Build Pulse Power HO Train Controller for Loco Crawl (page 41)
COMPARE. You'll find—as have tens of thousands of NRI graduates—that NRI training gives you more value. From the delivery of your first lessons in the remarkable NRI Achievement Kit we send you on enrolling, to "bite size" easily-read texts carefully programmed with custom-designed training kits... NRI can't be beat. Text for text, kit for kit, dollar for dollar—your best home-study buy is unquestionably NRI. (And NRI training costs you less than one semester's tuition at most colleges.)

Get a Faster Start with NRI's New, Exciting Achievement Kit

The day we receive your enrollment application we mail out your new NRI Achievement Kit. This attractive starter kit is an outstanding, logical way to help you get an easier, faster start in the training of your choice. It is the first of a number of special training aids developed in the NRI laboratories to make your adventure into Electronics exciting, meaningful. What's in it? Your first group of lesson texts; a rich, vinyl desk folder to hold your material; the industry's most complete Radio-TV Electronics Dictionary; valuable reference texts; lesson answer sheets; envelopes; pencils; pen; engineer's ruler; even postage. No other school has anything like it.

Learning Becomes an Absorbing Adventure with NRI Training Kits

Electronics comes alive with NRI training kits. What better way to learn than by doing? NRI pioneered and perfected the "home lab" technique of training at home in spare time. You get your hands on actual parts to build, experiment, explore, discover. NRI invites comparison with training equipment offered by any other school. Begin now this exciting program of practical learning. Whatever your need... whatever your education... there's an NRI instruction plan for you, at low tuition rates. Get all the facts. Fill in and mail the postage-free card today. NATIONAL RADIO INSTITUTE, Electronics Division, Washington, D. C. 20016

Join the thousands who gained success with NRI

"I average $150-$170, a month in spare time fixing radio and TV sets, and plan to start my own full-time business. I wish it were possible to tell every man of the wonderful opportunities." WILLIAM L. KING, Yoakum, Texas.

"Many thanks to NRI for the Electronics training I received. I hold a First Class FCC License and am employed as a studio and master control engineer/technician with KXJB-TV." RONALD L. WOOD, Fargo, N. D.

"I am a Frequency Coordinator for the 11th Naval District. The course I completed was priceless in my work. I was a blue collar worker, now I am a white collar worker." JOHN J. JENKINS, San Diego, Calif.

"I am a Senior Engineering Aid at Litton Systems, in charge of checkout of magnetic recording devices for our computers. Without the help of NRI I would still be working in a factory." DAVID F. CONRAD, Reseda, Calif.
Pick your field of ELECTRONICS

NOW NRI OFFERS YOU 10 WAYS TO TRAIN AT HOME IN SPARE TIME

Any training—if it is to be worth your time and money—must give you the knowledge and the skills you seek, the knowledge and the skills employers want. That's why NRI puts emphasis on providing a choice of carefully developed training plans in Electronics. NRI now offers you 10 ways to train at home . . . 10 ways to meet the challenge of today's job market by training with NRI for a career in Electronics, for part-time earnings, or simply for developing a new, fascinating hobby. The proof of the quality of NRI training plans is in its record of tens of thousands of successful graduates and the reputation NRI holds throughout the Electronics industry. Move ahead now in this exciting, growing field. Select the training plans of most interest to you and mail the postage-free card today. NATIONAL RADIO INSTITUTE, Electronics Division, Washington, D. C. 20016.

TELEVISION-RADIO SERVICING
Complete training from basic fundamentals of electricity to home entertainment equipment. You learn to fix radios, hi-fi and stereo sets, black-and-white and color TV, etc. A profitable field full or part-time.

INDUSTRIAL-MILITARY ELECTRONICS
From basic principles to computers. A comprehensive training plan that teaches you the fundamentals, then takes you into such modern-day miracles as servos, telemetry, multiplexing, phase circuitry, other subjects.

COMPLETE COMMUNICATIONS
Designed to teach and provide you with actual practice in operation, service and maintenance of AM, FM, and TV broadcasting stations. Also covers marine, aviation, mobile radio, facsimile, microwave, radar.

FCC LICENSE
Specifically designed short course to prepare you for your First Class FCC Radiotelephone License examinations. You begin with fundamental Electronic principles, advance to required subjects covering equipment, procedures.

MATH FOR ELECTRONICS
A brief course for engineers and technicians who need a quick review of essential mathematics used in industry, communications, in government jobs. Basic arithmetic review, short-cut formulas, modern digital number systems, much more.

BASIC ELECTRONICS
A concise course to teach modern Electronic terminology and components. A wealth of practical, useful information to help you better understand the field, give you some technical knowledge. For anyone who wants a basic understanding of Radio-TV Electronics.

ELECTRONICS FOR AUTOMATION
Not for beginners, but for men with some fundamental knowledge of Electronics who want an understanding of Automation in its present use. Covers process control, ultrasonics, telemetering and remote control, electromechanical measurements, other subjects.

AVIATION COMMUNICATIONS
Prepares you to install, maintain, service aircraft communications equipment. Covers direction finders, ranges, markers, Loran, Shoran, Radar, landing systems. Earn your First Class FCC License with Radar Endorsement.

MARINE COMMUNICATIONS
Covers transmitters, direction finders, depth indicators, radar, sonar, other equipment used on commercial ships and pleasure boats. Prepares you for First Class FCC License with Radar Endorsement.

MOBILE COMMUNICATIONS
Learn to install and maintain mobile equipment and associated base stations. Covers transmitters and receivers used by police and fire departments, public utilities, construction firms, taxis, etc. Prepares for First Class FCC License.

*NOTE: You must pass your FCC Licence exams (any Communications course) or NRI refunds in full the tuition you have paid.

5,000 FIRMS HAVE EMPLOYED DE VRY TECH ELECTRONICS GRADUATES...

There Must be a Reason!

Let Us Prepare You at Home or In One of Our Two Big Resident Schools for a Profitable Career in ELECTRONICS

Across the continent, leading employers of personnel trained in electronics tell us that DeVry training is "Top-Rated." Get the full story of DeVry Tech and the advantages it offers, by filling in the coupon below. The two free booklets pictured below tell of many fine opportunities for trained men in electronics: the great variety of jobs, from research, production, operation, maintenance and servicing of electronic equipment — to a neighborhood TV-radio sales and service business of your own. They'll tell you too, how DeVry has prepared men for good jobs with outstanding firms: on practical, "brass-tacks" problems with actual electronic equipment.

Here's good news: you don't need advanced education or previous technical experience to get started. If you can follow simple directions, you should be able to prepare with DeVry's help for real money in a field that may offer the opportunity of your lifetime.

Employment Service: With many employers so enthusiastic about DeVry Tech graduates, it's no wonder our Employment Service can help our graduates get started in electronics, or can assist them toward promotions later.

FREE! SEND COUPON FOR BOOKLETS ON ELECTRONICS AS A CAREER

DeVRY TECHNICAL INSTITUTE 4141 Belmont Ave., Chicago, Ill. 60641 Dept. PE-12-V

☐ I AM INTERESTED IN ELECTRONICS. Please give me your two free booklets, "Pocket Guide to Real Earnings" and "Electronics in Space Travel," also include details or how to prepare for a career in this field. The following opportunity fields (check one or more) interest me:

☐ Space & Missle Electronics   ☐ Communications
☐ Television & Radio   ☐ Computers
☐ Automation Electronics   ☐ Industrial Electronics
☐ Radar   ☐ Broadcasting
☐ Electronic Control

☐ I AM INTERESTED IN AUTOMOTIVE AND MAINTENANCE ELECTRICITY. Please supply further information.

December, 1965

Nothing new!

LEARN AUTOMOTIVE and Maintenance ELECTRICITY AT HOME!

Here's another great opportunity for the man who wants his own business or a bigger pay check with a brighter future. It is a NEW DeVry program that gives you the advantage of earning while you learn.

Prepare in spare time at home for profitable jobs which can take you all the way from trouble-shooting on the electrical systems of automobiles, marine engines, trucks, tractors and other gasoline engines, to the general maintenance of electrical equipment in the home or in light industry.

DeVry's new program "brings the classroom to your home" through the magic of AUDIO-VISUAL AIDS. Lectures recorded by DeVry instructors combined with colorful 8 x 10" transparencies to make learning easier. You get the advantages of "programmed" learning through modern texts which are also handy for future reference. To develop practical skill, you get and keep valuable shop equipment and manuals. This includes building the brand-new DeVry Transistorized Automotive Analyzer and the DeVry Silicon Battery Charger — ideal tools for earning extra money as you go.

This new program covers the entire electrical systems in automobiles and other vehicles, including transistorized ignition systems, alternators and regulators, and other applications. In the maintenance field, it covers lighting, electric motors, controls, wiring — even transistors. The graduate from this program can be either a specialist as a troubleshooter on the electrical system of an automobile, or handle electrical lighting, heating, alarm and control systems. It is ideal for "one man" maintenance departments.

Check coupon at right and mail it today for FREE facts.

ACREDITED MEMBER OF NATIONAL HOME STUDY COUNCIL
New Jerrold
tele-mate

cordless UHF converter

$19.95 LIST

Jerrold, originator of the famous Powermate antenna amplifier, now brings you the most compact, efficient, and high-style of UHF converters—Tele-Mate!

All-solid-state with maintenance-free tunnel-diode design, the new Tele-Mate has a low noise figure and needs no warm-up. Works on unused Channel 5 or 6 of any VHF receiver to bring in all UHF channels in the area. At only $19.95, Tele-Mate is by far the best value in the UHF converter field.

See your TV serviceman for the Jerrold Tele-Mate or write for name of nearest dealer.
Now with exclusive new **DYNA-BOOST** circuit that intensifies speech signals and extends the range more than ever before!

**GREATER RANGE POWER**

PLUS OPERATING FEATURES AND PERFORMANCE THAT MAKE YOU PROUD TO OWN THE BEST!

**23 CHANNEL FULLY-EQUIPPED AM CB TRANSCEIVER**

Here is talk-power you'll be glad to talk about! Full 5 watts input plus built-in speech compression Dyna-Boost circuit that puts the power in the sidebands where it does the most good. Increases modulation level to the very maximum at all times, even for a soft woman's voice. Front panel switch enables you to use Dyna-Boost as you need it. **Make the dramatic "talk-test" and prove it for yourself!**

Fully equipped with all necessary crystals for immediate operation on all 23 CB channels, at a turn of the switch.

**COBRA CAM-88, $214.95**

---

Other Features include:

- Transistorized 117 VAC/12 VDC Power Supply
- Double Conversion Superhet Receiver
- Delta-Tune Fine Tuning
- Adjustable Squelch Control and Standby Switch
- Illuminated S and RF OUTPUT Meter
- Modulation Indicator
- Plug-in Microphone
- Use as Public Address Amplifier

CIRCLE NO. 4 ON READER SERVICE PAGE
A Weller gun reaches full soldering temperature up to 40% faster than other guns. This is just one of the reasons why Weller is the choice of nearly all professional electronic service technicians.

Weller guns also have trigger-controlled dual heat that permits instant switching to high or low heat to suit the job. They deliver the most heat per rated watt, resulting in the greatest soldering efficiency.

When you buy a soldering gun, be sure to insist on Weller.

Weller Dual Heat Guns and Kits come in wattage ranges from 100 to 325, priced from $6.95 to $12.95 list.

LETTERS FROM OUR READERS

Address correspondence for this department to:
Letters Editor, POPULAR ELECTRONICS
One Park Avenue. New York, N. Y. 10016

CALL OUT THE MARINES

HELP! WE NEED HELP! The very fine article, “Project Choose,” by Ken Gilmore (September, 1965) listed our “National Directory of Schools and Vocations,” but failed to state that it is a 713-page book with a cost of $11.66. We have been besieged by stacks and stacks of letters from your readers asking us to send them free lists of schools. Although we would like to answer them, we do not have the facilities to do so. The directory is a standard guidance book which can be found in most High School Guidance Departments, High School Libraries, and in most large city libraries; it is available at these places for examination by interested students. We are returning the quarters and five-cent stamps which some of your readers sent. You certainly have an eager public, and we shall never forget POPULAR ELECTRONICS. Even the Armed Forces are in on this.

ADELINE E. MILLER
State Schools Publishers
North Springfield, Pa.

Miss Miller, we know how you feel about the “quantity” of reader mail. The response to Ken Gilmore’s article on resident schools has been terrific. Sorry that the price of your valuable Directory was omitted.

FIDO’S WHISTLE MODIFIED

If you want to save tape, you can modify the circuit in “Fido’s Whistle-Controlled Flivvers” (October, 1964) to make a sound-actuated relay. I eliminated the frequency-selective network and the relays in the latching circuit and installed the system in the motor circuit of my tape recorder. Now the reels turn only when a sound is being recorded.

DOUGLAS HARRINGTON
Wellesley, Mass.

(Continued on page 8)
Why does one of these men earn so much more than the other?
More brains? More ambition?

No, just more education in electronics.

You know that two men who are the same age can work side-by-side on the same project, yet one will earn much more than the other.

Why? In most cases, simply because one man has a better knowledge of electronics than the other. In electronics, as in any technical field, you must learn more to earn more. And, because electronics keeps changing, you can never stop learning if you want to be successful.

But your job and family obligations may make it almost impossible for you to go back to school and get the additional education you need. That's why CREI Home Study Programs are developed. These programs make it possible for you to study advanced electronics at home, at your own pace, on your own schedule. You study with the assurance that what you learn can be applied on the job to make you worth more money to your employer.

CREI Programs cover all important areas of electronics including communications, servomechanisms, even spacecraft tracking and control. You're sure to find a program that fits your career objectives.

You're eligible for a CREI Program if you have a high school education and work in electronics. FREE book gives all the facts. Mail coupon or write: CREI, Dept. 1212C, 3224 Sixteenth Street, N.W., Washington, D.C. 20010

TV PICTURE TUBE TESTER

I am planning on building the "TV Picture Tube Tester and Rejuvenator" (October, 1965) and have a couple of questions concerning it. The 5-volt tap (position 6) on filament switch S2a in Fig. 7 does not seem to be connected. As I see it, this switch position will be dead. Is that correct? Also, can I use a 1- ma. meter in this tester?

Melvin J. Hyatt
Prairie Village, Kan.

Melvin, you are right about the 5-volt position of the switch; to correct for this condition, simply run a small piece of wire from pin 6 on S2a to pin 8 on S2b. Also note that the value of R3 is 1 megohm as shown on the schematic, and not 1000 ohms as in the Parts List. Use of a 1- ma. meter is not recommended because it would throw too many unusable readings too low down on the meter scale.

MOSCOW IS EAST AND NEW YORK IS WEST

Mr. Pyle wrote an informative and certainly a most interesting article, "When It's 6 AM in Tokyo" (August, 1965), but I would prefer that he brush up on his navigation before flying with me. In my travels around the world in the USAF I have always found New York to be West of London, and Moscow to be East.

Jesse R. Callahan
Villingen, Germany

Jesse, the editor who worked on this article was standing on his head; now he has his back to the wall. As for Mr. Pyle, he's facing North and repeating 1000 times, "East is to the right, West is to the left, and some editors don't know their right from their left."

INTENSIFIER FOR "HI-LIGHTER"

The "Hi-Lighter" (September, 1964), was a complete success. I obtained the 6.3-volt filament transformer—the most expensive item on the list—for only $2 (Army surplus). I put a convex lens in front of the GE 1133 lamp to focus and intensify the light even more. It works beautifully.

Michael Spielzinger
New York, N.Y.

NEW from FINCO

BOOSTER-COUPLER
Model No. 65-1 List $29.95

ALL FINCO PRODUCTS ARE ENGINEERED FOR "COLOR"

The BOOSTER-COUPLER
"for Deluxe Home and Commercial Use"
Two tube, 4 set VHF-TV or (FM) Distribution Amplifier for home and small commercial distribution systems... with low loss splitters (FINCO #3001 or #3003) can feed 16 or more sets, depending on signal level and line length losses. FEATURES:
- On-Off Switch
- AC convenience receptacle
- Ventilated perforated steel cabinet 6\(\frac{7}{8}\)" x 3\(\frac{3}{4}\)" x 3\(\frac{7}{8}\)"
- Metal enclosed to eliminate shock hazard
- Easy access for tube servicing
- Convenient, easy mounting... bracket and screws supplied
- UL listed AC cord
- 117 Volts, 60 cycles
- Attractive appearance with rugged commercial construction
- No strip terminals
- Minimum "snow" (very low noise figure)
- 100% test for all electronic characteristics

The CONVERTERS
"That challenge all competition"

FEATURES:
- Drift free fine tuning
- Post conversion signal amplification
- Solid state chassis — shockproof
- Convenient AC outlet on converter
- Exact input-output impedance match
- Lighted dial tuning
- Full color and black-white signal conversion
- High gain — low noise
- Conforms to FCC radiation specifications
- Easy installation — UL approved
- Instant warm-up — Operates at Channel 5 or 6
- A model for every reception area

Write for beautiful color brochures—Numbers 20-338 and 20-377

"PHONOVID" BAFFLING

How can Westinghouse’s "Phonovid" sys-
tem (August, 1965) reproduce video pictures
on a standard TV set directly from a phono-
ograph record? Since the minimum frequency
response needed for a TV image is generally
considered to be one million cycles per sec-
ond, could you please explain how it is pos-
sible for the stylus and cartridge to respond
to anything over the usual maximum of 20 kc.

ED DRAPER
Baldwinsville, N.Y.

Easy, Ed. It's slow-scan TV. The pictures
are stills, and the frequency-response require-
ments are way down. You'll be interested in
the article on page 67 of this issue.

SWAMPED BY OPERATION ASSIST

I was swamped with replies to my request
in the Operation Assist column for a sche-
matic. I tried to answer a few at first, but so
many came in that I could not possibly an-
swer all of them personally. Thank you (for
publishing the request) and everyone who

was kind enough to write to me. My special
thanks go to one fellow who sent me practi-
cally the whole booklet in Xerox form, and
who did not give his name or address.

JOHN LUCHE, WA5KGW, WPESDTL
Houston, Tex.

PARTS PROFILES DT's

If any experimenters ran into the dv/dt
effect when they set up the demonstrator/
tester shown in Fig. 1 on page 73 of "Parts
Profiles" (October, 1965), they should place
push-button switch S2 between the rectifier
bridge and the 3-ohm, 1-watt resistor instead
of in the position shown. This will eliminate
the mysterious gremlin which turns on the
SCR premature.

DONALD LANCASTER
Phoenix, Ariz.

Also, switch S2 should be held open long
enough for the SCR to turn off. The dv/dt ef-
effect is a characteristic that tends to turn on
an SCR when the rate of rise of the applied
voltage exceeds a certain critical value, even
though the applied voltage is less than the

New from RCA!

ALL SOLID-STATE CB 2-WAY RADIO WITH ALL SILICON TRANSISTORS

Here's the latest, and the finest, in a long line of exceptional 2-way radios from RCA. The new all transistor RCA MARK 10 with the operating features you have been asking for...engineered to provide the most dependable communications possible. Check this partial list of RCA MARK 10 advantages:

- All silicon transistors assure dependable communications at temperatures ranging from -23° to +130°F.
- 12 crystal-controlled transmit and receive channels with illuminated channel selector.
- Combination "S" meter and relative RF output meter.
- Operates from 12-volts DC power source (positive or negative ground).
- 3-watt public address system with volume level fully controllable by receiver volume control.
- Provision for tunable receive, AC operation, and external speaker (optional).
- Crystal-controlled double conversion superheterodyne receiver provides frequency accuracies greater than 0.004%.

- Separate AGC amplifier eliminates blasting and overloading, minimizes fading.
- Six-stage IF bandpass filter for maximum selectivity without ringing.
- Low distortion, series type noise limiter with automatic threshold adjustment.
- Receiver power regulated for maximum stability.
- Acoustically designed cabinet with audio characteristics shaped for maximum intelligibility.
- External speaker jack (de-activates internal speaker).
- Compact, lightweight. Only 3¾" high, 5¾" deep, 8½" wide, weighs less than 4½ pounds.

See it at your Authorized RCA Citizen's Band Radio Distributor. To find him, look for stores displaying this symbol. It's your assurance of top-quality RCA CB equipment.

static breakdown voltage. A pn junction has capacitance, and the larger the junction, the larger the capacitance. An SCR is a npnp device, and it has capacitance. Like a capacitor, the SCR can take on a fast charging current. The faster the SCR charges up, the faster the voltage rises. The trick, then, is to keep the current surge down to a minimum.

RADIO MAGAZINES CIRCA 1925 AVAILABLE

We have been in radio since the earliest days of broadcasting (1922) and we have a dozen or more issues of Popular Radio magazine of 1924-25 vintage. They certainly bring out the primitive beginnings, like the Model T era of radio. Would you know of any organization that would appreciate having these issues?

Clark Brothers
Albia, Iowa

CAMPER'S SPECIAL DOWN THE DRAIN

There goes another construction project down the drain due to the fact that the parts are not available where I live. I am referring to the "Camper's Special" (August, 1965). It would appear that the 2N3053 transistors used in the project are not stocked anywhere in Oakland or San Francisco. I have contacted some 20 electronic supply houses in the Bay Area and not one had them. Furthermore, they advised me to discontinue construction of the project because there was so slim a chance that I could get hold of these transistors. Because the project uses transistor sockets, I was still able to complete the unit, but I find it extremely maddening not to know whether the project is a success or a failure. Could you possibly tell me where I can get these transistors?

D. McDANIEL
Oakland, Calif.

The Bay Area is a big place and we can't understand why you couldn't get the 2N3053 transistors. They are made by RCA, list for $1.24, and are similar to the 2N3070, 2N3016, 2N3056, 2N3057, 2N3855, and 2N3444. Your distributors should have been more helpful instead of trying to discourage you from putting the project together. We suggest that you try one of the mail order houses if the distributors won't accommodate you. Incidentally D. M., your complaint was the only one we received on lack of parts availability, but we did get a lot of compliments on the project.

TWISTED PAIRS COME EASY USING A HOMEMADE DIE

Here's a way to make professional-looking twisted pairs which are often used in wiring filament and a.c. circuits to minimize radiation or pickup of stray signals, hum, noise, etc. Obtain a short brass rod about $\frac{1}{4}$" in diameter and drill three holes in it as shown in the diagram. Hole size depends on the gauge of the wire you intend to twist; side holes should be drilled at angles of less than 45° for best results. To use, simply insert the two wires in the side holes and pull them from the center hole. Connect one end of the wires to be twisted in a vise and place the die in a hand drill. Then simply rotate the drill and work the die along wires until the lengths of wire are properly twisted.

—Roman A. Scheidel

SINK-DRAIN STRAINER PROTECTS SMALL SPEAKER

Small perforated sink drain strainers — the type found at corner hardware shops — make excellent protective grilles for small speakers. Chrome-plated and convex in shape, they come in many sizes and sell for about 25 cents each. To install one, simply glue it in place; a few drops of epoxy cement will do.

—Henry R. Rosenblatt

(Continued on page 20)

THE TURNER TRANSISTORIZED

WITH VARIABLE OUTPUT LEVEL

Now, from Turner comes the very finest base station microphone ever designed. The $\Theta$ features a two transistor preamp with volume control to give you up to 50 times the output level you now have. Yes, just dial your desired signal for maximum modulation all the time — every time. You can work close or far away from this microphone, or change the output for a big or little voice.

Eventually, all sets lose some of their initial power. Turner's $\Theta$ puts the zip back into your set and keeps it up to full strength at all times!

The $\Theta$ has tailored frequency response of 300-3500 c.p.s. for best and clearest voice transmissions with knocked down local noise interference.

Exclusive touch-to-talk or lock on-off switching — the $\Theta$ works with all tube or transistor sets regardless of switching requirements or type.

Ask your dealer about the new $\Theta$.

Choose Your Tailor-Made Course in N.T.S. "PROJECT METHOD" ELECTRONICS

Now! N.T.S. — one of America’s oldest leading home-study and resident technical schools—offers you GREATER CAREER OPPORTUNITIES IN ELECTRONICS.

You can install and maintain electronic circuitry in missiles and rockets ... specialize in microwaves, radar, and sonar.

You can succeed in TV-Radio Communications ... prepare for F.C.C. License, service advanced satellites for industry and defense.

You can service and repair the electronic "brains" of industry — computers, data processing and other automation equipment.

You can become a highly-paid TV-Radio Technician, an electronics field engineer, or succeed in your own sales and service business.

CHOOSE YOUR FIELD — INSURE YOUR FUTURE!

1 ELECTRONICS-TV-RADIO SERVICING AND COMMUNICATIONS
   A basic course thoroughly covering fundamentals of electronics, radio, TV servicing and communications.

2 MASTER COURSE IN ELECTRONICS-TV-RADIO, ADVANCED TV AND INDUSTRIAL ELECTRONICS
   Qualifies you as a Master Electronics Technician — the Man in Demand.

3 FCC LICENSE COURSE
   Preparation for this government license essential for many interesting jobs in radar, radio, television, communications, guided missiles, many others. Upon completion of this course, if you do not pass the FCC exam, your tuition will be refunded in full.

4 RADIO SERVICING (AM-FM-TRANSISTORS)
   Train for radio sales and service with dealer or distributor.

5 TELEVISION SERVICING (INCLUDING COLOR)
   Covers installation, adjustment, repair and servicing of black and white and color television ... prepares you for your own sales and service business.

6 STEREO, HI-FI AND SOUND SYSTEMS
   A growing field. Prepares you to build, install and service modern sound equipment for home or industry.

7 BASIC ELECTRONICS
   Gives you the fundamentals you must know to build on for a future Electronics career. Also offers an excellent background for Salesmen, Purchasing Agents, and others in Electronics.

8 ELECTRONICS MATH
   Simple, easy-to-follow instructions in the specialized math you need in many electronics jobs.

INDUSTRY WELCOMES N.T.S. STUDENTS AND GRADUATES
N.T.S. HOME TRAINING: QUICK, PRACTICAL WAY TO HIGHER PAY, LIFELONG BENEFITS

N.T.S. "Project Method" Courses can help you get a new and better job — or move up to higher pay in your present one.

N.T.S. "Project Method" home training lessons are shop-tested in the Resident School in Los Angeles. You work on practical job projects, learn to use shop manuals and schematics. Your N.T.S. training is individual. You proceed at your own pace. The Schools' practical methods plus more than 60 years of experience have helped thousands of students all over the world to successful careers.

Most courses include Equipment Kits. There are no Kit Deposits. Everything included in your low tuition.

HIGH SCHOOL AT HOME
Learn easily. New modern method. National also offers accredited high school programs for men and women. Take only subjects you need. Study at your own pace. Latest approved textbooks — yours to keep — everything included at one low tuition. Check High School box in coupon for information.

MAIL REPLY CARD OR COUPON FOR FREE BOOK AND SAMPLE LESSON
In Field of Your Choice

CLASSROOM TRAINING AT LOS ANGELES
If you wish to take your Electronics-TV-Radio training in our famous Resident School in Los Angeles — the oldest and largest School of its kind in the world—write for special Resident School catalog and information, or check coupon.

BENEFIT NOW AND ALL YOUR LIFE WITH N.T.S. HOME TRAINING
The personal guidance you receive during your training can be very helpful to your progress. Many N.T.S. students are able to earn more money within a few months. You can pick and choose your career. Work in industry or go into business for yourself.

Your services will always be in demand wherever you go — and you can pick your spot!

N.T.S. Graduate Advisory Service can help you answer technical questions in establishing your own business and in countless other ways after you've completed your training.

NATIONAL TECHNICAL SCHOOLS
4000 S. Figueroa St., Los Angeles, California 90037

Please Rush FREE Electronics "Opportunity Book" and actual sample lesson on course checked below:

TIPS

(Continued from page 14)

MODIFIED MONO PHONE JACK FEEDS MONO OR STEREO PHONES

Stereo as well as mono headphones can be plugged into a modified phone jack—a simple bend eliminates the need for an adapter or wiring changes. Just shorten the circuit closing prongs as shown in the photos. A pair of long-nose pliers can be used as a bending tool, if they are strong enough. Adjust the bends so that the tip and center section of a stereo plug are contacted. A mono plug should be pushed in only partially. If you push the mono plug in all the way, it will serve as a shorting plug, and while this could be a desirable feature in some instances, it could also damage some types of transistor amplifiers. A small bushing or spacer cut to proper size and fitted over the mono plug would limit insertion distance.

—Art Trauffer

BEEF UP THOSE FLOPPY RABBIT-EAR ANTENNAS

If the small swivel balls inside of the telescoping-type antenna mounted on the rear of your TV set should break through the plastic case, you can put them back in place with two small metal strips. Drill a ½” hole in each strip to allow the antenna sections to pass through, shape the strips with tin snips to fit inside the case, and insert them between the swivel balls and the top of the case as shown. Make the center screw just snug enough to provide sufficient friction to hold the antenna elements at any desired angle when they are fully extended.

—Homer L. Davidson

Top sensitivity, even in the arctic...

One microvolt sensitivity, even at –10° F. 0.4 microvolt sensitivity +10° F. through +125° F. . . . signal pulling capability that you can depend on, even in the arctic.

Completely solid state, the Amphenol “Six Hundred” has replaced the relay with high speed electronic switching to make it far more rugged than comparable equipment. Its dual conversion superhetrodyne receiver, with 4 stages of amplification provides outstanding selectivity.

Other significant advantages include a powerful 3½ watt output, current drain that is actually less than a flashlight, and 10 crystal controlled channels.

The 600 is a 12 VDC compact, mobile unit at $169.95; its companion model, the 625, in the same compact cabinet, includes a universal 120 VAC–12 VDC power supply at only $20 additional. For more information including complete specifications, contact your local Amphenol communications distributor or write direct.

BUILDE 20 RADIO CIRCUITS AT HOME
with the New Improved PROGRESSIVE RADIO "EDU-KIT®"
A Practical Home Radio Course

Now Includes
12 RECEIVERS
12 TRANSMITTERS
SQ. WAVE GENERATOR
SIGNAL TRACER
AMPLIFIER
TUNING INJECTOR
CODE OSCILLATOR

YOU DON'T HAVE TO SPEND HUNDREDS OF DOLLARS FOR A RADIO COURSE

The "Edu-Kit" offers you an outstanding PRACTICAL HOME RADIO COURSE at a rock-bottom price. Our Kit is designed to train Radio & Electronics Technicians, making use of the most modern methods of home training. You learn by doing, constructing, servicing and practicing. This IS A COMPLETE RADIO COURSE. You will learn proper method of testing and repairing radio and TV sets. You will learn simple radio, multi-wave radio, television, and transistor radio. This new improved Kit will bring you up-to-date on all the latest developments in radio and TV. You will learn practical trouble shooting, using the Progressive Signal Tracer, Progressive Signal Injector, Progressive Servicing Basic, Square Wave Generator and the accompanying instructional material.

The "Edu-Kit" is the answer for the Novice, Technician and General Classes of F.C.C. Radio Operator Licenses. You will build Receiver, Transmitters, Wave Generator, Code Oscillator, Receiver, Transmitter, Frequency Counter, and everything you will need in your course. Absolutely no previous knowledge of radio or science is required. The "Edu-Kit" is the result of many years of teaching and engineering experience. The "Edu-Kit" will provide you with a basic education in Electronics and Radio, worth many times the low price you pay. The Signal Tracer is worth more than twice the price of the Kit.

THE KIT FOR EVERYONE

You do not need any previous background in radio or science. Whether you are interested in electronics or not you will have an interesting hobby, a well paying business opportunity. If you will find the "Edu-Kit" a worthwhile investment. Many thousands of individuals have successfully used the "Edu-Kit" in more than 79 countries of the world. The "Edu-Kit" is carefully designed, step by step, so you cannot make a mistake. The "Edu-Kit" allows you to teach yourself at your own pace, no instructor is necessary.

PROGRESSIVE TEACHING METHOD

The Progressive Radio "Edu-Kit" is the foremost educational radio kit in the world, and is universally accepted as the standard in the field of electronics training. The "Edu-Kit" uses the modern educational principle of "Learn by Doing." Therefore you construct, learn schematics, study theory, practice trouble shooting—all in a closely integrated program designed to provide an easily learned, thorough and interesting background in radio and TV. The "Edu-Kit" is a practical, hands-on course designed for the beginner or the professional. You begin by examining the various radio and TV parts. Each step in operation, theory and wiring of these parts. Then you build a simple radio. With this first set you will learn the practical type of radio testing and trouble shooting. Then you build a more advanced radio, learn more advanced theory of radio servicing. Then you will find yourself constructing more advanced multi-wave tube radio circuits, and doing work like a professional Radio Technician.

Included in the "Edu-Kit" course are Receiver, Transmitter, Code Oscillator, Signal Tracer, Frequency Counter and Professional Type "breadboard" experimenting but genuine radio circuits, constructed by means of professional techniques. The "Edu-Kit" is a practical, hands-on course designed for the beginner or the professional. You will learn practical trouble shooting, using the Progressive Signal Tracer, Progressive Signal Injector, Progressive Servicing Basic, Square Wave Generator and the accompanying instructional material.

Included in the "Edu-Kit" course are Receiver, Transmitter, Code Oscillator, Signal Tracer, Frequency Counter and Professional Type "breadboard" experimenting but genuine radio circuits, constructed by means of professional techniques. The "Edu-Kit" is a practical, hands-on course designed for the beginner or the professional. You will learn practical trouble shooting, using the Progressive Signal Tracer, Progressive Signal Injector, Progressive Servicing Basic, Square Wave Generator and the accompanying instructional material.

THE "Edu-Kit" is COMPLETE

You will receive an instruction book necessary to enable you to train different radio and television equipments, each circuit is guaranteed to operate. Our Kits contain tubes, tubes sockets,vari- able, electrolytic, mic, ceramic, and paper dielectric capacitors, resistance, tie paper, hardware, tubing, punched metal chassis, Instruction Manuals, hook-up wire, solder, selenium rectifiers, coils, volume controls and switches, etc.

In addition, you receive Printed Circuit boards, including Printed Circuit chassis, professional electronic soldering Iron, a self-powered Dynamic Radio and Electronics Tester. The "Edu-Kit" also includes Code Instructions and the Progressive No. 1 Oscillator, a self-powered Oscillator, with bonus "Edu-Kit" Postpaid Instructions, a High Fidelity Guide, a Quiz Book, Your receive Membership in Radio-TV Club, Free Consultation Service, Certificate of Merit and Discount Privileges. You receive all parts, tools, instructions, etc. Everything is yours to keep.

PRINTED CIRCUITRY

At no extra price in the "Edu-Kit", and now includes Printed Circuitry. You build a Printed Circuit Signal Injector, a Printed Circuit Tuning Injector, a Printed Circuit Code Oscillator, all of which can detect Many Radio and TV troubles. This valuable technique of radio construction is now becoming popular in multilayer radio and TV sets. A Printed Circuit is a special insulated chassis on which has been deposited a complete radio or TV circuit which takes the place of wiring. The various parts are permanently mounted in and soldered to the terminals. Printed Circuitry is the basis of modern Automation Electronics. A knowledge of this subject is a necessity today for anyone interested in Electronics.

UNCONDITIONAL MONEY-BACK GUARANTEE

SERVICING LESSONS

You will learn trouble-shooting and servicing in a progressive manner. You will practice repairs on the sets that you construct. You will learn symptom and causes of troubles in home, portable and car radios. You will learn to use the prototypical Signal Tracer, the Wave Generator, the Progressive Servicing Basic and the Dynamic Radio & Electronics Tester. While you are learning in practical way, you will be able to do a many a repair job for your friends and neighbors, and charge fees which will far exceed the price of the "Edu-Kit." Our Consultation Service will help you with any technical problems you may have.

FROM OUR MAIL BAG

J. Swannett, at 25 Poplar Pl., Water-

J. Swannett, at 25 Poplar Pl., Water-

bury, Conn., writes, "I have repaired several sets, and everyone is pleased. I received my "Edu-Kit" for $26.95, and found myself doing work like a professional Radio Technician.

I am sending you this message because I would like to let you know that I was just retired from being a member of your Radio-TV Club.

Robert L. Shuff, 1534 Monroe Ave., Huntington, N. Y., writes, "Thought I would drop a few lines to say that I received my "Edu-Kit," and was really amazed that such a bargain can be had at such a low price. I have already started repairing radios and phonographs. My friends were really surprised to see me get into the swing of it so quickly. The trouble-shooting Tester that came with the kit is really swell, and it seems, if there is anything found, you can be sure you have it."
NEW PRODUCTS

Additional information on products covered in this section is available from the manufacturers. Each new product is identified by a code number. To obtain further details on any of them, simply fill in and mail the coupon on page 15.

ROUNGENCY CARD FILER

Is your shack wall covered to capacity with QSL cards? Nordlund Radio Products has a rotary QSL card filer that will hold up to 600 of them, for easy "flip-viewing." The Model S accommodates cards up to 3 1/2" x 5 1/2" in size, and its Mylar windows protect them from dust and handling. The basic unit comes with 20 binders (for 160 cards). Additional binders are available in lots of four. Each binder has an 8-card capacity, back-to-back.

Circle No. 75 on Reader Service Page 15

SHORT-WAVE RECEIVER

Covering 550 kc. through 30 mc. in four bands, the Lafayette HA-226 is an imported superheterodyne short-wave receiver with a built-in power supply and a 4" speaker. In addition to the on/off volume control, band selector, slide rule dial, main tuning and CW/phone switch—the HA-226 is also suitable for Novice hams—it features an illuminated S-meter which shows signal strength and correct tuning for best reception.

Circle No. 76 on Reader Service Page 15

FLUORESCENT ANTENNAS

The newest color for mobile antennas is bright orange! Antenna Specialists is offering an extensive line of communications antennas made with brilliant fluorescent "International Emergency Orange" material. Called "Colorguard" antennas, they consist of both fiberglass and stainless steel whips. The coils on the latter are encased in molded fluorescent orange plastic jackets.

Circle No. 77 on Reader Service Page 15

STEREO TAPE DECK

Sound-on-sound, and tape and source monitoring are possible with the "three-headed" Sony 350 tape deck. Other features include 4-track stereophonic and monophonic recording and playback, solid-state circuitry, two v.u. meters, and vertical and horizontal operating positions. Tape speeds are 7 1/2 and 3 1/2 ips; frequency response is 50-15,000 cycles ±2 db; and signal-to-noise ratio is better than 50 db. A carrying case is available if portability is desired.

Circle No. 78 on Reader Service Page 15

VERSATILE OSCILLOSCOPE

Said to fulfill practically every service and test requirement, Allied Radio's Knight-Kit KG-636 5" oscilloscope covers d.c. to 5.2 mc. and is ideal for color TV servicing as well as wideband testing. It is also suitable for general-purpose testing of hi-fi, amateur, and CB equipment. Features include a dynamic sync limiter circuit that assures trace uniformity under any high sync level conditions, and automatic astigmatism correction for uniform focus regardless of trace position on screen. Vertical sensitivity is 17 millivolts r.m.s. per inch minimum; horizontal sensitivity, 0.6 volt r.m.s. per inch. The KG-636 also comes in factory-assembled form.

Circle No. 79 on Reader Service Page 15

MOBILE CB ANTENNA

Mosley Electronics has created a new demon—the "Demon" DA-27 omnidirectional mobile CB antenna. Having an overall length of 17", the DA-27 is a flexible, durable stainless steel whip with a tensile strength of 290,000 p.s.i. The VSWR is 1.5:1 or better at resonance, and a simple whip adjustment permits antenna peaking at desired frequencies.
It's almost absurdly easy. You need no experience whatsoever. The superbly detailed kit construction manual prepared by Fisher StrataKit engineers tells you absolutely everything you need to know to build this magnificent 80-watt stereo control-amplifier. The language is simple; the diagrams are huge and crystal-clear; the exclusive StrataKit method itself is uniquely 'beginner-proof.'

You build your StrataKit in ingeniously simplified stages (Strata). Each stage corresponds to a separate fold-out page in the instruction manual. Each stage is built from a separate, clearly identified packet of parts (StrataPack). The major parts come already mounted on the extra-heavy-gauge steel chassis. Wires are precut for every stage—which means every page. All work can be checked stage-by-stage and page-by-page, before proceeding to the next stage. There is no possibility of last-minute 'surprises.'

When you have built the Fisher KX-200, you are the owner of one of the world's finest amplifiers, easily worth $250.00. Its 80-watt (IHF) stereo power amplifier section will drive the least efficient speakers at extremely low distortion. Its preamplifier section provides a virtually unlimited range of input and control facilities. It even incorporates exclusive features like a laboratory-type d'Arsonval bias/balance meter and a power-derived third-speaker output with separate volume control.

All this is yours in a kit priced at $169.50. The Fisher KX-100, a 50-watt stereo control-amplifier kit of advanced design, costs only $129.50. (Walnut cabinet for either model, $24.95; metal cabinet, $15.95.)

"I personally guarantee that any Fisher StrataKit you assemble, as directed, will be fully equal in performance and reliability to its laboratory-wired prototype."

Avery Fisher

PRODUCTS (Continued from page 22)

mounting is recommended but a modified "Mobilmate" accessory is available for trunk or hood mounting. A screw-type provision within the base allows the antenna to be easily disconnected.

Circle No. 80 on Reader Service Page 15

SOLID-STATE WIRELESS INTERCOM

Lafayette Radio Electronics has announced a solid-state wireless intercom that will connect any two locations which are serviced by the same electric company power line transformer. No wiring is required — you just plug each unit into the a.c. outlet, and it's ready to operate. Since the intercom is completely transistorized, no warm-up time is necessary. Each unit is a "master" with a volume/on-off control, push-to-talk bar with a "lock-bar" feature for continuous operation.

Circle No. 81 on Reader Service Page 15

CB TWO-WAY RADIO

Most CB radios require two crystals for each new channel. In the Pearce-Simpson 11-channel, solid-state "Escort II" a mono-crystal circuit provides additional channels with the installation of a single crystal for each channel, which means considerable savings for the user. There is a zener diode in the input circuit for stability, and special close-tolerance crystals provide a frequency tolerance of ±0.003. The "Escort II" generates minimum heat and effects minimum power drain. Operation is instantaneous. Size of unit: 8½" wide x 2¾" high x 8½" deep.

Circle No. 82 on Reader Service Page 15

MULTIPLE SPLINE SCREWDRIVER SET

Deep-seated or awkwardly placed screws are easier to reach with the tools in Xcelite's new 99PS-60 set than with conventional keys, according to the company. Designed to simplify service and assembly work on products with Bristol multiple spline socket screws, the set consists of a regular size 4½" screwdriver handle, nine interchangeable 4" Bristol multiple spline blades with major diameters from .048" to .183", and a 4" extension shaft. All items are contained in a pocket-size, see-through, plastic carrying case which doubles as a bench stand.

Circle No. 83 on Reader Service Page 15

SOLID-STATE PREAMPIFIER

The widest dynamic excursions on a record will not overload the sensitive low-level phono stages of the new Marantz Model TT stereo preamplifier. Gain figures include: phono to main output, 64.5 db; phono to recording output, 42.5 db; high level to main output, 22.5 db. The frequency response of the Model TT is 20 to 20,000 cycles ±0.1 db; noise, 80 db below 10 mv. input; IM distortion, 0.15% at 10 volts r.m.s. output. Among other features of the Model TT are two panel jacks, a panel headphone jack, center channel output, and a tape play/tape copy switch.

Circle No. 84 on Reader Service Page 15

ELLIPTICAL-STYLUS CARTRIDGE ASSEMBLY

Bounce-proof and scratch-proof operation is claimed for the Shure Model M80E "Gard-A-Matic" phono cartridge assembly—even under conditions of careless handling and excessive floor vibration. Its retractile safety suspension system protects the elliptically shaped diamond stylus from damage if the tone arm is accidentally dropped. The Model M80E is specifically designed for use with Garrard Lab 80 and Type A70 automatic turntables, and comes mounted in a head that simply plugs into the tone arm of either turntable.

Circle No. 85 on Reader Service Page 15

REGULATED POWER SUPPLY KIT

An inexpensive, transistorized, regulated power supply kit has been introduced by Viking Engineering which is compact enough to fit into the most crowded work area (it's 3½" x 4½" x 5½" deep). Also available factory-assembled, the supply will deliver a continuously variable output from 7 to 25 volts at 200 ma. d.c. (30 volts at 100 ma. d.c.). Load regulation is ±0.2%, and line regulation is ±0.4%. All functions are controlled by a single "on-off voltage adjust" knob. Output is isolated to provide either positive or negative grounding.

Circle No. 86 on Reader Service Page 15
Some plain talk from Kodak about tape:

The meat of the matter... and some boxing news

Undistorted output from a tape—as from any other link in the chain of audio components—is at the very heart of high fidelity enjoyment. Distortion (or the lack of it) is simple enough to evaluate in theory. You start out with something measurable, and you reproduce it. Everything added (or subtracted or modified) by the reproduction, that can be measured or heard, is distortion. Since most kinds of distortion increase as you push any component of your system closer to its maximum power capability, you have to label your distortion value to tell whether you did this while coasting or at a hard pant.

Cry "uncle!"

To make the distortions contributed by the tape itself big enough to measure and control, we simply drive the tape until it hollers "uncle" and use that power reference as our benchmark. Here's the procedure. Record a 400-cycle signal (37.5-mil wavelength at 15 ips) and increase its level until in a playback, which is itself pristine, you can measure enough 1200-cycle signal (third harmonic) to represent 2% of the 400-cycle signal level. This spells "uncle!" We use 400 cycles for convenience, but insist upon a reasonably long wavelength because we want to affect the entire oxide depth.

The more output level we can get (holding the reproduce gain constant, of course) before reaching "uncle," the higher the undistorted output potential of the tape. Simple, what?

"Wadayamean—undistorted output at two percent?"

That's what makes a Miss America Contest. Two percent third harmonic is a reference point that we like to contemplate for a picture of oxide performance. Since distortion changes the original sound, it becomes a matter of acumen and definition how little a change is recognizable. If you're listening, two percent is a compromise between a trained and an untrained ear. If you're measuring, it comes at a convenient point on the meter.

Because undistorted output helps to define the upper limit realism of the recording, the higher the undistorted output, the easier it is to reproduce the massed timpani and the solo triangle each at its own concert hall level. And this is just another area where Kodak tapes excel... our general-purpose/low-print tape (Type 31A) gives you up to 3 decibels more crisp, clean output range than conventional tapes.

The great unveiling—Kodak's new library box with removable sleeve!

**Transmits only upon ground command**

This listing does not include all of the satellites in orbit—many of which no longer are transmitting, or transmit erratic, very weak signals. Satellites of the Soviet Union generally use tracking and telemetry frequencies in the band between 19.990 and 20.010 mc. Exact frequencies of some Soviet satellites are broadcast by Radio Moscow immediately after launching. In orbit are Cosmos 41, 42, 43, 44, 49, 51, 53, 54, 55, 56, 58, 61, 62, 63, 70, 71, 72, 73, 74, 75, 80, 81, 82, 83, 84.

POPULAR ELECTRONICS
for brilliant 82-channel TV performance—COLOR or black & white, plus FM/Stereo

INSTALL THE NEW...

JFD LPV COLOR
LOG PERIODIC TV ANTENNA

Now you can enjoy the best reception ever on any VHF, UHF or FM/Stereo station—from one antenna, using one down-lead—with the patented new JFD COLOR LPV Log Periodic.

Why cripple your reception with inefficient antenna “hodge-podges?” Choose a powerful space-age JFD LPV . . . see and hear the spectacular difference!

DON'T BE MISLED BY Imitations—NO OTHER ANTENNA WORKS LIKE THE JFD LPV BECAUSE . . .

- Only the LPV is designed according to the original log periodic patented design of the University of Illinois Antenna Research Laboratories.
- Only the LPV combines frequency-independent design with capacitor-coupled electronic dipoles for . .
- Higher, more uniform gain and narrower directivity on channels 2 to 83—and FM.

SEE YOUR JFD LPV DEALER TODAY!
JFD ELECTRONICS CORPORATION • 1462 62nd Street • Brooklyn, N. Y. 11219
world's largest manufacturer of TV & FM antennas

TOPICAL ASSIST

Through this column we try to make it possible for readers needing information on outdated, obscure, and unusual radioelectronics gear to get help from other P.E. readers. Here's how it works: Check the list below. If you can help anyone with a schematic or other information, write him directly—he'll appreciate it. If you need help, send a postcard to Operation Assist, Popular Electronics, One Park Avenue, New York, N.Y. 10016. Give maker's name, model number, year of manufacture, bands covered, tubes used, etc. State specifically what you want, i.e., schematic, source for parts, etc. Be sure to print or type everything legibly, including your name and address. Because we get so many inquiries, none of them can be acknowledged. Popular Electronics reserves the right to publish only those items not available from normal sources.

Schematic Diagrams

Seebury master amplifier, type MA 2-L6, ser. 13103.
140 watts. (Larry R. Spliter, 310 W. 7th, Hays, Kan.)
Pilot Model TP-32 receiver/record player, circa 1945.
Has 6 tubes. (Martin Burden, 2652 Saw Mill Rd., North Belmore, N.Y. 11712)
R-2A/ARR-3 surplus receiver. Has 13 tubes and 1629 tuning eye tube. (K. Fulton. 751 N. Clementine, Anaheim, Calif. 92905)
Philco Model 48-482 receiver, cote 121, Tunes s.w. and B.C. Has 9 tubes. (Mike Draeger, 10 South Lane, North Tonawanda, N.Y. 14120)
Sonora Model "F" receiver, circa 1930. Tunes s.w. and B.C. Has 7 tubes. (Frank Twardoch, 149 B'way, Valley Stream, N.Y. 11580)

Atwater Kent Model 55 receiver, ser. 4381914. Tunes B.C. (Joe Rock, Jr., Box 162, Knoxville, N.C. 27185)

Ward's "Airline" Model 02-288 receiver. Tunes B.C. Has 5 tubes and magic eye. (Robert Blainer, Box 348, Oliver, B.C., Canada)

Parker receiver. Tunes B.C. band. TRF. Has 10 tubes and Model 301 power converter. (G.E. Peckcock, 3082 Lake Hollywood Dr., Los Angeles, Calif. 90028)

CV-57/UVR surplus teleertype monitor, made by RCA. Has 1 CRT. (JSH Lab, R. Hahl, Mgr., Box 471, IAU, San German, P.R. 00753)

Halcrofathers S-53 receiver, circa 1942. Tunes s.w. and B.C. Has 8 tubes. (Larry Schweiger, 8106 Belinder Rd., Leawood, Kan. 66206)

Oak Ridge Model 104 syncro sweep generator. (Louis W. Kogelmann, 2543 S. Logan Ave., Milwaukee, Wis. 53207)

H.H. Scott receiver, ser. K-432, circa 1933. Tunes 550 kc. to 22.5 mc. on 4 bands. Has 15 tubes. (Geoffrey Ashford, P.O. Box 213, San Carlos, Calif. 94071)

Ballantine Model 300 electronic voltmeter. (Thomas McCarthy, 367 Bergey Blvd., Orlando, N.J.)

Supreme Model 599 set tester. (M. Moszczar, 212 Louise Drive, Morrisville, Pa.)

Halcrofathers Model S-3SC receiver. (David W. Holman, R.R. 25, Box 436A, Independence, Mo.)

Go with the new PRECISE Green Line.

It's the scenic route for your test measurements—headed straight for value and accuracy. These unique instruments have color dynamic front panels featuring easy-on-the-eyes Green to aid readability and accuracy. New functional design and layout make operation fast and foolproof. Underneath, they're humming with sophisticated circuitry checked out for reliability. That's why, now more than ever, you'll find the going's smoothest with PRECISE test instruments. Go all the way with PRECISE scopes, VTVMs, power supplies, signal generators, tube testers, decade boxes and probes.

FREE! Tool Kit With Case

Get this compact, convertible tool set free with your purchase of any PRECISE instrument (except probes and decade boxes). Included are nutdrivers, screwdrivers and a handy tote case. Available only during our Green Line introduction. Supplies are limited, so make tracks to your PRECISE distributor and get this free gift now!

(Continued from page 28)

Bendix Model MT-26 receiver. Tunes 3 bands. Has 12 tubes. (Don Erickson, 24300 Myers St., Sunnyvale, Calif. 92388)

RBC-1 Navy surplus receiver, circa 1941. (Stephen Gingold, 129 Woodlawn St., Springfield, Mass. 01108)

Space-Tone "Senator" Model 1962 receiver. Tunes AM and FM on two bands. Has 11 tubes. (John Bonhomme, 897 Crotona Park N., Bronx, N.Y. 10460)

RT-11A/APN-12 surplus transceiver. Tunes 160-230 mc. on 8 channels. Has 18 tubes. (John Kimble, 34 Fifth St., Winnaboro, S.C.)

SPECIAL DATA OR PARTS

H. L. Schroeder receiver, circa 1920; has 8 tubes, 4 l.f. transformers and 2 a.f. transformers. Speaker, schematic, and service data needed. (Manuel Alcantara, 5055 S. Kolmar, Chicago, Ill. 60639)

RCA Model PR25 sound recording camera, circa 1936. Schematic of studio recording amplifier and service manual needed. (L. R. Gossard, 1201 Elizabeth Blvd., Fort Worth, Texas 76110)

National variable capacitor, type VHF 1-S, 3.0 pf. to 22.5 pf.; capacity needed. (Henry L. Keen, 2509 Naborson Ave., Lomita, Calif. 90717)

RT53/TRC7 surplus transceiver, ser. 209, made by Radio Engineering Labs; operates on 2 meters. Crystal frequencies and schematic needed. (B. E. Weinhold, Box 180, Manheim, Pa. 17545)

"Hints & Kinks" volumes 1 through 5. (Francis F. Migone, 122 E. Pierson Ave., Somers Point, N.J.)

Hallicrafters Model S-26R "Sky Champion" receiver. Instruction booklet and tuning assembly including dial cards and indicators needed. (Jon Wright, RFD #2, Hampton, N.Y. 14840)

Link Model UFS-50 ED. 7 FM transmitter and receiver, circa 1940; uses local tubes and 816 mercury vapor rectifiers. Schematic and/or instruction manual needed: also 6-meter conversion wanted. (John W. Ranck, R.D. #5, Lewisburg, Pa. 17837)

Hammarlund "Comec Pro" receiver. Coils needed. (J. Padgett, 929 Humer Ave., Kansas City, Kan.)

Heath Model 05 oscilloscope kit, circa 1949; has 8 tubes. Zenith Model 9H099 receiver, circa 1944; tunes 50-1600 on BC, 88-108 mc., 42-48 mc. on FM. Schematics and construction manuals needed. (Dana E. Mills, 145 Washington Ave., Endicott, N.Y. 13760)

Guild "Spice Chest" #484 receiver. Translucent dial scale and metal front panel needed. (Dave Gibson, 3100 Priscilla Ave., Parma, Ohio 44134)

Berlant "Concertone" Model 1401 tape recorder deck. Source for idler, drive wheels, and flywheel needed. (William O. Scottlemeyer, 932 Worcester St., Natick, Mass. 01760)

Crosley Model 148 receiver, circa 1937; tunes BC: has 5 tubes. Plastic station selector dial needed. (Richard Pellard, 57 Rockwell Ave., Medford, Mass. 02155)

Silvertone #101.571 receiver: tunes BC and S.W.; has 6 tubes and phono plugs. Schematic, operating instructions, and all available data wanted. (Rodger Boots, Box 311, Mechanicville, Iowa 52266)

Heath Model AT-1 transmitter kit; tunes 80, 40, 20, and 10 meters. Construction manual, coils, bandwidth, driver capacitor needed. (Steve Cushman, 5 Carbery Ave., Sharon, Mass. 02067)

Westinghouse Model H-116 radio-phono combo., circa 1945; tunes AM-FM and S.W.; has 13 tubes. Parts list needed. (William Gavin, Jr., 10327 S. Drake, Chicago, Ill. 60655)

(Continued on page 32)
Here's what you've been waiting for...now, you can build your own silicon controlled-rectifier control circuits. Start with RCA's Basic Experimenter's Kit (KD2105). With it, you can build a model race car speed control, a universal motor speed control, or eight other interesting circuits. Add-on Light Sensor and Heat Sensor Kits (KD2106 and KD2110) enable you to build 4 more electronic control circuits for hundreds of useful applications around the house, hobby shop, and garage.

The 80-page, illustrated RCA Experimenter's Manual (KM-70) will familiarize you with the theory and operation of solid-state components in the kits. At the same time, it will give you complete detailed information on all 14 circuits including schematic diagrams, circuit descriptions, and construction details, as well as photographs of the circuits as easy-to-follow assembly guides.

Here is what you can make...

Here is what You Need...
- RCA Basic Experimenter's Kit (KD2105) One Silicon Controlled-Rectifier; Two Transistors; Five Rectifiers.
- RCA Experimenter’s Manual (KM-70) 80 Illustrated Pages; 14 Circuits and How to Build Them.
- RCA Add-On Light Sensor Kit (KD2106) One Photocell for light-operated switches.
- RCA Add-on Heat Sensor Kit (KD2110) Three Thermistors, special solder for heat-control circuits.
- Plus readily available standard components.

If you want to build one circuit or all 14, check with your RCA Distributor where kits and RCA Experimenter's Manual are on display. He'll be glad to help you select the kit or kits for the solid-state circuit you have in mind. Do it today!
Available from your RCA semiconductor distributor

(Continued from page 30)  

Philo Model 20 receiver, circa 1928; has 7 tubes. Schematic and parts source needed. (Robert M. Ball, 314 Westwood Drive, Westfield, Mass. 01085.)

Atwater Kent Model 30 receiver, ser. 536013. Schematic and speaker needed. (Lous W. Kogelmann, 2543 S. Logan Ave., Milwaukee, Wis. 53207.)

Crosley Model 5-50 receiver, ser. 61255C: has 3-301 and 2201 tubes. Schematic, operating info., and other available data wanted. (Thomas A. Bailey, P.O. Box 222, Knoxville, I11. 31418.)

Atwater Kent Model L receiver; has 8 tubes. Schematic and battery hook-up needed. (Homer L. Linton, 1305 New Ave., N.W., Roanoke, Va.)

Pickwick receiver, circa 1934; tunes BC and s.w.; has 8 tubes. All available info. needed. (Myron E. Wood, 8615 N.E. Boehmer St., Portland, Ore. 97220.)

Reed & Reese "Auotronics" NA5-15451 regulated power supply. Schematic and all other available data needed. (Larry Edwards, 2563 25th Ave., San Francisco, Calif. 94116)

Aemco Model RC-2 Gelger counter. Schematic and battery info. needed, or mailing address of Aemco. (Don Thompson, Box 849, Rille, Colo.)

Belmont BC-1237-A war surplus transceiver, circa 1943. Schematic, operation instructions, and service manual needed to connect to RA-105-A power supply. (Harold Wright, 5406 W. 138 St., Hawthorne, Calif. 90251)

McMuro Silver Model 700 transmitter, ser. 316, circa 1950; tunes 144-240 mc. Schematic and all other available info. needed. (Jerry Goodrich, 203 North Hwy. 91, North Salt Lake, Utah 84054)

Philco Model 61 "Transistor" receiver; tunes BC; has 5 tubes. Schematic and parts list needed. (Tim Vinden, 453 Spruce St. N., Timmins, Ontario, Canada)

CV116/ URR surplus frequency shift converter. Schematic and operating manual TM-11-2241 needed. (C.R. Baumann, Box 307, Shiprock, N.M. 87420)

United Sound Eng'g. Model U amplifier, type 29, ser. 3107; has 5 tubes. Schematic and tube source needed. (Kevin Clark, 908 Goodrich Ave., St. Paul, Minn. 55108)

Perfomlux Model B "Tape-Riter," series C-2. Schematic and diagram of belt drive needed. (Kirk Oatman, 1613 4th Ave., E., Spencer, Iowa 51301)

Emerson receiver, circa 1935; tunes 550 to 18,000 kc. on 3 bands; has 8 tubes and round clock-like dial. Operating manual and schematic needed. (Bill Plate, Box 12, Boykin, S.C. 29019)

McMuro-Silver "Masterpiece VI," circa 1938; has 20 tubes, 6L6's output, 6FS expander. Service notes and schematic needed. (S. Handelton, 50 E. 10 St., New York, N.Y. 10003)

Service Instruments Model 11 "Rider Channelyst," type A. Schematic and operating info. needed. (Arnold Benkema, Jr., 2440 52 St. S.E., Grand Rapids, Mich. 49508)

Echophone receiver; tunes 3 bands; has 6 tubes. Service manual needed. (Jonathan Hagger, Oak Knoll, Blue Earth, Minn. 56013)

RCA Model 155A CR oscillograph; has 5 tubes. Schematic, operating data, and parts manual needed. (Ronald Brownich, Box 1156, Rt. 2, Augusta, Ga.)

Hickok Model 110-B VZVM, circa 1950, order #1070. Schematic and operating instructions needed. (Scott Wilkinson, 2510 Mason St., Silver Spring, Md. 20002)

No. 19 MKII surplus wireless set, built by U.S. for Russian tanks, circa 1944. Schematic and power source needed. (David Krall, 2800 Monterey Rd., San Marino 9, Calif.)

Echophone Model EC-3 receiver. Schematic and operating manual needed. (Steve Whitney, 460 Rushmore Ltn., Madison, Wis. 53711)

Be super-critical.

Whether you're looking for the fun and economy of building quality kits or you want ready-to-use factory-wired equipment — before you buy, examine carefully. Compare EICO with anybody else — feature for feature, chassis for chassis, part for part. The more critical you are, the more you'll see for yourself that your best buy is EICO.

Over 3,000,000 EICO instruments now in use! Preferred by engineers, scientists, technicians and students. EICO equipment is available nationwide through 3500 EICO dealers.

New Model 779 — Sentinel 23 CB Transceiver. 23-channel frequency synthesizer provides crystal-controlled transmit and receive on all 23 channels. No additional crystals to buy! Features include dual conversion, illuminated V/W meter, adjustable squelch and noise limiter, TV Filter, 12VAC and 12VDC transistorized dual power supply. Also serves as 3.5 watt P.A. system. $169.95 wired.

New Model 712 — Sentinel 12 Dual Conversion 5-watt CB Transceiver. Permits 12-channel crystal-controlled transmit and receive, plus 23-channel tunable receive. Incorporates adjustable squelch & noise limiter, & switches for 3.5 watt P.A., use, spotting, & Part 5 operation. transistorized 12VDC & 117VAC dual power supply. $99.95 wired only.

New Model 753 — The one and only SSB/AM/CW Tri-Band Transceiver Kit. 200 watts PEP on 80, 40 and 20 meters. Receiver offset tuning, built-in VOX, high level dynamic ALC. Unequaled performance, features and appearance. Sensationally priced at $179.95 kit, $299.95 wired.

New Model 378 Audio Generator. Near-distortionless sine wave generator: 0.1% 20-20,000c. Providing fast, convenient switch-selection of frequencies from 1c to 100kc; 1c steps 1c to 1000c, 1kc steps 1kc-1kc, 10kc steps 10kc-100kc, 100kc steps 100kc. 8 pos. 006 step output attenuator & fine attenuator. Output meter (41/2-200)ma with 8 voltage ranges & db scale. $49.95 kit, $69.95 wired.

Model 232 Peak-to-Peak VTFM. A must for color or B & W TV and industrial use. 7 non-skip ranges on all 4 functions. With Uni-Probe $29.95 kit, $49.95 wired.

Model 324 RF Signal Generator. 150kc to 435mc range. For M-RF alignment and signal tracing of TV, FM, AM, CB and mobile. Built-in and ext. modulation. $28.95 kit, $39.95 wired.

Model 667 Tube/Transistor Tester. Dynamic conductance tube tester. 14 combinations of 3 plate and 3 screen voltages and 3 ranges of grid voltage. Interference leakage readings in ohms. Checks all new tube types. Two step transistor test. $79.95 kit, $129.95 wired.

Model 688 Emission Tube Tester. Checks all new tube types. $44.95 kit, $59.95 wired.

Model 460 5" Oscilloscope. DC wideband 0-4.5mc for color and B & W TV service and lab use. Push-pull DC vertical amp., bal. or unbal. input. Automatic sync limiter and amp. $89.95 kit, $129.95 wired.

Model 1064 DC Power Supply. For bench testing auto radios, CB, mobile and tone equipment. Voltmeter and ammeter. Low ripple for transistor equipment. 0-8V/0-16V outputs. $45.95 kit, $54.95 wired.

Model 566 — All Solid-State Automatic FM MPX Stereo Tuner/Amp. No tubes, not even nuvisors. Delivers 112 watts HIP total to 4 ohms. 25 watts to 8 ohms. Completely pre-wired and pre-aligned RF, IF and MPX circuitry, plus plug-in transistor sockets. $219.95 kit, $325.00 wired with cabinet.

Model ST70 70-Watt Integrated Stereo Amplifier. Best buy of highest ranked stereo amplifiers according to independent testing. $99.95 kit, $149.95 wired. $74.95 40-Watt Integrated Stereo Amplifier, $79.95 kit, $129.95 wired. ST79 Matching EM MPX Stereo Tuner, $89.95 kit, $139.95 wired.

1945-1965: TWENTY YEARS OF LEADERSHIP IN CREATIVE ELECTRONICS

CIRCLE NO. 8 ON READER SERVICE PAGE
You can earn more money if you have an FCC License

Employers are paying good money for men holding FCC tickets. Read how to get yours:

When you hold a Commercial License issued by the FCC (Federal Communications Commission) you have written proof that you know and understand basic electronics theory and fundamentals. It’s worth plenty...particularly to companies on the lookout for qualified electronics technicians. Here’s how one of the country’s leading office machine manufacturers rates men with FCC Licenses:

"An FCC License is an asset to any man looking to enhance his career in the field of electronics. At our Company, a licensed man is well-rewarded because an FCC License attests to his knowledge of electronics theory..."

Thousands of employers will tell you the same thing. Licensed men get the good jobs. They make more money...move ahead faster...enjoy exciting, challenging work. What’s more, they’re needed badly in every field of electronics. Industrial electronics, Radio-TV Broadcasting, Aerospace, Electronics Servicing...including mobile and marine radio plus CB.

Yes...your opportunities are unlimited once you’re carrying that FCC Commercial Ticket. AND CLEVELAND INSTITUTE OF ELECTRONICS CAN GET ONE FOR YOU! On the facing page, read how four ambitious men just like you have cashed in on CIE’s sure-fire FCC Licensing Program. Read about CIE’s exclusive money-back offer. And then send in the postage paid reply card. CIE will quickly send you complete FREE information. You will soon be on your way to a Commercial FCC License and the many rewards that go with it!
These CIE men have good jobs
(they have Commercial FCC Licenses)

Matt Stuczymski, Senior Transmitter Operator, Radio Station WBOE. "I give Cleveland Institute credit for my First Class Commercial FCC License. Even though I had only 6 weeks of high school algebra, CIE's AUTO-PROGRAMMING teaching method makes electronics theory and fundamentals easy. After completing the CIE course, I took and passed the 1st Class Exam. I now have a good job in studio operation, transmitting, proof of performance, equipment servicing. Believe me, CIE lives up to its promises!"

Chuck Hawkins, Chief Radio Technician, Division 12, Ohio Dept. of Highways. "Cleveland Institute Training enabled me to pass both the 2nd and 1st Class License Exams on my first attempt... even though I'd had no other electronics training. (Many of the others who took the exam with me were trying to pass for the eighth or ninth time!) I'm now in charge of Division Communications and we service 119 mobile units and six base stations. It's an interesting, challenging and extremely rewarding job. And incidentally, I got it through CIE's Job Placement Service... a free lifetime service for CIE graduates."

Ted Barger, Electronic Technician, Smith Electronics Co. "I've been interested in electronics ever since I started operating my own Ham rig (K8ANF). But now I've turned a hobby into a real interesting career. Cleveland Institute of Electronics prepared me for my Commercial FCC License exam... and I passed it on the first try. I'm now designing, building and testing all kinds of electronic equipment... do a lot of traveling, too. It's a great job... and thanks to CIE and my FCC License, I'm on my way up."

Glenn Horning, Local Equipment Supervisor, Western Reserve Telephone Company (subsidiary of Mid-Continent Telephone Company). "There's no doubt about it. I owe my 2nd Class FCC License to Cleveland Institute. Their FCC License Program really teaches you theory and fundamentals and is particularly strong on transistors, mobile radio, troubleshooting and math. Do I use this knowledge? You bet. We're installing more sophisticated electronic gear all the time and what I learned from CIE sure helps. Our Company has 10 other men enrolled with CIE and take my word for it, it's going to help every one of them just like it helped me."

Two out three men who took the 1st Class Commercial FCC License exam in 1964, failed. Nine out of ten CIE-TRAINED men who take this exam, pass... the very first try! And that's why CIE can back their courses with the warranty you see at the left. CIE-trained men know their stuff... because CIE AUTO-PROGRAMMED Home Study works!
Get started now. Send postage-paid reply card for free information about a plan that gets you an FCC License or costs you nothing!

Cleveland Institute of Electronics
1776 East 17th Street, Dept PE-35, Cleveland, Ohio 44114

At last!

A compact transistor audio amplifier

Features:
- 5 Transistors and 1 Thermistor
- Shielded Input Transformer with TWO PRIMARY WINDINGS...50 Ohms and High Impedance
- Output Transformer with TWO SECONDARY WINDINGS...8 Ohms (for Speakers), 500 Ohms (for Modulation and High Impedance Loads)
- Volume Control Included and Mounted on Circuit Board
- Low Distortion...400 Milliwatt Push-Pull Output
- Extremely High Gain...80 DB! Handles low-level mikes, phono pickups, telephone pickups, etc.
- Sturdy Printed Circuit Board 5½" long, 1¾" wide
- Weight...3½ ounces
- Power Supply...Any 9-Volt DC Source

Use it for:
- PA System
- Hi-Fi System (Use 2 for Stereo)
- Guitar Amplifier
- Surveillance Listening System
- Electronic Stethoscope

COMPLETE AMPLIFIER $7.95 each
INCLUDING SCHEMATIC DIAGRAM We pay postage!

BIRNBACH RADIO COMPANY INC.

HANDBOOK FOR ELECTRONIC ENGINEERS AND TECHNICIANS
by Harry E. Thomas

If someone asked you to describe the spark stream from white cast iron, where would you find the information? Or how about "ringtime" in a radar echo box? Or the specifications of MIL-C-3883 electrical cord? Heretofore, it would have been quite an undertaking—possible, but involving the shuffling of a lot of books. In this one volume, Harry Thomas has compressed tens of thousands of facts likely to be of everyday importance to the engineer or technician. It's impossible to describe the tremendous variety of items that have been compiled into a well-organized handbook. At POPULAR ELECTRONICS, this book ranks next to our dictionary.

Published by Prentice-Hall, Inc., Englewood Cliffs, New Jersey 07632. Hard cover. 428 pages. $15.00.

INTRODUCTION TO ELECTRONICS
prepared by Bureau of Naval Personnel

Here is another in the low-cost series of reprinted military training courses from Dover. Originally intended for use by naval personnel, this book is typically GI. The subject of electronics is embraced from simple d.c. theory to sonar operation and practice.

NEW LITERATURE

The June, 1965, issue of Bell Laboratories Record (86 pages) is devoted entirely to the No. 1 Electronic Switching System now in commercial operation at Succasunna, N. J. If you're interested in what's happening in telephone communications, make out a check, draft, or money order for 25 cents to Bell Laboratories Record, and send it to: Circulation Manager, Bell Labs Record, 463 West St., New York, N. Y. 10014... Various test instruments in the Mercury line are described and illustrated in an 8-pager entitled "Test and Repair Instrument Catalog." It's available free from Mercury Electronics Corp., Mineola, N. Y. 11501.

The "Mariner" has arrived
way-out new five-element CB beam antenna...

works vertically or horizontally
out-shouts them all with 12.5 db forward gain!

M-134
FIVE ELEMENT BEAM ANTENNA
The "Mariner"

Lightweight but tremendously rugged. High quality aluminum construction
that's reinforced with proper stress distribution to take winds up to 60
m.p.h. Weighs only 19 lbs.—easy to handle and install.

Supplementary data: The M-134 is Gamma fed ... has 1.5/1 VSWR ... and
a boom length of just 22 ft.

12.5 db vertical forward gain (ref. flat ground plane) or 11.0 db in hori-
zontal mode (ref. ½ wave dipole). Really booms your signal out where
you want it.

You get maximum rejection of unwanted noise thanks to 20 db front-to-
back ratio (vertical) or 25 db horizontal. It's like 10-2 from Mars!

See your a/s distributor today for complete specifications or write to:

BUILD...

THE SUPER-X PULSE POWER PACK FOR HO RAILROADING

...and get the feel of the real thing

By WOODROW POPE
Design Engineer,
Collins Radio Company

SAY, Mr. Model Railroad Engineer, can you start your loco without jumping to 10 scale miles per hour? You can, you know, without equipping your locomotive with flywheels or high gear ratios. How? Easy ... just build and use a new transistor throttle power pack on your pike for the ultimate in model railroading.

With it you get pulse power for smoother stall-free starts, and your loco
can crawl, or hi-ball, or couple—without crashing. You also get lots of power to operate signal lights, switch machines, or other accessories... all with circuit overload protection.

Just What is Pulse Power? To understand pulse power, you must first understand the nature and operation of the conventional d.c. power pack. Your loco is equipped with a tiny d.c. motor that operates off power supplied to the tracks by the power pack. When you man the throttle, which is nothing more than a rheostat, you are regulating the voltage across the track, and hence the motor speed.

Assume your throttle is turned all the way down and your loco is sitting still. You now begin to turn up the throttle, gradually increasing the voltage applied across the tracks. But notice, your loco does not start immediately; it waits until the proper operating voltage is reached, and until all magnetic and mechanical locking has been overcome. By this time the voltage is too high for a slow, smooth start, so the loco lunges ahead.

Figure 1 shows, graphically, how late a typical loco might start after you begin cranking up the throttle. You will note that a certain minimum voltage must be reached to overcome the inertial load on the motor before it will even begin to turn.

Now let's assume you are using one of the latest power packs to hit the scene—you know, like the one we're telling you about right now—your loco will start to crawl, like real trains do, the moment you hit the throttle. How come?

Well, with pulse power you get maximum voltage in the form of narrow pulses the instant you flip the primary power switch. This is shown, graphically, in Fig. 2. Here the average power consumed by the motor is a direct fun-

---

**PARTS LIST**

- C1—1000-µf., 15-volt electrolytic capacitor (Sprague TVL 1165 or equivalent)
- C2, C3—0.47-µf., 35-volt capacitor (Kemet KR47C35K or equivalent)
- C4—1-µf., 35-volt capacitor (Kemet K1C35K, or equivalent)
- D1, D2, D3, D4, D6, D7—1X2000 silicon diode, or equivalent
- D5—1N276 diode, or equivalent
- F1—1-ampere fuse
- 11—#47 lamp, 6-8 volts, 0.15-amp.
- 12, 13—12-volt, 1.2-amp, automobile dome lamp, or equivalent (two required)
- Q1, Q2, Q3, Q7—2N4084 transistors
- Q4, Q8—2N1382 transistors
- Q5, Q6—2N4561 transistors
- R1, R6—3200-ohm, 1/2-watt resistor
- R2, R3—22,000-ohm, 1/2-watt resistor
- R4—Not used
- R5—6800-ohm, 1/2-watt resistor
- R7—10,000-ohm, 2-watt carbon potentiometer, linear taper
- R8—300,000-ohm, 1/2-watt resistor
- R9, R15, R16—1000-ohm, 1/2-watt resistor
- R10, R14—10,000-ohm, 1/2-watt resistor
- R11—10-ohm, 1/2-watt resistor
- R12—1000-ohm, 2-watt carbon potentiometer, linear taper (with switch S3)
- R13—300,000-ohm, 1/2-watt resistor
- S1—D.p.s.t. slide switch
- S2—S.p.s.t. slide switch
- S3—S.p.s.t. switch (mounted on R12)
- S4—D.p.d.1. slide switch
- T1—Power transformer, primary, 115 volts; secondary, 12.6 volts with center tap. (Stanor 1F8150, or equivalent)
- 1—Cabinet (Raytheon AC-1813-1 or other suitable sized cabinet)
- Misc.: Fuse clip; pilot light holder; red lens (Dialco series 1006); binding posts (4—2 red, 2 black); throttle knob (Raytheon 175-6-2G); crawl adjust knob (Raytheon 90-2-3G); power transistor mounting kit (Motorola MK-15)

---

Fig. 1. The ordinary power pack is nothing more than a full-wave rectifier whose output is a pulsating d.c. voltage with peaks that look like the waveform above. For most locos, the average power required for starting is much too high for a smooth start, and the trains pull out with a sudden jerk, and at a speed not akin to real railroading.

Fig. 2. The pulse power pack produces a train of narrow pulses in addition to variable d.c. power. The pulses are fully visible when the throttle is turned down, but disappear gradually as the throttle voltage builds up to full power. Instant rise of pulse from zero to maximum provides immediate power to operate train when crawl knob is turned up.

POPULAR ELECTRONICS
How It Works. From Fig. 3 it is apparent that pulse power, which makes your trains run like a dream, calls for a rather sophisticated circuitry. Let's give the circuit a once-over and see what we mean. First, we have transformer T1 stepping down the 117-volt a.c. primary power to approximately 12.6 volts. This 12.6-volt supply branches off to jacks J1 and J2, where it is available to operate switch machines, signal lights, and other accessories. Some of this power is also tapped off and applied to the bridge rectifier circuit (D1 through D4), from where it will eventually operate your trains.

The 6-volt #47 pilot lamp (I1), wired from the center tap to one side of the transformer secondary winding, is merely an indicator to tell you when the power is on. You can break down the rest of the power pack into its pulse forming and control circuits, the variable d.c. circuit, and the short-circuit protection circuit. If you care to, you

Fig. 3. Crawl control R7 adjusts pulse width to give desired crawl speeds when S2 and S3 are turned on. Throttle R12 is part of a voltage divider that drives emitter followers Q7 and Q8 with varying d.c. variation of the pulse width which you adjust with a crawl control. This varies the circuit RC time constant.

Fig. 4. Pulses rise to maximum as soon as power is turned on (a), providing immediate train start. Crawl knob adjusts pulse width for varying train loads and desired crawl speeds. Throttle adjusts d.c. at emitter of Q8 (b) to run train at desired speeds. With throttle turned down (c), pulses appear prominently, then fade away as d.c. is turned up.
can throw in polarity switch S4 (forward and reverse) for good measure.

The Pulse Circuits. These circuits begin with Q1 and Q2 which comprise a free-running multivibrator. The collector of Q2 puts out a 60-cycle square wave which is fed through S2 and S3 to pulse generator Q3 for conversion to narrow pulses. These pulses are then amplified by Q4 and appear as shown in Fig. 4(a). CRAWL ADJ potentiometer R7 adjusts the pulse width to suit varying train loads and desired crawl speed. The CRAWL ON-OFF switch (S2) is used to disable the crawl feature, if desired. Switch S3 is ganged to the main throttle so that it cuts off the pulses when the throttle is turned all the way down to where you hear a "click."

Variable D.C. Circuit. In the variable d.c. function generator circuit, R12 and R13 form a variable voltage divider, the output of which is fed to emitter followers Q7 and Q8. The emitter followers provide a low impedance source for the voltage. The output voltage at the emitter of Q8 is variable from about 3 volts to 12 volts, as shown in Fig. 4(b), depending on the setting of R12, the speed control potentiometer.

Diodes D6 and D7 are used to mix the two functions (pulse and variable d.c.) together. The pulses and variable d.c. are fed to emitter followers Q5 and Q6.
Fig. 6. Pictorial diagram of the completely assembled unit with the cabinet back cover removed, and the circuit board and wiring harness taken out of the cabinet to show wiring details. All wiring should be long enough to allow plenty of room to mount and remove the circuit board at will. Check the schematic diagram to make sure you have the diode polarities properly oriented, if you cannot readily identify the diode markings shown.
which provide a high current output. Their output waveform is as shown in Fig. 4(c).

Short Circuit Protection. Lamps L2 and L3 in the emitter circuit of Q6 protect the entire unit against accidental short circuits or overloading. Together with a red jewel mounted on the front panel, they also double as a track short indicator. These lamps are of the ordinary 12-volt auto dome light type, each rated at 1.2 amperes. Putting them in parallel, however, increases the circuit capacity to 2.4 amperes.

When the filaments are cold, the lamps exhibit a very low resistance, and therefore act like a piece of wire. When your loco or other load begins to draw about 1 ampere of current from the power pack, the lamps begin to glow and their filament resistance goes up rather sharply to form a protective load for the power pack. Thus, even if the output leads at J3 and J4 were to be shorted together, no damage would result to the power pack. But because one of the lamps is mounted under the red jewel, you would know there was an overload when it lit up.

The FWD-REV switch (S4) is an ordinary d.p.d.t. switch wired to reverse the polarity of the d.c. voltage as it is flipped from one direction to the other.

Construction. Assuming you have obtained the Bud cabinet called for in the Parts List, you now proceed to lay out and drill the holes as shown in Fig. 5. After drilling all holes and deburring them, mount the power transistors on the back panel, making certain you use the mica strip and washers supplied with the mounting kit to insulate the transistors from the case.

Figure 6 shows the general layout of the wiring and other circuit components. Electrolytic capacitor C1 should be wrapped with electrical tape to insulate it from the case. Notice that it is mounted with a plastic clamp.

The circuit board is made from a piece of 2½" x 6¾" Vectorbord. Observe the location and mounting position of I1 and I2. Bring out long leads to the panel mounted components, and use a

(Continued on page 96)
If any single word could sum up tape recording today, that word would be "miniaturization." Everything is getting smaller. Recorders for hobbyists once weighed nearly 50 pounds (the old Berrylant Concertones of the fifties). Then came the 28-lb. Ampex 600 which was grabbed by the pros not only because it recorded well, which it did, but also because its Samsonite "one-suiter" size made it convenient to tote around.

Now just consider this: the new Craig TR-490 "Electronic Notebook" recorder weighs just two pounds. It can be worn holster-style around the waist, under a coat, for "secret" recording with a tie-bar mike. Yet the TR-490 can record for half an hour, the same amount as the Ampex 600 with full-rack heads on a 1200-ft. reel, or the old Concertone at 15 ips on a 10-inch reel larger than the entire Craig recorder? The sound? A pro can tell the difference, but many people can't.

Contributing Factors. Many things have contributed to this revolution in recorder size. To wit:

(1) Better metals, which permit narrower and straighter head gaps, thus better high-frequency response at low speeds.

(2) Better tapes, with more uniform coatings. Less clumping of the ferrous oxide particles means fewer fluctuations in output at slow speeds. The byword in

Beware the innocent tie-clasp. It's a snooper microphone, connected by concealed wires to a tiny recorder, worn holster-style over the shoulder. The 2-pound Craig TR-490 "Electronic Notebook" typifies trend to smaller, lighter recorders.

December, 1965
tape manufacture today is uniformity; and lower noise, smoother response, and lower distortion are all dependent upon it.

(3) Better transistors, meaning less bulk and heat. More important, they consume less power, making smaller electronic packages possible. Direct current devices, transistors work as well from batteries as from filtered d.c. supplies.

(4) Better batteries, notably rechargeable alkalines and nickel-cadmiums (thanks to space research) with flat-as-a-ruler discharge curves and the ability to bounce back fresh-as-new after recharging.

(5) Better microphones, especially ceramics and dynamics, which can be made in many shapes (such as the tie-bar of Craig’s “Notebook” recorder).

Other Trends. Most major manufacturers will offer battery-powered models in 1965-66, some for the first time. Radio Corporation of America, which blazed a solitary trail in cartridge recorders for several years, this year is introducing a full line of reel-to-reel and cartridge models, including two “cordless” designs.

Roberts Electronics is introducing its first battery recorders, one for stereo. This company also is offering a subminiature recorder similar to the Craig TR-490. Roberts’ unit is the 1510, a capstan-drive instrument with built-in mike, speaker, vu meter and battery-condition indicator.

“Subminiatures” are not new. Drug-stores and discounters have had $12.95 models for some time. But most of these are bare-minimum devices, some without erase heads, most without capstans (the tape moves under the power of the take-up-reel motor, so speed fluctuates as hub diameters change with tape transfer), and some even without a microphone, the “speaker” doing double duty.

The Craig and Roberts instruments have capstans (so do some others—the Uher 4000, Sony, Telmar, Concord, etc.—already on the market) and shuttle tape at a constant 1 3/8 or 3 3/4 ips. These tapes can be played on other machines, which is not true of most “cheapies.”

But capstan drive is not all that makes the difference. Better-quality miniatures offer better mikes, quieter input circuits, more powerful motors, stronger erase currents, and generally more precision throughout. Some will record music satisfactorily, something capstanless machines won’t do.

Another trend in evidence this year is the move toward automation. In tape recording, this means a way to make tape play in both directions and to stop, start or reverse direction without manual control. RCA’s tape cartridge was a step in this direction, and now some of its hands-off features are being applied to reel-to-reel machines.

There’s other automation, too. For example, Concord’s F-88 “Sound Camera” has a mike with a sound-operated switch to start recording when the sound starts, and stop when it stops. This has intriguing possibilities. A mike near a front door could record messages from}

Stereo in miniature. Roberts Electronics’ 6000S is a battery-powered tape recorder that will play AND RECORD in stereo. Rechargeable batteries keep it going for several hours on an overnight charge.
visitors who arrive during your absence. Or, as a burglar alarm, the mike could turn on the recorder, which in turn could turn on lights, ring bells, maybe even summon the police.

What about stereo? Well, competition from discs continues keen. Four-track commercial stereo continues, but tape's ace-in-the-hole is its ability to record stereo as well as play it. Nearly all recorder manufacturers now offer machines which will record in stereo.

Accessory and Tape Changes. Progress in tape recording isn’t limited to recorders, for they are just the nucleus of a recording system. Much is being done with accessories, too—mikes, mixers, monitoring devices—and with the raw material of recording, the tape.

Tape continues to improve, degree by degree. Quality control during manufacture is more rigid, and tape coatings are more uniform. Kodak, for example, holds tape to the same strict tolerances as film. More uniform coatings mean less output variation, a vital factor when you are recording as slowly as 1½ or 1/3ips.

Clumping, once a way to tell a good tape from a bad one, has virtually disappeared. Backings, too, are better. Some tapes are now designed to break cleanly rather than stretch, on the theory that a break can be spliced together again, but a stretch does permanent damage by lengthening the tape.

You can still buy economy tapes. But even these are better than some of the “quality” tapes of a few years ago.

Progress in another vital accessory area—microphones—has continued and today’s mikes are smaller and smoother. Here, the recordist often buys response over smoothness, a big mistake. The pros know that a “wide-range” mike with a big peak at 10-12 kc. will sound “tinny” whereas a mike with less range but smoother output will give the impression of wider range.

As mikes have improved, prices have tumbled. Shure’s 575S, for example, costs less than $15; yet it is available either in high or low impedance, as a dynamic or as a ceramic.

With an additional mike goes a need for blending inputs. The answer is a mixer. Before transistors, only the pros could afford a good mixer. Today, you can buy a four-channel transistor model for $25 (Citroen Electronics’ Model 1400). It takes up to four mikes, and gives you a volume control on each one.

The Future. What’s on the horizon in recording? Many bright lights. Brightest is TV recording, still expensive but coming closer to earth each year.

Will TV recorders replace home movies? Doubtful, but who knows? That “instant” availability, with no wait for lab processing, is a powerful attraction. The day we get portable color TV recorders is the day to watch for.

Meanwhile, back at the plant, engineers are experimenting with microcircuits in the hope of making electronic gadgets even smaller. The trend toward miniaturization in tape recording is bound to continue.

Voice-operated microphone with Concord F-88 “Sound Camera” turns recorder on when sound starts, off when sound stops. It operates on rechargeable batteries.

Norelco’s “Car-Mount” has a dual purpose. It can be a playback unit for music on the road, or used for recording travel notes.

Transistors mean smaller mixers. Powered by batteries, Citroen Electronics’ Model 1400 preamp/mixer works well with battery-powered recorders since neither require a.c.
NEW SLANT ON RECORDING

Tape Recorder orientation seems to have been split cleanly into two design philosophies over the years. There are recorders which work standing up, and recorders which function while lying on their backs.

The ideal seems to be somewhere in between, 45-60 degrees from horizontal being preferred. But this slant on recording is found only in professional studios. If you want to angle your own recorder, you'll have to build an inclined base for it, such as the one shown here.

—Glen F. Stillwell

There's no reason to crane your neck when an hour's worth of woodworking will solve the problem.
INSIDE TIPS FROM THE PROS

There are no secrets in making good recordings—just the use of common sense

By BYRON G. WELS, K2AVB

Recording at home differs from recording in a professional recording studio not so much in acoustical matters as in the attitudes of the recording “engineers.” Acoustically, the average living room comes close to the recording studio, due to overstuffed furniture, rugs, draperies, etc. The big difference is “finesse”—the pro knows all the tricks, the electronic and mechanical shortcuts which make his job a paying proposition. Lacking the pro’s experience, the home recordist must learn piecemeal, mistake-by-mistake.

If you would emulate your professional associate downtown, heed the following words of advice, guaranteed to turn a rank amateur into a knob-twirling, earphone-tapping, mike-waving pro.

1 Use leader tape. This is tape that looks and feels just like the oxide-coated variety, but oxide is what it doesn’t have. Leader tape can be spliced in between selections on a reel of music to help locate beginnings and endings. It comes in opaque white (which the pros use most) and also in colors. Sonically it is “dead”; non-magnetic, it can’t even hiss. Spliced at the beginning of a reel, leader tape offers a convenient space for identifying the recording. You can write on it with a pen or felt marker.

2 Make a click eraser. Nobody we know sells such a device, yet many pros wouldn’t be without one. Make one yourself with a piece of Alnico cylindrical magnet (Edmund Scientific sells them) measuring ½” in diameter, about ½” to ¾” in length. Remove the innards from an old ball-point pen and insert the magnet, holding it in place with epoxy cement.

This device will erase small spots—clicks, whistles and sibilants—by simply wiping the magnet across that portion of the track on which the unwanted sound occurs.

3 Record sound-on-sound. Some recorders are equipped to do this, some are not. All that is necessary for machines which are not so equipped is to defeat the erase function. (You can’t put a switch in a lead to the erase head because the coil in the head is generally a part of the bias oscillator circuit.)

Simply bend a piece of thin metal (aluminum) into a U shape and hang it over the erase head before threading tape onto the machine. Unable to contact the erase head, your tape cannot be erased. Thus, the new sound you record will go right over the old. Voila! Sound-on-sound.

Inked identification on leader tape helps keep your tape library in order. Boxes should be labeled too.

December, 1965
A microphone boom puts the mike where you want it and keeps it there. The boom swings in all directions. Priced at about $5, this particular boom is sold by Atlas Sound. Mike is top-quality Electro-Voice 676.

4 Don’t “ride” gain. This will really separate the boys from the veterans. Pros set their levels ahead of time and leave them alone. Volume excesses are handled in other ways, such as by moving the mike (if it’s on a boom) or by moving the announcer away from the mike. To fade back in, he simply walks up to the mike while talking.

5 Label your tapes. Never put a tape back in the box without identifying it. If you don’t want to leave a permanent record, use grease pencil—to change the label, just wipe it off with a tissue.

6 Use a mike stand. Hand-holding a microphone is inviting trouble. Changing your grip on the case can make noise, which will become a permanent part of the recording.

Do as the pros do—use a stand. Top models are just a couple of dollars. Floor models can be purchased for $5.98. A “baby boom” which will put the mike most anywhere you want it, and keep it there, costs just a little more.

7 Perform preventive maintenance regularly. Don’t wait until your tapes begin sounding muddy to get out the head demagnetizer. If you record often, do the maintenance once a month.

Follow this plan: degauss the heads, clean heads and tape guides with head cleaner, check pressure pads and friction idlers for hard spots (rough with a wire brush if necessary), dress down the pressure roller with sandpaper if it has become slick, use a vacuum cleaner to remove lint and pieces of broken tape from around the heads, and check to make sure all controls are in working order.

8 Make a duplicate of valuable tapes. If you have a tape which is irreplaceable, which needs editing, timing, rearranging, etc., make a “dupe” first and do your initial experimenting on that. Then, when you know exactly what must be done, go back to the original tape and do it.

9 If you edit, record in one direction only. This may seem uneconomical, but to a pro (who must worry about rent, travel, salaries, taxes and all sorts of
overhead), tape is the cheapest commodity of all.

The same should be true at home. It's false economy to record in both directions, thereby rendering the tape un-editable, only to have to suffer later through false starts, dead air, and other delays which could have been neatly spliced away had the tape been recorded one-direction-only.

If you must pinch pennies, you can save the bits of deleted tape, splice them end-to-end and make up a reel of tape which, for many purposes, is as usable as new tape. But don't use it for anything serious—differing bias requirements between tape bits can play havoc with frequency response and output.

10 Use alligator clips. Many home recordists record everything with a microphone: radio programs, records, the works. But with a mike they also pick up unwanted sounds: the baby crying, car horns, airplanes, birds and everything else within range. The pros use mikes only for live recording. To dub from records or radio, they use a direct cable connection between recorder and source. You should follow the example of the pros.

If your sound source has no "tape out" for a connecting cable, make up a cable yourself. Take a length of shielded cable, attach a plug to fit your recorder's high-level input on one end, and a pair of alligator clips on the other. Clip the gator jaws to the loudspeaker terminals of a radio or TV, and you can record without having to whisper. Keep the radio volume low, the recorder volume control up to minimize distortion.

11 Use a mixer. As you become more sophisticated, you'll invariably buy more mikes. If your recorder has only one mike input, hooking up your new mikes could be a problem. The pros know the answer: a mixer. Then you can plug in three or four mikes at the same time, and control their relative volume with a "pot" (the pros' term for "volume control") on each mike. Mixers today cost about $25.

---

**TAPE RECORDER REMOTE SWITCH**

Ever find yourself at your cable's end (mike cable, that is) with your tape about to run out and no easy way to shut it off? There's a way to avoid this calamity by running a pair of wires from the recorder motor out to a switch located at the microphone. When you want to turn off the recorder, you have a switch literally at your fingertips.

Mount the switch conveniently (I used a plastic box) and fasten it near the microphone with masking tape. If the mike cable is not too long, you may be able to tape the switch wires directly to it. But this may induce hum; if so, you will have to keep the wires separated.

At the recorder end, you can add a new jack to accept a plug for the switch wires, or you can do as I did, unsolder the speaker wires from the earphone jack and rewire the jack to the motor.

Now, when I pull out the plug, the recorder's motor works normally. When I plug in my remote wire, I can turn off the recorder from the other side of the room.

---

Homer L. Davidson

Remote switch in plastic box is handy to microphone, is safe (the box provides insulation), and is a real leg saver.
Five simple checks on the tape you buy

Want to know how to "test and tell good tape from all the rest?"
The Magnetic Tape Division of Sarkes Tarzian, Inc., has some suggestions in a booklet on tape soon to be released. Try these counter tests next time you're at your dealer's.

Test 1. Check for proper slitting and winding. Remove reel from package and hold it broadside to a bright light. The winding should be smooth from reel edge to reel hub. (Note: light will shine through tape which has an acetate base, but polyester tape will be opaque.) If the winding shows dark spots or ruffled edges, it is not quality tape.

Test 2. Check for layer-to-layer adhesion. Hold the tape broadside to the floor. Unwind about 12 inches of tape from the reel and let it hang free. Superior tape should continue to unwind until you stop it; inferior tape may stick. Tape that sticks will not unwind freely in use, causing wow and flutter. The oxide may even come off in spots.

Test 3. Check for cupping. Hold the reel on a table or other flat surface above the floor. Feed at least five inches of tape past the edge, shiny (uncoated) side down. Superior tape should droop toward the floor, proving that it is truly flat. Inferior tape may stand out stiff instead of wilting. Cupping can cause poor winding and poor tape-to-head contact.

Test 4. Test for bias and/or curl. Stretch out about six feet of tape on the floor and apply tension at both ends. Superior tape should stay flat, touching the floor at all points along its length. Inferior tape may wave in an arc or curl. Tape which curls will not wind evenly. Result: uneven tracking past the heads, especially serious with four-track recorders.

Test 5. Check for sound reproduction. Place blank tape on the recorder. Record program material at appropriate volume level. Play back at the same level setting. The sound from the tape should be identical to that of the original program. If it is not, the tape may be at fault.

There are, of course, many other tests which will distinguish good tape but these must be made with instruments. The tests above are useful because they can be performed in the store, before you have made your purchase.
PINPOINT THOSE ERASE TROUBLES

Do your tapes erase clean, or do you hear faint sounds of an earlier recording in the background?

By LEWIS A. HARLOW

INCOMPLETE ERASURE is one recording ailment which always shows up when it’s too late. You notice those traces of an earlier recording which ride piggyback on the new signal after your recording has been made. By then, you can’t get rid of one without damaging the other.

Erase usually is accomplished with an a.c. signal generated in a tube or transistor oscillator circuit. This signal is impressed on the tape through the erase head, which differs from a recording head mainly in its greater current handling capacity and wider gap. The erase frequency can be anything reasonably above the audible range—somewhere between 60 and 100 kc. But more important is power; the signal must be strong enough to do a thorough job.

To check your recorder, make this erase test. Make a short recording on new tape. Monitor carefully. Record up to the indicated maximum level, but don’t over-record. Then rewind and run the tape through again with switches set for “Record” but with the volume all the way down and all inputs disconnected. The tape should be thoroughly erased. Now, rewind and play the tape with playback volume full on. You may hear hum and hiss but you should not hear a trace of the previous signal. If you do, check for the following:

Dirty Erase Head. Symptom: partial rather than total failure to erase. A common trouble, it is caused by iron oxide accumulating on the pole-piece of the erase head and forming a metallic barrier to the erase current. Solution: clean the pole-piece with head cleaner. Apply with a pipe cleaner or Q-tip, rubbing off the reddish residue.

While you’re at it, clean the other heads, too. They probably need it.

Switch Trouble. This usually develops in recorders used only occasionally, since the abrasive action of the contacts keeps

Heads are visible when cover is removed. On this recorder, the tape moves from right to left. Thus, head on right is erase head (it contacts the tape first). Clean this pole-piece thoroughly with head cleaner.

December, 1965
them cleaned. But if you develop a noisy switch, exercise it 20-25 times or so to repolish its contacts. If this doesn't help, apply liquid cleaner to the contact points. Then, exercise and test again.

Warning: don't bend the contact points of switches. They are factory-adjusted for years of service. "Improving" them may do more harm than good.

While your recorder is open, check for breaks in long runs of flexible wiring. Heads and switches are often located near mechanical components and wires there are not as protected as they are, say, inside an amplifier.

Tube Trouble. Usual symptom: total erase failure. Your tube placement chart will identify the erase oscillator tube. (If it does not, you are probably erasing with an audio output tube switched into "record" service.) Solution: test the oscillator tube and replace it even if the tester reads "fair." This may be necessary often, since erase and audio output both are heavy-duty services.

Blasts. An erased tape that is quiet except for occasional weak blasts does not necessarily indicate a faulty erase system. *It is possible to put more volume onto a tape than an erase system is designed to remove.* Solution: two passes through the erase system, or external bulk erasure.

Tapes From Other Recorders. Not all erase heads plow the same width of path. Not all erase heads are mounted at the same height above the bottom margin of the tape. If you made a tape on one machine and are going to record over it on another, better use a bulk eraser first. Or, use a fresh reel of tape.

Voltage Checking. Now, and not before, is the time for troubleshooting with a VOM or VTVM and schematic, if your erase trouble persists. Check voltages at the oscillator tube socket. Then trace continuity through the oscillator coil and all the way to ground through the coil in the erase head.

Coils are rarely at fault. Resistors and capacitors fail occasionally. You may also find a short due to a wire touching ground, or weak insulation.

Worn Erase Head. Checking for a worn erase head comes last because it is the least likely. Wear will damage an erase pole-piece by widening its gap. But while this is happening, the record/play pole-piece is wearing just as fast. You'll notice missing highs due to a worn playback head long before the erase gap wears out. It is a good practice to replace the erase head when you replace the playback head. That way, wear will never be a cause of erase failure.
QUICK CURES FOR SICK RECORDERS

A refresher course in some obvious tape recorder troubles

By GLEN F. STILLWELL

YOUR recorder is sick. It won't play and it won't record. You haven't much time to fix it because in fifteen minutes there's a program you just must record. Your objective: find the trouble fast.

Diagnosing sick recorders, like troubleshooting any electronic device, is a pat procedure in which you ask yourself

(1) What does it do?
(2) What doesn't it do?
(3) What is the relationship between what it does and what it doesn't do?

In the answers lurks a clue to the trouble.

Making a Diagnosis. Most tape recorder trouble is due to loose or faulty connections. Poor reproduction is rarely a product of electronic malfunction, especially with units under five years old.

Chances are your patient is suffering from simple mechanical failure: if the tape won't move; if it will move but can't touch the heads; if it will play back but won't record; or if it moves at an uneven pace.

If your recorder "won't work at all," you can check out the electronics in a jiffy. Plug in a mike and listen over the monitor circuit (headphones or loudspeaker). If the sound comes through, you can eliminate amplifiers as the source of trouble.

If the tape runs and the amplifiers are okay but the machine still won't record, the problem is related to the heads—bias oscillator, connecting wires, dirty gaps or, in extremely rare cases, the heads themselves (tape heads are like TV picture tubes—always suspected but almost never to blame).

Typical Cases. Noisy operation can be harder to eradicate than no operation at all. Look at these "ferinstances."

A well-known recorder developed a strange rhythmic clicking noise that defied detection until the instrument was opened up. Turned out the noise came from a loose pulley belt slapping a tube shield. Cure: Replace the belt and tilt the tube shield.

Another recorder made a squealing sound. The motor and drive system seemed to be okay. The trouble was in a counter, cured by a tiny drop of oil.

A Wollensak howled like a homesick pup. Turned out to be a microphonic tube that otherwise scored 100 in a tube checker. Replacement fixed it up.

The owner of a new recorder always suspects the worst when his machine won't justify its claims. Yet the trouble usually is something which can be easily fixed. For example, a German-made recorder became partially inoperative. The owner thought it was the heads. He was overjoyed to learn it was nothing more serious than a hidden, but blown, fuse.

Another machine tested perfectly yet made no sound. The monitor circuit was okay, heads were okay. Tapes made on it played back okay on other machines. The trouble: shorted speaker wires.

Often the trouble is nothing which needs "repair" at all, like the portable with a clever switch under the playback level control to disconnect the speaker in order to prevent feedback. Pulling the knob out turned the speaker off. Sure enough, one owner took his recorder to a service shop, complaining "no
sound.” The repairman wearily flicked the switch with his finger and the instrument came to life.

This illustrates how often trouble is due to a lack of understanding of the instruction book, or to an owner who simply neglects to read the instructions at all. Recorders differ, and while the basics of tape recording are constant, the fine points of mechanical design can throw you for a loop. Even a veteran recording engineer must read the book before operating a battery recorder bought for his children.

**Troubles and Cures.** “Poor” sound is seldom reason for lugging a recorder back to the dealer. Usually it is something which can—and should—be fixed by the owner, right then and there. Here is a list of recording troubles with suggestions for curing them.

1. Mushy, muddy, unclear sound. Probably due to recording at too high a volume level. The recording indicator (either a meter or a light) gives an indication—*not a guarantee*—and experience is needed to learn just where the needle should be for good signal-to-noise ratio without distortion. Cure: practice.

2. Tearing, ripping, shredding sound when using a microphone. Probably caused by talking too close to the mike. Microphone diaphragms are so sensitive that they can vibrate from air currents set in motion by sounds 25 to 50 feet away. No wonder they “shatter” horribly when the voice is only an inch or so away, shouting.

To use a mike properly, either speak *across* it in a normal tone of voice or hold it far enough away to accommodate your speaking volume. Again, the answer is practice.

3. Weak playback, or playback which fluctuates in volume. Check for dirty heads. Use head cleaner and a Q-tip. Clean the heads monthly and this problem will never arise.

4. Sharp, raspy sound that comes and goes. Probably a loose connection, a plug not pushed all the way in, or a frayed shield on a connecting cable.

5. Hum, just a trace. Could be recorder location. Try a different spot and see if the hum changes. If your recorder is sitting in a strong a.c. field, you’ll get hum on playback (but not on record, so it won’t get on your tapes). If moving the recorder doesn’t help, try turning the plug around.

6. Hum, lots of it. May mean no ground between recorder and source. Check the cables. With a high-impedance mike, it could be pickup by the cable. Even short cables can be hum-sensitive. Cure: a low-impedance mike and cable transformer. Temporary cure: lift the cable off the ground or reorient it and choose the quietest location.

7. No hum, no scratch, plenty of monitor volume but markedly less volume on *(Continued on page 97)*

Mechanical troubles outweigh electronic problems. Bent fan blades can cause noise by chattering on case. Cure: bend the blades back where they belong.
BUILD...

SOLID-STATE SLOT CAR
SPEED CONTROL

Turn your slot racing car into a mighty fast cat, yet maintain absolute speed control every inch of the way

By JAMES FISHBECK

SIMPLE TO BUILD, inexpensive to own, a dream to operate! We're talking about a transistorized slot racing speed controller that lets you run your model racing car almost like the pros do at Le Mans. From the instant you start, all the way through the sloping, winding, pretzel-shaped speedway, till your car zooms across the finish line, you'll enjoy the full pleasure of instant and complete control over your racing car's speed and performance.

Because the push-button type of speed controller controls the car's speed by applying a series of pulses, the acceleration is in steps, rather than through a smooth, linear variation from low speed to top speed. This new solid-state speed controller uses a carbon potentiometer wired to a d.c. amplifier to provide a
smooth variation in resistance, which gives your car finger-tip speed control and all the power it needs to perform with style and class.

How It Works. The speed controller consists of a dual amplifier and two separate potentiometer throttles—one for each amplifier (Fig. 1). Each amplifier output drives a separate lane of the speedway.

Potentiometer R1 is shown connected across the d.c. power pack supplied with the racing car set. Its center tap is wired to the base of emitter follower Q1, thereby controlling the output of this stage. The output of Q1 is directly coupled to the base of Q2, the power output stage, which supplies power to the track through F1. The other amplifier operates in the same way.

Since the power pack is nothing more than a step-down transformer feeding into a full-wave rectifier, it puts out an unfiltered d.c. which is quite suitable to run racing cars. Because the transistor amplifiers do not perform well with pulsating d.c., a filter capacitor (C1) is put across the power pack output to filter out the ripples before they get to the amplifier.

If you operate a speedway with more than two lanes, you can build a separate amplifier for each lane with no degradation in performance (as long as you don't exceed the wattage rating of the power pack). Just be sure you use identical components in all the amplifiers and speed control potentiometers.

Construction. Except for the two speed controller potentiometers, all parts, including the power pack supplied with the slot racing set, are mounted on a 2” x 5” x 7” aluminum chassis (Figs. 2 and 3). The two speed controller po-

**PARTS LIST**

C1—500-µf., 25-volt electrolytic capacitor (Cornell Dubsler BBR 300-25 or equivalent)
F1, F2—1-ampere fuse (Littlefuse 3AG)
Q1, Q3—2N109 transistor
Q2, Q4—2N554 transistor
R1, R3—500-ohm carbon potentiometer, linear taper (IRC-CTS Q11-114 or equivalent)
R2, R4—1000-ohm, 1-watt, 10% resistor
TS1—4-terminal screw-type terminal strip (Cinch-Jones 17-4 or equivalent)
1—2” x 5” x 7” aluminum chassis base (Bud AG-402)
2—3½” x 2½” x 1½” aluminum Miniboxes (Bud CU-3017A)
Misc.—Two miniature fuse posts (Littlefuse 342014), multiple-conductor intercom cable, power pack from existing racing set, two knobs, mounting hardware, transistor sockets, rubber grommets, hookup wire, etc.

---

Fig. 1. In this two-lane speed controller, each channel is a mirror image of the other. The speed control potentiometers are mounted on individual chassis, and are connected to the amplifier circuit by long cables. For compactness, mount the slot racer power pack on top of the amplifier chassis.
tentiometers are mounted on individual 3½" x 2½" x 1½" aluminum Miniboxes. After drilling, punching, and deburring the chassis, insert rubber grommets through all cable entrance holes.

If your power pack is too large to fit on the size chassis recommended, get a bigger chassis. The size suggested happens to be convenient, but you have complete freedom to select the packaging that best suits your needs. Incidentally, the layout of components is not critical, either. Just use good practices to come up with a professional looking job. You must mount the two small transistors (Q1 and Q3) on sockets, however, and you must use mounting kits for the power transistors (Q2 and Q4).

After you have mounted each potentiometer on its Minibox, wire it up as shown in Fig. 1 using the three-conductor flexible cable (you can make the cable any length you wish). Connect the other end of the cable to the main chassis.

Check It Out First! Having completed all your wiring, you are now itching to fire up the unit and race away... but don't, yet. You'd better go over all the wiring, very carefully, and check it out against the schematic. Above all, you'll want to make certain you haven't reversed any of the leads to the power pack, as this could play havoc with your transistors. If everything's okay so far, wire the output terminals to the track and plug the unit in.

If either car runs in the wrong direction, reverse the track leads to that lane. Do not reverse the leads at the power pack to correct this condition. Should either controller potentiometer work backwards, that is, if the car increases speed when the knob is rotated counterclockwise, reverse the two cable leads across the potentiometer end terminals.

If one car tends to run slowly when the potentiometer controlling that car is at full throttle, one of the transistors in the amplifier associated with that lane is defective. To determine which transistor is at fault, remove the smaller transistor (Q1 or Q3) from its socket. (CAUTION: always turn the power off when removing or inserting any transistor.) If the car still runs slow with the transistor removed, replace the larger transistor. If the car doesn't run at all now, replace the smaller transistor.

Fig. 2. Large chassis allows plenty of room for mounting the power pack. Use mounting kit for Q2 and Q4, and be sure to mount Q1 and Q3 on sockets. Cables at sides of chassis go to speed controllers.

Fig. 3. This underchassis view shows parts layout and wiring. Capacitor C1 is wired across the power pack output to provide filtered d.c. to the amplifiers. Use rubber grommet at all cable entrances.

EQUIPMENT REPORT

Knights-KIT KG-221 FM MONITOR RECEIVER

WELL, at last a major kit manufacturer has produced a police/fire receiver. This is one item that’s been missing from the kit catalog for years. Allied Radio’s Knight-Kit KG-221 monitor receiver can be wired from scratch in less than eight hours and—as a 152-174 mc. FM receiver selling for $39.95—it’s a real bargain.

We actually wired the unit ourselves (the front end comes preassembled and prealigned) to get at the facts. We found the instructions easy to follow, and when we were through with the wiring, we plugged the unit in. It worked fine, and as the manufacturer claimed, no alignment of any kind was necessary.

The KG-221 features a transformer power supply with a silicon diode rectifier, and has five tubes and one transistor. The transistor is a part of an all-electronic squelch circuit that’s adjusted by means of a front panel Squelch control which silences the receiver when a station is not transmitting.

The unit has a 3” x 5” speaker, and is said to provide an output of one watt (we didn’t measure the power output but the volume was loud enough for room listening). The KG-221 also has a Phones jack and a Speaker/Phones switch right on the front panel to allow a choice of reception.

In operation, the receiver was found sensitive enough to pick up traffic several miles away, just using an ordinary TV “rabbit ears” antenna adjusted to the proper length. We think it is well worth its modest price.

For those who prefer to work in the 30-50 mc. band, Allied Radio offers the Knight-Kit KG-220, which is similar to the KG-221 in other respects.

Receiver vernier tuning dial covers 152-to-174 mc. FM band for police, fire, civil defense, other emergency services, and U.S. Weather Bureau broadcasts.

The receiver front end comes factory-preassembled and tuned, and no further alignment is necessary.

This underchassis view shows ample room for all parts and wiring. Component layout is not critical.
A YEAR or so ago, there was a magic word spiraling to fame—and the word was “Telcan”. The word turned out to be mostly mythical. Telcan’s promise of low-cost TV tape recording for home entertainment simply went unfulfilled. And the British-owned Telcan, after much corporate juggling, simply slipped out of sight.

But the need still exists. A popularly priced home-entertainment television tape recorder that doesn’t require an engineering degree to operate will find plenty of buyers.

Good TV taping, like hi-fi audio recording, depends on the maximum possible frequency response of the tape and head combination. One rule of thumb: the faster the tape speed past the head, the higher the possible frequency response. This response can be further improved by narrowing the head gap, an expensive process, and possibly using finer milling in preparing the tape’s oxide coating—also expensive.

When Ampex initially developed TV tape recording, the only feasible way of obtaining this high tape speed was by rotating the record/playback head assembly. The transverse system that resulted is still standard in the broadcast industry. Transverse recording uses 4 recording/playback heads rotating at a 90-degree angle to the direction of tape travel. Two-inch-wide video tape is used and it moves past the rotating heads at 15 or 7½ inches per second. At 15 ips, this is equivalent to an effective tape speed of 1500 ips. This speed means that the tape machine can record frequencies of 4 to 5 mc.—more than enough for broadcast-quality recording.

Understandably, transverse machines are costly and use expensive instrumentation-grade tape. The machines are big and bulky, complicated to operate, and are certainly not intended for home use. But the transverse machine was the first TV tape recorder and these original Ampex TV broadcast machines started a major revolution in programming techniques.

The helical scan was developed in response to the need for lower-cost, simpler-to-operate equipment for closed-
circuit and educational TV systems. This type of tape scan uses one or two heads mounted on a rotating drum that scans a diagonal path or "helix" across the tape. Tape widths can vary from one-half to two inches, and tape speeds can be from 3.75 ips to 9.6 ips. Naturally, the faster speeds produce better frequency response. At 9.6 ips, effective tape speed past the head is nearly 1000 ips and usable bandwidth up to 3 mc. is possible. Helical-scan machines are called "closed-circuit" or "industrial" recorders, since this is their principal application. Prices are usually less than $10,000 and some recorder decks go below $1000. Average cost is $4000 (e.g., the Norelco EL 3400).

As this is written, there are two helical machines on the market that can qualify as home-entertainment recorders—the Ampex Model HVR, with a $1085 price tag and the Sony TCV-2010, which sells for $995, including a built-in 9-inch TV monitor.

Both the Ampex and Sony recorders are transistorized. Both are compact—about the size of a large, conventional stereo recorder—and are at least as easy to operate as a stereo recorder. The Ampex takes a 1-inch tape and plays at 9.6 ips or half that speed in the more expensive 2-speed model. The Sony uses a 1/2-inch tape and plays it at 7.5 ips. Reproduced picture quality on both units is more than adequate for home TV viewing and good enough for most closed-circuit systems. Both manufacturers have made up attractive "packages" using the unit in a TV console. Both sell "accessory" TV camera systems for shooting home "TV movies". It has been rightfully claimed that the cost of tape is lower than for a comparable playing time of home movie film. In addition, the TV tape has the added advantage of instant sound tracks and instant playback.

The longitudinal scan is mechanically the simplest technique. It is exactly the same as the scan used in ordinary tape recorders, with one difference—the tape whizzes past one stationary recording head at a speed that would be called "fast forward" on audio machines. This is 120 ips and eats up a lot of tape. Pulling tape at this speed wears down the heads very, very fast and has a marked tendency to wear out tapes. The ill-fated Telcan was a machine of this type, but it was plagued by electronic and magnetic troubles.

Some engineers claim that longitudinal scan just won't work and they may
The simplest video recording technique is the old longitudinal scan method used in voice and music recorders. To get the necessary TV information on the tape, it must be pulled past the heads at very high speeds. The Wesgrove recorder (see text below) uses this idea. While the system works, it wears down tape recorder heads rapidly.

be right, if you are talking about providing high-quality pictures at low cost. But the proof of the pudding is another ill-fated machine—the Ampex VR-303, a longitudinal scan machine that sold for a brief period early in 1965 at $3950. The machine produced very good quality pictures on 1/2-inch tape at a speed of 100 ips! The tape was recorded half-track, so with flip-over, a single reel would play up to 50 minutes. But what a reel! It was 12½ inches in diameter and held about $60.00 worth of special tape.

Other manufacturers were introducing helical scan machines at comparable prices, and the 303 died an untimely death.

Most of the present-day clamor about TV tape recording is being generated by the latest British entry—Wesgrove. Priced at less than $500 (wired: $392, kit), this longitudinal scan machine is definitely in the home-entertainment category. Unfortunately, picture quality leaves much to be desired. Tape pulling speed, tape size, and head wear dog the footsteps of Wesgrove. Even though the heads are replaceable ($12 each) the user would need to splice several lengths of Mylar tape together on a 12-inch reel to obtain 30 minutes playing time. The cost of one such reel will come close to

If the longitudinal scan method can be made to work, most experts agree that Fairchild Camera's recorder will be the most economical. Tests have shown that this recorder renders good-quality pictures from 1/4-inch tape moving at 60 ips.

December, 1965
$50. That's one fly in the ointment. Another is the observably poor quality of the reproduced picture. Of course, it is to the manufacturer's credit that the thing works at all at these prices, but it is just not the sort of picture you're accustomed to seeing on your TV set.

If the longitudinal recorder can be perfected and sold for $400-600, it may be the brainchild of Stewart Hegeman. Last of the vanishing breed of free-lance inventors, Hegeman has demonstrated a 60-ips recorder with remarkably good picture quality. His company, Par, Ltd., has granted an option to Fairchild Hiller Corp. to sell this recorder to the military. Hegeman will be remembered for his hi-fi developments in amplifiers, tuners, and speaker systems.

Another company pushing hard on the longitudinal scan is Fairchild Camera and Instrument Corp. Its scientists have managed to get good pictures from 1/4-inch tape at a speed of only 60 ips, which makes the machine economical where tape is concerned. Another feature is that it records a composite signal--video, audio, and horizontal hold—all on a single channel. While Fairchild has demonstrated working models of this machine, they plan to license it rather than manufacture it themselves. "We're just not in the home-entertainment equipment business", says a company official, "and we don't expect to start in it now."

To date, Fairchild has reached licensing agreements with at least two manufacturers and production is scheduled to start in 1966. The machine will sell for about $500, including a monitor. Instrumentation-quality tape long enough for 1/2-hour playing time per track (2 hours total) should cost about $15.

Bandwidth of the new machine, at 60 ips, is claimed to be 2.8 mc.—more than enough for clear, clean pictures on home TV sets. Engineers have also recorded color using 1/2-track recording and a more sophisticated electronics package.

The Fairchild machine sounds very promising, but it is at least one year from your living room. In the meantime, it is likely that the price tag on helical scan machines will drop. By early 1967, recorders may be available for $400 to $500. If this happens, and the machines use modestly priced tape and provide good picture quality, the industry will then face a standardization impasse that may not be resolved for several years. Chances are that helical scan will win out, at least temporarily, since longitudinal-scan manufacturers will probably continue to work at slower tape speeds for greater economy.

What of the future? Clearly, there will be further price breakthroughs in the helical-scan units. Longitudinal scan still requires final development before it can be mass-produced. By mid-1966, a helical-scan recorder priced below $500 will probably be announced, but it won't be

Wesgrove is one of the two British manufacturers that introduced low-cost TV tape recorders. This particular machine is available as a kit for $400.
available much before Christmas. This machine will probably use ½-inch tape that should be in volume production about the same time that the recorder hits the market. The head will carry a 1000-hour guarantee and replacements will sell for less than $25.00.

Low-cost TV cameras for home use will make home-taped home "movies" more and more common by this time next year. Tape rental libraries will start opening, offering movies and shows at daily rentals lower than the price of a pair of tickets to the neighborhood movie house. Inviting favored neighbors in to view the show and splitting the rental with them will become common practice. And this rental service could sound the death knell of pay-TV.

TV tape recorders will sprout in unlikely places. They are already in use by golf pros and in public-speaking classes. Theater and movie shooting rehearsals will provide "live" commentary to the actors during breaks. The uses are almost unlimited.

And, in your own living room, there will no longer be favorite TV programs missed because you are out for the evening. An automatic timer hooked into the recorder will preserve the show for later viewing—complete with commercials. That's one problem they haven't quite licked yet!

Sony's $1000 recorder is attracting considerable public attention. With a tape width of ½ inch and a 7.5-ips speed, the picture quality is quite good.

TV PICTURES ON PHONOGRAPH DISCS

An important development by Westinghouse, called "Phonovid," is a system that records TV pictures on high-quality phonograph discs and slow-speed audio tape. Phonovid does not produce moving TV images, but a series of still photos. One 12-inch 33½-rpm record can hold 400 still pictures along with a sound track.

Heart of the unit is a storage device that "builds up" the TV image from the slow-scan recording. One complete picture takes several seconds of playing time to produce, and the previous image is held on the picture tube until the next one is ready for display.

The system is useful for schools, meetings, presentations, and other situations that require a slide-type program with narration. Basic prices are high—several thousand dollars for a playback system—but Phonovid has the big advantage of using low-cost LP records and slow-speed audio tapes.
PHOTOGRAPHERS working with photofloods will find this dimmer a real money-saver. Built into a multiple outlet box, it cuts the line voltage to one or more lamps, when switched in, thus greatly extending lamp life as well as allowing greater versatility in light control.

How It Works. The dimmer consists of a silicon diode connected in series with the a.c. line feeding three of the four outlets in a commercially available strip-type outlet box. Selection of the diode and type of box depends upon the number of lamps needed and their wattage rating.

For example, two 500-watt floods and one 500-watt spotlight draw a little less than 13 amperes; therefore, a four-switch, four-outlet box with at least 6-ampere sockets and a 15-ampere fuse should be selected. Motorola's 1N3210 diode can handle up to 200 peak inverse volts at 15 amperes of current. However, you can use any diode that is capable of handling at least this much voltage and current.

A slight circuit modification in the outlet box is all that is needed to enable you to switch the diode in or out of the circuit, as shown in the wiring diagram. When S1 is in the on position, the diode is "jumped" out of the circuit and the full amount of line voltage is applied. When S1 is in the off position, the diode is in the circuit and only half of the a.c. line waveform reaches the lamps.

This modification leaves the outlet next to S1 out of the dimmer circuit, and enables you to get full-line voltage
Drill a 3/8" hole through one end of the outlet box and Minibox, as well as two 5/32" holes on both sides of 3/8" hole for mounting boxes together.

Diode leads fed through the 3/8" hole are connected across the first switch. Note change in line cord connection. These two changes are all that's needed.

As diode is too large to fit inside outlet box, separate Minibox must be used. Connected as an extension to the strip-type outlet, it is screw-mounted.

from it at all times. The other three switches control their respective sockets, as before.

**Construction.** Mount the diode in a 23/4" x 2\(\frac{1}{4}\)" x 1\(\frac{1}{2}\)" Minibox and attach the box to the multiple outlet strip as shown. Feed the diode leads through a 3/8" hole previously drilled through both boxes. Two 3/32" holes are drilled on either side of the 3/8" hole to accommodate a couple of 6-32 machine screws and nuts to hold the boxes together.

A small piece of metal, at least \(\frac{1}{6}\)" thick, can be used as a heat sink for the silicon diode. (In this particular unit, an old phonograph cartridge weight was used.) Drill a 3/8" hole near the top of the heat sink to hold the diode. A 3/32" hole drilled at the base of the heat sink permits attachment to a right-angle bracket.

Mount the rectifier using the hardware as shown in the illustrations. The white nylon bushing fits inside the 3/8" hole to center the 1/4" stud on the rectifier, and to keep the stud from making electrical contact with the heat sink. Place a mica washer on either side of the heat sink.

Before using the dimmer, check with an ohmmeter to make sure that the diode is electrically insulated from the Minibox. Center the diode and bracket assembly before drilling a 3/32" hole in the bottom of the Minibox to mount the right-angle bracket.

* Non-news broadcasts. Some additional broadcasts are beamed to North America, but are not included here since they are not expected to be heard satisfactorily during the winter months.
IN 1955, when your Short-Wave Editor first became associated with POPULAR ELECTRONICS, a survey was taken to determine the approximate geographical location of the majority of the DX'ers who were reporting to the existing short-wave column. It was found that the majority was located east of the Mississippi River, most of them in states bordering on the Atlantic Ocean. So it was decided to list all operating times exclusively in EST, in conjunction with the 24-hour system.

Recently another survey was taken, the results of which indicate that the readers of and contributors to this column are now generally distributed throughout most portions of the United States. Some areas of the far-midwestern states and sections of the Rocky Mountain states have fewer DX'ers than other areas, and the Atlantic Coast continues to have the greatest numbers. But the DX'ers in the southern states and Pacific Coast regions have greatly increased. In addition, readers in a large number of foreign countries have been expressing increasing interest in the hobby.

For a long time most of the short-wave broadcasting stations have given their operating times in Greenwich Mean Time (GMT); a limited few are still releasing their schedules in EST. The American Radio Relay League, which represents tens of thousands of amateur radio operators, adopted GMT several years ago. And portions of the bulletin of the Newark News Radio Club (the largest and oldest short-wave club in the nation) have been changed over to GMT. The majority of the other short-wave clubs and virtually all of the foreign clubs use GMT exclusively.

Taking all of these various items into consideration, it has been decided to change the times in this column from EST to GMT. This decision is expected to cause a bit of hardship—short-lived, we hope—for East Coast DX'ers, but is expected to win the overwhelming approval of DX'ers from virtually every other part of the U.S., in Canada, and in the foreign countries.

The adoption of GMT will become effective on January 1, 1966. As of this date, readers are requested to submit all reports in GMT rather than in EST. For Eastern Standard Time DX'ers, this will mean adding five hours to the local time. Those in Central Standard areas should add six hours; those in Mountain Standard areas, seven hours; and the Pacific Coast reporters, eight hours.

10 Heising

Many present-day electronic devices have been around for a long time, and some still bear the names of their inventors. Try matching the names of the well-known scientists listed above (1-10) with drawings A-J of the devices or circuits they helped develop.

(Answers on page 104)
HOW TO SERVICE YOUR OWN EQUIPMENT

SERVICING your own equipment can be fun. In addition, it eliminates the time you would have to be off the air while the equipment was at the factory being serviced. And any person capable of passing an amateur examination should be capable of performing the greatest percentage of the servicing of his own gear. Doing the job requires only the instruction/service manual that comes with the equipment, and a test meter.

Either a 20,000-ohm-per-volt volt-ohm-milliammeter with a 5000-volt scale or a vacuum-tube voltmeter is equally suitable. Possibly the VOM is slightly more desirable for some transmitter checks, and it has the advantage of not having to be plugged into the 117-volt power line to operate. The VTVM, however, is slightly better for making measurements in a few low-voltage, high-resistance circuits found in receivers—the a.v.c. circuit, for example. But the choice between the two types is pretty much a matter of personal preference. Actually, a 1000-ohm-per-volt VOM will do almost as well as either a 20,000-ohm VOM or a VTVM for routine amateur equipment servicing; its main disadvantage is its inability to give accurate voltage readings in low-voltage, high-resistance circuits.

The most intelligent first step in servicing any piece of electronic equipment is to read the instruction manual. Then eliminate obvious possibilities before tearing into the unit. Are the antenna, speaker, microphone, and/or key connected? Is the antenna changeover relay operating properly? Are all the tubes lit? Is the trouble limited to certain bands or modes of operation? Has a fuse blown?

It is fairly common for a fuse to blow in properly fused equipment for no apparent reason. Therefore, if a fuse does blow without any other evidence of

Bill Paul, WB6KGG, of San Francisco, Calif., started his amateur career with a bang: his very first Novice QSO was answered by a Mexican amateur. Retired from the Police Department with a spinal injury, Bill has lots of time to be on the air. With his Hallicrafters HT-37 transmitter, Hammarlund HQ-180 receiver, and an inverted-V antenna, he has worked 41 states and 3 continents, mostly on CW. Bill will receive a one-year subscription for submitting this winning photo in our Amateur Station of the Month contest. If you would like to enter the contest, send us a clear picture of your station, preferably showing you at the controls, and some details on your ham career and on the equipment you use. Entries go to: Amateur Photo Contest, c/o Herb S. Brier, Amateur Radio Editor, P.O. Box 678, Gary, Ind. 46401.
trouble (such as a burning smell), just install another fuse of the proper rating. If the equipment then works properly, all is well, although you should watch the unit carefully for the next few days for signs of intermittent trouble. Of course, if the new fuse immediately blows, you have a metering job to do.

Electronic equipment instruction manuals invariably include a schematic diagram showing all resistance, capacitance, and other component values. In addition, they usually contain separate charts showing voltage and resistance readings to be expected from various test points (usually the tube socket terminals) to ground. Unplug the unit from the power line and start measuring resistances at the indicated points. When you find a large discrepancy—say 20%—between the listed and measured resistance values, carefully check all components connected to that point either directly or indirectly.

In a transmitter recently serviced by your Amateur Editor, for example, pin #3 of the 6L16 output tube had a listed resistance of 22,000 ohms, but the measured resistance was zero ohms. Inspection of the circuit diagram showed a 22,000-ohm resistor and a 0.005-μf capacitor between the pin and the chassis. In addition, there was a 47,000-ohm resistor between the terminal and the B+ line. Deducing that the capacitor had probably short-circuited—a common trouble—we unsoldered one side of it from the circuit and measured its resistance. It was shorted; so we replaced it with another capacitor of the same type and capacitance. As a precaution, we also measured the 47,000-ohm resistor. When the capacitor shorted, it effectively connected this resistor directly across the B+ voltage to ground, causing several times the normal amount of current to flow through the resistor. This might have changed its resistance or burned it out completely. Fortunately, it did neither.

The above illustrates the theory behind troubleshooting with an ohmmeter: find a point in the circuit where the measured resistance differs from the specified resistance and start checking all components associated with that circuit. In general, resistors should be within 10% of their specified values; capacitors should show a very high resistance (after an initial meter “kick” as the larger capacitors charge up); chokes, coils, and transformer windings should show low values of resistance—usually well under 200 ohms, except for a few audio transformer windings which may run up to a few thousand ohms.

It is always wise to troubleshoot a defective circuit thoroughly before applying power. Nevertheless, resistors that change value or capacitors that become leaky after the unit is in operation for some time are usually much easier to run down by making actual voltage measurement.

(Continued on page 101)
HO, Ho, Ho," chuckled the Department Store Santa Claus as he hoisted the seven-year-old up on his knee. Winking at the child's mother standing nearby, he continued . . . "and what do you want for Christmas?"

"Gosh, Santa, lotsa things," the bright-eyed youngster replied, "but mostly a pair of three-transistor Citizens Band walkie-talkies with superregenerative receivers."

Far-fetched? Not in the least! In fact, if present trends continue, Santa's helpers will have to bone up on their electronics knowledge just to understand the younger generation. Each year toy manufacturers have introduced an increasing number of electronic items. This has been made possible, of course, by the availability of transistors, diodes, and other solid-state devices, allowing the use of safe, reliable, and inexpensive circuit designs in the various products.

This year, CB transceivers designed for the younger generation are going over big in toy stores across the land. One firm, Electrosolids Corporation (12740 San Fernando Road North, Sylmar, Calif.), offers seven different models dubbed "Spacephones." These range from a three-transistor set retailing for $9.95 or less in kit form to a seven-transistor design, with an operating range of 1 1/2 miles, retailing for less than $35 a pair.

Lafayette Radio (111 Jericho Turnpike, Syosset, L.I., N.Y.), has a low-priced transceiver which, in a direct appeal to youngsters, is called an "Army Commander Walkie-Talkie" and is described in Lafayette's latest catalog as a unit which "looks like . . . and works like a real U.S. Army two-way radio." A three-transistor job with a 1/4-mile range, it features a superregenerative receiver.

Allied Radio (100 N. Western Ave., Chicago, Ill. 60680), devotes six pages in its latest catalog to several Knight CB transceiver kits, with the copy for the lower-priced units aimed directly at the younger set. The Model C-100, a three-transistor unit selling for less than $9, is described as "great for adults and kids alike who enjoy camping, hunting, fishing, hiking, and outings."

Record players have always been popular with preteens and teen-agers. Today, the once almost universal acoustic child's phonograph has been replaced by a variety of

---

transistorized battery-operated designs. The “Galaxy 100” is typical of the new breed. It plays either 33 1/3- or 45-rpm records and is part of a broad line manufactured by Strombecker (4646 West Lake St., Chicago, Ill. 60644).

Beatle and Rolling Stone preteen fans who strive to imitate their heroes will get a big boost from a low-cost electric guitar manufactured by Brumberger (34 34th St., Brooklyn 32, N.Y.). Sold through toy and department stores, the instrument carries a list price of only $14.95, including a fully transistorized amplifier.

REMCO Industries, Inc. (200 Fifth Ave., New York 10, N.Y.) is offering a “transistor radio and broadcast system” that works, for only $11. Wonder what NBC or CBS will say about this.

Not all of the current emphasis is on “play” toys, however. Educational electronic kits are being produced by a number of manufacturers, including International Rectifier, Heath, Allied Radio (Knight), Norelco, Lionel, and Philmore. Although many of the current offerings are multi-project experimenters’ kits emphasizing circuit construction, others—such as the “Geniac” and “Minivac” kits—emphasize computer techniques.

Reader’s Circuit. Submitted by Garry Boross (13 Fisher Ave., Nanuet, N.Y.), the general-purpose signal injector circuit in Fig. 1 has a number of potential applications in the home laboratory. Developing a spike-like waveform rich in harmonics, it can be used as a signal source to check headphones, loudspeakers, audio amplifiers and both AM broadcast and s.w. receivers. If a hand key is used in place of the power switch (S1), the unit will serve as a code practice oscillator. As an additional bonus, according to Garry, the device can produce a series of evenly spaced bars on a TV screen when attached to the set’s antenna terminals, simplifying linearity adjustments.

Garry uses a pair of transistors in a common-emitter configuration to form a familiar collector-coupled multivibrator. Resistors R1 and R3 serve as base resistors and R2 and R4 are collector load resistors. Cross-coupling is provided by C1 and C2, while C3 is an output coupler to isolate the load. Circuit power is supplied by B1 through S1.

Standard components are used throughout. Transistors Q1 and Q2 are general-purpose npn types (CK722’s, 2N107’s, or 2N109’s). All resistors are half-watters. Capacitors C1 and C2 are low-voltage disc ceramics, while C3 is a 600-volt tubular paper capacitor. Switch S1 can be a s.p.s.t. toggle, slide, or rotary type. Finally, B1 is a Burgess 2U6 or 2N6 9-volt transistor battery.

Neither the layout nor the wiring is critical and the individual builder can follow his own construction preferences when duplicating the circuit. Use either an etched circuit board, a metal chassis, or perforated phenolic board to hold the components. The completed unit can be housed in a plastic or metal box, as preferred.

Manufacturer’s Circuit. The VHF variable frequency (sweep) oscillator described on the back page of a condensed catalog recently put out by the Vari-L Company, Inc. (207 Greenwich Ave., Stamford, Conn. 06904) should be of particular interest to hams, students, and advanced experimenters. Covering the frequency range from 170 to 240 mc., the circuit features the use of a

![Fig. 1. Schematic of a general-purpose signal injector circuit submitted by reader Garry Boross.](image)

![Fig. 2. This Vari-L variable frequency oscillator covers a frequency range from 170 to 240 mc.](image)
YOUR CB Editor has received a dramatic account from Joe Stubblefield, KKV5779/WASNRH, of the tornado that ripped through Hale Center, Texas, last June, and the dangerous risks taken by CB'ers in order to warn and protect farmers and residents in the vicinity. It was estimated that at least 100 lives were saved through the efforts of CB radio operators, nicknamed "Minute-Men." The same group has stood guard over Hale Center for the last ten years during each tornado season.

CB'ers risked their own lives by staying with their transceivers until minutes before the tornado struck. Among those highly lauded for their actions were Carl Rastetter, KKV1192, and Jack Dunlap, KKV5114. The two patrolled F.M. Road, two miles due east of Cotton Center, heading directly into the storm to seek out its intensity and report to the CB Civil Defense Center in Hale Center. A bolt of lightning no doubt saved their lives—the flash revealed that the black funnel was directly in front of their automobile. Whipping the car in the opposite direction, Rastetter shouted his findings over the air, warning that the twister was headed straight for Hale Center.

The two men stayed directly ahead of the storm, leaning on the horn to warn as many farmers in the area as possible. In their race to beat out the tornado (staying close enough to report changes in its direction), they could only watch as the twister bore down on the Floyd Shackelford farm. It destroyed the farm, and killed Mrs. Dorothy Shackelford. Rastetter and Dunlap were among the first to give aid.

The CB'ers at the home base stations went into action immediately upon receiving the news that the tornado was bearing down on the city. Many of them got into their mobile rigs and drove around Hale Center, honking their horns, and spreading the word.

The tornado warning siren was activated for a solid 30 minutes. It was reported that the CB'er in charge held the warning button down until the tornado was but one block from him, then fled, but not before falling debris from the twister had smashed his car.

In Joe Stubblefield's own words: "The tornado was visible for 15 minutes as it zigzagged across the countryside. . . Then with a frightening rumble like a dozen freight trains, or a fleet of jet airplanes, it came screaming into the city. . . After de------

(Continued on page 88)

The tornado that swept through Hale Center, Texas, last June, demolished three farm homes (including that of Floyd Shackelford, below, right), left five dead, and hundreds homeless. The CB'ers in the area risked their lives to warn and protect others.

Photos by Hale Center American
Converted ferry was stripped of machinery and engines, and connected to city water, gas, electricity, etc. Problem was to prevent the hull from rusting away without yearly dry-docking.

REVERSE CURRENT KEEPS FERRY AFLOAT

WHEN the San Francisco firm of J. Walter Landor ran out of space, it simply bought one of the last of the Bay ferryboats. The company tied the boat up to a dock and converted the topside into offices. Keeping the steel hull of the 40-year-old ferry from scuttling the studios and staff was a problem.

A permanently moored ferryboat is corroded by the electrolytic action of seawater. One ampere of d.c. will wear away 20 pounds of steel each year. To overcome this action, designer Alexis Tellis dropped four carbon anodes over-

side and fed them d.c.—reversed to the corrosive action of the hull. A solid-state rectifier supplies 0.85-0.95 volt to the rods. More voltage damages the paint; less voltage corrodes the hull.

—William P. Brothers

Designer Alexis Tellis examines one of four carbon anodes dropped around steel hull. Anodes, charged with d.c. equal to that ferry would ordinarily lose by electrolytic action, counteract current flow.

Electrical potential of steel hull is measured every month. Brass studs brazed to hull give solid electrical contact, accurate reading. Amount of d.c. current required depends on exposed hull area.
You need this book to help you cash in on Color TV business

New RCA Color TV Troubleshooting Pict-O-Guide, 1A1389

You're missing more and more chances for profit if you're not in color TV service. There are 3 million color sets in use now...and the total should be at least 5 million by the end of the year.

The new, completely revised RCA Color TV Pict-O-Guide, with its many color photos and illustrated step-by-step instructions, makes it possible for you to recognize and understand the visible symptoms of troubles and maladjustments in color receivers. Use the Pict-O-Guide whenever you work on a color set.

RCA ELECTRONIC COMPONENTS AND DEVICES, HARRISON, N.J.

(For a complete course in the principles and practices of color TV you will find the 8 lesson Color TV Home Study Course by RCA Institutes, 1A1325, invaluable.)
MICROFILM YOUR MANUALS

Getting cramped for space? Why not dump that clutter?

Whether your electronic interests are concerned with ham radio, hi-fi gear, or general experimentation, before long you collect a mass of instruction manuals covering construction and alignment of kits, operation of test equipment, and servicing notes. You start by lining them up on a bookshelf, and the result is anything but neat. If a file drawer is available in a cabinet or desk, you soon fill that to overflowing with manuals. Something has to be done. I solved the problem of storage, and threw out all my instruction manuals. Not the information contained therein . . . just the manuals.

Initially, I tried to record the information from the instruction manuals on tape. This worked until I came to a schematic diagram. It was then that I uncovered the ultimate answer—copying the instruction books on film. Using 35-mm. black and white film, with a 36-exposure roll running about 85 cents, the cost is pretty low.

Most of what you photograph is straight line work, and preservation of tone gradients is of no consequence. Kodak high-contrast copy film is your best bet, but any black and white film can be used. A rigid support is needed for the camera. You only have to focus once for each book, as the camera-to-page distance remains constant. Set a pair of No. 2 photofloods at either side of the book to provide good lighting.

It’s important that the manual pages lie absolutely flat. Try cutting the pages out of the books and placing a sheet of glass over each page to be copied. Check through the camera viewer to be sure that no glare is reflected from the glass.

Don’t throw the pages away until after you see the negatives. If the negatives are good and black in the white areas, and crystal clear in the printed areas, then you can start junking the instruction books.

There are several ways of retrieving the information stored on the film. One method is to mount the negatives in cardboard slide mounts. They can then be projected with any slide projector. As you are dealing with high contrast black and white, ordinary room lighting will not interfere with the projection. If you have a film strip recorder, keep the film in strip form and use the projector to view the information.

—Byron G. Wels, K2AVB
How to go about selecting the best hi-fi equipment in your price range (avoiding all the nerve-racking guesswork, to say nothing of the costly disappointments)...in a nutshell.

The "meat" in this nutshell is guaranteed to whet the appetite of every audiophile and music lover who plans to buy hi-fi equipment during the next twelve months.

In over 172 fact-and-photo-filled pages, the new 1966 STEREO/HI-FI DIRECTORY gives you all the vital statistics on amplifiers, changers and turntables, cartridges, tonearms and accessories, receivers, tuners, tape machines, speakers and cabinets—on every hi-fi component being manufactured today!

With this authoritative guidebook, you can compare similar items, feature-for-feature, dollar-for-dollar, before you buy! You'll avoid making even one costly mistake by making sure, in advance, that you get the best value for your money, on anything and everything you buy!

First Time Ever Offered!
A DELUXE, GOLD-EMBOSSED
LEATHERFLEX-BOUND EDITION
...just $3.00 postpaid

This deluxe edition is a permanent, handsomely-bound collector's item that belongs in your hi-fi library! Check appropriate box on coupon.

The 1966 STEREO/HI-FI DIRECTORY will help you select the finest equipment in your price range, so that you can derive greater pleasure than ever from your records and tapes. Now, (to ask a redundant question) where else can you get this kind of "satisfaction insurance" for a mere $1.25?

---FILL IN, DETACH & MAIL COUPON TODAY!---

Isn't it about you

- **RANGE GAIN CB TRANSEIVER**
  - The King of CB—When you choose Range Gain, our exclusive Double Side-Band Reduced Carrier gives you horizon-to-horizon coverage. What’s more, this transceiver also features: 23-channel transmit and receive, built-in crystal filter, automatic noise limiter, metered control, adjustable squelch. $269.95

- **MR. 10B and MR. 33B MONITORADIO**
  - Get the news before it breaks—This Regency emergency receiver lets you listen to exciting fire and police stories unfold. Features: handsome cabinet, illuminated slide-rule dial, 5-inch speaker, your choice of high or low bands. $79.95

- **MRC-10B and MRC-33B FM MONITORADIO**
  - A beautifully engineered piece of equipment—Features: crystal controlled for better stability, reliable built-in electronic squelch, big 5-inch speaker, fully-tuned RF stage for better image rejection, provision for external speaker or headphones. $299.95

- **TRANSISTORIZED MONITORADIO**
  - The ultimate in fire and police receivers Our TM Monitoradio combines the reliability of transistors with a three-way power supply to stay on-call 24-hours a day. Features: your choice of high or low bands, vinyl-laminated steel cabinet, electronic squelch. $99.95

- **PR-35B FM RECEIVER**
  - Our lowest-priced emergency receiver—Features: Transistorized squelch circuit, temperature compensated superhetrodyne circuitry to minimize drift, 4-inch speaker, rugged plastic cabinet. $59.95

- **FLIGHT MONITORADIO**
  - Tune in on the exciting world of aviation This unit out performs “commercial grade” aircraft receivers. Features: built-in 5-inch speaker, illuminated slide-rule-calibrated dial, scratch- and mar-proof vinyl-laminated steel cabinet. $79.95

- **TUNABLE MOBILE RECEIVER**
  - This is the one the pro’s use—Features: 12 VDC power supply and cord, fully-tuned RF stage for better image rejection, 3-gang condenser, built-in electronic squelch, illuminated slide-rule dial, ventilated metal cabinet, universal mounting. $114.95

---

*Roam the world without leaving home—This four-band SWL set brings foreign, aviation, emergency, military and maritime broadcasts into your home with three times the sensitivity of comparably-priced units. It has a transformer power supply to eliminate possible electrical shocks (hot chassis), and these features: noise limiter on/off switch; separate mixer, oscillator and tube sections; and head-set phone jack. $69.95

time you get what really want for Christmas?

Just leave this ad lying around where your wife (or husband) can find it.

How to use this readers' gift-hinting service...

Sure, you could use some more shirts. Socks would be nice, too. But wouldn't you really rather have one of these Regency or Metrotek beauties?

So go ahead. Put a check in the box above the one you've been wanting. Then leave this ad lying around some place where your wife (or husband) can't miss it.

This isn't very subtle. But it's better than just telling her outright. You can bet she'll get the hint. And you won't get surprised with another hand-painted tie.

To make it really easy on her, write the name and address of the Regency or Metrotek dealer nearest you somewhere on this ad.

□ NEW! PACER II

Eleven crystal-controlled channels for industry's lowest price—is just one of the reasons why Pacer II is your best buy in CB transceivers. It also gives you a built-in, solid state DC power supply, an ANL switch and a big, easier-to-read "S" meter. Plus these important features: 23-channel superhet receiver, positive squelch control, and a quick-change, external crystal socket. Comes complete with channel 11 crystal, mobile mounting bracket, carrying handle, AC and 12 VDC power cords. $99.95

□ NEW! MUSTANG II

Get started in CB for less than $80—When you choose our new Mustang II, you get the perfect answer to a low-cost start in CB. What's more, Mustang II has eight crystal-controlled channels, a quick-change, external crystal socket; "S" meter; spotting switch; 23-channel, tunable receiver; positive squelch control. And this fine unit comes complete with channel 11 crystal, PTT mike, 12 VDC power supply cord. $79.95

□ NEW! COLT 23

Every channel crystal-controlled—You can get crystal-controlled transmission on all 23 CB channels... when you choose the new Colt 23. What's more, this transceiver has many of the features that you'd expect to find only on sets costing much more: double conversion superhet receiver, illuminated "S" meter, automatic noise limiter, positive squelch control, mobile mounting bracket, built-in AC and transistorized 12 VDC power supplies. Complete with channel 11 crystal, $129.95

It will take thousands of electronics technicians to put man on the moon will you be one of them?

To put men on the moon requires an army of electronics technicians working behind the scenes. These technicians will be men who, like yourself, started their careers with a healthy interest in electronics, and the foresight to realize what a major role electronics will play in the future. Many of them will have taken their first step in this exciting field by sending for the tree book from RCA Institutes. This book, more than any other, shows you how much more you get with RCA Institutes Home Training, and how thousands of men, like yourself, have built, and are building the most rewarding careers the field of electronics has to offer. Read how right this minute, you can do the same!
Compare RCA Training With That Of Any Other School

Here Are 6 Solid Reasons Why Your Choice Should Be RCA:

1. Wide Choice of Courses. RCA Institutes lets you learn at home in your spare time the major fields of electronics with complete, step-by-step, easy to understand courses. Choose from the following:
   - Communications Electronics
   - FCC License Preparation
   - Mobile Communications
   - Automation Electronics
   - Automatic Controls
   - Industrial Applications
   - Nuclear Instrumentation
   - Digital Techniques
   - TV Servicing
   - Color TV Servicing
   - Transistors
   - Electronics Fundamentals (in English or Spanish)
   - Computer Programming
   - Drafting

Each of these home training courses gives you the latest, up to the minute training you need to start toward a successful career in the electronics field of your choice!

2. New, Easier Way to Learn. Only RCA Institutes gives you an exclusive, fast, easier way to master the essentials of electronics. The RCA "AUTOTEXT" Instruction Method, a system of programmed instruction developed by RCA, and introduced by RCA Institutes will help you learn almost automatically. Programmed instruction has been proved with thousands of students—even those who have had trouble with ordinary home training methods in the past. For those just starting out in electronics, there's no better way to begin!

3. Top Quality Equipment. RCA Institutes assures you of prime quality equipment in the kits furnished to you with the courses you take. The essential instruments you build with these kits are yours to keep and use on the job. And each one is complete. You never have to take apart one piece to build another as some home training courses require you to do! Compare what RCA gives you with any other school.

4. Personal Guidance. You may receive personal guidance every week from one of the many top instructors in the field at RCA Institutes to help you with your home training program, conveniently located in the heart of New York City.

5. Liberal Tuition Plan. RCA Institutes offers you the most economical possible method of home training through its Liberal Tuition Plan. You pay for lessons only as you order them. If, for any reason, you should wish to interrupt your training, you may do so and you will not owe one cent until you resume the course. No long-term obligations, ever!

6. Ideal for Beginners and Advanced Students. If you are already in electronics, RCA Institutes advanced home training courses will help you get ahead faster and secure your future, by teaching you the most recent developments in your field. If you are just starting out in electronics, RCA electronics fundamentals courses will give you the foundation you need for building a career!

IF YOU PREFER CLASSROOM TRAINING, RCA OFFERS YOU THE BEST.

RCA Institutes maintains one of the largest schools of its kind in New York City—a virtual "College of Electronics" where classroom and laboratory training is available to you in day or evening sessions. You may be admitted without any previous technical training; prep courses are available if you haven't completed high school. Coeducational day and evening classes start four times a year.

OUTSTANDING PLACEMENT RECORD

RCA Institutes Resident School has a Free Placement Service available to all students. In recent years, 9 out of 10 who used this service have found their jobs waiting for them on the day they graduated! And many of these jobs are with top companies in the field—such as IBM, Bell Telephone Labs, General Electric, RCA, and radio and TV stations and other communications systems throughout the country!

PLAN FOR A SUCCESSFUL FUTURE IN ELECTRONICS NOW! SEND FOR FREE BOOK! CHECK HOME TRAINING OR CLASSROOM TRAINING. NO OBLIGATION. NO SALESMAN WILL CALL. USE ATTACHED POSTCARD.

THE MOST TRUSTED NAME IN ELECTRONICS

December, 1965
mollishing three farm homes... it bounced into town from the west... aimed at the heart of the business district... down 5th and 6th Streets... smashing everything in its path, destroying homes, automobiles, and trees.

In its five-minute path of destruction through the city, the tornado left hundreds homeless and five dead. It left the business district practically a shambles, destroying the new City Hall and two new fire engines; it destroyed a new $265,000 Baptist church, the grade school, the post office, a two-story hotel, and 22 stores. An automobile agency was also destroyed along with 110 new cars, 15 of which had been blown over onto a new freeway underpass just built in the heart of the city. Some 200 homes were destroyed or badly damaged. The total financial loss was estimated at more than two million dollars.

Hale Center Texans will undoubtedly long remember those five minutes as well as the courageous CB operators who, with the aid of their Citizens Band Radio facilities, saved the lives of so many citizens.

CB'ers in Canada. CB'er R. A. Tabberer, 17W6327, of Prairie Village, Kansas, was highly impressed with the handling of his request to the Department of Transport in Canada for a Tourist Radio Service license. His two trips into the country during August and September (combining business with a vacation) took him into Ontario, Saskatchewan, and Alberta. He voiced his praises in a letter directed to the DOT, thanking them for the privilege of being able to use his CB gear in Canada "if and when the need arises."

If you are planning a trip into Canada, be sure to apply for a TRS license at least 30 days before entry, and remember that the DOT wants to know your name and address, your CB call-sign, class of service (Class D), and the period of time you intend to be in the country. Keep in mind also that U.S. CB'ers must follow General Radio Service rules and regulations when operating in Canada, and that only GRS channels 4 through 22 may be used.

In making an application for a TRS license, send your request to the DOT office nearest the Port of Entry at which you plan to enter the country. Address your request to the Regional Superintendent, Radio Regulations, Department of Transport, at one of the following locations:

Have You Seen These New

New 23-Channel 5-Watt All-Transistor CB Transceiver

Kit GW-14
$89.95

Assembled GWW-14
$124.95

23 crystal-controlled transmit & receive channels for the utmost reliability. Low battery drain... only .75 A transmit, .12 A receive. Only 2½” H x 7” W x 10½” D... ideal for car, boat, any 12 v. neg. gnd. use. “S” meter, adjustable squelch, ANL, built-in speaker, PTT mike, aluminum cabinet. 8 lbs. Optional AC power supply, kit GWA-14-1, 5 lbs... $14.95.

New Fully Automatic Electronic CW Keyer

Kit HD-10
$39.95

All-transistor circuitry. 15-60 words per minute. Solid-state switching—no relays to stick or clatter. Convertible to semi-automatic operation. Built-in paddle. Self-completing dashes. Variable dot-space ratio. Built-in sidetone. Keys neg. voltages only, such as grid-block keying. Transformer-operated power supply. Fused. 6 lbs.

New All-Transistor, 10-Band SWL Portable

Kit GR-43
$159.95

10 bands tune longwave, broadcast, FM and 2-22.5 mc shortwave. 16 transistors, 6 diodes, 44 factory-built & aligned tuned circuits. Two separate AM & FM tuners, two built-in antennas, 4” x 6” speaker, battery-saver switch. Operates anywhere on 7 flashlight batteries or on 117 v. AC with optional charger/converter GRA-43-1 @ $6.95. Assembles in 10 hours. 17 lbs.

New Deluxe 5-Band SSB Ham Transceiver

Kit SB-100
$360.00

Full SSB-CW transceive operation on 80-10 meters. 180 watts PEP SSB—170 watts CW. Switch select for USB/LSB/CW operation. Operates PTT and VOX; VOX operated CW with built-in sidetone. Heath SB series Linear Master Oscillator (LMO) for true linear tuning. Mobile or fixed operation with appropriate power supply. 23 lbs... Accessory mobile mount, SBA-100-1... $14.95.
Gift Ideas From Heath?

New 30-Watt Transistor FM Stereo Receiver

31 transistors, 11 diodes for transparent transistor sound; 20 watts RMS, 30 watts IHF music power @ ±1 db, 15-60,000 cps; wideband FM/FM stereo tuner, two pre-amplifiers, & two power amplifiers; compact 3¾" H x 15¼" W x 12" D size. Assemble in around 20 hours. Mounts in a wall, or optional Heath cabinets (walnut $9.95, beige metal $3.95). 16 lbs.

$99.95
Kit AR-14
(less cabinet)

66-Watt Transistor AM/FM Stereo Receiver

Just add 2 speakers for a complete stereo system. Boasts AM/FM/FM stereo tuning; 46-transistor, 17-diode circuit for natural transistor sound; 66 watts IHF music power (40 watts RMS) at ±1 db from 15,000-60,000 cps; automatic switching to stereo; preassembled & aligned "front-end" & AM-FM IF strip; walnut cab. 35 lbs.

$184.00
Kit AR-13A
Now Only

New 30-Watt Transistor Stereo Amplifier

17 transistors, 6 diodes; 20 watts RMS, 30 watts IHF music power @ ±1 db, 15,000-60,000 cps. Accommodates phono, tuner, auxiliary... 4, 8, 16 ohm speakers. Bookshelf size: 10¾" D x 3" H x 12" W. Install in a wall, or Heath cabinet (walnut $7.95, beige metal $3.50). 10 lbs... Matching FM/FM stereo tuner available @ $49.95.

$59.95
Kit AA-14
(less cabinet)

CIRCUIT NO. 22 ON READER SERVICE PAGE

telephone numbers. Important emergency phone numbers, such as those of the police and fire departments in all the areas involved, plus State Police, Civil Defense and civil offices, are also included. Some team members act as field men for the Red Cross and participate in emergencies by looking the situation over, then making a report to the control captain, who, in turn, notifies the Red Cross and advises them of specific needs to cover the situation.

The St. Anthony’s CB Emergency Group, Denver, Colo., was organized in August, 1962, by St. Anthony’s Hospital for the purpose of using CB radio as a means of communicating in conjunction with Civil Defense. According to the setup, convoy leaders are to determine the use of one of three routes to escort doctors, nurses, anesthetists, and other personnel to a Civil Defense hospital located underground at Georgetown, Colorado. The hospital is completely stocked with all items vital in a time of disaster. Communications involving CB’ers are to include the passing of information from a base station at the hospital to relay stations at Bergen Park, Squaw Mountain, Empire, and Georgetown. The relays would be tied in with the mobile rigs in each member’s auto. Every fourth Sunday of the month, at 5 a.m., CD test runs are held by the group. In order to qualify as a participant, each member must have a CB transceiver and be licensed to operate his gear under CD and FCC regulations. Each member is also registered with Civil Defense and carries an identification card.

CB Chatterbox editor Don Cortright, Cereal City Citizens Radio Club, Inc., Battle Creek, Mich, advises that the club has received a license from the FCC for 75 units. The purpose of the application was to enable members to continue to use channel 3 for club business without infringing upon interstation restrictions. Use of the club call sign has been restricted to members for club activities, and is being handled under the control of the executive board. Only members who sign an agreement to the above (which Don states is required by FCC regulations) are issued a unit number.

1965 OTCB Club Roster. The following list of clubs reporting in for the first time wraps up our tabulations for this year. If your CB club has not been listed in this column, or if your group has not reported during 1965, start the new year right by sending the details now to: 1966 Club Roster, POPULAR ELECTRONICS, One Park Avenue, New York, N. Y. 10016.

NEW Heathkit® All-Transistor
23 Channel
5-Watt
CB Transceiver

Transceiver Kit & 46 Crystals... $169.90!

- 23 crystal-controlled transmit & receive channels
- 14 transistor, 6 diode circuit for cool, instant operation and low battery drain. .75 A transmit, .12 A receive
- Full 5 Watt performance...minimum of 3 watts RF output, plus 3 watts audio modulating power
- Front panel "S" meter indicates signal strength & relative power output... aids in alignment
- Adjustable squelch control eliminates speaker hiss during standby
- Automatic noise limiter minimizes noise from ignition systems, electric motors, etc.
- 1/2 uv sensitivity for 10 dB signal plus noise to noise ratio
- Built-in PM speaker
- Easy to build with circuit board construction
- Attractive TURNER ceramic PTT microphone
- Handsome diecast, chrome-plated front panel with rust-resistant aluminum charcoal gray cabinet
- Includes power cables & crystals for 1 channel (Specify) and gimbal mount for versatile installation
- Base mount AC power supply for "fixed" station available soon

JOHNSON'S UNMATCHED RELIABILITY!

For personal or business use, no other equipment equals the day-in day-out dependability of Johnson's "Messenger" Two-Way Radios. "Messengers" are designed to deliver maximum performance, even under extreme operating conditions. Before you buy—take a long look at the Johnson quality line—or better yet, talk to any "Messenger" owner. You'll see why dollar for dollar, Johnson is your best buy! Easy to install, easy to operate, license issued on request.

See your nearest Johnson Dealer/Distributor or write for complete information.

E. F. JOHNSON CO.
1293 TENTH S.W. • WAASECA, MINN.

REACT editor; and Dan Sonneborn, junior auxiliary editor. Club president is Don Hahn.

Lowell, Massachusetts: Highway Emergency Locating Plan. Organized last July, the main purpose of this group is to aid motorists in distress. They monitor channel 9, and are presently organizing chapters across New England and Massachusetts. The Lowell H.E.L.P. group is the only rescue organization in Lowell currently approved by the Mayor. Present officers are: Raymond Reynolds, KBD0312, regional director; Daniel Enis, KKA9973, assistant regional director; Michael Lekakos, KKA-6667, membership director; Ted Macopoulas, KMA0535, treasurer; and Lester Griffin, KKA8502, control monitor.

Somers Point, New Jersey: Coastal Communications League. Organized in March, 1963, this club was immediately called in by Civil Defense to assist in a fire emergency—a dry spell had created several fires in woods and farm areas. Members used walkie-talkies on fire trucks, on their own mobiles, and at a base station, and covered the area for 48 hours in search of additional fire hazards. Since then CCL members have aided the New Jersey Marine Police in locating missing or overdue boats on the river and in the bay area, and have participated in traffic control at special events. Officers include: Edward Leopold, president; Paul Heriegal, first vice president; William Hodson, second vice president; Cathy Heriegal, secretary; Marie Cramer, treasurer; and a five-member board of directors.

Other clubs reporting: In London, Kentucky, Laurel 11 Meter Club; in Bethesda, Maryland, Radio Associates of Montgomery County, Inc.; in Woodbridge, New Jersey, Raritan Area REACT; and in Norristown, Pennsylvania, the Junior Citizens Band Club.

I'll CB'ing you—next year! —Matt, KHC2060

Travel Anywhere In The World, First-Class, On Longwave, Standard AM, FM, and 7 Shortwave Bands with this New Heathkit All-Transistor Portable

Tour The Voice Capitals Of The World. Your round-trip ticket to unsurpassed global listening is always ready when you own this superb new Heathkit 10-Band Portable Radio. Seven Bands tune 2-22.5 mc shortwave, marine and amateur stations. Longwave 150-400 kc tunes aircraft and marine stations. FM Band, 88-108 mc—full coverage—full fidelity. Standard AM band 550-1600 kc. All with a sharpness of tuning that permits receiving stations you’ve never heard before.

16 Transistors, 6 Diodes, 44 Factory-Built And Aligned RF Circuits assure cool, instant operation, superior performance, long life, and easy assembly. Two separate AM and FM tuners are ready to drop into place (the FM tuner and IF strip are the same components used in deluxe Heathkit FM Stereo equipment).

Two Built-In Antennas ... one in carrying handle for AM, and 5' telescoping whip for FM and Shortwave.

Convenient, Versatile Controls. Like the Battery-Saver Switch that reduces power to 150 milliwatts for normal indoor listening (cuts battery drain as much as 35%), or boosts power to 500 milliwatts for strong, outdoor reception. The handsome rotating turret dial scale is directly driven by a 10-position selector, permits easy viewing of any single band (a log scale is provided for re-locating unknown stations). There's a battery saving Dial Light switch for nighttime use; Automatic Frequency Control with on-off switch for drift-free, accurately tuned FM; a big, 8½ revolution Tuning knob easily separates stations; a combination on-off-volume control; and a continuous Tone Control for listening as you like it.

Big 4" x 6" Speaker, plus earphone for private listening.

Inexpensive, Flashlight Battery Power. Uses 6 "D" size batteries to operate the radio, plus 1 "C" battery for the dial light (batteries not included). Also operates on 117 VAC with the optional converter/charger available.

Deluxe Styling Matches Its Deluxe Performance. Jet black extruded aluminum front and back panels contrast with luxurious chrome-plated, die-cast end pieces to present a rugged, handsome unit you'll be proud to take anywhere. Hinged front and back panels open and close easily thanks to special magnetic edges...no cumbersome snaps or latches. Inside the front panel you'll find a hard-bound "listener's guide" book containing frequencies of worldwide Shortwave and U.S. FM stations plus a special map for easy conversion of world time zones. It travels snugly in its own special slot in the front panel.

Build It In 10 Hours Or Less! Since the two tuners and all R.F. circuits are preassembled and factory-aligned, you merely mount this entire section on the chassis and wire 3 small circuit boards. The lucid Heathkit Construction Manual and thoughtful design make it easy to complete without special tools or instruments.

TELEX/Acoustic Products
COMMUNICATIONS ACCESSORIES

FOR CBers
PRO-27 CB BASE STATION ANTENNA

Looking for a CB Base Station Antenna that outperforms all others?

YOU'VE FOUND IT!

- Only CB base station antenna with tunable matching for exceptionally low 1.1 to 1 SWR
- Field strength exceeds every other colinear antenna
- 64 wave length for extremely low angle of radiation.
- Tested under all conditions
- Heavy duty aluminum and steel construction

The Pro-27 has a combination of mechanical and electrical features that can't be beat. See it at your distributors, or write for literature.

NEW-TRONICS CORPORATION
3455 Vega Avenue Cleveland, Ohio 44113

PULSE POWER PACK
(Continued from page 46)

different color wire for each lead to avoid confusion. It's also a good idea to lace the wires as shown, to facilitate mounting and removal of the circuit board.

As a final word, observe that the two 1" standoffs are secured with the bottom screws of the power transistors. If you happen to use metal standoffs, do not let them come in contact with any of the components on the circuit board. If you can get non-metallic standoffs, you should do so.

Operation. After you have completed the wiring, check out the unit thoroughly before plugging it in, and thus save yourself from a possible headache later on. Connect the output jacks (J3 and J4) to the tracks (at this point polarity doesn't matter).

Before turning the power switch on, set the CRAWL switch (S2) to the off position, and flip the DIRECTION switch (S4) to FWD. Also, turn the THROTTLE control fully counterclockwise but without turning off the switch that's ganged to it (you will hear a distinct "click" if the switch is turned off).

Now, flip the PWR switch to on. If the trains move at all, R13 is too high in value and must be reduced. Successively try a smaller resistor (reduce the resistance by about 10% in each step) in place of R13 until you find one that will just cause the train to stand still. When you do, leave that resistor in. Slowly rotate the THROTTLE clockwise; the train should start up and run forward. If it runs backwards, simply reverse the leads to the tracks.

Turn the throttle counterclockwise, but without flipping S3 off. Then turn the CRAWL ADJ knob fully counterclockwise and flip CRAWL switch S2 to on. Your train might growl a little but it should not move. Now slowly rotate the CRAWL ADJ knob clockwise until the train begins to crawl real nice and slow. As you give it some throttle, your train will increase in speed realistically—as if it were coming out of Grand Central Station.
Slow down the throttle as you come in to a station and let the train crawl a bit. When you are ready to stop, just rotate the throttle fully counterclockwise until S3 clicks off for a full stop. With a bit of practice you'll soon be driving your train like the old pros and enjoying many hours of real pleasure. Man, that's railroading!

**QUICK CURES**

*(Continued from page 58)*

Playback. Probably a magnetized playback head, erasing away the signal as it is recorded. Use a head degausser.

8 Squealing, when tape is moving. Probably a glazed spot on a pressure pad or tape guide. Use head cleaner on a Q-tip and soak the pads. Let dry before using.

10 No highs. A common problem. Could be caused by magnetized heads, by a playback head out of alignment, by loss through an over-long cable connecting recorder to source, or by use of a microphone to pick up the sound of a loudspeaker instead of a direct connection to a high-level output.

Highs sometimes are lost in the input cables when two sources are joined with a "Y" connector.

11 No playback, no record, no nothing. Tubes or indicator lights dark. Baffling to the beginner, this is one of the easiest things to fix. Check the a.c. cord—is it plugged in? Turn on a light—maybe your current is off. Check the fuses in the basement. Plug a lamp into the same socket as the recorder. If it lights, you know you've got power to the recorder. Check for a fuse on the recorder. It may be blown. If the tape motor operates but the tubes won't light, look for another fuse on the electronic chassis. Also, suspect a fuse if the tubes light but the motor won't run.

Fuses do blow occasionally for no apparent reason, and a blown fuse does not necessarily indicate trouble. But two in a row mean something is definitely amiss, and it's time for you to call a repairman.

---

"If I don't like a program, I just shut it off."

---

**Pre-tuned/pre-packaged IF strip**

Model 8902 pre-tuned 455 KC IF strip provides excellent gain (55 db) and selectivity (6 db bandwith: 8 KC). No alignment is required. Included among the 21 components on the PC board are a mechanical filter, 2 transistor amplifiers and a diode detector capable of driving earphones. Overall dimensions: \( \frac{3}{4} \times \frac{3}{4} \times 1 \frac{1}{8} \)".

Model 8901 input IF transformer adapts the IF strip for use with a converter in capacity detectors, AM and CB receivers. Both units are included for $5.75 net.

• Train in our two computer systems labs and our four fully-equipped peripheral equipment labs
• New classes start January 3 and every two months thereafter

SOLID STATE
(Continued from page 76)

voltage-divider R2-R3 bypassed by C3, in conjunction with emitter resistor R1; this resistor also acts to "float" the emitter above ground. Capacitor C4 serves as a bypass across the power source.

The frequency of operation is determined by the tank circuit comprised of C2 and the primary of current-controlled inductor TI. Because the inductance of TI's primary coil is a function of the control current applied to its secondary winding, it follows that the oscillator frequency is controlled directly by the applied control current. The output signal is inductively coupled from the resonant tank through LI.

The components used in this circuit are by no means inexpensive. Transistor Q1 is a 2N1493 npn r.f. type. Transformer T1 is a Vari-L MP-1 current-controlled inductor; this unit has a primary inductance of 0.1 µh. when no control current is present and 0.051 µh. with a control current of 60 ma. Coil LI is a hand-wound "hairpin" coil mounted in close proximity to the tank circuit. All resistors are half-watt composition types. Capacitors C1 and C2 are small ceramic type trimmers, while C3, C4 and C5 are low-voltage ceramic disc capacitors. The power source is not critical and d.c. or battery supplies of from 10 to 20 volts can be used.

As is true of all VHF circuits, careful layout and "clean" lead dress are essential for optimum performance. Signal leads should be kept as short and direct as is practicable, to keep distributed capacities to a minimum. However, as long as good wiring practices are observed, the builder can follow his own inclinations with regard to construction methods.

Capacitors C1 and C2 are adjusted after the wiring has been completed and checked. In general, C1 is adjusted for best operation under load, while C2 is adjusted to establish either the upper or lower frequency limit (with the control current either at maximum or minimum). Afterwards, the desired operating frequency can be obtained by adjusting the control current itself. Approximately 4.5 volts are required to furnish the required maximum control current. If a d.c. source is used, the circuit will oscillate at a fixed frequency established by the control current amplitude. If an a.c. source is used, the circuit will "sweep" through a given frequency range at a sweep rate determined by the frequency of the a.c. source.
Transitips. Almost every experimenter knows that source and load impedances must be matched for optimum circuit performance and for maximum power transfer between, say, an output amplifier and its loudspeaker load. This is true whether we are dealing with d.c., a.c., audio, or r.f. circuits. Of all these circuits, the high-frequency r.f. ones are the most critical. At d.c., low a.c., and audio frequencies, an exact match is not as essential as you might suppose and, in practice, fairly good results can be obtained with a relatively poor impedance matching.

No, your textbooks aren’t wrong! Maximum power transfer does occur when impedances are matched, but the loss of power with even a relatively large mismatch may be negligible. An example will illustrate our point. Referring to Fig. 3, we have a 10-volt d.c. source with an internal resistance (R) of 100 ohms, and a choice of three possible loads: 100 (R1), 200 (R2), and 50 (R3) ohms. Let’s see what happens as each load is connected to the source.

When R1 is connected, the total resistance in the circuit is 200 ohms. Using Ohm’s law for d.c. power, \( P = \frac{E^2}{R} \), we can determine that a total of 500 milliwatts is developed. Half of this, 250 milliwatts, is delivered to the load, while the other half is dissipated internally by R.

Now, suppose we double our external load and connect a 200-ohm load (R2) in place of R1. Again, using the d.c. power law, we can determine that approximately 333 milliwatts are developed—two-thirds of which (222 milliwatts) is delivered to the load. Compared with the 250 milliwatts for the matched load impedance (R1), you can see that the difference is only about 10%.

Now, let’s cut the load impedance in half and connect the 50-ohm load (R3) in place of R1. Applying the same mathematical equation, we find that approximately 666 milliwatts are developed this time, only one-third of which is delivered to the load (222 milliwatts). As you can see, it doesn’t make
any difference which way you go, a 50% mismatch only results in a 10% loss of power to the load.

In practical terms, this means that the hobbyist has a good deal of leeway when choosing substitute components, particularly where audio output transformers and loudspeakers are concerned. For example, if your circuit calls for a 1000-ohm center-tapped transformer, and you have only an 800-ohm unit on hand, you can use the latter without a noticeable loss of power. Similarly, if your transformer has a tap for an 8-ohm loudspeaker, but your speaker has a 6-ohm voice coil, you can use it without trouble. Normally, up to a 50% mismatch in load impedance will not cause any noticeable distortion.

There are exceptions, of course. If an amplifier is operated near its maximum output, a smaller-than-normal load impedance may cause distortion. Where inverse feedback or carefully balanced output circuits are used, as in critical high fidelity amplifiers, a severe mismatch can result in a change in the circuit's frequency response. Finally, a high load impedance in high-power circuits can result in dangerously high primary voltages being present; this could damage transistors or other components.

Product News. Motorola Semiconductor Products, Inc. (Phoenix, Ariz.) has expanded its line of low-cost plastic-encapsulated silicon transistors to include pnp as well as npn types. The new pnp units include the MPS706, MPS834, MPS2894, MPS3639 and MPS3640. All are switching types, which means that they can be used at r.f. and audio frequencies as well.

If you're interested in developing fair amounts of power in the UHF region, and if price is no object, you might consider the new PT4690 power transistor recently introduced by TRW Semiconductors, Inc. (14520 Aviation Blvd., Lawndale, Calif.). An npn silicon planar type, the PT4690 can deliver up to 6 watts at 250 mc. with a gain of 8.5 db ... and 6 watts at 400 mc. with a gain of 5.0 db.

While on the subject of high frequencies, Texas Instruments, Inc. (13500 North Central Expressway, Dallas, Texas) is now producing a pair of transistors capable of delivering a usable amount of power at up to 2.5 gc. (gigacycles). Designated as types TIXS12 and TIXS13, the units offer a guaranteed power output of 250 milliwatts at 1.5 gc. and, as oscillators, are capable of driving harmonic generators to provide power at 12 gc. and beyond.

That closes our story for now. Have a Happy Holiday Season! —Lou
measurements. But be very careful in making them; the voltages in amateur gear are high enough to kill.

FCC News. After extending the time for filing comments and counter comments on FCC Docket 15928 which would modify amateur regulations (it was reviewed in our July column), the FCC is now considering the proposals contained in this Docket in the light of the over 2000 comments received on it. One interesting effect of the proposals, which will not go into effect under any circumstances for at least a year, is the 10:1 increase in the number of amateurs now taking the Extra Class exam.

The consensus of those taking the exam is that the 20-wpm code test is easier than the written test—probably because most applicants are prepared for the code test. But many applicants underestimate the scope of the written test. From personal experience, we can report that simply being able to answer the questions in the Extra Class section of the ARRL License Manual is not sufficient preparation for the test. The questions in the actual examination are often completely different from those in the License Manual. Furthermore, one of the examination questions may require combining the information contained in a couple of License Manual answers. In addition, the applicant is asked to draw ten of the diagrams shown in the General and Extra Class sections of the License Manual.

However, by using the License Manual as a study guide in conjunction with the ARRL Radio Amateur’s Handbook or a similar text, you should be ready to pass the Extra Class written examination within a few months. The big secret is to read each question in the License Manual and refer to the Handbook index for the pages on which the subject is covered; then study these pages until you understand both the answer and the theory behind it.

that, on April 22, the Society for the Prevention of Blindness asked Jim, WA6CHT, for help in locating a cornea needed to restore the eyesight of a woman. Through the Eye Bank Network and Ted, W6NTT, a fresh cornea was rushed by plane from Iowa City to Denver the next morning, and the operation was successfully performed that evening.

A San Francisco Radio Club News item would seem to refute the generally held belief of Advanced Class licensees that the FCC’s proposal to renew Advanced Class licenses as General Class licenses is unfair. It reported that in the question and answer period following a speech by Mr. William Grenfell, W4GF, of the FCC, at the ARRL National Convention at San Jose, Mr. Grenfell pointed out that immediately after the last Advanced Class examination was given December, 1952, the essence of the Advanced Class examination was included in the General Class examination. In other words, any amateur who has qualified for a General Class license since 1953 actually holds an equivalent to the old Advanced Class license. The FCC’s proposal to abolish the Advanced Class license completely, therefore, appears to be merely the recognition of an existing fact.

During a 20-meter contact with Bob, OX4FR, on August 25, he told us that all U.S. personnel operating in Greenland would henceforth be using the prefix “OX” at the “request” of the Danish Government. This information was later verified by the ARRL and the FCC. Bob, formerly KG1FR, also said that it is necessary to include a stamped self-addressed reply envelope with your QSL card to the station for a quick reply, because their postage funds are very limited.

News and Views

Bill Dundas, WN2TDA, 2 Stiles, Painted Post, N. Y., runs 50 watts to a 30-year-old transmitter and receives on a Hallicrafters SX-110. The old exhaler must work, because Bill has 20 states, Guatemala, Puerto Rico, and Canada in his logbook. A dipole antenna does the yard work, while a Heathkit DX-60 transmitter and a Lafayette HA-230 receiver occupy the back-up positions . . . Mike Zuhajewski, WASMCQ, Rte 3, Paw Paw, Mich., says he is going broke answering letters since an item on his effective station appeared in “News and Views,” but he still offers help to prospective amateurs. His 8'-high “long wire” has now made 51 contacts in nine states and Canada, but he has discovered that eight to 18 watts doesn’t get out as well as 50 watts! . . . Allan Sorkin, W6OFTT, 9115 S. Strub Ave., Whittier, Calif., operates on 80
meters using a surplus ARC-5 transmitter with a crystal-controlled adapter. He receives on either a BC-454 receiver or a Knight-Kit R-55 helped along by a surplus FL-30 audio filter between the receiver and his phones for increased selectivity. Allan is quite concerned about the many attempts by certain groups to detach the hams from the 10-meter band. At the same time, he points out one way to combat these efforts: use the band.

Clair “Bruce” Bruce, WN7DAJ, Box 346, Hebo, Ore., works 80 and 40 meters with his Johnson “Ranger” transmitter and National NC-125 receiver, and separate dipole antennas about 40’ high. Bruce has 24 states and Japan, and will work you if you need an Oregon contact. Jerry Van Vactor, WNOLOY, 611 10th St., Spearfish, S. D., has worked 32 states and a handful of VE6’s and 7’s. He’ll ask you if you’re looking for South Dakota on 40 meters (preferably) or 15 meters, although his call letters will probably be WAOLOY when you read this. Jerry uses a Knight-Kit T-150A transmitter, a Hy-Gain 14AVQ vertical antenna, and a Lansing 100 receiver.

Lund HQ House, 759-40, has a Heathkit RX-10 receiver and a Heathkit RX-10 receiver. This is another side. Houston, Texas, is the present residence, and he’s on 80 states, since he has a Heathkit “Sixer” or his Knight-Kit T-80 feeding a 3-element beam, but you will find him more often on 80- or 40-meter CW. A Knight-Kit R-55A and a Hallicrafters SX-71 handle the receiving chores, and his low-frequency antennas are dipole. An 8’ x 10’ tool shed in the back yard is the WA5LBM ham shack.

Emory M. Kiger III, WA9FKD, Box 26, Nevada, Mo., worked 44 states as a Novice using a Heathkit DX-40 and a Hallicrafters SX-96 receiver. Since getting his General ticket, he has pushed the total up to 48 states worked and confirmed. At present, however, Emory is more interested in traffic handling than completing his WAS. Russ Hobby, WN25ET, 2732 Harvey Ave., Oceanside, L. I., N. Y., has worked 22 states with his Knight-Kit T-60 transmitter and “Star Roamer” receiver. Russ is studying electronics at RCA Institutes now, which keeps him off the air—except on weekends. Denny Fergusen, WN4WYC, 212 Piedmont Ave., Rockmart, Ga., spends most of his time on 15 meters, since he has a 3-element beam for the Kit DX-40 transmitter pushes electrons up the feedline and a Hammarlund HQ-154C receiver pulls them back down again. Den has worked 45 states, New Zealand, France, and England, David P. Robbins, W2BZT, R.F.D. #8, Belfast, Maine, probably doesn’t realize what he is starting when he offers to sked anyone needing Maine on 15, 40, or 80 meters. Everybody needs Maine! Dave transmits on a Hallicrafters HT-40 running 75 watts to feed a

Air

Even your Hi Fi Components need it!

You can minimize thermal drift and lengthen the life of hi Fi sets, FM stereo receivers, communications and other equipment with this low noise fan. The Hi Fi Boxer was designed by engineers who have produced airmover designs for computers, broadcasting equipment, and the Minute-man Missle.

HISTORY QUIZ ANSWERS

(Quiz on page 72)

1 — H John A. Fleming applied for a patent for his diode vacuum tube in 1904. It utilized the Edison effect principle discovered 20 years earlier.

2 — B Ralph V. Hartley invented the oscillator circuit that bears his name. It uses a parallel-tuned tank circuit with a tapped coil to provide the feedback voltage.

3 — C Georges Leclanche invented the dry cell using a solid depolarizer in 1868. To this day carbon-zinc dry cells are known as Leclanche cells.

4 — I Samuel F. Morse and his co-workers, Leonard Gale and Alfred Vail, demonstrated their electromagnetic relay telegraph in 1838, using the original version of the dot-and-dash code. The manual key, adopted later, was actually invented by Vail.

5 — D Hans C. Oersted discovered, in 1819, that a magnetic field existed around a current-carrying conductor.

6 — F George W. Pierce was the first to apply a piezoelectric crystal to a vacuum-tube oscillator circuit. This circuit, which now bears his name, is basically a crystal-controlled version of the Colpitts oscillator.

7 — J Nicola Tesla invented the high-frequency oscillator transformer known as the Tesla coil in 1891.

8 — E Max Wien developed the basic principles of a.c. bridges, and published a collection of his bridge networks in 1891. The Wien bridge is used to make capacitance and frequency measurements.

9 — A Vladimir K. Zworykin invented the television iconoscope in 1923.

10 — G Raymond A. Heising developed the constant-current form of plate modulation that bears his name. This method of modulation is widely used in high-power broadcasting stations.
SHORT-WAVE LISTENING
(Continued from page 71)

Some of you may prefer to continue the use of local time in your reports. If you do, please indicate clearly exactly what time zone you are using so that the proper conversion can be made here.

In adopting GMT, we shall continue using the 24-hour clock. The hours from 1 a.m. to noon are expressed as 0100 to 1200; from noon to 11 p.m. as 1200 to 2300. A time of 3:15 p.m. EST, therefore, converted to GMT would read 8:15 p.m.; and on the 24-hour clock, it would be 2015 GMT.

Copies of Leaflet J (Time Conversion) are available from your Short-Wave Editor (for a five-cent stamp) and may help you to make your conversions quickly and correctly. The leaflet briefly explains the difference between EST and GMT, and the 24-hour system; it also includes a conversion table for all of the U.S. time zones and a listing of times in a number of countries around the world.

"SweDX." The fortnightly DX program which is produced by DX-Alliansen and broadcast over Radio Finland is now entirely in English. Known as SweDX ("Sweedex"), it can be heard every two weeks on the following schedule: Fridays at 1145-1200 on 9555, 11,805, and 15,185 kc., and at 1645-1700 on 6120 kc.; and Saturdays at 0800-0815 on 9555, 11,815, and 15,185 kc. Reception reports and suggestions are most welcome and should be addressed to SweDX, Fack, Bromma 1, Sweden. Reports that include one IRC will be confirmed by three QSL cards, one each from DX-Alliansen, Finlands DX Club, and Radio Finland.

Current Station Reports

The following is a resume of current reports. At time of compilation all reports are as accurate as possible, but stations may change frequency and/or schedule with little or no advance notice. All times shown are Eastern Standard (Greenwich Mean Time listings begin with the next issue) and the 24-hour system is used. Reports should be sent to SHORT-WAVE LISTENING, P. O. Box 333, Cherry Hill, N. J. 08034, in time to reach your Short-Wave Editor by the fifth of each month; be sure to include your WPS identification, and the make and model number of your receiver.

Angola—R. Ecclesia, CR6RB, Luanda, has been frequently noted on 4935 kc. opening in Portuguese at 0030 but fading by 0115 or later. There is a world news bulletin around 0645.

Australia—Listen to R. Australia's N.A. xmsn at 0714-0815 should now tune to 11,840 kc. This replaces the 31-meter channel.

Belgium—Brussels has been heard on 6185 kc. with non-stop music and a beautiful signal at 0805.

Brazil—Two Brazilians currently heard on the West Coast are R. Brasil Centratl, ZY2, 4995

When propagation conditions are good, look for ZYG232, R. Universitaria Santos Dumont, San Jose dos Campos, 17.725 kc. This is an experimental station operated by college students and has been noted at 1800-1850 with pop music and frequent anns in Portuguese. The station is rated at only 1000 watts although the signal seems to indicate higher power.

In August, R. Mayrink Veiga, Rio de Janeiro, 9675 and 11,775 kc., closed down on the government. Rumors persist that the station has been granted permission to operate again but monitoring has not located any signals.

Bulgaria—Sofia was noted on 15,312 kc. (down from 15,320 kc.) with Eng. to Africa from 1410; a musical period started at 1415.

Canada—R. Canada's newest schedule reads: to Australian areas at 0225-0335 in Eng. on 9625 and 5970 kc., and to Europe (I) for service forces at 0555-0714 on 9625 and 15,320 kc. (and on 5970 kc. to Northern Canada); to Europe, N.A., and the Antilles in Eng. at 0715-0813 and in French at 0816-0944 on 17,820 and 15,320 kc. (also on 5970 kc. at 0715-0813 to Northern Canada and on 11,720 kc. at 0816-0944 to the Antilles); to Europe (II) in Ukrainian, Russian, Czech, Slovak, Polish, German, and Hungarian at 0845-1130 on 17,820, 15,320, and 11,720 kc. (the 11,720-kc. frequency is beamed to Northern Canada at 1016-1029 and 1131-1159); to Africa in Eng. at 1235-1415 and in French at 1415-1458 on 17,820, 15,320, and 11,720 kc.; to Europe (III) in French at 1500-1545 and in Eng. at 1545-1652 on 15,320, 11,720, and 9630 kc.; to Northern Canada (I) in French and Eng. at 1658-1746 on 15,190, 11,720, and 9825 kc.; to Caribbean and Latin American areas in Eng. at 1758-1830, in Portuguese at 1830-1900, and in Spanish at 1900-1946 on 15,190, 11,725, and 9625 kc.; to Northern Canada (II) in Eng. at 2100-0205 on 11,720 and 9625 kc. (also at 0605-0130 on 5595 kc. to Europe).

Cape Verde Islands—Station CR4AC, R. Barlavento, 3930 kc., was heard at 1850-1900 with symphonics. This one is difficult to catch due to ham radio QRMs.

Central African Republic—R. Bangui is scheduled from Monday to Friday at 0300-0410, 0730-0900, and 1100-1600, Saturdays at 0630-0910 and 0930-1800, and Sundays at 0900-1600 on 5065 and 7292 kc.

Ceylon—English xmsns of R. Ceylon beamed to Europe, the Near East, and Africa are broadcast daily on 15,330 kc. at 0900-0415. The Commercial Service has been noted recently signing on at 0200 on the new frequency of 15,225 kc.

Chile—Station CB597, Emisora Presidente Balmaceda, Santiago, 5975 kc., has been heard with closing multi-lingual anns (including Eng.) at 0006, giving a complete ID and requesting reports.

Cuba—Schedules from this country change frequently but here is the latest: Eng. to N. Europe at 1510-1640 on 11,735 kc.; Eng. to N.A. at 2200-2350 and 0000-0100 on 6135 kc.; Eng. to South America at 1550-1560 on 11,760 kc.; French to Mediterranean areas at 1200-1310, 1610-1640, 0200-0230, and 0400-0430 on 11,705 kc.; French to Europe at 1400-1510 on 11,735 kc.; French to N.A. at 2300-0000 on 6135 kc. in Creole to the Caribbean at 0600-0700 and 2100-2200 on 6060 kc.; and Arabic to the Mediterranean at 1310-1355, 1530-1610, 0230-0330, and 0430-0530 on 11,705 kc.

Dominican Republic—R. Santo Domingo TV, reportedly operating as a clandestine station, is noted on 7550 kc. and is barely audible in nearby areas at 1700 with local news.

Ecuador—Station HOCV3, R. Centinela del Sur, Loja, has moved up from 5024 kc. to 5960 kc. and has a live show around 2000-0000 on Fridays; reports go to Casilla 196, Loja. Station HCZP1, R. Rumichaca, Tulcan, is on 3785 kc. (not on 3950 kc.

December, 1965
THE NEW EMPIRE 888P CARTRIDGE

Listen to its unbelievable frequency response that spans the complete orchestral spectrum one full octave above and below the fundamental range of any musical instrument. No other cartridge series can reproduce the entire musical range as precisely and with such clarity as the Empire 888, 888P or 888PE.

LOOK! A NEW ELECTRONICS SLIDE RULE

WITH COMPLETE INSTRUCTION COURSE

Professional 10-digit metal Electronics Slide Rule. Designed specifically for technicians, engineers, students, hobbyists. Has special scales not found on any other rule. Enables you to solve electronics problems quickly, accurately. Made to our rigid specs by Pickett, Inc. Slide Rule plus four lesson AUTO-PROGRAMMED Instruction Course with grading service, and top-grain leather carrying case. . . . . a $50 value for less than $20! Send coupon for FREE booklet. Cleveland Institute of Electronics, Dept. PE-115, 1776 E. 17th St., Cleveland, Ohio 44114.

108 POPULAR ELECTRONICS
the Netherlands and Western Europe, and languages to be used will be Eng., French, Swahili, and Arabic. No information is yet available as to the frequencies to be used.

Malaysia—R. Malaysia, Kuala Lumpur (?), 6175 kc., has been heard from 0525 with both Malay and Eng. 1D's.

Maldives Islands—Male Simico Radio, Male Island, 15 kw., operates at 2030-2300 on 7150 kc., at 0200-0430 on 9552 kc., and at 0730-1230 on 3233.5 kc. News in English is given at 2200, 0400, and 1200; the remainder of the programs are in Eng., Japanese, Tamil, Hindi, and Sinhalese. The studio is not yet completed, which explains the bad modulation reported by some during the Eng. xmsns.

Nepal—R. Nepal, Kathmandu, 11,880 kc., has raised its power to 100 kw. and signs on at 0100, according to European sources.

New Zealand—R. New Zealand, Wellington, operates to the Pacific Islands at 0100-0345 (s/off is at 0930 Sundays on 6080 kc.) and 1200-1445 on 6080 and 9540 kc. and at 1500-0445 on 15,280 kc.; to Australia at 1500-1730 on 9540 kc., at 1745-0045 on 15,110 kc., and at 0400-0645 on 6080 and 9540 kc.; to Antarctica on Sundays only at 0315-0345 on 6080 kc. The station abandons the Home Service relay for its okdadays at 1745-1900. There is a program in Esperanto on the last Thursday of each month at 0330-0340 and 0630-0640.

Peru—Station OAX8R, R. San Jose, 4825 kc., finally verified after three years. It is located at Miraflores, Dep. de Lima, in the deep Amazonic jungle, from which it gets its name. La Voz Cultural de la Amazonia. The schedule is 0500-2100 weekdays; 0500-1000 and 1400-2100 Saturdays; and 0900-1200 and 1400-2100 Sundays. The station uses a Bauer transistor, rated at 3 kw., and has a Collins 250-watt unit in reserve. Reports go to Escuelas Radiofonicas, Apartado 218, Iquitos.

Portugal—According to recent anmts, Lisbon is making a survey to see if they should broadcast in French to N.A. next autumn on 6135 kc. and other wavelengths if necessary.

Rwanda—The new 250-kw. relay xmr of Deutsche Welle, Cologne, to be located at Kigali, is expected to be on the air by the end of 1965. Deutsche Welle has also announced that two more high-powered relay stations will be constructed—one in S. Asia and one in the Caribbean.

South Africa—One new 250-kw. xmr may be in operation by the time you read this; another is expected to start operating in March, 1966, at which time there will be a daily Eng. broadcast to Europe. When all four xmr's are in operation in late 1968, there will be service to Europe in Eng., German, French, Portuguese, Dutch, and Spanish.

Surinam—Stichting Radioomroep Suriname, a new government station, is on the air with 1000 watts on the medium waves; it will increase to 50 kw. by the end of this year. A short-wave service is expected in 1966. No frequencies were listed.

Sweden—R. Sweden's Eng. service to N.A. is now at 0900-0930 on 15.420 kc. and at 2045-2115 and 2215-2245 on 9705 kc. Other changes: the xmr in French and German at 0440-0530 will be 0605 and 9620 kc.; a new xmr to the Far East will be broadcast in Eng. and Swedish on 15.195 kc. from 0600; French to Canada and Eastern N.A. is at 1115-1145 on 15.420 kc.; the Spanish xmr at 1850 will be replaced by a French program on 9620 and 11,705 for West Africa and South America.

Clandestine—A new clandestine station has been noted almost daily. The call is R. Biashari, La Voz de la Resistencia Vasca. The station is using both Basque and Spanish and is working for the underground Basque Liberation Movement. Said to be mobile, the station is evidently scheduled, at 1400-1700 on 15.020 and 13,290 kc., although other reports list the frequencies as being 15,007 and 13,230 kc. Reports are welcomed at B. P. 59, Poste Centrals, Paris 16, France.

A station identifying as The Voice of the Blue Eagle has been noted around 19,100 kc. at times between 1350 and 1510 with classical and jazz music. A letter from the FCC mentioned that the station had been located and the operator warned, but other details were not given. The station has been heard since that letter was received.

NEW DUO-BEAM 10 by hy-gain

Now, with Hy-Gain's Duo-Beam 10, you can add miles of distance to your Citizens Band range...transmit and receive stronger and clearer signals in the area you've been working. And, because the Duo-Beam 10 is ROTATABLE, you can do it with PINPOINT ACCURACY in any of the 360 degrees surrounding your station! The Duo-Beam 10 is a twin-driven 10 element beam that re-forms the 5 watts output power from your transceiver and funnels it in a "ray-like" path close to the ground to deliver you power equivalent to what you'd get from a CB rig with output power as high as 120 watts. That's "Talk Power." The Duo-Beam 10 is rugged, too...all heavy gauge aluminum construction with iridite treated hardware...designed to survive 80 mph winds. Easy to install on rooftop towers, TV towers, or on a 1½" mast...it's guaranteed to outperform any legal antenna for CB.

93 Watts TALK POWER...
DUO-BEAM 6—Another new rotatable Duo-Beam by Hy-Gain...twin-driven 6 element model that delivers 93 watts "Talk Power." Guaranteed to outperform any legal CB antenna other than the Duo-Beam 10. Model 11608 . . . $69.95 Net

42 Watts TALK POWER...
DUO-BEAM 4—The smallest of Hy-Gain's new rotatable Duo-Beams...a 4 element model that delivers 42 watts "Talk Power." Guaranteed to outperform any legal CB antenna other than the Duo-Beam 6 or 10. Model 11408 . . . $39.95 Net

In this age of extravagance we set out to build the sensible receiver!

We assume your first interest is in the music, not the machine—with no zest for unneeded bulk, excess cost, or useless gewgaws in your equipment.

That's why controls are uncomplicated on the E-V 1178 receiver, despite its versatility.

That's why it is one of the smallest all solid state receivers you can find, despite its 50 watt amplifier power and full AM/Stereo FM capabilities.

And that's why our performance standards meet the most critical musical taste, not some theoretical ultimate of perfection in printed specifications. The sound is just exceedingly good.

The crisp decorator look of the E-V receiver is your extra bonus.

Just $315.00 with integral walnut-paneled enclosure. Guaranteed for two years—the new Model E-V 1178.

We also offer a Stereo FM receiver (E-V 1177) realistically priced at $280.00. Separate tuners and amplifiers, too. A postcard will bring our color brochure. It makes good sense.
