VAB LIBRARY SECOND ANNUAL NAB BROADCAST ENGINEERING CONFERENCE BILTMORE HOTEL . LOS ANGELES, CALIFORNIA

MAY 19-22, 1948

ENGINEERING

NATIONAL ASSOCIATION OF BROADCASTERS 26th ANNUAL CONVENTION

2nd ANNUAL BROADCAST ENGINEERING CONFERENCE AGENDA AND PROGRAM SCHEDULE

TUESDAY, MAY 18, 1948

NAB Engineering Executive Committee Meeting 8:30 a.m., Biltmore Hotel

WEDNESDAY, MAY 19, 1948

REGISTRATION for Broadcast Engineering Conference Galleria, Biltmore

EXHIBITS OPEN

NAB DEPARTMENT OF ENGINEERING

Royal V. Howard, Director Neal McNaughten, Assistant Director

Engineering Office 2nd Floor, Biltmore Hotel

NAB ENGINEERING EXECUTIVE COMMITTEE

Chairman: Orrin W. Towner, Technical Director, WHAS, Louisville

Members:

James V. Cosman, WPAT
Paul de Mars, Raymond M. Wilmotte, Inc.
A. James Ebel, WMBD
Oscar C. Hirsch, KFVS
J. R. Poppele, WOR

K. W. Pyle, KFBI
R. J. Rockwell, WLW

Network Advisory Members:

O. B. Hanson, NBC E. M. Johnson, MBS William B. Lodge, CBS Frank L. Marx, ABC

Board Liaison:

T. A. M. Craven, WOL G. Richard Shafto, WIS

ENGINEERING COMMITTEE

District 1-Richard Blackburn, WTHT District 2-Armand G. Belle Isle, WSYR District 3-Louis E. Littlejohn, WFIL District 4-D. C. Woods, WRVA District 5-W. Walter Tison, WALT District 6-H. Vernon Anderson, KLOU District 7-R. H. Delany, WHK District 8-Donald A. Burton, WLBC District 9-Oscar C. Hirsch, KFVS District 10-Mark Bullock, KFAB District 11-John N. Fricker, KSTP District 12-K. W. Pyle, KFBI District 13-Roy M. Flynn, KRLD District 14-Rabert Owen, KOA District 15-Paul R. Bartlett, KFRE District 16-Ralph G. Denechaud, KECA District 17—George A. Freeman, KRSC

J. R. (JACK) POPPELE, Member NAB Engineering Executive Committee, is Vice-President in Charge of Engineering of WOR and WOR-TV, New York, in addition to Bamberger's upcaming TV Station WOIC, Washington. Mr. Poppele is a Director of MBS, President of TBA, and is not only one of TV's outstanding figures but one of the nation's leading engineers. As Chief Engineer of Station WOR, he put its first pragram on the air in 1922. Mr. Poppele is a Director and Seniar Member of IRE, a Director of VWOA, a Fellow of the RGA, and Member of the Acaustical Association, the SMPE, and the AIP.

THURSDAY, MAY 20, 1948

MORNING SESSION-9:30 A. M.

Presiding: J. R. Poppele

Vice President and Chief Engineer, WOR-Mutual Member, NAB Engineering Executive Committe

COMPARATIVE FIELD MEASUREMENTS—COMPARISION OF PROPAGATION CHARACTER-ISTICS BETWEEN CHANNEL 4 AND CHANNEL 7 IN THE WASHINGTON METROPOLITAN AREA

E. C. Page, Consultant, Washington, D. C., for RCA Victor Corporation

TELEVISION AND FM TRANSMITTING PLANTS

Raymond F. Guy, Manager, Radio & Allocations, Engineering, National Broadcasting Company, New York, New York; and John L. Seibert, Project Engineer, National Broadcasting Company, New York, New York

THE COMMUNITY TELEVISION STATION

James D. McLean, Commercial Mgr., Philco Television Broadcasting Corp., Philadelphia, Pennsylvania

TV STUDIO SYSTEMS

M. A. Trainer, Manager, Television Equipment, RCA-Victor, Camden, New Jersey

LIGHT SOURCES FOR TELEVISION STUDIO LIGHTING

F. E. Carlson, Illuminating Engineer, Lamp Department, General Electric Company, Cleveland, Ohio, presenting paper prepared by Richard Blount, Engineer, Lamp Department, General Electric Company, Cleveland Ohio

REMOTE CONTROL TELEVISION LIGHTING

Captain W. C. Eddy, USN (Ret.), Director of Television, Balaban and Katz Station WBKB, Chicago, Illinois

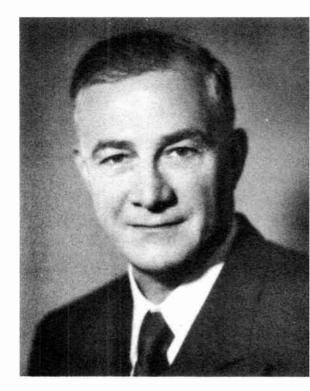

LUNCHEON-12:30-2:15 P. M.

Presiding: Royal V. Howard
Director, NAB Department of Engineering

THE ENGINEER'S ROLE IN BROADCASTING

A Message of Greeting—Judge Justin Miller, President, NAB

ROYAL V. HOWARD (B. Sc.) is Director of the NAB Department of Engineering. From 1934 to 1947 he was Vice-President, Engineering, of Associated Broadcasters, Inc., San Francisco. During the War he was a Member of the Board of War Communications and built international broadcast stations KWID and KWIX. He served with the Army in Europe as Director of a special ETOUSA headquarters staff for OSRD. Since joining NAB in 1947 he has been a U. S. Delegate at the International Telecommunications Canferences, Atlantic City, and the NARBA Engineering Conference, Havana. Mr. Haward is Chairman of the NAB Recording and Reproducing Standards Committee and is a Member of several RTPB, RMA and ASA standardization cammittees. He holds several letters patent on radia apparatus. He is a Senior Member of IRE and a Member of AIEE.

JUDGE JUSTIN MILLER
President
National Association of Broadcasters

FRANK L. MARX, Network Advisory Member of the NAB Engineering Executive Committee, is Vice-President in Charge of Engineering for American Broadcasting Company, NYC, and a pioneer in radio engineering. He entered the broadcasting field in 1925, and was associated in the construction of vorious radio stations throughout the United States. For 15 years he was Chief Engineer of WMCA, New York. In 1944 Mr. Marx became Technical Director of the Blue Network and, in 1945, was appointed Director of General Engineering of ABC. He has served on various RTPB panels and on the Committee on Sabotage of Radio Stations during the War. Mr. Marx is a Senior Member of the IRE.

THURSDAY, MAY 20, 1948

AFTERNOON SESSION-2:30 P. M.

Presiding: Frank Marx
Vice-President in Charge of Engineering, ABC
Network Advisory Member, NAB Engineering
Executive Committee

THE CBS GRAND CENTRAL TELEVISION STUDIOS

William B. Lodge, Director of General Engineering, Columbia Broadcasting System, New York, presenting paper prepared by A. B. Chamberlain, Chief Engineer, CBS, New York

TELEVISION FIELD BROADCASTS, INCLUDING RADIO RELAY

Robert Clark, TV Operation Supervisor, National Broadcasting Company, New York

NETWORK FACILITIES FOR AUDIO AND VIDEO BROADCASTING

Ernest H. Schreiber, Engineer, The Pacific Telephone and Telegraph Company, Los Angeles, California

INSTALLATION AND MAINTENANCE OF TELEVISION RECEIVERS

Edward Edison, Field Engineer, Los Angeles Television Operation, RCA Service Company, Inc., Los Angeles, California

ABSOLUTE SPEED FOR MAGNETIC TAPE AND DEMONSTRATION OF TAPE REPRODUCTION AT 30" PER SECOND

R. H. Ranger, President, Rangertone, Inc., Newark, N. J.

MAGNETIC TAPE EDITING DEVICE

H. W. Pangborn, Assistant Chief Engineer, KNX-CBS, Hollywood, California, presenting paper prepared by

R. S. O'Brien, General Engineering Department, CBS, New York

FRIDAY, MAY 21, 1948

MORNING SESSION-9:00 A. M.

Presiding: Paul A. de Mars,

Consultant, Raymond M. Wilmotte, Inc., Washington, D. C. Member, NAB Engineering Executive Committee

THE ECONOMICS OF COVERAGE IN FM BROADCASTING

Everett Dillard, General Manager of WASH (Washington, D. C.) and KOZY (Kansas City, Missouri) and Member-Elect, NAB Board of Directors

PAUL A. deMARS (COMDR. USNR), Member NAB Engineering Executive Committee, received his B. Sc. from M.I.T., and is a Consultant with Raymond M. Wilmotte, Inc., Washington, D. C. During World War I he served with the AEF. From 1920 to 1926 he served as Engineer with the New England Telephone and Telegraph Company. From 1927 to 1930 Mr. deMars, as Head of the Electrical Engineering Department, Tufts College, conducted extensive research in ionospheric prapagation. From 1931 ta 1941 he planned and built the pioneer Paxton and Mt. Washingtan FM stations. During Warld War II he served with the Navy. Since then he has been associated with Raymond M. Wilmotte, Inc., directing its braadcast cansulting, engineering, and construction prajects.

NEAL McNAUGHTEN, Assistant Director, NAB Department of Engineering, joined NAB in January 1948. From 1934 to 1940 he was Chief Engineer, KRGV, Weslaco, Texas. In 1941 he entered the FCC and for two years was Assistant Supervisor of the Great Lakes Monitoring Area. In 1943 he was made Assistant Chief of the Treaty Section and represented FCC on IRAC and RTPB committees. In 1944 Mr. McNaughten became FCC's NARBA Administrator. In 1945 he was made Chief, Standard Broadcast Allocations Section. In 1946 he was Secretary-General of the Second NARBA Conference and, in 1946-47, coordinated NARBA activities with the clear channel proceedings, preparing proposals for the Third NARBA. He was a Delegate to the NARBA Engineering Conference in Havana. He is a Member of the IRE.

A STUDIO TO TRANSMITTER RELAY RADIO SYSTEM

W. G. Broughton, Assistant Sales Manager, Broadcast Equipment Division, General Electric Company, Schenectady, New York, and

D. J. Nigg, Engineer, Transmitter Division, General Electric Company, Schenectady, New York

MEASURING EQUIPMENT AND TECHNIQUES FOR FM AND AM BROADCAST TRANSMITTERS

David Packard, President, Hewlett-Packard Corporation, Palo Alto, California

FACTORS AFFECTING PERFORMANCE OF DIRECTIONAL ANTENNA SYSTEMS

A. Earl Cullum, Consultant, Dallas, Texas

A SYSTEM FOR MEASURING CO-CHANNEL INTERFERENCE

Robert A. Fox, General Engineering Department, WGAR, WJR, KMPC, Cleveland, Ohio

LUNCHEON-12:30-2:15 P. M.

Presiding: Neal McNaughten,
Assistant Director, NAB Department of Engineering

THE DEVELOPMENT OF MAGNETIC RECORDING LEADING TO STEREOPHONIC SOUND and A DEMONSTRATION OF STEREOPHONIC SOUND

Dr. Haldon A. Leedy, Acting Director, Armour Research Foundation, Chicago, Illinois

FRIDAY, MAY 21, 1948

AFTERNOON SESSION-2:30 P. M.

Presiding: Orrin W. Towner,
Technical Director, WHAS, Louisville, Kentucky
Chairman, NAB Engineering Executive Committee

DEVELOPMENTS IN SOUND AND RELAY BROADCAST EQUIPMENT (Demonstrations)

J. L. Hathaway, Assistant Manager, Engineering Developments, National Broadcasting Company, New York

MODERN DESIGN FEATURES OF CBS STUDIO AUDIO FACILITIES

Lester H. Bowman, Manager, Technical Operations, Western Division of Columbia Broadcasting System, Hollywood, California, presenting paper prepared by

R. B. Monroe and

C. A. Palmquist, both of the General Engineering Department, Columbia Broadcasting System, New York

ORRIN W. TOWNER (E. E., University of Kansas), Chairman 1947-1948 of the NAB Engineering Executive Committee, is Technical Director of WHAS, Louisville, Kentucky. Mr. Towner was in charge of broadcast operation of Stations WREN and KFKU in 1927. From 1927 to 1938 he served with Bell Telephone Laborotories in its Radio Development Department. Mr. Towner was Technical Director of WHAS from 1938 to 1942. During the War he served as Associate Director of Airborne Instruments Laboratory of Columbia University, Division af War Research (1942-1945). At the close of the War Mr. Towner returned to WHAS as Technical Director. He is a Member of 1RE, AIEE, on Associate Member of SMPE and the Acoustical Society of America, and a Licensed Professional Engineer in both New York and Kentucky.

FCC-INDUSTRY ROUNDTABLE

Presiding: Royal V. Howard,
Director, NAB Department of Engineering

Inc.

FOR THE COMMISSION

George E. Sterling, Commissioner
John A. Willoughby, Acting Chief Engineer
Cyril M. Broum, Chief, FM Broodcost Division
Jomes A. Borr, Chief, Stondord Broodcost
Division

Hart S. Cowperthwait, Acting Chief, TV Broadcost Division FOR INDUSTRY:

Neol McNoughten, NAB
Orrin W. Towner, WHAS
J. R. Poppele, WOR
Fronk Morx, ABC
Poul A. deMors, Roymond M. Wilmotte,

GEORGE E. STERLING become Commissioner of the FCC Jonuary 1, 1940. As an amoteur his radio experience dates from 1908. Mr. Sterling studied at Johns Hopkins University and Boltimare City College. After serving overseas in Warld War I, Lt. Sterling assisted in arganizing the first radio intelligence section of the Signal Carps in France, receiving a special citation for his wark. He entered the Federal Service in 1923 as a Radio Inspector. In 1942 he became Asst. Chief Engineer and Chief af the Radio Intelligence Division and, in 1945, he was placed in charge of the Field and Research Branch. On May 1, 1947, he was appointed Chief Engineer of the FCC. Mr. Sterling is a Senior Member of IRE.

JOHN A. WILLOUGHBY has been Acting Chief Engineer of the Federal Communications Cammissian since January 1948. He attended Clemson Callege, George Washington and Harvard Universities. In 1916 Mr. Willoughby started his long radio career with the Bureau of Standards, later warking with the Post Office Department, the Army Air Carps, and the Naval Research Labaratry. He invented the submarine laap antenna, developed the interlacking "A" and "N" range system, and obtained potents on anti-fading systems. In 1930 he entered the Cammissian's Broadcast Division, being Assistant Chief of this Division from 1941 to 1944, when he was made Acting Chief, later becoming Assistant Chief Engineer in charge of Broadcast.

CYRIL M. BRAUM (Bach. E. E., University of Minnesata), Chief of FM Broadcast Division, Engineering Department, Federal Communications Commission, was Chief Engineer of WDGY in Minneapalis from January ta December, 1929. During 1930 he was with Electrical Research Products, Inc., New York City. Mr. Braum was Radio Engineer with the Minneapalis Palice Department from December, 1930, ta Octaber, 1937. From 1937 ta 1940 he was Radio Inspector with the FCC in Chicaga. From 1940 to date he has been in the Engineering Department of the FCC, having been Chief of FM Broadcast Division since 1942. He is a Voting Associate Member of IRE.

JAMES E. BARR is Chief, Standard Broadcast Division, Engineering Department, Federal Cammunications Commission. He attended Georgia School of Technology and Southern Methodist University, From 1929 to 1932 Mr. Barr was employed by Southwestern Bell Telephane Campany on autside plant construction. He was with Southwest Broadcast Campany, Fart Worth, Texas (KTAT, KOMA, KTSA, WACO and KNOW), from 1933 to 1938. From 1938 to 1940 Mr. Barr was Radio Inspector with the FCC with headquarters in New York City. Mr. Barr has been with the Standard Broadcast Division, FCC Engineering Department, from 1940 to date.

HART S. COWPERTHWAIT (Boch. E. E., University of Minnesoto), Acting Chief, Television Broodcost Division, Engineering Deportment, Federal Communications Commission, was Engineer with the Northern States Power Company from 1933 to 1940. Jaining the FCC in January, 1941, he has been Assistant Manitaring Officer at Grand Island, Nebrasko, and San Juan, Puerta Rica. He was then Intercept Officer at Wilmington, N. C., following which he was made Chief of the Intercept Section in Washington. Jaining the FCC Broadcost Division in 1944, he was Chief of the Television Allocations Section, and become Chief of Applications Section of the TV Division in 1945. He is an Associate Member of the IRE.

ESTERLY C. PAGE (Calanel, AUSR) is a Cansulting Radia Engineer, Washingtan, D. C. A cansultant in Washingtan befare Warld War II, he served averseas with the Signal Carps in charge of Invasian Radia Planning for the North African, Sicilian, Italian and Sauthern France campaigns. He received the Legian of Merit in 1946. In 1945 Mr. Page jained the Mutual Braadcasting Campany os Engineering Director and subsequently became Vice-President of the network. Since January 1, 1947, he has been a Member of the firm of E. C. Page, Cansulting Radia Engineers in Washington. He is a Seniar Member of the IRE.

COMPARATIVE FIELD MEASUREMENTS—COMPARISON OF PROPAGATION CHARACTERISTICS BETWEEN CHANNEL 4 AND CHANNEL 7 IN THE WASHINGTON METROPOLITAN AREA—

A camparative study and analysis of the caverage of two Televisian stations, aperating an Channel 4 (66-72 Mc) and Channel 7 (174-180 Mc) is presented.

The technique emplayed cansists of simultaneous mabile field intensity recordings of bath stations, employing the method specified by the FCC. The recordings are analyzed to present the field intensities exceeded for 10, 50, and 90% of the sector distances. The measured results are compared to the calculated coverage. Associated problems are also treated.

RAYMOND F. GUY, Manager of Radia Allocatian Engineering, NBC, New Yark, started aut in radia as an amateur. In Warld War I he served with the U. S. Army Signal Carps in France. In 1921, after graduatian fram Pratt Institute in Electrical Engineering, Mr. Guy started his boadcasting career with WJZ. He served five years as Braadcasting Section Head of the RCA Research Labarataries, and far 19 years has directed NBC's radia allacatians. He has played an impatant role in international braadcasting. Ta his credit are 20 years af Televisian and 11 years of FM experience. Mr. Guy is a Director and a Fellow of the IRE.

TELEVISION AND FM TRANSMITTING PLANTS-

This paper will deal with unique problems which arise in cannection with the design, construction and aperation of Televisian and FM transmitting plants. The subject matter will include layouts, navel design features, terminalogy, manitoring, test equipment and adjustments and synchranization cantral. The NBC plants in New Yark, Washington and Las Angeles will be briefly described.

JOHN L. SEIBERT (B. Sc. in E. E., University of Pennsylvania) is Praject Engineer for NBC, NYC. After early experience with Westinghouse, he has been in NBC's Radia Allocations Division, designing and building radia facilities for AM, FM, TV and International Broadcasting. Mr. Seibert has built many AM, FM and TV plants, and is currently completing the campany's station atop Mount Wilson. He has had wide experience in the field of transmitting plant design engineering and construction. He is on Associate Member of the IRE.

JAMES D. McLEAN (M. S. in E. E., M.I.T.) is not only an engineer of national standing, but is also the capable Cammercial Manager of PHILCO's TV station WPTZ in Philadelphia. After graduation in 1938 ne jained the General Electric Campany, where he worked in Radio, TV and Radar for 9 years. In 1945 he was appointed Manager of Sales, Transmitter Division of GE, where he remained until he jained Philca in 1947.

THE COMMUNITY TELEVISION STATION-

Development of community (small-city) television stations is economically necessary to obtain added coverage and revenues. Philco surveys indicate that a community television station may be constructed for a moderate investment. Twa-way microwave relays cannect this station to the nearest metrapolitan station. Operation becomes economically feasible by utilizing network pragrams and gradually expanded local pragramming.

MERRILL A. TRAINER, Manager, TV Equipment Sales, RCA, Camden, has been intimately associated with major RCA TV developments since 1930. He assisted in the first successful TV relaying between Philadelphia and New York in 1932, and helped produce the first iconoscope cameras. In 1936 he helped build NBC's TV station, and, in 1937, he assisted in the design of TV equipment for Moscow. During the war, he supervised the Company's development of airborne TV equipment for guided missiles. He is an Associate Member of IRE.

TV STUDIO SYSTEMS-

Equipment layouts for television studios of small, medium and large size will be presented and discussed. Circuit arrangements for inter-connecting, switching and monitoring will be illustrated by diagrams. Various arrangements of the audio and video units in the studio control room, film cantrol room and master control room will be shown on color slides.

FRANK E. CARLSON (B. Sc., University of Michigan) is on Illuminating Engineer of the Lamp Department of the General Electric Company in Neta Pork, Cleveland. He and his associates are responsible for the application of light to the problem of picture projection, recording and reproducing sound on film in all phases of the lighting of photographic processes, including light for motion picture and television studios. He is a Member of SMPE, IES and the Photographic Society of America.

LIGHT SOURCES FOR TELEVISION STUDIO LIGHTING-

This paper describes the characteristics of several types of light sources in terms of the television studio lighting problem. Such factors as color quality, efficiency, and the degree to which the available light can be effectively utilized by reflectors or lenses are porticularly emphasized. To the extent that fundamental doto on pickup tube characteristics are available, on oftempt is also made to evaluate each type of source in terms of pickup tube response.

WILLIAM C. EDDY (Captain, USN, Ret'd) is Director of Television for WBKB, Balobon and Kotz, Chicago. Following graduation from the Naval Academy in 1926, he served in the Submorine Service in China and Pacific waters. He joined Fornsworth Laboratories in 1932, and NBC New York in 1936. In 1940 he joined WBKB and in 1942 he returned to the Novy to command Radio Chicago. In 1947, with A. H. Brolly, he designed WBKB's relay system. Captain Eddy holds over 100 radio and electronic patents and is a designer of lighting systems and lighting accessories for television.

REMOTE CONTROL TELEVISION LIGHTING-

With the novelty ero of television fost disoppearing, the oudience now demonds lighting and stage techniques comporable to motion pictures. Continuity of action in television and restricted staging areas prohibit using motion picture techniques. New equipment has been developed to solve this function of techniartistic illumination. Remote controlled ceiling units, permitting complete flexibility and full utilization of new light sources, are fost becoming standard in television stations. A typical studio installation and the practical use of this new equipment will be the subject of this poper.

WILLIAM B. LODGE (M. S. in E. E., MIT), Network Advisory Member of the NAB Engineering Executive Committee, is Director of the General Engineering Department of CBS. Mr. Ladge joined CBS's engineering department in 1931, after two years experience in vacuum tube research at Bell Laboratories. From 1936 to 1942 he was CBS engineer in charge of their Radia Frequencies Division. From 1942 to 1944 he was Associate Director, Airborne Instrument Laboratory, Calumbia University, for OSRD. In 1944 Mr. Ladge was appointed to his present position. He is Chairman of Panel 1, RTPB, and a Senior Member of the IRE.

THE CBS GRAND CENTRAL TELEVISION STUDIOS-

This paper describes the physical and technical facilities of the new WCBS-TV studias under construction in New York City. The videa and audia systems design, meeting camplex pragram production and technical aperating requirements, will be enumerated. Emphasis has been placed an flexibility of aperation. Cansideration has been given to the importance of the audia system, cantiquity of service, and future expansion. Associated requirements including studia lighting and cantral, air canditioning, studia cues, and sound effects, as well as same major differences between these facilities and those required by average television stations, will be discussed.

ROBERT W. CLARK (E.E., Leland Stanfard) is Televisian Operations Supervisar of NBC in New York City. In 1928 he jained RCA Cammunications at Balinas, California. In 1931 he jained NBC in San Francisca and, in 1932, was appointed their Assistant Chief Engineer of KNBC. In 1937 Mr. Clark was transferred to the NBC Televisian Development graup, NYC, and caaperated in the development of the first partable TV equipment. Fram 1941 to 1944 he was engaged in war research projects. Returning to NBC in 1944 he was appointed to his present position. He is an Associate Member of IRE.

TELEVISION FIELD BROADCASTS, INCLUDING RADIO RELAY-

This will caver problems encountered in presenting television field pragrams in respect to preliminary surveys, equipment setup and pragram presentation. The relay partian of the talk will caver NBC's first experience in relay pragrams and will include recent information utilizing microwave relay equipment.

ERNEST H. SCHREIBER '(M.A., Physics, University of California) is Engineer, Pacific Telephane and Telegraph Campany, Las Angeles, having jained PT&T in 1923 at San Francisca. He has been lacated since 1929 in the Sauthern California Area affice, where he is engaged in the engineering of audia and videa network facilities. He is a Member of the IRE and Sigma Xi fraternity.

NETWORK FACILITIES FOR AUDIO AND VIDEO BROADCASTING-

This paper will describe the present methods for providing audia and videa pragram channels for radia broadcasters and will tell of the mediums available naw for transmission of audia and videa signals: Regular cable pairs, caaxial canductors, special shielded pairs, and microwave radia systems. Present plans for providing service over principal intercity rautes, types of facilities, band widths and general features will also be explained.

EDWARD EDISON (B. Sc., University of Nebraska) is Field Engineer attached to the Los Angeles Television Operation of RCA Service Company, Inc. In 1942 Mr. Edison joined the RCA Service Company. During the War years, as RCA Field Engineer, he was assigned to various Pacific Naval Bases in connection with radar installation and fleet instruction pragrams, in which connection he received a Navy Commendation. He is an Associate Member of the AIEE.

INSTALLATION AND MAINTENANCE OF TELEVISION RECEIVERS-

A brief history of RCA's growth in Televisian since 1936, leading up to the conception and launching of the RCA Service Plon for the consumer. A review of some related problems between the Television Braadcaster and the installation and service organization.

RICHARD H. RANGER, President of Rangertone, Inc., Newark, served with the Signal Corps in World War I. After the War, with RCA he worked on transoceanic telegraphy, broadcasting, and finally, facsimile. In 1930 he formed Rangertone, Inc., developing among other devices the first electronic organ in 1932. Warking with the Signal Laboratories at Fort Monmouth prior to World Wor II, Mr Ranger helped produce their first Radar. During the War, he was again with the Signal Corps, stationed first in the United States, and later with Technical Intelligence in Europe. He has adopted the German Magnetophone for use in the broadcasting field and has developed the professional magnetic tope recorder. He is a Member of the AIEE and Fellow of the IRE.

ABSOLUTE SPEED FOR MAGNETIC TAPE AND DEMONSTRATION OF TAPE REPRODUCTION AT 30" PER SECOND—

Factors determining the smoothness of the tape movement in a professional type magnetic recorder are the constancy of the tape pull of the three motors involved. First in importance is the synchronous motor. New hysteresis motors have proven particularly effective for these, and a particular adaptation will be described.

H. W. PANGBORN (B. Sc. EE, Pacific States University) is Assistant Chief Engineer of KNX-CBS, in Hollywood. Entering the broadcast field in 1932, Mr. Pangborn joined CBS Hollywood as Transmitter Engineer in 1936. He was made Transmitter Supervisor of KNX in 1943 and Facilities Engineer in September 1946. During the War Mr. Pangborn taught troining courses in electronics at California Institute of Technology and graduate-level teaching of the University of Southern California.

MAGNETIC TAPE EDITING DEVICE-

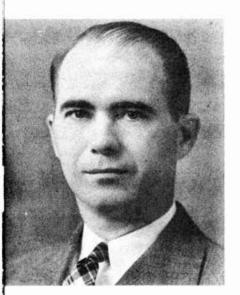

A tape-editing machine which enables the precise location of particular words or portions of words is described. By means of a variable speed forward-reverse drive the tope may be quickly reeled to the desired section. A pickup head mounted on a drum is then rotated, scanning a 2-to-5 word section of tape repetitively. Aural and visual (oscilloscope) methods for locating an exact cutting point within the scanned section are described.

EVERETT L. DILLARD, Member-Elect, NAB Board of Directors, is General Manager of WASH, Washington, D. C., and KOZY, Kansas City, Mo. He entered radio in 1919 as an Amateur and in 1928 secured a license for (now) KCKN, Kansas City. In 1930 he organized the America Pezo Supply. He was later Chief Engineer of KXBY and experimental Television Station W9XAL. In 1933 he formed the well-known Commercial Rodio Equipment Company. In 1936 Mr. Dillard became licensee of experimental FM Station W9XA, and later, K49KC, (now KOZY) which was placed in commercial operation in 1942. He established W3XL (now WASH) on 98.9 mc. Mr. Dillard organized the Continental FM network. He is a Member of the IRE, RTPB FM Panel, President of the FMA and a former Member of the FMBI.

THE ECONOMICS OF COVERAGE IN FM BROADCASTING-

The engineering considerations contributing to the best coverage consistent with economy and operation, and the required service area by FM Stations will be discussed. Advantages in coverage of FM; engineering aspects of single-site FM-AM operation; engineering aspects of a site selected exclusively for FM; the relation of transmitter power, antenna height, and antenna gain; planning for future FM expansion; effects of topography on coverage; site factors to be avoided; multipath distortion problems; allocation of the Class A FM Station; discussion of FCC standards for FM; and the use of FM by Radio Relay in FM Networking, will be discussed.

WILLIAM G. BROUGHTON (E. E., Cornell) is Sales Engineer of the Transmitter Division of General Electric Company. Joining GE in 1924, Mr. Broughton entered the radio field in 1930 and was engaged in aircraft radio development, participating in long-distance communication tests in the Caribbean with the U. S. Navy. In 1936 Mr. Broughton was appointed Supervisor of the Radio Engineering Section of the GE Advanced Course in Engineering. Since 1937 he has worked on special assignments dealing with emergency communication systems and application engineering on new-type radio equipment. He is an Associate Member of IRE.

A STUDIO-TO-TRANSMITTER RADIO RELAY SYSTEM-

A new 920-960 mc ST system for FM Broadcast service is described. Photographs, specifications, performance, and propagation characteristics are given. Application engineering and economic considerations are discussed. It is shown that a radio link between studio and transmitter is advantageous, especially where high-fidelity wire circuits are not already available, where the transmitter site is located in terrain difficult of access, or where severe climatic conditions are encountered.

DONALD J. NIGG (B. Sc. in EE, University of Kansas), Engineer, Broadcast Engineering Section of General Electric's Transmitter Division at Syracuse, has been engaged in the development and design of FM Broadcast equipment for the past three years. Employed by GE in the Test Department at Bridgeport, Conn., in June 1943 Mr. Nigg later worked on equipment for the armed forces. During 1944 he handled special radar assignments for the company at MIT's Radiation Laboratories. He is an Associate Member of IRE and a member af Tau Beta Pi.

DAVID PACKARD (E. E., Stanford) is President of Hewlett-Packard, Inc., of Pala Alto, California. From 1935 to 1938 he was with General Electric at Schenectady as an engineer in vacuum tube engineering. In 1939 with William H. Hewlett, he arganized the Hewlett-Packard Company. During his wark at the Hewlett-Packard Campany he has been especially interested in development and application of measuring instruments. Mast recently his work has included supervision of the development of monitoring and measuring equipment for broadcast applications. He is a Fellow of the IRE, Member of AIEE (now serving on the AIEE Committee on Electronic Instruments) and a Member of Phi Beta Kappa and Sigma Xi.

MEASURING EQUIPMENT AND TECHNIQUES FOR FM AND AM BROADCAST TRANSMITTERS—

Techniques and equipment involved in making gain, distortion, intermodulatian, noise and residual hum measurements at AF channels in braadcasting transmitters are described, as well as the relative merits of measurements, precautions, and interpretations necessary to obtain reliable information.

Measurements of overall performance with emphasis on FM equipment; means of demodulating the carrier to provide the necessary measuring signals; the problem of measuring carrier deviation and modulation swing in FM transmitters; the application of monitaring equipment to measure residual AM modulation on FM transmitters, together with normal measurements, are described.

A. EARL CULLUM (B. Sc. in Communications Engineering, M1T) is a Consulting Radia Engineer of Dallas, Texas. In 1931 he became Communications Engineer with American Airlines. In 1934 and 1935 he was Vice President and Chief Engineer of the Southwest Broadcasting Company, Fort Worth. Since 1936 he has headed the firm of Cansulting Radio Engineers in Dallas, Texas. In 1942 he was appointed Research Associate at the Radia Research Laboratory, Harvard, and in 1943-1945 was Associate Director of the Laboratory. Mr. Cullum is a Fellow and Director of the IRE.

FACTORS AFFECTING PERFORMANCE OF DIRECTIONAL ANTENNAS-

A brief review will be mode of the technical aspects that must be considered in designing directional antennas. This review will bring aut not only the problems of protection and coverage, but will also bring out the aspects that affect the stability and efficiency of directional ontennas. A review will then be made of the modern methods used to calculate, adjust, and maintain directional antennas.

ROBERT A. FOX is Engineer, General Engineering Department for the Richards Stations (WGAR-WJR-KMPC) Cleveland, Ohia. While attending Ashland College and the University of Illinois he warked as a Plant Engineer for the Star Telephane Campany, becaming an engineer there from 1926 to 1928. In 1928 Mr. Fax was appointed Chief Engineer of the Lorain Telephone Campany where in 1931 he established its ship-to-shore telephane service on the Great Lakes. In 1936 he jained UBC in Cleveland and in 1941 he joined WGAR. On leave af absence in 1942, he canducted war research at Calumbia University. In 1943 the RFC placed him in charge of their comunications in the South American area. Fram 1944 ta 1945 he was a Combat Scientist with OSRD, serving with distinction with the Army in both European and Pacific theaters as an Operational Analyst. He is a Seniar Member af IRE.

A SYSTEM FOR MEASURING CO-CHANNEL INTERFERENCE—

This paper describes a system for continuously recarding the ratia of desired ta undesired signal for stations operating on the same channel. The system emplays a receiver having constant output aver a wide range of input voltage fallowed by a selective amplifier which isolates the heterodyne voltage when on undesired signal is present. The selective amplifier aperates a graphic recarder whose reading is proportional to the ratio of desired to undesired signal.

HALDON A. LEEDY (Ph. D., University of Illinois) is Acting Director of Armour Research Foundation, Chicago, Illinois. From 1933 to 1938 Dr. Leedy held the post of Assistant in Physics at the University of Illinois. In 1938 he joined the Armour Research Foundation as Physicist, and in 1944 become Chairmon of Physics Research, which position he held until 1948. He is a member of Sigma Xi, Physics Club of Chicago, the Acoustical Society of America, the ASA, the American Society for Testing Materials, the American Institute of Physics, the AIEE, and the Illinois State Academy of Science, and a Senior Member of IRE.

THE DEVELOPMENT OF MAGNETIC RECORDING LEADING TO STEREOPHONIC SOUND and A DEMONSTRATION OF STEREOPHONIC SOUND.

Recent improvements in the design of recording heads, the use of high frequency bios, and improved magnetic moterials have resulted in a remarkable increase in the quality of magnetic sound. The talk will be illustrated by a demonstration of the basic principles of magnetic recording and a demonstration of a stereophonic sound reproduction system, with sound recorded on three magnetic tracks, simultaneously, on a single paper tape corresponding to three microphones placed in the sound field. Reproduction is obtained by placing laudspeakers in positions corresponding to those of the original sound source.

J. L. HATHAWAY (B. Sc. in E. E., University of Colorodo) is Assistant Monoger of Engineering Developments, NBC, New York. In 1929 he joined NBC where, os a member of the development group, he has since engaged in all fields of NBC's engineering activities. While on leave of absence from 1941 to 1943 he served as Special Research Associate at Harvard University, performing underwater sound developments work for the U. S. Novy. In Octaber 1947 he was appointed to his present position. He is a Senior Member of the IRE.

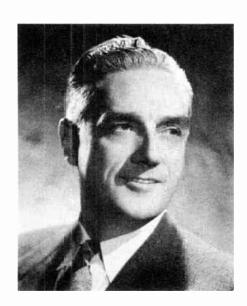

DEVELOPMENTS IN SOUND AND RELAY BROADCAST EQUIPMENT-

A newly designed pock-type transmitter and o miniature field pick-up omplifier are described. These are highly effective, incorporating several new and useful facilities. The transmitter represents a great improvement over similar prewar transmitters, and the field amplifier fulfills the need for a high-quality easily-operated unit which can be carried in a standard briefcase.

LESTER H. BOWMAN is Monoger of Technicol Operations, Western Division of CBS with headquarters in Hollywood. He attended the College of the City of New York and Volparoiso University in Indiano. Mr. Bowman, a veteran wireless operator, joined CBS Engineering Department in New York City in 1929. In 1931 he was appointed Chief Engineer of CBS Washington Station WTOP (then WJSV), in 1936 transferring to his present position with CBS-KNX. Mr. Bowman is a Member of IRE.

MODERN DESIGN FEATURES OF THE CBS STUDIO AUDIO FACILITIES-

The design of o recently completed broadcasting studio audio-control console, with facilities copoble of hondling the origination of the largest and most elaborate radio productions, is described. This unit, although comparable in size to a standard office desk, contains as much equipment as formerly required three or more standard equipment racks. Many new and novel features are included, and the performance is well within requirements set forth for AM, FM and Television audio facilities. Although designed primarily for broadcasting, the fundamental ideas and methods are applicable to other services.

FRIDAY, MAY 21, 1948 EVENING INSPECTION TOUR-6:30-8:30 P. M.

INSPECTION OF MUTUAL-DON LEE BROADCASTING SYSTEM STUDIOS 1313 VINE STREET, HOLLYWOOD, CALIFORNIA

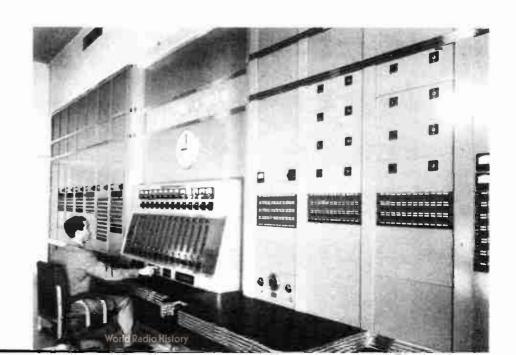

by special invitation of Lewis Allen Weiss and in cooperation with the Western Electric Company. These mast modern studios will be open especially for NAB Broadcast Engineering Conference Registrants.

LADIES ARE INVITED TO ATTEND

HOSTS:

Walter Carruthers, Chief Engineer, Studio Operations Harry Lubcke, Technical Television Director Frank Kennedy, Chief Engineer, Transmitter & FM Operations

Busses Leave Biltmore Hotel at 5:30, 6:00 and 6:30 P.M.

SATURDAY, MAY 22, 1948

INSPECTION TRIP TO FAMED MILE-HIGH-PLUS MOUNT WILSON

In charge of Arrangements: L. H. Bowman, CBS-KNX, Hollywood

Special Busses, each seating 35 passengers, will leave from the Biltmore Hotel, Los Angeles, at approximately 10-minute intervals from 9:30 to 10:00 Saturday morning, May 22nd.

The scenic trip over the new "high gear" Angeles Crest Highway will require about two hours.

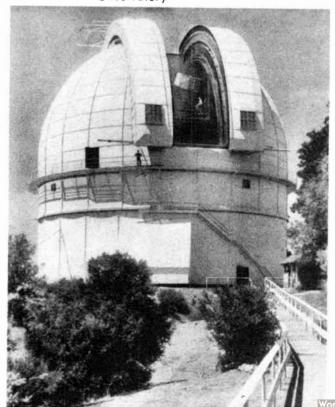

Those making the trip will see the many FM and TV stations now in operation and under construction, and PT&T TV and Communications Plant. Additionally, a visit has been arranged to see the famed Mount Wilson 100" reflecting telescope (the world's second largest telescope). Visitors will also be able to see the 150' sun tower, other observatories, and the astronomical museum. On clear days, the view from Mount Wilson's 5,714' elevation, overlooking 70 cities and fifty miles of coastline, is one of the world's greatest sights.

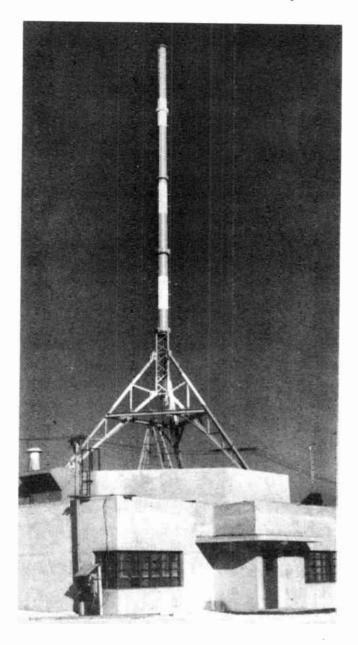

A light lunch will be obtainable at the Inn.

Returning busses will start back about 3:00 p.m. for arrival at the Biltmore at around 5:00-5:30 p.m.

LADIES ARE ESPECIALLY INVITED TO MAKE THIS TRIP

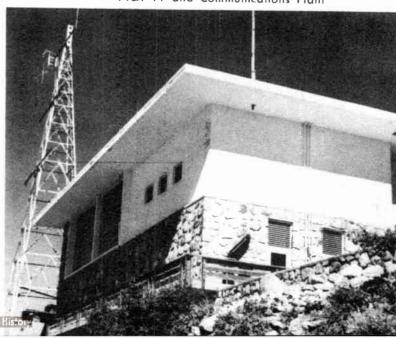

CBS-KNX, FM

PT&T TV and Communications Plant

NATIONAL ASSOCIATION of BROADCASTERS

IMPORTANT FINAL AGENDA

NAB Broadcast Engineering Conference Biltmore Hotel, Los Angeles • 1948

TIMES, DATES and LOCATIONS

of

ALL SESSIONS, LUNCHEONS

ENTERTAINMENT

and

INSPECTION TOURS

(Note especially changes in meeting and luncheon places)

Thursday, May 20

9:30 a.m. Morning Session Music Room, Galeria, Biltmore

12:30 p.m. Luncheon Biltmore Bowl

2:15 p.m. Afternoon Session

Music Room, Galeria, Biltmore
(Note: There will be a meeting in the Music Room immediately following this session which will be of interest to IRE Members)

Friday, May 21

9:00 a.m. Morning Session Biltmore Theater

12:30 p.m. Luncheon Music Room, Galeria, Biltmore

2:15 p.m. Afternoon Session Biltmore Theater

5:00 p.m. Sessions close promptly

6:30 p.m. Busses, through courtesy of Western Electric, depart Grand Street Entrance, Biltmore, for Mutual-Don Lee Studios. Ladies invited.

8:30 p.m. Busses, through courtesy of RCA, depart Mutual-Don Lee Studios promptly for Large Screen Television Demonstration at Warner Brothers Studios, Burbank. Ladies invited.

(See Special Event Announcement)

Note: Special tickets are necessary for entrance to Warner Bros. Studios. Extra tickets for entrance to Warner Brothers and busses to Mutual-Don Lee Studios may be obtained at Registration and Information Desks. No tickets required for busses from Mutual-Don Lee to Warner Brothers.

Saturday, May 22

Desk.

9:30 a.m. Busses leave from Grand Street side of Biltmore for Mount Wilson Inspection Tour. You are urged 10:00 a.m. to obtain tickets for this tour early to insure sufficient Bus facilities. Ladies are invited. Walking shoes sug-

gested. Bring your camera.

Note: Those desiring to stay at Mount Wilson for the special astronomy tour beginning at 4:30 p.m. will not ar-

rive back at Biltmore until about 8:00 p.m. Free theater tickets for Ladies are available at Registration
