EXCLUSIVELY FOR THE
RADIO EXPERIMENTER &
TRANSMITTING AMATEUR

VOL. VIII  No. 10  DECEMBER 1950
XTALS. The complete Xtal Kit in sealed cartons for the SCR 536 (BC611) Walkie Talkie. 14 xtal in all with 14 coils, 7 osc. and 7 final covering the complete freq. range of the unit. There are 7 x freq. and a further 7 xtras spaced 453 kc for the receiver. All are in Ft 243 holders with 5/8 pin spacing. The complete range is as follows: 3858/4040, 4080/4545, 4280/4735, 4397/4852, 4840/5285, 5287/5782, 5437/5892 kc. The complete kit including coils 56/- post free. Set of 14 xtras less coils, 48/-, set of 14 coils, 8/-. Any pair of xtras 6/-, with the exception of 3272.5 and 3292, these 7/6 each. All xtras are by leading House.

XTALS. 3.5 Mc Band any spot freq., 15/-. XTALS. F. A partial complete range 450 kc to 500 kc any spot freq., 3/4 Ft 243 holders, by Western Elec. at 12/6 each.

FOR 144 Mc. Any freq. 8000 kc to 8110 kc Ft 243 fitting at 15/-. A few Bendix 3/8 pin spacing 8007.68 kc at 12/6.

FOR 26 Mc. Any spot freq. from 7 Mc to 7500 kc at 12/6, with the following specials. 7200, 7225, 7250, 7275, 7500, 7325, 7650, 7475, 7450, 7400, 7475, 7500 kc at 7/6 each or 72/- per package.

FOR 7 Mc. 6000 kc to 7300 kc any spot freq. at 12/6, with the fone band specials as above.

16 Mc. No less for 144/ 8600 to 8083 kc any spot freq. at 12/6. Ft 243 holders.

FOR 21 Mc. 5250 to 5250 kc any spot freq., 70/-.

TO BAND. Double, 850 kc to 863.5 kc and 937 to 1083.5 kc, Ft 243 holders, by Western Elec. Proline harmonic generators. Plated type, spot welded contacts, mounted in air gap, at 5/- each. To Commercial users and others. A complete range available from 2 Mc to 9 Mc in either for 9 kc holders. The entire range by: RCA, Billee, Valpey, Stand, etc., and all leading American manufacturers. Quantity quotations are available on request. Export enquires invited.

VALVES RX AND TX. All are brand new in sealed cartons, and carry our full guarantee. 6L6gt 2/6, 24/- per doz. 813 27/6, 805 12/6, 832 11 7/6, 866/8660 10/6, H.K. 32 3/6, 860 17/-, 858 15/-, 850b 22/6, VU, 508 Vac rectifier 4v Fil. 250v at 125 mills 8/-. 807 RCA 6/-. 40/- doz. 985, 1025 4/-, 6L6g, 1922, 813, 8/-. 6AG7, 6SG7, 6AG8, 6C4, 114, 1R5, 6L7, 7/6. 524, 67, 6N7, 73A, 75A, 807, 6X6, 6AC7, 6H3, 680, 805, 805A, 6H4, 6R7, 6L7, 6X5, 65C5, 65C5, 65E, 65H7, 65R7, 65S7, 9001, 9004, 7Q7, 12C8, 125K7, 125G7, 125H7, 125I7, 48/-. VCR 32 3/6, 100th at 30/-.

BLEEDERS. 50 watt/100 watt, per doz., well assorted.

POWER UNIT. Type 247. Input 230/30cV, Output 500v at 300 mls plus 6.3v 3 amp. In grey steel ventilated cases. £3 19/- 6d, carr. paid.

MODULATION TRANSFORMERS. R.C.A. P.P. 805 to P.P. 813s, 60/-, carr. paid.

COLLINS RX/TX, TCS/8. Brand new, crated Freq. range 1500 kc to 12000 kc nominal 50 watt, with two 1828's in final. 7 valve S/H. Rx requires power supply. 8/- carr. paid.

HERMTADOR. 400 watt. Pri. 6,700 ohms et. Sec. 4,500, 5,000, or 5,500 ohms, 7" x 6" x 5". Porcelain standoffs, and completely at 50/-. Woden, U, M, 3, or 4, immediate delivery from stock.

PLATE TRANSFORMERS. Thermador, Primary 210/250, 50 cV, Secondary 14200/1420/1725/2280 at 800 Mills. Porcelain standoffs. Sec. test volts 6,000. In original sealed cases. £6.3/6, 8/- 30/- carr. paid.

VALVE HOLDERS. Complete all. Ceramic. Octal 1/-, 10/ -doz. 807/1 13/12, 13/12. British 5-pin 1/-, 10/- doz. Ditto 7-pin 4/- doz. Johnson UX lock-in 4/- Ditto. Jumbo 6/-, 813 6/-.

AUTO TRANSFORMERS. Woden 100 watt, 20/-. Met-Vick 500 watt completely screened in separate metal case with knock-out entry. 30/-.

EX-Admiralty 3 kva £2.21 49.5.

FILAMENT TRANSFORMERS. RCA. Input 230/30cV Output 10v. ct twice for a pair of 813s, terminal connections, and completely screened, 25/-. THERMADOR. Input 230/30cV Output 10v. ct 10 amp plus 10v. ct 8 amp potted, completely screened at 30/-. 110v Filament Transformer. Suitable for a complete Tx, Input 230/30cV, Output 7 amp. for a pair of TX40s, 7v for similar final, 4v. 6 amp for rectifiers, 6.3 v. 6 amp. 3.5 v. 6 amp at 28/-. SMOOTHING CONDITIONERS. TCC etc., 4mf 200v, wkg 5 x 5 x 5, 5/- ditto 4mf +/2mf 2000v, wkg 2 x 5 x 7/6, Kellog 4.5 x 4 + 2 + 1 mix 680v wkg in brown crackle case with Dues lid, conditioner detachable from case, 7/6. 10mf 1000v. wkg 5 x 9 x 4 5/-. MICA BI PASS. 350/1000v. wkg 100 assorted, about 10 values, all normal sizes at 10/- per 100. Bakedite cased Cornell-Dubilier, Solar, etc., 005 8000v wkg, 6/- doz. 001 500v wkg, 2/-, 250v. wkg doz. assorted 10/-. BENDIX. TA-12C. The well known Tx with four channel Oke. 807 buffer, and power transformer. In the final, the note of this Tx is equivalent to Xtal, and is easily modified to a 4 switched Amateur bands. Complete with valves. £2.4.

R.C.A. ET 4336 H. Tx. Freq. coverage 2Mc to 20 Mc. 6ft. rack and panel. Weight 4 cwt. Input 230v 50 cy. Line up is an 807 driving a pair of 813s, modulated by a pair of 805. Complete with all valves including 4 866 Rectifiers. New and unused in perfect condition. A speech Amplifier is required, giving approx. 50 watts, to drive the 805s, the input circuit of which is for 500ohm line. Suitable Plate Transformers are available 60/6- anodes to 500 ohm line for use in constructing a speech amp. Offered at the nominal price of £60 complete above, carr. paid.
An inexpensive yet precision instrument designed especially to meet the exacting needs of the modern service engineer and laboratory technician. With 6 frequency ranges covering 50 Kc/s. to 80 Mc/s., its accuracy is better than ± 1% of the scale reading.

50 Kc/s. - 150 Kc/s. 1.5 Mc/s. - 5.5 Mc/s.
150 Kc/s. - 500 Kc/s. 5.5 Mc/s. - 20 Mc/s.
500 Kc/s. - 1.5 Mc/s. 20 Mc/s. - 80 Mc/s.

Scale sub-divisions provide more than adequate discrimination for use in television circuits. Note the starred features below, which combine to maintain a minimum signal of less than 1µV up to 20 Mc/s and less than 3µV between 20 Mc/s and 80 Mc/s.

**OUTPUT**
Coaxial socket for attenuated output. Force socket located totally within H.F. compartment.

**MAINS TRANSFORMER**
Marked according for inputs of 100 - 130V and 200. - 260V., A.C. 50/60 c/s.

**CAST ALUMINIUM H.F. COMPARTMENT & CHASSIS**
Large number of fixing holes for H.F. compartment cover ensures excellent electrical bonding and good screening.

**FUSE**
Easily accessible when replacement is necessary.

**VALVES**
Standard types run at a rating to ensure long life.

**TURRET COIL SWITCHING**
Standard "AVO" practice.

**ATTENUATOR SYSTEM**
Employs close tolerance, high stability midget carbon resistors, low reactance rotary potentiometer modified for H.F. operation with carefully designed screening.

MAINS MODEL 100-130V. and 200-260V. A.C. 50-60 c/s. £124
BATTERY MODEL £124

Other features include —

**ILLUMINATED SPOT RANGE SELECTOR**
Gives rapid identification of operational band with intensified lighting around precise frequency. Fine hairline gives close discrimination, particularly on high frequencies.

**STOPS**
Separate stops prevent turning of dial with respect to condenser.

**MAINS FILTER SYSTEM**
This is screened from main electrical assembly.

**BUSHING PLATES**
Provide additional rigidity for rotary controls.

**SLOW MOTION DRIVE**
Substantially free from backlash.

**SURPLUS CONVERSION MANUALS.** Giving much detailed practical information on the adaptation of a wide range of American surplus items. Well illustrated with circuit diagrams, drawings and photographs. In two vols. Immediate delivery. 21s. Post 5d.

**HINTS & KINKS.** Useful collection of technical ideas and practical workshop data, written up in shortened form. An A.R.R.L. publication. Immediate delivery. 11s. Post 5d.

**RADIO AMATEUR NEWCOMER.** As its title suggests, a very useful handbook for the beginner in Amateur Radio. Though American in outlook, it covers much that is common ground on both sides of the Atlantic. Immediate delivery. Post free 8s. 4d.

**POST WAR COMMUNICATIONS RECEIVER MANUAL.** Gives essential data on a wide range of modern American ground, air and communications type receivers. (See p. 571 October SHORT WAVE MAGAZINE for fuller details). Post free £1 8s. 4d.

Suppliers of Technical Books and Publications to Schools, Universities, British and Colonial Government Departments.

Any American Radio or Technical Publication Supplied. Ask for our Quotation.
Every Morse transmitting operator should have one of these Keys. It will enable you to send faster than you would probably ever send otherwise—and with effortless ease. You can send for hours without feeling strain. Dots are sent automatically by side pressure, dashes by reverse side pressure. Has a really beautiful movement. Short circuiting switch, heavy die cast housing, holes for screwing down, rubber feet. Cat. No. 669, £3/17/6

EDDYSTONE 145 Mc/s BEAM AERIAL

To ensure best results 145 mc/s transmission and reception you should use this Eddystone 145 mc/s four-element Beam Aerial. Provides high gain and excellent matching into 72 ohms feeder. Adjustable elements. All brass construction. Compact and efficient. Cat. No. 717 ... ... £4/7/6
Mounting Plate. Cat. No. 762 ... ... 10/6

Available from Stratton & Co. by return through any Eddyestone Agent.

STRATTON & CO. LTD., WEST HEATH, BIRMINGHAM, 31

TELCON RF CABLES
Contribute to the efficiency of MODERN RADIO TECHNIQUE

A complete range of co-axial and balanced twin-screwed and unscrewed TELCON Cables is available for the reception and transmission of radio frequencies up to the centimetre range. In all of these "TELCOTOCHENE"* is employed as the dielectric with "TELOVIN" as a protective sheathing. "TELCOTHENE" insulated "hook-up" wire and sleeving in all sizes are also produced. Full technical data is contained in the Telcon R.F. brochure.

THE FINEST CORED SOLDERS IN THE WORLD—NOW PRESENTED IN

a Complete Kit for every soldering job

At last—you can buy a complete range of Multicore Solders enabling you to do perfect soldering on your equipment, for only 2/-.

The Multicore Solder Kit contains two specifications of Ersin Multicore Solder and two of Arax Multicore Solder, providing the right solder for all radio, television and electrical work, as well as for ordinary metals, soldering chassis construction, etc. Your workshop is not complete without the Multicore Solder Kit—the finest two-shillingsworth on the market.

The Multicore Solder Kit contains a carton of each of the following specifications:

- Ersin Multicore Solder 4 ft. 60/40 alloy 18 S.W.G. Arax Multicore Solder
- Ersin Multicore Solder 3 ft. 40/60 alloy 16 S.W.G.
- Arax Multicore Solder 3 ft. 40/60 alloy 16 S.W.G.

These specifications, as well as other gauges of the same alloys, are also available for larger users in Ersin Multicore Size One and Arax Multicore Size Eight Cartons, price 5/- each.

THE FAMOUS

'R.C.A. TRANSMITTER ET4336B.'

THIS MAGNIFICENT PHONE AND C.W. TRANSMITTER IS COMPLETE IN ONE TOTALLY ENCLOSED RACK AND INCLUDES AERIAL TUNING PANEL

TUBE LINE UP : 807 C.O./Buffer. Two 813 P.A. Two 805 P.P. Class B Modulator. Four 866A Rectifiers.

CONTROLS : Manual or Remote.

POWER OUTPUT : Normal 350 watts phone, but with the fitted QRP SWITCH output is 100 watts.

FREQUENCY COVERAGE : Normal 3.5 to 18mcs but by doubling in final, excellent output may be obtained on 28mcs.

FREQUENCY CONTROL. THE TRANSMITTER HAS A DETACHABLE FRONT PANEL FOR INSERTION OF WILCOX GAY V.F.O. OR CRYSTAL MULTIPLIER.

ALL YOU NEED TO GET GOING IS THE INSERTION OF VALVES, CONNECTION TO MAINS AND AERIAL! 20 page manual and circuit diagram with each equipment.

EVERY INSTRUMENT IS AIR TESTED AND GUARANTEED PERFECT.

DELIVERY FREE ENGLAND including CRYSTAL MULTIPLIER AND ALL VALVES.

PADdington 1038/9
0401

PHOTO-CELL MULTIPLIER AMPLIFIER UNIT COMPLETE. Incorporating 32, 12, 3 valves type 6AC7 6AG7, etc. etc. Can be adapted for use in wireless lighting or for making foreign bodies in liquids, tests in textiles, burglar alarms, circuit switching, by relays, etc., etc. Panel size 9 x 4 1/2. Circuit diagram not available. Price 12/- complete, post free.

MIDLOTT 9005 mfd. TWO GAGAN TUNING CONDENSERS. Size only 2 1/4 x 1 1/4. Capacity guaranteed, standard length 1 1/8th complete with mounting bracket, less trimmers, 6/-, or complete with "built-in" trimmers 7/6 each, plus 6d. post.

EX-GOV'T. VALVES. The following brand new and guaranteed valves are in stock : E971, ER106 685 at 12/-, 6A5 at 10/-, 6F7, PXN400, BD4 metal, at 10/- each. 26A60, 7VT9A, 6K5, 6N7/27, BP50, BD5, R 37, WU4, V1112, V1123 T14, T1, 5AK7U, 11A3, 6AG7, PW242, all at 7/- each, 5J1, MI14, 6K7GT, 6K7MT, M1A, 12647, 12847, 86A7GT, 6137GT, 6137T, 506, 660, 66V6, or GP, 7C7, 7C8, 7C10, 7C12, 1299A, 1299B, VP51 P2, 12AG, 602, 6PN, ERC55, ERC74, ERC75, E115, E116, 6XT5, T2, 6A7, 6S5, 7B, 7W9, 6093, INS1T, GJ13T, G35, KTW37, DH61, S35, T929, VP98, 12U3, E5, T9, SE9041 2ID6/1BT, MQ26EN, all at 6/- each. Also 1002 and 11537T, 9/6, 872, 24, 45, 84, 1296, 633, 919, 634, 125 each, 2/- 6/- at 2 8/- only. And the unheard range of 1-battery valves T41 and T43, at 7/-, 8/-4 at 9/- each. Most of these valves are boxed.

RECEIVERS. Westinghouse 300 new. Ex-Gov't., 7/- each. Westinghouse 4500 107B at 25/-, 174A, 26 E99 107B. THE "MONTROSE" MULTIMETER. By Taylor Electrical Test unmistak Ltd. Moving iron, robust, moulded case, simple, for home or workshop. Ranges, 0-6-0-15-0-300V, 0-20 ma, 200 ma-3A, A.C. and D.C. A 1 5v battery is fitted internally, for circuit tests. Size 3 2/5 x 2 1/2 x 1 1/2" thick. Weight 7 oz. Price ony 4/- only. All orders in strict rotation.

POCKET VOLTMETER. Ex-Gov't. Two range 0-15v, 0-300v, D.C. Brand new and complete in web carrying case, only 12/-.

SKY ELECTROSTATIC VOLTMETER. 0-5KV, panel-mounting. 91/- scale, brand new, 5/- each.

SANGAMO-WESTON, Ex-Gov't. 0-1 mA, Mv. meters. 21/2 panel-mounting. Absolutely brand new, 15/- each only.

MICROAMMETER. 0-500 microa, 2" scale, moving coil, panel-mounting, 7/- each.

RECEIVER TYPE 25. The receiver portion of the T/R 119E. Covers 14-675 Mc/s and makes an ideal basis for an all-wave receiver, or "Practical Wireless", August, 1945, issue. Complete with valves types EP36/2, EF (2) ER32 and ERC10. Supplied complete with necessary conversion data for home use. Only 22/6, Chase only 8/6.

SPECIAL COIL PACK OFFER. Limited quantity of brand new manufacturers' surplus, 3-wave band coil packs. Iron cored, size 4 x 41/2 x 2" deep. Complete with circuit, a bargain at 25/- only.

SPECIAL VALUE IN MAINS TRANSFORMERS. Parmeko-250-0-250, 30 ma, 6-25v, 5v 2a, half shielded, drop through type. Electrostatic screen. Price 15/- only, plus 6d. post. Limited quantity.

DUAL PURPOSE MAINS TRANSFORMERS. Special 3000-8- 250v A.C. 250v D.C. 500-250v A.C. 50v D.C. Output 500v A.C. and 250v D.C. Price complete with leads, 6/- each. Top chassis mounting, and fully guaranteed. Price (plus 9d each), only 15/-.

BAKELITE RECEIVER CABINETS. An extremely advantageous purchase, enables us to offer the following:— Attractive brown bakelite cabinet, size 15 x 81/2 x 71/4, complete with chassis drilled for standard five-valve superhet, back, 3-wave glass dial and back plate. Chassis and cabinet are designed for 6P1 speaker, and all standard components. Price complete is 25/- only. Limited quantity.

I.P. TRANSFORMERS. Manufacturer's surplus. Iron cored, 455 Kva. Size 4 x 14 x 15". Pair 8/-5. Whilst they last!

ES315 I.F. STRIP. A complete I.F. unit, comprising 6 SP1 I.F. stages, tuned to 13-5 Mc/s, 1 EAS0 diode detector and, 1 EP36 or EP38 output of video stage. A few modifications only are required to adapt this unit which will give pictures of extremely good quality, complete with lines, and fool-proof modification instructions, is 45/- plus 5/- packing and carriage. Limited quantity only.

ES437 RECEIVERS. Absolutely brand new, in sealed manufacturer's packing cases. Incorporating 12 valves type EP36, 2 of SP61, EP68, KBC33, 3 of EB43. Complete 45/- Mc/s. I.P. Brinn, motor, dial and drive, potentiometer, 25/-, only 10/- packing and carriage. Whilst they last! 6/- TRUVOX WAFER SPEAKERS. Special offer of the above well-known speaker listed at 25/- Limited quantity available, brand new at post free, 18/-.

VERY SPECIAL. HF/2000 EHT pencil rectifiers, brand new, 2-400 v 3-ma, only 15/- each.

ALSO. The very latest alder polo, as used in all the latest T.V. receivers. Bank of, comprising 2 of 10K, 1 each of 100 Ohm, 500 Ohm, only 5/- complete. Not repeatable.

FREQUENCY CONTROL CRYSTALS. By American G.B. Octal base fitting. Following frequencies only: 2-500 Kc/s, 3-500 Kc/s, 4-500 Kc/s, 6-200 Kc/s, 8-125 Kc/s, at 7/- each only. NEW CONDITION.

WAVE-FORM GENERATOR TYPE 34. By A.M. Including 6, EP1, 4 EP6, 2 EB43 and one C118. Also relays, transformers, pots, condensers and resistors. The whole contained in metal box size 11 x 11 x 6. In clean condition, an absolute bargain at 25/- plus 5/- packing and carriage.

A.M. RECEIVER UNIT TYPE 161. Complete RL37, 2 EP42 and EC242. Coils, relay and many smalls are and resistors. The whole in metal box, size 8 x 4 x 2.5." New, a bargain at only 15/-, carriage paid.

"DENCO" ALIGNMENT OSCILLATOR D.A.O.L. This unit provides a modulated signal for the alignment of I.F. amplifiers and associated circuits. The two standard frequencies of 665 kcs and 1600 kcs are selected at the turn of a switch. All supplies are derived from one U.10 cell and one 1399 battery inside the unit. Consumption of 20 mA single valve type DI52 is used. Dimensions of case: Width, 31", depth 2", height 4 1/2". Price, post free, only 39/-.

INDICATOR UNIT 198. Although we were unfortunately compelled to refund cash to many of our customers who ordered this unit at 35/-, we are pleased to state that we now supply a further limited quantity, absolutely brand new, at 45/-, carriage paid. May we suggest that you order early and avoid disappointment.

Our Reputation is Your Guarantee
AERIALS FOR ALL FREQUENCIES AND APPLICATIONS

Fully illustrated descriptive literature dealing with each aerial in our comprehensive range of amateur, commercial and television arrays is now available, and will be sent upon request. Among the most popular standard amateur arrays available for immediate delivery are:

- **BFD228 28Mcs. 3-element folded dipole, 80 ohms, £5/10/0.**
- **BT228 28Mcs. 3-element T-match, 300 ohms, £3/17/6.**
- **DUAL ARRAY, 14 and 28Mcs. 3-element beams mounted on a lattice cradle with detachable outriggers, £26/0/0.**
- **MINIBEAM. 28Mcs. 2-element Delta-match £3/19/6.**

And, for television, the most compact high-gain broadband three-element folded dipole array is the **TVTL**, which works wonders for just £6/0/0.

G.S.V. (Marine & Commercial) LTD

395, HIGH STREET, CHATHAM, KENT.

Telephone CHATHAM 3253/4.

**SOUTHERN RADIO'S WIRELESS BARGAINS**

- **R.3515 TELEVISION UNITS.** 21 valves with 6-stage 14 m.c. I.F. strip, recommended for ideal T.V. conversion by all experts. Brand new in original wooden cases. £3/18/6.
- **R.1355 RECEIVERS.** Brand new and unused, as specified for Inexpensive Television. £3/5/6.
- **T.R.1196 6-Valve superhet receivers.** Perfect and guaranteed. With circuit. 22/6, plus 1/4.
- **CONTROL CABLES, 14 ft., with adaptors or B.C.453/4/5.** 9/6 each.
- **R.A.F. BOMBSIGHT COMPUTERS.** Complete, brand new, with motors, gyro gears, blowers, etc., etc. Ideal for model makers, etc. The best component value ever offered. 55/- each, plus 5/-.
- **LUPBRA HOLE CUTTERS.** Adjustable from 8" to 31" for use on wood, metal, plastics, etc. 5/6.
- **CONTACTOR TIME SWITCHES.** By Smith or Venner, 10-hour movement with thermostatic control. 2 impulses per second. Complete in sound-proof case. £10/-, plus 1/4.
- **HAND GENERATORS.** 6 volts at 5 amps. Complete with crank. £20/-.
- **RADIO COMPASS INDICATORS, with internal Selsyn motor.** 3" dial, 13/6; 5" dial, 15/6.
- **INVERTER UNITS.** Type (PE 206A) 206-A D.C. input 27 volts at 38 amps, 6000 r.p.m. A.C. output, 80 volts, 800 cycles. Complete brand new with spares. £3/10/0 each.
- **CHANCERY LONG PLAYING ATTACHMENT G33.** For using L.P. Records on radiogram or Record Player with high fidelity Decca Pick-up, £4/17/6 plus 5/-; carriage and packing.

SOUTHERN RADIO SUPPLY LTD.

11 Little Newport St., London, W.C.2. Gerrard 6653
Experimenting with T.V. Transmission?

If so, you will need receivers of extreme sensitivity at the minimum cost. Radar receivers, designed for this purpose, and precision built regardless of cost are your best bet, and as releases by the Ministry of Supply are lessening you should obtain your equipment without delay. Below are several items we can supply now, many already well known to "Hams," but of course we cannot say how long stocks will last.

RECEIVER R.1355. Has five stages of IF with diode detector. Complete with 8 valves VR 65, and 1 each SU4G, VU 120, VR 92. Unboxed, but NEW and UNUSED. ONLY 55/- (carr. etc. 7/6).

RF UNITS for use in the above receivers comprise the RF, Mixer and Oscillator sections. Type 24 covers 15-30 mcs, type 25 30-45 mcs. These are complete with valves, and are slightly used, price 17/6 each (postage 1/6). Both New 24s also available 25/- (plus postage 1/6).

I.F. STRIP 194. Has six stages of IF with diode detector. A most sensitive strip which is easily modified. Complete with 9 valves VR 65, and 1 each VR 53 and VR 92. NEW and UNUSED. ONLY 45/- (postage, etc. 2/6).

RECEIVER R.3547. Contains the well known "Pye" IF unit, 45 mixer, I.F. Strip, and 18 valves EF50, 3 of EB34, 2 of SP61 and 1 each EA50, EBC53, EF36. NEW and UNUSED IN MAKERS CRATES. ONLY 120/- (carr. 7/6).

RECEIVER R.3084. A very sensitive unit containing 7 valves EF50, 2 EF54 and 1 each VU89A, HVR2, EA50, and a 30 mcs IF Strip with 4 mcs bandwidth. NEW and UNUSED IN MAKERS CRATES. ONLY 75/- (carr. 7/6).

RECEIVER ZC 8931. A 10 valve 14 metre superhet containing 6 JFT's of 12 mcs with 4 mcs bandwidth. Complete with 6 valves SP61, 2 SA5AS, 1 each RL7, RL16. NEW and UNUSED IN MAKERS CARTRONS. ONLY 59/6 (carr. etc. 5/-).

INDICATOR UNIT TYPE 6. Contains a 6" VCR 97 CF Tube, 4 valves EF50 and 3 of EB34. NEW and UNUSED IN MAKERS CASES. ONLY 90/- (carr. 7/6) and to finish.

THE CLASS D WAVEMETER. Another small quantity have become available since our sell out last December. Recommended and reviewed in the "Bulletin" this is an essential for all who require a first class crystal controlled wavemeter. Covers 1.8-9.0 mcs and is complete with 100/1,000 kcs dual crystal, 1 valve ARTH2 and 1 valve valve. Designed for 6v DC operation, but modification for AC supplied ONLY 79/6 (postage 2/6). Transformer for AC modification. 7/6.

Cash with order please.

Print name and address clearly.

U.E.I. CORP.
THE RADIO CORNER

(Phone Terminus 7937)

Open until 6 p.m. weekdays, 1 p.m. Saturdays.
We are 2 minutes from High Holborn (Chancery Lane), 5 minutes from Kings Cross by bus.

HIGH SENSITIVITY

Because of their high Sensitivity the S. G. BROWN Type "F" (Featherweight) Headphones are a popular choice by all requiring efficient, long & dependable service.

TYPE "F"

D. C. Resistance 4,000 ohms. Impedance 14,000 ohms at 1,000 c.p.s. Sensitivity 8 Dbs below 1 microwatt per bar.

Weight 9 ozs.
at 1,000 c.p.s.

Send for Brochures, it gives details of all types of S. G. Brown headphones.

S. G. Brown, Ltd.
SHAKESPEARE STREET, WATFORD, HERTS.

Superb Bargains

HARD MAGNETO GENERATORS.-P.M. steel magnet wound armature driven by gearing in handle, output approx. 10v 25 ma., open type, 8/6, post 1/6. Larger model, 4-magnet type in hard wood box with external terminals, 10/-, post 2/-. MAGNETS.-Swift Lerick S.L.B. 36 circular horseshoe 11" dia 1" thick, 3" Polar gap, drilled poles, weight 2 ozs., lift 3 lb., 2/- each. Alnico magnets 1" dia., 1" thick, 2/6" centre hole, 5/6.

D.C. Electro Magnets, twin coil, weight 1 lb., lift 4 lbs. on 6v, 3 lb. on 4v and 1 lb. on 2v, new surplus, 5/-, post 6d.

MERCURY SOLENOID SWITCHES.-New and boxed. 15 A., 3½- post 1/-. Dewar key switches, 7-pole C.O., 8/6. Yankee 3-pole S-way or 1-pole S-way, 8½ each, post 6d.

METERS.-Thermal A.C./D.C. 21" flush panel meter, 0-4 A., 10/-, 2½" M/c. ammeter, 60-50-20 A., 5/-; 6-20 A., 5/-, post 6d. D.C. M.C. iron-metal Voltmeters, O.G.C., 4" switch bd., 0-40 A. and 0-60v, 3/- each, post 2/-; 3" switch bd. meters, A.C., 0-300v and 0-60 A., 35/- each, post 2/-. FREQUENCY METERS.-5" Flush switch bd. type, Crompton make, 40-60 c/s, 8/½ each.

TRANSFORMERS.-Foster double wound 230v 50 c/s input, 50v 2A. output, 1½-, post 9/-.

RELAYS.-S.P.O. bank of 20 100-ohm. relays, enclosed in metal case, 10/-, post 2/-. O.P.O. relays in circular metal cases, as new, 5p each to on 6-12v 30 ohms. 2A.P.O. contacts 1/6d. D.P.C.O. contact 1,000 ohms., 1,000 ohms., both 2-S.T.C.O. contacts, 2/6 each, or 2/6d. each, post 6d.

HEADPHONES.-New surplus single 8.O.B. phones, with head-band and cord, 1/6, post 6d. Single phone unit in metal case, 30 ohms. with adjustable diaphragm, 2/6, post 6d. Double Headphones, lightweight with bakelite case and cap. service wire headband, new, 5/- pair, post 9d.

ELECTRADIX RADIOS
214 QUEENSTOWN ROAD, LONDON, S.W.8

Telephone : MACaulay 2159
NEW

R.C.A. Telegraph & Telephone Communications Transmitters
Type ET.4336

Designed and produced by the Radio Corporation of America. The Type ET 4336 is outstanding
in the exceptional quality of construction, versatile operation with rapid band selection and adjustment,
and the embodiment of modern advantageous features not generally found together in one
equipment.

The transmitter is designed for communications service in the high frequency range of 2200 to 20,000
kilocycles, and any desired operating frequency within this range may be quickly selected, using
ordinary crystals. All controls employed in tuning the transmitter to any frequency within the overall
range are mounted upon the front panel. Shift from telegraph to telephone operation is switch
controlled, and high speed keying is permissible. Two transmission power levels of 230 or 230 watts are
available, however the actual outputs obtained are somewhat in excess of these values at 20 mcs
and increase with decreasing frequency to values in excess of 300 and 450 watts respectively at 3 mcs.

GENERAL FEATURES.
The complete transmitter is housed in a tall console cabinet superbly finished, and has a very attractive
appearance, side and rear panels are removable, and electrical interlocks are fitted as a safety feature.
Stylish panel controls are conveniently grouped, and clearly identified. Five Meters are employed
to read Aerial, Plate and Grid currents, and Filament voltages. A modulation and keying indicator
of the vavour column type is mounted on the front panel. The Type MF-19468 Crystal Multiplier,
which we supply with the transmitter, slides into an aperture which is normally concealed by a
removable panel. When employing this unit, the oscillator stage in the transmitter functions as an
intermediate P.A. stage or frequency multiplier, and whilst employment is optional; transmission
over the entire transmitter frequency range, using low frequency crystals, is a distinct operational
advantage.

CIRCUITRY.
Valves type 807 are employed in the Crystal Multiplier Unit and the Transmitter Crystal controlled
oscillator. The Power Amplifier stage utilizes two valves Type 813 operating in parallel, and the
Modulator stage uses two valves type 805 operated in a Class B arrangement. Plate and screen
voltages for all stages are obtained from a mercury-vapour rectifier comprising four valves type
868A, connected in a full-wave parallel circuit. An Antenna Coupling and Matching system is
provided, and is so designed to allow the use of various feeder arrangements.

ELECTRICAL CHARACTERISTICS.
Type of Modulation 
Audio-Input Impedance 
Audio-Input Level for 100% Modulation 
A-F Harmonic Distortion 
Power Input 
Power Supply Requirements 
Regulation (Maximum) 5% 

WEIGHT. 500 lbs.

CONDITION.
New and perfect, as ex factory. Our Guarantee and Individual Test Certificate is supplied with each
transmitter.
We offer immediate delivery of the above equipment to home and overseas buyers, complete and
with all valves, at the exceptionally low price of $45. Full specification and further particulars are
promptly available upon request.

NEW VALVES:—At 2 9/16, 7193, EA50, LD210, LP220, SP41. At 4 9/16, 615GT, 6EH7, PM2,

It is a condition of acceptance that copyright of all material used passes to the Short Wave Magazine Ltd., on publication.

THE SHORT WAVE LISTENER ASSOCIATED WITH THIS MAGAZINE IS SPECIALLY FOR THE RECEIVING ENTHUSIAST
PREMIER TELEVISOR KITS
FOR LONDON AND BIRMINGHAM
USING 9" OR 12" MAGNETIC C.R. TUBES
£19.19.0 including all parts, valves and loud-
(Cor., etc., 15/-) speaker, but excluding C.R. TUBE

The Vision Receiver, 4 R.F. stages (BF544), Diode
Detector and Noise Limiter (6H6) Video valve (EF54)
Complete Kit with valves, £3/16/0. Carriage 2/6.
The Sound Receiver, 3 R.F. stages (6SH7s), Double Diode
Triode (6Q7), which acts as Detector and L.F. Amplifier,
Noise Limiter (EA50), output valve (6V6).
Complete Kit with valves, £3/10/0. Carriage 2/6.

The following Sensitivity figures prove that the
Premier Televisor Kit is capable of reception at
greater distances than any other Standard Com-
mercial Kit or Receiver whether T.R.F. or Superhet.

VISON RECEIVER
Sensitivity: 25 µv for 15" peak to peak measured at
the Anode of the Video Valve.
Sound Reception: Better than 40 db.
Adjacent Sound Reduction: Midland Model. Better
than 50 db.

SOUND RECEIVER
Sensitivity: 20 µv.
Vision Reception: Better than 50 db.

CONSTRUCTION BOOK 3/-

PREMIER SHORT WAVE RADIO KITS
Re-designed, easier than ever to assemble. These kits are
now supplied with point to point wiring diagrams, all parts are supplied including attractive plastic
cabinet 12" x 8" x 6" loudspeaker, valves, etc. Illuminated glass dial with new wave lengths. 190-
540, 1,000-2,000 metres. For use on 200-250w mains. 6K7, 6SH7, and CV1510 beam power output valves
in the A.C. and 6K7, 6SH7 and 12A6 valves in the A.C./D.C. model, both use metal rectifiers. Please state if A.C. or A.C./D.C. is required.
Complete kit, £4/19/6, including Purchase Tax.

PREMIER 3-BAND MIDGET SUPERKIT
Redesigned to receive the short, medium, and long
wavebands, 16-50, 194-540, 1000-2000, with point to
point wiring diagrams. A.C. valve line up, 6K8, 6K7,
6Q7 and CV1510 beam power output. A.C./D.C. is the
same excepting the output valve which is 12A8.
Please state which is required. Metal rectifiers are
used in both models, and they are used for use on 200-250v
mains. Complete with cabinet as illustrated, loud-
speaker, and all parts. £6/19/6, including Purchase Tax.

PREMIER TELEVISOR KITS
FOR LONDON AND BIRMINGHAM
USING 9" OR 12" MAGNETIC C.R. TUBES
£19.19.0 including all parts, valves and loud-
(Cor., etc., 15/-) speaker, but excluding C.R. TUBE

The Vision Receiver, 4 R.F. stages (BF544), Diode
Detector and Noise Limiter (6H6) Video valve (EF54)
Complete Kit with valves, £3/16/0. Carriage 2/6.
The Sound Receiver, 3 R.F. stages (6SH7s), Double Diode
Triode (6Q7), which acts as Detector and L.F. Amplifier,
Noise Limiter (EA50), output valve (6V6).
Complete Kit with valves, £3/10/0. Carriage 2/6.

The following Sensitivity figures prove that the
Premier Televisor Kit is capable of reception at
greater distances than any other Standard Com-
mercial Kit or Receiver whether T.R.F. or Superhet.

VISON RECEIVER
Sensitivity: 25 µv for 15" peak to peak measured at
the Anode of the Video Valve.
Sound Reception: Better than 40 db.
Adjacent Sound Reduction: Midland Model. Better
than 50 db.

SOUND RECEIVER
Sensitivity: 20 µv.
Vision Reception: Better than 50 db.

mains. Complete with cabinet as illustrated, loud-
speaker, and all parts. £6/19/6, including Purchase Tax.

We are now supplying
NEW LONG RANGE TELEVISOR KITS (ELECTROSTATIC TUBE)
For the London or Birmingham frequencies at
the same price as the standard kit
£17/17/0

Five Easy to Assemble Kits are supplied:
1. Vision Receiver with valves, carriage 2/6 £3/13/6
2. Sound Receiver with valves, carriage 2/6 £3/14/6
3. Time Base, with valves, carriage 2/6 £3/7/6
4. Power Supply Unit with valves, carriage 5/- £6/3/6
5. Tube Assembly, carriage and packing 2/6 £2/18/6

This unit includes the VR54 (EB24), VR57 (EK39),
VR116, VR136 (EF54), VR197 (ES52), CV66 (RL37),
CV1120 (SU2150A), CV1137 (RL16), CV1088 (AW4),
CV189 (U19), CV2941 (EL50), CV295 (BU20),
CV1141 (GDT4B), CV50 (CV1072), CV230 (CV1050),
CV91 (EF50), all 25/-.
6. VR54 (EB24), VR65 (SP66), VR92 (EA50), CV59 (ST),
CV121 (K555), CV649 (905), CV102 (Xtal Diode),
1626, all 25/-.
7. 6X5, HL23, RL18, VU111, VU135, VU134, CV6, CV73 (115), CV118 (AC6 Pen),
CV659 (843), NS2, DOP, BL35, CV1102, 1616, CV67 (klystren), U17, (CV1113),
PT25H (CV1046), all 5/-.

Christmas

Every year at this time it is our pleasure to spare those who may glance over this space any discussion of the burning controversies of the moment—and instead to send them greetings and good wishes for the Christmas season.

We number our readers in all corners and in every country in the world, and some will not in fact be seeing these lines till well on in the New Year. In the realm of Amateur Radio, however, time and space are hardly ever factors of any great significance—for amateurs girdle the earth and are in constant communication. And it is in this realm of Amateur Radio that the true spirit of Christmas still lives.

So it is the season of the year when once again we are happy to have the opportunity of offering our good wishes for their happiness and our thanks for their support to all our readers at home and abroad—from the Editor, Management and Staff of SHORT WAVE MAGAZINE.
TVI-PROOF EXCITER FOR TWO METRES

Three-Stage Design Using Modern Techniques

By W. R. JOSS (G2AJ)

For the first year of operation on two metres, the writer used the transmitter which was described in the November, 1948, issue of Short Wave Magazine. It may be remembered that this transmitter derived 145 mc output by means of an 815 tripling from 48 mc, and when it was first tested fingers were crossed and prayers offered that the 48 mc stage would not interfere with nearby television sets. The gods were kind and no TVI was experienced during eight months' operation in Hendon, North-West London. In April, 1949, however, the writer moved to Biggin Hill, Kent, and although high up on the North Downs where the field strength from Alexandra Palace is high, it was nevertheless not enough to prevent the 48 mc signal from disfiguring nearby television pictures. As the ability to operate during TV hours was considered desirable, an attempt was made to build an exciter which gave TV frequencies as wide a berth as possible and permitted a high-power final to operate in safety. At the same time, miniature technique was adopted, and the result is seen in accompanying photographs.

Getting There

In order to reach 144 mc, it was decided to double from 72 mc, a frequency undoubtedly safer than 48 mc! To obtain 72 mc, 36 mc could be doubled, but as this was getting near to TV frequencies, it was considered that tripling from 24 mc would be more satisfactory. Thus, the entire TV spectrum could be conveniently avoided.

An output on 24 mc can be obtained in a number of ways 4, 6, or 8 mc crystals all being suitable and easily obtained. However, a crystal oscillator on one of these frequencies can produce harmonics inside the TV spectrum, so it was decided that, if possible, the fundamental frequency should be 24 mc. A suitable crystal could be obtained but, as it would be expensive, the "third harmonic" circuit described in QST some months ago was adopted. In it the crystal is made to operate on the third harmonic, which appears as the fundamental frequency.

As an added precaution, it was decided that all frequency multiplying stages should run at a very low input and thus reduce possible sources of interference still further. B7G type valves lend themselves to this requirement.

Circuit

The complete circuit diagram is shown in Fig. 1. It will be noticed that the output frequency is reached with only two valves, whilst the third valve is a buffer amplifier. Thus, the unit could be used as a complete low-power transmitter in itself. British valves are used throughout, the Mullard ECC91, EL91, and QVO47 being chosen. The latter valve—a tetrode—will provide sufficient drive for an 829B or 3E29 to enable it to run at 100 watts, whilst its own drive requirements are very small, being of the order of one millamp. This drive can easily be obtained from an EL91 running as a doubler with some 200-250 volts on the anode.

The remaining stages, the crystal oscillator and tripler, can conveniently be contained in one valve, the Mullard ECC91—a double triode. A 6J6 may be used if preferred. This valve runs at a very low input, HT being in the order of 150 volts, and the resistance R6 should be adjusted to give this voltage if the HT volts are higher than specified. A crystal is controllable for interference with TV channels.

The mid-evening TV broadcast is often put forward as the reason for the lack of activity on Two Metres during that period—though it is not always clear whether this is because of watching the programme or to avoid interference with it! Here is a practical design to overcome the latter difficulty in the case of Alexandra Palace transmissions on 41.5 and 42.48 mc. Since our contributor, a well-known exponent of the art of VHF, explains how frequencies can be selected to prevent direct radiation on these channels, the same principles can be applied to arrive at suitable multiplier frequencies to clear other TV channels.—Editor.
The use of a blocking condenser C6 between plate coil and ground permits the rotor of the trimmer C7 to be grounded, thus simplifying the mounting. Series tuning was adopted for the anode circuits of V2 and V3, as this permits a higher value of inductance and, furthermore, the rotors of C11 and C15 can also be earthed. As an indication of the effect of series tuning, it will be noticed that L3 has the same number of turns as L2, in spite of operating at twice the frequency!

A word about the operation of the crystal oscillator circuit might not be out of place. Its success depends entirely on the feedback arrangements in the coil L1, and the writer has found that the higher the frequency the more tricky it becomes. No trouble has been experienced with 5.7 mc crystals oscillating at 17 mc—a frequency which has been used in two-metre converters—but 8 mc crystals have proved a little more obstinate. According to QST, the correct position of the tap is approximately one-third up from the crystal end of the coil when using a 6J6. However, the writer has found that this is, in fact, a little less whether using a 6J6 or ECC91. If too much inductance is included in the feedback portion of the coil, the circuit will oscillate at a frequency controlled by the value of C3 plus C4 rather than by the crystal. (More will be said about this later.) C3 has been padded with C4 so as to give a maximum capacity of about 70 µF, a large capacity being essential for stable operation.

Incidentally, this type of circuit can be made to oscillate at the 5th harmonic of a crystal, which suggests the possibility of reaching 144 mc with one valve! This is only worth considering for portable use, as 48 mc becomes involved again! A 9 mc crystal oscillating at the fifth harmonic would give 48 mc, whilst the second half of a 6J6 could be made to triple to 144 mc!

Construction and Wiring

The whole exciter is built on a 7 in. x 2½ in. x 1½ in. copper chassis, folded up from a piece of 20 gauge sheet. Only one internal screen is necessary, this being across the base of the QVO4-7. The finished chassis was polished and silver plated with the solution described by G6VX in the July, 1948, issue of Short Wave Magazine. The chassis is simplicity itself and the major dimensions are shown in Fig. 2.
Some care is necessary in wiring-up the unit, as a considerable number of components have to be accommodated in a small space. Details can be seen in the photograph. Quarter-watt resistances should be used wherever specified, and R6 should be a vitreous resistance of the 6-watt variety, as this takes up less space than the 2- or 3-watt carbon resistance which would otherwise be adequate. All .001 µF condensers are T.C.C. Type CM2ON; these again are necessary for reasons of space.

Condensers C3, C7, and C11 are all mounted on strong solder tags which are bolted to the chassis. Resistance R3 is virtually a safety measure to prevent the valve taking too much current if the crystal stops oscillating. Otherwise R4 (only 1-watt) can easily be burnt out.

The total heater current of the three valves is about one amp at 6.3 volts. The writer used two separate HT supplies, but this is not essential, and one power pack can be used with a suitable series resistance incorporated.

Testing

Any crystals in the range 8,000 to 8,111 ke may be used for the range 144 mc to 146 mc.

When the exciter is ready for test, the oscillator stage alone should be checked first. A low range milliammeter may be connected in the grid of the tripler stage and C3 rotated, until a reading of grid current is obtained, thus indicating oscillation. This oscillation should be checked on a calibrated receiver operating on the 24 mc range.

Fig. 1. Circuit complete of G2AJ's TVI-proof exciter-driver for the 145 mc band. It depends on correct choice of multiplier frequencies for the avoidance of TVI (see text).
Altering the setting of C3 should not cause any appreciable change in the frequency of the beat, and it will be found that the crystal will only oscillate over part of the range of C3 and at no other point. If the oscillator frequency shifts widely when C3 is altered, this indicates spurious oscillation, showing that the tap on L1 is too high. If the tap is too low, the ECC91 will only oscillate weakly or not at all. A point worth remembering is that pulling the crystal out of its socket is not a check for spurious oscillation, as the capacity of the crystal and holder constitutes part of the feedback circuit.

With the oscillator operating correctly, HT may be applied to the remainder of the exciter. C7 should only peak at one point (72 mc), but if this point happens to be maximum capacity, then a check should be made that it is not 48 mc. While testing, a milliammeter may be inserted in the grid of the QVO4-7, and the preceding stages peaked for maximum grid current; this should be about one milliamp. A dummy load in the shape of a 6-watt car bulb may be placed across the output link, and this should be approximately 60-70% of full brilliance with the exciter running correctly.

Operation

The exciter has been used to drive a 3E29 running at a 120 watts on CW and about 90 watts on phone. Under these conditions, the grid current is of the order of 15-20 mA.

This transmitter has been used during recent 2-metre contests, and operating took place throughout television hours with no QRM. With a home-built television receiver using a "straight" vision strip running on the bench four feet away, no interference occurs and it is possible to call "CQZ" and watch the picture at the same time! 'Nough said!
MORE S.640 MODIFICATIONS

Reducing IF Breakthrough, Curing Frequency Drift and Increasing Bandspread.

By E. W. BURGIS (G6FB), Lieut.-Cdr. (E), R.N.

UNDER the Copenhagen Plan a 100-kilowatt broadcast station has commenced operation on 1602 kc, and this has given rise to breakthrough on the intermediate frequency, which is 1600 ± 2 kc. This breakthrough apparently originates from one or both of two sources.

(1) Pick up by the crystal phasing condenser spindle
(2) Aerial pick up.

In the first instance the trouble is caused by both sides of the crystal phasing condenser virtually being "up in the air"; this results in direct pick-up by that part of the spindle which projects through the receiver front panel. The strength of the spurious signal is greatly increased by the proximity of the operator's hand to the crystal phasing control knob. In the writer's case, a heterodyne of S6/7 was quite usual (with BFO switched on) during the evening hours. Obviously the phasing condenser spindle should be at low RF potential in order to reduce direct pick-up.

Modification

Inspection of the circuit diagram and the actual condenser (C38) reveals it to be connected as shown in the circuit diagram at Fig. 1. Clearly, if the connections are reversed, then the rotor is more nearly at ground potential—being by-passed to earth through C37 (400 µµF).

This modification is quite easily embodied, and the method of so doing requires no comment, except that it is necessary to remove the finger plate to gain access to the four countersunk screws securing the phasing condenser and crystal switch to the front panel. The switch and condenser must be removed in order to carry out the necessary soldering operations. It is also necessary to bend the condenser rotor connecting tag clear of the crystal switch.

In our issue for May, 1950, there appeared some useful information on desirable modifications to the Eddystone S.640 receiver. This article describes further work on the set to improve its performance.—Editor.

It is not claimed that this modification will entirely cure the breakthrough, but, in the writer's case, it does attenuate it from S6/7 to a level which is now entirely masked by normal receiver noise. (When using a folded dipole aerial.)

A coincidental feature of the modification is that it also very severely attenuates induced hum which can occur in the same manner as the breakthrough.

With regard to breakthrough caused by aerial pick-up, this can be minimised by the use of either (1) A screened wave trap in the aerial lead and fitted as close to the aerial terminal as possible; or (2) An aerial system using a non-resonant feeder (such as a folded dipole).

Frequency Drift

Certain receivers were originally fitted with a 6K8GT mixer valve, which, in the writer's case, caused unacceptable frequency drift. Replacement of the 6K8GT by an ECH35 reduced the drift to completely negligible proportions. Although fitting an ECH35 involves no change of circuit constants, it is recommended that the RF circuits be "touched-up" to ensure optimum performance and to maintain calibration accuracy.

Frequently drift of the BFO can also be reduced by careful selection of the EF39 valve used in that position. Simple changing over of the various existing EF39's in the receiver should give...
adequate scope for implementing this idea. The previous remarks on "touching-up" should not be necessary, except in rare instances.

**Bandspread**

The amount of bandspread can be increased by a simple modification to the bandspread condenser. This involves careful use of a small hacksaw blade and a pair of long-nosed pliers to remove the two outer vanes of each rotor section of the existing condenser as shown in Fig. 2. The maximum capacity is reduced from 46.2 µF to approximately 31 µF, and the bandspread thereby increased—a definite advantage for 28 mc operation. This modification may, in some cases, demand slight touching-up of the RF tuned circuits. The main calibration of the receiver will also be a little affected, but only to the extent of a few kc, since the change in the minimum capacity of the bandspread condenser is very small (approximately 3 µF).

With the bandset pointer set to the left-hand edge of the green line (as in normal procedure), the modified bandspread coverages are approximately as follows:

Separate RF and IF Gain Controls

Preliminary tests indicate that this is another worthwhile modification and one which requires very little circuit alteration. Details will be given in a future article when tests are complete.

In conclusion, the writer would be most interested to receive information on further modifications and refinements from other S.640 users, particularly the replacement of the EF39 in the RF stage by a really high-gain valve.

**USEFUL HANDBOOK**

Though American in its treatment and outlook, the *Radio Amateur Newcomer* can be recommended to those who require a manual dealing generally with the problems that beset the beginner in Amateur Radio. In 156 pages, under 12 chapter headings, there is a great deal which is common ground on both sides of the Atlantic. The treatment is practical and straightforward, with plenty of illustration. A few copies are available at 8s. 4d. post free, of Gage & Pollard, Publishers' Agents, 49 Victoria Street, London, S.W.1. They can supply a wide range of American radio and technical books, and also operate a sterling subscription service for those wishing to obtain American periodicals.

**CARDS IN THE BOX**

If your call appears below, and you will forward a large S.A.E., with name and callsign, to BCM/QSL, London, W.C.1, card(s) held for you will be sent on. And if you will mention it at the same time, your call and address can appear in "New QTHs" with publication in the *Radio Amateur Call Book* also.

- G3BDG, G3DZJ, 3EWG, 3FCB, 3FDM, 3FLO, 3FRA, 3FRK, 3GMA, 3GWI, 3GWJ, 60Y, 8GL, GM3EDY, 3GJP, 3HAC, GW3GQT.

**XTAL XCHANGE**

A small offering this month—and for the few simple rules covering appearance in this space see p.622 of the November issue.

- G2BHY, 29 Hillcrest Road, Orpington, Kent. Has 7065 and 7125 kc crystals, 1-pin spacing, no certicates. Wants any frequency 3510-3550 kc, ±-in. mounting.
- G6TG, Burniston, Scarborough, Yorks. Has Q.C.C. Type F5 8081 kc crystal. Wants similar type 8011-8022 kc.
- ZB1AS, Lt. (G) D. A. Smith, H.M.S. Riccali, F.M.O., Malta, G.C. Has G.E.C. 3617 kc and Q.C.C. 3725 kc crystals, both ±-in. mounting, also S.T.C. crystals about 8000 kc, BTG mounting. Wants frequencies 7020-7040 kc, ±-in. pin spacing.
TWO-ELEMENT ROTARY

The "3MH Special"

By G. H. PRICHARD (ZL3MH)

HAVING read with interest the article by G2BCX in July Short Wave Magazine the writer would point out that he was given credit to which he is not entitled when ZL3MH was named as one of those concerned in the development of the aerial described by G2BCX. Using information given by W6GZK the writer published in Break-In for May 1949 an article which appears to be the source of the material for "The ZL Special." But the part played by ZL3MH was small indeed, as the present writer merely built and tested this array and then wrote it up for the benefit of fellow ZL amateurs.

Subsequently, however, he was successful in evolving a somewhat different array using the same principles and having equivalent performance, but being much simpler to construct, lighter, cheaper, and more suitable for rotation. The development of this new beam was a somewhat haphazard affair (as are so many amateur activities) and spread over quite a period. Four articles were written for Break-In concerning this beam and these appeared in the July, September, and December 1949 issues and further notes were published in September 1950.

It is now possible to present to readers of Short Wave Magazine a more tidily arranged description of the beam which is giving ZL3MH, and other ZL's, as well as some VK's and W's, excellent service for a minimum outlay. Before proceeding it should be pointed out that those requiring a fixed reversible array would find the new well known "G8l'O" more convenient to operate, and on-the-air checks indicate that there is little to choose between the two beams so far as gain or front-back ratio are concerned.

Test measurements taken by W6YLO with a "3MH Special" are:

- Forward Gain 70 dB
- Front/Back ratio: 40 dB

Design

Briefly, the beam consists of two resonant dipoles spaced 0.1 wavelength, horizontally polarized, and connected together at centres with 0.125 wavelength 70-ohm "beaded" coaxial cable which is transposed so that the inner conductor crosses from the left half of one element to the right half of the other. This combination is fed with any length of 300-600 ohm line through a quarter-wave matching section of 70-ohm line, which connects to the centre of one of the elements. This element becomes the "front" of the beam. (See Fig. 1 for detail.)

It will at once be apparent to many that this system represents no more than a compromise. There are numerous methods of modifying the design to satisfy theoretical considerations more nearly, but it is doubted if the extra effort would be worth while; this has been borne out by the performance of these beams on both Ten and Twenty. The compromise is made necessary by the fact that an electrical one-eighth wave of most 70-ohm lines is too short to span one-eighth wave of free space. Hence the use of 0.1 spacing with 0.125 wave of phasing section when the element spacing should be 0.125 wave also. However, the difference in electrical length of the two spacings is only nine degrees (360° = 1 wavelength) and the error has little or no deleterious effect. It would be possible to use 1/4-wave spacing with 1/4-wave of phasing line (a) By having elbows on the elements or (b) By making up an open wire 70-ohm line, but it is not thought that appreciably improved performance would result.

A further solution would be to increase the length of the phasing section to 1/4-wave without transposing. This was decided against on grounds of economy and appearance.

Test Results

The original version of the beam built for 28.2 mc used coaxial cable for the quarter-wave matching section, but experiments carried out by W6YLO disclosed that the horizontal pattern...
obtained from an identical array was asymmetrical, the major lobe being 10-15 degrees off centre. W6YLO discovered this to be due to unbalance introduced by the coax, and when this was replaced by 70-ohm twin lead the pattern at once became symmetrical, while at the same time the SWR on the feed line was reduced to the very acceptable figure of 1.4:1. In the course of his measurements W6YLO also discovered that while the major lobe in the horizontal plane is quite sharp, the vertical pattern is fairly broad. This is borne out by results obtained on the air and is also in accord with theory.

The writer ventures to suggest that the theoretical polar diagram shown by G2BCX in his article is that which would be obtained from a vertically polarized pair of dipoles fed with equal currents 135° out of phase. Now, if these dipoles are laid on their sides it is reasonable to expect that while the horizontal polar diagram would be much as produced by G2BCX in his experiments, the pattern in the vertical plane would resemble the original cardioid, distorted to some extent due to the changed disposition of the elements to ground. The experience of both W6YLO and myself lends weight to this assumption, as it is found that short skip signals with a high angle of incidence arriving from the back of the beam are quite strong, although the 40 dB front-back ratio holds good for low angled signals.

Again, while conducting comparative tests with this beam versus a four-element parasitic array, W6YLO found that when conditions changed so that DX signals received on the parasitic array faded out, use of the two-element driven array made possible up to 30 minutes more contact. Under stable band conditions there was nothing to choose between the two beams!

Design of the rotary beam array discussed by the author.

Tests carried out by the writer from June 1949 on 28 mc with this type of beam have been most encouraging, and several operators including ZL's, 2AR, 2BY and 2SP are also very pleased with results on Ten. VK3QK and other Australians are using the beam on Twenty.

More recently (June 1950) a 14 mc version was finally erected at this station on a 36 foot pole, complete with prop-pitch motor. Since then enjoyment of DX'ing has increased immeasurably. ZL3MH now gets his share of DX and can even enjoy ragchews on Twenty.

APPLICATION OF SPEECH CLIPPING

Our general correspondence indicates increasing interest in this important subject, since it is coming to be understood that the principle of the system makes more modulating power available over a narrower band of frequencies, without affecting speech intelligibility. The proper application of a good speech clipping system is most marked at the receiving end. Phone operators are referred to a useful practical article on the whole subject, appearing in the May, 1950, issue of Short Wave Magazine. And for those who have enquired, the component values that were missed in this article are given on p. 443, August.

Is Your Equipment always Safe to Handle?
ACCURATE FREQUENCY MEASUREMENT

Design for an HFM

By J. H. JOWETT (G3CFR)

There have been several designs offered recently on the subject of frequency meters; most of these, however, have very complicated circuitry using four or five valves, or else they require to be used in conjunction with a calibrated receiver (or one with a dial which can be read very accurately). This latter requirement is certainly a difficulty for those who use receivers like the Ri155, the frequency of which can only be set to the nearest 50 kc or so!

The meter to be described here is very similar in function to the well-known BC221, a frequency meter capable of a high order of accuracy. There is no reason why the meter described should not achieve a similar standard of accuracy; this would depend almost entirely upon the care taken in constructing the oscillator unit, and especially the mechanical details of dial and condenser system.

Circuit

Briefly, for those unfamiliar with the idea, the arrangement is as shown in Fig. 1. A 100 kc oscillator is used as the frequency sub-standard, as these 100 kc crystals seem to be far more easily obtainable than the 1 mc type. Harmonics of this crystal oscillator are arranged to beat with harmonics of the variable frequency oscillator (in this case it is an electron coupled oscillator covering the ranges 3,200-4,100 kc and 2,250-4,100 kc approx.). The mixing takes place in a triode-hexode valve, and the beats can be amplified by means of an audio frequency amplifier. Thus, for example, if the variable frequency oscillator was tuned to 3,501 kc, then it would beat with the 35th harmonic of the crystal oscillator, to produce a 1 kc beat note. When the variable frequency oscillator is tuned exactly to 3,500 kc, it would be zero beat with this harmonic.

The circuit of the instrument is shown in Fig. 2. The crystal oscillator shown is for crystals of the series resonant type.

Our contributor set out to produce for himself a heterodyne frequency meter on BC-221 principles and capable of the same order of accuracy. As he says, with care and a suitable reference standard—in this case the second harmonic of a 100 kc bar beating against the BBC transmission on 200 kc—an instrument well within the accepted limits of accuracy can easily be produced.—Editor.

The transformer is a 110 kc IF unit taken from an old broadcast receiver; these should be easily available from the local junk shop. This crystal oscillator circuit may not, however, be suitable for all types of crystal, some of which are arranged to oscillate on the “correct” frequency when excited in the parallel mode. This will require a circuit such as that in Fig. 3. Another suggestion for the use of the crystal in the parallel mode is to dispense with the triode-hexode arrangement and to use two separate valves of the SP6t variety, so that one may be used as a pentode mixer, and the second as a Pierce oscillator (which, incidentally, is usually much easier to get going than a triode type crystal oscillator). A suitable circuit for this modification is shown in Fig. 4.

Setting Up

It is assumed that a receiver roughly calibrated will be available for the tuning up process. First, it is necessary to put into operation the 100 kc oscillator, and this is best done with the aid of a receiver tuned to the Light Programme on 200 kc.

With the circuit shown in Fig 2, place switch S2 to position 1, remove the crystal and short circuit the holder. Then rotate the trimmers on the IF transformer until a beat is heard on 200 kc. If this is not forthcoming, it may be

![Fig. 1. Block schematic showing basic arrangement of the circuit.](image-url)
necessary to change over the connections on either primary or secondary windings. When the oscillator is working nicely on 100 kc the crystal may be reinserted and the trimmers finally adjusted to give zero beat with the 200 kc transmission.

Other stations that may be used for calibration purposes are, of course, MSF on 5 mc and 10 mc or WWV on frequencies of 2.5, 5, 10, 15, 20 or 25 mc.

Now, the variable frequency oscillator is tuned roughly, with the aid of the receiver, to about 3,500 kc. The "correcting" trimmer may be set at about half capacity. Put the switch S2 to position 2, and a beat note should be heard in the phones. The dial can then be moved until this becomes zero beat. Once this position has been found, the receiver can be dispensed with. Tuning the variable frequency oscillator higher in frequency will then give more loud beat notes in the phones at frequencies on 3,525, 3,550, 3,575, 3,600 kc and so on. These beat notes will be louder than any others which may be present, and will be unmistakable. Their settings can then be noted on the dial and plotted on a graph.

**Plotting the Graphs**

It is recommended that each sheet of graph paper should cover 50 kc of range only; if this is done, not only will greater accuracy be obtained, but the three points in the range at which a strong beat note is heard will be found to lie on a straight line. The LF range.

of $2,250-4,100$ kc is obtained by placing both sections of the recommended condenser in parallel, whilst the higher frequency range only requires one section to be in operation.

Graphs may be obtained throughout the recommended bands (3,500-3,800 and harmonics) and then a gap left until the range $4,000-4,100$ kc is reached; this is useful for calibrating crystals in the range $8,000-8,111$ kc for 2-metre transmitter control. The LF range is also included for the calibration of 6 mc crystals for that same purpose, but is not quite so accurate as the range covered is greater.

The function of the corrector capacity is to compensate for long term variations in frequency of the variable frequency oscillator. Whenever a range is selected in which a frequency is to be measured, the switch S2 is set in position 2 and the dial rotated to the setting at which the graph indicates a check point should be heard. The corrector is then moved to give zero beat with the fixed oscillator, at this dial reading.

**Operation**

For measurement of a transmission frequency, the same procedure is followed: the switch S2 is turned to pos. 3, the dial rotated until the variable frequency oscillator harmonic is zero beat with the transmission, and the frequency corresponding with the dial setting is read from the graph. For reception, the oscillator can, of course, be heard on the receiver. All the ranges between 1.7 and 30 mc are covered by harmonics of either the variable frequency oscillator or of the transmitter.

This sort of frequency meter will be seen to have considerable advantages over the type relying on crystal oscillators, multi-vibrators and receiver dials. The fact that it is self-contained is itself a great advantage, as it may be made up in portable form (e.g., the BC221). In practice, the dial is the item which determines the limit of accuracy (assuming the oscillator is mechanically stable), and it is suggested that such dials as the HRO or the design similar to that on the BC221 would be most suitable. The writer uses a dial which originated from ex-Service equipment, and gives a total of 1,000 degrees spread around a 2½ in. diameter knob, for a 180 degree revolution of the condenser.

It has been found that it is possible with such a meter to obtain accuracies of about 250 c.p.s. in the 3.5 mc band, which is well within the boundary set by the Post Office.
TVI SUPPRESSION

The Butler Filter

There are many ways in which to approach the problem of TVI. You can either watch TV yourself, or shut down during TV hours, or operate with QRP only on the bands from which you do not radiate squiggers on the TV channels—or tackle TVI as a problem to be solved.

It does not seem so many years ago that, to some of us, BCI seemed almost as insuperable a problem as television interference now appears to have become to many amateurs of the present generation, particularly those in fringe areas.

The elimination of TVI is certainly not easy—but then neither was the suppression of BCI when the offending receiver was a straight-three "melody-maker" owned by an aggressive individual a few doors up the road.

Approach

It could be done then, and it can be done now. The first thing is to make sure that the transmitter does not radiate any energy on TV channels when the aerial system is entirely disconnected, and the PA working into a fully screened dummy load. With proper choice of multiplier frequencies, complete screening and the suppression of squiggers in drive and PA circuits, it should be possible to operate a TV receiver in the same room as the transmitter without any trace of interference.

Some of the Factors

There are the usual provisos about this. The TV receiver itself must be one of those which (a) Does not have an IF in one of the amateur bands; (b) Does not produce from its own local oscillator harmonic beats in our bands; (c) Is itself fully screened internally; (d) Is not operated with an aerial feeder line at or near resonance at one of the transmitting frequencies; and (e) Can normally be used without having to screw the gain controls up against the stops.

If under these conditions there is no interference from the transmitter when operated with a dummy load on the desired bands, the next step is to couple up the radiating aerial proper. It is then that the (neighbour's) TV picture usually begins to follow the keying or otherwise shows the familiar signs of TVI.

Function of the Filter

And it is for this stage—between PA and aerial tuning system—that the Butler Low Pass Filter is intended. Attenuating very sharply at frequencies above 30 mc, tests show that, providing there is no interfering signal radiated from the transmitter itself, the Butler Filter will suppress TVI under actual radiating conditions, on any band, against any TV receiver satisfying conditions (a) to (e) above.

This Filter is designed for insertion in the low-impedance (72-ohm) feed line between transmitter tank and aerial tuning unit, which should be arranged for the usual link coupling. The primary function of the Butler Filter is to suppress any harmonics, at any frequency above about 30 mc, that may be present in the output circuit of the transmitter; obviously, it is these that can cause TVI, even if the transmitter appears (under the test conditions already enumerated) to be completely suppressed.

Full details regarding the Filter can be obtained from the manufacturers (Butler Radio, 17 Five Bells Lane, Rochester, Kent), who will also be pleased to advise users on their individual TVI suppression problems.

And we might add that there are several well-known makes of TV set that appear to be unaffected by amateur transmission on any band, at any range. On the other hand, there are several equally well-known makes which are of such poor basic design that their IF's are actually planted in one or other of our bands! No amateur should allow himself to be compelled to close down to avoid interfering with such a receiver.

USEFUL TV BOOKLET

For those possessing a commercial TV receiver, or otherwise non-technically interested in television, a new booklet entitled Television in Your Home is worth having. In 64 pages of seven chapters, it discusses TV strictly from the angle of the viewer who wishes to get the best results from whatever receiver he may possess (or contemplate buying) without having to learn the technicalities. The price is 2s. 2d. post free, of the Books Dept., Iliffe & Sons, Ltd., Dorset House, Stamford Street, London, S.E.1.
ADAPTING RECEIVERS FOR TOUCH TUNING

Operation for the Blind

By W. KROHN, C.S.P. (G6KJ)

ONE of the first problems facing a blind operator is to equip himself with a good standard communications receiver which he can use with complete independence, and after several years of comparative floundering, this was found in the famous National HRO. With its splendid slow-motion dial engraved with degree markings which can be easily felt, this receiver requires no adapting at all except for identification marks on the coil packs. This is achieved simply by fitting soldering tags under one of the fixing screws in the corners of the frames enclosing the graphs, putting a tag in a different position on each coil.

In spite of success with the HRO, the search has gone on for other receivers which can be easily adapted for use by a blind operator without too much mechanical complication, expense, or disfigurement. But it was not until a few months ago, when a Hallicrafter SX24 became available, that it was possible to extend these researches. This receiver also can be adapted in a reasonably simple way, and although so far the same accuracy of handling has not been achieved as with the HRO, the writer is satisfied that it is only a matter of careful operating practice to get equally satisfactory results.

The SX24 Modification

The first thing to do is to remove the existing band set and band spread dials. Take out the four self-threading screws (two at each end of the top edge of the cabinet) which secure the frame of the hinged cover, then lift out the front edge of the frame. Loosen the rotating dials on the spindles. Remove the four screws and nuts securing the band set dial cover, when by springing the panel slightly forward it should be possible to slide the cover out. The circular dial will then come out through the hole in the panel.

The author of this article is an active amateur who, having been blind from birth, has never actually seen any of his gear. Yet he is able to build and operate equipment with the same ease and certainty as his sighted friends—and indeed is an experienced amateur, having been licensed for well over 20 years. His article is an interesting discussion on the practical problems of adapting an SX-24 for touch tuning.—

Editor.

Now remove the three screws securing the band spread frame on the panel—this is a little tricky, as the bottom screws are not accessible—and then extract the band spread dial. This is the most difficult operation, as there is very little space between the end of the spindle and the back of the panel, but a little judicious “brute force” achieved it, as the object here was to try to do the job without removing the receiver from its case. Now, with a fine hacksaw blade, cut a small piece out of the panel in the bottom edge of the band spread opening to expose the spindle. Before doing this, slip a piece of stiffish folded paper between the panel and the chassis to catch as much metal as possible. This cutting can, of course, be avoided by drilling a hole accurately opposite the end of the spindle—but the drilling is easier, as the drilling of a hole at least half-an-inch in diameter in a springy panel is a difficult operation.

The Touch Dials

For the bandset dial, a 64-in. disc of light gauge aluminium is marked with the “minutes of a clock face,” embossing double dots at the points which would represent the hours; this disc is drilled half-inch at its centre and secured to the panel by four short screws and nuts.

A brass boss drilled quarter-inch to a depth of ¼-in. is slipped through the dial on to the spindle and tapped for a grub screw. Slotted and screwed into the end of the boss is the pointer. The pointer is fitted with the main set of condensers at minimum capacity, and fixed to read “12 o’clock”; the smaller bandspread dial is fixed in the same way. Adequate clearance of the boss in the dial is most important, as any binding may cause the belt drive to slip.

In applying the same method of fitting and marking to the bandspread
The SX-24 as modified by G6KJ for tuning by touch. Himself a blind operator, he designed this system and carried out all the mechanical work entirely unaided. With the receiver modified as shown, he can get within a few kc of a given frequency on any amateur band covered by the SX-24. The large dial is bandset, and the smaller bandspread, as in the original.

dial, it was punched with two rings of markings; the conclusion since reached, however, is that this is pointless—it is, in fact, confusing to the touch to have too many markings, as any blind person will appreciate. Like using a Braille watch, it is only a matter of practice to achieve a high degree of accuracy in reading.

**Operation**

On the SX24 I now know that if the wave switch is on "two" and the bandset pointer at "three minutes before nine" (in other words, at 8½ degrees) the bandspread covers the whole 80-metre band; similarly, with the switch at "three" and the pointer at "three-quarters of a minute before five," the bandspread covers 40 metres.

The marking out of these dials is not at all a difficult matter for a sighted person, but as the writer is stubbornly independent, a most satisfactory machine has been devised with which any dial from two to ten inches in diameter can be punched, dividing the circumference into tenths or multiples of ten, or twelfths or multiples. The markings are done with an adjustable automatic spring punch so that the embossings come out reasonably even. The fundamental idea for this marker is due to Stanley Wartenberg (W2ET), who wrote a splendid article on making Braille dials for the Braille Technical Press. In the writer's machine the positioning of the disc to be marked is achieved by a rachet; hence the spacing of the markings is dependent on the number of teeth on the rachet wheel and the number of notches counted between each punching. Being in the fortunate position of having a lot of useful tools, including a small power-driven lathe, it was possible to make at home every part for the marker except the gear wheels. There is no doubt that many other types of standard communications receiver could be similarly modified for accurate use by blind operators, and it is hoped to take the idea further as opportunity offers.
A another month of pretty good conditions, considering everything. The LF bands have been excellent. Ten has been very poor; Twenty has been varying from passable to very good. We find that the DX enthusiasts are in two divided camps over this business of conditions. The one goes out of its way to say that they have been excellent, spectacular, brilliant, marvellous, and all the other adjectives; we suspect this crowd of a certain amount of bravado. The others say "Not much doing, as usual," and leave it at that. The curious thing is that some of the latter seem to have worked just as much DX as some of the former. So we back out of this argument and leave it to a psychiatrist.

The fact remains that when we get a large number of stations on the air, notably for a weekend contest, conditions usually give the appearance of being good. The CQ DX Contest produced such an effect. Apart from the high level of activity, a few unusual DX stations appeared. One such was YJ1AB, who suddenly turned up among the ZL's on about 14000 kc and worked just a few G's before fading out. On other mornings, when things have been quieter, a lack of ZL and VK signals has made it worth while to listen round very carefully, and one has been

By L. H. Thomas, M.B.E. (G6QB)

rewarded, now and then, by a VR2, a ZM6, or some similarly rare specimen.

The old motto applies as much as ever: "If you don't hear it you can't work it—and you won't hear it unless you spend an awful lot of time listening." How long does your patience let you listen before you somehow find yourself sending "CQ DX"?

The DX on Twenty

Some of the habitual twenty-metre users have migrated to the LF bands, leaving rather more room for the remainder. But short-skip doesn't make it easy, especially when we have French and Italian phone (or should we say spitch?) working on 14090, 14050 and 14100, to say nothing of Russian commercials on 14070 and 14070 kc. At times the band has been no place for anyone wishing to retain his sanity and his nice pure habit of speech!

Many of the chasers managed to raise 3A2AB before he finally left Monaco. This, by the way, he did some days ahead of schedule, largely on account of his disgust (he says) at the low standard of operation. He told us that the G's were not far from the bottom of the list in this respect, and that he
would have given lots more of them a QSO if only others had had the sense to make it more snappy. As he said at the time, "Why on earth tell me the QTH, power, type of aerial and receiver, name is Fred, and all the rest, when there's a queue waiting . . . as if I cared, anyway!"

We gave him his last QSO before he pulled the big switch for good, and were thrilled to hear him come on phone with Leon Deloy, the original F8AB, at the mike. F8AB, famous for his 25-cycle raw AC in the very first Transatlantic tests of nearly 30 years ago, has been out of radio for a long time, but now lives in Monaco. We gathered that this was Leon's very first phone QSO!

Then there has also been an F3SBK on the band; whether he is genuine we don't yet know. VUBAL is said to be with a Himalayas expedition in Bhutan; FG8AL has been on from Guadeloupe, and FG8AC is also reported; furthermore, we hear that W4LTV is going there and hopes for an FG8 call. VK9QK and VK1XYG have brought joy to a good many hearts, and Y1JAB we have already mentioned. ZS8MK has been on the LF end from time to time, but woe betide the lid who calls him when he is in QSO with someone else; we heard one or two getting some rough treatment! (This, we may add, caused us much pleasure.)

Two "funnies" we heard during the Contest were DP4CC and DP4CG; does anyone know more? We assumed they were just a couple of unlicensed Germans.

G6BB (London, S.W.2) raised F9QV/FC, 3A2AB and ZE3JO for new ones. G2BBI (Westcliff) found EA6AS and EA6AT on phone. G6AT (Hampton Hill) says he is an expert at picking the dud times on the band—and there certainly are plenty to choose from.

New ones for G5FA (London, N.11) were 3A2AB and FQ8AB; other DX included KH6, KR6, KL7, VU, VQ4, VS6 (all on CW) plus T12HP, VP6, EA8, MT2, EA6 on phone. G3FGT (Birmingham) managed to work VK1YG, ET9X, and also KG6, KH6, VS6, VQ2 and 4, as well as a lot of the less difficult stuff.

G3GUM (Formby) is a man to watch; after three months on the air he is in the table with a score of 332 and 82C. New ones for him during the month were FY7YB, VQ9AA, ET9X, VP1AA, ZA1A, 3A2AB, and a good many others. The nicest one missed was W6RGD/

HL1, heard working KG6 several mornings. 'GUM is aiming at the Century before December 31, and, at the present rate of progress, should get there with some to spare. He asks what now happens to WAZ, with AC4YN and AC4RF presumably off the air? One can only hope that things will settle down and that they will possibly start up again, but it does seem unlikely. Even if some C8's come on, it will take a long time to find whether they are genuine, and probably the QSL situation will be impossible.

G3ATU (Roker) thinks there are now three HVfA's on the band—one on phone, one T9 and the other T6 and calling himself "Don Giuseppe"! (We have, since last month, had a letter direct from Vatican City Radio, which makes it quite clear that no HV's have ever been licensed.) Nice new ones for 'ATU were VR1C (1900), VQ8CB (1600), 3A2AB and ET9X. Others of interest were VR2BU (0800 on a "dead" band), VK9QK and VK1YG (1630). Another one heard was EA0AB, Spanish Guinea, on 14080 at 2000 GMT.

G2HKU (Sheerness) has come up against some of G1BF's pals, his CQ's having been replied to by both FO1OL

G8UN of Prestwich, Manchester, believes in taking his radio in comfort. Though licensed since 1928, he has never gone QRO and the main interest still is phone on Twenty with 10 watts to an 867. The Tx is VFO controlled, the aerial a folded dipole fed with 300-ohm ribbon, and the whole outfit is relay controlled. And when the top and two lower doors of the operating desk are closed, none of the gear is visible—an ideal living-room layout.
and URI BF. The former gave his QTH as "Twitti," which sounds just about right. G2VJ (London, S.E.22), on phone, has worked YI3ECU, PK4DA, VSt1DZ, XZs2SY, EA6AF and 3A2AB.

G2BJY (West Bromwich) has at last gone QRO and is now using 150 watts. But he did make DXCC and EDXC with 25 watts, which was well worth doing and none too easy. Before leaving his QRP he worked three new ones—VK1YG, VS2CP and ZD6EF. Others on 14 mc were CR7, KP4, KH6, ZA, VQ2 and 4, and ZE.

### Forty-Metre DX

Carrying right on with G2BJY, but now on Forty, he has been surprised by the way the DX has rolled in. Not only working W's (including 6's); ZL's and 4X4'Brien, he has heard FM7WF at 2200. G2HKU was delighted to raise a W in Vermont, after searching for one on 14 mc for years. He, too, has worked ZL, VE and W's, and has heard VE8AD (at 0630).

G6TC (Wolverhampton) finds the W6's quite easy to raise around 0700, and on some evenings he has worked other W's as early as 2000. (No one yet has reported a W6, via the long path, in the afternoons.)

G3ATU found a good one—LB9AC on Hope Island, Spitzbergen. Others of interest were CX1FY, HP2RO, FM7WF, VS7KR and VP8AK—yes, all on 7 mc! G6BB raised UNI1AE, VS7KR, ZS2TK (at 0650), MiC, EK1AO and some less usual Europeans. G3FTU worked two 4X's, MF2AB, innumerable W and VE, and heard VP8AJ, 8AK, VS7NG and UV2BC.

G5FA collected ZD4AB and UNI1AE for new ones, plus HZ, MD7, KP4, FA, CN, 4X and 9S, as well as all W districts.

G2AVP (Debden) has returned to the fold after a long absence due to some hard work on a course. He has been mainly on 7 mc, and has accounted for 18 new countries since October 22. Among them are UN1, UL7, KP4, EA6, HK, ZD4, FM, VP9, CO, CT3. He has noted several South American break-throughs and says that sometimes, at 2200, the band is full of LU, PY, HK and CE at S6-9. Some very nice stuff has been heard on the band, such as VA1KF, K1H6, VP8, H1, KZ5, YV, CX, VU, VQ4, VQ3, KS4, VP1 and EL. (No one yet seems to have mentioned PK4DA, who came roaring through during the Contest.)

G3COJ doesn't like the band much, chiefly owing to "endless CQ DX calls by G stations, who should know better." He heard VS7KR at 0100, FM7WF at 2330, plus the usual VP8's, ZL's and the rest. G3VG (Dartford) worked T12PZ, SV9WM, ZL, 4X and W5, and also heard FM8AD (0335), ZC4TF, ZD4AB, CM8CM (0520) and HC2IH (0545). But he finds broadcast and spitch growing steadily worse, making it more and more difficult to dig them out.

### The Month on Ten

G3EHY (Banwell), who is a well-known VHF operator, sends interesting
One of the keenest and most successful exponents of DX working on 7 mc is G5FA, New Southgate London, N.11. He finds the stuff in spite of Spanish BC, Russian jamming and BBC harmonics.

news of an "Aurora opening" on 28 mc. On October 28, after the band had been dead for some time, weak signals began to come in from the North. Suddenly GM's, GI's and stations in the North of England were heard working each other, all with beams looking North, and 'EHY had a solid QSO with G16VU—S9 with flutter. LA8AB and SM3WL were also heard, but they were working each other and not aware of the Aurora.

G3COJ has found a great improvement in the band, with most parts of the world audible, though erratically. He even heard an XE on 28 mc CW—a DX piece which a lot of people have long been coveting. G2BJY found conditions poor on the whole, but good for South Africa, although all the activity was on phone. G2BBI worked CR4AD on phone.

New ones for G5FA were ZD4AB, HZ1KE and KS4AC. He also worked TA, ZE and a few W's.

G2HIF (Wantage) has not written since the close of the last 28 mc season; and, as he says, "What a difference!" But he managed a WAC, on phone, in 3½ hours, with the W the hardest to get. He finds things most unreliable now, as even an S9 contact is liable to peter out suddenly. 'HIF is in the middle of big trouble with TV; in a "double-fringe" area, within a few hundred yards he has eight sets on Sutton Coldfield and about the same number on London, which doesn't make suppression problems any simpler.

Eighty-Metre DX

There has been a surprising lack of DX activity on 3.5 mc, although the band is always pretty crowded. G6QX (Hornchurch) has, however, been working W's as nearly as 2230, with W1BOR, 1DHD and 1IZQ outstanding. He got 579x back from them too. G6BB raised YO6CA, YT2DGL and LX1JW for new ones. G3FGT worked ZC1DG—a very nice Asian if genuine!—and also UA3HS, who, he says, was in great demand. He, too, raised LX1JW.

We happen to know that the ZL's are there almost any morning, and many other nice pieces of DX are possible. The stumbling-block to a quick WAC on 3.5 mc seems to be Asia; but every time we think of that we look up at ZC8PM's card on the wall (for two years ago) and smile a seraphic smile. [Over
G3GUM tells us that G3ATO, nearby, with 6 watts and one crystal on 3527, worked ZL2CQ one morning. Fine work!

Top Band Topics

Apart from the terrifically high level of activity which "MCC" seems to have stirred up this year, there is no shortage of Top Band DX. DLzQM, for instance, told us that he was hearing dozens of G’s at mid-day on a recent Sunday, but most of them were too engrossed with locals to take any notice of his calls (QRM was probably the real trouble).

G6AB (Holland-on-Sea) broke fresh ice by working UR2AA (Tallinn) at 2345 on October 21. UR2AA told him that he would be on at midnight on Saturdays in future, round about 1910 kc. This was probably the first G/UR contact—any other claimants?

G2NJ (Peterborough) worked OK1AWA (Prague) at 0045 on November 4; the OK was using 50 watts. 'NJ also heard DL2QM at 579, as early as 1625 GMT, and the DL told him he thought DL2DV and z0Z would be on the band soon.

Then, during MCC, we heard stations working OK1AJB and others calling IAAT. Whether the latter is genuine we don’t know; there hasn’t been an I on the band since the days of G6ZO/I in 1946, so far as we are aware.

G3FGT has been doing some infra-QRP work, and with half-a-watt to a 6J5 he achieved DL and OK and also had a cross-band with PA0JA, who was on 3.5 mc. Nice going for flea-power.

The other Top Band news is, of course, the series of Short Wave Magazine Transatlantic Tests that begin early in the New Year. Full details are repeated in the accompanying panel. There are several important points to note, so we will emphasize them here: Synchronise your clocks and call at the right times (0505-0510, 0515-0520, and so on); Do Not call W’s on their own frequency or anywhere above 1800 kc; and, preferably, do not call "CQ W/VE" above 1775 kc. You have the whole area of 1775-1775 kc in which to call CQ; leave 1775-1795 for answering W’s and (we hope) working them.

It would be the height of absurdity if the W/VE periods were all occupied by W’s and VE’s calling CQ Europe, and the European periods by ourselves calling CQ W/VE; someone has got to reply to someone else sooner or later. So listen more and call CQ less. And remember, it is a Test and not a Contest.

The Overseas Mail

VS6BW/G3AQZ writes from Hong Kong with some nice QTH’s which appear in the box herewith. VS6AC also writes, to say that he will be on 7 mc this winter and hopes to work G’s.

To show that it’s possible, he has been listening and has logged the following on 7 mc: G2ASY, 2BTX, 2HFO, 3AAG, 3BTA, 3DMG, 3DRY, 3EDW, 3ESA, 3PBQ, 3PSK, 3GPP, 3GVQ, 4XC, 5UI, 8KP. He also logged GW4CZ, R4 and S6, the only signal audible on phone.

VS2CP (Kedah) says 14 mc conditions have been very poor and wonders whether to have a serious crack at the LF bands. We certainly hope he does. The VSt’s and z’s have to observe tolerances at the band-edges, amounting to a loss of 7 kc at each end on 1.7 and 3.5 mc, 12 kc on 7 mc, 20 kc on 14 mc, and 35 kc on 28 mc! At all events, it does give them space to look for DX without any local QRM, but they probably don’t look on it like that. VS3, he
tells us, is definitely non-existent now. VS2CP has now managed his rebuild and is running 150 watts on 14950 and 14100.

HZ1KE at Taif, Saudi Arabia, is still very interested in the Top Band and will co-operate in contests and the like. But he says that a portion must be set aside for DX stations. He has heard and called many stations but only worked one—G5LP. HZ1KE has very efficient gear available for all bands from Two to One-Sixty—plus time and enthusiasm—but pleads for some good planning at this end.

YL2UW is now home again, and at RAF Insworthy, Gloucester. He hopes to be on with an /A call soon. W2QHH (Hamilton, N.Y.) continues his phenomenal climb up the Four-Band ladder (not that he has very far to climb!) and is looking forward to the winter season on 3.5 mc very keenly. His present score of 73C on that band is pretty terrific, but he is always on the beat for more.

A real live QSL card from MD0AA confirms that he was in Yemen and adds the welcome information that he will be there again during December. He is very much under cover but perfectly genuine.

DX Miscellany

G3COJ’s aerial “score” is now 35 different types. We really must try to count our own attempts one day! COJ has, at present, an 8-element on Two, a 3-element on Ten, a 3-element and another beam on Twenty, plus a ZL Special and a dipole.

G3ABG (Cannock) had his YA2B card returned from Box 25, Kabul; but his DXCC arrived, which cheered him up. He worked a nice lot of DX on 7 mc during the CO Contest and is now on the Top Band, hoping that TA3FAS will show up. G6DN (Manchester) tells us that the former SV0AM has had his call changed to SV0AN, and will send cards to all who worked him with the old call.

The former G3CDR has had to “lend” his call to the GPO again during a second period in the Far East. He hopes to visit VS6AC and make some contacts from there. Meanwhile, he asks the gang to keep an ear open for him from ZB2, ZB1, VS9, VS7, VS1 and finally VS6!

G5YH (London, W.4) wants to register a violent protest against the shocking quality of too many G signals on CW. He says most of them wouldn’t have been tolerated in 1930. In particular, he flays the practice of keying the oscillator stage. He says he heard G5—calling CO at 8 w.p.m. with a note like an old man with bronchitis, and then G3—apparently using raw AC. ’YH has had a burst of CW on 28 mc and has raised ZE2RF, VK6RU, ZS3K and some K5’s.

G3DCU (London, N.W.11) made 213 QSO’s during the CO Contest, giving him a score only slightly higher than that of last year, when he worked 28 mc only. He enquires about “M1AS” on 14 mc, who sounds mighty fishy to us.

SU1UU is O.K.! We have had a QSL-cum-Christmas card from him. He says his QSL’s will arrive in time; he is under cover but genuine, with 25 watts.

The latest certificate for hunters of such is a “WXBAS,” of all things. To translate, “Worked Ten Bruges Amateur Stations.” It will be awarded
to anyone submitting proof of working ten or them after January 1, 1951.
This, we think, is going a bit too far; what will happen when every town tries to do the same? (Worked 500 Londoners, worked All Ashby-de-la Zouche, and so on ad infinitum).
GM3FBA (Helensburgh) is working in Portsmouth and hopes to be G3FBA/A when down there. We are interested to note that he heard UB5BP when he was working GW3FFE on the Top Band last year; we didn’t know that anyone else had noticed him.
Last month Q6BFC was mentioned in connection with G3ATU. ‘ATU asks us to state that the Q6 worked a VQ4, at the end of which he sent “CL” firmly three times and has never been heard of since.

1951 Four-Band Marathon

We have decided that the Four-Band table gives an unfair advantage to those who were able to work 28 mc in the palmy days of 1946—witness our own 28 mc score, which has hardly increased in the last three years. Just to keep everybody awake on all bands, we propose to run the table in the form of a 1951 Marathon, starting (not unnaturally) on January 1. So, after that date, get cracking, keep your log nice and neat, and you will have no trouble in putting in your 1951 scores month by month. The placing on the ladder will be, as now, by the figure representing the total of the different figures for each of the four bands—not the number of different countries worked.
So that gives you a chance to derive a small thrill from working an OZ, ON or OK on 3.5 mc, or even a DL2 on 28 mc! And we should like to appeal to everyone to join in this one, which should be fast and furious for the first four or five months, anyway. Some of those high-scorers who are too modest to report will now have a chance to begin at the bottom again. Send your first report in mid-January so that we can start the new table in the February issue. Who will be the first away to a flying start?

Pirates

In response to numerous appeals not to waste any more space on this unsavoury subject, we have decided to drop it. (We never did like it, anyway.) Seeing that these pleas have come from places as far apart as ZL and OZ, we are glad to oblige. Your piracy worries should be forwarded to the GPO, please, not to us. And please read the paragraph on the subject on p. 621 of the November issue, which explains much.
This is the last time we shall be seeing you all before Christmas, so we must take this opportunity of wishing you a Merry Christmas and a Happy New Year. Let us hope that 1951 will mean working W’s and VE’s on Top Band, WAC on Eighty, and all the other thrills you can mention. And those wishes go for I. McLott and Arabackle, too.
Deadline for next issue is first post on December 14, and, for the following month, January 15. So 73, BCNU and ‘Miri Xmas.”

MINIATURE GEAR

Some interesting designs have recently been published of transmitting equipment devised to pack the maximum efficiency into the minimum space—in fact, portable transmitters have become, in general, smaller, lighter and more compact than the receivers with which they are operated. This prompts us to ask whether there are any readers who have been equally successful with miniature receivers, either straight or superhet, on the same lines and designed for normal amateur band operation. If so, we would very much like to hear from them, if possible with a photograph of the set.
The winner of the Marathon Contest for 1950 is announced as G3BDQ (St. Leonards, Sussex), and the silver cup—one of the Club trophies—was presented to him by the President at the FOC Dinner on November 25. During the Marathon, open only to members of the Club, the best contact was that between SM3JDZ and KV4AA. The DX contest, another Club event which has now been "run off," will be reported in the February issue, "as logs are not due in till after these notes appear.

Progress

With this issue of Short Wave Magazine, the FOC completes its fourth year of post-war activity. Membership has increased steadily till it now stands at over 300, in 31 countries—and be it noted that all these members are qualified at the high standards demanded by the rules. It has never been the object to enrol as many members as possible; rather, the intention has been, and still remains, to attract into the FOC those amateurs who can not only qualify at the operating standards laid down, but are also imbued with the spirit of Amateur Radio in the best and widest meaning of that term. The result is a happy, well-knit and smooth-running organisation, characterised by a "mateyness" not always found in bodies covering such a wide range of diverse types as go to make up the membership of the FOC.

And with this it is well to pause a moment to remember G2ZQ and G5BW, the original founders of the First Class Operators’ Club, who strove so hard in pre-war years to make it the success it has become. They have both passed on long since, but we may believe that they would approve the outcome of their pioneer hopes and aspirations.

The world of Amateur Radio also mourns the passing, quite recently, of VK4RC, who was an FOC member and a well-known enthusiast for many a DX Contest; his callsign rang round the world.

FOC Committee

As more nominations for the 1951 Committee were received than there were vacancies, a ballot became necessary, and the result will be announced in Circular Letter No. 41 dated December. A copy of this is being posted to every member individually, the rota system being dropped for this one issue. Any member who does not receive C/L 41 is asked to write G2ZC.

The Club Dinner

This took place on the evening of Saturday, November 25, at the Aldwych Brasserie, London, and was attended by 66 members, with the President, G2NM, in the chair. We were glad to welcome 2 overseas members and to see so many old-timer G’s who are members of the Club. As in previous years, the evening was a joyous and successful occasion, organised as a "get-together" rather than as a formal meeting—though indeed it is the only annual meeting that the Club holds. A full account of the Dinner will appear in the next C/L.

Election Notice

In accordance with the Rules of the Club, the following are declared elected to the active membership list of the First Class Operators’ Club:

J. Christie, GM3FXM (Burntisland); A. Bertenes, F3NB (Cité de l’Air, Athis-Mons); T. Holbart, G3DXJ (Reading); B. Farleigh, G4RJ (Kingswear); and G. N. Roberts, G3ENY (Walton-on-Thames).

All communications respecting the First Class Operators’ Club should be addressed direct to: Capt. A. M. H. Fergus, G2ZC, 80 West Street, Farnham, Surrey. (Tel.: Farnham Surrey 6067).

TRANSMITTER FOR TEN

Three-Stage Job
Designed for the Band

By W. J. CRAWLEY (G2IQ)

There can be no doubt that while it is entirely possible to arrive at a reasonable compromise for gear to cover the bands 3.5 to 14 mc effectively, the change in frequency from Twenty to Ten is such as to demand quite separate equipment for satisfactory operation on the 28 mc band. Our well-known contributor discusses this matter with particular reference to 10-metre transmission and the present trend for "table-top" units.—Editor.

THE conventional rack-and-panel outfit which has been in vogue for nearly two decades appears to be giving way to the smaller table-top type of transmitter. The new trend has several advantages from the amateur point of view. Generally speaking, the rack transmitter is an unwieldy affair, and any amateur who has had to replace a burnt-out bleeder resistor underneath the main power pack chassis will agree that servicing a rack-built job is a physical effort as well as a mental feat. The first feature, then, that commends the smaller rig to the amateur is its accessibility, and so the ease with which adjustments both above and below the chassis can be made. If something has to be done, it is much simpler merely to turn the whole assembly on its side than it is to remove it from the rack and re-assemble it once again on the work bench.

Improved Efficiency of a One-Band Transmitter

Another point where this new trend scores is the better average efficiency that it is possible to obtain from the smaller rig. In view of the twitching eyebrows that will probably greet this contention, the writer had better explain what is in his mind. The majority of amateurs today seem content to specialise in certain aspects of their hobby. For example, there is the VHF man who is experimentally-minded: the DX man, who works mostly on Ten and Twenty and sometimes on Forty; the phone-only enthusiast, usually to be found on Eighty. It will be agreed that the number of amateurs who actually work on all bands is very small and that most specialise on two or three bands only. In the majority of cases, the need for a rack-built band-switched transmitter with its undeniably lower efficiency would therefore appear to be small. Nobody will deny that there is a loss of efficiency in a band-switched rig. Apart from RF losses in switching and leads, there is the question of valves. Take for example the popular 813, a very useful valve up to 20 mc—but there are much more efficient valves for 30 mc. There must unquestionably be a loss of efficiency in a combined 7, 14, 28 mc transmitter which uses an 813 in the final. With competition so keen on the bands today, it is only common sense to use as efficient a transmitter as possible for a given input. Amateurs in countries where the 150-watt maximum does not apply do not have to be so particular, and a hundred or so watts lost in waste inductance need not worry them! But it is well worth while from our point of view to run the final at as high an efficiency as possible, and the small table-top one-band type of rig is the logical means of obtaining this.

It should be clear to the reader by now that the writer has in mind a separate small final stage for each of the bands worked. The main advantages may be summarised as: (1) Ease of construction and accessibility for adjustment and service, (2) Higher efficiency because each PA is a specialist on one particular band, (3) Less floor space, (4) Easier screening against TVI. Objections may be raised to the idea of separate transmitters for each band on the score of cost. However, this need not be much higher than the complete rack-and-panel job, when the amount saved on ironmongery is accounted for!

Design for Ten

The small transmitter to be described is for use on 28-30 mc only and all the stages, including the PA which runs at the full 150 watts on CW and 70 watts on phone, are contained in the midget receiver type chassis measuring 10in. x
With a 7 mc crystal, it is possible to get full output on 28 mc using this circuit, as described in the text. The meters are for V2 plate (0-50 mA), V3 grid (0-25 mA), and V3 plate (0-250 mA).

5in. x 2in. It is not claimed that this small rig is the acme of constructional perfection, but its efficiency is high and its small dimensions may help to sell the writer’s contention that power output and bulk need not be synonymous.

The transmitter is built around the type 829B valve, which is obtainable in the surplus market at a very reasonable price and is a really excellent final amplifier. It consists of two similar tetrodes in the same envelope with a pressed glass base, and is eminently suitable for the push-pull mode of connection, being capable of a power efficiency of around 80% at well over 100 mc. It requires very little drive, and, like most tetrodes, is said to be quite stable without neutralisation owing to its low plate-to-grid capacity. The writer, however, is rather cynical on the subject of neutralised tetrodes and has heard enough of the transmissions emitted by PA’s using tetrodes without external neutralising to convince him that, generally speaking, neutralising is a necessity.

Line up of the Midget Transmitter

There are three valves only in the rig: a Pierce harmonic crystal oscillator using a 6AG7 type valve; a simple frequency doubler stage with a 6V6 driving the final to full grid current; and this 829B PA.

The Pierce harmonic oscillator does not appear to have gained the same popularity in this country as in America, and the triet is still the most popular oscillator here. The Pierce circuit is simpler, easier on crystals and less likely to “take off” than the triet. It may also be used straight through on the fundamental frequency
without damage to the crystal. The output is slightly less than that of the tritet, but there is more than enough for our purpose in this application. A 6AG7 valve is used with the suppressor earthed, as a valve with the suppressor brought out separately is preferable in this oscillator to one with the connection made internally to the cathode. Output at 14 mc is taken from the oscillator plate circuit, which is tuned by means of a midget 50 µF variable condenser. The frequency multiplier is conventional and consists of a 6V6 GT using a combination of grid and cathode bias. Another midget variable takes care of the tuning of this stage, the output of which is link-coupled to the grid of the final amplifier. With but 200 volts on the 6V6 there is ample drive, and no difficulty should be experienced in this direction.

The Final Amplifier
The valve holder for the 829B is mounted one inch below the chassis, so that the internal screen of the valve is flush with the chassis. All earth connections are taken to one of the metal posts supporting this holder. The neutralising capacities are rather unconventional and consist of two pieces of bared coaxial cable, two inches long. Holes are drilled in the chassis very slightly less in diameter than the coaxial and adjacent to each plate of the 829B. The coax. is then pushed firmly through the holes so that about one inch protrudes above the chassis: the grid wires of the valve are then crossed over beneath the chassis and connected to the coax. under the chassis. The amount of neutralising capacity required may then be very effectively found by altering the amount of coax. protruding above the chassis. The valve is not too fussy about this, and one inch of 72-ohm cable will be found to be correct. The plate coil has ten turns, centretapped, of 12 SWG copper wire. 2 inches inside diameter, and the ends are firmly attached to the lugs of the split-stator condenser and then well soldered. The leads to the plate tags of the 829B should be flexible to allow for expansion as the valve warms up.

Operation
The initial tuning should be done with the HT supply to screen and plate of the 829B disconnected. If the coil and condenser values have been adhered to, no trouble should be experienced in hitting resonance. The crystal stage runs at about 15 milliamps and the doubler at 30/35 mA. The grid current

Under chassis view of the ten-metre Tx described by G2IQ. A single-turn link couples the FD into the grid of the PA.
rating of the $829B$ is $12\, mA$, through a $5,000$-ohm grid leak, but for Class-C phone operation slightly increased efficiency results from increasing this to $15\, milliamps$. With the grid current meter registering the correct current, the plate condenser should be swung slowly through resonance and the neutralising stubs moved up and down until there is no movement of the grid meter. The applied bias on the valve may then be read by means of a suitable voltmeter between the top end of $R8$ and chassis. This should indicate at least $65\, volts$ negative, depending upon the amount of grid current. The plate and screen voltages now may be applied in that order, and the final loaded up to the aerial by whatever means is favoured at the operator's station. For phone work, the final ambles along at $600\, volts$ $180\, mA$, whilst for $CW$ $200\, mA$ at $750\, volts$ can be taken. The $829B$ is a particularly robust valve, and the writer has had one particular specimen in use on Ten (and Two Metres) for over two years, and, despite considerable use, it is still as good as new.

**Conclusion**

It is hoped that the foregoing will lead to some new trends in amateur transmitter design. The rig described can certainly be improved upon from the artistic point of view, and it is to be hoped that some who pride themselves on turning out really beautiful work will put their hands to the design of smaller transmitters. The point is that there is really no need for the ugly, cumbersome rack-and-panel affair. Two or three small rigs similar to the one briefly described would be more efficient, less cumbersome and more easily de-bugged against TVI. That is the writer's opinion, anyway, so perhaps you'll think it over.

**CARBON MICROPHONE GREMLIN**

*Chased Out*

*By W. FARRAR, B.Sc. (G3ESP)*

The job on hand at G3ESP was the construction of a low-power phone transmitter as a standby outfit on 40 metres and as an exciter for a higher power amplifier. It was plate and screen modulated, using a carbon microphone in the cathode of the first speech stage.

Having got the thing built, it was found that there was an unpleasant roughness on the speech as monitored in a nearby receiver. Surely it could not be the microphone! This was an ex-Air Ministry stand type (similar to a GPO telephone), and the signals from G2--, who uses a similar type, are not at all bad. So everything in the rig was checked, bias values changed, grid leaks changed, but the speech still stayed rough. Finally, it was decided to look into the microphone itself.

On hand were two other carbon microphones, one an ex-Service power-microphone insert, and the other a "home broadcaster." The former was very slightly rough, but much better than the GPO type: the home broadcaster, however, produced no traces of roughness at all. So it was the mike after all.

Examination showed that the GPO type and the home broadcaster had similarly made inserts, so the h-b insert was put into the GPO holder. Lo and behold, roughness was still there, though not so much as before.

**The Solution**

Now, the home broadcaster had just a wire mesh in front of the insert, whereas the GPO type had the usual mouthpiece. On removing this mouthpiece, and speaking at the bare insert, everything was fine, with no apparent roughness or distortion. At first it was thought that pressure might be exerted on the insert when the mouthpiece was locked on, thereby causing physical distortion. However, even if the mouthpiece was just hung over the capsule, it still caused distortion.

Finally then, the funnel mouthpiece was cut off with a hacksaw, and the hole enlarged as far as possible by means of a fretsaw, so that almost all the mike insert was exposed when the mouthpiece (if it can now be called that) was locked on. Result—good quality.

These ex-Air Ministry stand microphones have been widely advertised, and no doubt many amateurs are using them. If roughness in the speech is noticeable, don't say "Usual carbon quality!" then throw it away in favour of a crystal mike.
By E. J. WILLIAMS, B.Sc. (G2XC)

Contest Pre-View—

Activity and Conditions—

Seventycem Reports—

The Achievement Tables—

Your conductor is writing this offering of "VHF Bands" confronted by a pile of Contest Logs, and as there are still some days left for further entries to come in, there is every possibility of a record number being received. Entries have already arrived from ON, PA and even DL, and a quick check on the British logs shows that something like 170 G stations were active during the week-end. As a point of interest, over half of these were heard at G2XC, and that shows well how unevenly the activity was distributed over the country.

Under such circumstances, it is quite impossible to produce a scoring system fair to all. Amongst the claims so far received are three for more than 300 points; one of these comes from South London, one from the Midlands, and the third from the South-West of the country. This seems to indicate that the system adopted for these contests is as near the ideal as can reasonably be achieved. It is doubtful whether a scheme which will seem satisfactory to isolated groups, such as those in the Newcastle area, will ever be evolved and your conductor is not going to attempt to devise a handicap system, such as has been suggested by some competitors? It is quite generally realised that we cannot all start level. So many factors enter into the problem. Height-above-sea-level is not the only thing that matters. A man at sea-level but surrounded by flat country may be far better placed than the man at 300 feet, surrounded by still higher ground or screened in, say, the London direction. If allowances were made for that, the next claim for consideration would come from the flat-dweller who cannot erect a good aerial system; and after that the man who cannot operate on Saturday afternoon, or the church-goer who finds Sunday activity difficult. Indeed, it would need a stronger man than your conductor even to attempt to satisfy all these handicaps. We are absolutely certain that to try to produce any system of handicaps would result in a pile of complaints even higher than the pile of Contest logs at present on our desk.

Fortunately, the great majority of entrants recognise the practical impossibility of working out a scoring system guaranteed to give everyone a level chance. Those who happen to be badly placed if conditions are disappointing take part in a good sporting spirit, not necessarily with the idea of winning the Contest, but to enjoy it as an event and to make QSO’s.

At the same time, let us assure entrants in Lancashire, Yorkshire and still further North that the difficulties under which they compete, especially if conditions are poor, are well realised. The only real remedy appears to be to produce more activity in those areas. But how to do that is, of course, quite another problem!

Comments from the Entries

As there is a scarcity of news other than that included in the Contest reports, it is thought that some extracts from competitors’ impressions of the Contest may be of general interest, and perhaps provide food for thought.

No attempt has been made to place the following in any particular order; they are just as they were drawn out of the pile.

"The standard of operating was high, with the usual exceptions. One station was heard to send CQ thirty-five times

## TWO-METRE ACTIVITY BY ZONES AND COUNTIES

*(Based on reports for current issue only)*

### Zone A (144.0 to 144.2 mc)

- **Cumberland**: G3BW
- **Durham**: G2FO, G4WB
- **Lancashire**: G2DCI, G2OJ, G3AGS, G3AOO, G3AVL, G3BPJ, G3BY, G3SCC, G3ELI, G5YNA
- **Northumberland**: G3CYW, G4LX
- **Yorkshire**: G2HNI, G2IQ, G3COJ, G3DMK, G4BP, G5QU, G6OS, G6PJ, G6TG, G8GL

### Zone B (145.8 to 146 mc)

- **Norfolk**: G5JU, G5KU, G5RP, G6OH, G6SH

### Zone C (144.2 to 144.4 mc)

- **Cumberland**: G3BW
- **Durham**: G2FO, G4WB
- **Lancashire**: G2DCI, G2OJ, G3AGS, G3AOO, G3AVL, G3BPJ, G3BY, G3SCC, G3ELI, G5YNA
- **Northumberland**: G3CYW, G4LX
- **Yorkshire**: G2HNI, G2IQ, G3COJ, G3DMK, G4BP, G5QU, G6OS, G6PJ, G6TG, G8GL

### Zone D (145.8 to 146 mc)

- **Norfolk**: G5JU, G5KU, G5RP, G6OH, G6SH

### Zone E (144.4 to 144.6 mc)

- **Cheshire**: G2CYN, G3ATZ, G3AYT, G3BOC, G3FMJ, G4OS, G5CP
- **Derbyshire**: G2DL/JA, G3EMJ, G5RW
- **Leicestershire**: G2F NW, G3ENS
- **Lincolnshire**: G3DRG/A, G6LI
- **Nottinghamshire**: G2XS, G3APY, G6CW, G8UZ
- **Warwickshire**: G2ATK, G2BFT, G3ABA, G3BVI, G4DJQ, G3EVQ, G3FPO, G3IS, G4NB, G5JU, G5SK, G6CI

### Zone F (145.65 to 145.85 mc)

- **Flintshire**: GW3DNN
- **Montgomeryshire**: GW2ADZ

### Zone G (144.65 to 144.85 mc)

- **Bedfordshire**: G3CGQ
- **Buckinghamshire**: G3BQO, G3MI, G6JK, G6NB, G6PR
- **Cambridgeshire**: G2AIQ, G2UQ, G2XV, G3AEF, G3BK, G3CJY, G3GQG, G3WW, G3MW, G5IG
- **Hertfordshire**: G3FD, G3GDR, G3GRA, G5UM
- **Huntingdonshire**: G3AKU, G3AVO/A
- **Norfolk**: G3VM, G5UD
- **Northamptonshire**: G2ICG, G3BA
- **Suffolk**: G2CFL

### Zone H (145.25 to 145.5 mc)

- **Berkshire**: G3EJL, G5HN, G5RP, G6OH, G8LG
- **Dorset**: G3ABH
- **Gloucestershire**: G2AOK/A, G3MA, G3YH, G5BM
- **Hampshire**: G2DGB, G2XG, G3ARL, G3BHS, G3JNC, G3RGE, G3DEP, G3FAN, G3GAV, G3GQP, G6IS, G6XM
- **Oxfordshire**: G5TP, G6KB
- **Wiltshire**: G8IL

### Zone I (145.5 to 145.65 mc)

- **Cornwall**: G3AGA
- **Devon**: G2BMZ, G3AUS, G3AVF, G3CQC, G3GAO, G3WS, G3BY
- **Somerset**: G3EHY, G3F1H, G3FMO, G3FUM, G4RX

### Zone J (144.85 to 145.25 mc)

- **Essex**: G2CIW, G3CNF, G3ECA
- **London County**: G2DLO, G3BUN, G3EIW, G3FGR, G4AU, G4DK, G5LI, G5PY, G6UW, G6LN, G6KZ
- **Middlesex**: G2AHF, G2BMI, G2DDF, G2FMF, G2YC, G2ZY, G3CKX, G3CWW, G3FEY, G3GSE, G3SM, G4HT, G4KD, G5LQ, G6HG, G6UH, G8IF
- **Surrey**: G2ANT, G2MV, G2YI, G2YN, G3LOP, G4CG, G4CI, G5DS, G5MA, G5NE, G5US, G5WP, G6CB, G6LK, G6LX, G6NF, G6SC
- **Sussex**: G2MC, G2NM, G3DIV/A, G3BEX, G3E8BW, G5RO

**Note:** The frequency areas given above are in accordance with the Two-Metre Zone Plan, as accepted by the majority of VHF operators. A few stations are not conforming.

Before signing his call! Another came back to me giving my call eight times after he had been given a report of 589. (G4CI). . . . "After 3 months off the band I find the only difference is the more general use of BCNU, which I always think is rather a frightful expression, though I suppose it's useful in Contests!" (G2YL) . . . "One-way traffic in evidence on the Saturday night —many stations called, only one replied" (G5JU) . . . "It was going great guns until just after 2000, when the PA power pack blew up. To my mind, the contest was won or lost by the operating on the Saturday evening, and it would appear that once again one of the London boys had the contest in his pocket. " (G3ABA) . . . "My only grouse is that I could have made more points if only phone stations would come back to my CW calls" (G2SM). . . . "My chief impression is of those who got away, viz., GW2ADZ, G3APY and G2IQ, to mention but a few worth quite a lot of points had they been landed. The band was open and it was shut, and at no time was it void of signals" (G3CGQ) . . . "Activity was low and, if it shows no signs of bucking up in the near future, then I shall be the next to QSY to the long waves" (G3GZ). . . . "Operating was pretty slick and competent by all"
## TWO METRES

**Note:** Figures in brackets after call are number of different stations worked: Starting figure, 100.

(G3BOB) . . . "The contest was very much more interesting than previous 2-metre contests, because we were favoured with somewhat better conditions, which meant the contest did not die on one around the middle of Sunday afternoon." (G3BLP) . . . "The best contest I have taken part in." (G6PR).

"Conditions excellent on Saturday afternoon but deteriorated after dark. On Sunday conditions average to poor. Severe congestion in vicinity of 145 mc, with very few stations operating below 144.5 and none heard above 145.55 mc." (G2UJ) . . . "English stations nothing. Condition not so good" (PA0RK) . . . "I did not start building the converter until two days before the contest. I expect to be bottom of the list as regards score, but, after all, someone has to be there" (G3EMJ) . . . "Considering the low barometer, torrential rain and continual gales, results were surprisingly good" (G3BY) . . . "It was a pity that so many stations were using phone and frequently in DX parts of the band" (G5PY) . . . "A relay stuck at about 1030. This was fixed, and then I found the beam rotating gear had jammed during the night. This was undoubtedly gremlins, as it was perfectly all right when I went to bed. It was put right with some brute force and much profanity, and then while working G3E/JL the modulator quietly faded away. Anyway, it was a very enjoyable weekend" (G5RP) . . . "Worked everyone I heard (two stations)" (G6TG) . . . "Too much phone on the band with long-winded contacts by some operators who don't read CW. How did they get a licence?" (G6LI) . . . "Had an excellent time. Great fun, for which many thanks!" (G3FD) . . . "At five minutes to twelve on Saturday the band was dead. At 12 noon it was chaos. With the six pips of Greenwich going, G2XC was heard to burst into life, accompanied by dozens of other stations. Never in my life have I heard so many CQ's called all at once by so many on so small a wavelength!" (G2AIQ) . . . "G3DAH was coming through during the 36 hours even when calling due West. He was called by everybody in the Midlands, but NG" (G6CW) . . . "I spent almost the whole of Sunday on the band. Only a handful of signals were heard, and even these I could not raise, in spite of repeated calls" (G3FIH) . . . "Am now gargling a sore throat and massaging a swollen wrist after the activity last week-end. The annual event brought
forth many almost forgotten callsigns" (G3GBO). "On Saturday afternoon QRM from the road was at its peak, and I offer apologies to those stations who called me. Think the method of scoring needs drastic overhaul, but I realise the difficulties. Too many points are given for long distances" (G6CB).

"After 1300 GMT several G's calling me with phone, but why did these fellows not use the key? We were in a contest, not a tea-party from grandmothers" (PA0FN). "If the Channel would not be, it would be easier to contact G's on Two" (DL3FM).

"My shack is 18 feet below sea level" (PA0JOB). "I feel it was unfortunate the date fixed was Armistice Sunday, and the contest might have been earlier in the year instead of at the mercy of changeable weather" (G3WW).

"No signs of any Shropshire or Yorkshire stations, although watch kept for them all day Sunday. No G1's or GM's heard" (PA0G). "This entry will save someone else from being bottom of the list. I was only able to spend 5½ hours on the band" (G81P).

"Contest thoroughly enjoyed, in spite of poor conditions and lack of activity" (G3BOC). "Regret the unfortunate clash with MCC on Top Band" (G3CWV). "My first experience of 2 metres is pleasure that operators come back with slow sending to slow call" (G3GRA). "Not enough activity in the North. Worked every station heard" (G4LX). "Can anyone explain why, on 2 metres, you can frantically call a chap and never raise him, later to be called by him with the assertion that he'd called you many times before?" (G5UM). "A number of well-known stations conspicuous by their absence. Thoroughly enjoyable contest for G3ABH" (G4ABH). "If Saturday's conditions could have lasted throughout the contest, it would have made a very enjoyable event more so" (G3ENS).

"If only the band was always so active, I might be tempted to have a go at 70 cms!" (G5DS). "I am beginning to think there ought to be a pledge signed by all participants to continue the same activity after the contest ends" (G2CIW).

"An additional Summer contest would be of interest and value" (G81L).

"These contests do not give one a dog's chance of winning unless you are situated in a place like London, where there is a hiv of activity on the band" (G2O). "Because conditions were so poor, some stations changed their minds during the Contest and suddenly decided they were not in it after all!" (G3BOC).

Before leaving this selection of words of wisdom from your letters, your conductor would like to add some that he overheard while eavesdropping on a Contest QSO on the Sunday morning. It went like this: "You're very lucky to get this QSO with me, as I don't usually search the part of the band you are in!" No callsigns this time! One other point: The views expressed above have not been chosen because they are also those of your conductor, or of the Short Wave Magazine. We may or may not agree!

Other News

G3WW (Wimblington) sends a list of counties he still wants. As well as the more remote ones, he would like Essex and Lancashire for the "yearly" table. He gives October 15, 16 and 19 as best days of the past month. G2CIW (Rombournd) found the October 18-20 period a good spell; due to work, he was unable to participate fully in the Contest. G3GBO (Denham) thinks he will have to go QRO to work the Devon stations. However, he has had some success with new counties to the north of him. G3ABA, G3AKU and G3ENS being welcome contacts. G3AKU (St. Ives) had receiver trouble during the Contest, which restricted his activity; he says he is active on all bands and so misses some of the good spells on Two. G3AVO is reported to be shifting to

PA0PB, The Hague, is one of the active VHF men over there. When this shot was taken, PY2JU (right) was visiting.
Benson in Oxfordshire. G5PY (Clapham Park) has built an 829 PA, to be driven from his 522 and run at 75 watts; it will also be used as a driver for 435 mc work. G5LI (N.W. London) has also been trying out higher power to an 829B, but is not sure that it has helped much; he also hopes to have the beam rotatable from the operating position before long. Apologies to G3BOB for dropping him 7 places down the Counties Table last month. He should have been up at the 30 level. G3CAZ (Gillingham) asks if there is a contact on 20 and 30 metres with the same station counts as two separate QSO's for the VHF CC. The answer is Yes, provided you get two cards! On that subject, G2CAZ comments that old-timers promise them and don't send them, and it gets them a bad name. G2A (Biggin Hill) has been inactive due to a mishap to the feeder to his beam; this is now remedied, thanks to some assistance from G6VX. G8LN (Plumstead) has been doing well (at least as well as activity would permit) with 5 watts to an SCR522 and a 4-element beam. He has heard a number of 2-metre stations operating also on Top Band, and asks why folks prefer a band cluttered with QRM when they have another band on which they can chat without any disturbance. G3AEP (Whittlesey) warns against pulling out an 832 by its anode pins, because the glass envelope is too hot to hold. Apparently it is a sure way of making the band open up, but the 832 will not be in a condition to take advantage of it!

A newcomer to the band in Hampshire is G6G5 (Bournemouth), using an SCR522 with 13 watts, and an RF27 converter; at present the rotary dipole serves as aerial. He is on 145.26 mc. G9BY (Boyl Tail) worked ON4BZ on October 24, and has been entertaining ZS1AX (one of the 50 mc ZS men). G3FJI (Radstock) has been consistently active and mentions that G3FKO and G8DX in Bath are preparing for 2-metre work. G3EHY (Banwell) considered recent conditions as being better than at any time in the summer.

### TWO-METRE ACTIVITY REPORT

**G5DS, Surbiton, Surrey.**
*WORKED:* G2AIQ, 2FNW, 2IQ, 2O1, 2XC, 2XV, 3ABA, 3AEP, 3AIR, 3AIW, 3EYH, 3ENS, 3SW, 4MW, 5UD, 8DJM, 8IL, G2WADZ, ON4BZ.
*HEARD:* G2AIH, 2CPL, 2WJ, 3AHL, 3AIW, 3DNO, 3DQV, 3FAN, 4GR, 5BD, 5DT, 5UF, 6L1.
*(October 10 to November 10)*

**G4U, Lincoln.**
*HEARD:* G2O1, 3ABA, 3BPJ, 3DEP, 3ENS, 6L1, D3FM, ON4BZ.

**G3FHI, Radstock, Somerset.**
*WORKED:* G3BLP, 3BDB, 3DEP, 3EHY, 5BY, 6LK, 6NB, 6XM, 8IL.
*HEARD:* G2CIW, 2U1, 3ABH, 3BHS, 3BVA, 3CGE, 3FUM, 3FVR, 3GBO, 3GHI, 3SM, 3YH, 4AU, 4CI, 4GR, 4HT, 5LT, 5MA, 5MA/P, 5NF, 5RP, 5UF, 5US, 6AG, 6GK, 6JK, 6KB, 6VM, 8XZ.
*(October 12 to November 12)*

**G2CIW, Romford, Essex.**
*WORKED:* G2F8B, G2CPL, 2FQP, 2IQ, 2XC, 5BY, 5UF, 8IL.
*HEARD:* F8GKH, 9MX, G3AUS, 9EHY, ON4BZ.

**G2UJ, Tunbridge Wells, Kent.**
*WORKED:* G2CPL, 2DRO, 2FMY, 2K2, 2MV, 2NH, 2XC, 2XV, 3ABA, 3BHS, 3BLL, 3BNB, 3CAZ, 3CGO, 3DAH, 3DQV, 3FD, 3FMK, 3FXQ, 3FVR, 3GBO, 3GDR, 3GGE, 3SM, 4AU, 4CI, 4HT, 5HT, 5DS, 5HN, 5L1, 5MA, 5NF, 5RO, 5RP, 5CB, 6L1K, 6NB, 6PG, 6PR, 6UH, 6XM, 6IL, 8VQ.
*HEARD:* G2AIH, 2AIQ, 2AJL, 2CWI, 2WS, 2YL, 3AHI, 3AIW, 3DNO, 3DI, 3DFR, 3FAN, 4GR, 5BD, 5DT, 5UF, 6L1.
*(October 10 to November 10)*

**G3AIQ, Histon, Cambs.**
*WORKED:* G2BKM, 2HCQ, 2IQ, 2MV, 2UQ, 2XC, 3ABA, 3BEP, 3AIR, 3AKU, 3BK, 3BQG, 3CQG, 3CY, 3DIVA, 3EBW, 3EHY, 3FQO, 3FRY, 3WV, 4HT, 4MV, 5BY, 5DS, 6LN, 5MA, 5RP, 6L1K, 6NB, 6X1, 6XM, 6YO, 6GL1, 8SY, 8UZ, G2WADZ.
*HEARD:* G2FPO, 2XV, 3APY, 3BLP, 3CQG, 3EHY, 3ENS, 3FAN, 3FOD, 5BD, 5DS, 5IR, 5NF, 5PS, 8IC.
*(October 10 to October 31, 1950)*

**G3W, Wimlington, Cambs.**
*WORKED:* G2ADZ, 2AIQ, 2AJL, 2H7, 2AKA, 2ATK, 2AVR, 2CPL, 2DL1J, 2F2W, 2FQP, 2HCQ, 2NV, 2NH, 2UQ, 2XC, 3ABA, 3AEP, 3AKU, 3APY, 3AVOIA, 3BAI, 3BLP, 3BKB, 3CGO, 3DAH, 3DMU, 3DROA, 3EHY, 3ENS, 3FAN, 3FD, 3FXQ, 3FXQ, 3FVR, 3GBO, 3GDR, 3GGE, 3GHI, 3GL, 3GHI, 3CI, 4HT, 4MV, 4PV, 5DS, 5GC, 5L1, 5MA, 5RO, 5US, 5UF, 5UM.

**G3EHY, Banwell, Somerset.**
*WORKED:* G2AIO, 2ATK, 2CWI, 2CPL, 2DCL, 2FNO, 2FQ, 2O1, 2WJ, 2X, 3XV, 3ABA, 3AEP, 3ABA/P, 3AEP, 3BA, 3BLP, 3BV, 3ENS, 3GA, 4NB, 4RK, 5JU, 5PP, 5SK, 5RK.
*(August 13 to October 11)*

**G3EHY, Banwell, Somerset.**
*WORKED:* G2AIO, 2ATK, 2CWI, 2CPL, 2DCL, 2FNO, 2FQ, 2O1, 2WJ, 2X, 3XV, 3ABA, 3AEP, 3ABA/P, 3AEP, 3BA, 3BLP, 3BV, 3ENS, 3GA, 4NB, 4RK, 5JU, 5PP, 5SK, 5RK.
*(August 13 to October 11)*

**70 cm Activity Report**

**G3EIT, Salford, Lancs.**
*WORKED:* G201, G3AYT.

**G2CIW, Romford, Essex.**
*WORKED:* G2F3KZ, 3E1W, 3FQ, 5BY, 5PS, 5YQ.
*HEARD:* G2DD, 2WJ, 3CU 5BY, 6L1K, 2QY.
G2FO (Stockton) was worked on October 18. Auroral reflections were noticed on October 28 from 2010 to 2100.

G2XS, now in Mansfield, Notts., reports active once again; his new location is 500 feet a.s.l., so he has hopes of getting out well. G3EMJ (Derby) has 18 watts to a BC522 on 144.45 mc; a G21Q-type converter and a 3-element Yagi complete the line-up. G6TG (Scarborough) would welcome reports and would like to know of anyone using a ZB2 adapter on 2 metres. G3COJ (Hull) repaired 8 elements of his beam after the gale wrecked it in September and worked ON4BZ and heard DL3FM on October 21; G3FAN was heard on October 24. G8GL (Northallerton) is on 2 metres only. A crystal-controlled converter is being built to feed into a BC455. G4LX (Newcastle) found the period October 18-25 good, and received G3DEP and DL3FM, amongst others. G3BOC (Heswall), who has been on 144 mc for about 3 months, operates an SCR522 on 144.55 mc; his only DX so far has been G3BLP, but he is active most evenings from 1830 to 1930 and after 2200 GMT. G3BOC considers location does play an important part in the propagation of 2-metre signals.

PA0LU reports good 2-metre conditions in that country on October 19, when he worked DL4XS.

Seventycem

The reception of 70 cm signals from G5BY by G2CIW (Romford), reported in last month’s “stop press” note, was, in fact, a cross-band contact, with G2CIW transmitting on 2 metres. Between October 16 and 21, G5BY and G6LK had nine two-way contacts. G2ANT (Godalming) has worked G2DD, G4XC and G6LK on 70 cm. There are hills up to 900 ft. between G2ANT and G4XC, and the distance is around 30 miles. G2ANT has an 832 tripler, a G3EJL converter and an 11-ole. Yagi. G2CIW, whose RF vanished at the critical moment when he was trying to push a signal down to G5BY on 435 mc, has now added a wire mesh reflector to his 8-element stack. It is matched with Q-bars into the 80-ohm coax, and has a balun on the receiver side. In the receiver, fundamental injection is now being used with improved results. G3GTS (Gillingham Transmitting Society) are preparing for operation on 70 cm, and G2AOL (Otford) has the Lecher lines ready for his converter.

Page 691

G3BOB (Hayes) is under way with a 24-ole. beam for the band. G5PY (Clapham Park) is intending to drive his 105 tripler with his new 829 145 mc PA. G3HAX is the callsign now granted to R. Rew, whose excellent article on the conversion of the ASB8 appeared in Short Wave Magazine last month; he will be active on 70 cm from Birmingham on Sundays from 1600 to 2130 GMT. And G3HBW is the new call of A. L. Mynett (Wembley), whose reception of G5BY on 70 cm was reported last month.

G4ELT (Salford) reports reduced 70 cm activity in Lancashire, but hopes it is only temporary. Nightly tests are still made between G2O1 and G4ELT and have resulted in considerable improvements. G4ELT puts out a call to the South most evenings at 2130; he is on 432.7 mc, with about 4 watts output from the Tx. The receiver is a valve diode mixer with push-pull RL18's as oscillator. Both G2O1 and G4ELT are still trying to get some gain out of an RF stage.

G2QY (Pinner) keeps the schedule with G2DD, and has heard only G5PY and G5TP—with the inevitable G4HT harmonic! G2QY corrects us in regard to the reception of G2XC on October 19; it was not G2DD, but G2QY himself who received your conductor on 70 cm.

there was a suggestion of a signal from the Portsmouth end again on November 14.

From PAOBLU we learn that DL4XS is ready for 70 cm operation, and that PA0DT is also on the band. PAOBLU and PAOZQ have had excellent contacts with PA0PN over a path in excess of 50 miles.

Still Higher Frequencies

PAOZQ has a 13 cm oscillator ready using CV90, and G3APY and G3ENS/P had a QSO on 3 cm over a distance of 27 miles. Locations were on Broomriggs Hill, near Loughborough, and Alport Height, near Langport; signals were 50 plus with no fading or static, but much time was needed to get the parabolas lined up. G2QY has gear in hand for 2450 mc, and asks if anyone is sufficiently interested to join him.

Sayings of the Month

"My station is in existence since 1928—so you can see the old are still going strong—in spite of what some may say" (PA0FB) . . . "Woe is he that attempts to acquire VHF CC these days. He might as well try to grow rose-scented cauliflowers" (G3CAZ) . . . "Will G2XC please publish details of the filter he uses in his Rx to be able to give G—-To!" (G2ANT) . . . "What greater joy can there be than sitting back and listening to your friends working the DX?" (G3AEP) . . . "This data is not generally known, so please forget where you got it from." . . . "I have worked more counties (5) on 70 cm than on 2 metres. Is this a record, or something?" (G2QY).

The Clubs

Fiveband Club members will be glad to know that G3BLP has consented to take over the duties of representative for the London area. G3BLP has been a consistent operator on the VHF's for many years and has held a number of records. His call is well-known all over the country, and we are very grateful to him for accepting this task. He is hoping to organise a Club Dinner in London in early March, and details of this will be given, if possible, in next month's issue of Short Wave Magazine.

Congratulations to G3AEX and G8IL, both of whom have become members of the VHF Century Club during the past month. Membership is now on the 80-mark.

In Conclusion

Next month's "VHF Bands" will be chiefly devoted to the results of the Contest. In addition to the main table of placings, it is hoped to show the winners in the various Zones, with the Continental winners, and also to present a table showing what the result would have been if local contacts had been barred. Reports of the month's activities should reach the usual address—E. J. Williams, G2XC, Short Wave Magazine, 53 Victoria Street, London, S.W.1—by December 13 latest. Finally, your conductor would like to wish you all a very happy Christmas, and a prosperous 1951, with plenty of DX and new records on 144, 420 and the higher frequencies.

★★★★

LINES OF THOUGHT

It is often suggested—in our view, quite wrongly—that there is now nothing much left for the amateur in the way of technical development. This ignores the vast new field which we can expect eventually to be opened to us when amateurs in this country are allowed to use pulse transmitting techniques on VHF, when amateur TV transmission is permitted, and when we can use enough power to make moon reflection a practical method of DX communication on the VHF bands. Though there is nothing very original about any of these ideas in the technical sense, they do suggest the tremendous scope there is for the development of Amateur Radio in fields of endeavour which would be quite new to us as amateurs.

★★★★

LIGHT CONTROLLED CIRCUITS

A new Mullard booklet called Industrial Photocells, very well produced and easy to read in the technical sense, will be of considerable interest to all electronic engineers concerned with the design and application of photo-electric equipment. It is, in fact, astonishing what a wide scope there is for light-control circuity, of which the photo-electric cell is the heart. A glance through Industrial Photocells set us thinking about quite a number of possible applications in the Amateur Radio field—we must think some more.
NEW QTH's

This space is available for the publication of the addresses of all holders of new U.K. callsigns, as issued, or changes of address of transmitters already licensed. All addresses published here are reprinted in the quarterly issue of the "RADIO AMATEUR CALL BOOK" in preparation. QTH's are inserted as they are received, up to the limit of the space allowance each month. Please write clearly and address on a separate slip to QTH Section.

Here and There

Handsome Present

This is the time when many of us are casting about for suitable gifts for friends and relations, and it may be the problem is to think of something for an overseas contact. For anyone with an interest in Amateur Radio, may we suggest that there could hardly be a more acceptable present than a year’s subscription to Short Wave Magazine—this costs but 20s. home, or 22s. overseas, and would be a monthly reminder of your thoughtfulness. Send your instructions, with remittance, to The Circulation Manager, Short Wave Magazine, Ltd., 53 Victoria Street, London, S.W.1. And you might even consider treating yourself to a present of the same kind!

Echo from Zone 23

On p.470 of our issue for August last we mentioned that AC4RF was at Chamdo, an outpost town on the Tibetan border. It is now reported that he was "detained by Chinese Communists" on October 10, when Chamdo fell to the forces invading Tibet. At the moment of writing, there is no definite news of the other British amateur, AC4YN, who was at Lhasa, far to the west of Chamdo. Both operators were employed on radio duties by the Tibetan Government.

E.M.I. Scholarship Scheme

To meet the need for increasing numbers of highly trained electronic engineers in their research and design organisations, the great firm of Electric & Musical Industries, Ltd., is offering, through E.M.I. Institutes, a scholarship scheme in connection with a special four-year course in Electronics. The Course consists of three years’ full-time study at E.M.I. Institutes, with one year’s practical experience in the factories and workshops of E.M.I. Engineering Development, Ltd. Candidates should be in the age group 16-18 years, and preferably of higher school certificate standard in science.

The normal fee for this Course is £400, payable at the rate of £100 a year. But successful applicants for a scholarship will receive a grant from E.M.I. at the rate of £50 a year in respect of fees and additionally, in suitable cases, a maintenance grant of at least £50 per annum. The whole scheme provides a fine opportunity for an intelligent youth wishing to make a career with one of the world’s leading electronic organisations, and is a good example of the valuable educational facilities now provided by enlightened private industry. The Course will commence on January 17, 1951, and those interested should make immediate application for entry forms to the Principal, E.M.I. Institutes, Ltd., 10 Pembroke Square, London, W.2. Interviews for selection will be given between December 17 and 21, by arrangement with candidates.

The Amateur Radio Exhibition

A total of 24 exhibitors were showing at the Royal Hotel, W.C.1, during the period November 22-25. This year there were more of those firms whose products are not usually considered to be of direct interest in the strictly Amateur Radio field. On the other hand, this indicates the interest of the firms concerned in the amateur market. Though the attendance was somewhat down on previous years, the youthful element—on which the future of Amateur Radio depends—was much in evidence. For us, it was a great pleasure to meet so many readers, many of them for the third or fourth year, and our visitors’ book was filled with many pages of signatures.

"Economical Three-Band Transmitter"

In the article appearing in our September issue, a slight error crept into the opening paragraphs, regarding the input to which the PA can be driven under the conditions stated—this should be 20-25 watts, and not as given. On p.472, Lines 8-9 in the first paragraph should read L2 and not L3; this is evident from the circuit.

New Catalogue

We are glad to draw readers’ attention to an excellent catalogue of surplus bargains now available from the firm of Lyons Radio, Ltd., 3 Goldhawk Road, Shepherds Bush, London, W.12.
The Month with the Clubs
FROM REPORTS RECEIVED

Many Clubs found their November activities centring around the Magazine Club Contest, which was still in full swing at the time reports were being sent in. Activity appeared to be well up to, if not above, the average for this event, and a great battle was being waged every evening between 5 p.m. and 11 p.m.

Notwithstanding this small degree of disruption, we have received reports for the month from 40 Clubs, all of which appear to be in a flourishing condition with useful and interesting programmes planned for the winter session.

Club Secretaries are asked not to send in routine reports next month, as this space will be devoted to the usual annual account of MCC, complete with the full results and analysis tables showing how all the participants fared. Closing date for Clubs' scores and remarks on the Contest was December 1, so that they should all be in hand before publication of these notes.

The next date for routine Club reports will be January 15, for the February issue, addressed "Club Secretary," Short Wave Magazine, 53 Victoria Street, London, S.W.1.

Kingston and District Amateur Radio Society.—In this club's first Exhibition and Social, which was very popular, not only with members, but also with the general public. Exhibits included a variety of gear built by members, a show of QSL cards, a wide selection of valves, and "Thirty-Eight Years of Ham Radio," by G2LP. Membership is still increasing and has now passed the 50 mark.

Reading Radio Society.—Recent events were a discussion and Junk Sale, and an evening devoted to a talk and Film Show on the Electricity Supply. Other items arranged were a "C & G Quiz," an evening "In Lighter Vein" and a meeting of the instructional section. All gatherings are held at Abbey Gateway.

Clifton Amateur Radio Society.—Members have recently held an SWL Contest (won by K. Brooker) and had discussions and talks on Microphones, Valves and Colour Television. Forthcoming attractions include a visit to the Exhibition, a Film Show and a Grand Xmas Party. Five more members have recently received their tickets, and membership now numbers about 50.

East Surrey Radio Club.—The Club recently met in the shack of G2AJS at Caterham School and saw some interesting demonstrations of Physics and Radio. On November 2 the New Zealand Govt. Public Relations Officer gave a talk and film show on Life in New Zealand. Two more members have passed the RAE and await their licences.

Stoke-on-Trent Amateur Radio Society.—Weekly meetings continue at the Club HQ (Cottage Inn, Oakhill), every Thursday at 8 p.m. November meetings included talks on Test Meters, Television Transmitters, A Double Superhet, Super Modulation, and Impedance Matching—a very thorough cross section of technical knowledge. The Club Tax, G3GUB, is said to be on the air every Thursday after 3 p.m., but we rather think this is a multiplication by 1,000!

Oxford and District Amateur Radio Society.—At the recent AGM all officers were re-elected. During the past year membership has increased by 50 per cent. Activities include a Basic Radio Course and a D-P Contest in full swing, with three cash prizes. There are 80 members, 15 of them licensed.

Warrington and District Radio Society.—At the Annual Dinner (November 29) the "George Richards Trophy" will be presented to G3BOC, of Wirral, who won the inter-club contest. SWL F. E. Loxham won the listening contest. The club meets on every first and third Monday, 7.30 p.m. at 30 Queens Avenue, Warrington.

Gravesend Amateur Radio Society.—This club held a birthday party, visited by the Mayor of Gravesend. The birthday cake was made from VK ingredients! Other events have included talks by G3EJK and G6BO, whose discussion on the use of tables of LC products was particularly well received.

North West Kent Amateur Radio Society.—Recent events were the AGM and a lecture on "The Gainsborough Receiver". It is hoped to publish a regular News Letter shortly. Meetings are held on the first Friday, 7.30 p.m. at The Shortlands, Station Road, Shortlands; new members and visitors will be cordially welcomed.

Coventry Amateur Radio Society.—At the AGM the officers and committee were re-elected, and are now preparing for the new session. Fortnightly meetings continue at the BTH Social Club on alternate Mondays, 7.30 p.m. Next after publication is on December 18, which will be the form of a Junior Ope's Party—XVLY's and XY'L's invited, with a guarantee of no washing-up! The "Sausage-and-Mashed Supper" will be held on January 1, and a Top-Band Demonstration on January 15.

Dunfermline Radio Society.—The AGM was held recently, and the new committee elected. It is hoped that the present membership of 20 will be greatly increased and that premises can be found for a club station. Meetings are held at the Public Baths, Pitmähr Street, Dunfermline; see pence for Secretary's address.

Chester and District Amateur Radio Society.—An interesting series of lectures, films, and junk sales has been arranged for well into the winter, and meetings will begin at 7.30 (or 6.30 for the Morse enthusiasts!). The Club Tax, G3CIZ, is on the air, mainly on 3.5 mc, and reports are welcomed. Note new Secretary's QTH, in panel.
During last September, Derby & District Amateur Radio Society was represented at a local exhibition. Here are G3EMJ and G8YY operating the Society's station G3ERD in the 7mc band; numerous contacts were made.

Edgware and District Radio Society.—This club's second Annual Two-Metre Contest was held in October, a transmitter being hidden on Stanmore Common. Transmissions were made at intervals of twenty minutes, and the winners arrived after a two-hour search. Weather was kind, and a cine-film record was made of the event. Edgware is believed to be the first club to run a contest of this kind, and others might well follow suit. The Annual Dinner has been fixed for January 27.

Midland Amateur Radio Society.—A recent lecture covered the subject of Radio Controlled Models, and proved to be of absorbing interest. Members look forward to further details in connection with P-E cells. Meetings take place on the third Tuesday, at Imperial Hotel, Birmingham.

Spenn Valley Radio and Television Society.—December events are a demonstration of the BRT 400 receiver, on the 13th, and the Annual Dinner on the 27th. The latter is to take place at the Star Inn, Robertstown. The dates of the January meetings are the 10th and 24th.

South West Essex Radio Society.—This club now meets every Wednesday at 8 p.m., and the winter programme of talks and demonstrations is in full swing. Full constructional facilities are available to members, and a slow Morse class is held each week. More members will be heartily welcomed by this (as yet) small club.

Harrogate Radio Society.—New premises have recently been acquired and activity has started again after a break of nine months. Talks and demonstrations have been promised on Microgroove Recording, Television, RF and IF stages, and Tape Recorders. Newcomers will be welcomed and a course on basic theory will be run if the demand warrants it. The club holds the call G3HRS and hopes to be on the air soon.

Richmond and District Radio Society.—At the last meeting, which was well attended, an informal lecture on Radio Valves was given. At the forthcoming meeting a talk, illustrated by slides, will be given on "Early Amateur Radio Personalities." Future activities will include regular Morse classes.

Malvern and District Radio Society.—The winter session is in full swing and lectures are given at 7.45 p.m. on the first Wednesday of the month, at the Foley Arms Hotel. The subject for November was Solar and Cosmic Radiations; for December it will be Microphones and Loud Speakers, and for January, Service Communication Equipment. A visit to Sutton Coldfield was much enjoyed by members and more outings will be arranged for the future.

West Middlesex Amateur Club.—Recent meetings have been devoted to lectures on Airborne Radar, Aerial Problems, a Home-Built CRO, and also a Junk Sale. A coming event is a general discussion in which members will be persuaded to talk about their own interests in radio, and there will also be an exhibition of home-built equipment. Meetings are on the second and fourth Wednesdays, 7.30 p.m. at the Labour Hall, Uxbridge Road, Southall. Morse class at 7 p.m.

Wirral Amateur Radio Society.—Future meetings take the form of a lecture (Propagation, Pt. II), a general discussion, and the club's annual constructional contest. G3BOC won the Warrington and District Clubs' Top Band Contest for Wirral. Forthcoming meetings will be on December 6 and 20, January 10 and 24, all at the YMCA, Whetstone Lane, Birkenhead. Note new Secretary's QTH, in panel.

Eccles and District Radio Society.—This club now has a low-powered transmitter running on the Top Band with the call G66XJ. Meetings continue to be held every Monday at 7 p.m.

Dorking and District Radio Society.—Forthcoming events include lectures on December 12 and 19, and the AGM on January 2. Morse instruction is given at every meeting—7.45 p.m. The Headquarters are at 5 London Road, Dorking. Visitors will be welcomed any Tuesday evening between 7.30 and 10.30 p.m.

Sheffield Amateur Radio Club.—Members are asked to note that the date of the December meeting has been changed to Wednesday the 20th. This is also the closing date for ticket applications for the first Annual Dinner, to be held on January 10, 1951.

Barnet Amateur Radio Society.—The AGM took place in November after a very successful year, including some excellent lectures and demonstrations by prominent personalities. Membership has steadily increased. The next meeting will be on December 16, 7.30 at Bunny's Restaurant, Station Road, New Barnet, and will take the form of a social evening. Barnet's two radio groups amalgamate on this occasion.

Lincoln Short Wave Club.—In November G6T lectured on Balance in Feeder and Transmission Lines, and it proved to be the club's most interesting evening. The annual dinner is held at the Bridge Hotel, Saxilby, and the AGM will be on December 20. It is hoped that members will attend in force to elect their new committee.
Portsmouth and District Radio Society.—Much interest was shown in the club's exhibit at a local hobbies exhibition, when the club Tx, G3DIT/A, was operated daily. Meetings have been well attended and recent lectures were on Television and Radar. Another junk sale will take place shortly. Membership stands at 49, but there is room for more.

Edinburgh Amateur Radio Club.—The season progresses with lectures and demonstrations, and every fortnight the club Tx, GM3HAM, is on the air on 80 metre CW. Coming events include aBrains Trust, a UHF lecture and a visit to the local Police radio station.

Shefford and District Radio Society.—This club made the headlines in the local Press when it supported Shefford Industries Fair and transmitted during the three days of the show. The club room was thrown open to visitors and much interest was shown in the equipment on view. A special attraction to the public was the wire recorder built by G2DUS, on which visitors were allowed to record.

The new club-room of the Salisbury & District Short Wave Club was opened in the grounds of Wilton House on the evening of September 26 by the Earl of Pembroke (speaking).

The new club-room of the Salisbury & District Short Wave Club was opened in the grounds of Wilton House on the evening of September 26 by the Earl of Pembroke (speaking).

Barnet and District Radio Club.—After reorganising, this club started the winter season with a Film Show and a Junk Sale with "lucky dip" parcels. The club station G3FFA is being rebuilt and the phone ticket is awaited. Meetings are on Wednesdays, 8 p.m., at Hopedene, The Avenue, Barnet.

Ravensbourne Amateur Radio Club.—They now meet every Wednesday and Thursday, 7 p.m. at Clifton Road School, S.E.14 (Room F, Top Floor). A trans- mitter and receiver are being built. G2DTH is Chairman and G3DSC is the Instructor. All local SWLs and beginners are welcomed to the meeting.

NAMES AND ADDRESSES OF CLUB SECRETARIES

BARNET (Radio Club): C. J. Spencer, 31 Bury Road, Barnet.
BELFAST: J. Davis, G3GAL, 31 Belmont Park, Belfast.

SPEN VALLEY: R. Pride, 100 Raikes Lane, Birstall, near Leeds.
STOKE-ON-TRENT: J. R. Bingley, G3DML, Euxton, Albany Road, Harpenden, Stoke-on-Trent.
TYNESSIDE: J. Berge, G3ONL, 131 Addycombe Terrace, Heaton, Newcastle-on-Tyne, 8.
WEST MIDDLESEX: F. F. Blomfield, 213 Harrow View, Harrow.
WIRRAL: A. H. Watts, G3FXY, 38 Sandymount Drive, Wallasey.
WORTHING: R. Forge, G3FRG, 2 The Plantation, Worthing.
Bradford Amateur Radio Society.—On December 19 G6KU will lecture on Radio Receivers—the first of a series for junior members and beginners. On January 2 G2BQ will talk about Electrolytic Condensers. Morse classes will be held from 7.30 to 8 p.m. before each meeting. Visitors welcome.

City of Belfast YMCA Radio Club.—A winter programme of lectures and so on has been arranged, and two Morse classes are now active on Wednesday and Thursday. A visit was recently paid to the BBC Headquarters in Belfast, and two competitions for SWL members have been organised. A monthly news bulletin is now published for members.

Worthing and District Amateur Radio Club.—Meetings are on the second Monday of the month at 7.30, and are held at the Adult Education Centre, Worthing. During November the club is giving a dinner to G4JH, who is leaving the district for London.

Paisley Short Wave Club.—This club is now very active and is enrolling new members. On Saturday nights the members are busy working DX from GM3FDP, which now has a TUSB VFO installed. Prospective members are asked to contact the Hon, Sec.

Kenilworth Radio and Television Society.—This club’s transmitter, G3HAD, is now active on all bands from 1.7 to 14 mc. Members are busy improving their Morse and it is hoped that some more call-signs will appear shortly. It is hoped to show a series of films of interest to amateurs at forthcoming meetings.

Forfar and District Amateur Radio Club.—At the recent AGM the new season’s officers were elected. GM3EAK is President, GM2H1K Vice-President, and Mr. A. F. Ferguson Secretary, as before. The club-room is at 168 East High Street, Forfar.

Brighton and District Radio Club.—Recent events which have been popular and successful were the local Hamfest and the Club Stand at the Home Hobbies Exhibition. The club Tx, G3EVE/A, was operated from the latter. Activity now returns to normal, with weekly meetings on Tuesdays, at which talks and demonstrations will be given.

Radio Society of Harrow.—Meetings have been changed from Thursday to Friday evenings, beginning on December 8, and will be held in the Eastcote Lane Secondary School, South Harrow. Membership increases at every meeting. Forthcoming events: December 8, Constructional Competition; 15th and 19th, Practical Nights; 22nd Junk Sale.

Tyneside Radio Society.—Formed only on 15 September last, one of their principal objects is to operate in Contests. A permanent HQ has already been found, which will be occupied early in December, and regular meetings will commence as soon as possible thereafter. It was hoped to enter the club in MCC.

Many years ago, the firm of Stratton & Co. produced one of their first short wave receivers, made in the old factory in Bromsgrove Street, Birmingham. The model shown here was actually built in 1925, and is still in full working order. One of the features of this set, which was B-V-1, was the glass panel—no doubt it was that which helped so much to get the tuning range down to 15 metres, considered an extraordinary low wavelength in 1925!
624K This Month's Bargains

HEAVY DUTY L.F. CHOKEs. Fully potted. 30 Hy. 100 ma. 150 ohms (Weight 14lb). Price 15/-; 20 Hy. 120 ma. 150 ohms (Weight 14lb). Price 15/-; 30 Hy. 150 ma. 150 ohms (Weight 18lb). Price 17/6. All transformers are carriage paid except to Bire for which we must ask for 5/- extra.

Complete Noise Limiters, wired on small sub chassis with 6116 valve, 5/- each. Post free.

VIBRATOR PACKS. 6v input. Output 180v 40 ma, fully smoothed. Price 19/6 plus postage 1/6. All packs are tested and sent out in working order.

SPECIAL FOR AR8 USERS. Matching Speakers, 2.5 ohms. Black cradle case. £3/15/0. Spare Crystals for D model only, 455 kcs., 15/-.

Sealed cartons of spare valves (14). £5.

TWIN FEEDER. 80 ohm, 5d. per yd. Twin Ribbon Feeder 300 ohm (Heavy duty) 5d. per yd. Co-ax Cable, ½ dia. 70 ohm 8d. per yd. Postage on above feeder and cable, 1/6, any length.

Carriage paid on all orders over £1 except where stated. Please include small amount for orders under £1

THE NEW 1355 CONVERSION!

POWER UNIT 541B.
Separate HT and LT Transformers, providing 300v at 200mA DC, 12v at 3A AC, and 4v DC. New and boxed, 65/-.

RECEIVER 3547
With 15 EF50's, 8 other valves and hundreds of parts, including "Pye 45 mc/s strip." New and boxed, 214/6.

CONTROL UNIT 214
With 3 EF50's, 3 other valves and dozens of components. In sealed maker's cartons, 19/6.

PHOTO-CELL MULTIPLIERS.
For facsimile, photo-electric measurements, b u r g l a r alarms, and similar purposes. New, polished, 250v, 28/6.

SPEAKER TRANSFORMERS
Midgets, 28/6.

WIDGET COILPACKS
Shallow 210v/240v Finished Filament core, ALADDIN CE41, 10/-; 27M1. 6/6.

CONDENSERS
EB41, 10/-; 27M1. 6/6.

6AC7, 10/-; 30/6.

6AG7, 10/-; 30/-.

6L33, 10/-; 30/6.

EB41, 10/-; EL32, 6/6.

6AL5, 6/6.

FILAMENT TRIPTRANSFORMERS
Narrow, permitted Amateur TV, Complete with Bleeder network, 3 valve amplifier, (2x 6AC7, 12v, 6AK7) and cell data. Equivalent to Mazda 27M1. 30/-.

RADIO EXCHANGE CO., who gave you the £6 television, now presents, for the first time, the COMPLETE T.V. SET - SOUND, VISION, TIME BASES, POWER PACK and SPEAKER, on one 1355 CHASSIS.

This sensational development, using no RF units, permits a remarkably compact and inexpensive unit, which may be enclosed within the 1355 case. Data for London, now available, 3/- per copy. Data for Birmingham, ready shortly. NEW 1355's in original maker's cases, 55/-.

TRANSMITTER 21
Complete with valves, for CW, MCW and modulated signals, these, together with the receiver 21 and vibrator 21, form a complete, self contained station for 4.2-7.5 mc/s and 18-31 mc/s. PA coils and relays have been removed by the Ministry of Supply, but may easily be replaced. Complete with control panels and circuit. 25/- Correct plug-in meters, 6/6 (new and boxed).

AMPLIFIER 1135A
With EBC33, EL32 and EL34; 9" x 23" x 6", Complete with our "10 min. conversion data." 17/6.

RECEIVER 24 complete with Vibrator Pack and covering 4.2-7.5 mc/s and 18-31 mc/s. These may have slightly damaged switch spindles (wafers undamaged), or toggle switches, but are otherwise perfect. Complete with circuit and 9 valves, 37/6.

New and Boxed P.M. Speakers 6½', 13/6 each, plus 1/- postage.

8', 16/6 each, plus 1/- postage.

10', 20/- each, plus 1/- postage.

New IN34 Crystal Diode Cartridges, 5/3.

Post paid.

Type R35 Receiver Power Pack. In grey steel cage 8½" x 9½" x 6½", contains two separate complete power units with outputs of 300v at 80 mA and 300v at 60mA. Each with 6.3v 3A LT. Price £4/12/6.

Mains Transformers. Input, 200/240v, output 6.3v 1.5A, 7/6. Post 10d. 300-0-300v 80mA, 6.3v 3.5A, 2.5A, 21/6 ; also 350-0-350v, at same price, post 1/-, Special 230/4 or 6v 4A, 6/10. Post paid.

Multi-Ratio Output Trans., 30 watts, 25/-, post 10d.

New Miniature Condensers, in all cases, 450v 8 mfd., 3/6. 16 x 8 mfd, 8 x 8 mfd, and 22 mfd. 16 x 16 mfd., 4/10 each. Post paid. 32 x 32 mfd., 350v, 6/-.

TU9B Units. Complete in black crackle cases, 17/6. Carriage paid.

R1132A. We have a few of these splendid 10v Receivers 100/120mcs, New, £4/19/6. Carriage and Packing, 10/-.

New Brown's Poming Reed Phones. 6/6 pair. Post paid. Finest made.

Trans., to match 5/6. Post paid.

RF24 Units. Converted to 28 mcs band, variable tuned with 100-1 geared SM, dial. Complete with plug and leads for immediate use. £3/5/- Post paid.

New Army Morse Keys, 2/10, post paid.

Input 200/240. Output 6.3v 5.5A, 6.3v 7.5A, 6.3v 8.5A, 35/- plus 2/6.

0-200 Microameters 4½". 42/10 P.P. 0-300v. 21, 10/-.

0-250 Milliammeters. 2½", 10/- Post paid.

Army Morse Key and signalling lamp sets in metal case, 8" x 8½" x 6½. 12/- Post 1/6.

Please Note— All Crystal Microphone and Pick-up Inserts have been sold.
Have you got
The Radio Amateur Call Book?

If you are an active operator on the amateur bands, one of your most pressing needs is a directory of Amateur Radio stations, available for constant reference.

THE RADIO AMATEUR CALL BOOK is this directory, and the only one of its kind. But the CALL BOOK does much more than list amateur stations throughout the world, alphabetically by callsign (for this alone it is worth every penny)—it gives you the Continental area in which each country is included, and the Zone listing of that country. The CALL BOOK also shows the QSL Bureau address for every country, the callsign districts out of which many countries of the world are divided for radio purposes, and provides time-conversion charts based on GMT; it also lists the Q-Code, the international language of radio, as used by amateurs all over the world.

The layout and arrangement of the CALL BOOK are such that all this vital information can be obtained in a matter of seconds, whether it is the name and address of an amateur in Tibet or the QSL Bureau for Paraguay.

The RADIO AMATEUR CALL BOOK is a large volume of nearly 400 pages, published four times a year: Spring, Summer, Autumn and Winter. The callsign lists and addresses are under constant revision and each issue is right up-to-date, with hundreds of new callsigns and changes of address.

**Autumn 1950 Issue out of print. We are now taking orders for the Winter 1950-51 Issue, for delivery during January**

**Prices:** Single copy, 16s. (post 10d.)—or for any two issues to choice, 29s. —or for a year of four quarterly issues, delivered on publication, 53s. 6d.

Come to SMITH'S of
EDGWARE ROAD
THE FRIENDLY SHOP
FOR ALL RADIO COMPONENTS

We stock everything the constructor needs—over 25 years' experience of handling radio parts and accessories enables us to select the best of the popular items and the more useful items from the surplus market in:

- Loudspeakers and Phones
- Transformers and Chokes
- Meters and Text Equipment
- Pickups and Turntables
- Switches and Dials
- Metalwork and Bakelite
- Books and Tools
- Valve Holders and Cans
- Metal Rectifiers
- Sleeving, Nuts and Bolts, Tags, Clips, Grommets and all other bits and pieces.

NOTHING TOO LARGE—NOTHING TOO SMALL

Everything you need under one roof—at keenest possible prices

No general catalogue is issued owing to constantly varying stocks and prices, but we shall be pleased to quote you. Lists are available in the following lines, in which we specialise, and can thoroughly recommend:

1. The increasingly popular "Electro-Voice" range of Transformers and Chokes, "As good as the best"—yet cost little more than the cheapest.
2. The "G.L.G." 16-gauge Aluminium Chassis. "For the man who takes a pride in his rig."

EASIBINDERS

for THE "SHORT WAVE MAGAZINE"

Bind your issues in the Easibinder. By a simple operation the journals are inserted with a steel wire, and at once become a neatly bound volume for the Bookshelf. The Easibinder is bound in green cloth, and gold-blocked with title and year on the spine. It will hold 12 issues. (One volume).

Price 11/3 (Post Free)

A Binder can be sent on approval if requested. When ordering please state the years to be blocked.

LiquiDATOR'S STOCK

Polished walnut radio cabinet size 20 x 12 x 7 1/2 in. complete with L., M., and S. dial, size 7 x 5 1/2 in. and backplate with magic eye cutout, also with drilled chassis and backboard back. You will find it quite a simple matter to complete this into a very handsome receiver of the £15 class. Limited quantity, price 32/6, plus 2/6 carriage for the 5 items.

THIS MONTH'S SNIP

RADIOGRAM UNIT BY A VERY FAMOUS MAKER. Comprising centre drive induction motor with speed regulator, auto stop and magnetic pick up, all mounted on a full size unit plate. Brand new in manufacturer's cartons. The motors are 78 R.P.M. type, but we understand that as they are governor controlled, their speed can be reduced to 33 R.P.M. or they can be made into dual speed motor by quite a simple modification. We have no precise details of this modification at the moment, but if these come to hand we will gladly supply free of extra charge to purchasers. Only a limited supply of these radiogram units are available at this month's Snip price of 25/6s. ea. (this is almost half proper price) so order while stock lasts. If not ordering enclose 5/- extra for packing and insurance.

P.M. SPEAKERS

All speakers are by very famous makers such as Rola, Celestion, Goodmans, etc.

FOR YOUR LABORATORY

You many times have felt the need of a device which would enable you to put resistance or capacity or a combination of these two quickly into a circuit. We have a small quantity of resistances and capacity boxes which, by the simple manipulation of plugs, will enable you to do this. With these boxes you can put in 1 ohm, 2 ohms, 3 ohms, 4 ohms, and so on, in steps of 1 ohm, right up to 6,000 ohms. In a similar way capacity can be put into circuit by small amounts, thus making it simple for you to find optimum working conditions. These boxes made for Government Laboratories, are available while they last at 19/6 each, plus 1/6 post and packing. Don't delay—order by return.

VOLUME CONTROLS

All have full-length spindle and are complete with fixing nuts. We stock full range of values between 2,000 ohms and 2 megohms, prices are less switch, 2/6 each; single-pole switch 3/9 each.

DESIGNED FOR THE P40 RECEIVER

But also a very handy little POWER PACK if you’re stuck with a unit requiring a 12V, heater supply. This unit was manufactured by Stratton Co. and is compact and extremely robust.

The unit is complete and ready for use on an AC Mains Supply of 200/250V. 40/60 c/s. The outputs are ideal for numerous surplus receivers and equipment which requires a considerably low H.T. and a 12V, L.T. supply. Double choke smoothing is employed and full wave rectification. The Power Unit is enclosed in a metal retainer which is louvred Dim: 11\frac{1}{4} \times 5\frac{1}{4} \times 4\frac{1}{4} \text{ ins. finished in grey ripple.}

Clydesdale's Price only £3 19 6 each Post paid

JUST THE RECEIVER IF YOU'RE IN CONFINED QUARTERS

The receiver unit of the No. 18 RECEIVER provides an extremely compact set for operation on 40 M. During tests on 7 Mc/s the 18 Rx proved extremely sensitive and requires only a 2V, accumulator and a 90/120 V.H.T. supply with about 1\frac{1}{2} V. of bias.

The 18 Rx is a 4-valve superhet with regeneration for use when C.W. reception is required, by increasing the I.F. gain control to almost MAX, the receiver is in a state of oscillation. The I.F. is 465 Kc/s. The valve line-up includes 1/ARP12 R.F., 1/ARP12 Mixer, 1/ARP12 I.F., and 1/AR8 2ad DET and AVC and AUDIO OUTPUT. The output jacks are provided for headphone use. Circuits and details are available as required.

Clydesdale's Price only 17/6 each Post paid

A "MUST" FOR YOUR WORKBENCH

An inexpensive 1 1/2 HP motor—modified from the TYPE 29 MOTOR GENERATOR for use on 200/250 Volts AC mains. This motor makes an ideal buff, or light tool grinder, or a scatric drilling machine, a drill chuck can be easily fitted to the end of the 1/2 in. spindle after the existing fan has been removed. Motor size 11ins. \times 3\frac{1}{4}ins.

Clydesdale's Price only 25/- each Post paid
