Ensemble II feature a new tweeter, redesigned crossover and a stylish new cabinet with tapered walls and a Nextel-coated grille. Acoustically identical to the original satellites, the new designs look better, feature improved power handling and offer increased flexibility in mounting options.

Improved Power Handling.
While the original Ensemble and Ensemble II had formidable power handling capability, the new models employ even more robust construction, with a resulting increased ability to be used with today's modern high-current amplifiers. New Ensemble and New Ensemble II can safely be used with any amplifier designed for home use.

New Industry-Best 10-Year Warranty.
We feel this new design sets new standards for reliability in our industry. We're backing it up with an industry-best 10-year limited parts and labor warranty.

What critics said about the original Ensemble and Ensemble II

Ensemble has "...crisp balanced sound... stereo imaging is phenomenally sharp — some of the best I've heard... the dynamics are stunning... some of the speakers I'm comparing it to cost $1900 to $2800."

- High Performance Review

Ensemble may be "the best value in the world... a winner."

- Audio

"Ensemble delivered a smoother output than many larger and more expensive speakers. It's hard to imagine going wrong with Ensemble."

- Stereo Review

"Ensemble can provide big-speaker performance from a package that takes up little more room — or money — than mini speakers... another hi-fi milestone."

- CD Review

"Ensemble II, like its companions in the Cambridge SoundWorks' lineup, performs so far beyond its price and size class that it can be compared only with much larger speakers at substantially higher prices. Ensemble II is appreciably cheaper than its competition, yet in our opinion it can hold its own against any of them in overall performance... an outstanding value."

## PERFORMANCE

### DOLBY DIGITAL (AC-3) PERFORMANCE

All data except frequency response obtained with Dolby Digital signals from Dolby Labs' AC-3 test DVD using "small" speaker settings. Except for maximum output-power and channel-imbalance measurements, the speaker-balance controls and volume control were set together to produce 2.83 volts into 8 ohms from a -20-dBFS signal from the speaker-files. Other test conditions were same as for Dolby Digital.

### DOLBY DIGITAL PERFORMANCE

- **Max. unclipped subwoofer output:**
  - **(0.12 dB gam)**

### FREQUENCY RESPONSE (20 Hz to 20 kHz)

- **Subwoofer output frequency response:**
  - **0-19 kHz**

### NOISE (A-weighted)

- **Distortion at 1 watt**
  - **1%**
- **Channel separation**
  - **Stereo**
  - **Front (2.0 V peak)**
  - **Center (1.4 V peak)**
  - **Surround (1.4 V peak)**

### DISTORTION AT 1 WATT (THD+N, 1 kHz)

- **Channel separation**
  - **Worst case (left out right driven)**
  - **>45 dB**

### DYNAMIC POWER

- **8 ohms**
  - **182 watts**
- **4 ohms**
  - **95 watts**
- **8 ohms**
  - **144 watts**
  - **118 watts**
- **8 ohms**
  - **118 watts**
- **230 watts**

### CLIPPING HEADROOM

- **8 ohms**
  - **-0.25 dB**
- **4 ohms**
  - **-0.25 dB**
- **8 ohms**
  - **-0.6 dB**
- **4 ohms**
  - **-0.6 dB**

### STEREO PERFORMANCE, DIGITAL INPUTS

Same test conditions as above.

### MEASUREMENTS

#### NOISE (A-weighted)

- **Worst case (surround)**
  - **-66 dB**
- **Distortion (THD+N, 1 kHz)**
  - **Worst case (surround)**
  - **0.12%**
- **Surround-channel noise-reduction calibration error**
  - **Positive (surround)**
  - **-18 dBFS**
- **Surround-decoder input-overload margins**
  - **Front (re 2 volt input)**
  - **Center (re 1.4 volt input)**
  - **Surround (re 1.4 volt input)**
  - **>45 dB**
- **Channel separation**
  - **Worst case (left out right driven)**
  - **>45 dB**

#### STEREO PERFORMANCE, DIGITAL INPUTS

Same test conditions as above.

### OUTPUT AT CLIPPING (1 kHz into 8 ohms)

- **One channel driven**
  - **95 watts**
- **All channels driven (10 seconds)**
  - **130 watts**

### DISTORTION AT 1 WATT (THD+N, 1 kHz)

- **Worst case (right surround)**
  - **0.11%**

### DOLBY PRO LOGIC PERFORMANCE

Except where noted, all data obtained with tones from a digital test-signal generator. Other test conditions same as for Dolby Digital.

### FREQUENCY RESPONSE

- **Front**
  - **20 Hz to 20 kHz**
  - **+0.5 dB, -2.6 dB**
- **Center**
  - **20 Hz to 20 kHz**
  - **+0.3 dB, -2.7 dB**
- **Surround**
  - **20 Hz to 2.5 kHz**
  - **+0.3 dB, -3 dB**

### SELECTIVITY

- **Alternate-channel**
  - **68 dB**
- **Adjacent-channel**
  - **12 dB**

### PILOT-CARRIER LEAKAGE

- **19.38 kHz**
  - **-75/-67 dB**

### CHANNEL SEPARATION (1 kHz)

- **>45 dB**

### FREQUENCY RESPONSE

- **FM**
  - **20 Hz to 15 kHz**
  - **+1,-1.5 dB**
- **AM**
  - **65 Hz to 2.8 kHz**
  - **+0.5,-6 dB**

### TUNER SECTION

All figures for FM except frequency response.

- **Sensitivity (50 dB quieting)**
  - **Mono**
  - **22 dB**
  - **Stereo**
  - **44 dB**
- **Noise (at 65 dBf)**
  - **Mono**
  - **-74 dB**
  - **Stereo**
  - **-68 dB**
- **Distortion (THD+N at 65 dBf)**
  - **Mono**
  - **0.4%**
  - **Stereo**
  - **0.5%**
- **Capture Ratio (at 65 dBf)**
  - **0.8 dB**
- **AM Rejection**
  - **80 dB**

### TEST REPORTS

well, losing "sync" by only a couple of decibels at the extreme top of its range.

The receiver allows you to assign either the RF AC-3, the optical, or the coaxial digital input to the laser disc (LD) position; the coaxial and optical inputs can also feed any or all of the aux/TV, DVD, LD, or CD inputs. Unlike most AV receivers, which lock out a digital input once it is assigned, the R-925 lets you assign a digital source to multiple inputs simultaneously. This is a simple scheme, but it means that if you want to use, say, the coaxial digital input for non-Dolby Digital laserdisc playback, as would normally be the case with a DD-capable laserdisc player, you must manually switch inputs each time, as the R-925 incorporates no "auto-fallback" mode. Sherwood also lets you dub to VCR1 independently of your listening/viewing selection and to mix and match audio and video sources for dubbing or recording. There's even a custom labeling option so that you can rename the AV inputs shown in the front-panel display.

The Sherwood does not produce any on-screen (video) displays, however — a bit unusual for a receiver in this price range — so setup procedures rely on simple alphanumeric messages in the front display window. That causes no real problems since these are clear and the Sherwood's options are relatively few. But the last point gives me some reservations. The R-925's only speaker-mode setup options are "large," "small," or "none" for the center channel and "yes" or "no" for the subwoofer, which toggles a 12-dB-per-octave high-pass characteristic for the left/right channels while activating the line-level subwoofer output, itself processed with a corresponding low-pass filter. When you select the "no" option, Dolby Digital's low-frequency-effects (LFE) channel is redirected to the front left/right channels.

So far, so good. However, the surround channels are equipped with a

66 STEREO REVIEW DECEMBER 1997
Introducing MovieWorks 5.1.
The Surround Sound Speaker System Of The Future.

MovieWorks 5.1 is for people who want the ultimate surround sound listening experience. It is a no-compromise speaker system with high-performance, high-output main, center and surround speakers — and an awesome "room-shaking" powered subwoofer.

MovieWorks 5.1 is the first surround sound speaker system to include MultiPole® surround speakers that can switch between dipole and bipole radiation, depending on the music or movie sound track being played. It is, we believe, the system of the future.

High-performance main speakers.
The main speakers in MovieWorks 5.1 are a two-way, shielded design with excellent tonal balance, wide dispersion and pinpoint stereo imaging — everything you'd want in a high-quality speaker to reproduce both music and sound effects. They will fill even a large room with accurate, natural sound... without filling the room with big speaker boxes.

High-output center speaker.
The center speaker is a new high-output, wide-range design with natural tonal balance and superb dispersion. It has two 51/4" midrange/midbass drivers and a tweeter identical to that in the main speakers, for seamless blending of soundtracks. Bass reach is significantly lower than most center speakers. Its dynamic range can handle even demanding soundtracks, and dispersion is broad enough to cover all listening positions.

MultiPole surround speakers.
The surround speakers in MovieWorks 5.1 are a new high-output, wide-range design using MultiPole technology that allows you to choose between dipole (diffuse radiating) and bipole (direct radiating) sound.*

With the growing popularity of Dolby Digital® 5.1 surround sound, which sends discrete signals to the left and right rear speakers, there has been controversy about what kind of radiating characteristic is best for surround speakers. For virtually all of today's movie soundtracks, we recommend dipole radiator designs because they do a superb job reproducing surround effects so everyone in the room hears them correctly.

For some 5.1 channel mixes, however — those with signals spread between the two surround speakers in true stereo — bipole direct radiators can be advantageous. In particular, music recordings with vocalists directed to surround channels sound better with our MultiPole speakers set to their bipole position.

As Dolby Digital 5.1 technology becomes more familiar to studios, it's difficult to predict what mixing approaches will be used. But with the MultiPole surround speakers, you're literally ready for anything.

Awesome powered subwoofer.
MovieWorks 5.1's powered subwoofer is amazing — it's the one everybody likes. It has a heavy-duty, long-throw 12" woofer and a robust 150-watt amplifier with electronic crossover. Boot says it "is an aural atomic bomb...gracefully played frequencies down to an awe-inspiring 21 Hz...nothing short of phenomenal."

Factory-direct savings. No risk.
If you want a no-compromise surround sound system that can deal with all present and future software, MovieWorks 5.1 is the speaker package for you. Because we sell factory-direct, with no expensive middlemen, it sells for hundreds less than competing systems. And it's backed by our 30-Day Total Satisfaction Guarantee. Try it in your home for a month — there's virtually no risk.

Factory-Direct Price: $1,799.99

* Unlike seemingly similar systems, our MultiPole speakers, when switched from dipole to bipole operation, affect a very broad range of sound — not just very high frequencies. This difference is crucial to proper performance. New Industry-Best 10-Year Warranty applies to all speakers except the powered subwoofer's amplifier which has a 2-Year Warranty.

fixed high-pass filter, so if you want full-range surrounds, one of Dolby Digital's drawing cards — though not a very important one in my book — you will have to look elsewhere. Also, the low-pass filter on the subwoofer output may roll off at too low a frequency, possibly creating an octave-wide "hole" in the bass response given the 100-Hz high-pass filters on the main channels. Whether this is a problem will depend on your speakers and room acoustics. You can always ignore the receiver's subwoofer output and instead hook up your subwoofer's own loop-back high-pass filtering using the receiver's preamp-out/main-in connections.

Performance-wise, I was duly impressed by the Sherwood R-925. In two-channel mode, the receiver was about on par with competing 100-watt stereo receivers, which is to say that its amplifier section delivered very clean and solid power almost right up to its limits; at very high volume settings the R-925 started to sound noticeably hard before the onset of overt distortion (clipping). The sound quality of Dolby Digital surround playback was first-class: dynamic, defined, and clear. The R-925 offers a fixed dynamic-range control. Surround-mode power should prove more than adequate for most systems, and the R-925's surround-channel amplifiers sounded every bit as capable as the front-channel amps when I auditioned them "naked," with the other three channels driving dummy loads.

Dolby Pro Logic performance was excellent. Channel leakage was virtually nil, except for some negligible crosstalk at low frequencies. The clarity, stability, and cohesiveness of surround- and center-channel sound, even from demanding Dolby Surround-encoded music recordings, was outstanding. The Sherwood's digital-domain Pro Logic processing was generally quiet, yielding no audible noise at the listening position under any real-world conditions.

Stereo music also sounded excellent, and during critical listening the R-925's digital-to-analog (D/A) converter, fed via its optical input, nearly matched the overall musical resolution of the converter in my reference CD player. Typical of today's A/V receivers, the Sherwood R-925 provides four "extra" surround modes, endowed with the usual names: Theater, Hall, Church, and Stadium. All are four-channel modes that eschew the center speaker. As a group, they earn the

Absolute Freedom. Absolute Sound.

Sennheiser's new RS-Series 900MHz Wireless headphone systems deliver uncompromised performance. You'll enjoy clear, perfect transmission with extended range compared to other 900MHz systems. Plus, there's never any signal drift - once the signal is locked in, it stays locked in. Most importantly, the RS Series gives you the pristine, natural sound that Sennheiser is famous for.

CIRCLE NO. 14 ON READER SERVICE CARD
dubious distinction of being among
the least musically satisfying ambi-
ence modes I have recently encoun-
tered. The Stadium mode, for exam-
ple, sounds uncannily like a guitar
"flanger" stomp-box.

The only surround adjustments of-
fered are rear- and center-channel de-
lays, the latter in Dolby Digital only.
(The manual offers no guidance for
setting these.) The R-925 does, how-
ever, permit the relative front/rear
speaker balance to be adjusted inde-
pendently for each and every mode,
including Dolby Digital and Pro Log-
ic. Hurrah! More A/V receivers should
incorporate this useful adjustment.

One thing that set the R-925 clearly
apart from many competing A/V re-
ceivers was the performance of its FM
section, which was noticeably above
average. Reception on weaker or fringe-
location FM signals was better than
the run-of-the-mill receiver, yielding
two or three more listenable stations
than usual at my semi-rural location.
The tuner's audio quality on stronger
signals was also quite good — not the
equal in clarity and dynamic range of
a top-flight component tuner, but gen-
erally open, clean, and musical. AM
reception was about average.

In terms of the human interface, the
Sherwood R-925 scored well overall.
Its front panel is generally readable.
and most of the controls are easily
accessible, though its "endless-circle-
"rotary input-selection knob is harder
to use than direct-access source keys.
The supplied remote control does have
individual source keys but fails to pro-
vide direct access to surround modes,
forcing you to step through all modes
in sequence. The R-925 lets you select
Dolby Digital mode whenever the aux/
TV, LD, or DVD inputs are set to digi-
tal, whether or not any AC-3 data is
present — which, of course, can yield
silence: you must manually deselect
DD by calling up another mode. This
could confuse less experienced users.

The remote control is an unusually
powerful and flexible preprogrammed
device that can transmit several dozen
commands to each of eight different
components. The handset includes a
plethora of keys, which for the most
part are logically grouped by function
or component and differentiated by
size and shape. There's a standard,
cruciform cursor control in the middle
and a back-lighting button.

The Sherwood remote also offers
some unusual options, including ex-
tensive macro capabilities and the
ability to "punch out" keys for such
functions as volume, channel up/down,
and transport so that they stay set to
the relevant components regardless of
what other component the remote as a
whole is set to, letting you control, say,
both receiver volume and TV channel
selection without constantly switching
component modes.

Though a few problems cropped up
in our test — most rectified in a sec-
ond, final production sample from
Sherwood — the R-925 delivered fun-
damentally fine performance in its
movie-sound modes, solid amplifica-
tion, and a notable FM section. Com-
bine that with its simple design and
unusually useful remote control, and
you have an appealing, basic home-
theater centerpiece.

Magneplanar® LOUDSPEAKERS
...an offer we hope you can't resist

For over 25 years Magneplanars
have been a favorite of audiophiles
world-wide. The latest survey by a
high-end audio magazine found
more audiophiles owned
Magneplanars than any other
brand, and 99% said they would
purchase them again if they had it
to do over.

We know once music lovers hear
Maggies® (affectionate name), they
are hooked...especially after hear-
ing them in their homes. Because
we want to "hook" you...we are
making an offer we hope you
can't resist.

As an introduction to this
unique sound, we have
developed the MMG (Mini Mag)
with a factory-direct price of only
$500.00 per pair and a 60 day
satisfaction guarantee...we even
pay the freight.

The MMG is the smallest full range
di-pole speaker (same sound front
& back...no box) we have ever pro-
duced. Due to higher volume and
advances in manufacturing and
materials technology we can now
offer the unique Magneplanar
sound in this more affordable com-
pact size.

The 60 day satisfaction guaran-
tee also includes a program which
allows you to receive up to all your
money back for the MMGs when you
buy a bigger, better pair of
Magneplanars at one of our dealers
...for a full year. You can also get all
of your money back if you get three of
your friends to buy a pair.

Acoustic Research
The Edge/S 12 HO Home Theater Speaker System

KEN C. POHLMANN • HAMMER LABORATORIES

For a time, it seemed like the audio and video markets were diverging. Videophiles, when they weren't completely transfixed by their big screens, increasingly discovered the excitement of multichannel audio playback and abandoned mono and even stereo TV. The reason, of course, is that videophiles wanted to recreate at home the experience of watching movies in the best theaters, which now includes 5.1-channel surround sound. Meanwhile, for many years, audiophiles were sticking to stereo. Many, especially the purists, argued that more than two channels had been tried in the quadraphonic debacle of the 1970s and had failed because high-quality music reproduction does not require multichannel playback.

Now the gap between videophiles and audiophiles is closing, and if the truth be told, it is because the videophiles were right. Surround sound does indeed augment the playback of music as well as movie soundtracks. The problem is, which way should audiophiles turn? If we stick with stereo, we miss the excitement of surround sound, and if we go with home theater, many of us are afraid that it will be necessary to sacrifice audio integrity. Moreover, the extra cost of adding high-quality 5.1-channel playback can be formidable. It would be terrific if you could buy one affordable playback system that would sound great in both applications — that is, a true home-theater/music system.

Many companies have been working hard to address that market need, and one of them is Acoustic Research. AR was an American pioneer in the early days of stereo, when its designs were considered the alpha and omega of loudspeakers. Veteran audiophiles still speak fondly of the AR-3a and other models. Today, AR is a trademark of Christie Design Corporation (CDC), a subsidiary of Recoton. More important, CDC is headed by speaker designer Cary Christie, who co-founded Infinity Systems with Arnold Nudell back in the early 1970s. Now, under the direction of Christie, AR has moved into the world of home theater, aiming to provide systems that serve the needs of both multichannel music and home theater. Although AR offers a number of mix-and-match speaker combinations, for this report we selected an affordable combo of five Edge satellite speakers ($140 each) and an S 12 HO powered subwoofer ($549).

The Edge speaker is housed in a robust ABS plastic case designed to be weather-resistant and thus also suitable for protected outdoor applications. The metal grille protects a full-range (nominally) 41/4-inch driver with an effective cone diameter of about 3 1/2 inches. In addition, there is a 3/4-inch polycarbonate tweeter as well as a port for the 4 1/4-inch driver. The satellite's power-handling capability is stated as 150 watts and its sensitivity as 91 dB sound-pressure level (SPL) with a 1-watt input measured at a distance of 1 meter. Frequency response is rated as 75 Hz to 20 kHz ±3 dB. The crossover frequency is said to be about 3.5 kHz.

The cabinet measures 9 5/8 inches high, 6 3/4 inches wide, and 6 3/4 inches deep and is magnetically shielded for placement next to a TV. Around back there are two binding posts for connecting the speaker leads. AR provides mounting arms that attach to the rear of each cabinet with a ball-and-socket swivel. Both long and short arms are supplied, as is a mounting base. Using the ball and socket, and either the long or short arm, the speaker can be placed horizontally or vertically and aimed in any direction. The cabinet's near-trapezoidal shape gives you extra leeway in finding exactly the right angle. The AR logo plate, by the way, can be turned to accommodate horizontal or vertical orientation. The Edge speaker is available in white or black.

The S 12 HO subwoofer is housed in a cube that measures approximately 16 inches on each side. This roomy cabinet accommodates a 12-inch driver with an effective cone diameter of about 9 1/2 inches and a rated impedance of 8 ohms. The subwoofer's bandwidth is given as 20 to 200 Hz. The cabinet also houses its power amplifier, rated at 140 watts. Each of the thick sides is wooden (no grille cloth for the cat to sharpen his claws on). The woofer is mounted on a false bottom and fires directly downward, along with its port. The cabinet's design raises the false bottom above the structural bottom, allowing sound to emerge...
The holidays have a special way of bringing families together — and so does Mitsubishi. Gather the family around a Mitsubishi Home Theater system to experience the sights and sounds of classic holiday programs and football games. Wrap up a Mitsubishi "Theater in a Box", a DVD player or VCR for special gifts that the entire family can enjoy. And while you're making that list and checking it twice, be sure to ask your Mitsubishi dealer about special financing offers.

It's a wonderful life with Mitsubishi.
USER'S REPORT

through front and rear slots. This is a nice design that helps protect the woofer from accidental damage. The cabinet is available only in a black ash woodgrain vinyl finish.

In contrast to the serene simplicity of the satellite speaker's rear panel, the powered subwoofer bristles with connectors and controls. In particular, there are four RCA jacks; two are for line-level inputs from the system power amplifier or receiver, and two are line-level outputs. One of the input jacks is designated mono, for use when the S 12 HO is connected only to a system's mono subwoofer output. There are also two terminal strips, each with four push terminals; these provide an alternate way to deliver speaker-level signals to the subwoofer. One terminal strip accepts left and right signals from the amp/receiver's front speaker outputs, while the other loops signals back to the front speakers.

There are two potentiometers. One adjusts the subwoofer output level, and the other selects the low-pass cutoff, at any point between 50 and 200 Hz. A rocker switch can be used to select 0-degree or 180-degree phase relative to the satellite channels. Another rocker selects power-off or auto-power; with the latter selected, the subwoofer's amplifier remains in standby mode if no audio signal is detected. A plastic spacer prevents inquisitive fingers from touching the potentially hot heat-sink area over the power-output transistors.

To audition this AR system, I connected a Sony DVP-S7000 CD/DVD player to a Denon AVR-3200 Dolby Digital receiver rated to deliver 85 watts (into 8-ohm loads) to each of its five channels. Audio connections were made with a Toslink optical cable and video connections with an S-video cable. My listening room has more wires than Ma Bell, so it was easy to connect the five satellite-speaker cables to the Denon receiver's main output terminals, each leading to an appropriate location around the room. Finally, I connected the receiver's line-level subwoofer output to the S 12 HO via an RCA cable.

I placed the AR speakers on stands that elevated them about 3 feet off the floor, placing them at ear level when I'm seated in my comfy chair. My listening room measures 15 x 23 feet, with a cathedral ceiling that rises to 20 feet. Experience has shown that the traditional home-theater speaker geometry works well, with the center speaker atop the TV set, the front satellites placed on either side toward the front corners of the room, and the surround satellites placed along the side walls near the back of the room. Generally, I've found that it's best to place a subwoofer along the front wall.

Of course, the acoustical radiation patterns of all speakers are different, so I spent some time moving the speaker stands about, aiming the Edge satellites, and nudging the subwoofer until I found locations that seemed to satisfy the zen of my particular room. I also spent some time adjusting the subwoofer's level and cutoff frequency, using both pink noise with a real-time analyzer and my own ears to make the adjustments. Installation chores completed, I settled in for some critical listening to both movie soundtracks and music. I started with movies, auditioning such well-recorded DVDs as Twister and Jumanji. I was immediately pleased with the intelligibility of the dialogue. Somewhat surprisingly, the seemingly simple task of reproducing speech can be challenging to a speaker, but the Edge speakers did a good job of delivering clarity. I was also happy with the system's ability to convey good, dynamic theater music and sound effects. The frequency response was reasonably flat, with no overt problems. Moreover, I was happy with the low-frequency-effects channel. In Twister's tornado scenes, for example, I could shake my room with reasonably loud bass (though an a second S 12 HO would have been nice). Finally, the surround-sound imaging was quite good, providing a realistic sense of envelopment with good pan ning around the circle, free of obvious pinpoint's of sound.

To judge the system's musical abilities, I auditioned a number of CD tracks, including the Jennifer Warnes tune "Bird on a Wire" from her Famous Blue Overcoat album. This superb recording by engineer George Massenburg is an acid test for playback systems. As I expected, the Edge speakers fared less well in this demanding application. I felt that the high-frequency response was slightly brittle, the sound quality a little aggressive around 8 kHz. In addition, there seemed to be a slight deficiency in the lower-midrange and upper-bass regions, as if the crossover between the satellites and the subwoofer was not quite right. I worked with the sub's level and cutoff adjustments, and I moved it around, but I never entirely solved the problem. Perhaps if I had been able to vary the slope of the sub's 12-dB-per-octave crossover, I could've gotten it right.

Also, although it was quite musical, the subwoofer sounded somewhat boomy when stressed with complex low-frequency material, and it lacked the tight punch of truly excellent low-end response. On the other hand, I must confess that I was surprised at the peppy musical prowess of this moderately priced system. It was definitely competitive with similarly priced, music-only loudspeaker pairs or three-piece systems. With music, the AR the system played loud and without undue strain or resonances. A minor lapse: the sub's automatic turn-on feature did not always work when I turned on the receiver and played music at low listening levels.

It should not be surprising that I rate the AR Edge/S 12 HO system very good for movie playback and merely good for music playback. It is a simple fact that high-quality, music-only recordings are more demanding than movie soundtracks, and they often pose problems for even the best loudspeakers. On the other hand, although music is an important component of movie-viewing, slight sonic deficiencies do not particularly interfere with overall enjoyment of the movie experience. AR's Edge satellite speakers and S 12 HO subwoofer demonstrate that a single sound system can provide a good home-theater experience and reasonably satisfactory music playback. Depending on which application is more important to you, and whether you have the extra budget to pursue high-quality music playback, systems like this one may well serve both of your listening needs.

Acoustic Research, Dept. SR.
527 Stone Rd., Benicia, CA 94510; telephone, 707-748-5930
Before high-performance home theater can fit in your life, it has to fit in your home.

Some movie enthusiasts consider a towering rack of audio/video components the epitome of home decor.

You, on the other hand, may prefer to experience the awesome sensation of Dolby Pro Logic surround sound from a system that blends unobtrusively with the curios on your bookshelf.

In which case you will appreciate the Yamaha AV-1 CinemaStation. Its audio/video center complements your TV and VCR with a full-featured CD player and FM/AM tuner. Plus the uncanny ability to outperform other compact home theater systems that cost significantly more.

All in a case no larger than a hardcover history of Hollywood.

That's because the real muscle behind CinemaStation resides in the small, deep-bass subwoofer that sits inconspicuously under a table or behind your couch.

Two hundred watts of amplification drive the subwoofer and five satellite speakers. Dolby Pro Logic positions dialogue and effects naturally around your room—while exclusive Yamaha Cinema DSP (Digital Sound Field Processing) recreates the sensation of a spacious theater. Plus, six different Yamaha Hi-Fi DSP programs can give your room the acoustics of actual performance venues when you listen to your favorite music.

Yet for all its advanced capabilities, CinemaStation is easy to set up, and simple to control with on-screen menus and a remote that glows in the dark.

Call 1-800-4YAMAHA for the dealer nearest you, and try CinemaStation on for size.

No matter how large your expectations, you'll find it's a perfect fit.
The Most Critically Of All-Time? Don't

"Ensemble may be "the best value in the world." Audio

"...stereo imaging is phenomenally sharp...the dynamics are stunning...some of the speakers I'm comparing it to cost $1,900 to $2,800." High Performance Review

"Ensemble makes a great argument for mail-order everything." The Village Voice

Our best subwoofer/satellite speaker system. It uses ultrasonic (4.5") dual subwoofers and two-way satellites. White or charcoal. Factory-Direct Price: $599.99

"The Ensemble II, like its companions in the Cambridge SoundWorks lineup, performs so far beyond its price and size class that it can be compared only with much larger speakers at substantially higher prices...it represents an outstanding value." Stereo Review

"The only speakers you'll ever need...equally at home as high-end PC speakers or as room-filling stereo speakers." PC Magazine

"I haven't heard better speakers at this price." PC World

"In terms of price for performance, it's in a class by itself." Macworld

"It puts out a natural, balanced sound that compares well not just with other computer speakers, but with any speakers." Computer Shopper

"All in all, this is a lot of speaker for $1,500 a pair—which is precisely the point of CSW's factory-direct strategy. As soon as I fired the Towers up, it was evident that they threw a big image. The Towers' soundstage was noticeably deep and solid on most material." Audio

"Our new three-way, dual-woofer speaker system. It's dynamic presence, natural tonal balance and the "all-around" sound of its bi-polar design result in sound that is nothing short of incredible. Real-wood black ash or walnut veneers. Factory-Direct Price: $1,499.99

"Our new multimedia amplified speaker system. It has more power, more output and better bass than any other multimedia speaker system we know of. Computer beige or charcoal. Factory-Direct Price: $349.99
Acclaimed Speakers Take Our Word For It.

"The Powered Subwoofer's performance was first rate...."  Home Theater

"...a winner...sonically the Powered Subwoofer is a knockout. Bravo."  Sound & Image

POWERED SUBWOOFER Reproduces accurate bass to below 30 Hz. You'll hear soundtracks the way they were meant to be heard...better than most theaters!  Factory Direct Price: $699.99 ▲

"We've heard plenty of far more expensive home theater speakers that couldn't hold a candle to this rig. The Ensemble IV sounds so much better than the other sub/sat systems we've tried - at half the price of many - that it's a hands-down Hot Ticket."

"This system is one of the top bargains in today's market. Hearing is believing!"

"The Powered SoundWorks The Surround II speaker sounded absolutely great...the ambience of Pro Logic really snaps in...their dispersion pattern lets them blend easily with a wider variety of front speakers. These will stay on my surround speaker shelves for a long time."

The Cambridge SoundWorks The Surround II was recently rated number one by a leading consumer publication.

THE SURROUND II is our most affordable dipole radiator surround speaker.  White or charcoal.  Factory Direct Price: $249.99 pr.

ENSEMBLE IV HT This home theater package is the most compact, affordable subwoofer/satellite speaker system ever designed by Henry Kloss.  Factory Direct Price: $399.99 ▲

CIRCLE NO. 6 ON READER SERVICE CARD
Little Speakers with Big Possibilities

Small speakers are so familiar an element of modern stereo and home-theater sound, it's easy to forget that it was not always so. Back in hi-fi's Pleistocene period — that is, before the invention of the acoustic-suspension speaker in the 1950s and the high-wattage solid-state power amp in the 1960s — real hi-fi buffs sacrificed their domestic arrangements on the altar of enormous, horn-loaded cabinets. These were designed to squeeze some semblance of low-frequency response and dynamic realism from the limited amplifiers of the day.

Things are different now — very different. Amps and receivers with 50 to 100 watts per channel are ubiquitous and almost universally affordable. An important consequence is that high speaker sensitivity — the ability to produce significant volume from relatively few watts of input — is not the important factor it once was. Speakers significantly less than 2 feet tall today routinely produce loud, deep bass, with a freedom from serious distortion that hi-fi fans a generation earlier could only dream of getting from their refrigerator-size speaker enclosures.

All else being equal, smaller speakers are almost always preferred over larger ones, especially by household members whose criteria do not, shall we say, begin and end with sonic performance. It is not surprising, then, that speakers measuring a foot or less in their largest dimension are hugely popular — nor that manufacturers today produce a veritable blizzard of such diminutive designs, ranging from blister-packed discount-store fodder to high-end models costing thousands of dollars a pair.

In between are scores of excellent-sounding, affordably priced, compact loudspeakers. Some are intended primarily as left/right speakers in a classic small-room stereo system, with or without a supporting subwoofer. But most are designed to function equally well in a variety of applications. The placement flexibility of compact speakers suits a home theater's front-stage...
The Solid HCW1 from Rock Solid Sounds ($200 each) is supplied with two different stands (only one is shown) to optimize it for horizontal or vertical mounting. Frequency response is rated as 70 Hz to 20 kHz ±3 dB.
array (left-center-right) to a T. But most small speakers are adaptable for surround-channel use as well, and some even have wall-mounting hardware built in or packaged with them.

It's difficult to make sweeping statements about small speakers as a genre, but there are a few attributes that the better models share. For example, small speakers tend to present narrow faces to the world, with their drivers closely spaced, an acoustical prescription for excellent stereo imaging and depth, in part because it reduces the unwanted reflections from the baffle (cabinet face) to which many large speakers are prone. That's one reason small speakers have a reputation for "detailed," "transparent," and "defined" sound from instruments and voices: much of the credit must go to their slim physiques.

Another, somewhat subtler advantage of smaller speakers is that, being less intrusive in a room and (usually) physically more attractive and easier to handle, they stand a far better chance than large speakers of being set up in acoustically favorable locations — half the battle in any hi-fi installation.

Of course, smallness carries a few restrictions, too. With their 3- to 6-inch woofers and half-gallon enclosures, mini-speakers aren't destined to stir up a great deal of activity in the genuinely deep-bass region — below about 50 Hz, say. And, largely thanks to the same factors, most minis cannot play as loud as larger speakers, or produce quite the same dynamic impact. Nonetheless, most listeners are astonished at just how much solid, musical bass can emanate from good small speakers, and by just how full and dynamic they can sound, even at volumes approaching realistic levels. And since small speakers are most often used in small rooms, their ability to play loud is not an important factor.

There are so many good small speakers today that we have to divide them into subcategories just to get a handle on the profusion. We've made some rough and ready distinctions below, but most or all of the speakers mentioned — and at least as many equally fine ones we lack the space to highlight — could arguably fall into two or more of our categories. Whether you need small speakers for a simple two-channel system, a surround-sound suite for your home theater, or even a pair or two to use outdoors, there are plenty of pint-sized models to choose from. And you're sure to encounter some surprisingly high sonic performance in the course of auditioning candidates.

### The Bantam Audiophiles

Probably the most popular category of small speaker is the mini-monitor, designed primarily to deliver fine music reproduction in smaller rooms or in a "near-field" layout where the listener is seated within a yard or two of each speaker. In fact, almost every model in this category can trace its heritage to some degree to a near-field-monitor speaker design originally promulgated by the BBC some twenty-five years ago.

While not too surprisingly, then, British and Canadian manufacturers tend to be good at this sort of speaker. Celestion's Impact 10 ($199 a pair) is a classic example. Barely a foot tall, it updates the typical two-way configuration of a 5-inch woofer and 1-inch tweeter with a neodymium magnet in the tweeter and an unusual contoured baffle that is said to minimize reflections for increased imaging detail. The Diamond 7.2 ($350 a pair) comes from Wharfedale, another of Britain's oldest loudspeaker brands. Again a two-way design with a 5-inch woofer and a 1-inch tweeter, the vented Wharfedale speaker has an extremely braced, nonresonant cabinet that is made from a composite of crushed rock and copolymer.

Also from Great Britain comes KEF's new Q15 ($350 a pair), the smallest speaker featuring that firm's Uni-Q driver layout, which integrates tweeter and woofer into a single, concentric assembly. The Uni-Q arrangement is said to yield broad dispersion in all directions for smooth off-axis response — a textbook prescription for even tonal balance throughout the room. The design's symmetry also
permits the 12 x 8 x 10-inch Q15 to be placed either horizontally or vertically without affecting its sound, unlike conventionally arrayed multidriver speakers. KEF also makes a more conventional two-way minispeaker, the Coda 7 ($125 a pair).

Canadian speaker makers are, if anything, even more dedicated to the mini-monitor. PSB's Alpha Mite ($169 a pair) is a slightly downsized version of its original Alpha, widely regarded for several years now as a speaker that offers a lot of musical sound for the money. The Alpha Mini ($199 a pair) uses a 5 1/4-inch woofer instead of the Alpha's 6 1/2-inch, but it has the same 1/2-inch, ferrofluid-cooled tweeter; the cabinet is barely 10 inches tall. Paradigm's Titan ($219 a pair) is a similar, slightly larger speaker (6 1/2-inch woofer, 3/4-inch tweeter) from another north-of-the-border manufacturer with an equally well-established reputation for fine sonics. The Titan has recently been joined by a really pint-sized speaker, the roughly 8 x 8 x 6-inch Micro ($149 a pair), which sounds similar but has a less extended response.

American firms have not been slow to grasp the mini-monitor concept. The SuperOne from NHT ($350 a pair) is a widely praised example. It has a very conventional, two-way acoustic-suspension design, with a 6 1/2-inch woofer and a 1-inch tweeter, but its meticulously balanced response just happens to yield unconventionally good sound. NHT recently introduced the SuperOne-Xu, for which it claims identical performance, in a modernistic thermoplastic enclosure with an integral mounting base and wall bracket ($375 a pair).

The Pinnacle Classic Gold Mini-Monitor ($375 a pair) has a 1-inch ferrofluid-cooled tweeter and a 5 1/4-inch woofer in a vented enclosure with an unusual angled duct and elliptical port, which Pinnacle dubs the Diaduct. Wall-mounting hardware is included. Advent's affordable Ruby ($250 a pair) has a larger, 6 1/2-inch woofer for enhanced bass extension. That, however, edges it over the 1-foot mark to a height of 15 inches.

**Stylish Sound**

While many of those drawn to smaller speakers are attracted by their performance-to-cost ratio, others find another facet of smallness equally important. Diminutive transducers lend themselves to innovative, visually unobtrusive, or simply interesting design. But there's no rule that says an adaptable, unusual-looking small speaker cannot also deliver excellent sound quality.

Definitive Technology's ProMonitor 100 ($350 a pair) is a noteworthy example. This dramatically formed minispeaker has an enclosure constructed of PolyStone, a mineral-filled polymer that permits its unusual, compound-curve shape. (The geometry is said to have significant antiresonance benefits as well.) The integral stand converts to a wall-mounting bracket, and there's also a keyhole mount on the cabinet itself. The ProMonitor 100 has a 5 1/4-inch woofer and a 1-inch aluminum-dome tweeter. It's available in white or black. Definitive also offers two or four ProMonitor 100s in home-theater packages with a center speaker and a subwoofer.

The Polk Audio M5 ($399 a pair) is characterized as "the go anywhere, do anything" loudspeaker. Designed for maximum placement flexibility, the unusual V-shaped enclosure is angled to permit corner, tabletop, shelf-top, or wall mounting with equal ease, all either vertically or horizontally. The M5's attractive form-follows-function cabinet design manages to accommodate a large 6 1/2-inch woofers and 1-inch tweeter. There's even an all-weather version, the AW/M5 ($499 a pair).

Speaker giant Bose bills its Model 100 ($199 a pair) as a "high-fidelity speaker you decorate with, instead of around." And despite a touch of the old hyperbole there, Bose's marketing guys may have a point. The understated, elegantly textured Model 100 is a real looker. Inside is a single 4 1/2-inch Stardriver transducer, the product of several years of recent Bose research. This full-range driver doesn't need a crossover, yet it is said to yield smooth, wide-band sound suitable for stereo or

---

**Definitive Technology's ProMonitor 100 ($350 a pair), shown here with the ProSub 100 ($449), is available finished in black or white and measures 10 x 6 x 6 inches.**

**PSB's Alpha Mini ($199 a pair) has a rated response of 58 Hz to 21 kHz ±3 dB. The low end of the Alpha Mite ($169 a pair) is 72 Hz.**

**Paradigm's Titan ($219 a pair) has a rated sensitivity of 90 dB and a frequency response of 75 Hz to 20 kHz ±2 dB.**

**The Boston Acoustics Micro90x ($400 a pair) has a frequency-response rating of 120 Hz to 20 kHz ±3 dB and a sensitivity of 89 dB.**

**The Celestion MP-1 multipurpose speaker ($299 a pair) can be mounted on a shelf, on a stand, or on a wall.**
The Wharfedale Diamond 7.2 ($350 a pair) is a two-way front-ported bookshelf speaker with a power-handling spec of 100 watts.

The Energy Take 2 ($180 a pair) has a sensitivity rating of 88 dB and a power-handling capability of 15 to 100 watts.

The KEF Q 5 ($350 a pair) can be mounted vertically or horizontally and is available finished in black, mahogany, or "video gray."

The NHT SuperOne-Xu ($375 a pair) consists of a 6½-inch woofer and a 1-inch tweeter housed in a molded thermoplastic cabinet.

The Celestion MP-1 ($299 a pair), with a 4½-inch woofer and a 1-inch tweeter, is designed as a multipurpose speaker, hence the model number. This understated mini has smoothly rounded edges and an elegant matte finish, and its ingeniously adaptable stand bracket encourages flexible placement. Also qualifying for the high-style brigade is The Edge from Acoustic Research ($280 a pair), with a 5¼-inch woofer and a 1-inch tweeter. The vented, molded cabinet incorporates a heavily sculpted, antidiffraction baffle surface. An even smaller version, The Edge Sequel ($149 a pair), employs a 4½-inch woofer in a similar cabinet just under 8 inches on its longest side.

Like nearly all of the "stylish" small speakers mentioned, the Celestion and AR models that are described above are available in various sub/sat and home-theater groupings, packaged with a companion powered subwoofer or with matched center- or surround-channel speakers. And all of these speakers are magnetically shielded.

Home Theater Hideaways

Home theater and the small speaker are inextricably intertwined. Virtually all minispeaker makers offer one-carton systems incorporating multiples of one or more of their Lilliputian speakers for home-theater use. A great many of these packages are based on magnetically shielded minis that are also available separately, allowing you to assemble your home-cinema system as you go.

The DCM CX-007 acoustic-suspension speaker ($75 each) has a sensitivity rating of 88 dB. Available in either black or white, it features self-resetting protection circuitry.

The DCM CX-007 acoustic-suspension speaker ($75 each) has a sensitivity rating of 88 dB. Available in either black or white, it features self-resetting protection circuitry.

The Rock Solid Sounds, a division of the British maker B&W Loudspeakers, has produced a series of uniquely styled, high-performance minispeakers over the years. The Solid HCM1 ($200 each) arrives in a swoopy black or white molded enclosure that was engineered to minimize coloration-inducing internal resonances from its 5-inch woofer and 1-inch tweeter. It comes with wall-mounting hardware and incorporates a nifty tabletop/shelf-top stand that can rotate 180 degrees so that the HCM1 can function equally well horizontally as a center-channel speaker on top of a TV.

Atlantic Technology is one manufacturer that owes its very existence to the audio/video revolution: all of its products are home-theater-oriented. The 251.1LR ($399 a pair) is a veri-
cual two-way speaker with dual 4-inch woofers flanking a 3/4-inch tweeter; this narrow-baffle arrangement, called a D'Appolito array, is said to enhance imaging by reducing "smearing." Infinity's new L-MPS "multipurpose satellite" speaker ($229 a pair) has a similar layout, with dual 3½-inch drivers flanking a 1/2-inch dome tweeter. An acoustic lens is said to promote wide, smooth horizontal dispersion for home-theater coverage. The Infinity design also makes for a very narrow package: the L-MPS is under 5 inches wide and about 10½ inches tall.

**Audio Al Fresco**

Around the world, Americans are famous (or notorious, depending on your viewpoint) for carrying outdoors activities that most cultures consider strictly indoor stuff. Music listening is one example, and speaker manufacturers have obliged with a new breed of "indoor/outdoor" models engineered to survive the rigors of life al fresco, whether that means on a suburban patio or in a penthouse roof garden. While such outdoorsy speakers include models that are camouflaged as rocks or potted plants, most all-weather designs are more conventional minispeakers intended for relatively sheltered locations, such as soffit-mounted under the eaves of a house or out on a covered balcony or a screened porch.

The Outdoor speaker from Cambridge SoundWorks ($299 a pair) is a prime example of the breed, with components engineered for the elements: a sealed, mineral-filled polypropylene enclosure, an electroplated steel grille, and corrosion-resistant stainless-steel hardware and gold-plated connection terminals. The Outdoor includes both a threaded 3/4-inch socket mount and a keyhole slot, and it is engineered for higher than usual sensitivity to enable adequate sound levels in unenclosed spaces. The Nomad Six outdoor speaker from Parasound ($360 a pair) also employs stainless-steel hardware and gold-plated connectors; its enclosure is made of acoustically inert ABS and integrates a multidirectional mounting bracket. A ferrofluid-cooled 1-inch tweeter is paired with a weather-resistant, 5½-inch polycarbonate woofer, and an integral bass-boost contour enhances perceived bass in open-air acoustics, which de-emphasize the bottom octaves.

AudioSource’s indoor/outdoor design is the Project One ($200 a pair), a stylish minispeaker with a 4-inch woofer and a 3½-inch dome tweeter in a weather-resistant polycarbonate enclosure just 9 inches tall. A continuously adjustable gimbal-mount bracket is included. The Voyager outdoor speaker from Boston Acoustics ($400 a pair) features an indestructible Lexan cabinet that helps make it fully immersible and even freezable. It combines ruggedized versions of the company’s highly evolved 1-inch soft-dome tweeter and 5½-inch co-polymer woofer, with stainless-steel hardware and a mounting bracket included. Bose offers an all-weather option in its Model 151 ($279 a pair), an outdoor speaker that puts the firm’s 4½-inch Kevlar-cone full-range driver (derived from the famous Bose 901) into a 9 x 9 x 6-inch enclosure designed to resist moisture, heat, salt, and anything else life on land or sea might throw its way. Stainless-steel hardware and an aluminum grille are included.

It’s clear that compact speakers are no longer exclusively for cramped quarters. Fine-sounding models are available in a wide variety of styles — guaranteeing that you’ll be able to find one that will look right at home where you live.
Ace Ventura, Aladdin, Night of the Living Dead. This is serious stuff.

THE BOSTON CR HOME THEATER PACKAGE
A SERIOUS SYSTEM FOR $999.

Our $999 CR Home Theater Package includes: a pair of CR7 mains, a CR1 center channel speaker, CR6 surrounds with brackets and a CR400 powered subwoofer.

If you take your movies seriously, this is for you: the Compact Reference Home Theater Package. It features our much-touted CR7 main speakers. They impressed Audio magazine enough to call them “Great Performers.” Plus, they said, “[The CR7’s] sound is smooth and well balanced, and their bass competes with that of larger speakers.” In the center: the CR1 center channel. Its tweeter is identical to the CR7’s, and both speakers’ bass units are tonally matched. So left/right pans are seamless, tonal balance is smooth and dispersion is broad. For surrounds, choose between our compact, flexible CR6 monitor with swivel-mount bracket or our award-winning CRX diffuse-field surround. Finally, there’s the newest CR family addition: the CR400 powered subwoofer. It’s a serious subwoofer in a compact package. The CR400’s 75-watt amp and 8-inch DCD bass unit produce remarkable bass effects down to 35Hz (-3dB). And it offers volume control, a variable crossover and a polarity switch—features you’d only expect to find in larger, more expensive subs. Test-listen the CR Home Theater Package at your local Boston dealer. You won’t hear anything else like it. Seriously.

IF YOU ARE STILL THINKING about putting together a home-theater system, you're probably eyeing one of those new DVD players. And for good reason. Though laserdiscs still deliver fine picture and sound, even an average DVD can look as good as the best laserdisc, and the best DVDs are noticeably sharper. Movies on DVD are also offered at much lower prices than the laserdisc versions. And remember that, like combi-players, DVD players play audio CDs, too. So if you're in the market for a new CD player, for a little more money you can have state-of-the-art video as well.

The full potential of DVD has yet to be realized, but some player features are already more or less standard. Most movie titles offer a clickable menu from which you can select different soundtrack languages and subtitles, various special features, and sometimes different versions of the film. Some DVDs include film-star biographies, production notes, trailers, documentaries, and more. Some even offer alternate soundtracks with commentary tied to the image on screen, or a track that contains music only.

Though much of the focus has been on DVD's outstanding video characteristics, its movie-theater-quality sound is not to be underestimated. Only a small percentage of laserdiscs carry Dolby Digital soundtracks, but all DVDs offer it, often with 5.1 discrete channels (left and right front, center, and left and right surround, plus low-frequency-effects/subwoofer). The most important benefit, as I hear it, is greater clarity of the dialogue in the center channel, which no longer bleeds left, right, or rear the way it often does with analog Dolby Surround. Surround effects have better focus, too, and the overall sound field is cleaner and more natural. Far from noticing "more surround" in the DVDs auditioned for this article, I noticed more centered sounds in front.
though when an effect was intended to be heard from the rear it was more precisely located. And Dolby Digital’s discrete left and right surround channels yielded a sound field more in sync with what was happening on the screen. (Note that some DVDs sold in this country use Dolby Digital only for the primary — English — soundtrack, with any alternate soundtracks in other languages encoded in Dolby Surround, from which Dolby Pro Logic decoders can extract front left, center, and right channels and a single surround channel.)

If you’ve already made an investment in a DVD player, you know that there aren’t yet as many titles as on laserdisc. But there are already more excellent DVDs than there were laserdiscs early in that format’s history. There also aren’t many music titles yet, but I hope studios will consider releasing more. DVD is tailor-made for opera and ballet. In the meantime, here are ten motion-picture-related DVDs that should hold your interest and enable you to get the very best performance out of your system.

IN THE LINE OF FIRE
1993: color; one-sided: English, Dolby Digital 5.1 channels; French, Dolby Surround; Spanish or Korean subtitles; closed-captioned; letterbox (2.35:1 aspect ratio). 127 min. Rated R.

A suspenseful cat-and-mouse thriller starring Clint Eastwood as a Secret Service agent and John Malkovich as a psychotic assassin determined to kill the President. It was shot in 2.35:1 Panavision, the aspect ratio in which it is presented here. This ratio has caused a lot of problems for home video in the past. When a Panavision film is not presented as seen in the theater, so much of the picture is edited out that the result is not artistically valid. But when it’s letterboxed to preserve the full width, there aren’t enough scan lines for adequate detail, not even on laserdisc. DVD’s increased horizontal resolution ameliorates the situation, for this movie is incredibly sharp and focused. There are a lot of long shots, and they struck me as the sharpest I’ve seen on any optically read disc.

Seeing this DVD is like observing a road sign on the way to digital TV. The Dolby Digital soundtrack is impressive, but it’s curious that this DVD’s default setting is Dolby Surround rather than Dolby Digital, which you have to select in the menu as an option. (The releases from Columbia TriStar are the only ones I’ve seen that do this. All others have had Dolby Digital only for the English soundtrack, and it’s automatically remixed to Dolby Surround if the regular stereo output jacks are used.) In sum, *In the Line of Fire* is a DVD of demonstration caliber.

THE LOST WORLD
1997: color; one-sided: English, Dolby Digital 2.1 stereo soundtrack with music and effects; alternate soundtrack with music only: extensive supplemental material including original trailer, excerpts from earlier Willis O’Brien films, and a large still-frame archive. Approximately 65 min (feature only). Not rated.

This DVD has been done as a two-sided rather than dual-layer disc, so it must be turned over to view the whole movie. But it boasts a picture that is so filmlike in overall tone and detail that it must stand as one of the best film transfers in the optical video catalog, one that makes even the excellent laserdisc look as if it had been shot through a scrim. Walls, streets, wooden benches, even smoke all have apparent texture. Also note that the credits’ white on black letters are all rock solid, with no distracting bloom or blur.

This DVD is also laden with special features. Chief among these, besides production notes and a trailer, is a documentary on the real Irish patriot, Michael Collins. Produced for British TV’s *South Bank Show*, it features Neil Jordan, the director of the movie. These 51 minutes are quite a bonus, as the show is one of the best “making of” features I’ve seen. Jordan explains why it was necessary to alter some of his story’s facts in order to make a successful movie, and he sheds light on the process of translating a real life into a film biography. The documentary is available only on the DVD, not the laserdisc, which costs $15 more. That makes the DVD version quite a bargain.

THE PLAYER
1992: color, two-sided: English, Dolby Digital 5.1 channels; French, Dolby Surround; alternate soundtrack with commentary by directors Robert Altman and screenwriter Michael Tolkin;
Robert Altman’s clever allegorical satire of Hollywood is presented full length on Side 1 of this feature-laden DVD, which shows off many of the possibilities of the format in presenting “more than just the movie!” Besides the remixed Dolby Digital soundtrack, Side 1 also contains an alternate audio track in which Altman and screenwriter Michael Tolkin discuss the film and the novel on which it was based. And there’s a special menu that features the more than fifty name actors who grace this Tinseltown movie. Click on an image in the menu, and almost instantly you’ll be transported to the scene in the film where the actor appears; click on a different line of the menu, and you’ll get a list of the other films in which he or she has starred. When you’re finally ready to move on to Side 2, you’ll find that it contains a 17-minute documentary discussion with Altman plus five deleted scenes and a theatrical trailer. That’s a whopping amount of information for a disc priced at just $24.50. The Player is one of the most outrageous bargains in the infant DVD catalog.

Poltergeist
1982; color, two-sided; English, Dolby Digital 5.1 channels; French and Spanish, Dolby Surround; English, French, or Spanish subtitles; closed-captioned: trailer; letterbox (2.35:1 aspect ratio) or pan-and-scan. 114 min. Rated PG. MGM/UA 906039 $24.95.

Both a cult and a mainstream favorite, this story of a housing-development family that’s terrorized by demons has been made available three times on laserdisc, but none of those versions can hold a candle to this clear, sharp DVD. Some of the film takes place in darkness or shadow, and now you can easily see details that were quite obscure in earlier transfers. Overall, this film and In the Line of Fire make it clear that DVD and the 2.35:1 aspect ratio are a match made in heaven. Laserdisc fans have always rightly demanded the anamorphic letterbox for artistic reasons, but that reduces the number of scan lines so much that the crispness of the image suffers. But thanks to DVD’s greater horizontal resolution, movie fans can now have their cake and eat it, too. Take the opening scene here, where four kids sitting on a curb pursue a man on his bike with remote-controlled toy cars. The anamorphic frame is necessary to capture all four youngsters (the pan-and-scan version cuts it down to three), but in past letterbox transfers they seemed to be merely a group of kids. The DVD is so sharp that each kid emerges as a separate personality within the group. Of course, all of the neat monster visual effects are sharp as a tack, too, but it is the human elements that keep this movie from being just another genre flick. We get to know and care about the characters, and when they are threatened, we feel it deeply.

The remixed sound is cleaner than ever. All of the special surround effects seem to be coming from the correct places, while dialogue emerges up front with crystalline clarity. This is one of those double-sided DVDs that has the letterbox version on one side, the pan-and-scan on the other, but the 2.35:1 image is so good that it’s unlikely you’ll ever watch the version “formatted to fit your TV” at all.

The Road Warrior
1981; color, two-sided; English, Dolby Digital 5.1 channels; French, Dolby Surround; English, French, or Spanish subtitles; closed-captioned: trailer; letterbox (2.35:1 aspect ratio) and pan-and-scan. 95 min. Rated R. WARNER HOME VIDEO 11181 $24.95.

Arguably the best of the Mad Max series, this action-adventure yarn set in an apocalyptic retrograde S&M world, where possession of gasoline gives power, is loaded with high-energy sights and sounds. The camera shots of all the high-speed chase stunts are exemplary, and Brian May’s score is melded to the motorized sound effects as if the Foley and music tracks were one. The DVD format takes to the 2.35:1 aspect ratio like a duck to water, crisply delineating every scene, and the Dolby Digital soundtrack provides clear-cut front-to-back separation.

The disc is demo caliber. The movie opens with a 1.33:1 image taking the center of the Panavision space for scenes from the first Mad Max movie, with a mono soundtrack of narration and music that sounds as if it were recorded in the 1950s. But the black-and-white images are razor-sharp, even sharper than in the average full-frame picture. As the section ends, the surround and low-frequency-effects channels kick in with the sound of Max’s car going full throttle, and the screen opens to 2.35:1. It’s a pretty heady experience, and from there on the movie never lets up till the closing credits. Take the R rating seriously if you have kids, but have a good time.

Seven
1995; color, two-sided; English, Dolby Digital 5.1 channels; French, Dolby Surround; English, French, or Spanish subtitles; closed-captioned: letterbox (2.35:1 aspect ratio). 127 min. Rated R. NEW LINE VIDEO N4381 $24.95.

Picky fans are liable to fault this choice, for it splits a 127-minute movie between two sides. And it is true that DVD promised something laserdisc could not deliver: no side breaks except on movies long enough to have interruptions that would provide natural stopping points. But the single-side, dual-layer approach, allowing more than 133 minutes per side, seems hard to come by, and the producers obviously felt that the complex images of Seven needed more room for the MPEG video-compression scheme to work correctly. I’m willing to accept that decision because this is one of the best-looking DVDs of all. Watching it, I was constantly aware of just how much it looks like a film. There’s a total absence of video noise, and details are constantly leaping out. The crinkled glass on office doors seems to have touchable texture, as does Brad Pitt’s beard stubble; headlines on newspapers at a newsstand are legible without strain. The 5.1-channel Dolby Digital sound is used intelligently, and it’s transferred without a hitch, with a good low-frequency-effects channel used sparingly to add welcome low-frequency punch at key points in the story. Extras are unusually skimpy for New Line, just some background biographical information. The movie’s the thing here, but it’s
delivered in such high quality that it holds its own without supplemental material.

**SHORT CINEMA JOURNAL**

*Invention; Mr. Resistor; The Big Story; Some Folks Call It a Sling Blade; Black Rider; Trouble; Michael Apted Interview; Baraka (excerpt); The Unfamiliar Place; Goreville; Henry Rollins — Easter Sunday in NYC; John Lee Hooker — Performance & Interview; Quisling & Tsai; Shape Without Form.*

1997; color & b&w; one-sided. Dolby Digital 5.1 channels with many auxiliary soundtracks and one alternate video track; some letterbox. 137 min. Not rated. POLYGRAM 440-046 565 $29.95.

Probably the most imaginative DVD I've seen, *Short Cinema Journal* presents a number of short subjects of different types, ranging from *Some Folks Call It a Sling Blade* (later reshot and expanded as the opening scene of *Sling Blade*) to a dynomite commercial for GM's electric car. There are quite a few alternate audio tracks, varying aspect ratios, and the only example so far of an alternate video track: in *The Big Story*, a 3-D animation in which all the characters are Kirk Douglas, you can switch to Video 2 and obtain, right in sequence, the animated pencil-sketch study for the finished film.

Far from being a gimmick, however, this compilation presents some really neat little films in excellent video and Dolby Digital audio, which ranges from two to six discrete channels. The Short Cinema Journal Corporation hopes to make its DVD a monthly video "magazine," with the second issue due out by the time you read this. PolyGram will distribute it in stores, but you can also subscribe by mail. Short Cinema Journal plans to package the discs differently from PolyGram, which has opted to use the poorly designed Laserfile slide case, which can scratch discs if handled carelessly.

**SINGIN' IN THE RAIN**

1951; color; one-sided; English, Dolby Digital 5.1 mono/stereo; French and Spanish, 2.1-channel mono; English, French, or Spanish subtitles; closed-captioned. 103 min. Rated G. MGM/UA 900626 $24.95.

There have been at least three laser-disc versions of this classic movie, but none of them is as classy as this DVD. The main thing you'll notice is the outrageous colors, ranging all the way from the hot pinks of the chorus line in "All I Do Is Dream of You" to the screaming bright green of Cyd Charisse's dress against a garish red background in the big "Broadway Melody" production number to the "Beautiful Girls" fashion show, in which elegant models show off clothing using just about every color under the sun. Analog video just can't handle all that with the ease of DVD, which makes it look like it does in the movie theater. As for detail, it seems like you can count every raindrop in the famous title-song sequence.

The English soundtrack is good cleaned-up mono, with some discrete stereo fed to the left/right front and surround speakers in musical numbers. Since MGM recorded its major musicals using many different sound "stems" for different sections of the orchestra, it's possible to do this kind of reconstruction without having it sound artificial. All in all, this DVD is, by itself, reason enough to investigate the medium. I hope MGM is planning on eventually presenting its whole catalog of fabulous musicals in the DVD format. At press time *Brigadoon* was already out, and *Showboat* was promised for Christmas.

**STRAngers ON A TRAIN**

1951; b&w; two-sided; U.S. and British prints; English and French, Dolby Digital 1.1-channel mono; English, French, or Spanish subtitles; closed-captioned. U.S. print, 101 min. not rated. British, 103 min., rated PG. WARNER HOME VIDEO 15324 $24.95.

It is perhaps sufficient to say Alfred Hitchcock's movie of Patricia Highsmith's novel *Strangers on a Train* is one of the best suspense thrillers ever made. Two men meet on a train, and one suggests to the other that they perpetrate murders for each other of people they don't care for. One thinks it a joke, but the other goes through with it, having planned things way ahead. There were two versions of this movie, and for DVD it has received not one but two crackerjack transfers. The version released in the U.K. has extra footage that makes the malevolent character even more so while more clearly revealing his homosexuality. What a dandy idea to present each version complete on a DVD side in beautiful, high-contrast black-and-white. The jacket notes indicate which scenes were expanded so that you can follow the changes, and some brief but informative program notes give more detail. Two movies for $12.50 each is really an extraordinary value for your dollar.

Rad Bennett is editor and publisher of *The Laser Disc Gazette*, a bimonthly newsletter that features reviews of DVDs, laserdiscs, and CDs.
Some notable quotes from Edward M. Long in *Audio*‘s September issue:

“...KEF has gained an enviable reputation for producing excellent loudspeakers.”

“...clear, precise imaging.”

“The RDM one reminds me of the classic BBC LS3/5a, but with deeper bass and higher output.”

“...the KEF RDM ones are an excellent value—and very good looking, too.”

Designed by the same engineers as our legendary Reference Series, the RDM one features KEF’s patented Uni-Q® technology. Uni-Q places the tweeter at the exact acoustic center of the woofer cone to create a single point source for the entire frequency range—the ideal to which all speakers aspire—producing a flawless soundstage over a much wider listening area. Whether on a bookshelf or stand, the RDM one no longer confines you to sitting in a central sweet spot to enjoy exceptional performance. Audition them for yourself by contacting us for the name of the authorized KEF dealer nearest you. Ask for a full reprint of the RDM one review when you call.
Ebenezer Scrooge trundled home, pressing his floor in the elevator car without so much as a good word for his fellow passengers. Nestled in his ear was a miniature radio so that he could catch the...
closing markets. At a mere fraction of an ounce, ATC’s FMSounds radio ($30) did not weigh heavily upon his soul and protected at least one ear from the rabble of humanity. His stocks were as strong as the tiny radio’s reception — and its 14-hour lithium battery. Reaching for the volume switch, he accidentally pressed the scan-tuning button, and the sound of Marley filled his ear. He hastily pressed the button again to tune in another station.

By Rich Warren
As Scrooge approached his condo, the IBM Home Director ($79) brought up the lights in a magical sort of way. Scrooge cackled every time this happened, he was so pleased with how easily he had installed the system. Why, he didn't even need to call IBM's 24-hour support line. And he admired Big Blue for offering free help for only 60 days — a company after his own heart. Scrooge didn't own an IBM PC (he was too cheap even to buy an Aptiva, which comes bundled with a Home Director), so he bought the stand-alone starter kit. After plugging the PC Connection Module into a wall outlet, he ran the supplied cable to his clone PC's serial port and popped in the CD-ROM to load the software. Then he plugged his TV, stereo, coffee pot, and several other small appliances and lamps into special modules — one per device — that were in turn plugged into electrical outlets. (Since the starter kit came with only one lamp and one appliance module, Scrooge begrudgingly paid $15 apiece for extra lamp modules and $17 apiece for extra appliance modules.)

Scrooge relished the thought that he could program his PC to control his lights and appliances automatically or use the supplied wireless remote control to turn them on and off — all without having to run any extra wires. The remote even operated his TV and VCR. And his voice-activation software gave him infinite pleasure. He programmed it to turn on the lights when he said "Bah!" and off when he said "Humbug!"

Preparing to retire for the evening, Scrooge pressed the play button on his CD player, and the voice of Marley wailing reggae again filled his ears. The sound took him aback — he knew Marley hadn't really been there wailing in the room after all — it was just the sonic hologram. Scrooge had forgotten all about the VLS Cyclone 3D virtual surround processor ($100) that his nephew Fred had installed.

Marley predicted that three ghosts would visit. Scrooge retorted: "I don't get ghosts, I have DSS!" Marley warned him to pick up the beat and get on, and Marley appeared on the screen, although his voice still seemed to hover there with concert-hall ambience.

"Bah, humbug," grumbled Scrooge, accidentally turning lights on and off as he went in search of his Caig ProGold (K-PAV50) Audio/Video Pro Maintenance Kit ($76). He muttered that the whole affair must be the result of a dirty connector or a static charge on the TV screen. Opening the latch on the black plastic storage box, Scrooge selected the OpticALL antistatic cleaner and sprayed the screen, cleaning it with one of the enclosed nonscratch cloths. Then he sprayed some ProGold G5 conditioning treatment and cleaner on the system's connectors and switches, using the special nylon brushes to reach the tight spots.

While he was at it, he also cleaned the tape heads in his boombox with the kit's ultrapure isopropyl alcohol and plastic-handled foam swabs. Finally, he used CalLube MCL to relubricate the contact surfaces. Scrooge didn't use the entire arsenal in the Caig kit, but he was sure he had solved the problem. If it worked for Boeing, Dolby, Hewlett-Packard, and Xerox, it should do the trick for him, too.

Scrooge decided to take a closer look at the Cyclone 3D processor, barely larger than a deck of cards, that was sitting on top of his TV. He had been too cheap to buy a real surround-sound speaker system, but his nephew assured him that the Cyclone would deliver a delightful surround illusion, creating five virtual speakers from a single pair of real speakers. (It uses a modified version of the Toltec circuitry that VLS developed for its Auri surround-sound headphone processor.)

Scrooge particularly liked the automatic volume control that limits dynamic range for late-night home theater. He liked limiting things. So Marley chirped and beeped once. A ghostly blue light filled the room. "Bah, humbug," Scrooge bellowed. It was just the light coming from his new Sm'art
PCWorks multimedia speaker system by Henry Kloss.

PCWorks is our newest and most affordable multimedia speaker system. Designed by Audio Hall of Fame member Henry Kloss (founder of AR, KLH & Advent), PCWorks is the most affordable audio system we know of that produces very accurate, very realistic, wide-range sound—including terrific bass.

Plug it into anything with a headphone jack.

Connect PCWorks to a computer, TV, tape CD player or boom box—anything with a headphone jack—for beautiful, realistic stereo sound. It uses subwoofer/satellite design, electronically contoured amplifiers and hum-suppression to create breath-taking sound from a very compact, very affordable package. It has been carefully fine-tuned to produce the natural, accurate, wide-range sound normally associated with high-quality component stereo systems. Frankly, we are amazed at how good such a small system can sound.

What critics say about PCWorks

"A speaker system for $100 that should make some $250 systems nervous...The shape of things to come: A set of speakers for your PC that will more than fill the bill, and not crimp your budget."
-Computer Gaming World

"Superior upper-band response, with crystal-clear highs and elegant midrange. Bass response within the 60Hz to 100Hz bandwidth is pure acoustic heaven. You'll be hard-pressed to find a better set of speakers or twice the price."
-Boot magazine

"Sounds better than some speakers that sell for twice the price...amazing performance...a low-priced speaker system with high-end sound."
-PC Gamer

"You'll be astounded...outrageously good price-performance value. Even without the low cost, not many speaker systems come close to the marvelous output of this system. And at $99? Forget it. A desktop speaker set that costs less than $100 is subtly small, and sounds like it's worth $500."
-cnet GameCenter

Take it anywhere.

Because it works on 110 or 12 volts, PCWorks can go literally anywhere—on vacation, on your boat, or (with optional rechargeable battery) to the beach.

Satisfaction Guaranteed.

If you're not perfectly happy with PCWorks, return it within 30 days for a full refund. There's virtually no risk.

Designs CD Lites CD-100 M rack ($60), which concealed a blue-cloaked fluorescent light behind the white diffuser that forms its back panel. The blue light cast an otherworldly glow as it traveled through the edges of the sixty-five CD jewel boxes Scrooge had carefully placed on the rack's five shelves. The waist-high rack added a bit of class to Scrooge's otherwise spartan digs. He enjoyed having it now, although he remembered that the "assembly required" part would have tried even Bob Cratchit's good will, since the directions in the box failed to match the product. Scrooge made a note to ask the company for a different color filter — blue just seemed too eerie.

Out of the corner of his eye, Scrooge noticed that his other CD holder — the DisCDisk ($70) from Epic Design Studios — was turning. Forty-four of his favorite CDs stood upright on the elegant lazy-susan-style holder made of solid aluminum. Someone had given it to him; he would never buy anything that exquisite on his own. He also knew it would not spin by itself (he always felt a secret thrill spinning it and admiring his CD collection).

The TV popped back on, and the Ghost of Christmas Past beckoned him. Scrooge did not remember subscribing to this particular channel. The ghost carried the record of Scrooge's life on DVDs and CDs stored smartly in a Scosche SoundKase SKN-12 Executive CD Notebook ($30). The black nylon fold-over case held twelve discs and had compartments for a portable CD player, headphones, a notepad, and even a few pens. All the better for notes on his life.

Scrooge noticed that his name and social-security number were printed in the area around the spindle hole of each disc. He wondered how the ghost had managed that. The spirit smiled and held up the CD ID kit ($50) from Epic Design Studios, which contains a special disc holder, a stamp pad, indelible ink, and a stamper. The ghost had returned the enclosed postcard to Epic with what he wanted the stamp to say, and he received a customized stamper back in the mail. With a flick of the wrist, he could permanently label the discs so that no spirit could mistake them for some other poor soul's.

The ghost pulled a disc from the SoundKase notebook and slipped it into Scrooge's CD player. Scrooge heard how as a child he had played video games but never bothered with a surge protector, and how he had cried when his game player and TV died during that horrendous thunderstorm. The ghost showed him the Woods TV Game Surge Protector ($20). The UL-approved device had six outlets and was designed to accommodate two of those large "power brick" AC adaptors of the kind used on video-game systems. Scrooge's childhood meltdown didn't have to happen the way it did.

At the wink of an LED, Scrooge's VCR commenced playback at 2 o'clock. The jovial Spirit of Christmas Present invited him to party. They jumped into the spirit's Maserati, where they enjoyed music provided by a portable CD player supported by Arkon's Sound Feeder SF345 CD Mount ($50). Secured to the car's floor was a sturdy yet flexible metal gooseneck that supported the thick Gripmatic mounting platform; a pair of spring-loaded, ratchet-adjusted ears held the player firmly in place. The platform also had a built-in DC power adaptor, which plugged into the car's cigarette lighter, and an FM modulator that "broadcast" the CD signal over the car's FM radio. The spirit used the SoundKase VVS-12 CD Visor Organizer ($17) to keep a dozen discs in easy reach.

Scrooge was so impressed with the CD-player mount and visor holder that he failed to notice they were cruising 500 feet above the pavement. When he finally looked down, he wished he still had the Sole Control remote in his hand. Since it came preprogrammed with 621 codes and was designed to control five components, he figured it just might work on this spirit.

At the stroke of 3 o'clock the breadmaker, microwave, and coffeemaker all started chiming at once. Scrooge stumbled out of bed, clutching the Sole Control. He had always liked its differently shaped and colored keys, which never left a doubt about the function of each button. Before him beckoned the ominous Spirit of Christmas Yet to Come. Scrooge wondered if it might show him HDTV or digital ra-
"The Velodyne's performance here was breathtaking. In fact, it may very well have threatened the room's structural integrity had we not backed off the volume a bit..."
Al Criffin, Home Theater, December '96

"This is bass that doesn't end, in frequency or in level! It is bass that is literally felt as much as heard – on occasion, more felt than heard."
Edward J. Foster, Audio, March '97

"Bring on the challengers. They won't have an easy job... the Velodyne F-1800RII is the best subwoofer I have yet had in my home theater."
Thomas J. Norton, Stereophile Guide to Home Theater, Fall '97

World's Best Subwoofer Technology...

Patented True Accelerometer-Based High Gain Servo Control
- Low distortion, clean, accurate sound that Velodyne is famous for.
- Smoothest frequency response of any subwoofer.

Revolutionary New Energy Recovery Switching Amplifier Design
- Transformer-less direct-line power switching creates the most powerful amplifier in any subwoofer (1000 watts RMS/3000 peak).
- Patent pending design eliminates shoot-thru current for the highest amplifier efficiency ever achieved.

Tandem Voice Coil in Push-Pull Motor Structure
- High linear excursion capability 1/4" peak to peak, 2" max.
- Four times the heat dissipation for high power handling and long life.
- Less than 1/2 the distortion of conventional motor designs.

New!... ULTRA SMALL PACKAGE

All of the best features of the world famous F-1800RII have been put into a smaller cabinet. Response down to 20 Hz for audiophiles with output levels to satisfy all home theater systems. Now you don't have to sacrifice sound quality for a compact, easy to place subwoofer.

Velodyne Acoustics, Inc., 1070 Commercial Street, Suite 101, San Jose, CA 95112

dio, but some things are beyond even the power of spirits.

First, the spirit reminded Scrooge that he really should do something about that clumsy video switcher the satellite TV installer left him. Because his DSS receiver used an S-video cable and his cheap VCR used a composite-video cable, he was forever fumbling with his Sole Control to find the right TV inputs. Scrooge swore that he'd try Tributaries' new Tribute C2S cable ($100), which passively converts composite-video signals to S-video so that he could use S-video connections throughout his system. The barrel of the cable's RCA-jack end even contains luminance (Y) and chroma (C) adjustments, so he could tweak the video performance for a ghost-free picture.

The spirit sat before a PC creating jewel-box liners and disc labels. As Scrooge strained to read what was shown on the screen, labels began spilling from the color ink-jet printer, even if they were mostly black: "Ebenezer Scrooge R.I.P." The spirit's bony fingers created the labels effortlessly using Neato's CD Labeler Kit ($80). First it loaded the supplied software templates onto the PC (spirits of doom always use PCs, though Neato's software can also run on Macs), and then it used the design software to create spiffy labels that were guaranteed to unnerve Scrooge. In all, there were sixty-six background images to choose from.

The spirit loaded the printer with label sheets and issued the print command. It then used the supplied label applicator to position the custom adhesive-backed labels onto the discs—at last, a way to give home-recorded CDs a professional look. Loaded on his PC was Sonic Foundry's CD Architect audio-recording program, including the Sound Forge XP digital audio editor ($395). With this he could edit the audio record of his existence with the power and versatility formerly enjoyed only by big-budget recording studios. He could be a CD-making pro and still have money left over for charity. He could view every bellow, every whimper, and every humbug on screen and edit out the cheap remarks. He could clean up some of his harsher comments, maybe even add a little reverb to his personality. Then, with only a few mouse clicks, he could burn in new audio CDs on his computer's CD-R drive. Scrooge, who had never edited an audio track in his life, let alone recorded his own CDs, was humming away by the time the first morning church bells sounded. He could and would reform his life and the way it sounded.

Donning his sweatsuit, Scrooge grabbed his Panasonic RQ-SW70 Shock Wave personal radio/cassette player ($120) and headed out the door for a morning jog. The player's tough rubberized case repelled the light snow. Headphones in place, he pressed play, and now he was really jammin' with Marley. The Virtual Motion Sound System headphones delivered more than sound; they actually vibrated with the music, a real head-banger. He tried all of the twenty radio-station presets, and every one was playing reggae Christmas carols, except the one that was playing reggae Hanukkah songs.

Scrooge accosted the first youth he saw on the street and asked if the DVD player was still in the window of the stereo salon down the street. He must buy it and have it delivered to his nephew Fred as a surprise. He also purchased duplicates of all his favorite toys for Bob Cratchit and his large family, including another Sole Control remote, a Home Director, a Cyclone 3D processor, and all of those nifty things the spirits had shown him. They would make great Christmas presents. Scrooge just couldn't wait to see Tiny Tim hopping around with an FM-Sounds radio in his ear. At work Scrooge would finally let Bob have his own Sole Control, and access to the Home Director to boot. And Scrooge was a man of his word. He learned to keep Christmas in his heart, a home theater in his living room, and plenty of spare batteries in a cool, dry place.
As more and more sophisticated technologies arrive that are capable of reproducing music with unbelievable detail and nuance, the performance bar is inevitably raised for loudspeaker manufacturers.

And no company has set the bar higher than Celestion with our new A Series loudspeakers. A fact clearly noticed by D.B. Keele, Jr. in the August issue of Audio magazine.

No matter what source materials he selected, from Mozart symphonies to movie soundtracks, Keele was amazed by the A3's performance. He wrote that "their dynamic range and effortlessness border on the best I have ever heard" and that "their imaging and localization could not be faulted."

There is so much advanced technology in our new A Series loudspeakers it fills a White Paper. Call us and we'll send you a free copy as well as full literature on the speakers and copies of the Audio review.

Once you've read the Celestion story and heard the Celestion sound, you'll see why D.B. Keele, Jr. and Audio gave us an A. And why it's time for other speaker companies to go back to school.
For almost half of his 40-year life, Steve Wright of Loveland, Ohio, dreamed of building a home theater. He finally got his chance when he moved into a new house with a basement that was just waiting to be turned into one. He “finished” his 550-square-foot home theater earlier this year, but he admits that it will probably never truly be finished — and he’s already planning to add new components. However, Wright does believe that his home theater is a success. “I was happy with its performance and the way it looked,” he says, “but I wasn’t really going to consider it a success unless it was featured in ‘Systems.’”

Wright gives some of the credit for his successful home theater to STEREO REVIEW. “The magazine was not only an inspiration for building the room but also helped keep the dream alive. I looked at other ‘Systems’ features many times to get ideas from other readers,” he says.

The most striking feature of his home theater is its cabinetry, built by Don Justice Custom Cabinetry of Cincinnati. The center unit backs into one corner of his basement and holds his 50-inch Pioneer rear-projection TV at a 45-degree angle. Two adjoining “wings” extend onto the side walls. The TV sits on the floor, but the wood frame that surrounds it makes it look as if the TV and cabinet were manufactured together.

Flanking the screen on three sides are speakers from Atlantic Technology’s System 250.1. At left and right are Model 251.1 LRs; above the screen is the Model 253.1 C center-channel speaker. The speakers aren’t particularly large — the LRs measure only about 6 x 13 x 8½ inches — but you’d never know it by looking. They are installed behind custom grilles that match the screen size perfectly. (The grille panels can be opened and the extra
space behind can be used for storage.) The three speakers share the same drivers, with two 4-inch polypropylene-cone woofers and a 3/4-inch dome tweeter in each one. Both models are sealed-box (acoustic-suspension) designs, though the center speaker has a tilting base, so that it can be aimed at the listening position, and a rear-panel timbre-matching control.

The surround speakers are a pair of Atlantic Technology Model 254.1 speakers, which Wright had mounted in the ceiling by using the optional ceiling-mounting kit. These full-range speakers (rated for 80 Hz to 20 kHz ±3 dB) are also part of the System 250.1 and were purchased in anticipation of an upgrade to Dolby Digital, with its discrete full-range surround channels. The 254.1 is a two-way design with two 4-inch polypropylene woofers and a 3/4-inch dome tweeter.

Augmenting the sound from the five front and surround speakers is a Model 262 PBM powered subwoofer, which features an internal 150-watt amplifier and a 12-inch polypropylene driver with a low-pass filter variable from 60 to 125 Hz. Its frequency response is rated as 35 to 180 Hz ±3 dB. The subwoofer is placed along one wall of the basement, just off the right wing of the cabinet.

Wright is quite pleased with the System 250.1 speakers. "They're fantastic for home theater," he brags. "I might not have picked them for a music-only system, but in my setup they can't be beat."

The electronic components are located in a glass-fronted cabinet to the right of the TV. There is a Sony STR-GA8ES A/V receiver with five channels of amplification. It delivers a rated 120 watts each to the three front speakers and 50 watts each to the two surrounds. Also in that cabinet are a Yamaha CDX-730 CD player, a Yamaha K-640 cassette deck, and a Technics SL-D20 turntable. Wright splits his music between CDs, cassettes, and LPs, with about 500 of each. His video source is a JVC S-VHS VCR.

Knowing that the system would be installed in a basement that it shares with a play area for his kids, Wright took a couple of extra precautions. First, he made sure that the equipment was mounted high enough to be out of reach of the children. Also, the subwoofer wiring was installed before the drywall went up to avoid any cable runs across the floor. He didn't want to keep the kids away from good music, though, so he installed Niles CM-76 ceiling speakers in the ceiling on their side of the basement.

Wright has left plenty of room for storage and expansion — he’s got an entire empty equipment cabinet just waiting for new gear. A DVD player is next on his list. He’s still watching the rollout and hoping that Paramount jumps on the bandwagon and releases DVDs of the Star Trek movies, which you can tell are his favorites just by looking around the room. A digital satellite receiver is also on his wish list.

Wright’s surround-sound enjoyment isn’t limited to his home theater. In the master bedroom is the smallest of his three A/V systems, comprising a Yamaha AX-500U integrated two-channel amplifier and TX-500U tuner, a Fisher CAV-875A surround-sound amplifier, and two flush-mounted Russound SP-610 in-wall speakers for the front, two wall-mounted Bose 101 speakers for the rear (there is no center speaker), and a 25-inch JVC video monitor. The Yamaha amplifier also drives two Bose 201 bookshelf speakers in the office and two Niles CM-76 ceiling speakers in the master bath.

His third system, in the great room, is built around a Sony GX69ES receiver driving two flush-mounted Russound SP-610 in-wall speakers and a Bose Video Monitor in front, two Russound SP-502 in-walls in the rear, and an a/d/s MS1 powered subwoofer. The receiver also drives in-wall and ceiling speakers in his kitchen, dining room, and living room and out on his deck.

Throughout the house, each listening area has its own volume control, a Russound ALT-2 RLC.

As you might have already guessed, there’s plenty of music listening going on at the Wright house. Steve is a rock-and-roll fan. His wife, Laura, prefers country. Contemporary jazz — from Bob James, Lee Ritenour, and David Sanborn — is something they both agree on. But the favorite listening time seems to be Sunday morning, when Wright loads his Sony CDP-525 CD changer with classical music and relaxes with the Sunday paper.

— Brian C. Fenton
Engineered by world renowned B&W Loudspeakers in harmony with award winning industrial design, Solid Solutions offers the most intelligent approach to integrating great sound and great style into your home. From the small, elegantly sculpted front, center, and surround sound speakers, to our all new incredibly powerful subwoofer featuring “Flow-port” technology, Solid Solutions reproduces all of the excitement from your favorite audio and video sources.

Easy to set up. Easy to look at. Easy to afford. It's the elegant solution to better sound. Anywhere.

Then … just sit back and enjoy the show.

- Solid 1996 Industry Accolades Include:
  - Excellence in Design Award
    Audio Video Interiors
  - Design and Engineering Award
    International Winter Consumer Electronics Show
  - HiFi Grand Prix – Product of the Year

FROM SIX CDs OF SOUL to eighty-seven of Beethoven, the range of holiday boxed sets is especially wide this year. And heavy. In fact, you really do need a handle to lug home the Ludwig. There's a handle on the soul box, too, taking us back to the days when we toted around our vinyl 45s. To get your own handle on the many new boxes that beckon from stores, here's an assortment of sets (with suggested retail prices where available) for everyone on your shopping list.

**AC/DC Bonfire**
Elektra (four CDs, $70). A memorial to original lead singer Bon Scott, focusing on the band's early years and including rare material — as well as the entire *Back in Black*, the 1980 "tribute" to Scott with successor Brian Johnson.

**THE BEACH BOYS**
The Pet Sounds Sessions
EMI/Capitol Entertainment Properties (four CDs). Announced last year, finally released this year: multiple versions of the classic 1966 album's thirteen tracks, featuring the first true stereo mixes.

**RAY CHARLES**
Genius & Soul:
The 50th Anniversary Collection
Rhino (five CDs, $70). The first compilation that spans his entire recording career, from 1949 to 1993. The eighty-page book offers several essays and an exhaustive discography.

**CREAM**
Those Were the Days
Polydor/Chronicles (four CDs, $60). All studio recordings from *Fresh Cream*, *Disraeli Gears*, *Wheels of Fire*, and *Goodbye*. Add to that the singles, nearly every official live track, unreleased studio/concert tapes, and unpublished photos.

**THE DOORS**
Box Set
Elektra (four CDs, $70). Three discs are filled with demos and live recordings, most of them previously unreleased. The fourth disc has fifteen "Band Favorites" from the studio, five each chosen by John Densmore, Robby Krieger, and Ray Manzerek. The book includes their track-by-track commentary.

**SIMON AND GARFUNKEL**
Old Friends
Columbia/Legacy (three CDs, $50). All the singles, the major album cuts, and fifteen newly issued tracks: two demos, three unearthed studio recordings, and ten live performances. Remastered, for the first time, from the original tapes, with Sony's 20-bit Super Bit Mapping.

**PETER TOSH**
Honorary Citizen
Columbia/Legacy (three CDs, $45). On the tenth anniversary of his murder, the reggae star is memorialized on one disc each of Jamaican singles (including titles by the Wailers), unreleased live recordings, and "Hits & Classic Album Cuts."

**BEG, SCREAM & SHOUT!**
The Big Ol' Box of '60s Soul
Rhino (six CDs, $100). Resting in their special sleeves and nestled in their carrying case, the CDs resemble the 7-inch singles of yore. You also get trading cards for all of the 144 artists, who include James Brown, Aretha Franklin, Marvin Gaye, Etta James, Wilson Pickett, Otis Redding, Carla Thomas, Irma Thomas, Mary Wells, and Jackie Wilson.

**CUBA**
I Am Time
Blue Jackel (four CDs, $56; 322 Hicksville Rd., Bethpage, NY 11714). It looks...
like a box of cigars but actually contains Cuban music grouped under four themes: folk ("Invocations"), song, dance, and jazz. The 112-page book is a virtual encyclopedia of artists and musical styles.

**VANGUARD COLLECTOR'S EDITION**

Vanguard (four CDs, $60). The label that brought us Joan Baez also recorded Paul Robeson, Count Basie, the Weavers, the Kingston Trio, Odetta, Ian and Sylvia, the Clancy Brothers, Buffy Sainte-Marie, Judy Collins, Country Joe and the Fish, Buddy Guy, and more recently. Peter Case and Paul Kelly — all here.

**Also Recommended**

**BILLY JOEL** *The Complete Hits Collection 1973-1997*

Columbia (four CDs, $50, limited edition).

**PHIL OCHS** *Farewells and Fantasies*

Elektra Traditions/Rhino (three CDs, $50).

**DUSTY SPRINGFIELD** *The Dusty Springfield Anthology*

Mercury/Chronicles (three CDs, $50).

**THE PHILLY SOUND**

**UNBLOCKED** *Music of Eastern Europe*

Ellipsis Arts (three CDs, $37; telephone, 800-788-6670; 20 Lumber Rd., Roslyn, NY 11576).

**JOHN COLTRANE**

*The Complete 1961 Village Vanguard Recordings*

Impulse!/GRP (four CDs, $55). The historic performances, taped over four nights, appear together for the first time. Here are twenty-two versions of "Spiritual," "India," "Impressions," "Chasin' the Trane," and five other compositions, with the saxophonist joined by the likes of Eric Dolphy and McCoy Tyner.

**BILL EVANS**

*The Complete Bill Evans on Verve*

Verve (eighteen CDs, $300). In a hinged steel cube with shelving comes every session the pianist did for the label — 269 tracks, all 22-bit remastered — as leader, co-leader, and sideman. The 160-page hardcover book includes a biography, a tribute by Chick Corea, an interview with Creed Taylor, and session-by-session analysis.

**CHARLES MINGUS**

*Passions of a Man: The Complete Atlantic Recordings 1956-1961*

Rhino/Atlantic Jazz Gallery (six CDs, $75). Five discs of music, offering the entire Pithecanthropus Erectus, The Clown, Blues & Roots, Oh Yeah, Tonight at Noon, and Mingus at Antibes. The sixth CD is a 75-minute interview with the bassist by Nesuhi Ertegun.

**SONNY ROLLINS**

*The Complete RCA Victor Recordings*

RCA Victor (six CDs, $84). The saxophonist in the early 1960s — The Bridge, What's New, Our Man in Jazz, Sonny Meets Hawk, Now's the Time, and The Standard Sonny Rollins — including cuts previously available only on French LPs.

**LENNIE TRISTANO, LEE KONITZ, AND WARNE MARSH**

*The Complete Atlantic Recordings*

Mosaic (six CDs, $96, limited edition; available by mail-order only; telephone, 203-327-7111). Pianist Tristano and his most important students, altoist Konitz and tenorman Marsh, in everything they did together and separately for the label from 1955 to 1961.

**RCA VICTOR 80th ANNIVERSARY**

The Collector's Edition

RCA Victor (nine CDs, $98). Collects eight volumes released in 1997 — with music ranging from the Original Dixieland Jazz Band to Marcus Roberts — and adds a bonus CD, a photo album, and a newly discovered version of Charles Mingus's "Scenes in the City."

**THE RIVERSIDE RECORDS STORY**

Riverside/Fantasy (four CDs, $65). Highlights of the label's lifespan from 1952 to 1964, assembled and annotated by cofounder Orrin Keepnews. Among the forty-three performers are Cannonball and Nat Adderley, Art Blakey, Bill Evans, Milt Jackson, Thelonious Monk, and Wes Montgomery.

COMPONENT OF EXCEPTIONAL MERIT - Awarded to the Legacy FOCUS Speaker System

- Bound for Sound, 1996

Founded in 1983 by renowned engineer, Bill Dudleston, Legacy Audio is the leader in acoustic development. At Legacy Audio you'll discover what the critics and thousands of music lovers have already learned:

The best can cost less.

Serving our customers directly cuts out the middlemen and allows us to put much more quality and technology into our speakers.

WHAT MAKES LEGACY AUDIO SO UNIQUE?

- Advances like our Field Optimized Convergent Source technology, push/pull ribbon tweeters and exclusive Hexacone KEVLAR cone diaphragms give us a huge performance advantage over the competition.

- Legacy designs have a future. We stay ahead of current technologies to assure compatibility with the multiple formats on the horizon. We've also maintained a liberal trade-up policy over the last 15 years.

- Legacy guarantees your satisfaction. You can evaluate any of our products in your home before you make a final decision. A direct line to our technical staff assures complete support.

- Legacy stands behind our speakers with a ten year warranty. Hand built in America, our speakers will perform well into the next millennium.

It's Still Rock-and-Roll

This late in the century, it's difficult to expect miracles from Mick Jagger, age 54, Keith Richards, who turns 54 this month, Charlie Watts, 56, and Ronnie Wood, the baby at 50. Bridges to Babylon, however, is their best studio album since their last great record, Tattoo You, itself a ripe 16. Sure, Steel Wheels (1989) and Voodoo Lounge (1994) got some kind reviews, but can anyone remember more than a track from either of them? It'd bet that, even 16 years from now, many songs on the new record will remain as vital as Tattoo's touchstones, "Start Me Up" and "Waiting on a Friend."

Just as Paul McCartney was revived by working on the Beatles' Anthology series, so the Rolling Stones rediscovered songcraft by revisiting old material for the taping of 1995's live Stripped. But Bridges to Babylon is also an extension of Jagger's overlooked 1993 solo album, Wandering Spirit, where he first returned to serious writing. The full band doesn't waste any time on Bridges, starting with the fleet rocker "Flip the Switch" and then grooving through "Nobody Seen My Baby?" which could have been the Single of the Summer à la "Miss You" had it been released a couple of months earlier. Yes, the descending chorus resembles that of k.d. lang's "Constant Craving" (which is why she and Ben Mink get a co-writing credit), but the Stones track is really a different song. And the co-production by the Dust Brothers is just a light Dusting. In the end, "Anybody" sounds like nobody but the Stones.

It gets better. The midtempo rocker "Low Down" gives me chills every time it skids from its big chorus into the next guitar verse. "Already Over Me" and its sister song, "Always Suffering," are vintage Stones ballads that wouldn't seem out of place on Sticky Fingers. Another outright classic, "Saint of Me," rounds up bassist Me'Shell Ndegeocello, organist Billy Preston, and others for some rousing, defiant gospel choruses. Above them all is the sturdy Watts; in this frequently over-electronic age, he relishes the crackle of his snare drum. Throughout the record, Jagger sings better than he has in years. For "Always Suffering" he stays in a low register until rejoicing in the third verse's "Let your soul come alive," proving he can still put a lump in your throat.

The album closes with a showcase for Richards. "Thief in the Night" may seem like one of his standard end-of-evening, end-of-record shuffles, but it sure will get you in its sway, and it nicely sets up the 7-minute "How Can I Stop." Here, the band recalls the grandeur of tracks like "Moonlight Mile" and "Memory Motel," giving over the final minute to an elegant sendoff by Watts and jazz saxophonist Wayne Shorter.

You can think of the Rolling Stones as a bunch of bad boys still excited at being able to rock. Or you can think of them as a bunch of old bluesmen just getting started. Either way, Bridges to Babylon certainly bodes well for getting them and their fans into the next century.

Ken Richardson

Beethoven Piano Concertos with Evgeny Kissin

Evgeny Kissin's new Sony CD of the Beethoven Piano Concertos Nos. 2 and 5, with the Philharmonia Orchestra led by James Levine, is his first recording of any Beethoven concerto, though he did perform the
Positively Bob Dylan

Relatively few people have paid much attention to Bob Dylan’s Nineties output — least of all Dylan himself, whose concert playlists usually stop at 1975’s Blood on the Tracks. But he has settled into a perversely fascinating groove over the past decade: he’s been brilliant, inscrutable, and flat-out sloppy. With Time Out of Mind he’s finally become all three — and mostly brilliant. It’s the first Dylan record in years that keeps you coming back to it all over again.

It’s also his first studio record since the 1993 collection of folk and blues standards, World Gone Wrong, not to mention his first album of all original material since 1990’s Under the Red Sky. And already Time Out of Mind has drawn its share of comeback hype, but don’t go into it expecting another Blonde on Blonde.

Producer Daniel Lanois, who last worked with him on the 1989 record Oh Mercy, aims for maximum echo and spookiness, making the rough spots an essential part of the picture.

Something about the skeletal swamp sound, the lowdown vocals, and the unfinished songs is so wrong that it’s absolutely right. Recorded before Dylan’s recent hospitalization, Time Out of Mind is heavy with foreboding, and the lyrics jump from trivial to profound and back. There are eye-openers like the black-humored “Not Dark Yet” and the intense blues “Cold Irons Bound.” There’s even a ballad, “Make You Feel My Love” (which has already been covered, to lesser effect, by Billy Joel), to prove that Dylan can still write an obvious standard when the mood strikes.

The payoff is the closing “Highlands,” at 17 minutes the longest Dylan song ever, with enough random rhymes and non sequiturs to suggest that he made it all up as he went along (Neil Young and Erica Jong are name-dropped, and there’s even an audible lyric flub midway through). Yet the song has haunting images and builds steadily to its bittersweet conclusion; it leaves you feeling that you’ve been somewhere. Call “Highlands” a short story or a sprawling country blues, but there’s nothing else like it in Dylan’s catalog — or, for that matter, anywhere else.

Brett Milano

Piano Concertos Nos. 2 and 5.

Evgeny Kissin (piano); Philharmonia Orchestra, James Levine cond. SONY 62926 (69 min).

Kathleen Battle Sings Mozart Operas Arias

The cover of soprano Kathleen Battle’s collection of Mozart opera arias, recently released on Deutsche Grammophon, should have shown her giving a big hug to the conductor, James Levine, the artistic director of the Metropolitan Opera. Instead, the disc is encased in a somewhat forbidding red plastic box — for shortly after the recording was completed nearly five years ago, Battle was unceremoniously fired by the Met management for her imperious behavior at rehearsals. It was the most shocking public dismissal since Rudolf

BEST OF THE MONTH

Bing sent Maria Callas packing forty years ago, and it marked the beginning of the end of the temperamental Battle's career on the opera stage, though she continues to perform to great acclaim in concerts and recitals.

We may rejoice that they got this recording in the can before the storm broke, for it is a radiantly beautiful souvenir of an era when Battle and Levine were close artistic collaborators, a team as celebrated and accomplished in their way as Elisabeth Schwarzkopf and Herbert von Karajan or Birgit Nilsson and Georg Solti. Levine accompanied Battle in legendary lieder recitals at Salzburg and elsewhere, but it was, above all, her performances at the Met of the lyric-soprano roles in the great Mozart operas, conducted by Levine, that established her as one of the world's leading interpreters of that repertory. This recording captures these artists at the top of their form, and even if subsequent events have given it a certain bittersweet quality, that's almost a virtue for some of the arias about love lost and love longed for that are included here. The aria "Ruhe sanft, mein holdes Leben," from the opera Zaide, is a case in point. As exquisite a musical expression of a yearning heart as was ever written, it is ideally suited to Battle's golden voice, which soars with the ease of a bird in flight across a cloudless sky.

The disc offers Battle a chance to try her hand at the three major female roles in The Marriage of Figaro. At this point in her career, she was perfectly capable of pulling off the wistful longing of the Countess Almavia ("Porgi, amor"), the sunny innocence of her maid Susanna ("Deh vieni"), and the dazed, adolescent high spirits of the page Cherubino ("Non so piu"). Nobody swoons more fetchingly than Battle, and her renditions of Pamina's aria ("Ach, ich fiel's") and the Act Two finale with the Three Boys from The Magic Flute, which close the disc, are ravishing. The Met Orchestra purrs like a Rolls-Royce in the hands of Levine, who has made it the best opera orchestra in the world. If the collection has one flaw, it is a certain overall lugubrious tone. There are just two up tempo selections. Cherubino's aria and Bloncle's aria "Welche Wonne, welche Lust" from The Abduction from the Seraglio, and even these are none too brisk as performed here. The program might have benefited from the inclusion of a few more frisky numbers.

MARIAN CAREY: Butterfly. Columbia 67835 (57 min).

Mariah Carey's ability to deliver a song has often exceeded the quality of her material, but that's no longer the case. Butterfly offers a set of meticulously crafted selections that are immediately engaging.

As usual, Carey is lyricist, composer, arranger, and producer, often collaborating with Walter Afanasieff and bringing aboard others to lend an occasional hand with the production. Not as usual, the lyrics reflect a maturity: a poignancy laces “Close My Eyes” as a woman regrets growing up too soon, and “Outside” is a lament of alienation. The music, meanwhile, invites rather than shouts; even the obligatory opening dance song, “Honey,” has an edge of politeness to its subdued rap. “My All” is introduced by a delicate guitar and has a Spanish tinge, “Whenever You Call” features an exquisite piano solo with a classical feel, and the treatment of “The Beautiful Ones’ from Prince’s Purple Rain is riveting.

With an album as satisfying as Butterfly, Mariah Carey deserves our respect.

PATSY CLINE: Live at the Cimarron Ballroom. MCA Nashville 11579 (41 min).

A month after her car crash in 1961, Patricy Cline arrived at Tulsa’s Cimarron Ballroom to do a show with Leon McAuliffe’s famed swing band. But because the accident had dislocated her hip, she couldn’t stand up to sing, so she sat on a stool. You’d never know that from her performance, as she belts out “I Fall to Pieces,” the No. 1 country song at the time, as well as past hits “Walkin’ After Midnight” and “A Poor Man’s Roses.” Her brassy (and sometimes salty) between-song banter is also a delight to hear, as is McAuliffe’s supple band.

Only two years later, Cline died in an airplane crash. Very few concert tapes would of too long ago, and for that reason Live at the Cimarron Ballroom is a welcome collector’s item. However, most fans will find the poor sound quality a big disappointment, since the recording is extremely muffled, with almost no brightness, and the vocals sometimes drop out. In fact, the album is only marginally fit for release to anyone other than the most rabid aficionado.

THE KELLEY DEAL 6000: Boom! Boom! Boom! NICE/New West 6002 (44 min).

The Kelley Deal 6000’s debut album of last year, Go to the Sugar Altar, didn’t promise much, sounding like a more hap-hazard version of the Breeders, with whom Kelley played lead guitar next to sister Kim on Last Splash. But Kelley finds her own voice on Boom! Boom! Boom! The songs are punchier and poppier, and the Breeders trademarks of cool/ironic vocals and dirty guitar chords are used more sparingly.

The sex-rocking “Shag,” the punk-snarling “Get The Writing Off My Back,” and the boom-boom-booming “Brillo Hum” are as catchy as anything on Last Splash but more fully arranged. Less characteristic are a pair of ballads, “When He Calls Me Kitten” and “Where Did The Home Team Go,” done as Fifties-style slow dances with Deal singing in convincing teen-angel style. She’s also developing a wicked sense of humor:

STEREO REVIEW DECEMBER 1997
in “Stripper” she applies for that job, making it sound as innocent as cheerleading. And if I didn’t know better, I’d swear that “My Boyfriend Died” is the nastiest Hole parody ever recorded.

**TANYA DONELLY:**
Lovesongs for Underdogs.

REPRISE 46495 (45 min).

One of her most ambitious projects, Lovesongs for Underdogs is particularly ethereal, and jumps from tender to nasty and back. And of loops, vocal layers, and guitar textures. In her journey from contemporary Christian music to breezy-pop purveyor, Amy Grant revealed herself to be a quixotic performer, one who imbued quasi-religious material with a kind of joie de vivre but who carried almost none of Christian music’s emotional searching to the secular arena. On Behind the Eyes she finally be-

**ECHO & THE BUNNYMEN:**
Evergreen.

LONDON 828 905 (50 min).

**H**ow can you make a reunion album when you haven’t really broken up? The two prime movers of Echo & the Bunnymen, singer Ian McCulloch and guitarist Will Sergeant, already got back together in 1994 as Electrafixion, swearing it was the dawn of a new band. The only problem was that nobody wanted to buy an Electrafixion album that sounded like second-rate INXS. By receiving the Bunnymen name and bringing bassist Les Pattinson back in, they’re clearly hoping to conjure the old magic.

They succeed, but not entirely. Although Evergreen doesn’t reach the peaks of their first three albums, it’s good enough to make you forget about Electrafixion and the one Bunnymen album, 1990’s Reverberation, that was made in McCulloch’s absence. In fact, they recapture the familiar psychedelic swirl so well that it keeps them from breaking any new ground. Still, Sergeant’s raunchy yet lyrical guitar work is always a pleasure. McCulloch’s voice has gotten surprisingly aged over the years, but he sings with a swagger that was missing from his solo efforts. And the Bunnymen still sound mysterious even when rocking out. B.M.

**AMY GRANT:**
Behind the Eyes.

A&M 540 760 (50 min).

In her journey from contemporary Christian singer to breezy-pop purveyor, Amy Grant revealed herself to be a quixotic performer, one who imbued quasi-religious material with a kind of joie de vivre but who carried almost none of Christian music’s emotional searching to the secular arena. On Behind the Eyes she finally be-

**RETAILS 111:**
Synth versions of war-horses like “Born to Be Wild,” “More Than a Feeling,” and “Hotel California.”

**THE MOOG COOKBOOK:**
Plays the Classic Rock Hits — Ye Oide Space Bande.

RESTLESS 111. Synth versions of war-horses like “Born to Be Wild,” “More Than a Feeling,” and “Hotel California.”

**TODD RUNDGREN:**
With a Twist.

GUARDIAN 59866. The wizard creates lounge covers of his own songs, such as “I Saw the Light” and “Hello, It’s Me.”

**TEXAS CHAINSAW ORCHESTRA:**
Rhino 72845. That’s right, chainsaws (plus other hardware), roaming away to tunes like “You Oughta Know,” “I Will Always Love You,” and “Chain Gang.”

**GOLDEN THROATS 4 — Celebrities butcher songs of the Beatles.**

RHINO 72593. William Shatner’s legendary “Lucy in the Sky with Diamonds” is here, along with Bing Crosby’s “Hey Jude,” Joe Pesci’s “Got to Get You into My Life,” and thirteen more.

**LOUNGE-A-PALOOZA.**

**SHOW & TELL — A Stormy Remembrance of TV Themes.**

Which? 0666 (P.O. Box 659, Village Station, New York, NY 10014). Mostly punk, mostly sitcoms: Green Acres, Laverne & Shirley, Cheers, even It’s Garry Shandling’s Show.

**ULTRA-LOUNGE, ON THE ROCKS, PARTS ONE AND TWO — Rock ‘n’ Roll Hits Distilled for Easy Listening.**

CAPITOL 55413 and 55414. How they tried to be hip: Mel Torme’s “Sunshine Superman,” Peggy Lee’s “Everybody People,” and the Hollyridge Strings’ “Theme from Shaft.” K. Russell’s “Sugar, Sugar,” and more on two separate CDs.

**JACK KEROUAC:**
Kicks joy darkness.

RYKODISC 10329 (80 min).

**MATERIAL:**
Seven Souls.

WORLDLY TRILKOA 534 905 (64 min).

**ALLEN GINSBERG:**
The Lion for Real.

MOUTH ALMIGHTY 534 908 (54 min).

The three figuresheads of the Beat Generation — Jack Kerouac, William S. Burroughs, and Allen Ginsberg — are represented on three current releases, as another beaten-down generation of disaffected coffeehouse habitues reaches across the decades to forge a link with the poetic progenitors of hip, literary angst. The best of the CDs, kicks jre darkness, gathers readings of Kerouac by rockers, actors, and poets, produced by Jim Sampas (his brother-in-law) with Lee Ranaldo of Sonic Youth. Some hits are clearly better than others, but what’s most commendable about this collection is its range. A few standout: Robert Hunter reading a classic passage from Visions of Code with Kerouac scatting in the background, John Cale casting the poem “The Moon” in mystery and enchantment, and Julianna Hatfield waxing childlike in “Silly Goodtime Pones.” It’s a high compliment to speculate that Kerouac, who didn’t have much use for rock-and-roll, would have appreciated this treasure chest of a tribute.

Two dark lights come together on the reissue of the 1989 album Seven Souls, which has Burroughs reciting excerpts from his novel The Western Lands against a brooding soundtrack by Bill Laswell’s Material. Burroughs was as clinical with his words as a surgeon, but here he reads his work as an anthropologist-mystic who is undertaking some sort of “journey beyond Death, beyond the basic God standard of Fear and Danger.” Material’s under-
ground aesthetic serves this world view well, icing the words with spacy, dubby backdrops that carry an aura of menace as they lurk through subterranean realms.

Also reissued from 1989 is The Lion for Real, a Ginsberg album with music by producer Hal Willner. This, however, sometimes comes off more like a collision than a collaboration. One problem is Ginsberg himself, whose speaking voice rarely modulates beyond a kind of chipper recitation. Given that liability, Willner's varied settings still frequently manage to link up with the droll comic meditations. On the other hand, the album closes with a truly misconceived bummer, "C'mon Jack," a bout of homosexual overkill recited awkwardly by Ginsberg to seamy dance beats as lewd voices chant "ooh" and "ahh." Although he was a great poet and culture hero, Ginsberg wasn't exactly on par with Jim Morrison in terms of erotic charisma when he stepped before a mike.

P.P.

TALK SHOW.
ATLANTIC 83040 (42 min).

BRAD: Interiors.
EPIC 68137 (45 min).

These two bands amount to a human's holiday for members of Stone Temple Pilots and Pearl Jam. Talk Show is basically STP with a new singer, Dave Coutts, while Brad is a Seattle-scene conglomerate featuring Pearl Jam guitarist Stone Gossard. Talk Show seems to be more an actual band than a side project, and Coutts fits in with the DeLeo brothers (guitarist Dean, bassist Robert) and drummer Eric Kretz in a more simpatico way than does STP's problematic Scott Weiland. Coutts's amiable-brat vocals recall Robin Zander, and indeed Talk Show bashes, crashes, and riffs with the infectious energy of vintage Cheap Trick. Listen to the retooled, "Day Tripper"-style rifting of "Hello Hello." Except for the fact that "So Long" seems a rather obvious rewrite of the opening track, "Ring Twice," Talk Show is consistently entertaining.

Brad, too, has its moments on Interiors, its second album (a follow-up to a 1993 reissue that's better left forgotten). An entire album of songs as solid and fleshed out as "The Day Brings" (a kind of New Age pick-me-up) and "Sweet Al George" (the best craven rocker that Aerosmith never wrote) would be a first-rank treat. However, Interiors is larded with so-so material that snacks less of inspiration than process: book some time, bring some stray riffs, and hash out an album amid the studio's bloodless environs. In their worst moments, the guys of Brad sound like progressive-rock wannabes, and their ambition just doesn't get realized. Led Zeppelin IV wasn't built in a day.

P.P.

TONIO K.: Olé.
GADINIS 228 (53 min).

Recorded in 1989 and 1990 with a stellar cast (Paul Westerberg, Bruce Thomas, David Hidalgo, Marc Ribot, Peter Case, Booker T. Jones) but unreleased at the time

A TIDE OF YULE

T

here's more than one way to sing a
carol. Here's what you can do:

LOUIS ARMSTRONG & FRIENDS:
What a Wonderful Christmas.
Hip-O 40063. New compilation.

ASLEEP AT THE WHEEL:
Merry Texas Christmas Y'all.
High Street 10355. Tish Hinojosa guess.

ANN HAMPTON CALLAWAY:
This Christmas.
ANGEL 33308. Cabaret star.

ROSEMARY CLOONEY:
Songs from White Christmas and Other
Yuletide Favorites.
COLUMBIA/LEGACY 65278.
Recordings span 1950 to 1956.

5 CHINESE BROTHERS:
A Window Shopper's Christmas.
1-800-PRIME-CD 035. Thirteen fun originals.

SCOTT HAMILTON WITH
STRINGs: Christmas Love Song.
CONCORD 4771. Tenorist and Alan Broadbent.

THE LOUVIN BROTHERS:
Christmas with the Louvin Brothers.
RAZOR & TIE 2154. From 1966.

MANNHEIM STEAMROLLER:
Christmas Live.

THOMAS MORE:
The Soul of Christmas.
UWAYA/TOMMY BOY 1218
(two CDs). Celtic music.

WILLIE NELSON:
Hill Country Christmas.
FINER ARTS 9705.
Eleven new recordings.

NITTY GRITTY DIRT BAND:
The Christmas Album.
RISING TIDE 53048. With Vassar Clements,
Richie Furay, Alison Krauss, John McEuen.

BOB RIVERS:
More Twisted Christmas.
ATLANTIC 83043. Samples: "Sled Zeppelin."
"Yellow Snow! Yellow Snow! Yellow Snow!"

ROOMFUL OF BLUES:
Roomful of Christmas.
BULLSEYE BLUES 9591. First holiday album.

RUPAUL: Ho Ho Ho.
RHINO 72936. "All I want for Christmas is
my liposuction . . . my breast implants."

TURTLE CREEK CHORALE:
Twisted Turtle Tinsel.
TCC 11102 (EP; 800-746-4412). Sample:
"Jingle Bell Rock."

ILENE WEISS:
Weiss Christmas.
GAUDY 236. Laugl-tilll folkie originals.

DORIS YOOAM:
Come On Christmas.
REPRISE 46683. Eight carols, two originals.

CELTIC CHRISTMAS III:
Windham Hill 11233. David Arkenstone, Patric Cassidy, Nnightoise.

COUNTRY CARES FOR KIDS:
A HOME FOR THE HOLIDAYS.

ICHIBAN BLUES AT CHRISTMAS 4:
ICHIBAN 1193 (770-419-1414). Jerry Butler, Francine Reed, the ExceIoos.

A JAZZ-A-BYE CHRISTMAS:
PRODUCTIONS 3046 (800-816-6706).

MERRY AXEMAS:
A GUITAR CHRISTMAS.
ERIC 67775. Steve Vai invites over a bunch
of friends, including Jeff Beck, Alex Lifeson,
Joe Perry, and Kenny Wayne Shepherd.

NOMAD CHRISTMAS:
A WORLD MUSIC CELEBRATION.
NOMAD 50314 (919-932-9600). Brazil to Bulgaria,
India to the Middle East.

FIVE DEGREES/ISLAND 524 434 (73 min).

* * *

NORTHERN HERITAGE.
Six Degrees/Island 524 434 (73 min).

Heritage, a concept album with the sub-
title "New Interpretations of American Roots Music," revisits public-domain songs
that speak of the love, joy, despair, and
deaths of generations of peoples who settled
this country. The record includes sparkling
acoustic instrumentals by Bela Fleck, John
Jennings, Vassar Clements, John Hartford,
David Grisman, Jerry Douglas, and the
project's producer/arranger, violinist Darol
Anger. And there are equally outstanding
vocals by Jane Siberry, John Gorka, Dar
Williams, Mary Chapin Carpenter, Willie
Nelson, Mavis Staples, and Tim O'Brien.

With this much talent, the album would
seem a can't-miss proposition, and it is
exceptionally moving at times (the instrumen-
tal "Talk About Suffering Here Below," feat-
uring bassist Edgar Meyer, and Carpenter's
quintessential, if not fully realized,
project's producer/arranger, violinist Darol
Anger. And there are equally outstanding
vocals by Jane Siberry, John Gorka, Dar
Williams, Mary Chapin Carpenter, Willie
Nelson, Mavis Staples, and Tim O'Brien.

PAINT IT, BLUE —
SONGS OF THE ROLLING STONES.
HOUSE OF BLUES 161 315 (62 min).

STONE COUNTRY —
COUNTRY ARTISTS PERFORM THE
SONGS OF THE ROLLING STONES.
BEYOND/TOMMY BOY 3055 (44 min).

The Rolling Stones freely admit how
much they stole from their blues heroes;
Paint It, Blue gives those heroes an overdue
chance to steal it back. What's surprising is
how respectful most of them sound: the
late Johnny Copeland's "Tumblin' Dice,"
Lucky Peterson's "Under My Thumb," and
because of a regime change at A&M. O(176,759),(877,946)

118 STEREO REVIEW DECEMBER 1997
Sound City is one of the country's leading full-service dealers of high performance Audio/Video and Custom Home Theater products. From an entry level set-up to an audiophile-grade stereo system, all the way up to a full blown state-of-the-art Home Theater, Sound City has unmatched selection, service and expertise. In addition, our huge buying power allows us to offer excellent savings on select manufacturer closeouts on first-quality audio, video and car stereo products.

Alvin Youngblood Hart’s “Sway” are note-for-note remakes, and since Bobby Womack recorded “It’s All Over Now” before the Stones did, his new version is a cover of a cover. Sparks fly only when the bluesmen take some liberties: Taj Mahal’s acoustic “Honky Tonk Women,” Larry McRae’s funkified “Midnight Rambler,” the Holmes Brothers’ swamp-rocking “Beast of Burden,” and Junior Wells’s Chicago-shuffle “Satisfaction” all throw fresh spins on the old chestnuts. But whose bright idea was it to throw the riff from Lou Reed’s “Walk on the Wild Side” into Luther Allison’s “You Can’t Always Get What You Want”?

Nobody tries anything similar on Stone Country, whose eleven tracks (save for Blackhawk’s inappropriately jaunty “Wild Horses”) are all patterned closely on the Stones’ arrangements. But not every singer seems at home: Nanci Griffith affects a howler of a Mick Jagger impression in “No Expectations,” and Collin Raye sounds far too nice for “Brown Sugar.” Still, Deana Carter gives “Ruby Tuesday” an affecting innocence, and Travis Tritt is like a kid on a rampage in “Honky Tonk Women.” And George Jones personalizes “Time Is On My Side” because he’s George Jones, and he personalizes everything.

Bob Dylan gathers friends both green and graying to show what the Singing Brakeman means to them. Unfortunately, Bono turns “Dreaming with Tears in My Eyes” into unrecognizable mish-mash, and Mary Chapin Carpenter debases “Somewhere Down Below the Mason Dixon Line” into the kind of beer-barrel piano tripe you hear in peanut-shells-on-the-floor steakhouses.

This isn’t to say that everyone need be as faithfully traditional as Willie Nelson with “Peach Pickin’ Time Down in Georgia” or Iris DeMent in an unvarnished treatment of “Hobo Bill’s Last Ride.” Steve Earle and the V-Roys rock “In the Jailhouse Now” with a fun and witty insouciance, and Van Morrison charms “Mule-Skinner Blues” into something akin to an irresistible boogie. Other strong interpretations come from John Mellencamp in “Gambling Bar Room Blues” and Dwight Yoakam in “’T for Texas.” But alas, too many of these performers seem to be having an off day. Dylan himself is so raspy as to sound consumptive, while the dying Jerry Garcia isn’t anywhere near the top of his game. Others (Aaron Neville, Dickey Betts) just sound like they’re wondering what they’re doing here.

That leaves the long-dead Jimmie Rodgers as the most impressive of the lot. His ghost will probably still rule when Bono and most of his pals are forgotten.

The Smithsonian’s third gala anthology of musical comedy and the Great American Songbook puts the emphasis on the stars, from George M. Cohan to Ethel Merman to Nathan Lane. Still, the great shows and composers can’t help but be spotlighted just as much as they were in the two earlier boxed sets, American Musical Theater and American Popular Song. Making Star Spangled Rhythm unique among similar retrospectives is the admittance of Hollywood to the pantheon, via numerous soundtrack items from the Thirties and Forties (some of which have never been on LP or CD), showing how even performers who never appeared on Broadway (Judy Garland, Bing Crosby) contributed to the development of the art form. Equally praiseworthy are the inclusion of superior revivals — allowing the package to conclude with the Nineties productions of Guys and Dolls and Showboat — and the omission of Andrew Lloyd Webber.

POPPULAR MUSIC

THE FAIRFIELD FOUR:
I Couldn't Hear Nobody Pray.
WARNER BROS. 46698 (42 min). ★★★
A national gospel treasure since the 1920s, the Fairfield Four are both somber and joyful on this CD, a stark reminder of the power and beauty of the unvarnished human voice, seldom more moving than when joined with others in a spiritual calling. A.N.

DARYL HALL/JOHN OATES:
Marigold Sky.
PUSS/BMG 102 (57 min). ★★
Is the old magic back? Yes and no. It’s refreshing to hear the Hall & Oates sound again, with the same mix of Philly soul and rock backbeat, but the writing isn’t near the level of the duo’s Private Eyes and Big Bam Boom. B.M.

JOE JACKSON & FRIENDS:
Heaven & Hell.
SONY CLASSICAL 60273 (52 min). ★★
Writing in a sort of modernist symphonic style mixed with pop touches, Jackson is clearly trying to be a latter-day Gershwin or Bernstein, not a bad thing to aspire to. But despite some imaginative moments and generally impeccable performance, there’s little here that lingers in the memory. S.S.

WALLACE RONEY: Village.
WARNER BROS. 46649 (60 min). ★★★★
Roney, a 37-year-old Philadelphian, sounds a lot like Miles Davis, his mentor, but he shouldn’t be written off as a mere imitator. He’s a fiery player with a wonderful combination of technique, invention, and taste. Give him time to find his own style. C.A.

JIM CROCE — A NASHVILLE TRIBUTE.
RIVER NORTH 1295 (38 mm). ★★★
The knot of singers who honor Croce have a difficult time inhabiting his material, and the bulk of them simply go through the motions. A couple of folks — Rodney Crowell ("Operator") and, surprisingly, Crystal Bernard ("Photographs and Memories") — get close, but nobody approximates the ease of Croce’s delivery. A.N.

6 STRING DRAG: High Hat.
E-SQUARLD 1055 (39 min). ★★★★★
From Raleigh, 6 String Drag fits into the alt-rock category but moves away from boring melodies, cryptic lyrics, and half-dead vocals to fuse a roots-rock/country fest of infectious hooks and literate writing that is not just winning but inspiring. These Carolinians like their barbecue hot, hot, hot. A.N.

CALL 1-800 4-PARA 94 to find the PARA dealer nearest you!

Professional Audio/Video Retailers Association
himself humming “The Night They Invented Champagne” from Gigi.

THE BILL HOLMAN BAND: Brilliant Corners. JVC 0026 (59 min).

THE CLIFFORD JORDAN BIG BAND: Play What You Feel. MAPLESHADE 03232 (70 min).

Bill Holman’s L.A.-based orchestra is one of the most precise and far-reaching big bands around today. This is very much an “arranger’s band,” a vehicle for the writing of Holman, the least pretentious of the composers and arrangers who contributed scores to the Stan Kenton Orchestra in the 1950s. Brilliant Corners is an unusual project for Holman in that it features no originals, only his adaptations of pieces by Thelonious Monk, and it is essentially a program of recompositions. Holman is most successful when he takes the greatest liberties, as in the opening “Straight, No Chaser,” where Monk’s theme is only obliquely stated after some whirling fanfares and chorales. But Holman shows great originality even when serving Monk straight up, and he locates new wrinkles in “‘Round Midnight” by rescoring it for Bob Efford’s noble-sounding bass clarinet.

THE DAVE McMURDO JAZZ ORCHESTRA: Fire & Song. SACKVILLE 5004 (two CDs, 143 min).

The Dave McMurdo Jazz Orchestra is a Canadian outfit that somehow has managed to stay alive for nearly ten years. The arrangements aren’t intricate tapestries but neither are they pedestrian. There’s a bit of Count Basie and a gram or two of Gil Evans, and the solos — by such highly talented players as trombonist McMurdo himself, pianist Don Thompson, baritone saxophonist Perry White, and guitarist Reg Schwager — are as skillful and substantive as they are plentiful. Add to that the fact that these performances were digitally recorded with utmost care on 24-track machines and you have an album that will treat your ears royally. From Pat LaBarbera’s absorbing tenor solo in “Fast Eddie,” which opens Disc 1, to Chase Sanborn’s crisp, lyrical reading of “Easy Living,” which closes Disc 2, Fire & Song is a fulfilling big-band album that might give McMurdo the recognition that seems to have eluded him south of the Canadian border.

C.A.
BEETHOVEN: String Quartets Nos. 13 and 16; Grosse Fuge.
Juilliard String Quartet. Sony 62792 (76 min).

The Juilliard String Quartet’s latest Sony CD offers a generous 76 minutes of prime Beethoven communicated with the utmost conviction and intensity. There have been more volatile readings, but if you want your Beethoven sinewy and weighty, these will be to your taste. The sonics are on the close-up side, but the textures are clearly and cleanly delineated from start to finish. The Juilliard opts for the exposition repeat and cleanly delineated from start to finish.

Juilliard String Quartet

but what is more unusual is the decision to observe repeats of both exposition and development in the “Was es sein? / Es muss sein” (“Must it be? / It must be”) finale of No. 16. The effect of the repeats is to alter the whole specific gravity of the piece, transforming it into a decidedly more serious affair than usual. The Juilliard players clearly don’t buy the common “leave ‘em laughing” interpretation of Beethoven’s intent in this last of his quartet masterpieces.

Heard here at the end of the Quartet No. 13, which was originally intended to be the finale. “Was es sein?” is almost terrifying in its intensity and relentless drive. I would rank this as one of those rare readings that provide unique insights into a work, and the CD is worth getting for it alone.

ELGAR: Cello Concerto. WALTON: Cello Concerto. DELIUS: Caprice and Elegy.
Janos Starker (cello); Philharmonia Orchestra. Leonard Slatkin cond. RCA Victor 61695 (63 min).

The redoubtable Janos Starker, in his first go at the major British cello-and-orchestra repertoire, delivers a highly intense rendition of the Elgar concerto. Deep melancholy permeates much of this music despite the virtuosic elements in the motto perpetuo second movement and in the finale with its abrupt and impatient conclusion.

The Walton Cello Concerto has finally arrived in its original form, and the famous “Ritual Fire Dance” (here a “Dance for the End of Day”) and the very torchy songs get a context that gives them dramatic as well as purely musical power. El Retablo, on the other hand, more Neoclassical than Spanish in tone, is a dramatic enigma that’s not entirely successful in musical terms.

In spite of her mezzo-soprano billing, Nancy Fabiola Herrera manages a very respectable and sexy contralto. I Cameristi is a fine North Italian chamber orchestra under the capable direction of the Dini-Ciacci brothers. Diego scores a big success with El Amor Brujo, but the equally capable Maurizio cannot solve the problems of El Retablo, which remain, I’m afraid, in the category of a curiosity.

Maurizio Dini-Ciacci cond. NAXOS 8.553499 (62 min).

The original version of Falla’s “Gypsy ballet” El Amor Brujo — chamber orchestra for fifteen musicians and spoken dialogue alternating with songs and dance numbers — is paired here with his strange El Retablo de Maese Pedro (Master Peter’s Puppet Show), a musical dramatization of a scene from Don Quixote as a puppet play within a puppet play.

El Amor Brujo works very well in its original form, and the famous “Ritual Fire Dance” (here a “Dance for the End of Day”) and the very torchy songs get a context that gives them dramatic as well as purely musical power. El Retablo, on the other hand, more Neoclassical than Spanish in tone, is a dramatic enigma that’s not entirely successful in musical terms.
groundbreaking version on L'Oiseau-Lyre is stunning; the Argo recording with the Choir of Christ Cathedral, Oxford, was the masterpiece of producer Peter Wadland and remains unsurpassed, particularly the the singing of the boys. William Christie's lovely, intimately scaled recording on Harmonia Mundi is also one to be cherished. If you prefer a high-cholesterol reading with mod-ern instruments, there's Robert Shaw's ma-
sterial one on Telarc. And don't forget Thomas Beecham's fabulous 1959 recording, with over-the-top re-orchestrations by Eugene Goossens, on RCA. You're not making a mistake if you choose this new set, but be aware of what you're missing. J.J.

Thomas Tirino (piano); vocal and instrumental accompaniment. Bis CD-874 (64 min).

With no slackening of quantity or quality, Thomas Tirino has plunged ahead into Volume 4 of his amazing CD series on the Swedish Bis label of the complete piano music of the great, neglected Cuban pianist and composer Ernest Lecuona (1895-1963). As in the previous volumes, Tirino leads off with a big re-covered and reconstructed piece here the astonishing Rumba-Rhapsody for three female soloists, chorus, piano, and orchestra. It's amusing if a bit over-blown. As before, it is the simple piano dances—six Cuban dances, ten more Hispanic-flavored nineteenth-century Cuban dances, and eight waltzes—that engage our delighted attention. These elegant dances, almost all between 1 and 3 minutes in length, are so brief as to seem almost aphoristic. The writing is, by turns, elegant, wisful, witty, popular, brilliant, and melancholic.

Music like this depends not entirely on the written notes. Tirino has resuscitated Lecuona by a sort of reincarnation. He has not only studied the various (and often contradictory) manuscripts and printed editions, but he has listened carefully to Lecuona's own recorded performances and has caught the grand manner in his own way. The composer often failed to write things down, or, like any creative performer, played interesting variants. Above all, he has caught the composer's accent, his expressive pianism and way of speaking musically. E.S.

MENDELSSOHN: Piano Concertos Nos. 1 and 2; Capriccio Brilliant; Serenade and Allegro Giocoso.
Stephen Hough (piano), City of Birmingham Symphony, Lawrence Foster cond. Hyperion 68969 (75 min).

Mendelssohn's published output for piano and orchestra can fit neatly onto a single CD, as demonstrated by Stephen Hough in this release from Britain's Hyperion label. All five works, composed between 1832 and 1836, show stylistic fingerprints of Hummel and Weber in the solo writing. Also from Weber (the Konzertstuck for piano and orchestra) comes the idea of eliminating pauses between movements.

The Piano Concerto No. 1, in G Minor, is far and away the most popular of the lot. Its taut and dramatic opening movement (no cadenza) steals the show straight off. The slow movement is in the composer's best "song without words" manner; and the presto finale has sparkle aplenty. The D Minor Concerto, No. 2, has a lower profile but considerable lyrical substance in its opening pages and the whole of the slow movement. Except for the somberly reflective first half of the Serenade and Allegro Giocoso, the shorter works are of lesser consequence, though there is brilliance to burn in the Capriccio Brilliant and Rondo Brillant.

Stephen Hough, who is something of a specialist in Romantic keyboard repertoire, searches out the lyrical essence of the music rather than going for glitz. He is supported with warmth and enthusiasm by the City of Birmingham players under Lawrence Foster's direction. Good, substantial...
**CLASSICAL MUSIC**

**Songs to My Lady**

While there were few major female composers during the Renaissance, much of the era's best music, perhaps most of it, was addressed to the fair sex. Guillaume Dufay created many of his greatest choral settings for the liturgy, devoted to the Virgin Mary, who attained an importance in the spiritual life of the Renaissance untamount to that of her Son. The Virgin and the Temple, a recent DG Archiv CD by the New York-based choir Pomerium, gathers together some of Dufay's exquisite Marian motets and chants.

The album's title refers to the controversy swirling around its opening motet, "Nuper rosarum flores" ("Lately, the blossoms of roses"), composed for the dedication of the cathedral of Florence. Brunelleschi's great domed church consecrated to the Virgin. This 6 1/2-minute masterpiece decisively marks the musical watershed between the austerity of medieval church music and the polished, supple style of the Renaissance. Alexander Blachly, Pomerium's director, points out that the piece is arranged mathematically, with the curiously irregular ratios among its four parts of 6:4:2:3. One school of thought is that the motet's design reflects the sublime dimensions of the Cathedral; other musicologists believe that it is based on the Biblical description of the Temple of Solomon in the sixth book of I Kings.

Perhaps both sides are right, and Brunelleschi had Solomon's Temple in mind when he conceived his cathedral. We'll never know the answer, and it really doesn't matter when we have such a satisfying performance of this exquisite work, and of the other chants and motets on the CD. The fifteen voices of Pomerium meld and bloom with clarity and warmth in a fine recording taped at a number of churches in New York City.

Another choir from New York, Lionheart, explores profane as well as sacred musical homages to womankind in a disc of madrigals and chant from Tudor England catchily titled My Fayre Ladye. There is scarcely any difference between the idealized portrait of the beloved in the erotic madrigals and the way worshippers celebrated the perfection of the Virgin Mary. Some of the chants included here, from a collection published in Paris in 1502, take their texts from the sensuous Song of Songs and address the Virgin quite explicitly as a lover. Not many of us were taught hymns with words like these: "How beautiful and how fair you are, dearest, in your room, and your breasts are its clusters."

Some of the madrigals cross the line of bawdiness. William Cornysh's rollicking ballad "Blow Thy Horn, Hunter" compares the beloved to a hunted deer, after the huntsman has tracked her down and killed her, the song tells us, his "horn is well unmet, his bolt may fly no more." The six men of Lionheart, accomplished veterans of the early-music scene in New York, sing with a persuasive mixture of refinement and spirituality, making subtle distinctions in their interpretations of the various genres represented. The recorded sound is clear enough, but too dry for my taste.

**MOZART: Serenade No. 10, in B-flat Major ("Gran Partita," K. 361); Serenade No. 12, in C Minor (K. 388).**

Winds of Orchestre des Champs Elysées, Philippe Herreweghe cond. HARMONIA MUNDI 90760 (70 min).

**MOZART used the term "serenade" for various kind of works, and the three for wind ensemble to which he affixed that title in the early 1780s are out-and-out mas-**

Another choir from New York, Lionheart, explores profane as well as sacred musical homages to womankind in a disc of madrigals and chant from Tudor England catchily titled My Fayre Ladye. The recorded sound is clear enough, but too dry for my taste.

**DUFAY: The Virgin & the Temple (Chant and Motets).**

Pomerium, Alexander Blachly dir. DEUTSCHE GRAMMOPHON ARCHIV 447 773 (60 min).

**LIONHEART: My Fayre Ladye (Tudor Songs and Chants).**

Lionheart. NIMBUS 5512 (60 min).

**PUCCINI: La Rondine; Morire?; Le Villi (excerpts).**

Angela Gheorghiu (Magda), Roberto Alagna (Ruggiero), others: London Voices: London Symphony, Antonio Pappano cond. EMI 56338 (two CDs, 121 min).

Although formally a through-composed opera, La Rondine was originally conceived as an operetta in the Viennese style—and it shows. A loose series of subplots provides vehicles for a series of exuberant love duets, bittersweet ballads, and amusing choral scenes. The opera's first big number, the aria "Chi il bel sogno di Doretta," is one of Puccini's most inspired flights of melody and has become a recital staple; Angela Gheorghiu here turns it in a classic performance, overflowing with emotion, of this wistful paean to romantic love.

Her rich, creamy soprano is ideally suited to the part of the court eserv Magda, and she is well partnered by tenor Roberto Alagna, as the naive Ruggiero, the country bumpkin on his first visit to Paris. The third act is basically one long, rapturous duet between the two of them, interrupted by a pretty but irrelevant scene between the poet Prunier and the maid Lisette, delightfully sung by William Matteuzzi and Inva Mula.

The opera is short, lasting scarcely an hour and a half, and the disc is filled up with some fascinating oddities: "Morire?"—a morbid song about death, passionately sung by Alagna, and some excerpts from Puccini's first opera, La Villi, that give the orchestra and chorus a chance to shine. The music is brilliantly scored, and conductor Antonio Pappano elicits an intensely colorful performance from the London Symphony Orchestra.

**SCHUMANN: Cello Concerto; Symphony No. 4.**

Christophe Coin (cello); Orchestre des Champs Elysées, Philippe Herreweghe cond. HARMONIA MUNDI 901908 (59 min).

Recordings of the Schumann Cello Concerto seem to come a dime a dozen these days, and the same for the Symphony No. 4. The chief interest of this new recording is the use of a modest-size period-in-
in the concerto. Combined with the lighter orchestral texture provided by the period instruments, that's all to the good from an orchestral texture provided by the period instruments. That's all to the good from an instrumental standpoint; I heard none of the occasionally clotted sonorities that can crop up in the final movement. Score points here for conductor Philippe Herreweghe and his excellent body of players.

I have mixed feelings about the symphony, which is offered here in the 1851 revised version. For me, that score works better with the heightened by modern instruments. The strings here sound a bit too bland and the brass and timpani somewhat too blaring. I'd also like more adrenalin in the opening movement. The middle movements go well, and the last is just fine. Good sound all the way. D.H.

TCHAIKOVSKY: Swan Lake
(1895 version).
Maryinsky Theater Orchestra, Victor Fedorov cond. JVC/WEA 6500 (two CDs, 135 min).

While other recordings of Swan Lake have been touted as "authentic" versions, comprising all the music Tchaikovsky composed for the first of his great ballets, the point of Victor Fedorov's new one with the Maryinsky Theater Orchestra is to give us the music that was performed in the celebrated Petipa/Ivanov production of January 1895 (more than a year after the composer's death). This means that the numbers are performed in a sequence somewhat different from the original, that some of them are split for fragmented repositioning while others are shortened or dropped, and that we also get several of Tchaikovsky's little-known piano pieces as orchestrated for the 1895 production by Riccardo Drigo. The notation with the new set makes the point that it was this version of Swan Lake, after all, that took the work off the shelf and made it one of the most beloved in the dance repertory.

So, while many listeners may have become familiar and comfortable now with the original layout of the musical design as related to the original scenario, more than a few balletomanes may want something they can relate more directly to their experience in the theater — and they are not likely to find a more attractive souvenir than the one offered here. Fedorov has been conducting the orchestra of St. Petersburg's venerable theater in staged performances of Swan Lake for some time, and familiarity in this case has not bred anything remotely related to contempt. The performance, eminently danceable from start to finish, never says, it has a well-sustained dramatic momentum, and the level of both ensemble and solo playing is consistently high. The sound is not only rich and full but very focused, and the documentation is for the most part exceptionally thoughtful and comprehensive. For music lovers, this is not a replacement or substitute for the original version, but it's still a lovely production.

WAGNER: Die Walküre.
Poul Elming (Siegmund), Alessandra Marc (Sieglinde), Gabriele Schnaut (Brünnhilde), Robert Hale (Wotan), Alfred Muff (Hunding), Anja Silja (Fricka), others; Cleveland Orchestra, Christoph von Dohnanyi cond. London 440 371 (four CDs, 225 min).

Although London's new account of this most favored opera in Wagner's Ring cycle falls short of its most recent predecessors, by James Levine (DG) and Bernard Haitink (EMI), it has many virtues, and conductor Christoph von Dohnanyi's contributions rank very high among them. His approach is closer to Haitink's than to Levine's in emphasizing forward momentum rather than massive solemnity. Nonetheless, the grand moments — the Love Duet in Act I, the death-prophecy scene in Act II, and the entire Scene 3 of Act III — come off with power and majesty, at well-chosen tempos, and are executed with orchestral brilliance. Act I starts off very promisingly with a winning pair of Valsungs. Alessandra Marc's Sieglinde is opulent in sound, and she brings considerable interpretive skill to her crucial narrative ("Der Mannes Sippe"). She rises triumphantly to Wagner's demands in her great moment in Act III ("O hehrstest Wander"). As Siegmund, Sieglinde's twin brother, Poul Elming is a worthy partner in every way: a sturdy heroic tenor who sings with a lyrical legato and combines youthful vigor with manly dignity.

Robert Hale's Wotan is convincing in his confrontations with Fricka and, later, Brünnhilde. His voice lacks the imposing sonority required for the ideal Wotan, but he manages the range skillfully and leaves us with an intelligently conceived image of the troubled god. Gabriele Schnaut's Brünnhilde is also thoughtfully conceived and, in some details, well executed. Unfortunately, her voice wavers on sustained notes, a persistent flaw that compromises her good intentions. Anja Silja brings meaningful declamatory force to Fricka's pronouncements; there is strength, even grandeur in what she attempts to do, but those attempts are frequently undone by her limited vocal range and power. Alfred Muff was not the happiest choice for Hunding: a deep bass is needed here, not a bass-baritone, let alone a sometimes unsteady one. The Waltraute (Karin Götzl) and her seven Valkyrie companions are good but not outstanding — which also applies to the entire production.

G.J.

STEREO REVIEW DECEMBER 1997 127
STEERING CLEAR OF THE BOMB, PELLA WITH MUSICAL DASH AND DASHING PIANISTIC MANNERS, CURIOUSLY Hybrid TRIPLET CONCERTO TRANSPIRED FROM EARLIER KEYBOARD PIECES. RINALDO ALESSANDRINI HAS GREAT FLAIR AS A PLAYER, AND HE IS A SUPERB LEADER OF THIS CRACK EARLY-INSTRUMENT GROUP; THE PERFORMANCES OOZE ENERGY AND STYLE IN THE ITALIAN MANNER. E.S.

BEETHOVEN: Piano Sonatas No. 29 ("Hammerklavier") and No. 31. Charles Rosen (piano). MUSICMASTERS 67183 (58 min). Charles Rosen's recording of Beethoven's last six sonatas (Sony) has been valued for more than twenty-five years for the pianist's clear-eyed understanding, ability to focus on the grand design without neglecting detail, and largely successful quest for the essence of the music on its own terms. These virtues are deepened on this vividly recorded new disc — particularly in the eloquently communicative realization of No. 31, though a little more visceral impact might not have been amiss in the "Hammerklavier." R.F.

MURRAY PERAHIA: Plays Handel and Scarlatti. Murray Perahia (piano). SONY 62785 (69 min). Murray Perahia, best known for his solid performances of Classical and early Romantic piano music, takes on early eighteenth-century harpsichord literature in a dashing and pianistic manner. Curiously, his three Handel suites are characterized by a lot of elegance and even delicacy, but his seven Scarlatti sonatas are brilliant, energetic, and full — exactly the reverse of the characteristics ascribed to these composers by Handel's biographer Mainwar- ing (quoted in the lively annotation). E.S.

"Hammerklavier," one of four choruses from his Songs of Troubled Times, elicits a tour de force performance from countertenor James Bowman. Tchai-kovsky is represented by a few short works, and the disc concludes with a fine performance of Arvo Part's Magnificat, a long and rather droopy piece by Henryk Gó-recki, and a glorious little arrangement of the Italian manner. E.S.

BOSTON POPS: American Visions. Boston Pops, Keith Lockhart cond. RCA Victor 68786 (66 min). Ferde Grofé's comball MISSISSIPPI SUITE AND JEROME KERN'S MARK TWAIN SHARE COMPANY WITH JOHN WILLIAM'S HYMN TO NEW ENGLAND, HOWARD HANSON'S "MAYPOLE DANCES" FROM MERRY MOUNT, AND HARL Mc- DONALD'S "Fiesta" FROM San Juan Capistrano, after which we move up several pegs to "Buckaroo Holiday" FROM COP- land's RODEO, RON NELSON'S SAVANNAH RIVER HOLIDAY, "Times Square" FROM BERN- stein's ON THE TOWN, AND "Housatonic AT Stockbridge" FROM Ives's Three Places in New England. The Bernstein and Nelson get splendidly alert performances, and justice is done to the Ives masterpiece. The sound is bright and clean. D.H.

YING HUANG: Opera Arias. Ying Huang (soprano), London Symphony, James Conlon cond. SONY 62687 (68 min). Star of a recent film version of MADAMA BUTTERFLY, pretty young Ying Huang is in the forefront of promising operatic newcomers. Although she is from China, she seems quite at home in this collection of familiar Italian arias, and her pure clear voice is especially persuasive in the Puccini excerpts. Williun Livingstone

BACH: Harpsichord Concertos in D Minor (BWV 1052), F Major (BWV 1057), and D Major (BWV 1054); Concerto for Flute, Violin, and Harpsichord in A Minor (BWV 1044). Rinaldo Alessandrini (harpsichord); Claudio Ruffa (flute); Francesca Vicari (violin); Concerto Italiano, Rinaldo Alessandrini cond. OPUS 111/HARMONIA MUNDI 30-153 (72 min). Very dynamic performances of four of Bach's "coffee house" concertos, including a version with solo harpsichord of the fourth Brandenburg, two transcriptions of violin concertos, and the curiously hybrid triple concerto transcribed from earlier keyboard pieces. Rinaldo Alessandrini has great flair as a player, and he is a superb leader of this crack early-instrument group; the performances oooze energy and style in the Italian manner. For the first time on record, new disc — particularly in the eloquently communicative realization of No. 31, although a little more visceral impact might not have been amiss in the "Hammerklavier."

SWING... the only magazine written by, for, and about people in their 20s. Just fill out the attached postage-paid card, and we'll take care of the rest. If you're delighted with SWING, you'll receive 9 more issues (10 total - 1 year) for just $9.97. You save over 56% off the newstand cost of $29.50! (If you find that SWING doesn't measure up, simply write 'cancel' on your bill and owe nothing. The free issue is yours to keep with our compliments.)

SWING will help you get more out of your career, your relationships, your leisure time, and your future. Send for your free issue now!
The Shelving Shaped By Your Needs.

Archetype System® features modular elements that you combine and, as needs change, reconfigure. Shelves are rigid, neoprene isolators damp vibration, and solid steel threaded support posts provide infinite vertical adjustability. Options include acoustic mounting spikes, large-capacity drawer, bookends and section-bridging shelves. In solid hardwood or fiberboard. Call or fax for our free color brochure.

Stereo Review PRESENTS
THE BASIC REPERTORY ON COMPACT DISC
A CRITICAL DISCOGRAPHY

Noted critic Richard Freed's revised and updated choices of the best current CD's of the most often performed music in the classical orchestral repertory. Hundreds of recommended recordlings of symphonic works from Bach to Wagner! To receive your copy of this handy pamphlet, send a self-addressed business-size (#10) envelope, stamped with 55¢ postage, and a check or money order for $3 payable to Stereo Review (no cash, please), to The Basic Repertory, Stereo Review, 1633 Broadway, New York, NY 10019. Orders from outside the U.S.A. must be accompanied by a self-addressed envelope and $4 (payable in U.S. funds).

MOVING? Please give us 8 weeks advance notice. Attach label with your old address, and write in new address below.

RENEWING? Check box below and attach label with corrections marked, if any.

SUBSCRIBING? Check box and fill in coupon. For gift subscriptions attach a separate sheet.

Send STEREO REVIEW for 1 year at $17.94

☐ New Subscription    ☐ Renewal    ☐ Payment enclosed    ☐ Bill me
Canadian and foreign orders add $8 per year.

Return of the Son of Digital Cannons

Maybe DVD really stands for Déjà Vu Disc. Fifteen years ago, I was a hi-fi-crazed teen latched onto a Technics SL-1600 direct-drive turntable, one of the last and best of the 1970s S-shaped- tonearm battle-tables, before the sad days of Duran Duran and P-mount cartridges. I was trying to set it up to play Telarc’s infamous digitally mastered LP of Tchaikovsky’s 1812 Overture with the torture-track cannon shots that chewed up lesser phono cartridges like so much Chex party mix.

Man, what a scam. They even put a photo of a microscopic view of the cannon-shot grooves on the cover! I didn’t even like classical music, but I was hooked. I fed that Technics turntable every phono cartridge I could get my hands on (including a wicked-cool ADC Integra that looked like the nose of a black Concordé jet) till that proud moment when I got hold of a Shure V15 and finally heard those stupid digital cannons boom through my beloved Cerwin-Vega thunderboxes without the needle jumping the wildly undulating groove with a nasty crack. And then it hit me: I was a teenage hi-fi geek! I ripped the Telarc disc off my turntable, threw on Sabbath Vol. 4, and swore never to sit through a hi-fi demo disc of the 1812 again.

Fast-forward to today, and what am I doing? I’m sitting here in my living room listening to Delos International’s DVD Spectacular (Delos DV 7001 $24.98), a music-oriented DVD, jointly produced by DOLBY Labs, whose showcase is a wowie-zowie 5.1-channel Dolby Digital version of the 1812! Am I insane? Maybe so. But let me tell you, this disc is a glimpse of the audio future — of the DVD-Audio disc — done right. I’ve cored through these pages about the gimmicky production of some of DTS’s remixed 5.1-channel CDs, but the two music tracks on this Delos DVD — Tchaikovsky’s 1812 Overture, conducted by Andrew Litton and performed by the Dallas Symphony Orchestra, and Richard Rodney Bennet’s Bucaroole, performed by pianist Carol Rosenberger — are the real deal. Instead of ping-ponging the instruments around the speakers, the 5.1-channel mixes spread the music across the front three speakers and present the actual sound of the concert hall in the stereo surround channels.

Look, I’m not a classical-music nut, and I couldn’t have lived without ever hearing the 1812 again, but the DVD Spectacular version is, bar none, the most realistic and lifelike 5.1-channel recording I’ve heard to date. I wish every recording engineer on the planet could listen to this Delos disc on a good home-theater rig just to hear how much better multichannel music recordings sound when the producer keeps the music in the front channels and the recording venue’s natural ambience in the rear surrounds. Instead of panning everything around to all the speakers for that cheesy “Sound! Sound! All Around!” effect.

Famed recording engineer John Eargle has long promoted the idea of multichannel surround sound for music, and he has been recording his sessions in both stereo and surround for some time in preparation for the DVD era. Actually, Eargle couldn’t even wait for DVD — Delos has released more than a half-dozen classical music CDs mixed in Dolby Surround for playback on any home-theater system with a Dolby Pro Logic decoder. Eargle and Delos don’t feel like waiting for the DVD-Audio format either, so they’re releasing Eargle’s surround mixes on DVD-Video discs, which means that the 5.1-channel audio is encoded in Dolby Digital AC-3, held at its maximum bit rate of 384 kilobytes per second for the best sound quality.

I’ve been to Myerson Hall in Dallas where the 1812 track was recorded, and this recording brought me closer to the sensation of actually being there than any of the two-channel stereo CD recordings I’ve heard that were made in the same hall, Eargle’s included. And I hold this disc up to any critic of Dolby Digital who claims that it’s not nearly good enough for music recordings. Of course, I’m still holding out for uncompressed 24-bit PCM digital audio on DVD-Audio, because I think it will sound better than AC-3. But let me tell you something, the 5.1-channel music recordings on this Delos disc sound amazing. They’re clean, open, and free of the so-called “harshness” that uninformed critics of AC-3 attribute to the format. This AC-3-encoded source material is so pristine and well recorded by John Eargle that you may be just as surprised at what you didn’t hear as at what you do.

But the real star of the show is Eargle’s 5.1-channel mixture of the 1812. When he recorded the Dallas Symphony Orchestra at Myerson Hall, Eargle used twelve microphones in a combination of stereo and close-miking techniques to capture, as accurately as possible, the sound of the musicians onstage and the ambient swell of the concert hall. A pair of Sanken CU-41 cardioid microphones, crossed in the classic ORTF stereo-pickup pattern, were used as the main miking pair located near the front of the stage, flanked by a pair of Sennheiser MKH-20 omnidirectional mikes on either side. A pair of ORTF-crossed Neumann KM-140s were positioned closer in on the stage to pick up the woodwinds, while a pair of widely spaced Neumann KM-130 omnidirectional mikes were used for the chorus at the back of the stage. The tympani and basses were miked with a single KM-140 apiece, and a pair of these mikes were placed in the rear left and right corners of the concert hall, pointing away from the stage, to isolate and capture the rich, sonorous ambiance. It’s the stereo ambience fed from these KM-140s that you hear in the rear channels of DVD Spectacular’s 5.1-channel recording of the 1812 Overture.

Besides the two music recordings, DVD Spectacular is chockful of other treats, like a full complement of audio and video test tracks to help you set up your home theater and a slew of Dolby Digital theater trailers to rock your living room just like they do at the movies. All in all, it’s a hell of a lot of fun for just 25 clams, and a mouth-watering taste of the kind of spatial realism we can expect to hear from recorded music once DVD-Audio arrives in the flesh.

You can purchase DVD Spectacular at any store that carries Delos CDs, or you can order the disc directly from Delos at 800-364-0645, or on the World Wide Web at www.delosmus.com.
The horse, the automobile. The typewriter, the computer. The cassette tape, the Digital Recordable MiniDisc. Record music on your home deck and play it back anywhere. Just like tape. Digital sound and instant access to any song. Just like a CD. Record or mix up to 74 minutes from your CDs. All on one 2.5-inch MiniDisc. Then take it anywhere you go, and play it back on your car deck or portable player. Now that's progress.
A Revelation In High-End Sound!

“I was floored by the Paradigm Active/20...this is hands down the best sounding two-way 6-incher I’ve heard at any price...highly recommended!”

-Cory Greenberg, Audio Magazine

“this particular system is...ten leaps forward in terms of performance...destined to become a legend.”

-Tom Nussine, Video Magazine

Paradigm Reference fully powered speakers are highly advanced Integrated Active Systems designed to deliver breathtaking high-end sound!

At the heart of these incredible speakers are highly sophisticated electronic crossover/amplifiers. These are matched to high precision drive units in a closed system that utilizes both active frequency and phase optimization. The result is unprecedented spectral and phase coherent accuracy.

We invite you to visit your nearest Authorized Paradigm Reference Dealer and experience these stunning Reference Active speaker systems for yourself!
