INTRODUCTION

Since the publication of *Tube Substitution Handbook, Volume 1* in June, 1960, hundreds of new tube types have been introduced. This revised edition includes over 800 more substitute listings than Volume 2, over 1450 more than Volume 1.

Although tube substitution should not be performed indiscriminately, there are numerous occasions when it is necessary and feasible. For example, when you don't have the exact tube type with you on a TV service call, you'll either have to take the chassis to the shop (without knowing if a new tube would fix the trouble), or else make a special trip just to get the tube. The same applies if you're working in the shop and need a replacement you don't have—you have to make a special trip to the distributor. Such needless trips waste time and reduce profits.

Also, when a tube is out of production or the distributor does not have it in stock, a substitute is needed. On occasion, too, it is desirable to use an improved version of the tube being replaced. For example, replacing a 6BQ6 with the improved 6CU6 will usually result in better performance.

For your convenience, this handbook is divided into five sections. The first section lists receiving tubes and their substitutes. Section 2 lists receiving tubes which can be replaced with industrial types. (Industrial tubes are more rugged than receiving types in that their peak ratings and power-handling characteristics are much higher: therefore, it may be desirable to substitute an industrial tube to get more satisfactory results.)

Sections 3 and 4 list American and European equivalents. If you have an American tube and want to know what European type will serve as a substitute, refer to Section 3. If you have a European tube and need to know what American type can be used as a substitute, refer to Section 4. This is a very useful section because of the large amount of foreign-made equipment being sold in this country. (Additional sub-

stitutes may be obtained by cross-referencing the American substitutes in this section with listings in Section 1.)

The fifth section lists picture tubes and their substitutes. There are numerous occasions when a picture-tube substitute is necessary: The exact type may be out of production, or it may not be immediately available from the distributor; in either case it is necessary to use a substitute. Also, in custom installations a shorter-necked picture tube may have to be chosen.

For additional information, refer to the introductions to each section. Also pay particular attention to the various notes pertaining to the substitutions.

JULY, 1961

A handwritten signature in cursive script, reading "Howard W. Sams". The signature is written in dark ink and is positioned to the right of the date.

Section 1

CROSS REFERENCE OF AMERICAN RECEIVING TUBES

This section lists *all* American receiving tubes which have been or are being manufactured. Also included are the latest tube types registered with EIA but not yet in production.

To use this listing, locate the tube type to be replaced in the left-hand column. Then refer to the right-hand column for the substitute. The substitutes are only those tubes which have similar, or improved, characteristics and can be inserted directly into the socket. No rewiring or mechanical changes are needed, although the associated service controls may have to be readjusted.

In some instances, the available space around the tube should be considered. For example, although electrically identical to a 6L6GB, a 6L6G is more than one inch taller and a half inch larger in diameter. Thus, the substitution may be physically impossible in some compact equipment.

Do not replace a tube in the right-hand column with one in the left-hand column because this may result in a tube with lesser qualifications being used. For example, where a high heater-to-cathode potential exists, a 6AX4 will hold up, whereas a 6W4 will not. Thus, you'll find the 6AX4 listed as a substitute for the 6W4, but not vice versa.

When no substitutes are shown, none are recommended. Refer to Section 2 to see if an industrial replacement is recommended.

Substitutes marked with an asterisk (*) should be used only when the filament of the original tube is wired in a parallel circuit. Those tubes marked with a section symbol (§) may not work in all circuits.

Section 2

INDUSTRIAL SUBSTITUTES FOR RECEIVING TUBES

In this section are those American receiving tubes that can be replaced by industrial types. The receiving tubes are listed in the left-hand column and their industrial substitutes in the right-hand column. Each tube listed has one or more substitutes. If a tube type does not appear in the listing, an industrial substitute is not recommended.

This substitution list should be used in one direction only—that is, an industrial type to replace a standard type. If the equipment is already designed for an industrial tube, a standard receiving tube will not usually work as efficiently or as long as the original.

Substitutes marked with an asterisk (*) should be used only when the filament of the original tubes is wired in a parallel circuit.

Section 3 EUROPEAN SUBSTITUTES FOR AMERICAN TYPES

This section lists European substitutes for American receiving tubes. Refer to this section only after checking for an American substitute in Sections 1 and 2.

American tubes are shown in the left-hand column; European equivalents are in the right-hand column. Only those American types which can be replaced with European brands have been included. For a list of European types with American equivalents, refer to Section 4.

Tubes with an asterisk (*) should be used only when the filament of the original is wired in parallel. This sign (§) means the tube may not work in all circuits.

Section 4

AMERICAN SUBSTITUTES FOR EUROPEAN TYPES

This section lists American substitutes for European receiving tubes. European tubes are shown in the left-hand column; American equivalents are in the right-hand column. Only those European types which can be replaced with American brands have been listed. For a list of European equivalents for American types, refer to Section 3.

In most cases, there is only one American replacement shown as a direct equivalent to the European type. Other equivalents for the American replacement are listed in Sections 1 and 2. For example, the American replacement for the 6F10 is the 6AC7. If a 6AC7 is not available, Section 1 shows that a 6AJ7 can be used as a substitute. Therefore, the 6AJ7 can be used as a substitute for the 6F10.

Substitutes marked with an asterisk (*) should be used only when the filament of the original tube is wired in a parallel circuit.

• EUROPEAN-AMERICAN 1C1-10F18 •

* Parallel-filament circuits only.

Section 5

PICTURE TUBE SUBSTITUTES

This section lists all picture tubes, from the 10- to the 30-inch sizes. This listing is numerical-alphabetical, with the substitutes shown in the right-hand column. Substitutes are not recommended for some types and, for this reason, are not shown in many instances. The listing of a certain tube type as a substitute for another one does not necessarily mean the reverse is true. Always refer to the left-hand column for the original type number. Then find the substitute in the right-hand column.

Minor changes may be necessary when a picture tube is substituted. These changes are indicated by various symbols following the type number. The key to these symbols is given below. *Be absolutely certain* to refer to this key.

Key to Footnotes:

- *Omit ion trap.
- ** Add ion trap.
- ¹ Parallel-filament circuits only.
- ² Mechanical changes may be required.
- ³ A change of accelerator-grid voltage may be required.
- ⁴ A change of focusing voltage may be required.
- ⁵ A change of brightness-control voltage may be required.
- ⁶ Add high-voltage filter capacitor.
- ⁷ Ground the *Aquadag* coating.
- ⁸ Change the anode connector.
- ⁹ Change the ion trap.
