XTALS. The complete Xtal Kit in sealed cartons for the SCR 386 (BC631) Walkie Talkie, 14 xtal in all with 14 coils, 7 osc. and 7 final covering the complete freq. range of the unit. There are 7 tx freq., and a further 7 xtal spaced 455 Kc for the receiver. All are in Ft 243 holders with 4 pin spacing. The complete range is as follows.

3885/4340, 4080/4555, 4280/4735, 4927/4825, 48 5298, 5272/5792, 5437/5892 kc.
The complete kit including coils 56/- post free.

Set of 14 xtal less coils, 48/-, set of 14 coils, 8/-.

Any special xtal, 24/- with free delivery at 5293.7 and 5295, these 7/6 each. All xtal are by leading U.S. makers.

XTAU. 3.5 Mc Band any spot freq., 15/-. XTAU. 1 Pts A complete range 430 kc to 500 kc output freq., 48/- Ft 243 holders, by Western Elec. at 12/6 each.

For 144 Mc. Any freq. 8000 kc to 1100 kc Ft 243 fitting at 15/-. A few Bendix 4 pin spaced 12/6.

For 28 Mc. Any spot freq. from 7 Mc to 7500 kc at 12/6, with the following specials. 7200, 7275, 7245, 7250, 7275, 7250, 7500, 7475, 7450, 7475, 7500 kc at 7/6 each or 72/- per doz. All 4 Ft 243 holders.

For 12 Mc. Complete band as above.

6 Mc Band for 144. 8000 kc to 6083 kc any spot freq. at 12/6, Ft 243 holders.

For 21 Mc. 5290 to 6250 kc any spot freq., 12/6. Ft 243 holders.

TOP BAND. Double, 850 to 863.5 kc and 850 to 890 kc, 10/-. A complete range available from 2 Mc to 9 Mc in either 4 or 6 holders. The entire range by: RCA, Billey, Valpey, Stand, etc., and all leading American manufacturers. Write to our full guarantee. Write to our full guarantee. Write to our full guarantee.

VALVES TX AND TX. All are brand new in sealed cartons, and carry our full guarantee. 615Gt 12/6, 24/- per doz. 815 12/6, 895 12/6, 827 12/6, 815 12/6, 860 12/6, 805 17/6, 836 15/6, 830 22/6, VU, 508 Vac rectifier 45 Mc.

2750v at 125 mills 8/-, 807 RCA 6/-, 60/- doz. 885, 1025 4/-, 616g, 1822 10v, 8/-, 6AG7, 6AJ5, 60C4, 174, 145, 6L7, 7A5, 524, 6N7, 6N7gt, 571A, 15, 6GQ, 6K6, 6AC7, 6/-, 60/- doz. 5W4, 6NK7, 6NKgt, 6N20, 6KG, 6GT, 6GS4, 6SM4, 6SH7, 1A5, 9001, 9004, 7207, 12SR7, 12SG7, 12AB at 5/-, 48/- doz. VCR97 12/6, 100th at 30/-

BLEEDERS. 50 watt/100 watt, per doz., well assorted, 12/-. POWER UNIT. Type 247. Input 250/50c, Output 50c at 250 volts plus 6.3v 3 amp. In grey steel ventilated cases. 63/19/6, carr. paid.

PILOT LAMPS. Small Bay, 6.3v, 12v or 28v, at 3/- doz.

MODULATION TRANSFORMERS. R.C.A. P.P. 805s to P.P. 813s, 60/-, carr. paid.

PARMEKO. 380 watts. 4500, 5000, 5800 ohms. C.T. Sec. 13850 coils at 450 mms, Sec. 2. 6700 ohms 12 watts, 25/-. THERMADOR. 400 watt. Ptl. 6700 ohms ct.—Sec. 4500, 5000, 5800 ohms. Complete Standoffs, and completely screened at 50/-. Weden, UM1, 2, 3, or 4, immediate delivery from stock.

PLATE TRANSFORMERS. Thermodor, Primary 210/230v 50 cy. Secondary, 2280/1725/1420/0/1420/1725/2280 at 800 Mills. Complete with live craters, sealed crates, and completely screened at 50/-. Weden, UM1, 2, 3, or 4, immediate delivery from stock.

VHARTER. Switched Primary 110/230v S20R. replacement, 30/-.

HALLICRAFTER. Output transformers, P.P. Separate High and Low impedance secondaries. 55CO19. 30/10,000 cy., 7/6 each. BC 454 complete with Dynamotor, brand new and boxed at 50/-, carr. paid.

VALVE HOLDERS. All ceramic. Octal 1/-, 10/- doz. 807 1/3, 12/- doz. British 5-pin 1/-, 10/- doz. Ditto 7-pin 4/-, Ditto Johnson UX lock-in 4/-, Ditto Jumbo 6/-, 831 6/-. AUTO TRANSFORMERS. Woden 100 watt, 20/-, Met-Vick-Whitaker Woden 100 watt completely screened in separate metal case with knock-out entry, 30/-, Ex-Army. 2 kva, 23 kva.

FIGMENT TRANSFORMERS. R.C.A, Input 230/50cy Output 10v. ct twice for a pair of 813s, terminal connections, and completely screened, 25/-. THERMADOR. Input 230/50cy. Output 10v. ct amp plus 10v. ct amp potted, completely screened, at 30/-. 1131 Filament trans. Suitable for a complete Tx. Input 230/50cy, Output 74v, for a pair of TZ40s, 74v. for similar Tx final, 4v. 6 amp for rectifiers, 6.3 v. 6 amp, 6.3 v. 6 amp at 25/-.

SMOOTHING CONDENSERS. T.C. etc. 4mf 2000v. wkg 5x 5x 3, 5/-, ditto 4mf+2mf 2000v. wkg 5x 5x 3, 7/6. Keklos 4 x 4 + 4 x 4 + 2 1/2 mf 800v. wkg 7x 7 1/2, 30/-. Phoenix 5000v. wkg 7x 7 1/2, 30/-. R.C.A 7/6. 10mf 1000v. wkg 5x 5x 4, 25/-. MIGA BI PASS. 480/1000v. wkg 100 assorted, about 10 values, all normal sizes at 10/- per 100.

3800v. wkg 6/-, 601 5000v. wkg 2/-, 250v. wkg doz. assorted 10/-. BENDIX. TA-12c. The well known Tx with four channel Osc. 807 buffer, and pair of 807s in the final, the note of this Tx is equivalent to the Xtal, and is easily modified to 4 switched Amateurs.

Complete with valves, 27.

R.C.A. ET 435 H. Tx. Freq. coverage 25Mc. to 30 Mc. Sft. rack and panel. Weight 4 cwt., Input 230v 50 cy. Line up is an 807 driving a pair of 813s, modulated by a pair of 805s. Complete with all valves including 4 866 Rectifiers. New and unused in perfect condition. A speech Amplifier is required, giving approx. 6 to 8 watts, to drive these, and the input circuit of which is for 500ohm line. Suitable Plate transformers are available 6L6 anodes to 500 ohm line for use in constructing a speech amp. Offered at the nominal price of £60 complete as above, carr. paid.
American Publications for the Amateur

RADIO HANDBOOK

RADIO AMATEUR'S HANDBOOK

ANTENNA MANUAL
Design and Construction of Aerials of every kind, for Radio Amateurs, Engineers and Technicians. (300 pages). Immediate delivery. 27s. Post 10d.

ANTENNA HANDBOOK

SURPLUS CONVERSION MANUALS
Giving much detailed practical information on the adaptation of a wide range of American surplus items. Well illustrated with circuit diagrams, drawings and photographs. In two Vols. Immediate delivery. per Volume 21s. Post 5d.

HINTS & KINKS
Useful collection of technical ideas and practical workshop data, written up in shortened form. An A.R.R.L. publication. Immediate delivery. 11s. Post 5d.

RADIO AMATEUR CALL BOOK
The World's only directory of amateur stations—Over 100,000 callsigns and addresses, alphabetically—Constantly revised and kept up to date. Immediate delivery. Latest quarterly issue, 16s. Post 10d.
Any American Radio or Technical Publication Supplied. Ask for our Quotation.

QST, the leading American monthly on Amateur Radio, established over 30 years ago. For a year of 12 issues 36s.
CQ, an independent American magazine for Radio Amateurs, monthly. 12 issues 29s.

AUDIO ENGINEERING
A monthly of quite unusual value and interest to all concerned with the design, construction and operation of audio equipment of every kind. 12 issues 29s.

Suppliers of Technical Books and Publications to Schools, Universities, British and Colonial Government Departments.

H.F. QUARTZ CRYSTAL UNITS
(TYPE FO)

These crystals are now available in the fundamental frequency range from 15 Mcs. to 27 Mcs. They are overtone type plates designed for operation at series resonance in low power transmitters, and in v.h.f. receiver oscillators, in which the i.f. section of the receiver is tuned. The Squier circuit is especially recommended, and full circuit details will be found in "Q.S.T." for Oct., 1948, and "Proceedings R.S.G.B.," Summer, 1949. Maximum r.f. volts across the crystal should not exceed 15 volts r.m.s., and the h.t. volts at the anode of the c.o. valve should not exceed 150.

The crystal is mounted in our type F miniature mount, which is directly interchangeable with the U.S.A. pattern FT243. Two units, back to back, plug in to the standard International octal valve socket.

Prices:--

A guarantee of satisfaction with everything we sell

NEW VALVES. 4/210, 719S, E590, LD210, LP220, SP41. At 4/-, 6J5GT, 6H7T, PM2, EB34, V1210. At 5/- 2X2, 2X8A, 6L7T, 7V1, 12A6, 12A8, 12AH7, 12J5, 12S5T, 12S57, 12S5, 2057, 37, 713A, 885, 886, 9906, AR12P, AK8, P61, SP61, 8D2, VS82, V132. At 6/- 309GT, 5R4, 5U4G, 5V3G, 52ZM, 6AB7, 6C5, 6J5, 6K5, 6K7GT, 6L7GT, 6S7, 6S7, 6S8, 6S9, 6V6GT, 6V9G, 6X9GT, 6X9G, 607, 957, 9001, 9003, E6B33, EF36, EF90, EC52, ELS3, AUS, NR77, KTZ41, RJL37, VS61, VS90, V111, VR91, VR136, VR197. At 7/- 1A5, 1R5, 1R4, 3B26, 6A65, 6AG7, 6B4, 6C6, 6F7, 6J7, 6L7, 8N7, 8S7F, 8S7G, 8V6M, P146, 72, 73, 83V, 2050, 2051, EF166, CV89, CV66, EVC35, 1625, VU38. At 10/- 6L6, 717A, 9J6, 1616, P27/500, PX25, At 15/- 832, 4C7, 721A, 724A, SP77, At 17/- XFGL. At 25/- 8012, 8025. At 27/- 931A (Photo cell), 8013A. At 35/- 718B, 803, 805. At 45/- 6S29, 5P41, SCPI. At 50/- 723A/B. All guaranteed. Two or more valves post free otherwise add 6d postage.

NEW STORAGE CABINETS. Of improved design, fitted with twelve sliding drawers, overall dimensions: — 10½" x 7½" x 6½". Extremely useful for segregation and neat storage of small parts. Price 17/6 each.

NEW PHOTO MULTIPLIER CELLS TYPE 931A. High vacuum type, with high response in visible region, low noise level, freedom from distortion, low dark current and small size. Ideal for Film scanning, Colorimeter measurement. Spectrography, Astronomical measurements. Alpha particle counting and facsimile transmission. Directly equivalent to type 27M1 Edbison.

NEW TRANSFORMERS Standard Primary. 250-0-250 80ma 04v 5A. 6.3v, 4A, 0.4-5v 2A. 15/9. All special Television Type EHT. Standard primary. 0-2500v 5ma. 2-0-2v. 4v. Fully impregnated. 34/6. All fully guaranteed.

NEW TV PREAMPLIFIERS. These stable high gain units are made by famous maker and with slight pruning of RF coils are ideal for long range work. Two valves type EF50 are employed, compact closed cases sized 6⅞ x 3½ x 3½". Terminal strips and Pye sockets for easy connection. Supplied less valves in perfect condition price only 6/9 each.

BENDIX RADIO COMPASS RECEIVERS TYPE BC 433G. These superb sets are commercially modified from a superb British model. They have been fitted with a careful and highly trained front control panel which contains tuning meter, slow motion dial, volume controller, etc. Other mods. include push/pull 6L6 output stage delivering 15 watts audio. A wonderfully sensitive instrument. Price 200-1750 L to. 35/- each. All guaranteed. Price 10/- each. For compass sets side by side in 6/6 each.

NEW AMERICAN MICRO SWITCHES. Operate with feather touch. Suitable for safety interlocks. Regulator, alarm, etc. 4½.

COMMAND RECEIVER MOUNTING RACKS. Sets of the BC 433-4-5 class slide into this unit completing electrical circuits brought out to socket rear of set. Rack contains miniature relays, fuses, headphone jacks and switches. Compact size, Black wrinkle finish. Type A. mounts 2 sets side by side. Price 7/- each. Type B. mounts 3 sets price 7/6 each.

NEW THROAT MICROPHONES. High sensitivity with good performance. Eliminate extraneous noise. Suitable as contact mike. 3/6 each.

NEW FLEXIBLE TUNING DRIVE CABLES. Type A. for BC 453 sets, etc. 15/9. Type B for Compass sets BC 433G, and MKX, price 6/6 each.

NEW TUNING CONDENSERS. 2 gang .0005 mf. 4/- .001 mf. 2½. 3 gang .0001 mf. 3½.

NEW CERAMIC FEEDER SPREADERS for spacing 600 ohm transmission lines, 1½ per each doz. 9/-.

NEW COLLINS AUDIO TRANSFORMERS TYPE 677N201. Z pri. 8000 ohms. Z sec. 8000 ohms. Turns ratio 1/1. Response 200-5000 ± 1 DB Rating 20 watts. Test voltage 3000, 10/- each. Also Collins type 677N123. Turns ratio 150-5000:1. Response 1000. 9/6 each. Both types have centre tapped primary and secondary. Also RCA High power driver type T202. Primary 500 ohms. Two isolated sec. to drive grids of valves 805 etc. Rated 35 watts each. All above hermetically potted and ideal for high power amplifiers and modulators. RCA POWER TRANSFORMERS Primary 0-190-210-230-250v. 50-60cs. 450-350-350-400 at 180ma. 6.3v 6a CT. 5v 3A. Screened fully shrouded. A complete amplifier circuit for GL in push/pull, with colour codes etc., is included. A superb product price 35/-.

NEW BULLEN HIGH-SPEED TELEGRAPH KEYS. Type 2801A. A very popular type fully enclosed with precise contact adjustment. Black wrinkle finish. A fine buy at 7/6.

NEW RCA RADIO DIRECTION FINDING EQUIPMENTS. BC 1065A. Freq. range 18-65 mcs. Of Modern design the equipment employs a total of 15 tubes. Designed for use with Adcock aerial system. Specification on request. Price 250 each.

STANDARD PANEL MOUNTING RACKS. Type 10A/SS91. Height 5.5ft for 19" panels. Drilled every inch. Supplied with panels total 3 ft. which carry terminal strips, etc. Suitable for Transmitters, amplifiers, commercial eqpt. 62 each.

NEW NATIONAL AERO VIBRATOR POWER PACKS. Table mounting model in handsome black wrinkle finish. Fitted with fuses connecting cord, etc., 25/- each.

Experienced export shippars. All prices include U.K. carriage. Terms C.W.O.

Satisfaction guaranteed or money immediately refunded.

VALVES: Ceramic based 807's 5/-, 1625 (12v 807) 7/-. TT11 (Midget 807) 4/-, 886/886A 9/6, 805 9/6, 615GT 2/3, 6N7 4/9, 524M 5/-, 5U4G 4/6, 666M 6/5, 6L6M 6/9, EL32 4/-, VR54 (816) 1/-, 12J5 1/3, HL23 1/6, EF50 2d.

BLEEDERS: 100K, 20K, 100W 9d, 30K, 25W 6d, 100 ohms 40W 6d, 3.15K 100W 6d. Fixing clips for above 2d each.

CONDENSERS: 4MFD, 800v 1/-, 6FD, 1KV 1/6, 10MFD, 2KV 4/-, 47MFD 2KV 6d each. 3.01MFD T.C.C. 0.5MFD 2KV 6d each.

CONDENSERS VARIABLE: 100pf. Midget ceramic insulated, panel mounting 1st shaft, 1/6, 500pf Johnson Tx type 2000v. ceramic insulated, new 10/-, Pye type Co-ax Connectors 3d each. Pye type Plug and sockets new only 5d per pair.

POTENTIOMETERS: 1 meg. midget with 23" shaft, 1/-, 10k (Morgan Tropical new), 6d, 1K, 25W, 2/3, 20 ohms, 100W, 2/6.

VALVE HOLDERS: 813 Ceramic Bases, 7/6, 807 Ceramic 1st, 1/-, 2 pin ceramic 1/6, 9/6 EDDYSTONE VALVE TOP CAPS for 813, 805, 866, etc., 6d each.

METERS: 21" round, 0-100ma, 7/6, 0-500ma 9/6, 0-15V AC, 6/-, 0-10ma 7/1.

PORCELAIN THROUGH CONNECTORS: with 2BA fixing bolt, 3d each.

R.F. CHOKES type 1010, 9d each, 7/6 per doz.

ICOMERIC JACK SOCKETS 1/-. Telephone plug lugs for same with Sft. lead, 1/- each.

NEON TUBES suitable for R.F. Indicators, 1/-. Neon Stabilizers (150v 8ma) 1/6 each.

GRID STOPPERS: 47ohm Eerie /watt insulated 2d each.

R.C.A. MODULATION TRANSFORMER: PP. 805 to PP 813, 35/- carriage extra.

R.C.A. FILAMENT TRANSFORMERS: 230V Primary, 5/0/5 for two 813 and 2.5/0/2.5 for two 866 twice, 17/6, carriage 2/-. 230V Primary, 2.5/0/2.5 twice for pair of 805 or 813, 13/6, carriage 2/-. Both of these transformers are completely screened.

R.C.A. DRIVER TRANSFORMER with split secondaries, 500ohms to 805 grids. Completely screened, 12/-, carriage 1/6.

ROTARY COIL UNIT with helical copper strip wound on 3" dia. ceramic former and provided with vernier drive and dial. A real bargain at 20/- plus 1/9 carriage.

ROTARY COIL UNIT as above but with 31 turns provided for on former (ceramic) complete with vernier drive and dial but with wire removed for only 10/-, 1/9 carriage.

2 Pole 9-way 3½" dia. ceramic wafer R.F. switch with silver plated contacts only 9/6, plus 1/6 postage.

We have obtained large supplies of first class American transmitting equipment, a few samples of which are listed above. Many other items are available and are shown in our list. For copy please send S.A.E.

Please include sufficient to cover packing and postage.

Bind Your Copies of Short Wave Magazine

Valuable time is lost in searching for a particular journal, but the simple Easibind device will solve this problem. Your journals are neatly bound and easily referred to. Easibinders are gold lettered on the spine with title and year (all previous years can be supplied) and they form a very attractive library. For Short Wave Magazine, binders are supplied to hold a complete volume, and lettered with title and Vol. No. Price 11s. 3d. (post paid.)

Easibinders are supplied for all other Radio Journals and we welcome readers of this magazine to see our display on Stand No. 6, at the R.S.G.B. Amateur Radio Exhibition this month.

YOUR EQUIPMENT CAN HAVE THE PROFESSIONAL LOOK — BY USING WODEN POTTED COMPONENTS

Woden Potted Transformers and Chokes ensure a clean layout with uniform smart appearance. They are used by many leading radio and television manufacturers, and this is sufficient testimony to the high standard of efficiency which characterises these components. Available for "Wireless World" Williamson Amplifier. "Electronic Engineering" Home-built Televisor and other popular circuits.

THE EQUIPMENT SHOWN IS THE TOP DAND CABINET TRANSMITTER AS DESCRIBED IN THE "SHORT WAVE MAGAZINE."

Send for illustrated literature and price lists of our complete range.

Power Units Type S41B. Manufactured by Messrs. Stratton. Input 200-230-250 volts 50c. Output 300 volts 200ma, choke input with 4 mfd. smoothing. Also 12.5 volts 3 amps A.C. and 4 volts D.C. smoothed by choke and two 1000 mfd condensers. Two transformers are used one supplying 5v for the SU4G and 12.5v the other supplying H.T. These are separately switched and the latter may also be switched by a 24v A.C. Ultex relay which is fitted. The Skylock fuses which are fitted are damaged otherwise the units are in excellent condition and fully guaranteed. Complete with valve, etc. 50/- carriage paid.

Rack Amplifiers Type 6. Uses two PX25 valves driven by ML4 and M.H.4 pre-ampifier. The power supply which is for 230v 50c input delivers 500 volts at 150mA, with two section smoothing and uses a FW4/500 valve. The amplifier is fitted with plate meter and volume control and is built into two panels on a 19in. rack. The power supply takes up a further panel leaving space for a further three 10in. panels (for fitting TX., record player or radio). Supplied brand new complete with standard rack but LESS VALVES. £5 carriage paid.

Parmeko Mains Transformers 230 volts 50c. input. Output 620-550-375-0-375-550-620 volts 5v 3a and 5v 3a. The 75 volt winding is for 250ma and the 620 or 550 volt winding for 200ma. The 375y and 550 or 620v windings may be used simultaneously. If the 375 volt winding is used alone it is capable of supplying 450ma. Brand new. 39/- carriage paid.

Parmeko Smoothing Chokes. 10H. 650ma. Brand new in original wooden case. £1 carr. paid per goods. 22/6 per passenger rail. 100 kcs. crystal complete with holder, 10/- carr. paid.

Micro-Ammeters. Centre zero 500-0-500 microamps 3½ scale, 4½ overall, flush mounting resistance 100 ohms. Easily modified to read 0-1ma. 12/6 post paid.

Test Set Type 105/ACR19 for SCR522 transmitter complete with 0-1ma meter, leads and instructions for use. Brand new. 15/- post paid.

Power Units Type 247. Input 230v 50c Output 500v 250ma fully smoothed with choke and two 4mfd condensers, also 6.3v 3 amps. Brand new in original packing case. 70/- carriage paid. AR88 output transformers. 10/- post paid.

Coil Units for BC3480 receivers R.F. or Det only 15/- post paid.

Transformer-Rectifier to supply 24 volts 1 amp, 19/6 post paid.

Thermo-Couple Ammeters. 0.5 amp 2° square flush mounting. New and boxed. 2/6 each post paid, 6 for 12/6 post paid.

Filament Transformers. 230v 50c input. Output 6.3 volts 3 amps. 3000 volt test. 12/6 post paid.

Tuning Units Range F. 600-9050 kcs. Less outer case 10/- carriage paid.

A. FANTHORPE, 6-8, Hepworth’s Arcade, Hull Tel. 35694
**HENRY'S**

**SPECIAL COIL PACK OFFER.** Limited quantity of brand new manufacturers' surplus, 3-wave-band, superhet coil packs. Iron cored, size 4" x 3/4" x 2" deep. Complete with circuit, a bargain at 25/- only.

**SPECIAL VALUE IN MAINS TRANSFORMERS.** Parmeko 250-0-250, 90 m/da 8.3v 3a, 5v 2a, half shrouded, drop through type. Electrostatic screen. Price 15/- only, plus 9d. post. Limited quantity.

**BAKELITE RECEIVER CABINETS.** An extremely advantageous purchase, enables us to offer the following:--- Attractive brown bakelite cabinet, size 15" x 8" high x 71/2" deep, complete with chassis drilled for standard five-valve superhet, back, 3-wave glass dail and back plate. Chassis and cabinet are designed for 6SP speaker, and all standard components, price complete is 25/- only. Limited quantity.

**RECEIVER TYPE 21.** The receiver portion of the W/S 21 operating from 4.2-7.5 Mc/s. Double superhet from 18-30 Mc/s. Incorporating B.F.O. and crash limiter. Valve line-up-12AR1 (VP21) and 2-AR8 (HL.23DD). Absolutely brand new, complete with circuit. Only 45/- complete. Vibrator Power Unit for above, brand new, 17/6 only.

**R3515 I.F. STRIP.** A complete I.F. unit, comprising 6 SP81 I.F. stages, tuned to 13.5 Mc/s, 1 EA30 diode detector, and 1 EF36 or EF39 output of video stage. A few modifications only are required to adapt this unit which will give pictures of extremely good quality. Price complete with valves, and fool-proof modification instructions, is 46/-, plus 5/- packing and carriage. Limited quantity only.

**EX-GOVT. VALVES.** The following brand new and guaranteed valves are in stock:- 6J6 at 12/6, 6AK5 at 10/6, 6FP, PEN 46, 6L6, metal at 10/- each. 25AG6, 6SN7GT, EF50, EF54, 25AG6, EF50, EL37, VU111, VUI20A, VUI33, VUI38, ST4, 5RG4Y, RL18, 6AG8, PM22A, VUI20A, 6K6 all at 7 1/2 each. 5Z4, MUI14, 6K7GT, 6J7GT, 6K8GT, ML4, 12SR7, 12SK7, 6SA7GT, 6SL7GT, 6S7, 6SC7GT, 6C6, 6V8C or GT, 7C7, 7T4, 7B6, 7C5, 1299A, 9D2, VP23, F2, 12A6, 8D2, 15D2, EF36, EF39, EF8Q3, EK32, EL32, 6X5GT, 2X2, 6AC7, 6N7, 78, 9003, IN5GT, 6J5GT, 6C5, KTW61, KTW63, 955, TDD2A, VB2B, AG6/PEN, 220SC, 210DET, EF8, KT2, U122, all at 6/- each. Also 6002 and 1LN3GT, 6/6, 807, 7/-, 4D1, 5/-, EA50, SP61, 854, EBD4, at 3/6 each. DI Diode at 2/3 only. And the midget range of 1.4v battery valves. 1T4 and 1S5, at 6/- each. 1R5 and 1S4, at 7/6. 3R4, at 9/- each. Most of these valves are boxed. Please note for current popular circuits we also have in stock ID8GT, at 15/3; and HIVAC XH at 10/- each. Both these latter are new and boxed. In addition we have over 10,000 new boxed BVA valves in stock at current Board of Trade prices. Let us have your enquiries.

A stamp will bring our current List.

**LYONS RADIO LTD.**

**RECEIVERS TYPE R.1155.** Now one of the best known and most popular of ex-Gov. receivers. Frequency range includes 20, 40 and 80 metre Ham bands long and medium wave transmissions. Power requirement - approx. 220v D.C. at 60mA and 6.3v at 3A. In new unused condition and tested before despatch Price, £11/10/0. Carriage 10/6. In Used condition, price £9/10/0, carriage 10/6.

**POWER PACK/OUTPUT-STAGE.** A unit to operate the R.1155 Receiver from A.C. mains and to provide for a speaker output. Assembled in an enclosed ventilated metal case 10 x 61/4 x 4ins. Employs S24 rectifier and 6V6 output valves. Fitted with all leads and plugs clearly marked. Price £5/7/6, Carriage 2/6...

**SPECIAL OFFER.** R.1155 in new unused condition together with P.P./O.P. Stge. £15/15/0. R.1155 in Used condition, together with P.P./ O.P. Stge. £13/10/0. Carriage either condition, 10/-.

**ACCUMULATORS.** Assembled in a metal case 83 x 62 x 6ins. With carrying handle that folds flat when not in use. Rated at 12v 14 amp-hours. Connections from each cell terminate to a threaded stem so that it is quite easy to form an accumulator to supply from 2v to 12v by re-arranging the connections, a proportionate increase in capacity being obtained for the lower voltages. In unused condition but outside of cases may be soldered. Price 26/- Carriage 4/-.

RECEIVER R.1155. A "must have" for the enthusiast who wants a Communication Receiver of the £100 class. We have a few only of these superb 10-valve sets, which cover 7.5 mc to 75 kc in 5 wavebands, which are spotless and BRAND NEW IN MAKERS' CASES. Every set aerial tested before despatch, and supplied with full details of easy mods for normal mains use. ONLY £12/10/0 (Carriage 12/6).

RECEIVER AEW 1. A 5-valve superbet covering 550-1800 kc and 6-12 mc in 4 switched wavebands. Operates from 6v D.C. source through built-in vibratorpack and has large separate speaker in metal cabinet with 50 ft. extension lead. Made for the New Zealand Forces Welfare Dept., these sets have 2.5 watts output and are NEW AND UNUSED. Valve line up: 6U7, RF Amp, 6K8 mixer, 6U7 IF Amp, 6Q7. 2nd det 1st Audio, 6V6 Output. Large open slow motion tuning dial size 7" x 3" for ease of operation. Set and speaker finished in olive green crackle. An ideal receiver for country areas, caravans, coaches, etc. ONLY £9/19/6 (carriage 10/6).

RECEIVER 35/73. Oener 3-wave coil pack recommended for this conversion 40/4 plus 1/- postage. Part of the TR 1196. Covers 4.3-6.7 mc, and makes an ideal basis for an all-wave superbet as described in this journal. Complete with 6 valves: 2 ea EF36 and EF39 and 1 ea EK32 and EBC33. ONLY 22/6 (Postage etc., 2/6).

RECEIVER 18. Part of the TR 18. Covers 6-9 mc, and requires normal battery supply to operate. Complete with 4 valves: 3 of VP23 and 1 of HL23DD. ONLY 15/- (Postage etc., 2/6).

TRANSFORMERS. The following have been specially made for the "Inexpensive TV." Time Base and Vision Transformer 350-0-350v 180 ma, 5v 3a, 6.3v 6a, 6.3v 8a, ONLY 34/-; Sound Receiver Transformer 250-0-250v 100 ma, 5v 3a, 6.3v 6a, ONLY 27/6. EHT Transformer for VCR 97 tube, 2-0-2v 1.1a, 2-0-2v 2a, 2500v 5ma, ONLY 30/-; POSTAGE 1/6 PER TRANSFORMER PLEASE.

CONDENSERS. 1mfd 2500v Tubular 2/6, 1mfd 300v block 4/6, 8mfd 450v 2/9 or, 6 for 15/-; 8 x 8mfd 450v 4/- or 6 for 22/6. 16 x 16mfd 450v 6/ or 6 for 25/-. 32mfd 350v 2/9 or 6 for 15/-; POSTAGE PLEASE under 1/6.

SPEAKERS. Rola 10" PM less trans 23/6. Rola 6j" PM less trans 10/9. 6j" PM less trans by famous maker 9/6. Truvox 10" PM less trans 17/6. Plessey 6j" Lightweight PM with trans 12/6, 3" PM less trans 10/-, 8" PM less trans 14/6. Postage per speaker, 1/6.

CHOKES. 5h 200mc 9/-; 10h 160ma 7/-; 20h 80-120ma 6/6. (Postage 9d.).

VALVES. VR91 (EF50), 4/6; 6AC7, 6J5, 5/6; 6SN7, 6V6, 5U4, 5Z4, VU111, VU120, 7/6. (Post 9d.)

'THE FAMOUS'

R.C.A. TRANSMITTER ET4336B.

THIS MAGNIFICENT PHONE AND C.W. TRANSMITTER IS COMPLETE IN ONE TOTALLY ENCLOSED RACK AND INCLUDES AERIAL TUNING PANEL

TUBE LINE UP: 807 C.O./Buffer. Two 813 P.A. Two 805 P.P. Class B Modulator. Four 866A Rectifiers.

CONTROLS: Manual or Remote.

POWER OUTPUT: Normal 350 watts phone, but with the fitted QRP SWITCH output is 100 watts.

FREQUENCY COVERAGE: Normal 3.5 to 18mc but by doubling in final, excellent output may be obtained on 28mc.

FREQUENCY CONTROL. THE TRANSMITTER HAS A DETACHABLE FRONT PANEL FOR INSERTION OF WILCOX GAY V.F.O. OR CRYSTAL MULTIPLIER.

ALL YOU NEED TO GET GOING IS THE INSERTION OF VALVES, CONNECTION TO MAINS AND AERIAL! 20 page manual and circuit diagram with each equipment.

EVERY INSTRUMENT IS AIR TESTED AND GUARANTEED PERFECT.

DELIVERY FREE ENGLAND including CRYSTAL MULTIPLIER AND ALL VALVES.

WEBB'S EXTENDED PAYMENT SCHEME

Enables you to buy RELIABLE apparatus, backed by WEBB'S GUARANTEE, over 12 or 18 monthly payments. A few representative figures are shown, but any apparatus (minimum value £15.0.0) can be accommodated. Webb's reputation and integrity assure you of a square deal.

EDDYSTONE "740" COMMUNICATIONS RECEIVER Price £29/10/0
8 valves. Includes all features necessary for serious short-wave work. DEPOSIT £5/10/0 and 12 monthly payments of £2/3/3 or 18 monthly payments of £1/10/2.

EDDYSTONE "750" COMMUNICATIONS RECEIVER Price £49/10/0
An outstanding example of British design and workmanship. 11 valves in double super-heterodyne circuit. DEPOSIT £9/18/0 and 12 monthly payments of £3/12/7 or 18 monthly payments of £2/10/7.

TAYLOR SIGNAL GENERATOR "65C" Price £17/15/0
DEPOSIT £3/11/0 and 12 monthly payments of £1/6/1 or 18 monthly payments of £1/6/2.

ADVANCE SIGNAL GENERATOR "E3" Price £23/10/0
DEPOSIT £4/14/0 and 12 monthly payments of £1/14/6 or 18 monthly payments of £1/4/0.

AVOMETER, MODEL 7 Price £19/10/0
DEPOSIT £3/18/0 and 12 monthly payments of £1/8/8 or 18 monthly payments of £1/9/11.

DECCA "3378" DUAL-SPEED PLAYING DESK Price £16/16/0
DEPOSIT £3/7/2 and 12 monthly payments of £1/4/8 or 18 monthly payments of £1/7/2.

THE ABOVE ARE MERELY EXAMPLES—we can supply anything in radio and electronic gear from Britain's most varied and comprehensive stock. Quotations by return of post.

WEBB'S NEW 40-PAGE CATALOGUE AVAILABLE 10d. POST FREE.

G-2K This Month's Bargains G2AK

POWER TRANSFORMERS. 620/550/375/0/375/550/620v at 500 ma. plus 250 ma at the 375v taps. Two separate windings for rectifiers of 5v at 3a each. Primary 230v 50c. Rated at 278 watts. Our price, 39/-, carriage paid.

MODULATION TRANSFORMERS. 360 watts. Prim. 5,000, 5,000, 4,500 ct. Sec. 1 3550 at 450 ma. Sec. 2 6700 ohms 12 watts. Ideal for Plate and Screen modulation. Price only 27/6, carriage paid.

HEAVY DUTY L.F. CHOKES. Fully potted. 30 Hy, 100 ma, 150 ohms (Weight 14lb). Price 13/-6. 20 Hy, 126 ma, 100 ohms (Weight 14lb). Price 15/-6. 30 Hy, 150 ma, 150 ohms (Weight 18lb). Price 17/-6. All transformers are carriage paid except to Libre for which we must ask for 5/- extra.

SPECIAL FOR AR88 USERS. Matching Speakers, 2.5 ohms. Black crackle case, £3/15/0. Spare Crystals for D model only. 458 kcs., 15/-.

SEALED cartons of spare valves (14), 2S.

TWIN FEEDER. 80 ohm. 5d. per yd. Twin Ribbon Feeder 300 ohm (Heavy duty) 5d. per yd. Co-ax Cable, 3/4 dia. 70 ohm 8d. per yd. Postage on above feeder and cable, 1d, any order.

STATION LOG BOOKS. 200 pages printed one side only. Size 8½ x 11½. First-class paper and bound with heavy cover. Price, 17/-6.

RECEIVERS TYPE 18. Covers 6-9 mcs and are for battery operation. New Model. Complete with four valves. Only 17/- each. Morse Keys. Small type on insulated base, 1/- each plus 6d. postage.

Bliley SMC 100 1000/1000 kc dual crystals, 25/-. R.C.A. 100 kc Crystals, 20/-. MASTER OSCILLATOR UNITS TYPE 123 This consists of a silver-plated box 6½ x 3½ x 3½ containing a rotating coil of 50 turns on a 1½ x 3½ former driven by a J.B. type 5 to 1 reduction drive fitted with a 0-100 engraved dial. Given away at 5/-, plus 1/- postage.

Moving Coil Headphones, with Moving Coil Microphone, 6/-, postage 1/-.

Transformer, for above, 2/- each.

BC306A Antenna Units. These consist of a very fine black crackle cabinet 16½ high, 8½ wide, and 8 deep. Three-band five-position low capacity all-ceramic switch, on the top of the cabinet are a pair of large stand-off insulators. These cases would make excellent V.F.O.'s. Low Power transmitters, etc. These are all brand new, and in original cartons. Price only 12/-6 post free.

An achievement of some magnitude in diminutives

The new G.E.C. Germanium Crystal Rectifiers

Designed for soldering into circuits

1. Provides a high frequency Diode requiring no heating power.
2. Very small in physical size.
3. Of low forward and high reverse impedance.
4. Extremely low shunt capacitance—only 1 PF.
5. So constructed as to give a unit of high stability and consistency.
6. Outstanding in its property to resist severe mechanical shock or vibration.
7. Indefinitely long life.

The General Electric Company Ltd. welcomes, and will give sympathetic consideration to enquiries to meet specialised requirements and specific circuit applications. Write and ask for particulars of types available to Osram Valve and Electronics Dept., Magnet House, Kingsway, London, W.C.2.

Articles submitted for editorial consideration must be typed double-spaced with wide margins on one side only of quarto sheets, with diagrams shown separately. Photographs should be clearly identified on the back. Payment is made for all material used, and a figure quoted in the letter of acceptance. It is a condition of acceptance that copyright of all material used passes to the Short Wave Magazine Ltd., on publication.

THE SHORT WAVE LISTENER ASSOCIATED WITH THIS MAGAZINE IS SPECIALLY FOR THE RECEIVING ENTHUSIAST
PREMIER TELEVISION KITS
FOR LONDON AND BIRMINGHAM
USING 9" OR 12" MAGNETIC C.R. TUBES

£19.19.0 including all parts, valves and loudspeaker, but excluding C.R. TUBE

The Vision Receiver, 4 R.F. stages (EF64s), Diode Detector and Noise Limiter (6H6) Video valve (EF84) Complete Kit with valves; £3/16/0. Carriage 2/6.

The Time Bases, blocking oscillators on Line (6H17 and 807) and Frame (VR137 and 6V6). E.H.T. from Line Output Transformer. 10h. F.M. Speaker. Includes the Instruction Book, including Parts List, Soldering Iron and the ability to read a theoretical diagram. The Vision Receiver costs £17/17/0, but is credited if a Kit for the complete Televisor is purchased.

We are now supplying:

NEW LONG RANGE TELEVISOR KITS (ELECTROSTATIC TUBE)
For the London or Birmingham frequencies at the same price as the standard kit — £17/17/0 —

Five Easy to Assemble Kits are supplied:
- Vision Receiver with valves, carriage 2/6.
- Sound Receiver with valves, carriage 2/6.
- Time Base, with valves, carriage 2/6.
- Power Supply Unit, with valves, carriage 2/6.
- Tube Assembly, with valves, carriage 2/6.

This unit includes the VCR97 Tube, Tube Fittings and Socket and a 6in. FM Moving Coil Speaker with closed field for Television.

The Instruction Book costs 2/6, but is credited if a Kit for the complete Televisor is purchased. Any of these Kits may be purchased separately; in fact, any single part can be supplied. A complete priced list of all parts will be found in the Instruction Book.

20 Valves are used, the coils are all wound and every part is tested. All you need to build a complete Television Receiver are a screwdriver, a pair of pliers, a soldering iron and the ability to read a theoretical diagram.

WORKING MODELS CAN BE SEEN DURING TRANSMITTING HOURS AT OUR FLEET STREET AND EDGWARE ROAD BRANCHES.

VALVES. We have large stocks of new boxed valves at very low prices. All except from Purchas Tax 1LC6, 1LD5, 11NS, 114, 115V, 12A7, 2A6, 5U4, 5Y4G, 8A6C, 8A6G, 6C5, 6F8, 616, 6J7G, 6K7, 6K8, 6L7, 6M7, 6Q7, 6S7, 6S8, 6V6, 719A, 12AX7, 12AT7, 12A7, 12AV7, 12AX7 (EBC38), VT82 (EL32), VR56 (EF85), VR57 (EIK32), VR16, VR163 (EF54), VR137 (E59), CV66 (RL37), CV120 (SU21/40), CV137 (RL16), CV1068 (AW4), CV189 (US99), CV284 (EL50), VU58, 807, VR23 (E50), XY, HY, HAYVIC 8W, KMB8, KTW61, U50, 866, AW4, 4068A, all 6/6, 6H6, 6SH7, 7193, VR79 (D1), all 2/6. November 1950
Continuity

The change in the general appearance of this issue is due to the fact that after more than four years we have been compelled to change our printers—and let us hasten to add that it is neither their fault nor ours. Rather, it has been dictated by the regrettable circumstances which have caused so much trouble and strife in London printing offices ever since May of this year.

Our readers will probably not have been aware—nor was there any reason why they should be—that for the last five or six months it has been increasingly difficult to ensure smooth production. Periodicals of every kind have been similarly afflicted (many of them have lost two issues altogether) and it says much for the resilience of private enterprise and the determination to maintain service that so little of this has been passed on to the general reader. So far as readers of SHORT WAVE MAGAZINE are concerned, it has meant only that we have been one week late with this one issue.

However, we may hope that such unhappy things are now past, and that once more we shall be able to apply ourselves to the business of giving you a good issue by the due date every month.

In our pages this time will be found two articles of particular value and unusual interest—the practical application of Super Modulation (of which much is now being heard), and the modification of a very fine “surplus” receiver for operation on the 430 mc band. Some very interesting 70 cm results are also reported in the VHF section, and broadly speaking the distances now being covered on Seventy-cm compare with those achieved on Two Metres when that band was being opened for GDX working.

AUSTIN FORSYTH, G6FO.
THE ASB8 ON SEVENTYCEMS

Modification of a Surplus Receiver for 430 mc Operation

By R. Rew

The author of this article is a well-known SWL in the Midlands who for long has been specialising in VHF receivers. His contribution is a mastery exposition on the modification, for the 70 cm band, of a particularly fine piece of surplus equipment. The object was to produce from the ASB8 a VHF receiver complete in itself, suitable for either fixed-station or portable working, and capable of taking stabilised CW and phone transmissions on 430 mc. Even if a degree of mechanical skill does seem to be involved in the modification, this part of it is simple enough to have done locally—and, as we have said before, for effective constructional work on these frequencies, the ability of the model engineer can be allied to the knowledge of the radio amateur.—Editor.

Comparatively speaking, there are very few receivers on the market really suitable for immediate use in the 70 cm band. Home-built converters and the receivers so far described have usually employed as the basis of their 70 cm circuitry tuning units taken from surplus equipment of one kind or another—the Type 105 oscillator unit, the R89A/ARN5A coaxial assembly and the TN18 of the APR4 radar search receiver, to name only a few. All of these have, however, suffered from one disadvantage: No pre-mixer RF amplification. This has been serious in view of the fact that many use crystal mixers which suffer a loss rather than a gain, as is usual with mixers in use on the lower frequencies. Nobody nowadays would consider using a 2-metre receiver without at least one RF stage, but on 70 cm the story is somewhat different. At this frequency coaxial tuning circuits give the most satisfactory performance in RF stages and the few valves capable of a worth-while performance are made to fit them. It is not surprising that the surplus market should be scanned for the basis of a 70 cm RF stage, as machining and lathe-work (to say nothing of silver plating the finished article) are somewhat beyond the majority of amateurs.

The only units so far found by the writer have been the ASB7 and ASB8 receivers of American manufacture. These appear to be identical in construction, and as the latter is the commoner of the two, it will be referred to throughout. These receivers are available in fair numbers, at quite reasonable prices. They have a superb and easily followed layout, and are mainly brand new, the precious coaxial circuits being therefore in good condition. The designed operating frequency was 515 mc and it is therefore necessary to lower the RF circuitry 80 mc or so to get into the 70 cm band—usually a good point where any surplus conversions are concerned.

General Description

The ASB8 starts at the aerial with an exceedingly well made coaxial RF stage using a GL446A lighthouse valve. In order to clarify the mysteries of the ASB8 RF section, and possibly fire others with enthusiasm (and a few spare GL446's!) to make a Chinese copy, Fig. 1 has been drawn to show the "inside story." As can be seen in the photograph this stage occupies the top centre of the chassis, and mechanically consists of three concentric silver plated and highly polished tubes. At one end these are fixed to a suitably machined end block, while their other (open) ends make contact with the anode (via blocking condenser), grid and RF cathode respectively of the lighthouse. Perhaps it should be explained that these lighthouse valves have two cathode connections—one a DC connection brought out to one of the base pins, the other the RF cathode taken to the metal base ring of the valve and connected internally to the DC cathode through a low inductance condenser of about 100 µF.

The cathode-to-grid line is tuned by a multi-fingered movable slide, the control for which is preset and is the large knurled locking knob located under the coaxial assembly. (It is visible in the photograph immediately behind the VR150). The aerial input tap to the grid line also moves with this slide and
comprises a springy finger which always makes contact about 1 in. from the shorted end formed by the slide itself.

Another slide of larger diameter tunes the grid to anode line and is controlled from the front panel by the screwdriver adjustment "Amplifier Tuning." This slide also carries the output coupling loop assembly which takes the amplified signal from the shorted end of the line formed by the slide, via a short length of coaxial cable to the mixer grid line. The mixer grid coaxial tuner is 4 ins. long and 1 in. diameter, with the RF amplifier output cable tapped on its centre conductor about 1½ ins. from the shorted end. The grid of the 955 mixer and its associated grid leak are coupled via a small capacity to the centre conductor near the open end, while the line as a whole is tuned by the small circular two-plate condenser at the extremity; this appears as another preset control on the panel marked "Mixer Tuning."

The 1st oscillator is a 955 acorn using two parallel lines connected directly to the grid and anode tags of the valve-holder and shorted for RF at their far end by C926, a 150 µF ceramic tube condenser. Variable tuning is accomplished by a circular disc which, as it approaches the lines, lowers their inductance and vice versa. As it stands, the frequency range is approximately 430-505 mc, the oscillator therefore working on the low side of the signal frequency of 515 mc. The 1st oscillator and mixer are cathode coupled by another coaxial line 4 ins. long and ½ in. diameter, with the mixer cathode tapped on the centre conductor about 1½ ins. from the shorted end.

Following the 1st mixer are two stages of IF amplification at 55 mc using 6AC7 valves. The frequency is then changed again, this time to 16 mc, the oscillator being a 6J5 at 39 mc and the mixer a 6AC7 with control grid injection. A form of sensitivity control appears to have operated on the screens of the 1st IF and 2nd mixer stages, a front panel socket labelled "Sens. Sw." allowing remote switching of the screen voltage. The screen of the 2nd IF stage goes
through R902 (35,000 ohms) to pin D of the power socket, and was presumably to connect to a DC potential modulated at the frequency of supply. Following the 2nd mixer are two further stages of IF amplification at 16 mc using 6AC7's and a 6H6 diode detector. Finally, a video amplifier and a cathode follower both using 6AC7's—intended to feed a CRT presentation unit known in the surplus advertisements as the "ASB8 Indicator," and also a very well laid out and constructed piece of equipment.

The IF stages use single winding coils tuned by movable dust cores, and all are heavily damped by low value resistors giving a rather wide overall bandwidth.

**Early Experiences**

The writer is inclined normally to frown on conversions of surplus equipment to satisfy amateur needs on the ground that in many cases much is done to the unit in order to get worthwhile results, that the final article bears little resemblance to the original. In other words, a start from scratch might just as well have been made in the first instance, with very likely better results in the end. In the case of the ASB8 the rather superior and easily followed under-chassis layout, coupled with the fact that it was thought that once the RF section was in order, little else had to be done apart from fitting suitable audio stages, resulted in the "No modified surplus!" rule being overlooked for the first time.

It is thought, therefore, that a short account of earlier modifications and the shortcomings experienced will bring out the reasons for the more comprehensive changes made later.

When first modified a suitable potentiometer was fitted to vary the screen voltage of the two 55 mc IF stages and an E350 diode was fitted as the 16 mc detector. The 6H6 was rewired as a double-diode noise limiter and the two output stages were replaced by a 6SN7 as combined 1st AF and BFO, with a 6F6 as the output stage. The RF sections were altered as described later in order to tune the 70 cm band.

Modified thus, the receiver was in use for some considerable time at the home QTH, and produced good signals from the locals at some 5 miles distance using but a dipole in the roof space. It was noted that the noise limiter did not live up to expectation, presumably due to the wide bandwidth, and also that the 2nd oscillator on 39 mc produced an unpleasant 11th harmonic at 429 mc in the busy part of the band. The latter trouble was overcome by lowering the oscillator to 38 mc and retrimming the 1st IF stages to 54 mc.

Modified as above, the ASB8 was used during 1949 for 70 cm tests with the G3BUR/P team. Its sensitivity seemed quite good under field conditions but having now two or three 50 delight to cope with at the same time, we had great difficulty reading the weaker signals from those stations less fortunately placed; the more powerful signals simply poured into our IF bandwidth until it could hold no more! We worked all stations heard, but we were also heard and called by other stations whom we did not hear, presumably because of the above condition.

The writer determined to have a somewhat narrower bandwidth for the Magazine 70 cm contest week-ends, and so when G3BUR/P next performed on the first week-end of the contest the ASB8 had only one 1st IF stage, this time at 56.3 mc, followed by the two 2nd IF stages now lowered to 10 mc. The 2nd oscillator had been moved to 46.3 mc bringing both its 9th and 10th harmonics outside the 70 cm band, and the damping resistors had been removed across the 10 mc IF stages and replaced by chokes. This time we had trouble of the opposite variety—trying to keep the stations inside our narrowed IF bandwidth! It was still, incidentally, quite 50 kc wide at the half power points.

The second week-end of the contest told much the same story, when we worked three new arrivals on the band—all using SEO transmitters with their modulated carriers running in and out of our IF passband.

Since that day a few more things have been tidied up and the receiver now lines up as follows in anticipation of
The IF section of the ASB8 after modification. The original component numbering is used for ease of identification, new circuit elements only being designated in the C, R, L nomenclature.

New components added for the purpose of the modifications will be referred to as R1, R2, C1, and so on.

Followed by two stages of 6SK7 2nd IF on 10 mc: 6H6 detector and noise limiter: 6SN7 as BFO and 1st AF followed by a 6F6 output stage; a VR150 stabiliser feeds the two oscillators which are allowed to run continuously, even when the receiver is switched to "standby."

With the 6J5 oscillator on 46.3 mc, its 9th and 10th harmonics cause no trouble, but other weaker spurious signals do occur due to harmonics of the 6J5 oscillator beating with the 955 oscillator fundamental and harmonics at certain settings of the latter to produce weak 10 mc beats. If the oscillators are lined up as recommended, only one of these, corresponding to a signal frequency of 443 mc, is heard when tuning through the band.

In referring to components throughout the modifications, use will be made of the notation adopted in the receiver itself, in which all parts are marked—R, C, X, L, and E, for resistor, condenser, valveholder, inductance, and transformer respectively—all of which have numbers in the nine hundreds.

It would perhaps be as well to point out that the centre underside of the
Underside of the ASB8, with positions of major new components indicated. As in the original every circuit element is numbered and the under-chassis layout is particularly clean, there is no difficulty in finding one's way about it.

Chassis is occupied by a by-pass condenser for HT positive and 6.3v. AC. Tags radiate from this condenser to feed the various stages, and care should be taken not to confuse these when modifying the wiring.

Modification to RF Stage

Fig. 1 shows a cross-section through the RF stage, which has two tuning controls—the grid-to-cathode input slide and the grid-to-anode output slide. The former is very "flat" in its tuning and is simply left in the lowest frequency position and locked. The output slide, on the other hand, is quite sharp and must be kept "on the nose" if weak signals are to receive the greatest benefit. Modifications to the output slide are necessary to get down to 420 mc. Two things are done to increase its travel at the LF end—a limit screw is removed from the end block, and 5/16 in. is turned off the slide at its "dead" end. The present screw adjustment on the front panel is replaced by a plain rod with a knob on the front panel, which is simply pulled out or pushed in as required. The output assembly to the mixer is also shortened to prevent fouling the front panel. When handling the sliders great care should be taken not to damage their delicate contact fingers.

The above modifications are carried out as detailed below, reference being made to Fig. 1 when indicating the steps in dismantling.

Remove the GL446 valve from the coaxial assembly and unscrew the "Amplifier Tuning" lock right out. Unscrew the aerial input cable socket on the front panel, and unsolder and pull through the chassis the screened HT lead from the end of the RF tuner to R942. Unscrew the clamp and screws holding the RF tuner to the chassis and pull out the inner tube of the output assembly after slackening the nut A. The coaxial tuner should now be free of the main chassis and is dismantled in the following manner:

Take out the screws securing the outer tube B to the end block C and carefully slide off the tube, having first slackened the knurled knob of the input slide. Slide off the aerial input cable assembly and the input slide D. Take out the screws securing the tube E to the end block C, and slide off this tube. Slacken
the grubscrews in the end block which told tube F and slide out the tube com-
plete with the screened HT lead.

Disconnect slide G from the screwed rod and end block C. Carefully note
the position of the locating slot in the outer tube H of the output loop
assembly relative to the slide G and unscrew the tube. Protective tape
should be wrapped round the fingers of the slide and 5/16 in. taken off its
'dead' end—preferably in a lathe. The outer tube H is now replaced in
the modified slider and 7/8 in. sawn off its end, after which it is re-slotted in
the same relative position as observed above. The hole in the slider which
originally held the screwed rod is cleared and tapped 4 BA. A length of 5/32 brass
rod is tapped 4 BA at one end and fitted as the front panel tuning control.
The hole in the end block is enlarged to take the brass rod, and the coaxial tuner
is then re-assembled in the reverse order described above.

When shortening the output loop assembly, care must be taken when
unsoldering connections not to damage the small polystyrene spacers in the
inner tube. The junction of the coaxial lines and R974 are unsoldered at point J,
the screws in clip K are slackened off and the coaxial cable pulled out. The
polystyrene washer L is loosened, the inner wire is unsoldered at the output
loop M and is carefully withdrawn complete with its polystyrene spacers.
The angle piece N is then held in a vice or other suitable fixture, a hot iron is
applied, and the tube is pushed through the hole until 7/8 in. projects when it is
re-soldered; when cold, the projecting 7/8 in. is removed with a small saw and the
new joint and hole are smoothed off. The inner wire and coaxial cable are then
reassembled, R974 680 ohms being discarded.

The inner coaxial tube and loop are replaced in the outer tube, projecting
from the coaxial tuner, engaged in the slot and the nut A tightened. Finally,
the coaxial tuner is remounted on the main chassis, thus completing the more
"mechanical" side of the modifications.

Modifications to 1st Mixer and Oscillator

The 955 "Mixer Tuning" which appears as a screwhole front panel
control is fitted with a small knob, and
will be found to tune the extent of the
70 cm band quite easily.

The 955 oscillator frequency is raised
to cover roughly 460-525 mc by moving
the 150 µF condenser C926 approximately 7/8 in. nearer to the valveholder.
The oscillator is used on the high side of the signal frequency. It might be
thought better in the interests of stability and more constant output amplitude to
lengthen the lines and run the oscillator on the lower side, but if this is
attempted it will no longer be possible to cover the 70 cm band with the
present tuning system and also the mixer/oscillator cathode line is no longer
resonant near the oscillator frequency.

When C926 is unsoldered, care should
be taken with its wire leads, as they
break easily. The fitting of a useful
dial in place of the present gearbox and
handle is to be recommended. Some
four turns of the tuning disc are required
to cover the 70 cm band, and a dial of
the type shown in the plan photograph
is suitable. It has 0-10 divisions round
its periphery, the number of complete
revolutions plus the number of divisions
on the dial being read off against the
cursor. The oscillator tuning scale
versus frequency graph is far from
linear, being cramped at the HF end
when the disc is near the lines, and well
opened out at the LF end where move-
ment of the disc has much less effect on
the inductance of the lines. Front panel
bracing struts fitted either side of the
chassis help to improve the mechanical
stability of the oscillator.

orthodox condenser tuning arrangement for the 1st oscillator, further modifications have been carried out. Fig. 4 shows the acorn valveholder remounted on 1 in. pillars and ½ in. to the rear of its former position. New tuning lines of 14 gauge wire are fitted, the two-pillar terminal strip being fixed in the position shown and anchoring the bottom ends of the lines. The tuning disc assembly is replaced by an Eddystone 15 + 15 µF split-stator condenser (reduced to one stator and one rotor plate per section) mounted in the centre of a 2½ in. square brass plate. It is necessary to remove a small portion of the chassis to accommodate the condenser. A 1.5 µF ceramic condenser is shunted across the split-stator condenser in order to limit its tuning range and prevent opening out of the tuning scale at the HF end. With a little ingenuity, a Muirhead edgewise graduated slow-motion dial can be fitted on the front panel. Connection between the split-stator condenser and the lines is made with 22 gauge wire to allow movement for setting purposes, and it will be found possible to position these leads and the 150 µF ceramic tube condenser to give an oscillator tuning range of 363.7 to 403.7 mc, thus tuning 56.3 mc on the low side of the signal frequency. The above tuning system gives a more linear frequency versus dial reading curve, but mechanical stability is still not all that could be desired.

Modifications to Main Chassis

The front panel presents quite a small area on which to accommodate a multitude of controls. The following arrangement results in the most being made of the space available. The “Sens. Sw.” and “Power Supply” sockets are removed and the holes are filled in with square plates. Two potentiometers of 500,000 ohms and 2,000 ohms are fitted in the centres of these plates, being the AF and IF gain controls respectively. The “Video In” and “Rec. Out” sockets are removed and two headphone jacks fitted—very essential on field days when the crowd gathers! The aerial input socket being a non-standard size is replaced by a double-ended Pye plug, Pye cable sockets being fitted to the internal receiver cable and the aerial cable. Continuity of the outer screen of the coaxial cable is thus maintained through to the coaxial tuner. The plug and sockets should have polystyrene or similar insulation, it being possible to

---

![Diagram](image-url)
dispense altogether with insulation in the case of the double-ended panel plug. Two 13/32 in. dia. holes are drilled in the front panel above the oscillator tuning dial, and the SP on-off toggle switches fitted are used for "Standby" and "BFO on-off" controls. On the rear wall of the chassis the locating spike and its bracket are removed (the bracket will break off at the welds), and an Igranic jack fitted for loud-speaker connection. A hole alongside carries a Belling-Lee socket to bring in the necessary supplies from an external power pack. In case the receiver has to be operated in inclement weather (such as one often finds on field days!), it is a good idea to have suitable holes in the rear of the cover to coincide with the above-mentioned jack and socket.

L905, X903 and all components associated with the 1st 55 mc IF stage are removed, and X903 is remounted on 1/4 in. pillars sub-chassis, so that the VR150/30 will clear the top of the cover.

All the components and wiring to X909, X908 and X911 are removed with the exception of heater and earth leads on X909 and X911. C934 between X908 and X911 is replaced by C936, and a small loudspeaker output transformer is mounted between X909 and the front of the chassis. The BFO coil shown mounted on the side wall of the chassis above X908 was taken from a 12 mc IF strip and padded down, the dust core being removed. Alternatively, the former of L905 could be re-wound and fitted between X911 and L910, the mounting holes being already drilled. The BFO coil could then be slug-tuned from the top of the chassis, which would possibly be more convenient than the Philips preset condenser mounted underneath.

A study of Fig 2 in conjunction with the appended Table of Values and the photograph of the underside of the chassis should make the circuit changes fairly obvious as far as the IF and 2nd mixer stages are concerned. The following points require further explanation, however.

L908 has 2 turns removed from the bottom of its winding and has a separate 5-turn coupling coil (of similar gauge wire) added below the main winding. This latter coil is connected to the similar coil already on T901 by a short length of 1/4 in. coaxial cable. In the interests of HF insulation and low capacity, the lead between the anode of the 955 mixer and L906 is made from the centre of 1/4 in. dia. coaxial cable, the braided screen and outer covering being discarded. RFC1 and RFC2 are miniature 2.5 mH chokes, and consequently have a small external field. If the more common size of 2.5 mH choke is used, it may be necessary to orientate the choke to give minimum coupling, or even fit a small screen across X907, to prevent oscillation in the 10 mc IF stages.

The circuit of the detector, noise limiter BFO and audio stage is shown in Fig. 3. Little difficulty should arise here, a certain amount of latitude in the values of the audio components being permissible and very likely dictated by the "stock in hand." The output transformer primary forms the load for the shunt fed 'phone jacks when the speaker is not being used, the LS jack being arranged to switch a 3-ohm resistor across the transformer secondary.

It will be noted that the standby switch breaks the HT feed to the RF stages and also the screen of the 56.3 mc IF amplifier. In some cases circumstances may dictate that other stages are deprived of HT during standby periods, as might well be the case during portable operation, when perhaps one HT supply has to suffice for transmitter and receiver. In such a case it is advisable to minimize drift by at least maintaining the HT feed to the two oscillators. For this reason, the VR750/30 HT line is brought out to a separate connection on the power socket.

It should also be noted that the heater requirements are 6.3 volts at 4.5 amps, and it is essential that the voltage at
Lining Up Procedure

The use of a signal generator or oscillator capable of providing frequencies of 10 and 50.3 mc is more or less essential in order to get the IF circuits lined up correctly. If a modulated signal is available, the output indicator can be an AC voltmeter plugged in the headphone or loudspeaker jack. If the signal is unmodulated a 0.1 mA (or less) meter in series with the diode load will give a suitable indication.

The circuits should be lined up in the following manner:—

(a) Set the IF gain control at maximum sensitivity and inject 10 mc between the grid of the 6AC7 2nd mixer and earth. Trim L910, L909, L908, and T901 in that order for a maximum deflection on the output meter reducing the generator output as necessary. Close the BFO switch and tune BFO coil for an audible beat note.

(b) Switch off the BFO and inject 56-3 mc between the grid of 955 mixer and earth. Trim L904, L907, and L906 in that order for a maximum on the output meter, reducing the generator output as necessary.

(c) Repeat (a) and (b) for the inevitable "final—final."

Operation of the Receiver

The fact that the RF, mixer and oscillator all have separate controls does not exactly make for ease of operation after handling the usual ganged tuned jobs on the lower frequencies. The unorthodox RF tuning at first tends to come in for much under-the-breath criticism. After hearing the first signals and realising that the RF stage really pulls its weight, such criticism is short lived and one soon gets the knack of tuning a single-ended stage under "push-pull" conditions!

The mixer tuning will be found to require only a turn or so when going from one end of the band to the other. The main difficulty at first will, no doubt, be knowing just when the three tuning controls are synchronised and keeping them so whilst exploring the band. There is a slight rise in back-ground noise when all three are brought into step, but this may be difficult to recognise at first. In the absence of signals, the writer recommends the use of what, for want of a better name, will be called a "noise generator" located near the aerial. Such a machine at the writer's QTH was provided by the small beam rotating motor. Heavily suppressed at the motor with six chokes and various condensers to well below the back-ground noise on 2 metres, it was found, rather surprisingly, to give out S9 signals on 70 cm. This noise generator proved indispensable for the first week or two with the finally-modified ASB8, but is now unwanted QRM, the writer being adept at keeping the tuning controls in step quite satisfactorily on the slight rise in back-ground noise. Using an all-triode RF section, it should be slight anyway! It might be mentioned that an aerial loosely coupled to the 955 mixer anode (through a blocking condenser) will usually result in auto QRM being picked up with great gusto, and gives a rough check on the sensitivity of the IF channel, even if it doesn't exactly sing the praises of the noise limiter!

General Results

Modified and lined up as described, the ASB8 is capable of receiving signals which are reasonably frequency stable under modulation. It has not yet been possible to do a full check on the performance when receiving CW signals, such transmissions being rather rare in the writer's vicinity. In areas where SEO's are still the rule rather than the exception, it may unfortunately be necessary to widen the band-width by slightly staggering the tuning of the 10 mc IF coils. If one is in the position politely to request the offender to reduce his modulation to 20 or 30 per cent., this will usually serve the same purpose and enable intelligible speech or MCW to be received. The poor SWL, however, has only one choice if he wishes to decipher the swishings back and forth through his IF pass-band—widen it! It is to be hoped that SEO's will soon give place to more stabilised systems of transmission, enabling receivers with reasonably narrow IF band-widths to be usefully employed in exploring the possibilities of 70 cm. The writer's opinion is that, even for copying crystal-controlled transmissions, a band-width of 20-25 kc in the IF circuits is still advisable. This statement is based on observations made on 2 metres where it has been noticed that quite a number of transmissions drift a few kilocycles
PRACTICAL SUPER MODULATION

Circuits and Values for the Communication Bands, Setting Up and Operation

By F. C. JUDD (G2BCX)

The system to be described, and known as Super Modulation, should not be confused with somewhat similar systems of efficiency modulation. Basically, it is the derivation of a system due to Doherty (Ref. 1), later developed by R. E. Taylor (U.S.A.) for commercial purposes and for certain broadcast equipment used during the last war (Ref. 2). After several years' delay in presenting this new method to the industry, development has brought the practical application at a time when an improvement is seriously (Ref. 3) needed in the amateur and other spheres of communication service. Many experimental transmitters have been constructed using this new system, and the writer has used super-modulation on three different transmitters working on 20 metres and 160 metres with power inputs ranging from one watt to a hundred watts, details of which will be given later.

Advantages of Super Modulation

Super-modulation makes use of emphasised sidebands and semi-suppressed carrier transmission and provides far greater signalling efficiency than was previously considered possible. With more than four times the true sideband power at full modulation, and one half or less than the band-width required in conventional amplitude systems, transmission efficiency is about equal to that claimed for single side-band methods—and in some operational respects it is superior. Fifteen to twenty times or more peak power output at full modulation, with a band-width of two to three kc each side of the carrier, without spread or splatter, is obtainable. Conventional systems are limited to four times or less than peak power. With compression of the carrier power under full modulation, the sideband power is driven upward to a high level output, resulting in a reduction in heterodyne interference and noise level at the receiving end. The greater signal voltage out of a linear detector results in 6 dB or more gain over a normally modulated transmission. The first difference that will be noticed is that a super-modulated signal is extremely sharp to tune and, at the same time, is far "louder" than any amplitude modulated signal of the same effective field strength. Further, at the receiving end when the BFO is switched on, the carried heterodyne is barely audible, and in many instances possible interfering heterodynes are not heard at all, except from very local transmitters. Speech quality is quite equal to normal amplitude-modulated transmissions. Tests made with two one-kilowatt transmitters, both super-modulated, and operated 2.5 kc apart, using full modulation for maximum sideband power production with the S-meter on the receiver "pinned" by both signals, showed that during a contact lasting perhaps 5 minutes. Stable 70 cm rigs will no doubt start in their early stages with crystals of the 6, 8, or 12 mc variety, as used on 2 metres, and very likely will lead to drifts of some 10-20 kc when multiplied into the 70 cm band.

Although the writer has confidence in the ability of the ASB8 to show a clear pair of heels to many of the receivers at present in use on 70 cm, there is no doubt that still better use can be made of the RF circuits as a basis for the 70 cm receiver par excellence. When time permits, this is the next step towards attaining a similar order of receiver sensitivity and ease of handling as that at present enjoyed on 2 metres.

This is a very useful article on the practical application of Super Modulation and takes matters several steps further than the preliminary discussion on the same subject in our October issue. G2BCX describes two experimental layouts, full power and QRP, and the treatment is detailed and factual.—Editor.
either transmitter could be tuned-in as desired without interference from the other. The system has also the following advantages:

1. Considerable reduction in BCL and TV interference. In the case of the writer’s transmitter operating on twenty metres with 100 watts input and super-modulation, no interference to nearby televisions was experienced, or on a BC receiver on medium waves some 10 feet from the transmitter; this was unscreened and without harmonic traps in either the drive or PA stages. With conventional amplitude modulation to the same transmitter, either anode or cathode, TVI and BCI are reported.

2. The audio power fully to modulate 1 kilowatt is only about 8 watts. In the case of the writer’s 100-watt transmitter mentioned above, the output from a 10-watt amplifier with one quarter of the gain required for normal anode modulation on a 10-watt transmitter was found to be more than sufficient; in fact, a maximum audio output of from 3 to 5 watts is all that is necessary for a 150-watt carrier input.

Theory of Operation

Sideband power alone, irrespective of how it is generated, is that part of the transmitted carrier wave which conveys speech to the receiver at a distant point. Thus, the greater the true sideband power produced by the transmitter, the stronger the received signal and the lower the interference level, especially if the carrier can be suppressed during modulation, a feature which decreases the heterodyne interference between stations operating only two or three kc apart. Also, if the sideband power is a true reproduction of the modulation, the bandwidth required is about one half of that necessary with the usual high modulation percentages and their attendant distortion, phase shift, and splatter. Theory shows that a true two and a half kc modulation frequency produces sidebands two and a half kc removed from the carrier, whereas in practice harmonics and distortion usually produce sidebands five to ten kc or more away from the carrier. The basic function of super-modulation is shown in the pictorial diagram in Fig. 1, which represents a conventional PA adjusted for maximum output. Bias, PA adjusted and tuning are as for any normal Class-C amplifier. The RF drive power is

![Image of diagram showing basic circuit for the Super Modulation system, showing how the output waveform is built up.](image-url)
applied through C1 and C2, which provides an RF potential divider to the grids of the PA and the Positive Modulator (PM). Thus, both valves have RF applied to their grids, the PM valve having twice that of the PA. The audio power (best referred to in terms of voltage) is also applied to the grids of the PA and PM respectively, the PA having half the amount of that to the grid of the PM. It will be seen that the audio transformer, which is centre-tapped at the secondary, will provide the necessary halving of the audio volts which, in the case of the PA, are passed through the condenser to C3, which also isolates its grid from the bias applied to the grid of the PM and which goes directly through the transformer. The PM is biassed to approximately two to three times cut-off so that, with RF drive applied, the valve takes little or no current and allows the PA to be tuned-up in the normal way.

With modulation applied, the standing bias on the PM will be overcome and the valve allowed to pass current and amplify, the result being a very large positive peak wave at the anode. Since the anode of the PM is taken to the centre of the PA anode load (tank coil), an RF step-up through the auto-transformer action of the tuned circuit will also result.

Now to return to the PA. With the valve already working under Class-C conditions, positive-going modulation voltage applied to the grid will have no effect on its operational condition; but, with negative-going speech voltage, the grid will be driven more negative, resulting in a reduction in anode current and therefore a reduction in RF output. In other words, the PA is producing decrement or negative-going modulation peaks (carrier suppression) while the PM is producing positive-going modulation peaks (increased sideband power) superimposed on the carrier; this remains at normal amplitude over the period of positive modulation. Under proper operating conditions, the PA output is reduced almost to zero during the negative modulation period. The resultant modulated RF output is shown pictorially in Fig 1 and also in Fig 1A, which shows a comparison with an amplitude modulated carrier of normal type.

Further advantages of the system are that no large modulator/speech amplifier equipment and power supplies are needed and no expensive modulation transformer is required, since accurate matching of modulator to transformer is no longer necessary. A small amplifier with a maximum of 4 to 5 watts output is ample for up to 150 watts input to the PA, and the transformer needs only to match the audio output valve and have a centre tapped secondary and a ratio of 1:1. In the writer’s transmitters, two speaker transformers are coupled back-to-back, with one having a centre tapped primary, which becomes the secondary winding of the system shown in Fig. 2.

**Practical Circuit for Super-Modulation**

A practical circuit is shown in Fig 3 and can be used for any of the conventional types of RF tetrode—6V6, 807, 813 and similar. The drive stages must be able to deliver sufficient RF for normal Class-C operation of the PA, with a little in reserve for the positive modulation period. For example, the RF output from an 807 buffer with 500 volts or so at the anode will be enough to drive, say, an 813; or at reduced input, say 300-400 volts, would drive another 807 operating at maximum conditions plus an 807 as the positive modulator.

The RF potential divider condensers C1 and C2 are best if of the variable pre-set airspaced type, as control over the drive to either the PA and PM allows for better adjustment of the super-modulation condition. The audio input, as already mentioned, is fed through a 1:1 transformer centre tapped at the secondary, so that half the audio voltage may be applied to the grid of the PA through the 2 μF condenser C3, which isolates the PA bias from the PM bias.

The circuit shows an RF drive, audio and bias arrangement similar to that in Fig 1. The bias supply should have
sufficient DC voltage output to bias the PM valve to approximately three times cut-off, and must be well regulated and smoothed. The 50-100,000 ohm wire-wound potentiometers are best mounted on the front panel of the transmitter to provide manual control, and must be of high enough power rating to carry the current passing at maximum voltage across them. Good-quality RF chokes are advisable for the grid circuits of the PA and PM, and apart from the centre tapped coil, all adjustments and tuning for the PA are as for a normal Class-C amplifier. The PM valve will add a little capacity to the tank circuit, and it may be necessary to reduce the tank inductance slightly, especially at the higher frequencies. A study of the circuit will show that the modifications necessary to convert a normal PA stage for super-modulation are very simple, and, providing the few components required are of the correct value, little trouble will be experienced in getting the system operational.

The screen voltage to the PA and PM must be well regulated and preferably taken from a separate supply. Much greater control over the whole system will be possible if the RF drive, bias and screen volts are variable. (Over)
Setting Up

Switch on filaments and grid-bias volts and apply RF drive. Check that bias is correct for Class-C operation of the PA valve to be used. Check bias volts for the PM, which should be enough just to cut the valve off with RF drive on the grid and with HT on. The grid current for the PA should be normal, and this stage may be tuned in the usual way for dip and aerial loading. Adjust bias on the PM valve until it just starts to draw and, with modulation applied, this valve will take current, which should swing up to almost the maximum rating for the valve in use, e.g., for an 807 with about 600 to 700 volts at the anode the current should rise to approximately 90-100 mA. The PA valve anode current will, at the same time, decrease, but the aerial current will rise by the same amount as for normal amplitude modulation.

If these conditions are not forthcoming, adjustments to bias, audio and RF drive volts will be necessary until the system is properly operating. All tuning and modulation adjustments should be carried out on an artificial aerial designed to match and load the PA to its normal operating condition, and only when the operator is satisfied that the whole system is working correctly should the transmitter be connected to an open aerial.

Modulation may be checked in the usual way with a diode phone monitor or modulation meter, and with a sine-wave input to the modulator, checks may be made with an oscilloscope, which will show the positive going modulation peaks at full amplitude. Make sure, above all, that the drive and PA stages are perfectly stable before attempting to use super-modulation.

Results Obtained

It has already been mentioned that the writer has used super-modulation on three different transmitters with inputs of from one watt to one hundred watts, and the results have been all that are claimed. On 20 metres with an 813 PA running at 100 watts input, tests were carried out using an 807 as the positive modulator; with an anode voltage of 700 to both valves, and the 813 taking just under 150 mA with the PM (807) drawing about 5-6 mA a total input of 108-110 watts was obtained. Reports of S9-plus from PY, LU and similar distances were consistent, and no trouble was experienced from QRM. Speech quality was equal to that from the same transmitter using normal amplitude modulation.

On 160 metres some tests were made using two 807's with 300 volts at the anodes and inputs varying from one to ten watts. It was found, however, that 807's with this anode-voltage gave best results with reduced anode current to the PA (higher bias and less drive) with the PM biased almost to cut-off under drive condition. A better valve would be the 6W6G or TT11, where the power input is limited to 10 watts. Some notes from the tests made with super-modulation on 20 metres using an 813 as PA and an 807 as PM with reduced input to the 813 (100 watts) may be of interest to those who may contemplate trying the system. The following applies, in some respects, to a circuit using similar valves for PA and PM.

QRP Operation

Later experiments with an entirely battery-operated 160-metre transmitter using two DL93's (special 1.4 V transmitting valves) for the PA and PM proved extremely successful. The transmitter, together with a superhet receiver, was in one case 12 in. x 9 in. x 8 in., which also housed the batteries. A PM22A triode, operated as a Hartley oscillator/VFO and a Pen25 buffer amplifier provide more than sufficient RF drive with approximately 100 volts HT on the anodes of both valves, the PA and PM being operated with 150 volts HT (maximum for this type of valve). The PM was biased nearly to cut-off with drive applied (67½ volts) with the PA at Class-C condition (20 to 30 volts-bias). Using short aerials 20-30 feet indoors and/or loaded whip aerials and operated from a car, good reports were obtained with inputs of from half to one-and-a-half watts to the PA.
Using a normal quarter-wave 160-metre aerial, signal strength and speech quality were approaching that of a normally modulated 10-watt transmitter. The PA and PM part of the circuit used on this little transmitter is shown in Fig. 4 and is a variation of the circuit of Fig. 3.

This may interest those who are keen on QRP and portable phone operation. The circuit shows a similar RF drive, audio, and bias arrangement to Fig 3, and the PA and PM anode circuit is the only difference with the original. It will be seen that HT to the PA anode is fed through the tank coil, and therefore the anode current meter is common to both PM and PA valves. By arranging for the meter to read about half scale for the PA current, it will then cater for the additional current taken by the PM on positive modulation, which is about half as much again as that showing for the PA. The audio volts were obtained from the LF end of the receiver, namely, a DAC32 diode/triode and a DL35 output tetrode (1.4v. valves). The microphone was arranged for switching to the DAC32 grid for transmitting, the audio output from the DL35 (about 250 milli-watts) with 90 volts HT being ample for full modulation.

When properly operating, super-

modulation is far superior to any other form of amplitude modulation, and has already been mentioned as a method not only of reducing the QRM on our overcrowded bands, but it is also an economical system due to the great savings on audio equipment and power. Further experiments are being made with an expanded form of super-modulation, with which it is possible to obtain a gain of 12 dB or more on speech power, and which is being used on a transmitter for 160 metres with an input of 8-10 watts.

WHAT THEY ARE TOLD ABOUT US

Translated Extracts from an Article in the Czecho-Slovak Krtake Vlny on Amateur Conditions in Britain

"QUITE a considerable number of people in Britain have an interest in radio, but only a very small number transmit and receive on amateur wavelengths. That is because collective (club) transmitters do not exist where enthusiasts could work in that way except in military Fascist units. There are very few exceptions, and in military units it is forbidden to contact amateurs. The State discourages amateur activities . . . . and as a valve is very expensive, it takes a long time before an average amateur in Britain can have even an o-V-o receiver."

". . . . The reactionaries [British authorities] are trying to use the insufficient advantages which the amateur in Britain has, so that they can paint rosy pictures of the advantages they will give to the radio enthusiast who enlists in an Army unit . . . I do not know a single working-class man in Britain who would be on an amateur organisation or committee. In the Midland Amateur Radio Society sits the reactionary element (here follow some uncomplimentary references to M.A.R.S. and certain of its leading members). . . . There are amateurs who know Morse and radio technique to whom the authorities deny a licence . . . The club stations which exist are exclusively for closed circles and bribery."

"If a schoolboy transmits without a licence and is reported to the local agents of the M.I.5 (British Gestapo), then after a trial, which is conducted in Fascist style, he can be taken away from his parents . . . into a concentration camp for children . . . in the camp he is imprisoned for three years, and until recently it was still legal for him to be flogged, and tortured in other ways . . . . As in other endeavours, there are two sides—one black reaction, Fascism and war; the other for progress, science and peace. It is the duty of every amateur to decide to which to belong. One side is for the destruction of all decent amateur activities and for using knowledge of electronics for war, the other serves the future of the whole radio amateur society . . . ."

EDITORIAL NOTE: The author of the article from which these extracts are taken is given as one Alexander Bergel, with an address in Erdington, Birmingham, and the English-Czech translation was by OKIRW. The article is important only because it is an example of what Czech amateurs are apparently being led to believe about Amateur Radio in this country. In the light of such stuff, we might perhaps refer those of our readers who have views on these matters to the Editorial in the September 1950 issue of SHORT WAVE MAGAZINE.

CARD IN THE BOX

We are holding card(s) for the stations listed below. Please let us have a large S.A.E., with name and callsign, addressed to BCM/QSL, London, W.C.1, and cards will be forwarded on the next G clearance. If appearance in "New QTH's," and subsequently in the Radio Amateur Call Book, is also desired, this should be mentioned at the same time.

G2AJJ, 2FMZ, 2YF, 3AEO, 3CAD, 3CCR, 3CH, 3CRA, 3DVB, 3ERE, 3FNM, 3FHR, 3FIW, 3FKS, 3FXK, 3GBU, 3GHM, 3GHZ, 3GRU, 3GSY, 3GXB, 3ZT, 4AF, 5YI, 6PW, 6SP, GD3GAB, GW3DHY, 3EPF, 3FEQ.
IN spite of the continuation of shocking conditions (see our P.S. to last month's "Commentary"!) the DX addicts have been hard at it throughout the month, and much of the usual addition and subtraction of countries has taken place. All those who hopefully added YA2B to their lists last month may now subtract him again, as cards addressed to him have been returned "not known." Further, the slight air of authenticity lent to him by his "Pse QSL via W2SN" disappears when we recollect (as we should have done last month) that W2SN runs the W2 QSL Bureau!

So our present pronouncement is that there never has been an amateur station in Afghanistan (other than the portable of AP5B) and that we flatly refuse to believe that anyone has worked Afghanistan until we see a card confirming it. (And even then, it had better be good).

In much the same category comes this "HV1A"—G3CDG (Lingfield) has had a letter from the Director of Vatican Radio who says that the Vatican authorities have never licensed anyone for amateur operation, and, if they did, it would not be with the prefix HV. The Director's own suggestion is that "HV1A" is an amateur outside the City who has "usurped the call" and is thereby "running the risk of coming within the sanctions provided for by the law." So that seems to be that.

As slight compensation for these sad affairs, we are glad to note that a new Monaco station, 3A2AB, has cropped up. This is being operated by DL4FS and DL4UI (QSL via DL4 Bureau). 3A2AB told us very definitely that they were the first and only station to be legally operated in Monaco. Even 3A1A, who was on recently, emanated from Heidelberg and was never in Monaco at all. Proof of this, we are told, will be forthcoming shortly.

Competitive Stuff

We still continue to receive bitter tirades on the subject of the vaguely-proposed reform in the way of counting countries, prefixes, and what-have-you. Let us hasten to mollify the writers by telling them that we haven't the faintest intention of interfering with the present system which, with all its faults, is at least known and understood.

We also receive letters saying that this "intense competitive spirit" is ruining Amateur Radio, which ought to be a leisurely and friendly hobby. This is all very well, up to a point, but it seems to us that if it weren't for the competitive side we would still be using LS5's and

TP-TG circuits, with, possibly, "two-toob low-loss" receivers. We can even hear some of the Old Timers muttering "And very nice, too" into their beards—which goes some way towards proving our point.

Our hobby should be leisurely and friendly—and it can be, whenever you want to make it so. But also it needs some stimulus and some urge which will keep the younger, livelier generation on their toes. After all, if you don't want to chase new countries, there isn't a single rule which says that you shall. If your idea of bliss is to sit on one band with one crystal and, in the manner of a comfortably fat spider, just reach out for what comes within your range—well, who's to stop you? You only work yourself into a fever working new countries if you're the type that likes to talk about working new countries; you only give yourself a hangover at Contests if you want to enter for Contests. So please yourself, but don't complain that your hobby is being spoilt or over-organised. Any questions?

Working the World

Pursuing the theme of country-chasing, it occurs to us that lots of people who don't go mad after new prefixes have probably worked more parts of the world than some of those that do. Remote islands are sometimes neglected if they don't count as a new country; distant parts of UA0, VE8, KL7, PY and CE don't appeal to the country-chaser pure and simple. But there are those quieter types who are fascinated by seeing into how many spots on the globe they can drop their signals.

How many who flaunt a card from Chile on their walls have worked those CE7's right down in Puntas Arenas? How many who have worked Brazil can show a contact with PY8 or PY9, "way up the Amazon'? And, in the Northern Regions, how many realise that KL7's have turned up from time to time on various Aleutian Islands (of which there are quite a few)? Then there was a UA0 on the Kamchatka Peninsula, to say nothing of some UA1's at Murmansk and Amderma. And how many amateurs have worked King Christian Land, Melville Island, Bathurst Island or Boothia? For that matter, how many even know where they are? (For the record, they are all in VE8 territory.) Down the other end there are Elephant Island, Coronation Island, Bristol Island and Candlemas, all in VP8 territory.

Our point is that there are many "rare spots" on the earth's surface which will not give one anything to show in the way of published figures, but should, at least, give a glow of satisfaction to the operator himself. The sort of achievement that can only be recorded by sticking pins in a map on the shack wall is no less than that which puts one high up in a table of scores. Maybe some of you collectors of "Remote - spots - which - don't - count" would like to tell us about them next month? We might consider a consolation prize for the man who has worked the largest slices of the Earth with the smallest score in countries!
The Month's DX

Pretty poor conditions have prevailed, so far as we can see, although those who don’t mind the early hours on 3.5 and 7 mc have had little cause for complaint. The ZL’s have been roaring through on both bands, morning after morning. On 3.5 mc they have been heard repeatedly at 579, which is better than their peak last winter. There have been a few G/ZL phone contacts on this band, and also on 7 mc. On both bands, it seems, the VK’s have been more difficult to raise than the ZL’s.

DX on Twenty

G2WW (Penzance) bored through the Europeans and emerged with FM7WF, KV4AU, KZ5ES and MS4FM on CW, plus EA6AT, EQ3FM, HC4AB, SU1MR, UG6WD and UA9KCC on phone. The latter gave him a new Zone. He also worked IT1CFN in Sicily and tells us that the new IT prefix seems to be official (derived from Trinatria, the old name for the island). Others also tell us this; but a new prefix doesn’t mean that it’s a new country—not yet!

G3ABG (Cannock) workedFY7YB and YA2B—it’s a shame about the latter! G2BJY (West Bromwich) thought conditions were fair, and even good, for Africa, but only once did the band open up for North America. His best were F60V/FC, CR7CL, PK2TM, VE5UN, VQ2WR, ZS5IW/P, V66AC, VU2JP, ZS3K and lots of VK’s, ZL’s and South Americans. All this, by the way, with 25 watts.

G4QK (Harpenden) found the band “comfortably empty” and worked a few new ones, such as ZS3K and ZS8MK. He asks whether CR4AD, T6, is “any use”—we think he is genuine. On October 6, at 2100, ‘OQ heard three KP4’s, KV4AC, ZS5GP and nothing else. He now has a nice open QTH and an aerial of 198 ft., North and South.

GM3EST (Motherwell) was one of the lucky ones to hook FP8AC. He found him the easiest DX station ever worked—the FP just came back to his first call! ‘EST has also received his card from XE1VA for a 14 mc CW contact, but he still can’t raise VP6CDI. He now has 95 cards towards his DXCC, and is anxious for the other five; he asks that...
GD3UB and EI2G might please take note of this.

G2AJ (Biggin Hill), one of the leading VHf hands, is once again fully equipped with aerials, meaning three 'Lazy-H's, six half-waves in phase for 28 mc, and a 270-ft. long wire for 7 and 3.5 mc. He was very active in the VK/ZL contest and netted about 1200 points. On 14 mc he had 136 QSO's in the two week-ends; on 28 mc, none; and on 3.5 mc, five ZL's. Other 14 mc DX: F9QV/FC, VK6JC, HR1AT, VP7NM, EA6AM, FQ8AC and VP8AO (all new ones) plus ZS8MK, FM7WF, CE5AW, VQ3BNU and IT1CFN. 'AJ was also interested to work W5LGS in New Mexico on 14 mc phone, 1530 GMT and S9.

From G3ATU (Roker) comes news of a contact with VQ6BFC, who is MT2BFC on a flying visit. He was heard to say that he would shortly be in Nairobi. G3COJ (Hull) managed FN8AD, KH6DV, SU1MR, VK7AJ, YI3ECU, YN4CB and ZCRL (all on phone) plus VK0JC, VP5BL and ZS8MK on CW. G6TC (Wolverhampton) collected ZS's, OQ5FG, VQ3 and 4, YI, CO and plenty of VK's and ZL's. G3CVG (Wakefield) tells us that his Junior Op. is now second op. at V56AC and is very anxious to work G's. At present only one crystal is available—14052—but a second one, 14086, is on the way out there.

The Forty-Metre Story

Quite a bit of DX can be chipped out of 7 mc, if you can find it underneath commercial broadcast, amateur broadcast, Russian commercials and all the miscellaneous seaweed that now covers the band. G5FA did some listening on Forty and heard ZD4AB, TA3GVU, VP3NQ, VP8AJ and VP3BM; he worked VK's, W's, VE's and KP4 and ZB1.

G2WV says that apart from ZL's, "which are child's-play," he is working VK7ON the long wave round. He has also been working HB9CH, with whom he recently stayed in Switzerland. But he has found conditions very erratic.

G3ABG had the unusual experience of working C8KY (Zone 23) on this band. 'ABG called CQ USA at 2330 GMT, and back came the C8, on about 7011 kc. We hope he is all right. G2BJY winkled out UA6 and UD6, along with many Europeans, and says he will be more active soon.

G2AJ has found the band good at times, and has emerged with ZD4AB, YV5BC, KP4MD, SV0WM, EA9BB, YU3FMW and heard VP8AJ. Earlier in the year he worked VP8AI. G3ATU, on the other hand, did work VP8AI, who is on Graham Land, but is believed to count as 'South Shetlands," though we can't think why. 'ATU also raised VQ2GW and ZD4AB.

G3COJ used a rather low-hung 7 mc dipole for the VK/ZL Contest, and raised only VK5FH, although he could hear DL1FF simply knocking them off. He has recently heard more DX, including VP8AJ, ZD4AB, CX1AX and a PY. G6TC finds the ZL's easy to work, and collected four in quick succession one morning. Others were CM2QZ, VK4TY and KV4AU.

Activity on Eighty

There is not much worthy of individual mention, but quite a few of the enthusiasts have been keeping up a regular fire of ZL's in the mornings. G3ATU worked TA3FAS and CT2BR; and heard CT3AB and PY7WS. He also noted F3NB saying that VP5BF (Caicos) was now on Eighty. Several other nice "pieces" are known to be preparing themselves for the band, but wild horses refuse to do their stuff.

The Overseas Mail

W3NJT (Maryland) drops a note to say that he is Flight Radio Officer on TWA's "Connies" and was on their inaugural flight opening the London service on September 30. He hopes to "do the town" on future flights, so we may be seeing something of him in person.

V57NX (Colombo) writes of the lack of CW activity in Ceylon. V57BJ, 7KR, 7PW, 7RA, 7RF and 7NX himself use phone and CW, but many of the chaps "scrape through their code test and then go all out on phone." They have just formed a Radio Society of Ceylon; the President is the Head of the Dept. of Physics in the University of Ceylon, the Patron the Minister of Posts and Telecommunications, and the Vice-Patron the Postmaster General! 7NX says that DX is looking up, but when the G's come in it's so late that his Morse suffers, both on the straight key and the el-bug, which his friends call the piano. He is flat out for Zone 6 for WAZ.

VP5BJ is recently licensed in Jamaica, and sends his OTH and that of VP5BL for the box. 'BJ works 14 mc CW and has raised about 20 G's since he started. He is rebuilding to cover 3.5, 7, 14 and
This is the outfit and operator at DL7CI, Berlin.

28 mc, with all his aerials directed on Europe.

VS2CP (Sungei Patani), who promised to come up on 3.5 and 7 mc, is "frustrated" by having had half his spares arrive, the other half seeming to have gone astray. He is for the present reduced to an output of about 5 watts, and says he has worked more DX with the "imaginary QRO" than he ever hopes to in actual fact.

VQ4RF (Nakuru) tells us that VQ4SC has sailed for G, and hopes to be operating soon as G8SC and GW8SC. He amassed lots of certificates before leaving Kenya and was given a royal send-off by the boys. VQ4ERR is now fully extended for his Double Century DXCC; when last seen he was at 107! VQ4AA and VQ4ZSW hope to visit VQ4 early in the New Year. 4AA is at present in hospital and QRT, but will be visiting 4RF for convalescence, possibly with ZS6NX as an extra visitor. 4RF himself has just returned from a trip round ZS-land, where he had a wonderful time. He also called in on the CR7's, who showed him every café in Lourenco Marques; those boys, by the way, are all on 230 volts DC, but hope to switch to AC and QRO some time soon.

F3HK (Louvéciennes) sends a long letter on the "country-prefix" situation, mostly imploring us not to make any drastic changes. (It's quite all right—we won't!) He asks that a permanent list of countries should be drawn up (regardless of revolutions or changes of spelling). He would like to see the question "When is a country not a country?" answered by reference to geography, which you cannot change according to how you feel. And the "irritating island cases" should be solved by "one island—one country, unless geography shows that you can jump from one to the next."

F3HK says that if we go on enlarging the list of countries and the multiplicity of certificates, the next step will be to count individual stations and issue a "Worked 100,000" Certificate or perhaps a "WAA" (Worked All Amateurs).

Seriously, though, HK pleads for a new country list with U.S. states and South American provinces included as countries, and the raising of DXCC to the figure of 200.

Top Band News

Back to the 160-metre band, where none of these problems worry us,
although there's always Monmouth and Berwick-on-Tweed. A most interesting item is that GW3FFE and GW3EOP both worked UB5BP in last year's 'MCC,' and both wrote him off as a phoney (and so did we all). The situation is now radically changed with the arrival of UB5BP's cards for both of them! This does not alter the Contest result—they were first and second anyway—but it makes one wonder why these two stations were the only ones to encounter the UB5. But we have seen both the cards, and apart from the usual Iron-Curtain reluctance to say anything at all, they give the correct reports and they check with times and everything. So we belatedly congratulate these two GW's on their UB5 contacts, and, for the record, GW3EOP was first.

G2NJ (Peterborough) remarks that DL2QM, operated by G3AMF, has been putting in excellent signals in daylight. HB9CM and G2DD have been heard very well around oroo GMT, but there were few G's about at the time.

And now there is a letter from G5LF (Stanmore) concerning his operation as GM5LF/A in Islay earlier in the year. He found Top Band conditions pretty poor, especially in daylight, but had eleven sessions on the air, totalling 18 hours. He used 300 ft. of aerial with an average height of 20 ft. Only 25 different stations were worked: GM5LF/A had 32 QSO's and 56 fruitless calls. The average report he gave was only about 449, and he found that many people didn't seem to believe a weak report, judging by the way they kept going ahead with long 'overs,' many of which were lost. LF found the whole thing most interesting, although rather disappointing from an operating point of view.

Another portable expedition was run by G2BTO (Bolton), who was licensed as GM2BTO/P within ten miles of Wick. He was really unable to operate on the Top Band, but did some good work on 7 mc, with an outside aerial but all the transmitting gear (4 watts of it!) on the back seat of the car. Finally, BTO contacted an SWL near Wick who had a 132-ft. aerial and a Top Band receiver, so he did get on the band for a short while after all.

And finally in this section, don't forget that a high level of worth-while DX activity is expected during the 1.7 mc Trans-Atlantic Tests to be held early next year. The essential details can be found on p. 428 of our August issue. You will be reminded again in good time.

**Miscellany**

G5FA claimed his 'WAE' certificate and was surprised to find that he was the first G to receive one. The very first certificate issued went to our old friend W2IOP, and 'FA claimed No. 10. He had a visit from VP4TS during the month; the latter is home on leave but is going out to Venezuela and hopes shortly to operate as a YV.

G2WW reports slight signs of a ten-metre opening. He has been entertaining ZS1AX for a while, and together they heard TA3GVU actually working W's on the band, round about lunch-time one day. They even heard W4OOR for themselves.

G3GUM (Formby) has been amassing quite a good score, but says he is thinking of founding a new Club, to be called the NOMCC ('Nice Ones Missed' Century Club). He would already qualify for membership! He heard five ZL's and a PY on 3.5 mc one morning,
and his "missed DX" on 14 mc makes wonderful reading, although he did succeed in snagging CX, EA8, KZ5, VS1, VU, KL7, TF, KV4 and about 30 VK's and ZL's.

G2YS (Chester) puts up a plaint about the sheep-like behaviour of amateurs on some bands. Why do they all crowd into the lowest 30 kc of the 7 mc band? Why (as we asked recently) do they all work between 1800 and 1900 kc, leaving almost a complete void between 1715 and 1800? YS says that HA4SA will be on the Top Band when he can manage to wind a coil. He may even pop up for MCC.

G2FYT (Bristol) has been almost dormant for three months but is about to awaken. He is now a proud holder of DXCC, with 114 confirmed out of 131 worked. G3ANW (Mitcham) passes the following gen. relating to TA3GVU. Every QSL received will be acknowledged, via W2SN unless a self-addressed envelope and a Reply Coupon is sent, in which case he will QSL direct. No QSL's to be sent direct to him, but all via W2SN.

Some interesting remarks on aerials are made by G3COJ. He has used at least 29 different types (including VHF) during the past three years, and now has a 7 mc ground-plane job. This, he says, lives up to its reputation by being equally poor in all directions. He thinks this may be because of absorption by nearby trees, which may account for the fact that all the leaves have been turning brown. On 14 mc he has been using a N-S dipole which has worked quite well in the appropriate directions, but he changed it to 67-ft. end-fed and immediately raised ZS8MK, which may prove something or other.

This QSL Business

Various recent remarks to the effect that G2 . has a card from VP1AA while G3 . can't get one, and so on ad infinitum, have now produced such a volume of correspondence that it has got quite out of band. The only way to deal with it is to forget the whole thing. Otherwise we should have a complicated table showing which countries have QSL'd to someone but not to somebody else; which have never QSL'd at all; and which have QSL'd to absolutely everybody except poor old G6 . , who can't raise a card for love or money. So let's just accept the fact that some do and some don't; and that some have a system and some others haven't.

Pirates Again

Before embarking on this theme, we should like to say that we agree entirely with G2HCHZ (Iford), who says that many supposed cases of piracy are due to a simple error of some kind. They can be due to misreading of call-sign caused by (a) Bad sending on CW; (b) Bad enunciation on phone; (c) Inexperience at receiving end; (d) Bad writing on card; (e) Sheer carelessness resulting in reversal or transposition of letters. Any QSL Manager will tell you that he meets dozens of these errors every day. Personally, if we receive cards for QSO's that didn't happen, we automatically forward them to G6BQ—and he does the same in the reverse direction. Otherwise we should both have been screaming about pirates for years past!

G3BHT (Liverpool) operates on 20 and 80 only, but someone has been using his call on 40-metre phone; G3GJR (Sutton Coldfield) has been receiving QSL's for periods when he was not operating; and G3EXZ (Southampton) has a card from UA6LL for a QSO that took place before he was licensed. Perhaps the rightful owner would like to claim it (7th of Sept. or Oct., 1949).

A different and more blatant type of piracy was encountered by G8VB (Greenford). In the middle of a multi-way a station actually came up on the frequency and proclaimed that he was the genuine G8VB and that "the other station using the call on the frequency" was a pirate. This, of course, is sheer bravado and will doubtless lead the perpetrator straight into serious trouble. His approximate location is known already.

**Behaviour on the Bands**

Recent remarks on the subject of general behaviour and operating practice have brought in so many letters that we cannot hope to deal with the subject in this Commentary. We therefore intend to summarise the way things are going in a short article dealing with that subject alone. Briefly, it may be said that we have heard from (a) Those who think that a standardised code for calling and signing-off would be a good thing; and (b) Those who say "If I want to call CQ for five minutes I shall darned well do it," and also "If I want to take ten minutes saying good-bye, who is going to stop me?" Also from some who say (c) "Why should I send at more than 15 w.p.m. just to alleviate the QRM?" and others who say (d) "Why should I be forced to send slowly for a lot of lazy so-and-so's who have never bothered to learn their code?"

You will gather from this that the subject is somewhat complicated, but, at least, worthy of discussion. So we will write a short treatise that will make your hair curl and then leave it to you. Good may result from it, although we rather feel that Amateur Radio is averse to being organised, standardised, nationalised or any other -ised. Long may it remain so—provided it keeps healthy in the process.

Readers who have asked whether that bad character Arabackle Oblifork has disappeared may like to know that he has a pen-pal in Aberdeen, named I. McLott, who appears to be a worthy upholder of the Arabackle tradition. Just after some of the recent pile-ups over 3A2AB, I. McLott wrote and asked "Why are all these chaps so terribly keen on working VK2AB?" (All right, you tell him).

And that's all from here this month. Next month's deadline will be November 16 latest and, for the benefit of our overseas readers, the following month's will be December 14. Address all your outpourings to DX Commentary, Short Wave Magazine, 53, Victoria Street, London, S.W.1. Until then, 73 and Good Hunting.

**NEW CATALOGUES**

The attention of readers is drawn to the new catalogue now in issue by Webbs Radio of Soho, price 9d., and listing a wide range of essential parts and equipment of interest to every radio amateur.

Then there is List No. 7 available at 6d. from Clydesdale's of Glasgow, which will be of particular interest to those who want the best in high-grade surplus gear, moderately priced and fully described in this List.

**CHANGE OF ADDRESS**

We are informed that Q-Max Electronics, Ltd., formerly of Little Turnstile, W.C.1, are now to be found in larger premises at 95 Villiers Road, London, N.W.2.

**THE BC-348 CONVERSION**

We can still supply copies of our Short Wave Listener & Television Review for June, July and August this year, containing in three parts a long, fully detailed article on BC-348 conversion and modifications. This is probably one of the most complete treatments of its kind ever published on the BC-348, and suggests a number of possible new modifications which may make this well-known receiver even more effective on the amateur communication bands.
NEW QTH's

This space is available for the publication of the addresses of all holders of new U.K. call signs, as issued, or changes of address of transmitters already licensed. All addresses published here are reprinted in the quarterly issue of the "RADIO AMATEUR CALL BOOK" in preparation. QTH's are inserted as they are received, up to the limit of the space allowed, each month. Please write clearly and address on a separate slip to QTH Section.

G2BCO  H. Worsley, (ex-G2DUD), 8 Hall Grove, Cheadle, Cheshire.
G3BHO  K. Robinson, 61 Hill Top Road, Old Whittington, Chesterfield, Derbyshire.

CORRECTION

GW3BJZ  T. Richards, Penrhiw, Aberfrwd Road, Mountain Ash, Glam.
By E. J. WILLIAMS, B.Sc. (G2XC)

Seventycem Ranges Extending—
G3QC/G8DD work 75 miles on
1250 mc for new World Record—
Two-Metre News & Views—
Calls Heard & Achievement Tables—

Much of the monthly argument over whether conditions have been good or bad is undoubtedly due to differing conceptions of what is meant by the term "good conditions." To many it implies an ability to work over paths in excess of, say, 100 miles, and consequently if they can do that every day, then conditions are always good. To others it means conditions superior to normal, and to them good conditions will be a much rarer occurrence. Both groups will, however, probably agree that conditions were good during the third week of October. No new two-metre records have been reported at the time of writing this, but as the conditions are still in existence, it may be that some Stop Press news will come in.

On Seventycems also there has been a noticeable improvement. An SWL in Wembley (A. L. Mynett) was able to receive 70 cm signals from G5BY on October 18. The distance is 181 miles, so everything seems set for a new record. G5BY was first heard in Wembley at 1840 BST, calling G6LK, at RST 53/79. He was received again at 1853, 2115, 2130, 2145 and 2200, being RST 559 at the last time. As a point of interest, at 1834 a two-metre phone transmission from G5BY was R5S6.

The following evening G2DD (Stanmore), G2QY (Pinner) and A.L.M. all heard 70 cm signals from G2XC. A.L.M. reported G2XC at RST 56/49 at 1841, while G2DD and G2QY both received signals at S4 peaks with fading to zero.

At 2215 G2DD logged G2XC again at RST 549, with slow fading to S2. The distances are over 60 miles.

On October 16, G5BY and G6LK had three two-way contacts, at 1855, 2055 and 2255 BST. G5BY’s signals were peaking at S9, but G6LK was only S4. G6LK has been receiving G5BY consistently on 70 cm during the past few weeks, and much of the credit for that must go to his new receiver, brief details of which are given later.

Crystal Diodes

Numerous readers have been good enough to send information regarding crystal diodes, and it is thought the following summary may be of general interest. Types CV 101, 102 and 103 were designed for use between 2,500 and 6,000 mc, while CVIII, 112 and 113 are for the band 6,000-12,000 mc. The three crystals in each of these groups are the low level, medium level and high level burn-out types respectively. Rectified current should be kept below 1 mA if possible, but the maximum forward currents permissible to avoid burn-out are 5, 20 and 50 mA respectively. All these crystals are intended for use in tunable mixer circuits.

Types CV253, 291, 351 and 364 are designed for operation in special pre-tuned circuits, while CV241, 246 and 247 are detectors, and not mixers. CV226 is a noise generator, and CV361 is for use as an interference suppressor. At 2215 G2DD logged G2XC again at RST 549, with slow fading to S2. The distances are over 60 miles.

On October 16, G5BY and G6LK had three two-way contacts, at 1855, 2055 and 2255 BST. G5BY’s signals were peaking at S9, but G6LK was only S4. G6LK has been receiving G5BY consistently on 70 cm during the past few weeks, and much of the credit for that must go to his new receiver, brief details of which are given later.

Crystal Diodes

TWO-METRE ACTIVITY BY ZONES AND COUNTIES

(Based on reports for current issue only)

Zone A (144.0 to 144.2 mc)
Fife: G3EGW
Lanark: G53DAA

Zone C (144.2 to 144.4 mc)
Lancashire: G2OJ, G8SB
Northumberland: G2LQ, G3CVY, G4LV, G4LX
Yorkshire: G2IQ, G2MA, G3COJ, G3CUJ, G3DRG, G6YO, G8GL, G8IC

Zone E (144.4 to 144.65 mc)
Cheshire: G2CDB, G8ATZ, G3FMI, G40S
Leicestershire: G2FNW, G2RI
Lincolnshire: G3DMU, G4OF
Northamptonshire: G8APY
Warwickshire: G2ATK, G2BFT, G3ABA, G3BPW, G3BVJ, G4RK, G5SK, G6CI, G8QY

Zone F (144.65 to 145.8 mc)
Gloucsmor: G8EYM
Montgomerystone: GW2ADZ
Shropshire: G3AHT, G4LU

Zone G (145.85 to 146.5 mc)
Bedfordshire: G3GOQ
Buckinghamshire: G3CVO, G3GBO, G3MI, G4MR, G6KJ, G6NB
Cambridgeshire: G2AIQ, G2UQ, G2XV, G3AEF, G3BK, G3WV, G4MW
Hertfordshire: G3GDR, G8UM, G8LL
Huntingdonshire: G2RQP, G3AKU, G3AVOJA
Norfolk: G3VM, G5UD
Northants: G2HCG, G3DUP
Suffolk: G2CPL

Zone H (145.25 to 145.5 mc)
Berks.: G6RP, G6OH, G8LG

Dorset: G3ABH, G5UF
Gloucsmorshire: G3GEN, G3MA, G3YH, G5BM
Hampshire: G2NS, G2XC, G3ARL, G3BHS, G3BNC, G3CGE, G3DEP, G3FAN, G3GAV, G3GCP, G6XM
Oxfordshire: G5TP, G6KB
Wiltshire: G2BUJ, G8IL

Zone I (145.5 to 145.65 mc)
Cornwall: G3AGA
Devon: G2BMZ, G5BY, G5QA
Somerset: G3EHY

Zone J (144.85 to 145.25 mc)
Essex: G2CIW, G2WJ, G3ECA
Kent: G2AOL, G2KF, G2UJ, G3BOB, G3BVA, G3CAZ, G3FMK, G3DAH, G4FB, G6AG, G6VX
London: G2ABF, G2DD, G3BQO, G3BUN, G3EIW, G3FSD, G3FXG, G4AU, G5DT, G5LI, G5PY, G6HC, G6WU, G6KZ, G8VR
Middlesex: G2AHF, G2DD, G2FMF, G2HDZ, G2OY, G2YC, G3CKX, G3DGN, G3EEl, G3GSF, G3SM, G4HT, G4KD, G5BC, G6UH, G8IP
Surrey: G2ANT, G2BN, G2MV, G2NH, G3BLP, G3GHI, G4CG, G4CI, G5DS, G5LK, G5MA, G5NP, G6CB, G8LK, G8NF, G8SC, G8SM
Sussex: G2AVR, G2JU, G2MC, G3BEX, G3EBW

Note: Frequency areas given above are in accordance with the Two-Metre Zone Plan, as accepted by the majority of VHF operators. A few stations are not conforming.

With the exception of these last two, all crystals should have a forward resistance not greater than 250 ohms and a back-to-front ratio not less than 10 to 1 when measured on the 100,000 ohm range of an Avometer Model 7. This means applying 0.4 volts in forward direction and 1.4 volts in reverse.

It has previously been implied in these columns and elsewhere that the CV103 was the British equivalent to the American 1N23A. This is apparently not so, and the CV112 would seem to be a better equivalent.

Other Seventycem News

G8VR (London, SE2) has been listening on 430 mc using a G3EJL Lecher line, silver plated, in conjunction with an RCA signal generator, working on its fundamental frequency, as local oscillator. Results were excellent and S9 signals were received from G2CIW, G2FKZ, G3EIW/P and G3FZL. The signal generator only being on loan, G8VR has now constructed what he describes as “a 9002 Pot oscillator with fabulous stability”—see photograph.

G2OJ (Eccles) has been working G3ELT, just over three miles away, and getting S9 results. He has two aerial systems available: a corner reflector with two directors, and a 16-element array. He has tried various RF amplifiers on the band, including a 6J6 Lecher circuit, but so far none of them have given any gain. A concentric line amplifier using a GG triode is the next on the list for trial. G3DA (Liverpool) and G3AHT (Osweystry) have been heard, and G2OJ beams South on two metres every night in hopes of a possible change to 70 cm.

G6LK (Cranleigh), as mentioned earlier, has been building new converters. Considering harmonic injection undesirable due to possible saturation of the crystal by unwanted frequencies, it
was decided to inject at signal frequency minus 1F. A separate crystal oscillator valve plus two 6J6 stages produced the necessary 408 mc. At the same time, the Lecher line circuits were replaced by 'cavities'... A similar receiver, but with a 46A lighthouse RF amplifier, has since been built, and results with both designs are most encouraging. G2FKZ at 27 miles has been worked several times through the 800 feet North Downs, which are only 3 miles from G6LK.

G5PY (Clapham Park) has worked G5TP (Stoke Row) at 40 miles and receives him at a consistent 1F. The 1294 and 1359 receivers do not seem to be much different as regard sensitivity, but the 1359 is much more selective. G3PZL (Dulwich) has found a CV102 to be the best crystal so far tried, but he remarks that as he uses a CV88 RF amplifier which helps reduce noise level, this crystal may not necessarily be best in a non-RF stage receiver.

G3CU (London, S.E.) sends latest news of the South London UHF Group. Some 13 stations in the London area are known to be active and can be heard most Sunday mornings. Three really modern transmitters and receivers have been constructed and installed at G2FKZ, G3CU and G3FZL. The transmitters at the last two stations use a STC 3B/40J disc-seal triode as a power doubler stage in a trough concentric line circuit. The input is 24 watts and the measured efficiency 35% to 43%.

G2FKZ has four CV53's in a push-pull parallel-cathode and paralleled-ano-des

---

### TWO-METRE ACTIVITY REPORT

**GSVR, Upper Abbey Wood, London.**
**WORKED:** DL4XS/3KE, F8JBI, G22CL, 3AFM, 2BUH, 3EBW, 3EHV, 3FMK, 3GDR, 4AU, 4HT, 5UD, 6AG, 6HG.
**HEARD:** G2QI, 2XV, 3ABA/P, 3BK, 3MI, 3VM, 4MW, 5RF, 5UF.
(September 13 to October 8).

**G3EHY, Banwell, Somerset.**
**WORKED:** G2AIO, 2CIW, 2CPL, 2DD, 2FWN, 2MV, 20I, 3ABA/P, 3AHB, 3AHT, 3ATZ, 3BLF, 3BOB, 3COJ, 3DA, 3DUP, 3FJ, 3FM, 3FVR, 3GRD, 3GEN, 4AIQ, 4CI, 4DF, 4HT, 4IB/P, 4MR, 5LK, 5MA/P, 5RF, 5UF, 5UM, 6AG, 6CB, 6PA, 6UB, 6VC, 6WX, 8LM, 8RF.
**WORKED:** G3AJB, Slough, Bucks.
**WORKED:** F3MX, G2ANT, 2AKT, 2BN, 2HCN, 2WJ, 2XC, 3ABA/P, 3ABP, 3BEW, 3BEH, 3EM, 3MI, 3WW, 4MW, 5BC, 8AG, 8AG.
**HEARD:** G2F6G, 9MX, G2QI, 20I, 2WS, 2XV, 3AHT, 3CKK, 3CXL, 5BY, 5SW, 6UC.
(September 10 to October 8).

**G4HT, Ealing, Middlesex.**
**WORKED:** G2AIO, 2AVR, 2CLF, 2FWN, 2MA, 20I, 2RI, 2UQ, 2XC, 2XV, 3ABA, 3ABA/P, 3AEQ, 3AHT, 3APY, 3AVO/A, 3BK, 3DUP, 3BEH, 3EYW, 4MW, 5UD, 5UF, G2WADZ.
**HEARD:** G3ABH, 5BY.

**G3BLP, Selsdon, Surrey.**
**WORKED:** 42AVR, 4BMZ, 2CL, 2RI, 3ABA, 3ANT, 3ATZ, 3DRG/A, 3DUP, 3EHX, 3EM, 3FMK, 4FB, G2WADZ.
**HEARD:** G3BWP, 5UD.

**G5DH, Surbiton, Surrey.**
**WORKED:** G2AIO, 2AVR, 2ABF, 2CL, 3ABA/P, 3BK, 3DUP, 3EBW, 3EHY, 3MV, 3WW, 5RF.
**HEARD:** G2AIO, 2IOQ, 2NS, 2WJ, 2XC, 3AEP, 3DEP, 3DSK/A, 3EEL, 3GTH, 5AA, 5DT, 6TV, F8MX.
(September 10 to October 10).

**G2AVR, Bexhill - on - Sea, Sussex.**
**WORKED:** DL4XS, F6GH, 9MX, G2AHB, 2DL, 2FMF, 2RHDZ, 2KFD, 2MV, 2UJ, 2WI, 3BPL, 3CQE, 3DEP, 3DGN, 3FMK, 3FRX, 3GDI, 3HHI, 3WW, 4HT, 5DS, 6AG, 6CB, 6JK, 6LO/A, 6NB, 6UH, 8KZ.
(September 3 to October 6).

**G2XCN, Portsmouth, Hants.**
**WORKED:** F8JBI, G2AHB, 2AQI, 2ANT, 2CIW, 2CPL, 2DD, 2MC, 2WJ, 2XV, 3BEY, 3BHS, 3DEP, 3EBW, 3ECA, 3ENI, 3FAN, 3FD, 3FXG, 3FYR, 3GAV, 3GEP, 3KDI, 3LKI, 3MW, 5BY, 5LS, 6DN, 5LL, 5QF, 5SN, 5U5, 6KB, 6LK, 6LR, 6WU, 8GL, 8LY.
**HEARD:** G3Y2C, 3AHB, 3BLP, 3CN, 3DAH, 3GHI, 3GSE, 5MA, 5RO, 5ST, 5UM, 5SF, 6JK, 6LL, 6NB, 6XM.
(September 25 to October 20).

**G3ENI, Abingdon, Berks.**
**WORKED:** G2BN, 2XCI, 3ABH, 3AHB, 3DEP, 3EYH, 4HT, 5MA/P, 5TF, 6JK, 6KB, 6NB, 6XM, 8IL.

### 70 cm Activity Report

**G6LK, Cranleigh, Surrey.**
**WORKED:** G2ANT, 2DD, 2FKZ, 2SY, 2XC, 3AHJ (90 miles), 3BY (181 miles), 5STP.
**HEARD:** G3DEP, 5PY, 6XM.

**G2O1, Eccles, Lancs.**
**WORKED:** G3E1T.
**HEARD:** G3AHT, 3AOO, 3DA.

**G2QQY, Epper, Middlesex.**
**WORKED:** G2DD, 2FKZ, 3SF, 4CG, 5CD, 5STP, 6LK.
arrangement, driving a ME1003 straight amplifier in a concentric line circuit with 68% efficiency. The receivers use CV98 RF stages in a concentric line with built-in crystal mixer. The local oscillator is CC, starting with a 22 mc frequency and finishing in a tuned coaxial line at 400 mc. This is fed through a high pass filter to remove undesirable frequencies. A tunable IF (32 to 38 mc) is used.

G2QY (Pinner) continues his nightly schedules at 1930 and 2215. He is experimenting with an RF stage and new aerials; G6LK at 32 miles and G5TP at 27 have been worked.

Several suggestions have reached us regarding this matter of 70 cm activity periods, but it is obvious that no period can be found which will satisfy everyone, and it appears that the best course is for stations to arrange individual schedules. If DX is the aim, then it does seem reasonable to use Two as a guide. Occasional discrepancies between the performances of the two bands may be reported, but, in general, good conditions on 2 metres means good conditions on Seventy. On October 19, for example (when G2XC was getting into the London area on 435 mc) two-metre signals were excellent over the same path (a report of S9 plus 15 dB was obtained), and the A.P. television was so strong at G2XC, 70 miles away, that a picture could be held at entertainment value with the contrast control at a minimum. On this point, it may be worth recording that over this path fading was negligible at 45 mc (except for a slight and steady increase of signal throughout the evening), but was noticeable at 145 mc, and was deep at 435 mc.

Two Metre News

G2KF (Edenbridge) normally on 145.206 mc, has 18 watts to a 522 Tx and a 4-element c.s. beam. The receiver is a 3-valve converter working into a BC648. He is frequently active between 1830 and 2000 and again after 2230. G3AHB (Slough) lost his 8-element stacked array in a recent gale and so has reverted to the original 4-element beam. Results have been quite good and he mentions that in north and south directions, where he has local hill obstructions, the Yagi is as good as a stack. He comments on the very good stability and sensitivity of the G21Q converter.

G8LN (Plumstead) hopes to be active almost immediately and asks for reports. He has been doing much listening and experimenting with aerials, including rotation from horizontal to vertical with interesting results. He wishes there were not so many DX hunters who appear not to wish for local contacts! G5DS (Surbiton) sends a list of 39 locals, i.e., in and around London, worked and another 39 heard during the past four weeks. In addition, he has worked 11 and heard 15 stations at more DX locations. That seems to make 104 altogether, which indicates some activity, anyhow!

Apologies to G5PY (Clapham Park) for failing to raise him to 21 counties in the Annual Table of Counties Worked. He would have liked to see the Contest extended to all VHF and UHF bands. G4HT (Ealing) hopes the Contest will brighten up the band and says he cannot escape the conclusion that there is less activity this year than last. G8VR (Abbey Wood) was another to work DL4XS/3KE, and he also knocked off F8JR on October 5. His station score has reached 112, but cards received are only 55. G5LQ (Chiswick) has returned

The 430 mc pot oscillator now in use at G8VR. Valve is a 9002, the copper (petrol) pipe on the left takes the live heater lead to the valve and acts as cathode return, and the two resistors visible are anode decoupling and grid leak. The inner can is from a CV173 and the outer is an old valve screen. Stability is excellent and output coupling is by means of a hairpin loop in a hole drilled into the pots.

**NOTE:** Figures in brackets after call are number of different stations worked; Starting figure, 100.

---

To 2 metres after a spell of experimenting with half-a-watt on 80 metres, the same VHF equipment is still in use, but a new Tx which will avoid 48 mc and TVI is under consideration.

G3BLP (Selsdon) reports calling CQ on Two, and being answered by a station on 70 cm, G3BLP hearing him on his sub-multiple, and G3BLP's harmonic being 559 in North London! The 16-element stack at G3BLP came down recently, and has now been erected again, but minus the reflectors. He has found conditions to be generally poor, although he had a contact with G3DRG/A in Waddington (Lincs.) on September 29. G3GHS (New Malden) has a 6AK5 type converter running into an AR88 on 5 mc; his beam is a 4-element Yagi. G3GHS wants some new counties badly, but has worked F8MX.

G3GBO (Denham) is now in his correct part of the band according to the Zone Plan, and can be found on 144.78 mc. He has worked F8MX twice, and the schedule with G3EBW (Hurst Green) is proceeding according to plan; he reports that G3GIZ (West Hyde) will be operating on Two very soon.

G3WW (Wimblington) missed the DL's in September, but found some compensation in working several more counties for the new yearly Table. He reports G2UQ as active in Whittlesey, Cambs.; G2AIQ (Cambridge) has a lazy-H with reflectors.

G3ABA/P used a 24-element array for the Coventry VHF Group Field Day. They operated from a site 400 feet a.s.l. and had the beam up another 52 feet. Conditions were fair, and although they failed to raise G2XC (who was S9 plus), they worked ON4BZ in Brussels. They ask for apologies to be passed on to the Northern stations, as they just did not get round to turning the beam that way! The biggest surprise was the lateness and earliness of the activity on Two; their last contact at night finished at 0130, and the first in the morning was at 0730, which indicates a very good spread in terms of time.

G2CDB (Chester) has an SCR522 Tx and a G2IQ converter. An 829 PA with 60 watts is nearly ready for operation. For 90% of the time G2CDB will be beaming South, as his beam is not readily rotatable; he mentions G3ATZ, G3FMI and G4OS as also active in Chester. G2OI (Eccles) found conditions very poor during the month. There has been continual rain and only an occasional night when Southern stations...
could be heard. However, a new county in the shape of Denbigh relieved the monotony. G81C (Doncaster) expresses surprise at the speed with which his call appeared in the Activity List, as he had not even written to us. It must have been one of our spics! Now we have first-hand information that he is on two most evenings from 1900 to 2200. An SCR522 feeds a cubical quad with RF, and the G21Q converter is in use as receiver.

G23KY (Isle of Anglesey) asks those interested in his sort of DX not to despair, as he will be on the air again soon, although 110 volt DC mains are a snag. G3EHY (Banwell) found conditions normally fair to good, the band always being open to at least 100 miles, and often to 220 miles. His best contacts were with G8GL (Northallerton) on October 5, and G2CPL (Lowestoft), 9g phone, on October 7. G3EHY considers that location does not play a major part in working VHF DX, and quotes his own much-screened position as supporting evidence.

Apology

It is regretted that the “Best Twenty” Table was dropped last month without warning. Although there were only four entries for the Table, it was set for publication, together with a note to the effect that it had been decided to discontinue it for the time. Unfortunately, at the last moment, when it came to the make-up of the Magazine, it was found that there was insufficient room for all the material prepared for “VHF Bands,” and this table was dropped as obviously having the least appeal.

Congratulations

The congratulations of us all to G3QC and G8DD, who have gone still higher to set up a new two-way record on 1250 mc. Signals at S8-9 were exchanged over a 75-mile path between Merryton Low, 4½ miles north-east of Leek, Staffs., and Worcester Beacon, near Great Malvern, on October 1, from 1330 to 1430 GMT. This path is not line-of-sight. The previous record was between W1OGF/1 and W1MIZ/1 over a 37-mile path. No details of the G3QC/G8DD equipment are yet available.

Aurora and Other DX

From W2PAU of CQ Magazine comes news of a large number of Aurora twometre band openings during August. Their intensity was such that their influence was felt in practically all latitudes of the USA, even as far south as Mississippi; best opening was on the night of August 19. One of the outstanding contacts was between W4AO and W01HD over a distance of 887 miles. Some idea of the extent of the coverage is given by the log at W8WRN which included 6 W2’s, 6 W3’s, 5 W4’s, one W5, 15 W8’s, 12 W9’s, 2 W0’s and one VE3.

The troposphere has also been playing well over in W-land. On September 6 W2BAV, who operates a station 3000 feet a.s.l., found himself sitting in the middle of a duct (or something) and proceeded to work 25 W3’s, five W0’s and a flock of W8’s. His best DX was W0DSR at 1175 miles! All this was on phone and signals were all solid copy. This is undoubtedly a new tropospheric record for the band. The input at W0DSR was 12 watts! So perhaps that 3000 feet at W2BAV had something to do with it.

Sayings of the Month

“Further always further” (DL3KE) . . . “It is a pleasure to be back to the quiet of two metres” (G5LQ) . . . “I am still looking for 20 more counties” (G3WW) . . . “Some people go to bed late and some get up early, but very rarely the same person” (G3ABA) . . . “Why do some people refer to cavities? Don’t they mean co-axial lines?” (G3GBO) . . . “I gather it has become a crime for a DX station not to return to a call” (G3BLP) . . . “My 4-element rotary is in the loft, i.e., nearly in the sea” (G2JU) . . . “The higher the frequency the fewer the contacts” (G4HT) . . . “It is more blessed to transmit than to receive” (G4HT) . . . “There seems a tendency for some stations to be DX hunters and not to work a local for a second time” (G8LN) . . . “PA0PN heard a phone station using frequency 435-7 mc and PN was beaming west. This must have been a G; if only stations would use CW on signing!” (PA0LU) . . . “Contest rules have been Q5P’d. I will try to win this time.” (PA0LU).

Fiveband Club

Numerous enquiries have been received regarding the holding of a Club Dinner in London. It is certainly hoped to arrange such an event again this winter, but it has been found impracticable to fix it in conjunction with the Amateur Radio Exhibition, as was done last year. Notice of the arrangements will be given as soon as possible, and if any wish to
be notified of the details care to let your conductor know, then full particulars will be sent by post.

New members continue to be enrolled in the VHF Century Club, and include G2ANT, G2AOL, G3GBO and G4AU during recent months. This may be a suitable time to remind applicants of the requirements of membership. It is necessary to send 100 cards confirming contacts made in the post-war period on frequencies above 50 mc. Stations may be worked once on each band, and portable count as well as fixed stations. When you send your cards you must include a signed statement that you have replied 100% to all cards you have received and will continue to do so. One further point—you must be a member of the Fiveband Club before your application for the VHF CC can be accepted. Membership of the Fiveband Club is open to all VHF operators on receipt of an undertaking to support and encourage VHF activity.

In Conclusion

In these days of printing difficulties, receipt of your letters and reports in good time each month becomes a matter of even greater importance, and your support in that sense will be greatly appreciated. Next month’s mail should be addressed to E. J. Williams (G2XC), Short Wave Magazine, 53 Victoria Street, London, S.W.1, by November 16 latest. It is tight, but we hope to be on an even keel again by the time the next issue is due, on December 8.

OPPORTUNITIES IN CANADA

It is reported that TV set manufacture is a rapidly growing industry in Canada, where the aim is to produce a home receiver in direct competition with the United States. Many large electrical companies are willing to train men who are adaptable, and there is plenty of work for experienced TV service and maintenance engineers. Readers who may be interested in this proposition can find out all about it on application to the Immigration Department, Ontario House, 13 Charles II Street, London, S.W.1.

U.N. TELECOMMUNICATIONS

It is reported that H. B. Rantzen, lately head of the BBC’s Engineering Designs Department, has been appointed Director of Telecommunications Services to the United Nations. This is a most important post, carrying responsibility over a wide field—from PA facilities at U.N. conferences to the technical supervision of short-wave news and information broadcasts in some 23 different languages.
Here and There

The Amateur Radio Exhibition

The Fourth Annual Exhibition organised by the Radio Society of Great Britain will take place during the period November 22-25 at the Royal Hotel, Woburn Place, London, W.C.1. More than 20 exhibitors are taking stand space, including ourselves; our Stand will be manned by staff members throughout the period of the Exhibition, and we hope to make personal contact with many readers, as in previous years. Admission is by catalogue, price 1s. at the door, and the show is to be opened at 2.30 p.m. on Wednesday, November 22, by Hugh Pocock, Esq., M.I.E.E., Managing Editor of our respected contemporaries, Wireless World and The Wireless Engineer.

Autumn Call Book

This is now on sale, price 16s. 10d. post free, and is as ever the only available directory to the amateur radio stations of the world. The Call Book now carries some 50 columns of G call signs, and the total number listed is about 6,200—still short of the possible, but if you have appeared in our “New QTH’s” at any time up to and including the issue of the Magazine for July last, you are in. We would particularly ask that all new call-signs/addresses, and changes of QTH, be notified to us as soon as may be, so that each quarterly appearance of the Call Book is as up-to-date with the G section as publication and distribution allow. We are, of course, not ourselves the publishers of the Radio Amateur Call Book—it is an American undertaking now in its 28th year—but we are the agents for the G section. You can obtain your copy from Gage & Pollard.

Slight Correction

With reference to G6TA’s useful article on Super Modulation in our last issue, he notes that in case any of the old hands thought that the metres M2 and M3 should be by-passed, they would be right—the correct value is .01 μ F.

Courses for Amateurs

We are informed that two Courses likely to be of interest and practical value to amateurs can be taken at the Brentford Evening Institute, Boston Manor Road, Brentford, Middlesex. These are the Radio Service Course under J. H. Gibbons, of E.M.I., and the Radio Amateurs’ Course (preparation for the 1951 R.A.E.), for which the tutor is E. J. Pearcey, G2JU, of the same organisation. The fee for either Course is but 10s., and application should be made to the Principal of the Institute, at the address given.

Esperantists’ Opportunity

From G3ESP we hear that the Universala Klubo de Radio-Esperantistoj has been revived with the object of bringing together those concerned with radio, either professionally or as amateurs, who are also interested in making use of Esperanto as a universal language. News and information will appear in La Interligilo and readers who would like to pursue the matter should communicate direct with: R. Filliatre, U.K.R.E., 46 Rue Lamartine, Paris IX, who will be glad to hear from transmitters and SWL’s.

Electrical Silence

Our bands are now afflicted with noise QRM of many different kinds, nearly all man-made. In residential areas much of it is caused by household vacuum cleaners, hair dryers, automatic irons and similar devices. Of them all, the vacuum cleaner is the worst because it is the commonest. In one household that we know, the matter has been tackled as a problem to be solved—the first step being to insist that the manufacturer supplies his product fully suppressed. If every amateur did this, and advised his non-radio friends to do the same, we should begin to make an impression, and the Committee concerned within the industry would have to define the standards for suppression. And for the record—and because it is marketed as being fully suppressed—readers will find that the GEC’s Electric House Cleaner Type DM.370 is absolutely noise-free electrically, and can be used in the same house as receivers working over the whole range BC bands to 145 mc without causing any interference.
The Month with the Clubs
FROM REPORTS RECEIVED

Increasing activity is shown by the fact that 34 Clubs have reported this month. Most of them are well into their "winter" programme of lectures, demonstrations and discussions, the season of Field Days and outings being over.

Clubs are all keyed up for the Fifth Annual MCC, which starts at 1700 on November 11 and continues, between the hours of 1700 and 2300, until the latter hour on November 19.

The following stations will be definitely on the air, although we do not consider that this list represents the full strength of the contestants:

G2AMV, Wirral
G2BOI, Tyneside
G2FJA, Medway
G2YS, Chester
G3ASR, Edgware
G3AXP, Baldock
G3BTJ, Slough
G3CKR, Warrington
G3DIY, West Cornwall
G3EHW, Plumstead and Woolwich
G3EKW, Nottingham
G3ERD, Derby
G3FAB, Coventry
G3FKF, Salisbury
G3FYN, Guilford, Nottingham
G3GEC, G.E.C., London
G3GFA, Sutton and Cheam
G3GHN, Clifton, London
G3GRS/A, Gravesend
G4BP,Scarborough
G5TB, Surrey
G5TS, Farnborough
GC2FMV, Jersey
GM3HAM/P or
GM8FM, Edinburgh
G6MR1, Forfar
GW3EOP, Neath
GW3FFE, Rhigos

Baldock District Radio Club.—All members of the RAE course passed the examination, which speaks well for the course! Four more have obtained their tickets and are on the air. A stand was run at the Arts and Crafts Exhibition in Baldock Town Hall, where a Tx was in operation and members' gear on exhibition. New Club HQ will be opened shortly; meanwhile instructional meetings are held each first Wednesday evening at the Baldock Senior School.

Barnsley and District Amateur Radio Club.—

At the meeting on October 13 the syllabus was discussed and a programme arranged to last until July 27, 1951. There will be lectures on Modern Receiver Design, also on Transmitter Design, Power Supply Considerations, Aerials and Feeders, Hi-Fi, NFM, Frequency Measurement, Station Planning, and "Gimmicks and Gubbins." The Receiver Design lectures start on November 10.

City of Belfast YMCA Radio Club.—The AGM was held in September; reports were submitted and officers elected for the forthcoming year. Twenty students passed the RAE examination, thanks to the special course run by the Belfast Technical College. G16YM will be on the air during this season with two full-power transmitters—one CW and one phone. Morse classes will be run on Tuesday and Wednesday nights, with a full programme of events of all kinds.

Birmingham and District Short Wave Society.—

Membership is steadily growing and visits are being arranged to local places of interest. Recent
lectures have covered Receivers for Two-to-Five Metres, and Transmitters for Beginners. A small nucleus of members is doing very good work, and it is hoped to rope in all the local members of the BSWL.

Brighton and District Radio Club.—The new HRO receiver is now performing well, and QSOs from the Club Station are a little more frequent. It operates on alternate Tuesdays, when an informal evening is held. Future events include a Hamfest, a talk by G2MC on Two Metres, and participation in a local Exhibition.

Cambridge Amateur Radio Club.—The next meeting will be on November 24, 8 p.m., at The Jolly Waterman. The evening will be given over to a Junk Sale. A hearty welcome is extended to all American amateurs stationed in the district.

Chester and District Amateur Radio Society.—Last month the Club welcomed G2AMV (from W7AI) who gave a well-demonstrated talk on VFO’s. The last lecture was by G2YS on the subject of TVI and How to Cure It. Two Americans were welcome visitors, one of them being W5FTK. Meetings are held in the Club HQ—Tarran Hut, YMCA Grounds. Morse classes are at 6.30 and official meetings at 7. 30 p.m.

Clifton Amateur Radio Society.—Meetings have been well attended and the attendance record broken. Recent events have been a Discussion on "MCC," a lecture on Radio in the Berlin Airlift, and a Junk Sale. An SWL Contest is in progress. Membership is now 43 and includes 15 licensed amateurs.

Edinburgh Amateur Radio Club.—At the AGM a new committee was elected, consisting of three transmitting members and two listeners. The subscription has been reduced, and the committee is drawing up a full programme which will include, during the next two months, a Junk Sale, a Quiz Night and a demonstration of UHF. A portable licence is being taken out, chiefly for 420 mc purposes. Contests will be organised during the early part of the season and a trophy awarded.

Edinburgh (Lothians Radio Society).—Fortnightly meetings continue at 25 Charlotte Square; forthcoming dates are November 2, 16 and 30, December 14 and 28. There will be a talk on a Ten-Metre Beam, one on Uses of the CRO, and Morse Instruction classes. Prospective members will be welcomed at all meetings.

Grafton Radio Society.—At the Fifth AGM the new committee was elected, consisting of the President (B. Randall, GW3ALE), four Vice-presidents (C. T. Bird, A. E. Mitchell, G8DF, J. A. Reading, G3RX and P. Beresford), Chairman (A. W. H. Wennell), Vice-Chairman (J. H. Clarke, G2AAN), Hon. Sec. (W. H. C. Jennings, G2AHB), Hon. Asst. Sec. (J. Moran, G2CLV), Hon. Treasurer (R. T. White), Hon. Storekeeper (P. Vasey), two Committee Members (H. Hudson, G3FLV and P. Beresford) and two Hon. Auditors (J. J. Hollington, GAGA and D. Outram).

Gravesend Amateur Radio Society.—The winter session has begun and a big programme is under way. After the success of the debate "CW v. Phone," another one on "QRO v. QRP" has been arranged. It is hoped to arrange more demonstrations with the lectures in future, as these seem to hold an audience more successfully.

Grimsby Amateur Radio Society.—This Club is being re-formed under the new name of Grimsby Amateur Radio and Television Society. Efforts are at present concentrated on a Top Band phone transmitter, which will have its first "airing" shortly. Attendances are improving, but there is a noticeable shortage of CW Timers. The Club room, from which the MCC transmitter will operate, is at Block 50, Welholme Road, Grimsby.

Kenilworth Radio and Television Society.—The first AGM was held recently, officers and committee being elected. Talks and demonstrations have been given by G5PP and G4KC, both of Coventry. A licence has been granted by the GPO, and the call sign is awaited. Headquarters are in Daw House Lane, Kenilworth, where meetings are held every Wednesday at 8 p.m. Visitors will be welcomed.

Lincoln Short Wave Club.—Members paid a successful visit to GKG and an Automatic Telephone Exchange on September 10; on the 27th there was an enlightening talk on The Decibel; on October 17 a debate on "Straight versus Super Rx," and Mullard Film Strips were shown on October 25. Forthcoming events: A talk on Aerials by G6TV, from Cranwell, on November 8, and another Mullard Film Strip on November 22. Finally—the Annual Dinner on December 6. Meetings are now held every Wednesday, alternating between
Morse classes and the normal programme.

Midland Amateur Radio Society.—MARS were unanimous in electing, as President, Mr. A. W. Rhodes, who has served so long as Secretary. The retiring President, G6DL, received the thanks of the Club after a very successful year, and Mr. B. Bligh is the new Secretary (QTH in panel).

North Kent Radio Society.—After a quiet summer this Club is now going ahead with its winter activities. The Club has been completed, the Tx has had its first airing, and the first portable outing, using G3ENT/P, was enjoyed by members and friends. It is hoped to add a modulator to the Tx and to operate phone in the near future. Meetings will be held on the 2nd and 4th Mondays throughout the winter, at the Freemantle Hall, Bexley.

Nottingham Short Wave Club.—Arrangements have been changed since the last notes appeared, and meetings are now held every Wednesday, 7.45 p.m. at The Old Boys’ Club, Middle Street, Beeston, Nottingham. See panel for new Secretary’s QTH.

Paisley Short Wave Club.—This Club now has its transmitting members, and in anticipation of TVI troubles in the future, GM4KM is starting a series of lectures on the subject. New members will be welcomed to the meetings, on Saturdays at 7.30 p.m.

Portsmouth and District Radio Society.—Recent meetings have been well attended, and lectures on Audio Filters and Frequency Measurement followed with keen interest. The Club, G3DIT, has made many DX contacts, despite poor conditions, and another transmitter, G3CLX/A, was operated at the Mecanico Club Exhibition. A future event is to be a visit to the local telephone exchange.

QAU Club, Channel Islands.—Most of the meetings have been devoted to discussions on MCC, for which the Club is entering under the call GT2EM. Two members have now become interested in the UHF bands, and hope to put Jersey on the map among the GDX on these bands.

Ravensbourne Amateur Radio Club.—This club meets twice weekly at the Deptford Men’s Institute, New Cross. A transmitter is being built and a call sign awaited, together with a portable call for week-end Field Days. An instructor is wanted for the Theory and RAQ section, but the Rx, Tx, Morse and Constructional sections are already in action. All new members, SWL’s and beginners alike will be welcomed.

Reading Radio Society.—Recent talks have covered the subjects of FM Reception and Electronics; future events include talks on Electronics (Part IV), Intercom, a C & G Quiz, and “In Lighter Vein.” November meetings are on the 9th and 25th, with the Instructional Section meeting on November 11 and December 9. The Hamfest will take place on November 26.

Rhigos and District Radio Club.—Meetings are held on the second Thursday of each month, at the Black Lion, Victoria Square, Aberdare. A recent successful lecture was on Reception of Television in Fringe Areas. GW3JZV, the President, congratulated on being the highest European scorer in this year’s ARRL DX Contest, and GW3FFE are grimly determined to win this year’s MCC and thus to pull off the Hat Trick.

Richmond and District Radio Society.—The October meeting was well attended, and the subject was a talk and demonstration on Aerials, given by G3DIT. November meetings which are on the 1st and 29th, will be held at the Richmond Community Centre at 7.30 p.m.

Romford and District Amateur Radio Society.—G3BNI, the former Hon. Sec., has resigned his duties owing to business reasons; the new Secretary is G3DNL—see panel for his QTH. The Club has started its winter programme and attendances are improving after the slack season. The month’s programme includes a Junk Sale, a talk on The Care of Tools, and a TV Lecture.

Salisbury and District Short Wave Club.—The new premises were formally opened on September 26 by the Rt. Hon. the Earl of Pembroke, accompanied by the Mayor of Wilton. Both guests spoke of their association with wireless in its infancy. Lord Pembroke and the Mayor were presented with membership certificates as President and Vice-President respectively, and the evening ended with a demonstration of the Club’s equipment. Meet-
ings are now held on Tuesdays and Thursdays at 7.30 p.m.

Sheppey Amateur Radio Society.—This club meets every Friday, 7 p.m. in the Sports Pavilion at Holm Place. The recently-acquired receivers are working well, and a Morse class continues for anyone requiring tuition or practice. Application will be made for a Club licence in the near future, and a transmitter is being designed in readiness for this. New members will be welcomed, either at the meetings or via the post to the Secretary.

Stourbridge and District Amateur Radio Society.—A meeting was held at King Edward VI. School, Stourbridge, on October 3, when Mr. F. Mills, G3CLG, gave an illustrated talk on Thermionic Valves—Theory and Technique. Members showed keen interest.

Torbay Amateur Radio Society. — At the September meeting members congratulated G3AVF, the Secretary, on finishing top of the list in the Two-Metre Field Day contest, and G2BMZ on his 520-mile contact, establishing a new record for Two-Metre European working. The formation of a local network and the forthcoming MCC were also discussed. October will see the opening of a new feature, “The Month on the Bands.” Two Cups are to be competed for annually—one for the best constructional item and one for the outstanding VHF achievement.

Wakefield and District Amateur Radio Society.—Forthcoming events include the following: November 15, talk on Design of Quality Amplifiers; November 29, Film Strip, Construction and Manufacture of Radio Valves; December 13, Introduction to FM. All meetings are at 7.30, Service House, Providence Street, Wakefield.

Wandsworth and District Radio Club. — The first meeting of the season, in September, was devoted to a general rag-chew. The season’s programme has been arranged, and the next meeting is at 8 p.m. on November 15, at the Waldron Road School, Garratt Lane, S.W.18. All interested are very welcome.

Warrington and District Radio Society.—The inter-club Top-Band telephony contest on September 24 was very successful, with many stations participating. A presentation will be made at the Annual Dinner, which takes place at the end of November.

PEEL WORKS - SILK STREET - SALFORD 3 - LANCs - ENGLAND
A subsidiary of THE GENERAL ELECTRIC CO. LTD. OF ENGLAND

THE FINEST CORED SOLDERS IN THE WORLD—NOW PRESENTED IN
a Complete Kit for every soldering job

At last—you can buy a complete range of Multicore Solders enabling you to do perfect soldering on your equipment, for only 2/-! The Multicore Solder Kit contains two specifications of Ersin Multicore Solder and two of Arax Multicore Solder, providing the right solder for all radio, television and electrical work, as well as for ordinary metals, soldering chassis construction, etc. Your workshop is not complete without the Multicore Solder Kit—the finest two-shillingworth on the market.

The Multicore Solder Kit contains a carton of each of the following specifications:

- Ersin Multicore Solder 4 ft. 60/40 alloy 18 S.W.G.
- Ersin Multicore Solder 3 ft. 40/60 alloy 16 S.W.G.
- Arax Multicore Solder 4 ft. 60/40 alloy 18 S.W.G.
- Arax Multicore Solder 3 ft. 40/60 alloy 16 S.W.G.

These specifications, as well as other gauges of the same alloys, are also available for larger users in Ersin Multicore Size Eight Cartons, price 5/- each.

MULTICORE SOLDERS LTD., Mellier House, Albemarle St., London, W.1. REGent 1411
"THE RADIATING SYSTEM
IS THE MOST IMPORTANT FACTOR IN THE EQUIPMENT CHAIN."
S.W. Magazine, Editorial, July.

And efficiency is combined with economy when you invest in a G.S.V. Lightweight Beam Aerial Array. Come along to our stand No. 5 at the R.S.G.B. Amateur Radio Exhibition and see for yourself why G.S.V. aerials have been supplied to G.E.C. Ltd., Decca Ltd., Pye Telecommunications Ltd., Murphy Radio Ltd., G.P.O. Engineering Dept., P.O. Radio Laboratories, Burndeat Ltd., P.O. Telephones, English Electric Co., Ltd. for a diversity of applications throughout the world. Among the most popular standard amateur arrays available for immediate delivery are:

- BFD328 28Mcs. 3-element folded dipole, 80 ohms, £5/10/0.
- BT328 28 Mcs. 3-element T-match, 300 ohms, £5/10/0.
- BF444 145Mcs. 4-element folded dipole, 90 ohms, £8/17/6.

DUAL ARRAY, 14 and 28Mcs. 3-element beams mounted on a lattice cradle with detachable outriggers, £26/0/0.

MINIBEAM. 28Mcs. 2-element Delta-match, £5/19/0.

And, for television, the most compact high-gain, broadband three-element folded dipole array is the TVTL, which works wonders for just £6/0/0.

! ! THIS MONTH'S SPECIAL OFFER — BENDIX TRANSMITTERS TYPE T.A.12 ! !

A 4 BAND Tx. Line up — 4 switched V.F.O.'s. Using 12 5K7's, into a ganged 807 doubler, feeding a pair of 807's in parallel as a P.A. Completely band switched with 3000 degrees of spread on each V.F.O. Send/receive aerial change-over relay incorporated.

The PA Stage Coils have been stripped of wire by the Ministry, and generally damaged, but are complete up to the grids of the P.A., except for one RF Choke. An electro-mechanical clutch and motor is provided for remote band change. These units are in fine condition and less valves. A real snip at the price 19½ carriage paid. Circuit available 1½, post free.

INDICATOR UNIT TYPE 62. The well known unit for television or oscilloscope conversion. Contains VCR97, C.R. Tube, 11-VR65's, VR45, EA50 valves, numerous pots, resistors, condensers, etc. BRAND NEW. A Gift at £3/19/6 plus 1½ carriage.

EDDYSTONE TYPE GROOVED COIL FORMERS and BASES. Both in Ceramic (6-pin), 2½" dia., 5" long. Ideal for QRO Rigs or Aerial Couplers. Price 6/- the pair or Bases only at 3½ each.

100 Kc/s CRYSTALS (General Electric, USA) in pairs type 12¾ each.

ADJUDICITY RECEIVERS. TYPE B36, as previously advertised, 12 only available. Less valves at 8½/19½ carr. paid.

All mail orders to NEWPORT please. Under 10/- please add postage.

P.M.G.
CERTIFICATE
NEXT EXAM—MAY '51
PREPARE NOW by taking our special POSTAL COURSE. Many former students testify that our tuition was invaluable in ensuring their success in previous examinations.

A former Student writes:

"...I passed the "Amateur Radio" examination held last May, and would like to thank you very much for the help that I know you posted course gave.
At the examination, after reading the paper through, and before starting to write I knew your lessons had dealt with all the questions." Student, 30,487

Moderate Terms. Facilities for easy payment.

Valves. 607GT. 6/6; V965 EHT rectifiers, 5kw 10ma, 6/6; 9001, 9002, 9003. 5/-; 6L7, 7/6, 954, 955, 3/6; 6V6, 6CB, 807, 5UG4, 5UG5, each; 155-154, 6/6, 174-185, 7/6. Y63 Tuning Eyes 8½/6, 9/6, 5AG5, 8/6; 6LG10, 15/- each. All post paid. 6SH7's better than EF50's. 4/.-

Selenium Rectifiers. H. W. 250V 60mA, 4/-; 120mA, 6/6; 120A, 6/6. F.W. 6 or 12v 1.5A, 10/-; 12A 25/- Postage 6d. on each.

New and Boxed P.M. Speakers 6½", 12/6 each, plus 1/- post.

£16", 15/- each, plus 1/- per each.

New IN34 Crystal Diode Cartridges, 5/3.

Post paid.

Type R359 Receiver Power Pack. In grey steel case 8"x9"x6½", contains two separate complete power units with outputs of 390v at 80 mA and 300v at 60mA. Each with 6.3v 3A LT. Price £4/12/6.

Mains Transformers. Input 200/240V, output 6.3V 1.5A, 7/6. Post 9d. 4v 8A, 25/-; post 9d. 300V 0.05A, 5/-; 5v 2.5A, 21/-, also 350-350v, at same price, post 1/-.

Special 220v or 6v 4A, 6/6. Post paid.

Multi-Ratio Output Trans., 30 watts, 25/-, post 1/-.

New Miniature Condensers, in all, cans, 450v 8 mfd., 3/6; 16 x 8 mfd., 8 x 8 mfd. and 32 mfd., 36 x 16 mfd., 4/10 each. Post paid. 32 x 32 mfd., 35/-.

TUP9B Units. Complete in black crackle cases, 17/6. Carriage paid.

New 0-500 Microammeters, 2½ .500 ohm internal resistance, 7/6 each. Post 6d.

M/C Microphones, 5/- Post paid.

Trans., to match 5/6. Post paid.

RP24 Units. Converted to 28 mcs band, variable tuned with 100-1 geared SM. dial. Complete with plug and leads for immediate use. £2/5/- Post paid.

New Army Morse Keys, 2/10, post paid.

Army Morse Key & Buzzzer Set, 4/10, post paid.

Army Morse Key and signalling lamp sets in metal case, 8½ x 6½". 10/- Post 1/-.

Please Note— All Crystal Microphone and Pick-up inserts have been sold.
THE NEW 1355 CONVERSION!

RADIO EXCHANGE, WHO GAVE YOU THE 65 TELEVISOR NOW PRESENTS, FOR THE FIRST TIME, THE COMPLETE TV SET—SOUND, VISION, TIME BASE AND POWER PACK—ON ONE 1355 CHASSIS. LONDON is now available, price 3/- per copy, whilst we hope to have data ready for Birmingham within the next month. REMEMBER ... our conversion system requires NO expensive RF units. New 1355's, in original cases, complete with 11 valves—55/-.

POWER UNIT S41B. With separate and individually controlled HT and LT transformers, these provide 300v at 200 m.A DC, 12v 3A AC and 5v DC bias supply. In attractive grey cases measuring 14" x 7" x 7", they are fully fused and complete with HT and LT indicator lights. NEW and BOXED, 65/-. RECEIIVER 3547 with 15 EFS0's, 8 other valves, bridge motor and hundreds of components, these are NEW and BOXED, and complete with "Pye" 45 m/c strip. ONLY 66/7.6.

AMPLIFIER 1135A. Twin input, with EBC33, EK31 and 35, measuring 3" x 3" x 6", ideal for small PA, or Modulator. OUR PRICE, complete with "10 min. conversion data," 17/6.

CONTROL UNIT 214. In sealed maker's cartons, with 3 EFS0's, 2 E834's, one DI, 39 radio valves, 4x 3.5v, 5 condensers, 2 pots, Yaxley switch, heavy toggle switches, etc. 19/6.

PHOTO-CELL MULTIPLIERS. Useful for Facsimile, flying spot TV, Photo electric measurement, burglar alarms, etc., these have a stage gain of over 1,000,000! Supplied complete with bleeder network, and 3 valve amplifier, and operating data. Equivalent to 27M1 (Mazda), ONLY 30/-.

RECEIVER 21. Supplied complete with vibrator pack, covering 4.2-7.5 and 18-31 mc/s. These may have slightly damaged switch spindles (NOT wafers) and/or toggle switches, but are otherwise perfect. ONLY 37/6 complete.

SERVICE DATA.

100 service sheets, covering British receivers which have been sold in big quantities, and which every service engineer is ultimately bound to meet. The following makers are included: Aerodyne, Alba, Bush, Cossor, Elco, Ever-Ready, Ferguson, Ferranti, G.E.C., H.M.V., Kolster Brandes, Lissen, McMichael, Marconi, Mullard, Murphy, Philco, Philips, Pye, Ultra. Undoubtedly a mine of information invaluable to all who earn their living from radio servicing. Price £1 for the complete folder.

OUR folder No. 2 consists of 100 data sheets covering most of the popular American T.R.F. and superbhet receivers " all dry " etc., which have been imported into this Country. Names include Sparton, Emerson, Edimiral, Crossley, R.C.A. Victor, etc. Each sheet gives circuit diagrams and component values, alignment procedure, etc., etc. Price for the folder of 100 sheets is £1. Post free.

FOR YOUR LABORATORY.

YOU many times have felt the need of a device which would enable you to put resistance or capacity or a combination of these two quickly into a circuit. We have a small quantity of resistances and capacity boxes which, by the simple manipulation of plugs, will enable you to do this. With these boxes you can put in 1 ohm, 2 ohms, 3 ohms, 4 ohms, and so on, in steps of 1 ohm, right up to 6,000 ohms.

In a similar way capacity can be put into circuit by small amounts, thus making it simple for you to find optimum working conditions. These boxes, made for Government Laboratories, are available while they last at 19/6 each plus 1/6 post and packing. Don't delay—order by return.

COMMUNICATIONS RECEIVERS.

THIS is the communications receiver type No. R.1155 which is one of the finest communication sets ever made. Designed by leading engineers and made by one of our famous Companies, this receiver will undoubtedly give you years of good listening. Most readers will know it fairly well. The receiver covers the broadcast bands, long waves and medium waves, and short waves up to 20 m/c/s. It contains 10 valves and really brings the stations in. Prices: 86/10/0 for a good complete receiver; 87/10/0 for same grade receiver tested and re-aligned; 88/15/0 for unused receiver; or 89/15/0 for unused receiver tested and re-aligned. All plus partly returnable packing case deposit and carriage charge of 10/-.

PLUG AND SOCKET.

THIS brass cased plug and socket is extremely robust and ideal for P.A. or outside work. Ideal also for taking power to units as it insulates the ends of the wires. Contacts are quite suitable for carrying up to 10 amps, so this can be used for lighting or power. Price 2/6 per pair.

THIS MONTH'S SNIP

Lowest priced TV. parcel yet offered! This comprises an ex-Govt. unit which among a host of other parts contains 11 6.3v valves and an excellent wide bandpass I.F. strip. With this we give without extra charge all the data showing how a really good TV. receiver can be made using this unit. Extra parts are needed of course but with the main unit at this low price the total cost should not exceed £10. Price for the unit compiled with the 11 valves and the data is only 22/6, plus 2/6. Send today or you may miss this bargain.

Orders under £2 add 1/6, under £1 add 1/-. Postable items can be sent C.O.D. Additional charge approx. 1/-. Good stock of all items at time of going to press. List 6d.
