### EMPORIUM NEWS

The biggest news is that the Emporium is moving to new purpose designed premises. The pressure on space due to the enormous increase in product lines has meant that in order to give our customary service, both to the first time visitor and also the man who has been a regular, we have simply have to have more room.

The new Emporium, designed by Derbyshire's answer to Le Corbusier, otherwise known as David GBGIY, will be truly the only place to visit if you are keen on seeing the best gear, in the most welcoming surroundings and with the finest demonstration and workshop facilities ever seen in this country.

YAESU

AEUK — Your number one

AS FACTORY APPOINTED DISTRIBUTORS WE OFFER YOU—
WIDEST CHOICE, LARGEST STOCKS, PROMPTEST DEAL AND
FAST, SURE SERVICE RIGHT THROUGH.

The superb FT-101Z and FT-101ZD Transceivers are now appearing
in large numbers on the H.F. bands for the simple reason that
they represent the best value for
money available today but price
notwithstanding many operators
argue that the receiver perform-
ance is superior to anything they
have handled before—call, 'phone
or write (please see facing page)
for full details.

FT-101ZD SERIES HIGH PERFORMANCE TRANSCEIVER

FULL COVERAGE
Full band coverage is provided on the FT-101ZD: 160 through 10 metres,
plus WWV/JJY reception on 5 MHz. Temmed with the FTV90IIR trans-
verter, operation can be extended to 72, 144, and 430 MHz from your
desk top.

CLEAN OUTPUT SIGNAL
With today's crowded bands, we all have the responsibility to keep our
transmitted signal free of spurious radiation. YAESU engineers have
included RF negative feedback, for a clean output signal.

STATE OF THE ART NOISE BLANKER
The all-new noise blanker is extraordinarily helpful in reducing the level
of impulse noise. The blanking level may be adjusted from the front panel.

RF SPEECH PROCESSOR
A high-performance RF speech processor is built into every FT-101ZD,
providing an increase in your average talk power of approximately 6 dB.
The processor level can be adjusted from the front panel, for optimum
signal enhancement.

WORLD-WIDE POWER CAPABILITY
The FT-101ZD has provision for operation from a variety of AC voltages,
from 100 to 234 volts. When you're travelling, you'll never need a
heavy, bulky transformer for operation with your FT-101ZD. A DC-DC
converter is an available option, for mobile operation. The FT-101ZD
is small enough to qualify as carry-on baggage on most airlines, and is
equipped with a strong, side mounted handle for ease of carrying.

VARIABLE IF BANDWIDTH
Using two 8-pole crystal filters with superior shape factors, the FT-101ZD
variable bandwidth system is a valuable tool on today's crowded bands.
With the turn of a dial, high-pitched SSB "bucketshot," or unwanted CW
signals, can be eliminated from the IF passband.

DIGITAL PLUS ANALOG READOUT
The FT-101ZD features digital plus analog frequency readout. The display
features big, bright LED digits, for maximum readability. For extra
savings, the economy model FT-101Z gives you the same precision analog
display, at a significantly reduced cost. You can add the digital display
later, if you wish.

INTERFACE WITH 901 SERIES COMPONENTS
Your FT-101ZD may be used with all of the exciting FT-901DM series
accessories. The FV-901DM synthesised, scanning VFO provides storage
and recall of up to 40 frequencies, in addition to its 3-speed scanner and
dual scan function. SAE for information on other accessories.

HOW TO REACH US (EASY PRIVATE PARKING ON OUR
70ft. FORECOURT)
FROM SOUTH AND EAST. We are located approximately two miles from Junction 5 of the M6 from which follow signposts to Birm-
ham. Within 4 mile right turn at Clock Garage and proceed towards city. After one mile look for traffic lights at Fox & Goose and immediately
over the lights take minor left fork into Alum Rock Road. We are located one mile from this point.

FROM NORTH. Leave M6 at Junction 6 (Spaghetti) and follow left fork down to traffic island see eight motorway complex. Take third turn-
ing off to Lichfield. One mile furthur on follow A4040 to the right and within 100 yds. veer again to the right, approximitely one mile further
on brings you to the Fox & Goose. Turn right and see preceding directions.

FROM THE WEST AND SOUTH/WEST. Follow M5 then M6 to Spaghetti Junction (see above). Alternatively, leave M5 at junction
4 or 3 and proceed to inner ring road. Turn South on ring road and leave on A47 (East). We are located three miles from this point.

Hours: 9.30-5.30 Continuous including Saturdays—Early closing Wednesday, 1 p.m.

Access or attractive H.P. terms readily available for
on-the-spot transactions. Full demonstration facilities.
Free Securicor delivery.
source for YAESU MUSEN

THIS MONTH WE FEATURE THE HIGH TECHNOLOGY CPU-2500RK 2M F.M. TRANSCEIVER WHICH IS ONE OF THE MOST SOPHISTICATED UNITS AVAILABLE ON THE MARKET TODAY. 36p IN STAMPS BRINGS YOU THE LATEST YAESU GLOSSY CATALOGUE WHICH GIVES FULL SPECIFICATION TOGETHER WITH DETAILS OF THE EVER-GROWING YAESU RANGE — AND AS AN ADDED BONUS YOU WILL GET OUR CREDIT VOUCHER VALUE £3.60 — A 10-1 WINNING OFFER!

HERE'S OUR WINNING OFFER — if you'd like the full Yaesu catalogue. Just send us 4 x 9p stamps (36p) and we'll send you Yaesu's fully illustrated brochure together with our Credit Voucher for £3.60 against your eventual purchase. A couple of stamps will bring you the FT101Z, Atlas or Swan leaflets or our current used equipment list.

NEW! ADVANCED TECHNOLOGY from SWAN ELECTRONICS

100 WATTS MINIMUM OUT!

100MX—The de-luxe Mobile Rig with all the extras

Solid state HF transceiver. 100 watt PEP and CW output, 80m.–10m. Broadband design featuring noise blanker, VOX, 25 kHz calibrator, CW sidetone, semi-break in CW, RIT, built-in speaker. Ultra stable PTO frequency source. Operates directly on 11 to 15v. DC, USB, LSB, CW operation. 9 MHz 8 pole crystal IF filter. 4W Audio O/P. UNBEATABLE PERFORMANCE—UNBEATABLE VALUE £459 Plus VAT

THIS IS THE RIG FOR THE MAN WHO INSISTS ON THE BEST

AS DIRECT IMPORTERS AND MAIN AGENTS WE OFFER THE FAMOUS ATLAS 210X and 215X TOGETHER WITH ALL ACCESSORIES FROM STOCK.

BRANCH: AMATEUR ELECTRONICS, UK—COASTAL, CLIFTONVILLE, KENT. KEN McINNES, G3FTE, THANET (0843) 291297. 9 a.m.—10.30 p.m.

The Fabulous ICOM IC-701!

Don’t be frightened by Solid State PAs! They are ROBUST and GUARANTEED.

Designed for the connoisseur, the ICOM IC-701 HF transceiver brings the latest digital technology to Amateur Radio. Study a few more of the vast list of features offered with the IC-701...

Two VFO’s BUILT-IN
The second VFO, which is an optional tack-on with most other transceivers, is an integral feature in every IC-701. Now you can work those Yanks on 40 and 80 metres!

Optically Coupled VFO
A VFO with no variable capacitors! Made under arrangement with Collins Radio, the IC-701 maximises digital readout with positively no time lag or backlash in display stability, even when using 100Hz steps. The IC-701’s free whirling dial is instantly co-ordinated with the high speed, computer controlled six digit readout using an optical chopper. There is absolutely NO mechanical connection between the smooth bearing mounted flywheel knob and the two dual-tracking VFOs.

Computer Compatible Interface
External microprocessor control from a PIA interface is possible via the 24-pin accessory socket on the rear panel of the IC-701. The IC-701 can even be interconnected with the companion 2 metre IC-211 to track frequencies for Oscar work.

Remote Control Facility
The IC-701 can be remotely controlled via the new optional RM-3 computerised remote controller. This unit includes scan, duplex, memory and tone functions plus a touch-tone pad with digital readout. You can select frequencies and automatically change bands with this CPU controlled accessory.

Continuous Operation
The IC-701 features continuous operation with a full 200w pep or 200w CW input on all bands and all modes. No need to worry about timing key-down operations as the IC-701 is designed to handle the maximum power continuously. If the heat sink starts to warm-up a built-in fan automatically switches on. If a temperature danger point should ever be reached the fan doubles its speed and the digital display flashes to tell you to quit transmitting!

No Tuning Necessary
Just select the required band and frequency and start transmitting.

All Solid State
While the others are still fooling around with valves, ICOM have produced a solid-state HF receiver including protected transistors in the final.

Cross Modulation Minimised
Cross modulation—a fact of life with some rigs—is minimised with the double balanced Schottky diode mixer used for both transmit and receive.

Small Enough for Mobile
The IC-701 is extremely compact with dimensions 111 by 261 by 311mm. (HWL) and weighs only 7.3kg. No more need to struggle with heavy rigs impossible to mount under-dash!

Full Metering
The front panel meter includes swr, power, ALC, compression and collector voltage/current measurement.

Desktop Microphone As Standard
A high-quality condenser electret desk microphone is included as standard equipment with your new ICOM IC-701.

Variable Power Output
In CW and RTTY modes power output can be continuously varied from zero to maximum 200 watts input. SSB output can easily be adjusted for novice use.

Ideal for the CW and RTTY Buff
The IC-701 includes narrow CW filter as standard plus semi-break-in and sidetone facilities. The IC-701 has switching to select either narrow or wide RTTY shift rates.

Thanet Technical Back-up
Your new IC-701 from Thanet comes complete with the Thanet one year warranty plus technical and spares support. Thanet staff have been factory briefed on the service and alignment procedures, and that includes all semiconductors.

Plus—
- Separate front-end RF stages using dual gate MOSFETs for each band, providing optimum performance.
- Diode matrix to define band edge parameters.
- Operation on all bands 1.8 thru 30 MHz includes WWV.
- Modes include USB, LSB, CW, CW-N (narrow), RTTY.
- Unique ICOM bandpass tuning.
- VOX, Semi-break in CW, RIT, ACG, effective noise blanker.
- Built-in speech processor using advanced circuitry.
- All filters built-in.
- Automatic front panel light dimming to suit ambient light conditions.
- Separate VCOs for each band to reduce spurious and birdies.
- Receive triple conversion.
- Built-in DC power supply, external AC PSU with speaker.
- Full line of matching accessories to come.
- Universal speaker.

Compare the IC-701 with the Others!
—and see what extras you DON’T have to buy.

Complete with AC PSU as shown £899 inc. VAT IC-701 alone £800 inc. VAT.

The Ultimate! IC-701 state of the art

Thanet Electronics for ICOM

August, 1979
IC-240 FOR SAFETY AND SATISFACTION

Now there is a mod kit for 80 Channels!

There is now a modification list available from Herne Bay which enables your IC-240 to give you a choice of 80 channels selected by means of thumb-wheel switches at the front. The Channel selected is displayed as a channel number which is illuminated from behind providing a readout which is easily readable in both dark and brilliant sunlight conditions. The kit, which can be easily fitted in an evening, costs £36 inc. VAT and postage and is called the 240-channelizer.

The IC-240, one of the first of the new generation of synthesized transceivers to appear on the market, is still one of the most popular. It offers all you really want for mobile use on 2m, plus a feature not found in all sets with digital display, keypads on the microphone or other gimmicks—IT IS EASY TO USE ON THE MOVE WITHOUT LOOKING! —and that MUST contribute to safety on the road.

You get a choice of 22 channels with all the UK and European repeater channels plus all the commonly used simplex channels already wired on the programmable matrix board. The dial is marked in channel numbers with 7 spare positions marked A to G for you to programme with any other channels you choose on the now standard 25 kHz channel spacing. Should 12½ kHz spacing arrive (and for your sake we hope it won’t) it will be very easy to modify the IC-240 to cover the in-between half channels, making 44 in all. To change channel you just turn the dial to the channel you want, with easy to feel click stops, and that’s all. No 5 kHz button to get all confused about! Repeat shift for normal or true reverse repeat and high or low power are selected by easy to feel toggle switches and the access tone is automatically introduced on duplex.

After testing all the mobile transceivers around on the UK market we still find that the 240 is as good as any, and better than some, when it comes to receiver and transmitter performance. The high sensitivity of the receiver coupled with excellent strong signal handling capabilities and high selectivity is hard to beat as is the excellent speech quality and very clean signal of the transmitter. At least one, and by the time this is published, probably two repeaters use a single IC-240 with both the transmitter and receiver operating at the same time. IC-240s have a long good service record for reliability and when they do go wrong we, at least, understand how to mend them.

Have you ever thought just how ideal the IC-240 is to use in conjunction with that excellent transverter the Microwave Modules MMT 432/144R to provide you with a reasonably priced, yet sensitive 70cm, system? The channel markings on the 240 simply become the correct SU or RB numbers on 70cm, and with the addition of a coaxial relay, a few diodes and a little care it is possible to produce a two band system with the transverter controlled from the IC-240 switching. By doing without the low power position on the 240 the transverter can be switched in or out and Duplex, Reverse Duplex or Simplex selected from the 240. You can then have the transverter mounted away from the 240 out of sight. The total cost for excellent coverage of both bands is thus about £360—which is much cheaper than separates and an excellent way of being able to use the many 70cm. repeaters now in operation throughout the country.

IC240 £193.00 inc. VAT.  240 Channelizer kit £37.00 inc. VAT.  240 fitted with Channelizer £239 inc. VAT.

SO—WHY GO FOR ANYTHING MORE EXPENSIVE?

For details leave your name and address or callsign on our Ansafone (02273 63850) during the evening when calls are cheap

SOLE RETAILERS

THE SHORT WAVE MAGAZINE: August, 1979
It's now our pleasure to announce that we have been appointed official Trio stockists for the South East. We shall be carrying the full range of their products, including the new TS 180S solid state HF rig and TS 770 VHF/UHF transceiver. Yes, 1979/1980 promises to be an exciting year for Trio and Waters & Stanton. This month we will be moving into our large, purpose-built premises a couple of hundred yards away in Main Road, Hockley. But don't worry, all our mail will be re-directed automatically — in fact, our mail order customers won't notice we've moved (apart from an even faster service!). Callers will see our new super store (we hope) as they enter Hockley! No parking problems, two miles from Southend-on-Sea and a shop full of Trio — can you resist the invitation to visit us?

**TRIO TS820S £832 inc VAT SAE for brochure**

The Trio TS820S must be the HF operator's dream come true. Many superlatives have been used to describe it and all are justly deserved. It's the transceiver that you'll hear from about every corner of the World with its distinctive, clean, crisp audio. A most effective RF processor ensures a remarkable improvement in readability under QRM conditions without any degradation of quality and RF negative feedback produces just about the clearest signal you'll find anywhere. 160-10 metres, 200 watts PEP input and 0.2uv for 10db S/N all add up to an enviable package. Add to this the digital readout display and unique selectivity obtained by "bandpass tuning" of the IF section produces a transceiver that is today's DX operator's No. 1 choice. For further information or credit terms, just drop us an SAE. Less digital readout £710 inc VAT.

**NEW TS 180S ex stock £542 inc VAT SAE for brochure**

The TS520 is now the most widely sold HF rig in the World. Just listen for a while on the HF bands and you'll realise just how many TS520's there are about. Full 6 band coverage of 160-10 metres with 200 watts PEP input and built-in speech compressor will get your signal around the World with ease. And, of course, the TS520 gives you a remarkable receiver performance to match.

With the TS520 you are buying the best engineered HF rig in its price bracket — and that's our own opinion having tried them all! Ask any owner of a TS520 what he thinks of it — he'll tell you his only regret is all the "SCI's" he lost by not changing to Trio before! If you have a limited budget yet want performance and a rig that will hold its price, then the TS520 is your choice.

**TRIO TR2300 £199 inc VAT SAE for brochure**

The TR2300 is a remarkable package which combines all the advantages of a portable station with those of a mobile transceiver. In many ways it's the ideal "starter rig" in amateur radio. Full band coverage from 144-146mHz in 80 x 25kHz channels plus 600kHz repeater shift and 1750Hz automatic tone-burst complete its versatility. The dial is directly calibrated in frequency and has illumination for night use. The transmitter is exceptionally clean with an output power in excess of 1 watt. Receiver sensitivity is every bit as good as the best mobile rigs and either internal batteries or an external DC source may be used. Fits easily into a suit case or on the corner of a desk and makes a really compact mobile rig. Price includes carrying case, shoulder strap, battery charger, external DC cord and, of course, the Waters & Stanton 12 month warranty. An absolute bargain — we even sell them to our staff!

**TRIO TR7500 £239.95 inc VAT SAE for brochure**

The TR7500 2 metre FM transceiver combines simplicity of operation with advanced design. Full coverage of 144-146mHz in 80 x 25kHz channels means no more crystals to buy. Dial indication meets the modern operator's requirements — if you want 50 you simply dial "50". For R6 you simply dial "6" — if you're one of those operators who finds channel numbers easier to use then frequency readout, then we can recommend this as a "best buy". Reverse repeater operation is, of course, a single switch action — as it should be. The package comes complete with microphone, mounting bracket and DC leads. Performance is equal to the best in a remarkably small package — 15-18 watts transmitter output and better than 0.2uv sensitivity matched with the unparalleled Trio quality and attention to detail makes the TR7500 one of the best.
YAESU and TRIO/KENWOOD EQUIPMENT

FT-101Z/ZD £550/£639
- Latest in a famous line of HF transceivers
- Digital frequency readout (ZD model only)
- QRM-beating Variable IF Bandwidth
- High-performance RF processor
- Rugged 6146B PAs with RF negative feedback
- Full band coverage 160-10 metres
- Compatible with all ‘901 accessories

YAESU FRG-7000 £355
The New Performance Standard in Communications receivers!
- Full and continuous coverage 250 KHz to 29.999 MHz
- Operation on SSB/AM/CW
- *switched selectivity and fine tune control for maximum efficiency on SSB
- *Accurate digital frequency readout to 1 KHz, using advanced CPU techniques
- *Built-in digital clock with facilities for setting two time zones (GMT and local), selected at the flick of a switch
- *CPU controlled timing clock switches receiver on or off at preselected times. Also enables control of external unit such as tape recorder
- *Wadley loop circuitry for minimum drift and maximum stability
- *Simple and accurate frequency selection; easy-to-use colour coded bandswitch and preselector

YAESU FRG-7 £203
The general coverage receiver for the SWL with a limited budget.
- Good all round performance at a down-to-earth price.
- Full and continuous coverage from 500 KHz to 29.999 MHz
- SSB/AM/CW operation
- Fine tune control for ease of SSB tuning
- Accurate readout of frequency to 10 KHz or better, using MHz and KHz controls
- Wadley loop circuitry for minimum drift and maximum stability
- Operation from mains supply, internal batteries or external 12v. DC

FT-227RB £255
- The latest 2m mobile from YAESU
- 800 channels 144-148 MHz
- Large, clear LED frequency readout
- 4 memory channels (2 simplex, 2 repeater)
- Up/down scanner controlled from microphone
- Quick release mobile mount

WATCH THESE PAGES for EXCITING HF NEWS SOON . . . !!!

TRIO TS-120V £408
MATCHING PSU — PS20 £51
TRIO's latest for HF Mobile
Join in the mobile scene now that conditions are up!
- *Big rig features in a compact package
- *Digital frequency readout
- *All bands 10 to 80 metres CW/SSB
- *10 watts output
- *IF passband tuning and other fine features

COMING SOON — TS-120S 100 watt MODEL!

TRIO TS-520S £539
Yet another Trio bargain from WESTERN! The latest version of this fine HF Transceiver with all the up-to-date features needed by today's amateur but at a realistic price. No frills, just good all-round performance and excellent value at the price.
- *Full coverage 10-160 metres. CW/SSB
- *All solid-state except driver (12BY7A) and PA which uses rugged and proven 6146B (S-2001A) valves
- *Improved speech processor to help in those pile-ups
- *Highly efficient noise blanker

TRIO TS-820S £829
The pacesetting 10-160m Transceiver for the amateur who wants to keep up-to-the-minute! Loaded with features to make your operating even more enjoyable, among these are:
- *Advanced PLL circuitry and ultra-stable VFO for accurate and spurious-free frequency control
- *Factory fitted digital readout of TRUE frequency — NOT just a “VFO counter” like some others
- *Speech processor gives true RF compression, front-panel controlled and fully metered
- *IF shift to combat QRM on a busy band

TRIO TL-922 £789
Want a BIG LINEAR? This is it!
A real powerhouse to complement your station. only needs 80 watts drive for full output.
- *2000 watts PEP input SSB; 1000 watts CW/RTTY
- *2 x Eimac 3500 in AB2 grounded grid for cool efficiency
- *Blower switch-off delay and full safety interlocks

TR-2300 2M PORTABLE £193
- The leading 2m portable
- Small, rugged, easy-to-use
- All 80 channels (25 KHz)
- Automatic tone-burst
- Charger and case included
- Mobile mount and flexible antenna available
- 1 watt output — 10 watt amplifier available

ALL PRICES INCLUDE 15% VAT and FREE SECURICOR DELIVERY
- ALL EQUIPMENT CARRIES A TWO-YEAR WARRANTY
- ICOM EQUIPMENT ALSO AVAILABLE — PLEASE ASK

SECONDHAND EQUIPMENT
Due to delay in publishing secondhand lists please send SAE for our up to date lists. We have a very quick turn over in secondhand equipment, especially in receivers. If you require a specific model please let us know and we will inform you as soon as we have one available. Our secondhand equipment carries a three month guarantee. We would be pleased to sell your equipment on a commission basis, which saves you time and money advertising.

ACCESS and BARCLAYCARD facilities.

1977 of the "Short Wave Magazine" £26.00 inc. VAT and postage

The Mk. 2 Multituner was designed by us to many requests who found our Mk 1 the finest they had ever used but required a larger frequency range. This covers 500 k Hz to 30 MHz. The circuitry gives 50 switchable, tunable positions to match any antenna over 5 metres in length to practically all communication receivers. Our "Multituners" are designed and manufactured by ourselves and have been exported to over 50 Countries. Many operators use them for QRP Transmitting also.

YAESU FRG-7 RECEIVER, Main and battery operated receiver 0.5 to 30 MHz. Solid state. Advance circuitry offers excellent performance for the DX listener at a moderate price.
Price £215.00
Yaeus FRG7000 Receiver £77.00
Yaeus SP1018 Speaker £32.00

NEW ANTENNA MODELS
H.S. H.F. Vertical 10-80m. £41.40

FOR QUALITY CRYSTALS — AT COMPETITIVE PRICES

Popular frequencies in stock
Made to order 10 kHz to 225 MHz

QSL leads the field in supplying crystals world wide to major communications companies, broadcasting authorities and posts and telecommunications administrations. As a result we can supply the amateur with a high quality, competitively priced product over a frequency range from 10 kHz to 225 MHz. Get the power of the professionals in crystal supply behind you!

2 METRE STOCK CRYSTALS. Price £1.83 for one crystal.

£1.74/crystal when two or more purchased.

FOR QUALITY CRYSTALS — AT COMPETITIVE PRICES

Made to order 10 kHz to 225 MHz

We regret that it has been necessary for us to increase the prices of our made to order crystals, because of increasing costs of supplies and overheads. NOTE the cost of crystals on our B delivery have only slightly increased so should you be able to accept the longer delivery it will be possible to make considerable savings.

Unless otherwise requested fundamentals will be supplied with 30pF load capacity and overtones for series resonance operation.

HOLDERS — Please specify when ordering — 10 to 200 kHz HC13/U, 175 kHz to 170 MHz HC6 or HC32/U, 4 to 225 MHz, HC18 and HC25.

DELIVERY. Column A 3 to 4 weeks (this service is subject to availability). Column B 6 to 8 weeks.

Please note that it is not always possible to provide the A delivery service but a telephone call will confirm its availability.

Any orders received for A delivery when it is not available will automatically be placed on B delivery and a credit note issued for the difference in price.

DISCOUNTS. 5% mixed frequency discount for 5 or more crystals at B delivery. Price on application for 10 or more crystals to same frequency.

We regret that it has been necessary for us to increase the prices of our made to order crystals, because of increasing costs of supplies and overheads. DISCOUNTS. 5% mixed frequency discount for 5 or more crystals at B delivery. Price on application for 10 or more crystals to same frequency.
Special rates for bulk purchase schemes including FREE supply of crystals used in UK repeaters.

EMERGENCY SERVICE SURCHARGES (to be added to A delivery prices). 4 working days £8, 6 working days £6, 8 working days £4, 13 working days £3 (maximum of 5 crystals on 4 day delivery).

CRYSTAL SOCKETS HC6/U and HC25/U

MINIMUM ORDER CHARGE £1.50.

COMMERCIAL USERS. Crystals can be supplied for MPU, industrial control, etc. in the range 4-21 MHz fundamental and 3rd OVT 18 to 60 MHz at £1.18 for 100 off. This is only a limited example of our capabilities. Please enquire about other quantities, frequency ranges, watch and sub-carrier crystals. We can supply crystals for marine and land mobile radio telephone use. Send for details.

TERMS. Cash with order, cheques and postal orders payable to QSL Ltd. All prices include postage to UK and Irish addresses.

OVERSEAS DISTRIBUTORS

West Germany, Austria and Benelux countries — SSB Electronic, Karl Arnold Str. 23, 8850 Isloehn, West Germany.

Denmark — Asbjorn Jorgensen, Aabrinken 1, Tapdrup, DK800, Denmark.

Portugal — Sorubal SARL, Rua General Pimenta de Castro, 15-81, Lisboa 5.

(Enquiries invited from companies in other countries.)

**INSTANT H.P. & P/EX. WELCOME**

Send 25p for full details of our range
The 2 metre units use a neutralised circuit and a J FET rather than the more common MOSFET because of their lower noise figures. We select the J FETs for a 1 dB noise figure and 18 dB gain that is used. Over the last year we have updated our range of Sentinel 2 metre and 70 cm. pre-amps ready for the 1980s. You can buy them now.

A typical N.F. for a 2 metre transceiver is 7-8 dB and to overcome this noise, we find the 18 dB gain is required and this causes no overload problem.

The tuned circuits are 18 s.w.g. (1.22 mm) air spaced to give the high Q for selectivity. The owner of a very popular 'multimode' range to say that not only had his Sentinel Auto made a big difference to wanted signals but it had removed the Police!

**SENTINEL AUTO 2 METRE PRE-AMPLIFIER**
Connects straight into transceiver aerial lead and the r.f. switch changes over automatically between transmit and receive-any mode. See above for spec. £17.83* Ex stock. 70cms version £20.90* Ex stock.

**SENTINEL STANDARD 2 METRE PRE-AMPS—**
Same performance but without r.f. switching. £13.22 70cms version £16.00*. Both Ex stock.

**PA3**
Miniature 2 metre PRE-AMP. Size 1 cu inch to fit inside your transceiver. N.F. 2 dB GAIN 18 dB. 9-15 V. £6.99 Ex stock. 70cms version £10.00 Ex stock.

**NEW DESIGN—SENTINEL 2 METRE POWER AMPLIFIER/PRE-AMPLIFIER**
Now fitted with an additional strip line relay to give straight through operation when switched OFF. Since January this year we have used a new type of power transistor which has proved so much more reliable than the original types that we have not yet had to replace any. Transmit amplifier gives four times power gain e.g. 12W in, 48W out, in an ultra-linear circuit for all modes. The pre-amp has the same performance as our Sentinel Auto. The r.f. switched change over has a delay for SSB use. Price: £66.70 Ex stock. Less pre-amp, £31.00. Yes, they do work fine with FT221s, Multi 2700s, T5700s etc.

**SENTINEL AUTO 2 METRE PRE-AMPLIFIER**
Connects straight into transceiver aerial lead and the r.f. switch changes over automatically between transmit and receive—any mode. See above for spec. £12 V nominal, size 22" x 1½" x 4½”. £17.83* Ex stock. 70cms version £20.90* Ex stock.

**SENTINEL Z MATCH**
The updated unit uses much more reliable slow motion drives, which make adjustment and re-setting easy. It will match aerials of 15-5000 Ohms, to your equipment, BALANCED or UNBALANCED at up to 1kW. SO239 and 4mm terminals for co-ax or wire aerials, both end fed and open wire. £48.00.

**SENTINEL H.F. WIDEBAND PRE-AMPLIFIERS**
2-40MHz 15dB gain. Ideal units for pep-up on receivers on 15 and 10, for OSCAR reception and as an ACTIVE AERIAL. 9-12 V. supply, size 22” x 1½” x 3”. We make the following two versions—

**SENTINEL STANDARD H.F. PRE-AMPLIFIERS—**
Performance as above. £10.00* Ex stock.

**SENTINEL AUTO H.F. PRE-AMPLIFIERS**
Same performance as above with a change over relay operated by your transceiver relay for direct connection in your aerial co-ax. £14.95* Ex stock.

**SENTINEL H.F. WIDEBAND PRE-AMPLIFIERS**
2-40MHz 15dB gain. Ideal units for pep-up on receivers on 15 and 10, for OSCAR reception and as an ACTIVE AERIAL. 9-12 V. supply, size 22” x 1½” x 3”. We make the following two versions—

Same performance as above with a change over relay operated by your transceiver relay for direct connection in your aerial co-ax. £14.95* Ex stock.

**SENTINEL H.F. WIDEBAND PRE-AMPLIFIERS**
2-40MHz 15dB gain. Ideal units for pep-up on receivers on 15 and 10, for OSCAR reception and as an ACTIVE AERIAL. 9-12 V. supply, size 22” x 1½” x 3”. We make the following two versions—

**SENTINEL STANDARD H.F. PRE-AMPLIFIERS—**
Performance as above. £10.00* Ex stock.

**SENTINEL AUTO H.F. PRE-AMPLIFIERS**
Same performance as above with a change over relay operated by your transceiver relay for direct connection in your aerial co-ax. £14.95* Ex stock.

**SENTINEL H.F. WIDEBAND PRE-AMPLIFIERS**
2-40MHz 15dB gain. Ideal units for pep-up on receivers on 15 and 10, for OSCAR reception and as an ACTIVE AERIAL. 9-12 V. supply, size 22” x 1½” x 3”. We make the following two versions—

**SENTINEL STANDARD H.F. PRE-AMPLIFIERS—**
Performance as above. £10.00* Ex stock.

**SENTINEL AUTO H.F. PRE-AMPLIFIERS**
Same performance as above with a change over relay operated by your transceiver relay for direct connection in your aerial co-ax. £14.95* Ex stock.

**SENTINEL H.F. WIDEBAND PRE-AMPLIFIERS**
2-40MHz 15dB gain. Ideal units for pep-up on receivers on 15 and 10, for OSCAR reception and as an ACTIVE AERIAL. 9-12 V. supply, size 22” x 1½” x 3”. We make the following two versions—

**SENTINEL STANDARD H.F. PRE-AMPLIFIERS—**
Performance as above. £10.00* Ex stock.

**SENTINEL AUTO H.F. PRE-AMPLIFIERS**
Same performance as above with a change over relay operated by your transceiver relay for direct connection in your aerial co-ax. £14.95* Ex stock.

**SENTINEL H.F. WIDEBAND PRE-AMPLIFIERS**
2-40MHz 15dB gain. Ideal units for pep-up on receivers on 15 and 10, for OSCAR reception and as an ACTIVE AERIAL. 9-12 V. supply, size 22” x 1½” x 3”. We make the following two versions—

**SENTINEL STANDARD H.F. PRE-AMPLIFIERS—**
Performance as above. £10.00* Ex stock.

**SENTINEL AUTO H.F. PRE-AMPLIFIERS**
Same performance as above with a change over relay operated by your transceiver relay for direct connection in your aerial co-ax. £14.95* Ex stock.

**SENTINEL H.F. WIDEBAND PRE-AMPLIFIERS**
2-40MHz 15dB gain. Ideal units for pep-up on receivers on 15 and 10, for OSCAR reception and as an ACTIVE AERIAL. 9-12 V. supply, size 22” x 1½” x 3”. We make the following two versions—

**SENTINEL STANDARD H.F. PRE-AMPLIFIERS—**

ABOUT BREDFURST

Unlike some of our larger competitors, we do not import any one line of equipment and therefore we do not make a larger profit by selling a particular manufacturer’s product in preference to any others. Consequently we have no axe to grind when recommending to you a rig that we feel, after a discussion of your particular requirements, will suit you best. If you would like to discuss your Amateur Radio requirements with us from antenna insulators to complete stations, please drop in or call us.

Same day mail order despatch — or just phone your credit card number.

Extensive stocks of Secondhand equipment — please phone your requirements.

MML 144/25, 25 WATT 144 MHz LINEAR POWER AMPLIFIER & LOW-NOISE RECEIVE PREAMP

**SPECIFICATION**

**LINEAR AMPLIFIER**

- **Power profile**: 25 watts typical output for 3 watts input
- **Frequency bandwidth**: 144-146 MHz at -1dB
- **Power requirements**: 13.8 volts at 2.8 amps for 25 watts output
- **Quiescent current**: 75mA nominal at 13.8 volts

**RECEIVE PREAMP**

- **Overall gain**: 10dB typical
- **Overall noise figure**: Better than 2.5dB
- **Frequency bandwidth**: 144-146 MHz at -1dB
- **Receive current**: 50mA nominal at 13.8 volts

**GENERAL**

- **Weight**: 300g (11oz.)
- **Overall size**: 150x65x47mm. (5 7/8"x2 9/16"x1 1/4")

**DESCRIPTION**

This 144 MHz solid state linear power amplifier, MML 144/25, is intended for use with any existing 144 MHz equipment having an output power of up to 5 watts. When used in conjunction with such a drive source, this linear amplifier will provide a power output of up to 30 watts.

The use of a highly rugged RF power transistor (rated at 65W dissipation) guarantees highly reliable and ultra-linear performance, which makes the unit suitable for all modes of operation (SSB, FM, AM and CW).

The incorporation of a low-noise receive pre amplifier, will generally give an improved overall receiver noise figure.

By means of an internal RF VOX circuit, the linear will automatically switch on to transmit when 144 MHz drive is applied to the input socket. However, this facility may be overridden by the application of an earth to Pin 1 of the 5 pin DIN power socket. This may be achieved by connection to the transceiver PTT switching line.

The unit is housed in a highly durable black diecast case and all circuitry is constructed on high quality glass-fibre printed circuit board. A suitable 5 pin DIN power plug is supplied.

**PRICE**: £44.97 inc. VAT. **DELIVERY FROM STOCK**

**STOP PRESS!!**

**AVAILABLE NOW — OUR NEW 50 WATT 432 MHz LINEAR AMPLIFIER WITH BUILT-IN LOW-NOISE PREAMPLIFIER. REAL VALUE AT £99 + VAT. WRITE OR PHONE FOR DETAILS.**

COURSES FOR THE R.A.E., 1979-80

Belfast: College of Technology (GI2BX), College Square East, Belfast, commencing Sept. 18, Tuesdays 5.30-8 p.m. (Theory and Practical), Thursdays 6-8 p.m. (Morse), enrolment early Sept. Further details from lecturer, J. E. Wilson, at the above address.

Birkenshead: North Wirral College of Technology, Borough Road, Birkenshead, starting Sept. 13, enrolments Sept. 3-5, Full details from the course tutor D. E. Owen, G4GGB, at the Dept. of Electrical Engineering.

Borehamwood: Borehamwood College of F.E., Elstree Way, Borehamwood, commencing Sept. 26, enrolment 7-8.30 p.m. Sept. 10-11, Wednesdays 7-9 p.m. Lecturer, G. L. Benbow, G3HB.

Burgess Hill: Marl Place A.E. Centre, Leylands Road, Burgess Hill, West Sussex, commencing Sept. 18, Tuesdays 7.30-9.30 p.m., tutor R. Canning, G6YJ. Full details from the Centre, ring Burgess Hill 6355.

Cheshunt: Organised by Cheshunt and District R.C. through East Herts. College of F.E., Turnford, starting September, all enquiries to J. Sleight, G30JI, QTHR (tel: Ware 4316).

Crawley: Ifield Evening Centre, Sarah Robinson School, Ifield, Crawley, W. Sussex, Thursdays 7-9 p.m., commencing Sept. 27. Further details from course tutor, R. Scrivens, G3LN, Crawley 22540. Enrolment Sept. 10-11.

Doncaster: Doncaster Metropolitan Institute of Higher Education, Waterdale, Doncaster, Wednesdays 7.30-9 p.m., enrolment week beginning Sept. 17.

Dudley: Dudley Technical College, Dudley, Tuesdays at 6.30 p.m., enrolment Sept. 4-7. Course lecturer, J. Raby, G8RF.

Hemel Hempstead: Dacorum College, Marlowes, Hemel Hempstead, Wednesdays at 6 p.m., starting Sept. 26, enrolment Sept. 10. Further details from course organiser, C. Burke, G3VOZ (tel: Hemel Hempstead 833300).

London (Harrow): Hatch End High School, Harrow, Wednesdays 7-10 p.m., starting Oct. 3, enrolment at Nower Hill High School (Sept. 15, 10 a.m.-3 p.m., Sept. 18, 7-9 p.m.) Tutor D. T. Busby, G4HFL.

London (Paddington): Amberley Adult Institute: Amberley Road, Paddington, Mons. and Thurs. 7-9 p.m., starting Sept. 17, enrolment Sept. 6-7 and Sept. 10-12. Tutor D. T. Busby, G4HFL.

Manchester (Openshaw): Openshaw Technical College, course includes Morse, enrolment Sept. 10-12. Tutor A. B. Langfield, G3IOA.

Manchester (Stretford): North Trafford College of F.E., Talbot Road, Stretford, Thursdays 6.30-9 p.m. (Theory), Mondays 6.30-9 p.m. (Morse), enrolment Sept. 10-12, 6-8 p.m. Lecturer, J. T. Beaumont, G3NGD.

Manchester (Swinton): Moorside School, East Lancashire Road, Thursdays at 7.30 p.m., starting Sept. 13. Details from P. Whatmough, G4HYE (G8BFP), 061-794 3706.

Melton Mowbray: Melton Mowbray College of F.E., Wilton Road, Melton Mowbray, Leics., Wednesdays 7-9 p.m., starting Sept. 18, enrolment early Sept. Full details from lecturer, K. Melton, G3WKM (QTHR), tel: Melton Mowbray 68810.

Northampton: Duston Adult Centre, Duston Upper School, Northampton, Tuesdays 7-9 p.m., starting Sept. 25, fee £11, enrolment Sept. 5/6/10 evenings. Instructor D. F. Watton, G4AYZ, QTHR.

Princes Risborough: Adult Education Centre, County Secondary School, Merton Road, Princes Risborough, Mondays 7.15-9.15 p.m., starting Sept. 24, enrolment Sept. 10-11, 7.15-9.15 p.m., fee £10. Lecturer, M. Lilley, G3INN.

Slough: Langley College of F.E., Station Road, Langley, Slough, Mondays 5.30-7 p.m. (Techniques), Mondays 7-8.30 p.m. (Morse), Thursdays 7-9 p.m. (Theory), enrolment Sept. 11-12, 12.30-8 p.m. Further details from lecturer, E. C. Palmer, G3FVC.

Stockton-on-Tees: Stockton and Billingham Technical College, Oxbridge Avenue, Stockton, Mondays at 6.30 p.m. (Theory), Thursdays at 7 p.m. (Morse), starting Sept. 17. Full details from J. A. Ross, G3WWG.

WORLD-WIDE COMMUNICATION
VHF BANDS

NORMAN FITCH, G3FPK

Next Stop Baghdad?

By the time this appears, there will be few VHF enthusiasts who will not have heard of the record-breaking Sporadic E QSO between CT1WW and OD5MR which was concluded at 1643 GMT on June 28. The distance was, as near as makes no odds, four thousand kilometres, a convincing world record, surely? This poses the question of just how far it is possible to work on VHF via the E-layer; after all, it would have been only another 850 kms. to Baghdad!

Awards News

John Hunter, G3IMV, (Bucks.) QTH Squares Century Club member no. 3, has submitted a further 25 confirmations to bring his total of QTH squares to 125 and hence, his first sticker. Reflecting his primary QTH squares to 125 and confirmations to bring his total of no. 3, has submitted a further 25

The results of the April 29, 4m. Open contest are to hand. In the Single Operator section, the winner was G3UUT/P with 575 points from 53 QSO’s. G3UKV’s 43 contacts worth 297 pts. earned second place and G3XBY was third with 264 pts. from 44 exchanges. In the Multi-Operator part, GM3WOJ/P were clear winners with 628 pts. from 49 QSO’s, followed by G3PFM/P, whose 53 contacts were worth 385 pts. In 3rd. spot were the G3JECQ/P team with 267 pts. from 57 QSO’s.

Coming attractions:- August 19 is the date for the 70 MHz. event from 0900-1700 GMT, and it is a two section event—Single Op. and Multi-Op. with no separate fixed or portable parts. The weekend of Sept. 1/2 sees the first leg of the IARU Region 1 Contest devoted to VHF, which means 2m. The usual 1600 GMT start for this 24 hour event, with one-point-per-kilometre for the scoring. This contest coincides with the U.K. 144 MHz. Open and s.w./s. event which requires the radial ring scoring system. The final UHF/SHF part of the IARU event is scheduled for the weekend of Oct. 6/7 and covers all bands from 432 MHz up. It coincides with our own 432/1296/2304 MHz contest.

The AGCW-DL VHF CW Contest will take place on Sept. 22 from 1900 to 2300 GMT on 2m. As before, there are three classes determined by the output power of the Tx. Class A is less than 3½ watts, Class B less than 25 watts and Class C over 25 watts. Exchanges should consist of report/serial number/class/QTH locators; e.g. 569040/C/ZL60j, etc. The scoring system is a little complex and any reader wanting the complete rules is requested to send an s.a.e. to your scribe. (QTHR)

RTTY addicts are invited to participate in the 11th BARTG VHF/ UHF Contest, a two session affair starting at 1800 GMT on Sept. 8 and lasting 5 hours. The final 5-hour stint at 0700 GMT on Sept. 16. The event is for 144 and 432 MHz but neither cross-band nor repeater or satellite contacts will count. The scoring is a little different from previous years and full rules can be obtained by sending an s.a.e. to Chris Plummer, G6APB, at 148 Porter Road, Brighton Hill, Basingstoke, Hants., RG22 4JT.

Beacon News

As this is being edited, the 2m. Lerwick beacon, GB3LER, on 144-965 MHz is QRT following the failure of the drive to the PA stage. The 2m. Angus beacon, GB3ANG, on 144-975 MHz is not being copied in London so that too is presumably still QRT.

In a letter dated June 7, Serge Canivenc, F8SH, wrote;—“It is quite a possibility for FX3THF (144-905) to be again on the air pretty soon, thanks to F1D1U from Nantes who will supply us with an 8-watt Motorola transmitter ‘cleaner’ I think than our present exciter. This will be used first as the beacon itself and we shall then transmit with a lower power than usual.” Later on, it is proposed to increase the power output to 60-100 watts for future TEP tests. Serge mentions that the present single 9-ere. aerial will be replaced by two 9-ere. Tommas which F9FT will supply.

The 4m. Gibraltar beacon, ZB2VHF, on 70-26 MHz is QRV again between 1800 and 2400 GMT, soon to be on 24 hours-a-day, During any breaks in transmission, keeper Jimmy Brunson, ZB2BL, will be listening for calls and use the Tx for replying. This ruse was used on June 28, during the big E’s opening, when G13ZTL was worked.

Repeater Notes

VHF relay GB3MN (Stockport) on R2 became fully operational on June 30. It is micro-processor controlled and the talk-time is 90 secs. Tony Oakley, G4HYD, told your scribe that the 2m. Hull repeater on R2 has been QRV from its new site since June 16. Its callsign is GB3HS. The Nottinghamshire Repeater Group issues irregular Newsletters the second of which describes its UHF relay at Mapperley on RB6 as, “A repeater to set your watch by.” It is claimed that the first dash in the callsign on the hour is as accurate as the Greenwich Time Signal. The group plans to replace the existing
460 MHz dipole stacks with bespoke ones for 433-434 MHz as soon as enough funds are available. Details of this group from G4AFJ at 21 Greenwood Avenue, Nottingham, NG3 7FX.

Trans-Equatorial Propagation

F8SH, in his letter of June 7, mentioned that the 2m. beacon ZE2JW was received in the Netherlands on Feb. 12 in CL53h between 1645 and 1723 GMT. On April 4, DC3MF near Munich copied it from 1823-1945 with signals 25 dB. above the noise. It was also heard in PA between 1745 and 1932 up to 43 dB. above the noise and in Austria at 21 dB. The QRB from Salisbury, Rhodesia to CL53h is about 8,100 kms. On this basis, it would not be surprising if ZE2JW is heard in Southeast England during the autumnal equinox. The QRB is 144-160 MHz. and it would seem that the period 1630-2000 GMT is the one to monitor. Doppler shift can be expected, so do not use too narrow a filter.

The Satellite Scene

Those readers seeking the latest up-dates on AMSAT satellites and related matters should note that the 80m. net on the first Sunday in each month is devoted to such information. G3RWL in North London is net control and the QRG is nominally 3780 kHz.

Oscar 7 is being commanded into Mode “A” whenever possible. The batteries have “had it” but the transponders work well enough when the spacecraft is in sunlight and working off the solar panels. As power is limited, when the transponders are working there will be no telemetry and vice versa. AMSAT-UK still needs meaningful TLM for 0-7 and this should be sent to G3YJO at the University of Surrey, Guildford.

Oscar 8 continues to function very satisfactorily but its orbit has been affected by recent solar events. AMSAT has given the following data for orbit number 6630 on June 24, based upon a visual sighting; Equatorial crossing time 0001.12s. UT at 45°W. Apogee 941.9 km; perigee 907.8 km. Inclination 98.921° and period 103.2258 plus/minus 0.00005 minutes. Increment 25.807° west per successive orbit. Using this data, orbit number 7412 on August 19 should cross the Equator at 0123-47s at 66°1° some 8m.21s. earlier and 2-7° further east than predicted in the UOS-AMSAT calendar. At the time of editing, 0-8 is on Modes “A” and “J” simultaneously on Tuesdays and Fridays, Mode “A” on Mondays, which are QRP days, and Thursdays, and Mode “J” at weekends with Wednesdays reserved for prior-booking special experiments through ARRL.

Sporadic E

Following the reports in the last issue covering the E’s event of June 2, s.w.f. Mike Allmark in Leeds says he is, “... now convinced that YU2CUT heard on June 2 is a phoney.” There is some Joker in the locality who comes on during E’s happenings, using such calls as, SV1DH, F5UF, SU2DX, 4X4HF, SU1ADV/1, EA1CR and SV0DA. John Lovell, G8JHL, in Manchester, has heard this character too and reckons he must have a good station to straddle the Pennines so well as he does. The give-away is that the cove does not seem to know his QTH locator. He gave KF66e for YU2CUT, but that is in the YUI area in the autonomous region of Voivodina. Mike reports he was at it again on June 19.

During the June 21 event, Bill Bigcliffe, G6NB, (Bucks.) was called by 5B4WR but could not complete the QSO due to unmannery, continental QRM. He is almost certain he heard an Egyptian station, too. The QRB from G6NB to 5B4WR is about 3,270 kms. This was around 0900 GMT and it only lasted a few minutes. It will be interesting to ascertain if any other readers caught this one. G6NB is a very experienced operator but admits to being somewhat sceptical.

The best E’s opening to date was the one on June 28 which started about 1330 GMT and went on till almost 2000 in fits and starts. From reports so far received from different countries, it is obvious that there was widespread ionization over much of the European continent, dense enough to sustain propagation on 2m. Some very long distances were worked and this raises the question, “Is there such a thing as double-hop E’s?” The majority of E’s contacts on 2m. are over distances between 1,100 and 1,900 kms. so it is tempting to conclude that contacts between stations 3-4,000 kms. apart must be double-hop. However, it is difficult to believe that ground reflexions from a heavily forested area, for example, would be possible.

The path between CT1WW and
OD5MR is such that, if it was a double-hop affair, the reflection would have been off the sea, which sounds reasonable. It seems that certain ideas are that these long-distance signal paths are possible due to the wave travelling perhaps a couple of thousand kilometres within the E-layer before being reflected down; ducting, in effect, with which we are familiar on tropo. To help solve the mystery, as many reports as possible are needed. F8SH asks us to send him reports not only of 2m reception via E's, but of Band 2 FM, the VOR beacons in the 108-118 MHz section, the aeronautical communication band, 118-136 MHz, and possibly Band 3 TV.

As to reports from readers, John Hunter, G3IMV, (Bucks.) heard it all happening when he switched on at 1620. In his first session, he worked IT9TDM (HY68b), YU2RQG (HI) and YU2CKL (HD) and was called by YT9MI. A "QO call" at 1730 brought a reply from LZ1ZB (LC) who was a huge signal, briefly. At 1925, John heard YU2RIO (JF34) at 599 and was called by YU2KDE (JF23). Then OE6FGG (HH) was worked and YU1's BBO and NOU called, the event fizzling out about 1945. From Dorset, John Cleaton, G4GHA, mentions three phases in the first of which he contacted 9H1BT (HV03f), IT9JU (sure it wasn't XJ, OM?) IT9TAI (GY67f), IT9KKG, IT9LYF, IT9ZWW (GY67) and IW9ACT. In the second phase, John worked IC8EGO and in the final session, YU2BKL. All those with 14 watts to a 6-ele. Quadr at 27ft.

Darrell Mawhinney, G81JPG, from Co. Antrim, is a new contributor and worked a goodly assortment of DX between 1440 and 1607. From W040d, he contacted DB2GB, HB7AJF, 13's LDS, LCZ, TJR and VFI, IW3QEF, YT9MI, and YU's 2GC, 2RQG, 2RSK and 3TDX. Darrell's QSO with IT9TDM at a QRB of 2420 kms. could be a G1-to-IT9 first, he suggests.

From Jersey, Geoff Brown, G41JCD, was on the act from the start at 1335 until 1454. His tally included 30 IT9's, in GX, GY, HX and HY squares; 5 9H1's; 35 YU's in IF, JC, JD, JE, JF, KD, KE, LF, etc.; a couple of LZ's in LD and LC; and HG8 in KG claimed as a Jersey "first," another GJ "first" with FØHI/FC who is GU3KFT on holiday in Corsica in EB square, plus lots of mainland Italians.

For your scribe, the event brought a new country in ISØPDQ, and a new country (EZ66a) and IT9VHS in GX03J was another new country. At least three other ISØ's were QRV; viz: BCO, ISJ and PUD, all in EZ. A Sicilian YL operator, IW9AKI, was in on the act from the GI-to-IT9 first, he suggests.

VFJ, IW3QEF, YT9MI, and YU's From W040d, he contacted DB2GB, the UOR beacons in the 108-118 MHz section, the aeronautical communication band, 118-136 MHz, and possibly Band 3 TV.

Starting Date January 1, 1975. No satellite or repeater QSO's. "Band of the Month" 23 cm.

was very loud but only spoke Italian and insisted on spelling out her QTH—Castelvetrano—phonetically to all contacts!

Elsewhere, SM3AKW (IW) worked F0Hl/FC, some Berliners worked into Israel and F1CRP heard a Canadian in Egypt. Mike Gaskin,
G8KYC, (Croydon) has built a simple panoramic display for his Rx and watched the MOF rise at the rate of 1 MHz per second in the June 28 event. He monitors the VHF spectrum and records 14 E’s openings in June. At 1920 on the 11th, he heard Arabic voices on 145.9 MHz and is puzzled as to their origin.

There is talk that EA8J in the Canary Islands was heard or worked from the British Isles, plus lots of other similar rumours of super-DX worked. There is little doubt that this was a most extensive event. It deserves the widest possible chronicling so that the researchers, like F8SH, will be able to build up an overall picture of E-layer propagation on the VHF’s over a large area of Europe and beyond. Your correspondent will gladly pass on all such reports.

Iain Simpson, GM8BVD, (Fife) has filled in some details of his 2.840 km. QSO on June 2 with SV1DH. His transceiver is a modified Trilo TS-700 with the original 20 kHz roofing filter replaced by a 7-5 kHz 8-pole crystal filter on SSB/CW modes. An SD-306 pre-amplifier stage has been added. The 16-ele. Yonna aerial at 13m. a.g.l. is 3m. above immediate obstructions and fed with less than 10m. of UR-67 coax. It is driven by an analogue rotation system with separate sync. position indicator accurate to better than 0.1°.

G3J1CD has been making the most of this season’s E’s happenings and had notched up 14 new squares this year before the June 28 session. Mike Allmark wrote before “the big one” but mentions having heard F1JG (CD24g) at 1604 on June 2, with a 5 min. opening on the 20th at 1155 which produced IW5AVM and a couple of IW0’s, but no QRA’s. On June 7 and 16 he copied Icelandic TV signals on Band 1 via Auroral E.

Kevin Jackson, (Leeds) reports reception of TV from Gwelo in Rhodesia on May 29 on 48.25 MHz with signal strengths up to S8 and suggests this was E’s enhanced TEP. On June 11, there was an E’s opening to YU when he got a snow-free picture from the Pelister Tx (KB76d), a 10 kw station on Ch. E4 (62-25 MHz). On the 19th, an Italian pirate TV station in Udine (GY77) was copied, while on the 22nd, a 100 watt OE Tx at Birkfeld (HH59) was identified. Other interesting squares seen in June included WW70B in Spain, HB35e in Norway and EB14 in Corsica.

The Rest

John Lemay, G8KAX, (Essex) enters our tables for the first time. His gear comprises a Sommerkamp FT-250 transceiver driving a home-built transverter for 2m. and a Microwave Modules job for 70 cm. On 2m, the aerial is an 8-ele. Yaga, while on 70 cm. a 20-ele. one is used. John is seeking 70 cm. skeds with Cornwall, and any Welsh counties during the autumn.

Jon Stow, G8LFJ, is another new Essex correspondent who enters our popular squares table for 2m. at only present, but with possible 70 cm. activity from the autumn. Planning application for a 40 ft. tower for supporting one or two 16-ele. aerials is under way. Jon caught the nice tropo. conditions on June 18-20 and worked EA1CR (X3D2d) late on the 19th and again early the following morning. French stations in AH and ZE were worked, plus OZ5TEA (FP) and OZ1BRJ (EQ) on the 19th. He heard a number of SM’s in GP and GQ squares. Jon complains bitterly about a weekly FM net of East London stations on 144-90 MHz from 2200 on Saturdays, sometimes lasting for three hours. Suggestions that they choose some other frequency, “. . . did not appear to make any impression,” he writes. It seems another case of because they cannot exchange better reports. He mentions having heard FUG from Dundee, who also enjoyed the band so we can only hope this group will respond to polite requests to move.

Another new Scottish correspondent is Richard Thomson, GM8ODL, from Dundee, who also enjoyed the June 2 event. He worked an assortment of DL, ON and PA’s in CL, CM, DL and DM squares from 2350 until 0330 the following morning. Richard uses an Icom IC-202, home-brew amplifier and 8-ele. Yagi at 60 ft.

Bryn Llewellyn, G4DEZ, was due to leave his Didcot QTH on July 12, having near-filled a waste skip with unwanted junk accumulated over the last five years. The new QTH is in south east Essex. Bryn mentions an opening to SM and OZ late on June 10 but nobody was around to take advantage of it. On the 18th, Geoff Brown, G34ICD, worked into ZZ square on tropo. to EA5CD.

Malcolm Andrew, G8NRP, of Random Electronics, was on holiday in the Dordogne region in France during June. At 1920 on the 11th, he heard GM8FFX in Aberdeen on 2m. working well down the west coast on the 18th. Unfortunately he did not seem to be able to raise anyone back home. Your correspondent found it a struggle to work OZ51Q (FP38) on the 19th, but exchanged S8 reports with EA1CR at 2317. By contrast, G4DEZ was only copying Ruben at S2. EA1CR was still on at breakfast time and admitted to not having gone to bed at all!

On the MS scene, Mike Allmark reckons the Arietids shower was good on July 1-9 and he heard DC7OH (GM), DF6NEA (EJ), 16WJB (HC), FIJG (CD), EA3ADW (BB), F6FHP (AE), OE3OBC (ID), F6BVA (DD), IW3QBC (GG), LQ6NY (GD) and others. He listened in on G3PO1’s sked with 4U1ITU on the 10th and received 53 bursts and 24 pings, the longest burst being 9 secs. at S8 and bringing Mike his 38th country heard. The mid-June tropo. brought in many F’s in AF, ZE and ZG squares.

VHF NFD is happening as this is being compiled and your scribe has taken occasional, listens on 2m. and worked a few GI and GM portables, plus some GT “Millenium” stations and EI1AA/P, The Irish Leprechaun Contest Group in Co. Wocklow. The conditions seemed fairly average. GW8BHH/P ended up with 708 QSO’s, GW6UQ/P 643 and G3CVP/P 892 with perhaps 10 duplicates. The Crystal Palace Group worked in to FO and DF squares and bagged 3 LX’s. Perhaps there will be more detailed reports on other bands next edition.

Sign Off

By the time this is expected to appear the September deadline will have passed, so the contributions for October should reach us by September 6 at the latest; earlier if possible due to probable postal problems. DISCUSSING PHASED VERTICAL ANTENNAE

ON THE HF BANDS—A TRI-BAND SYSTEM GIVING DIRECTIVITY CONTROL BY SWITCHING—CALCULATIONS, MEASUREMENTS AND PRACTICAL APPLICATION

B. N. TAIT (G3DDN)

THERE must be many amateurs who feel that the erection of a rotary beam in their garden is rather a frightening and costly undertaking, and yet think that without it they are getting left behind in the search for DX on the HF bands. In the writer's case, having moved to a magnificent site in Cornwall right on a cliff edge overlooking the Atlantic, the problem was one of neighbours who had paid large sums of money for a property with a sea view, and who were unlikely to take kindly to a Quad or Yagi in their foreground! A ground plane had already proved most successful, but, on 20 metres in particular, European QRM can very easily blot out all the strongest DX stations—unless one can devise an aerial system with the advantage of directional properties.

So experiments were started using a pair of ground planes, switching them in and out of phase, which is almost equivalent to rotating an antenna mechanically, and certainly a lot easier and cheaper. Initial tests were made using two home-made 10-metre ground planes spaced 16 feet apart. Fed "in phase," they produce a directional figure-of-eight pattern broadside to the place of the verticals; fed 180° "out of phase" a similar pattern is produced in the opposite directions, i.e., "endfire," as it is called. The actual theoretical forward gain is not more than 4 dB over a single vertical, but the side attenuation can be as much as 30 dB, which compares very favourably with any rotary beam. The method of phase switching is shown in Fig. 1.

Having proved the effectiveness of a "vertical beam," the writer embarked on a somewhat more ambitious scheme—a three-band vertical beam system, using two commercially built ground planes incorporating traps for Ten, Fifteen and Twenty metres. It was decided to settle on a spacing of 16 feet, as half-wave spacing is the most suitable for 10 metres, and the advantage of quarter-wave spacing (as it is on 20 metres) is the fact that by feeding the verticals 90° out of phase—instead of 180°—a cardioid pattern is produced with a side attenuation of 20 dB and a rear attenuation of 30 dB—most useful for overcoming the QRM on Twenty. Then, by inserting a quarter-wave delay line in either feedline the cardioid pattern can be switched in either direction.

The switching does become a little complicated with all the necessary quarter and half wavelengths of coax required for each band, but nevertheless the whole system is very much simpler than the mechanical rotation of a fairly large beam! The three-band switching is shown in Fig. 2. At Fig. 3 is the front panel layout, showing markings for each band.

Measuring the Coax

The formula for calculating an electrical quarter wavelength of coax is:

\[
\text{velocity factor} = \frac{\text{frequency (MHz)}}{246 \text{ feet} + \text{velocity factor}}
\]

The velocity factor of normal coax is somewhere between 0.5 and 0.8, but if it is not known for certain (normally obtainable from the manufacturer) it is advisable to calculate this first, otherwise a considerable number of short lengths of coax are going to finish up in the dustbin.

This is the suggested way of going about the calculation: Cut off exactly 14 feet of 52-ohm coax. Connect one end to a single-turn loop of wire and leave the other end open circuit. Couple the loop loosely to the coil of a GDO and find a dip on the meter at a frequency somewhere below 14 MHz. Check this frequency very accurately with the aid of a general coverage receiver. It is now possible to calculate the velocity of this coax by writing the previous formula as:

\[
\text{Velocity factor} = \frac{14 \text{ feet} + \text{frequency (MHz)}}{246}
\]

Repeat the process with the 75-ohm coax.

Both these lengths of coax can be used in the circuit, so in order to get them to resonate in the centre of the 20-metre band, they should be trimmed at not more than an inch at a time, checking progress with the GDO.

All the required lengths of coax can now be cut using the original formula for calculating the approximate length, adding on several inches before the initial cut, and then trimming and checking with the GDO after each cut. Note that on ten metres half an inch is critical.

A half-wavelength of coax is naturally exactly double the length of a quarter-wave, but note that to measure this with the GDO the far end of the coax must be short circuited.

Construction

The whole unit can be built into a metal box 15in. x 9in. x 7in. No chassis is required, as the switches are mounted on the front panel, the sockets on the back, and the coax is coiled up and tucked inside the box.

First make the connections from one tag to another on Sw2 and Sw3 as shown on the circuit diagram, keeping...
Fig. 2. Lengths for Phasing Units: L1, any convenient length of 52-ohm coax. L2, L12, quarter-wave 20m. 75-ohm coax. L3, L13, quarter-wave 15m. 75-ohm coax. L4, L14, quarter-wave 10m. 75-ohm coax. L5, L15, quarter-wave 20m. 52-ohm coax. L6, L7, L8, L16, 52-ohm coax, kept as short as possible (see text). L9, half wave 15m. 52-ohm coax. L10, half wave 10m. 52-ohm coax. L11, L17, any equal length of 52-ohm. Sw1, 4-pole, 3-way. Sw2, 4-pole, 3-way. Sw3, 4-pole, 2-way. (These switches should all be high-quality ceramic.) The feeder lines to the two vertical aerials Ae.1 and Ae.2 must be of identical electrical length.

the wires as short as possible, then mount the switches on the front panel. Using three or four standoffs construct a common earthing line around the switches, made of 12 or 14g. wire. The braiding at the ends of all the lengths of coax which are connected to the switches should be soldered securely to this wire. The input and output sockets should now be mounted on the back of the box.

Next, solder all the measured lengths of coax to the switches and also the 52-ohm coax from Sw1C and Sw1D to the two output sockets. Now make the connection from the input socket also with 52-ohm coax, but at the switch end connect to Sw1A only.

Alignment

Connect a GDO to the input socket of the unit by taking a single loop of wire loosely coupled to the coil, and switch Sw1 to 20 metres and Sw2 to “in phase.” With nothing plugged in to either output socket, check for resonance, i.e., dip the meter, at some frequency below 14 MHz. (You are now measuring L1+L2+L6+L11.) Check this frequency accurately, and now disconnect the input coax (L1) from Sw1A and connect to Sw1B. The resonant frequency of this section should be identical with that of the first section, if the two antennae are to be exactly in phase. If this is not the case they can be balanced by shortening or lengthening L6 or L16, whichever is more convenient. Repeat this check until the resonant frequencies of both sections are identical.

Now, with Sw1 switched to 15 metres carry out the same check for “in phase” on this band. Should adjust...
ment be necessary the cable to be trimmed is L7. If it is not possible to balance them it may be necessary to add a short length of 52-ohm coax between the end of L13 and the connection to Sw1d.

Repeat the same procedure for 10 metres, adjusting the length of L8, or adding a short length of 52-ohm coax between the end of L14 and Sw1d.

It is not so important to check the “out of phase” or cardiod positions; if these are not exactly 180° or 90° it simply means that the directional pattern of the two verticals will be slightly moved to one side or the other—however, with patience it is possible to get these to perfect accuracy by the method previously described, but noting the frequency difference between the “in phase” and “out of phase,” and adjusting the appropriate switch connections accordingly.

Results
The foregoing may seem somewhat complicated, but the fact is that no antenna system will work at maximum attainable efficiency unless quite a lot of time is spent on detailed measurements and adjustments. If the system is correctly adjusted and the two ground planes are reasonably in the clear, the lobe patterns and extremely low-angle radiation prove most effective for DX workings. The writer’s system is laid out to give the two cardiod patterns on 20 metres towards VK and ZL for the long and short paths. Signal reports have been most gratifying, and the ability to cut down (and even eliminate) QRM at the turn of a switch certainly makes the effort seem well worth while.

SWITCHED SELECTIVITY FILTER FOR THE FRG-7 USING TOKO MFL455 AND MFH41T FILTERS
PLUS ADDITIONAL IF AMPLIFIER STAGE
R. F. MILLINGTON
THE circuit devised, and described in the July 1978 issue of Short Wave Magazine, by R. Barker was just the circuit I was looking for to get the best out of my FRG-7, but no way could I afford—or indeed would the XYL authorise—the £50 outlay for the Collins filter. Not having much experience in working out component values for changes in impedances etc., I nevertheless decided to take a chance and send for the Toko SSB filter, mentioned by Mr. Barker, and have a go. Also, unwilling to apply a hot iron to a PCB in a confined space for any length of time, I decided not to remove the original filter but to bypass it, and use the Toko MFH41T mechanical filter, with a quoted passband of 4 kHz.

The circuit, Fig. 1, is the same as that given by Mr. Barker, except for the components forming the input and output impedances. R1 and R2 give the required input impedance for the SSB filter, 5K, and R11 in conjunction with the impedance of Q405 provide about 1K. R4, R5, R12, C5 and C8 provide the required impedances for the AM filter.

Originally the filter board was made and tried out, with the hoped for improvement in selectivity—though with the reduction in signal as Mr. Barker described; whether or not the losses were worse with the Toko filter I do not know, but although readable with the phones on, loudspeaker volume was very poor, even with the volume control fully on.

I found a circuit (Fig. 2) for a crystal-filter/IF amp, and adapted the IF amp circuit. Although not AGC controlled it works extremely well for the small number of components involved, and for the extra cost it is well worth while; Fig. 4 shows layout. The input impedance of the IF amp, although more than that required by the filter, did not seem to detract from the efficiency of the filter, so R11 and R12 were left in circuit and not changed.

It was thought advantageous to have the filters switchable independently of the ‘Mode’ control, and the spare contacts on the ‘Lights On/Off’ switch was used, so as not to drill into the metal work. It was wired so that the AM filter was in circuit with the lights on. There is one problem with this method of switching when the two filters used are on different frequencies: with the BFO correctly tuned to give 1.5 kHz output with the SSB filter in circuit (i.e. with an IF of 453.5 kHz) and BFO for USB on 452 KHz, and the AM filter on 455 KHz switched in, the resultant output will be 3 KHz. It is of course the same on LSB, except that the resultant AM filter output is now zero beat. When reading Morse this can be an advantage; but whether CW or SSB, if tuned-in correctly using the AM filter, then no retuning is necessary when switching to the SSB filter.

T1 and T2 are part of the MFL455 filter, and come with a small printed circuit board. This was used and mounted on the Veroboard, Fig. 3, using stiff pieces of wire (resistor lead off-cuts). T3 comes with the MFH41T filter

but with no PCB, so care has to be taken in enlarging the \textit{Veroboard} holes and fitting the pins in without force. If making up the filter \textit{and} the IF amp, then use a piece of board approximately 7" long and 3" high; only 26 holes on this side were used as the remainder were used for mounting the board. A bracket was constructed with

\* Fitted in IFT can

\textbf{Fig. 1} SWITCHED SELECTIVITY FILTER

The IFT used (a Denco IFT18/465) was recovered from the junk-box and is in no way critical; the circuit should work with any coupling coil as long as it can be turned to the IF frequency. Indeed a low-value resistor can be substituted for the IFT, and the output taken via a 0.1 \(\mu\)F capacitor from the collector's junction. C1, C2 and C3 are ceramic at 39v. working; C4 is electrolytic at 25v. All resistors are \(\frac{1}{2}\) watt.

Fig. 3 SWITCHED SELECTIVITY FILTER
with two feet bent at right-angles with centre holes, made so that the feet fitted over the fixing holes of the IF/AF PCB of the FRG-7, and so that it went between the inner end of the battery pack and that PCB. The Veroboard is then bolted to the bracket so that the SSB filter just clears the AF output IC and heat sink on this PCB. In this position the battery pack can still be used and no alteration has been made to the original set. No instability was noted either.

In order to keep the original filter in its place, the end of C417 at its junction with the filter was lifted (Fig. 5) and the inner of screened lead soldered directly to it, and the lead taken to the input of the switched filter. There is a small length of track leading from the output of the original filter to the junction of Q405, R421, and C420: this is cut with a sharp knife, making sure there is no bridge. The output from either the filter or the additional IF amp is taken to the R421/C420 junction via another length of screened lead. Should it be needed to return the set to its original condition, it is an easy matter to unsolder the screened leads, solder a bit of wire across the cut track, and reseat the end of C417.

As in the original circuit, the switching transistors get their voltage from the output side of the smoothing choke. Identify the pole of the ‘Mode’ switch which carried the 9v. BFO supply, and solder a length of wire from that point to the centre of the three connections on the unused side of the ‘Lights’ switch. Then connect a wire from the base of each switching transistor, as in the original circuit, one each to the remaining unused connections. The IF amp supply was taken from the set’s 10v. stabilised supply—a convenient point being the input to the ‘Lights’ switch, as then all three wires can be bound together to make things tidy.

Setting Up

Follow the procedure described in Mr. Barker’s article to receive, in effect, the receiver’s 1 MHz oscillator. Adjust RV1 for maximum gain, then screw in the core on the output side of the Denco IFT until the signal is heard. Repeat the same procedure with the other core, adjusting the IF gain control, RV1, for best volume. Once this stage is aligned, adopt the procedure as detailed by Mr. Barker, remembering that in addition the cores of the filter’s matching transformers will also need peaking up.

The IF gain control RV1 is adjusted to give enough amplification without overloading the receiver’s IF strip and cause distortion, or gain which cannot be turned down by way of either the AF volume control or the Aë attenuator. Indeed, if the control was brought to the front panel it would be a useful asset, but I concentrated on being able to return the FGR-7 to its original state.

In conclusion, the circuit works very well, and the frustration factor of listening on 80 metres in the evenings has been greatly reduced, and the expense—in total not more than £20—has been well rewarded with far more enjoyable short wave listening.

My thanks to Mr. Barker for going to the trouble of publishing his circuit.

SLOW-SCAN TELEVISION,  
PART II  
J. BROWN, G3LPB

Now we have described the Monitor, we hope you built one and got it going. If you did, you will doubtless be ready to start into sending pictures as well as receiving them; if you didn’t, well, just resurrect it from the loft (or wherever you put the projects that fall by the wayside) and get it going, as it isn’t all that hard.

Most people start by using a Monitor and getting someone who has a camera or flying-spot scanner to make a suitable tape; when it comes to your turn to transmit you just press the start button, and as the reels rotate so the transmitter is modulated with picture. This may become a bore after a while, but you should go through this phase if only because it is one way of gaining your own “test tape” with which you can check your station.

There are two methods of generating pictures: a camera or a flying-spot scanner. The camera is to be dealt with later: suffice it to say here that the choice is between vidicon and plumbicon tubes and we have opted for the former in Part III.

By implication then, we are going to describe a flying-spot scanner. This will enable us to transmit our own pictures, captions, and so on, by way of drawings or photographs.

We have to find a photo-multiplier or two, we have to have a CRT, and we have to find the mechanical arrangements to give an acceptable picture. Oh, and the electronics!

There are two basic methods used, which we may classify as the see-through method and the reflected method, see Figs. 1 and 2. Fig. 1 shows the CRT on which we have a scanning raster which provides the light; the spot as it travels “looks at” the picture, and the reflected ray travels to the two photo-multipliers. In order to get a useful picture you have to have mechanical adjustment horizontally, radially and vertically for both photo-multipliers independently, and a balance unit to combine the two multiplier signals at a level which allows for variation in the two multipliers. (There is a variation on this theme which uses a lens and focussing arrangement to ensure the spot only looks at one “bit” of picture at a time—Ed.)

Having looked at the hard way, turn to Fig. 2, which is so much easier and gives as good or better results. Here we have a raster on a CRT as before, but now we have a transparency in front of the tube, and a single photo-multiplier. The multiplier can only see the quantity of light allowed through by the bit of the transparency.
being scanned. It may look to you that this method has limitations by the mere fact of the use of transparencies but, for example, with the presence of a phase-reversing stage at the flip of a switch between multiplier output and modulator input, you can use a photo-negative, and use black letters to give white ones on the RF output.

We will try the method of Fig. 2 as being simpler and easier to set up. We need a source of synchronised light to scan the picture, which the block diagram shows to be the CRT: in other words we need a raster. Thus we need frame scan and line scan for the CRT, the photo-multiplier to turn light into electrical voltage, all of which have to be co-ordinated by suitable pulses—these are locked to the mains 50 Hz and produced in a unit called a Sync Pulse Generator; the electrics are shown in Fig. 4. C1 and C2 are given nominal values; these will work OK but later you may wish to get the timing closer and may then select their values. The spare gates on ICl are deliberately un-used so that if we require other units in the station we can derive pulses from these spare gates to hold all in sync with each other. The BD131 is a simple PSU stabilising arrangement, the 5.6 volt zener allowing for the 0-6 volt drop across the BD131. For outputs we have line sync pulses, frame sync pulses, and combined sync pulses.

Now to the Modulator—see Fig. 5. Here we meet the VCO (voltage-controlled oscillator), mentioned in Part I, in the flesh; and lo—it is nothing more than a common-or-garden multi-vibrator. However, we need to set it up, for which we need either a counter or a source of audio which we can define pretty closely. (One use for a 'scope, a bit of mains, and the Lissajous patterns!). Apply mains power with no other inputs initially, and put a speaker on one of the output transformer second-aries, and set all pots to centre. Ground Tr2 base, and adjust the two “white” pots equally and in the same direction for a clean 2300 Hz signal; if an oscilloscope is available we can check that both halves of the 2300 Hz are good and clean, as well as on frequency.

Unground Tr2, earth Tr4. Now adjust the “sync” pot in the emitter for 1200 Hz; release Tr4, ground Tr3, and adjust “black” pot in Tr3 emitter for 1500 Hz. Go

through them more than once, remembering that they may be a little interdependent. Release Tr3 from earth.

Now remove the external inputs and inject "combined sync" from the sync pulse generator; we should now hear sync-driven audio tone in the speaker (if you’ve remembered to put the 50 Hz input into the Sync Pulse Generator!).

**Timebases**

See Figs. 6 and 7. These boards are similar to the ones in the Monitor. If one is only going to use the board in a Scanner, we could remove the unijunction, VR1, the 1K resistor and the 220 ohm one. Thus we would be feeding into Tr2 through the 2.2K resistor. In Monitor use, one sets the VR1 to the unijunction circuit to give more than 120 lines, and so let the input from the SPG to Tr2 stop the game after 120 lines exactly; thus the monitor is using a free-running timebase which locks as soon as it sees a sync pulse. P2 sets the amplitude (width) of the sweep, and P3 is a shift control. The wirewound pot in series with the scan coil is partly to allow the output transistors to “see” a more civilised impedance, but it may also be used as an external width control; the output transistors can be BD131/132, or BD139/140, or the...
An underside view: the four sections are, right to left, EHT multiplier, 12v. positive and negative power supplies, modulator, and other power unit.

MJE340 series, depending on who you are friendly with!

The frame timebase board is the same for all practical purposes with slight changes of values to cope with the different speed. Again it is suitable for a monitor, and again the unijunction and its associated components may be discarded. (While it is true they may be omitted if so desired, one feels their presence in working order will be found to be of considerable use when things go wrong, and interchangeability of PCBs as between Monitor and FSS is a great aid to fault-finding—Ed.)

Tantalum is even more important for the electrolytics here: P2 is Height, P3 is Vertical Shift, and the wirewound pot in series with the scan coils becomes an external Height control. At each stage, the semiconductor devices are similar in both boards.

E.H.T.

See Fig. 9. A 5FP7 CRT is used, and the EHT for the tube is obtained from an old TV EHT transformer. As one dismantles, care should be taken to note what goes where, particularly if there is an air-gap in the ferrite. We want to save the over-wind which is usually the biggest, and usually the outer. Now we require two windings with which to provoke the brute into ringing. So, first to go on is a winding of 30 turns of 28 gauge enameled wire, with start and finish marked. Douse with Durofix to stick all in place, then add a layer of PVC sheet (Melinex or Kapton is even better than PVC). Allow to

See Fig. 6. A 5FP7 CRT is used, and the EHT for the tube is obtained from an old TV EHT transformer. As one dismantles, care should be taken to note what goes where, particularly if there is an air-gap in the ferrite. We want to save the over-wind which is usually the biggest, and usually the outer. Now we require two windings with which to provoke the brute into ringing. So, first to go on is a winding of 30 turns of 28 gauge enameled wire, with start and finish marked. Douse with Durofix to stick all in place, then add a layer of PVC sheet (Melinex or Kapton is even better than PVC). Allow to

![Diagram of LINE TIMEBASE](image-url)
dry, and follow with 8 or 9 turns of 28 gauge, marking start and finish as before, dope and cover with PVC as before. The third winding is 200 turns of 30 gauge to produce the 250 volts for the CRT electrodes. Now put everything back together, and make sure the overwind is well insulated. Connect in accordance with the circuit, while monitoring current and looking for around 1-1 amp, typically and the sound of the ringing just audible. If no whistle and around 3 amps, or so, switch off quick!

In the latter case, one of the windings on the switching transistor side needs reversing of its connections (when another try will almost certainly demonstrate that you didn’t mark the starts and finishes adequately!). The EHT is derived by way of the tripler, built up from scrap triplers or quintuplers from old TV sets; build them up with capacitors from the same source, and between fibre boards. You can’t be too careful here; for example a sharp point on an otherwise inoffensive soldered joint has been known to provoke a most annoying corona discharge. Mount the whole assembly at least 1 inch clear of any earthed metal parts. The typical result is some 5.1 kV for an input current of around an amp;

several have been made this way, and one was happy to draw a mere 600 mA—never since have we been so lucky!

Photo-Multiplier

Consider Fig. 8. This shows the supplies for a single photo-multiplier; it calls for 600-800 volts to the 931A by way of a voltage-doubling power supply; a look at the PSU circuit (Fig. 10) will indicate that the photomultiplier transformer is fed from around 12 volts 50 Hz, which in its turn is derived from the mains transformer in
the PSU proper. This is quite intentional, as these high voltages can bite, and putting your finger on them won't make the power-station notice even though you fry. **BE WARNED!**

The scrap view shows how the 47K resistors can be mounted on a bit of fibre board with pins. If you have only the copper-clad stuff, you'll be able to see how well it sticks while you're getting it off! If you want to play with the two-multiplier system, then Fig. 8a shows the slight differences required; in essence the light from the CRT is reflected from the object and this reflected light is collected by the two 931A photo-multipliers. A shiny surface is the thing to avoid with this sort of set-up, and it will probably be found helpful to use an optical focussing system to get a decent scan. The two multipliers are treated as individuals and the voltages balanced for equal sensitivity; output from pin 10 of each multiplier is 'commoned' after passing through the 47K resistors and taken to 'X' on the multiplier. In addition to the equalising electrically, one may expect a great deal of juggling with the mechanical arrangements for a satisfactory result, both horizontally and vertically.

**Power Supply**

Transformers 1, 2, and 4 are all ex-frame transformers from the VC-series TV chassis marketed by KB, RGD, and a few other firms; however any transformers which can dish out 14 volts AC at about 1 amp will do fine. T3 is a transformer having two 6:3 volt windings.

Look at Fig. 10: We get plus-12 volts DC from T1, and minus-12 from T2, so note which way round the diode goes! In each of these R1 can be around 1000 ohms, C1 at 500 µF, C2 at 1000 µF, with C3 around 0.1 µF in parallel. Some less-experienced constructors may wonder at the sanity of putting this tiny capacitance across

  - (b) Circuit of EHT rectifier system

---

This complete unit should be mounted away from any 'earthy' part of the case by at least an inch; these high voltages are dangerous and must be treated with respect, and covered-in where possible. Stick rectifiers are from old EHT tray triplers, and capacitors from old EHT trays.
1000 μF—the reasoning is that the high capacity component will cease to "look like" a capacitor as the frequency looking at it rises; at this frequency the smaller component is still behaving as a capacitor and takes over the work. Tr1 will clearly be a 2N3055, and Tr2 must be a pnp of equivalent beef, preferably a silicon; but OC28/OC36 will serve at a pinch. The zener diode may be 13 volts, but it may also be found that a little juggling by selection required if the pnp Tr2 has to be germanium. Adequate heatsinking goes without saying. For the rectifiers, BY127's can be used on the 12-volt lines from T1 and T2. Next we turn to T4, and here we see A and B give us 12-14 volts AC, which is fed to the transformer of the photo-multiplier in Fig. 8, and by way of the half-wave rectifier and smoothing capacitor we obtain the 12-14 volts of DC which appears in Fig. 9 and is chopped and...
Line timebase PCB.

used to generate the EHT for the CRT. This business of transforming down first and then up again causes the EHT supply to be poorly regulated, both at CRT and multiplier—but this is a safety measure as already indicated. Should the CRT EHT not be satisfactorily stable, a bleed string of resistors making up 200 megohms from the 5 kV to ground may help—the values selected so that no individual resistor has more than the rated voltage across the ends (usually 250 or 500 volts).

We are now left with T3. One winding on this supplies the CRT heater, and the other goes to the sync-pulse generator, where it serves both as the master timing voltage and provides 5 volts DC for the IC's. Incidentally, this may be a good time to warn that if the 5-volt supply goes up in value beyond an absolute maximum of 5.25 volts, you may as well start replacing the beetles. So—

Frame timebase PCB.

don't let the volts rise! The 0.1 µF capacitors across each IC in the SPG is further decoupling yet, partly as such and partly to prevent any fast spikes of high volts as the various IC's do their thing.

The CRT

This is Fig. 11. P1 is the front-panel brilliance control, while P2 is the internal one which is set for low illumination when the P1 setting is almost off; thus P1 is effective over most of its range.

Photographs

These will serve to show how the various bits go together, and will give some idea of the shape of things to come from your workshop.

to be continued
KEY BITS AND PIECES
IDEAS FOR TWO LOW-POWER CW TRANSMITTERS COSTING ALMOST NOTHING TO BUILD

SIMPLE CW rigs capable of being run from shoestring power supplies are frequently fascinating to construct and operate, and because they cost so little to put together are often attractive propositions to both old hands and newcomers alike. From the newcomers viewpoint in particular, getting 'airborne' via commercially produced gear requires a sudden cash demand unlikely to be met by a 'piggy bank' source! It can then be distinctly advantageous to get one's feet wet gently, and by taking one, or maybe two, old-fashioned valves—and valves still refuse to 'die' in amateur spheres—and linking them together appropriately a lot of on-the-air fun can be had for next to nothing. And it is really quite surprising just how much of the world can be worked with just a few watts of CW into a decent aerial.

Low power 'Top Band and 80' rigs have always been popular, and nowadays it seems that QRP working on other bands, too, is on the increase.

Circuitry of a couple of low power transmitters now follows.

Transmitter No. 1
A recently built hybrid CW rig for the 7 MHz band is shown in Fig. 1, final output being derived from a VXO source. The VXO allows a frequency swing of some 4 kHz, thus a few crystals of differing frequency in the 7 MHz CW band patch afford a fair final coverage and yet the rig remains 'rock bound'. The VXO was described in Short Wave Magazine earlier (March 1979, p. 38) with constructional details but here only the circuit is reproduced attached to the valved section it drives.

The few milliamps of current at 12v. DC required by the VXO is obtained by rectifying the 6.3v. AC heater supply and doubling it—BY100 rectifiers being used for D1 and D2 merely because they were to hand. Resistor R15 provides a discharge path for the circuit when S1C is at the 'Receive' position.

In the valved section, V1 amplifies the 7 MHz input and it reaches V2 grid through a pi-network pre-tuned partly by the core of L2 and partly by VT1; it is hardly worth while making VT1 a panel control in a single band affair. Keying is in the PA cathode satisfactorily.

Panel meters are by no means inexpensive nowadays: therefore when tuning-up, the station test meter (set to read 0-100 mA) can be made use of by plugging it into the key socket; alternatively the station reflectometer or wavemeter can be used to supply visual indication. The test point TP can also provide a ready indication that L2 is tuned ‘on the nose’.

Function switching is simple using a small rotary switch, but since it is not advisable to apply highish DC potentials to such switches the anode feeds can be left ‘hot’ and the rig ‘killed’ at ‘Receive’ by grounding both valve screens. Some adjustment to the two screen resistors might be necessary in other constructions to give correct DC potentials at these electrodes.

Valve types other than those specified can be tried if to hand, and types EF183 and 6CH6 can be directly substituted for V1 and V2 respectively without base changes; output overall might be slightly less however.

**Constructional Points**

Because the coils are home-made a reasonably accurately calibrated dip-oscillator is an indispensable item—and no self-respecting home-brew station should be without one. Initially too many turns should be wound on and a couple removed at a time until resonance is indicated. Coils should of course be loosely hooked into the construction and valves plugged in otherwise misleading results are possible; some ‘cut and try’ is inevitable usually.

The VXO should be contained in a metal box bolted to the front panel but allowing the tip of the crystal to project through sufficiently for it to be changed from time to time. A reduction epicyclic drive attached to the VXO tune shaft is also desirable. The VXO tune knob need not be calibrated if the receiver scale can be read in small divisions as is possible in the better type of amateur bands communications receiver. Type HC6-U crystals should be found ‘moveable’ over some 4 kHz—say 7017-7021 and so on—thus the user soon discovers just how much receiver scale he has available for any

- **For 80m**: 55 turns ditto.
particular crystal and whether a station calling CQ is within his tuning range, transmitter-wise, or not.

Coil L2 and VT1 are best placed sub-chassis with L3 on the upper surface. A suitable layout is shown in Fig. 2.

Testing
The VXO output is checked first, and with no HT applied to the valved section (if S1 is moved to 'Net') the oscillator note should be heard plainly via the associated receiver. Thereafter it is merely a case of tuning-up into a dummy load in the usual way and peaking L2. If the station test meter is plugged into the key socket and tuned for dip, some 40-50 mA can be expected from a rail voltage of 250v. DC for maximum output loading.

Transmitter No. 2
The circuit of an even simpler low power transmitter is shown in Fig. 3 and this can be effective on either Top Band or 80 metres; it could probably be made to go on other bands, too.

The active elements boil down to no more than a single valve and a crystal thus making the whole thing virtually pocket size. Crystal control does savour of yesteryear but is still useful on Top Band, in particular so that other services are not interfered with. Overall the physical size is mainly governed by the dimensions of the variable capacitors and for single-banding it might be possible to dispense with VC2 by using a fixed value item of suitable capacitance. The purpose of R4 is to prevent the voltage at the anode of VIA from going over-high when S1 is at the 'Net' position; actually a 'Net' facility is not really necessary and simpler function switching could be used.

Construction of the little transmitter is simplicity itself and provided the oscillator 'fires' readily little can go wrong. As in the other transmitter no panel meter need be used.

Power supplies
A simple power supply utilising an old receiver type mains transformer capable of supplying 250v. DC at 60-80 mA and 6.3v. AC at 1A in conjunction with either a type 6X5 or similar rectifier valve, and a couple of electrolytics, is quite adequate and as many suitable circuits have been described before there seems no need to repeat such information here.

ALTERNATIVE AERIAL-RAISING TECHNOLOGY
OR HOW TO PUT ONE UP WITHOUT MASTS OR CLIMBING TREES

Pretty well every amateur who has ever operated on the LF Bands, or out/P, has at some time taken a moment to curse his aerial arrangements—at least as to the erection thereof.

There seem to be, in general, two main problems; firstly you have to throw something up and over, and then you must recover whatever it is you’ve thrown if it fails for any reason to come down of its own accord. Gravity alone is not enough. Neither is it enough for the nautically-minded among us to make a 'Monkey's Fist' on to the end of a length of line. A line over a tree and a line thrown to a dockyard matey are not quite in the same category.

If one stays with the throw-it-over technique and restricts one's activities to trees well away from windows, a useful method is to go to a fishing-tackle shop and buy one of those nice tear-drop shaped lumps of lead with a loop moulded in to which a thin nylon monofilament can be attached. Provided you can persuade the monofilament to stay tied to the weight, you have a good combination, mainly because on the one hand one has a slippery line and on the other the tear-drop shape makes it most likely that when the weight falls square on to a branch on its way down, a bit of jigging from the ground should be enough to make it roll over to one side or the other and so continue its way back to master. We hope.

Another possible technique used to be called the "five-bob rocket" ploy. Heaven knows what a suitable rocket would cost now! With this method, again one uses monofilament, attached to the stick of the rocket, and the rocket launcher (a bottle, what else?) is aimed in the desired direction with some care before the blue touch-paper is lit and things start to happen. Since it is normal to need a couple of sighters, this is a pricey way to obtain a higher aerial.

Bows and Arrows: here we have a method which should be available to most amateurs, and which can be very effective if, as the writer does, you can call on an Olympic-standard archer and his tools to tackle the task. Don't, unless you already play archery yourself, try doing this without lots of practice well away from humans. Arrows can break your string and carry a long way, and still do a lot of damage at the end. Crossbows would appear to have something to offer in this context but the writer hasn't found a volunteer cross-bowman. Most were, it seems, demolished at Agincourt.

Still trying to get this bit of nylon monofilament up, one's next move is to radio-controlled models. Here one either needs a five-channel radio-control system, using four to control the aeroplane and one to give a positive drop of the line, which in its turn should be weighted so the flight of its fall can be noted. If the plane only needs two or three channels and you've got a four-channel R/C, fine, and you can use the spare channel to detach the line. Don't rely on gravity or drag or whatever to achieve the freedom to release, or you will inevitably have the doubtful pleasure of seeing your prized model aeroplane dive at full chat straight into the ground, scattering bits of radio gear and balsa all over the scenery; and when you wipe away the tears, you'll probably find the string broke.
during the dive and you haven't even the consolation of getting the aerial up. No, the procedure must be amended to allow for all the factors. Take your aircraft off, or better hand-launch it, and make it spiral-climb straight up over your head until it is at least twice and preferably three times higher than your tree. Now you need help with a pair of binoculars unless you reckon to look through a telescope on a tripod and still control your model(!): your helper will direct you to fly the aircraft over the desired tree, and just before the line touches the tree he will call to you to release the line, which with its weight will plummet to earth, the while you fly your aeroplane back to you and bring it in to land all safely. We hope.

No? Still not up? Try the fishing-rod again, with the monofilament and tear-drop, and with a bit of practice you'll be able to exceed handsonomely the height you can obtain by simply throwing. If you are interested in throwing a line over the ridge of your house, we do strongly recommend you replace the tear-drop by something less glass-breaking, such as a sorbo ball with the line threaded through it. Make sure the wind direction is right—there is nothing more annoying than having the ball go nicely up and clear of the ridge, only to be blown back again, drop and—Murphy again!—bounce down the roof to the guttering and straight down the downspout. (This does, of course, clear any spiders out quite effectively). If the ball does go over as required you will realise why the weight has to be non glass-breaking; just as soon as the trailing line touches the roof, it will check the ball and the elasticity in the monofilament will swing the weight nicely round in an arc—and as sure as you're reading this, the end of the arc will be a window. Hope won't resolve this one!

Just one final point. Don't let the family pooch or next-door cat get into the act; apart from the risk of doing them a mischief, there is also the risk that they may be able to do you a dis-service by such innocent things as standing on the invisible monofilament as you reach lift-off. Shut them up and/or kick 'em out, as may be appropriate.

Finally, you've got your monofilament up where you want it. Don't hang an insulator on it and haul the aerial up, but use it to haul over a second, stronger, line. There is no need whatever for these great hefty lines so often seen, but a braided terylene of quite small dimensions will have a breaking strain more than enough for you; indeed in boats the stuff tends to be selected too thick purely on the basis that thin stuff cuts the hands when used as sheets. If you insist on thick rope, use the terylene braid to haul up the Big One.

And, of course, don't forget that trees tend to move in the wind; this can be allowed for to some degree if the line is not to be broken on the first windy day. Perhaps the best way is to use the line to hold up a pulley-block through which you have threaded a line before hauling aloft. One end of the latter is tied to the aerial, and the other to a bucket filled with some stones to give a reasonable weight to hold the span up without too much sag; a hole in the bottom will ensure that water escapes before it can gather enough weight to break the aerial or line. The terylene line holding the pulley-block can now be hauled aloft and tied off to a lower part of the tree, preferably out of the sight of the local youngsters. You hope.

The result of all your efforts? With luck, the best aerial you've ever had. But, if it leads you to the doctor claiming a bad back strain, we accept no blame: we will however pray for you.

Still with the models, one can use a helicopter now that such can be made to be radio-controlled. Once again though there is a snag; in this case the clear one that flying a model 'copter isn't the same as flying the old trainer mentioned in the last paragraph (what—you were going to do it with a model Spitfire? Optimist!) but a whole new dimension to flying. The darned thing has to be flown all the time, and it won't be as forgiving as a high-wing trainer type. On the other hand, if you can fly a 'copter model, with the right sort of confidence, it is quite remarkable how well the system works.
CLUBS ROUNDUP

BY 'Club Secretary'

CLUBS again, and we must remind all scribes that not only will they be dropped in the absence of reports, but also that we can't give them any publicity on anything in the nature of history (unless it is of very general interest) except for the odd item which may be seen by us as a way of attracting more members to the club.

New Club

A long-felt need is filled by this one; British Young Ladies Amateur Radio Association, or BYLARA for short. They propose to have meetings over the air, Monday evenings on 3-605 MHz, and personal gatherings at 2 p.m. at every rally where they are in attendance, in the 'tea place'. These will be the ones for the informal natter, but at Drayton Manor 1980, the 2 p.m. main tea-room session will be the AGM. One other "official" get-together will be at 2 p.m. in the tea room of the Leicester exhibition, on the Saturday. What more can we do but wish them every success? Only to pass on the request that anyone reading this who knows of YL or XYL types, should tell them about the club and put them in touch with the Hon. Sec.; and of course to ask all letters to be fitted up with an s.a.e. "CDXN" will no doubt be noting the frequency, but here we can note that the girls will throw open the meeting to any OM callers after thirty minutes. Let us hope that they can get some of the G8 YLs into the group too, as we half suspect that, if not actually a majority, they are a pretty large minority!

Deletions

As we have previously indicated, as long as we are to run a system which reduces the postage and work-load at the Club end, then we must have our regular updates. We mentioned it last time, and now we have acted—albeit we have not done so in any case where on past experience we would have expected a letter, which might have been delayed in the post. However, if you aren't mentioned, then write in with the dates, the Hq address, the name and address (telephone number and STD code if there is one) of the Hon. Sec., and so forth. Don't fizz and pop because we dropped you—one of the clubs we would have thought to be an absolute "cert" after some 25 years knowledge writes in to indicate a search for Hq ownership of a transistor was a marvel. Indeed, one recalls in those distant days an article by G3HMO on making transistors at home from broken-up ex-WD diodes.

Indeed, one recalls in those distant days an article by G3HMO on making transistors at home from broken-up ex-WD diodes.

As usual, our first port of call is Acton, Brentford & Chiswick; August 21 at 66 High Road, with G4GD opening the discussions on the UK proposals for WARC '79.

Addiscombe are primarily a contest group, but they still have a regular natter on Tuesday evenings at the Spread Eagle, Portland Road, S. Norwood. The start is set for around 9.15.

The current AMSAT Newsletter is as interesting as ever, containing as it does an article discussing the Russian RS satellites and some data on the next phase of Oscars. If you have any interest in satellite working you should be a member. Details from the Hon. Sec.—see Panel.

A.R.M.S. is the one for the /M enthusiasts, whether they are on two-metres FM or 14 MHz DX. Details from the Hon. Sec.—see Panel.

Ashford in Kent have Hq at the top of Hart Hill, near Charing, where they can be found on any Tuesday evening.

B.A.R.T.G. looks after the interests of the radio-teleprinter mode chaps, by way of a newsletter, helping hand where needed, supplies of specialised bits and pieces, paper rolls and suchlike, not to mention the convention and other similar activities. Details from the Hon. Sec. at the address in the Panel.

Deletions

Ashford in Kent have Hq at the top of Hart Hill, near Charing, where they can be found on any Tuesday evening.

B.A.R.T.G. looks after the interests of the radio-teleprinter mode chaps, by way of a newsletter, helping hand where needed, supplies of specialised bits and pieces, paper rolls and suchlike, not to mention the convention and other similar activities. Details from the Hon. Sec. at the address in the Panel.

B.A.T.C. comes next, and for a quarter-century or so has been the pivot around which all the amateur TV activity rotates: B/W or colour, fast-scan or slow, it all comes alike. Your scribe can recall the Newsletter in its very earliest days, when everything was done by way of valves (hot-cathode FETs to you, Buster!) and mere ownership of a transistor was a marvel. Indeed, one recalls in those distant days an article by G3HMO on making transistors at home from broken-up ex-WD diodes.

Bishops Stortford are to be found at the British Legion Club in Bishops Stortford on the third Monday in each month. The venue is at the top of Windhill, just before the roundabout.

It is some measure of the man when we say that as far as we know, Bournemouth do not yet have a new Hon. Sec. to replace the late G4EMN. However, they are at the Dolphin Hotel, Holdenhurst Road, Bournemouth on the first and third Fridays of each month. For more details, either just turn up at a meeting, or get in touch with D. Wade, 70 Creekmoor, Poole.

Almost into East Anglia now, for a mention of the Braintree gang; they are in Room 3 of Braintree Community Centre, adjacent to the Bus Park in Victoria Road. Although they are to be found on any Tuesday, the second one of each month is the main meeting for Bury, on which evening they have a speaker or films, or whatever. On the remaining Tuesday evenings they have time for projects, natter-and-noggin sessions, Morse practice, etc.

Find the Old Bakery, Chester Walk, at the rear of the Public Library, if you are after the Cheltenham group. It looks to be the first Thursday and the third Friday in each month, but it is suggested that a check with the Hon. Sec. be made.

Chichester are booked into Room 34A in the Lancastrian Wing of Chichester High School for Boys, Basin...
Road, where they forage together on the first Tuesday and the third Thursday of each month.

The area around Wymborne is served by a group called Chilton. Nominally we understand they are in the Canteen of John Hawkins Ltd in Victoria Street. However, it is suggested you contact the Hon. Sec. to confirm this.

In terms of attendance rates, with little chance of bringing in outside speakers, not to mention the geographical spread, one marvels that there could possibly be such consistent success. We are referring, of course, to Chalkhill, who have their meetings on the first Thursday of each month at the SWEB Clubroom, Pool, Camborne, starting at 7.30. We recall a visit we made: arriving a little late we found it difficult to squeeze into the room, let alone find a chair!

Residents are one of the groups who owe us an update; but we know they are based on Trinity Church, Ifield, on the first and third Thursdays, starting at 7.30. We recall a visit we made: arriving a little late we found it difficult to squeeze into the room, let alone find a chair!

Another of the forward-looking groups is at Cray Valley, where they have a place at Christchurch Centre, High Street, Eltham, on the first and third Thursdays.

GUILDFORD: L. Bright, G4BHQ, 4 Dagley Road, Shelford, Saffron Walden, Essex.
HARROW: C. D. Field, G4AUF, 17 Clitheroe Avenue, Harrow, Middx. HA29UU. (01-868 3002.)
HEREFORD: S. Jesson, G4CNY, 181 Kings Acre Rd, Hereford. (Hereford 3257.)
LINCOLN: B. Brenton, G1EAM, 142 West Parade, Lincoln. (0522 23958.)
MAINHEAD: J. Patric, G1TWG, Bedford Lodge, Camdon Place, Bourne End, Bucks. (Bourne End 06285) 25775.
NORTHERN HEIGHTS: M. Topham, G8NUC, 1200 Great North Road,克拉福德73271。
PETERBOROUGH: A. Crichley, G3EE, 36 Waterloo Road, Peterborough.
RAI.B.C.: M. F. Woolley, G4JFY, 9 Rannoch Court, Adelaide Road, Surbiton KT64TE.
REIGATE: F. H. Mundy, G3XZ, Westview, rear of Manor Farm, off Reigate Road, Hookwood, Surrey. (Horley 73878.)
ROYAL NAVY: M. Pursell, G4JLK, 21 Sanyfield Crescent, Cowplain, Portsmouth PO8 8QO.
SALTASH: G. G. Lightfoot, G3BNO, 10 Lower Quay Street, Saltash (0755) 2839.
SOLIHULL: R. A. Hancock, G4BTT, 20 Ulleries Road, Solihull, West Midlands B92 8EE.
SOUTHERN HEIGHTS: M. Topham, G8NUC, 1200 Great North Road,克拉福德73271。
THAMES VALLEY: R. J. Bladell, G3FZL, 11 Liphook Road, Prestbury, Cheltenham. (Cheltenham 43891.)
WORCESTER: M. Tittensor, G4EKG, 16 Durcott Road, Worcester. (Worcester 73271.)
CORNISH: S. T. C. Towse, G3HHA, 47 Golden Miller Road, Prestbury, Cheltenham. (Cheltenham 43891.)

There is another group in Derby, this one being based on Nunsfield House Community Association, Boulton Lane, Alvaston Park; they are in residence every Friday evening.

One is set aside for a talk, and the other for a ragchew. For a raffle session, but this is flexible.

One of the few groups to have a Saturday evening is Crystal Palace; third Saturday in each month at Emmanuel Church Hall, Barry Road, London SE23. It is understood that the August meeting is set aside for G3OOU to take up Aerials as his theme, followed by G31HR on Aerial Accessories. Reading the Newsletter we were amused to learn of the method of curing their generator problems; ours too! On a totally different tack, they have quite a lot of new members, and the committee are thinking hard about the ways and means of getting them 'genned-up' by a suitable mix of lectures.

Every Wednesday evening at 119 Green Lane, you can find the Derby types foraged, to see what goodies the committee have laid on in the way of entertainment or activity. We might also note in passing that another YL has become a member, and received memberships number 878.

There is another group in Derby, this one being based on Nunsfield House Community Association, Boulton Lane, Alvaston Park; they are in residence every Friday evening.
Back into the London area for a while now. Ealing have Tuesdays at the Northfields Community Centre, Northfields Road, London W13.

At Edgware the second and fourth Thursdays are the ones to ring in red on the calendar each month. The venue is Watling Community Centre, 145 Orange Hill Road, Burnt Oak, Edgware.

Down West again, to Exeter where the Hon. Sec. puts us in our place—the Hq address is St. Davids Hill, in the Community Centre, on the second Monday every month.

It is a long time since we last heard from Fulford. However they are still about and can be found every Tuesday evening at 31 George Street, York.

We mustn't forget the G-QRP club, or we'll be shot at dawn by the Editor! This club is devoted to the arts and crafts of low-power amateur radio; thus it covers a lot of things, for the operating-only types right through to the majority who spend lots of time dreaming up and building their own QRP transmitters, receivers, aerial tuners and so on. Details from the Hon. Sec.—see Panel.

Now Guildford, who are in their Diamond Jubilee year and still enjoying it all. For August, they have a local insurance broker coming along to talk to them about his work, followed by G4CWP on "Aerial Masts and the Authorities", all on August 10. On 24th, G3LTP will be coming along to talk about Tropospheric Propagation.

At Harrow the venue is the Arts Centre, High Road, Harrow Weald, from 8 p.m. till 10 p.m. they have a shack, bar facilities, good car parking and a good programme. What more can one ask?

Next we turn to Hereford where the routine is to get together on the first and third Fridays of each month; and there is almost always something set up in the way of a programme. On a slightly different tack, the idea of having a coffee evening for the YLs/XYLs while the gang are yakking about wireless sounds like a useful sort of idea.

Over the seas and on past Skye brings us to the Emerald Isle, and IRTS Region 1. For anyone living in Eire, this is the one to make the first contact with, as they will almost certainly know if there is a local group near you; and of course you could do a lot worse than join anyway! Details from the Hon. Sec.—see Panel.

The newly-reformed Lincoln group are based on the City Engineers Club, Waterside South, Lincoln, and on the look-out for new members for the second and fourth Wednesdays of each month.

We now come to Maidenhead, where they have Hq at the Red Cross Hall, The Crescent, Maidenhead, on the first Thursday and the third Tuesday of each month; our current data closes with July-end, but indicates they have had plenty of talks, films, and whatever to keep the interest going.

Northern Heights Newsletter is a bit hard going at times—though it obviously appeals to the members—but this time they have hit the jackpot with a discussion of such ICs as the 'maybe' gate, the 'won't' gate and the J(UN)K flip-flop—this last changes state only when the coffee-machine starts giving change! We could add another, obtained very simply by subjecting a DVM chip to a pulse of some 5 kV; we have all the pieces in a little box, ready for interment! Alternate Tuesdays at the British Sub-Aqua Club, Mountain, Queensbury, Bradford.

Peterborough Radio & Electronics Society live in the Scout Hut, Occupation Road, where they will be on August 17, topic to be arranged at the time of writing.

R.A.I.B.C. have changed the word denoted by the 'B' from 'Belfast' to 'Blind', thus clearly indicating the value of the club to both the invalid and the blind members. We who are fit could help in many ways: by being a supporter, more actively maybe as a representative, or by setting-up some fund-raising activities. Not to mention roping in anyone who could be a full member; details from the Hon. Sec. at the address in the Panel.

Now to the R.N.A.R.S. for serving and ex-members of the Royal Navy, and Merchant Navy. The current Newsletter discusses MARS in some detail, and also has a piece on WARC '79. Details from the Hon. Sec.—see Panel.

At Reigate the Hq is in the Constitutional Centre, Warwick Road, Redhill, on the third Tuesday of each month. More details from the Hon. Sec.—see Panel.

A letter from G3XCS puts us right about the goings-on at Saltash, and gives us the new Hon. Sec.'s name and address for the Panel. They foregather at the Toce H Hall, which lies at the junction of Warraton Road, and Oaklands Drive.

There is a change of venue for the August meeting at Southgate—they normally foregather at the Scout Hut in Wilson Street, Winchmore Hill on the second Thursday in each month, but for this once they will be at another place which has still to be settled at the time of writing; thus we have to ask you to contact the Hon. Sec. at the address in the Panel.

On to Solihull, where the Hq is at the Manor House in the High Street on the third Tuesday.

There is quite a complicated programme of events at South Birmingham, all at Hampstead House, Fairfax Road, West Heath. There is a formal affair on the first Wednesday of every month; the club shack is open for HF operation every Thursday, and ever Friday evening there is an "open" evening, by which we understand a natter session.

Now to Stevenage, where they have had a superb programme during the first half of the year which finishes on August 2, at the British Aerospace (ex-Hawker Siddeley, ex-de Havilland) works. For more
information, or details of getting to the venue, a call to the Hon. Sec. is in order—see Panel.

We have two copies of the Surrey newsletter to hand, which makes it lucky that we looked at the most recent and spotted a late change of programme. The Hq is at T.S. Terra Nova, 34 The Waldrons, South Croydon, on the first and third Wednesdays: thus on August 1 we see a talk with slides to be given by G3OFJ on his visit to Egypt; August 15 will be informal.

Now to Sutton & Cheam where there seems to be a certain amount of doubt about the venue for this month; building alterations always overshoot the target date for completion! Thus, we suggest you get in touch with the Hon. Sec. at the address in the Panel for the latest situation.

Our letter from Torbay simply notes a change of Hon. Sec. without mentioning details of the goings-on. We do know the Hq address as Bath Lane (rear of 94 Belgrave Road), Torquay. For the rest, contact the Hon. Sec. at the address in the Panel.

Thames Valley are to be found in Giggs Hill Green Library in Thames Ditton, on the first Tuesday of each month.

Up north now, to Tyneside, where the Hq is at Vine Street Community Association, Wallsend; since this was a first letter after an AGM the programme dates are pretty open save that they will be on every Monday evening.

Yet another group with Hq problems is Verulam, as their old home is now rubble—but there are three places being actively investigated and by the time this comes to be read, the Hon. Sec. will be able to tell you where to go. This refers to the formals of course; the summer informals at the Mosquito Museum, Salisbury Hall, London Colney on the second Thursday in each month are not affected. Incidentally, Salisbury Hall was owned, before the Mosquito exercise, by Sir Nigel Gresley of steam locomotive fame.

The last of the season’s West Kent evenings will have been fun—a challenge to produce the loudest possible noise from a single US size Leclanche cell, measured in dBA at a point one metre in front of the device; an additional rule was that the cell must be at a temperature of 60°C, or less, at the start of noise and that the noise must be sustained for at least ten seconds! Now the Hq has closed down for the summer recess, they will carry on with gatherings on the alternate Tuesday evenings at the Drill Hall in Victoria Road, Tunbridge Wells.

Next stop is at Worcester where the venue is the Old Pheasant, New Street, Worcester, and it looks to be the first Monday evening in the month.

The Yeovil chaps will be putting out their strong right arms in August, with three special-event stations; GB2FAA at R.N.A.S. Yeovilton on August 3 and 4; this one is with and for the Royal Navy Group. GB2MSS is on Saturday August 18, at the Mid Somerset Show, Shepton Mallet, and finally their own G3CMH call, at Dillington House Fete, Ilminster, Somerset on Monday August 27, not to mention the every-Thursdays sessions in Hut 101 at Houndstone Camp.

Lastly, to York, who are based on the United Services Club, 61 Micklehyte York, every Friday evening except the third one in each month, at 7.30. They almost always have something going on, even though it may be fixed up at the last minute and so not noted in this column.

Finale

That’s it for another Roundup; send in your up-dates this time, please, addressed as ever to “Club Secretary”, SHORT WAVE MAGAZINE, 34 High Street, Welwyn, Herts. AL6 9EQ.
THE TRAP ANTENNA
T. L. SADLER, G3VMC

The following article describes the operation and construction of tubular traps for use in dipoles, beams or verticals on 10, 15 and 20 metre bands. Although some lathe work is involved the author feels that most amateurs can, with a little searching, find someone to do the relatively simple turning operations. It may be possible to interest a local college or school in exchange for some mutually agreed item (e.g. a technical manual). The author was fortunate in involving Mr. D. Beales whose expertise as a model engineering enthusiast proved invaluable when exploring the most effective and simplest methods of construction. The outcome being a very strong, stable unit comparing favourably with its commercial counterpart.

Trap Operation

Fig. 1 shows a dipole which will resonate on one of two frequencies $f_1$ or $f_2$ depending on the condition of the switches. When open, the dipole resonates at $f_1$ and on $f_2$ when closed. For a variety of reasons actual switches as shown would be most impractical from both an operational and engineering standpoint. Secondly if the lower frequency ($f_2$) was 14 MHz then this length would be around 33 feet and somewhat large for rotation at many QTH’s. So instead of switches a device is needed which offers a high resistance at $f_2$ and a very low resistance at $f_1$. This will for all practical purposes act like a switch and be self-selecting. The simplest solution is to use a parallel tuned LC circuit which when resonant at $f_1$ would offer a very high impedance to signals at that frequency and appear similar to an open circuit. On the other hand signals at other frequencies, in this case $f_2$, pass through the circuit with little attenuation. However, although the circuit is non resonant at $f_2$, the coils used in the traps become part of the next element and consequently load it, thereby reducing the length of $f_2$; see Fig. 2.

Consider now the diagram for a three band dipole, Fig. 3; note that loading coils are now in operation for both bands $f_3$ and $f_4$, i.e. 4 coils in $f_3$ and 2 in $f_4$, thereby shortening the overall length even further. So a 10, 15 and 20m. trap antenna is smaller than a 15 and 20m. band version which must be a bonus at most QTH’s.

Trap Design

When using wire antennae it is common to use traps consisting of a coil in parallel with an actual capacitor. In the case of self-supporting tubular elements a more substantial unit must be utilised. The coil still exists as such but the capacitance required is obtained from that existing between the element and the protective cover. Fig. 4 shows this more clearly.

It can be seen that the insulating bush acts as the dielectric of the parallel capacitor, and as this is not air, then careful choice of the material is essential. The dielectric constant of materials such as nylon and PVC varies widely with manufacture, so, using that odd bit of plastic tubing you may have in the garage is a recipe for disaster. The author settled on polythene which has proved most satisfactory in practice and reasonably easy to work, though polystyrene would probably work equally well, both materials having a relative permittivity of around 2.3.

The capacitance required can be estimated by knowing:

a) The spacing between the tubes.
b) The dielectric constant of the separating medium.
c) The area of the smaller tube.

A worked example will probably make this clearer, see Fig. 5. In this example it can be seen that two “capacitors” exist here, both in parallel i.e. one formed with an air dielectric and the other with a solid dielectric, both being 1 inch in length.

[Diagrams of trap antennas and calculations shown]
Cap. 1 (Air).
Area of smallest plate \(A = \pi \times \text{dia.} \times \text{length} = \pi \times 0.625 \times 1 = 1.963 \text{ sq ins.}\)
Spacing between plates \(d = 0.125 \text{ ins.}\)
Dielectric constant \(K = 1\).
\[C_pF = 0.2235 \times K \times A\]
\[= 0.2235 \times 1 \times 1.963 \times 3.5 \text{ pF}\]
\[= 11.5 \text{ pF}\]

Cap 2 (Polythene).
\[K = \frac{1}{3}\]
\[C_pF = 0.2235 \times \frac{1}{3} \times 1.963 = 8 \text{ pF}\]

Total \(C = C_\alpha + C_p = 11.5 \text{ pF}\).

Now consider the coil connecting the two elements. The following formula will prove reasonably accurate for single layer coils:
\[L \mu H = \left(\frac{N \times r}{2}\right)^2, \text{ where } N = \text{No. of turns}\]
\[r = \text{radius of coil (mean)}\]
\[L = \text{length of winding}\]

\[E.g. \text{ Coil = 22 turns at 16 t.p.i., and mean diameter = 0.625. Then:}\]
\[L = \frac{(22 \times 0.313)^2}{(9 \times 0.313) + (10 \times 1.37)} = 2.87 \mu H\]

Now to find the resonant frequency of such a unit:
\[f = \frac{1}{2\pi \sqrt{LC}}\]
\[= \frac{1}{2\pi \sqrt{2.87 \times 10^{-6} \times 11.5 \times 10^{-12}}}\]
\[= 27.7 \text{ MHz}\]

If the “air” capacitor is reduced to zero by sliding the bush and cover, then the effective \(C\) would be 8 pF. The resonant frequency would then be found to be 33.2 MHz, showing that a resonant point in the 10 metre band is tunable by sliding the bush and cover relative to the coil assembly.

Construction
Let us consider the difficult parts first, namely the insulator and bushes. As stated earlier a lathe is essential for the construction of these items. The insulator/coil former needs threading so as to facilitate ease of coil winding and to ensure stability. Do not try to wind the coil without threading the former, it will never be stable enough, especially during the tuning procedure.
Now the bushes: Turn the bushes to the dimensions shown in Fig. 6 and again skim to fit inside the 1-inch tubing. Don’t make it too tight a fit. Now, and not before turning, drill out the centre with a ½-inch drill and then follow through with a ⅛-inch drill. The shoulders on the bushes are necessary to stop them sliding into the cover when tuning.

Now fit the coil former into the two ½-inch tubes. If you have made them too sloppy a fit then use plumbers PTFE jointing tape until a firm fit is obtained. Adhesives are unnecessary.

Place the unit in a vice and drill a ½-inch hole through the aluminium tubes and into the insulator at a point ⅛-inch from the end of the tube; a depth of ⅜-inch will suffice. Countersink the hole. Pop rivet a solder tag into the hole ensuring that the tag faces the coil thread. With a soldering iron melt some of the plastic under the tag so as to form a hollow. The copper wire may now be soldered to one end and the required number of turns applied (some form of clamp or vice is useful to grip the coil while cutting and soldering the far end). Wind the coil tightly and neatly into its grooves. When complete, lightly file the rivet head and peen the connections with a hammer to obtain the minimum of protrusion over the nominal tube diameter while retaining a sound connection. If the wire approaches the tag from underneath then the joint may be lightly peened into the previously made hollow. It is important to follow the above carefully so as to avoid the possibility of arcing in the unit.

All that remains now is to fit the outer cover and bushes. Using a length of 1-inch steel tube slipped over each end of the trap, the unit is hammered tightly together. If it is a very tight fit then don’t worry about having to hit hard as practical experience has proved these traps to be extremely strong.

**Tuning**

You will need your steel tubes and hammer again to shift the outer tube and bushes over the coil unit. Place one end of the trap on a soft wood block, slip the steel tube over the other end and—hit it!

You now need a stable signal generator, preferably with a controllable output, and a receiver with a S-meter. Connect them, together with the trap as shown in Fig. 7. With the shorting link in place set the signal generator so as to give a S9 S-meter reading. (Don’t at this stage blast the rig with a massive signal as this will mask any measurements). Now remove the shorting link and a drop in S-meter reading should be seen, noting the amount. Change the frequency to another point in the chosen band and again measure the amount of attenuation, remembering to reset the S.G. level with the “capacitor” shorted. If, for instance it is found that the attenuation improves as the frequency is decreased then the trap’s resonant frequency needs increasing, i.e. the capacitance requires decreasing. Using the slide hammer, move the cover and bushes so as to place the capacitor bush nearer the coil thus reducing the air spaced section. Repeat the process until you have maximum attenuation in the desired part of the band; you may then like to check the attenuation across the band. Most S-meters cannot be relied upon to give very accurate measurements of attenuation but the author found (using two receivers of known performance) that attenuation well in excess of 45dB was easily obtained, falling by some 10dB towards band edges.

When you are satisfied that you have got it right remove the temporary strap and, referring to Fig. 4, drill a suitable tapping hole through cover, bush and element. Drill a clearance hole through the outer cover only and then tightly screw in the self tapper. Re-check the tuning. Apply some Copydex to the screw head if you are not using a stainless screw. When dry, bind with a band of self amalgamating tape, or snap over a finger from a surgical glove.

That’s it, the trap is now complete and ready for use.

**The Antenna**

How you use the traps is of course dependent on the antenna configuration, therefore specific dimensions of elements will not be given.

Normal antenna tuning practice should be used using a GDO and SWR bridge. The traps may be used in rotary dipoles or beams and, of course, verticals.
Showing a trap in the final stages of assembly together with a finished and tuned unit (note the self-tapper).

Note that Table 1 gives details of the reflector traps if you decide to use them in a two-element beam. A similar reduction in the number of coil turns will allow you to resonate director traps.

Fig. 8 gives some very approximate dimensions which should give a good starting point for adjustment.

A word of warning: aluminium tubing available today does not quite telescope and needs filing down a couple of thou. or so which does tend to be a little frustrating, but it can and has been done. Filed or sanded aluminium cold welds with the slightest pressure so be extremely careful when attempting to file and fit, or what appeared to slide together easily will be impossible to resonate.

Let us consider the adjustment of a 3-band dipole for 10, 15 and 20 metres.

Using ¼-inch tubing, form the dipole section for 10 metres making the elements slightly on the long side; fit a 10 metre trap on each element. Using a GDO resonate the dipole by trimming back each leg, fine adjustment being achieved by telescoping the trap within the element. This completed, extend the next sections and fit the 15 metre traps. Again using the GDO resonate the dipole in the 15 metre band by adjusting the section between the traps. Do not alter the 10 metre section.

Re-check the 10 metre resonance which should not have changed appreciably, if at all.

Finally extend ¼-inch tubing from 15 metre traps until 20 metre resonance is obtained. Again re-check all three frequencies.

The SWR will be dependent on how good the match is to the feed line and also on the height above ground. Feeding methods are dealt with in considerable detail in the usual amateur radio manuals to which the reader is referred in cases of difficulty.

A few final notes which the author considers important.

(a) Always place the capacitor end of the trap towards the feed point of the antenna.

(b) The traps are suitable for what is termed “junior” antennae so pushing the legal limit through them may be unwise, however the traps have been used with an output power of 250w, p.e.p. with no problems.

(c) When resonating the antenna remember to have the trap(s) in place.

(d) Cost? Well this depends largely on how accomplished you are in the gentle art of persuasion and scrounging, but the cost per trap should average out at about £2.

(e) If you already own a commercial ‘junior’ antenna which utilises separate traps for each band, and has a damaged trap, then with a little ingenuity in fitting, the author feels that a homebrew trap may be substituted. They are a little heavier but you won’t bend one of these very easily.

(f) When the trap is sealed there is a possibility of the formation of condensation, particularly in cold weather, so three 3/16th inch holes are drilled over the centre 4 inches of the outer cover to balance the humidity; obviously when used in a dipole make sure the holes face down. In the case of vertical antennae, then either forget the holes or fit suitable plastic covers to prevent rain access. Remember to de-fash the holes on the inside of the tube or they could short to the coil.

Materials (per trap)

(a) One 1 inch o.d. 16 gauge aluminium tube, 8 inches long.

(b) Two ¼-inch o.d. 16 gauge aluminium tubes, 8 inches long approx.

(c) 1 inch dia. polythene rod, 3 inches long approx.

(d) Polypenco rod, ⅛in. dia. 6 inches long.

(e) 18 swg enamelled copper wire, 6 feet long approx.

(f) Two 4 B.A. solder tags, 2 pop rivets, 1 self tapping screw.
COMMUNICATION and DX NEWS

E. P. Essery, G3KFE

The Bands
June weather must of need produce June-type conditions: in between the signals the crack of lightning/static, and all too often the dismal noise of rain/static. And, when the rain static has gone away and the sky is clear blue, one looks out of the shack window to the tiresome realisation that the mower needs to be mobilised again! Roll on winter—the worst that can happen there is a possible hour or two shifting snow off the drive. And of course, between summer and winter there is the DX season.

Talking of DX seasons, there does seem to be a mighty lot of operators hiking plans for expeditions to rare and semi-rare DX spots; some of them are single-handers trotting round lots of DXy spots, while others are all-out team jobs where the signal will be on the air 24 hours a day from two or three stations. Among the places mentioned have been Yemen, Mount Athos, and the 8Z4 Neutral Zone. The last-mentioned has already seen a 24 hour effort by 9K2DR, and 3B6/3B9 has also been activated by a group servicing the weather stations on Agalega, St. Brandon and Rodriguez. These last three also are prominent in plans being drawn up by N2KK and K5CO for a three-month jaunt during which they will individually look at some spots, and combine their efforts into the British YL Amateur Radio Association. They will be having a weekly eighty-metre gathering, Monday evenings at 7.15 clock, the frequency being 3605 MHz, - QRM. The net control will vary, but it is intended that after some 30 minutes the net will be thrown open and the OMs may call in. They also intend a quarterly newsletter edited by G4GAI, G4AQ (who used to contribute to "SWL" before she gained her licence) is Treasurer, and G4EZl is the one to contact for more details. Doubtless all the OMs will show the proper gallantry while the girls are having their weekly natter and avoid QRM. Incidentally, if you want to make your DX-chasing a bit tougher, try doing it the G4EZl way—she has worked YLs in 170 countries now!

Ladies First! The YLs of this country have now organised themselves, into the British YL Amateur Radio Association. They will be having a weekly eighty-metre gathering, Monday evenings at 7.15 clock, the frequency being 3605 MHz, + QRM. The net control will vary, but it is intended that after some 30 minutes the net will be thrown open and the OMs may call in. They also intend a quarterly newsletter edited by G4GAI, G4AQ (who used to contribute to "SWL" before she gained her licence) is Treasurer, and G4EZl is the one to contact for more details. Doubtless all the OMs will show the proper gallantry while the girls are having their weekly natter and avoid QRM. Incidentally, if you want to make your DX-chasing a bit tougher, try doing it the G4EZl way—she has worked YLs in 170 countries now!

Guildford & District club is celebrating its Diamond Jubilee, and doing so partly by way of an Award. You have to work at least five members of the club between March 1 and August 31, which leaves you a few days to do it before closing date. The five contacts must be spread over at least two bands, and be from at least 50 kHz away unless the QSO in question was on 23 cm, in which case there are no distance restrictions. Look for them, around 2000Z every evening, on or near 1835, 1925, 3535, 3735, 7035, 7055, 14035, 14235, 21035, 21235, 28035, 28535 (the Monday evening club net frequency), and 145525 KHz. Send log data to GJ3KMO, QTHR. To find if any of the gang are lurking in wait to give you a QSO, call "CQ Guildford Diamond Jubilee award" on Phone, or CQ for GJA on CW.

Snippets

Looking at the contests now, we note the European DX contest CW on August 11-12, with the Phone leg

'CDXN' deadlines for the next three months—
September issue—August 2nd
October issue—September 6th
November issue—October 4th
December issue—November 1st
Please be sure to note these dates.

Years ago, there was a trio of reporters to this piece who were christened the "Pirates of Penzance", and after a long lapse one of them again writes in—G4BKI, who is now at Warwick University. Since 1976 he has spent extended periods of time in VP9, where he signed G4BKI/VP9; now he has VP9KF. Hopefully, a degree in electronics will soon be his, and then the activity will show a rise. When operating from G4BKI/VP9, Paul gave at various times his brother, G4AMJ, or G4EWU as QSL addresses, as well as his own UK address, all as per G Callbook. However G4EWU has moved, so the best route is probably to send them to Radio Society of Bermuda, Box 275, Hamilton, Bermuda, where his father, G3DLH/VP9GG will attend to them; certainly so for any VP9KF contacts. Looking at the contests now, we note the European DX contest CW on August 11-12, with the Phone leg...
on September 8-9. Only 36 of the 48 hours may be used, the 12 hours rest being taken in not more than three periods. Score QSO points by swapping RST(T) and serial number, starting from 001. Europeans score one point per QSO times a multiplier of ARRL Countries List and call areas of JA, VK, PY, W/K/N, VE/VO, ZL, ZS, UA9, UA0. In addition, the multiplier is times-four on Eighty, times-three on Forty, and times-two on 14/21/28 MHz. Non-Europeans may take advantage of the "QTC" feature by which they can repeat back to a European station a list of Europeans already worked. You can QTC up to ten times to the same station for QTC points, but only the first of the contacts with that station will be counted for QSO credit. The form of the QTC should be Time (GMT) call, and QSO number (e.g. 1300G3KFE123 would mean you had worked G3KFE at 1300z and given him QSO number 123 in your log). A QSO made can only be the subject of a QTC report once, which says you've got to work a lot of EUs to make it worthwhile to QTC. CW logs must be mailed by September 15, Phone by October 15, to DARC Contest Committee, D-895 Kaufbeuren, P.O. Box 262, West Germany.

G3WZD, 7 Stockwell Court, Gower Road, Haywards Heath, West Sussex, writes to say that from around mid-September he will be resident in Singapore. Should anyone wish a sked, CW or SSB, they could write to the above address to arrive before the end of August.

**RTTY**

This mode seems to be on the increase, and certainly the writer has received more inputs of this order in the last month than ever before. First, we have to mention the SARTG Contest; in the 1978 results we note G3UUP in fifth place in the multi-op category, and G8CDW fourth among the SWLs. Congratulations to both.

As for the 1979 effort there are three periods over the same weekend, namely 0001 to 0800, 1600-2359 on the same date, 0800-1600 August 19, all times GMT. Operate 80-10 metres, as single operator, multi-op single transmitter, or SWL, exchanging RST and QSO number. Score five points for each station in your home country, 10 if it is another country in the same continent, and other continents 15 points. Multiplier is based on ARRL countries list, but includes each district in W/K, VE/VO, and VK. Final score is sum of QSO points times multiplier. It seems that the same station may be worked once on each band for QSO points and for multiplier credits. Logs to be received by October 10th, 1979, to contain band, date, time GMT, call-sign, exchanges sent and received, points and multipliers claimed—all on a separate sheet for each band. A summary sheet with the station vital statistics and classification entered, plus operators if one is in the multi-op class, should be posted to: SARTG Contest & Award Manager, OZ2CJ, C. J. Jensen, Meinersgrade 5, 8900 Randers, Denmark.

The report of the BARTG 1979 Contest in March is to hand, and it is noticeable that even with modern RTTY gear, Forty metres doesn't get as much use as it deserves. Of course the HF bands were lively (albeit some Ws indicated they found Ten a bit flat), and Eighty was turned to for the sake of the extra multipliers to be found. As usual, the hard one was South America, where few stations made more than a couple of dozen contacts, and only PY2CYK sent in a log. Africa was well represented, as was Asia, while the VKs were fewer; ZL2BR was a welcome newcomer. This time some 67 of the entrants managed to work all six continents, and in all there were some 56 countries operating, not counting the various call areas. There were some 138 single-op entries, 23 multis, and 14 SWLs; F9XY was top single-op station with G3RED leading the Gs home, I5MYL top multi, with G3ZRS third in the category, while SWLs Musson and Niendorf provided the UK representation in the SWL category.

Still with RTTY, we repeat the schedules for the GB2ATG on Sundays: on 3590 and 14460 kHz, both +QRM, the word goes out at 1100, 1130 on both bands, 1800 on Eighty only, and 1230 on VHF for GI only. 14090 kHz is used at 0730 for long-path to VK/ZL, 1530 beam east across Europe to the Far East, and at 1900 beamed NW for North America. All transmissions on 170 Hz shift, 45 bauds. The VHF transmissions are made twice, once using FSK and then again with AFSK.

Before going on to the matter of the rest of the piece, let us offer you an interest variation of the great Murphy's Law; this one is Ginsberg's Theorem, and it says 1. That you can't win; 2. That you can't break even; and 3. That you can't even quit the game. However, Freeman's commentary on this says that every major philosophy of life which seems meaningful is based on the opposite of one of the three parts of the Theorem: thus 1. Capitalism is based on the assumption that you can win; 2. Socialism is based on the assumption that you can break even; 3. Mysticism is based on the assumption that you can get out of the game. Baffling, isn't it!

**Twenty**

Here we must offer the joke in the pack, worked by GW3GWA (Wrexham) as 5X51A/A, giving name as "I'd" and QSL via Box 1, Entebbe; CW and only southern hemisphere signals addible on the band at the time. However, to make up for that one, GW3GWA is up to 93 confirmed for his CW DXCC, and has also received all the cards for a WAS. In terms of QSOs, there were, apart from the W-VE-EU stuff, LU, VU, ZL, VK, KH6, H18, FP8, KL7, XM, FM from the North Pole Expedition, VP2VJ, and ZK1BD.

We have already mentioned the G2NJ/G5NX/M saga: two stations in one car. While G2NJ was in the back seat at the key, an OK with whom he was in QSO asked for a word with G5NX, who promptly stopped the car and took the key. We suspect that surprised the OK somewhat!

Twenty for G2HKU (Sheppey) was tackled in three different directions: CW QRP with the HW-8 managed EA8MA, UK5OBP, UK5SAU, VE2DXU, UT5QG, UH8DC, OK2YN, UC2WP, and UI8LAG. Full-bore CW operation made with YY0AA, K6SV, UK9SAT, VE6ABC, DK5AD/AC3, and VK7CM. SSB managed to work out to ZL1AA, ZL1VN, ZL3SE, ZL3RS, ZL1QQ, and C5ACQ.

Two letters from G3NOF, both of which indicate that conditions have been very good. In the mornings there have been openings to W6, W7, VE7 as early as 0600, to be an overture to the first act when the VK/ZL...
stations (and sometimes the Pacific) appear around 0730. Not a great deal of real DX in the daytime, but conditions improving again in the evenings. SSB QSOs were made to F08D, F08DT, F08FC, K71CW (Nebraska), K0CL (Colorado), K8-VIO/KH4, KH6FKG, KL7H, U0CR heading for the Pole, PZ1DR, Vks, VK2AGT (Lord Howe), VR6-HI, WS1XO (New Mexico), WA7-COQ (Utah), ZF1GC, ZK1DN and ZLs. By the time of the other letter, DA1WA/HB0, HOKBXX, K71W, KL7CD, KL7CHT, O65XG/A, P2-9JS, TG4ANX, TG9GI, T12LL, Vks (including VK4AJW/M/VK5), VP8-RY, VR6TC, WA7WSE (Arizona), WB7VYJ, XE1MR, XE1UF, YS9-RVE, ZLs, T5SCJ, and 5W1HU had also been worked.

21 MHz

Here we must let G2BJY (Walsall) go in first; his home-brew rig and brace of 807s managed to work to EUs assorted, HZ1HZ, lots of JAs, OH2BOZ/OH0, UA9, UA0, UF6- VAB, UK5DAT, UK8ACC, UK8- FAA, UK8IIA, UL7GCE, UM8- MAQ; the previous letter indicated again the pattern of JAs in plenty and Asian Russian signals, but in addition PYs, SV8JE, UOCR and 7X7AN, not to mention a couple of /MMs showing that the aerial was getting out to other parts of the world at the appropriate times.

G2ADZ (Chessington) did have a spell when nowt was doing on Ten, for long enough to make him crank the bandswitch, the result being just one QSO, on CW with VK1PG.

G2NJ/M, out with G5NX, mentions that his last QSO, just as the car turned into the home straight, was with VE1BBH.

While G2HKU stuck all the time to CW, he divided it between QRP and the HW-8, and full-bore; the latter gave W6BS, GL3GP/W0, J2OBS, PT2ERA, JK1IWB, W4DIV, and 5H3VT; the HW-8 worked out to DK5AD/N3, K1RM, K3EST, ODS/LX, ED5TY, PY1BOA, N3- ATO, and UV9AX.

G3NOF (Yeovil) notes the summer conditions have often left 21 MHz open to somewhere for 24 hours a day, with some Sporadic-E propagation in between the good stuff. The first letter mentions just one QSO, this on SSB to W7QK in Oregon. The second letter indicates full summer conditions, heavy fading, WS coming in around 1100 and staying there till 0600, the short gap being filled by VK/ZL. SSB QSOs were made with K7HRW, K7RI, KH6EB, KP4CKY, J7DAY, JA3- GSM, JA3MCS, JA6OKB, JR6HI, TI4HWF, VE1AST/1 (Sable Is.), VP8SD, VQ9KK, W7NDN, W7- BKR (Wyoming), WD5AJE/SU, XT2AV, ZL2AZV, 9J2BO, 9Q5MA.

Ten Metres

G2BJY wangled his rig onto this band as well as the normal 21 MHz, and as a result keyed with C6TOQ, who gave the name Lu and QTH Lisbon to raise an eyebrow, DL2HE/ W5, EA8TY, PYOMAG, PY1MGH, PT2XX, SV0AA/S (Rhodes), K5VT/ SV5, UK7BAL, UK9ADV (YL Irina), many UA9s, and 7Y2D for a new prefix.

G3OUC wrote on a different subject altogether, of which more elsewhere, but on the back of his letter he did indicate that on 28-82 MHz he had worked RA9FIA, and RA4PGC, both around the 0830 mark on successive mornings.

G2ADZ has been busy elsewhere and so his radio has had to take a back seat for much of the time. However, he still managed to generate a report of considerable interests. Firstly, beaconry, and here it was GB3SX, DL0IGI, SB4CY, EA2BH, and A9XC pretty consistently; erratically ZS6DN, and W1AW with slow CW. Nothing noted of ZE2JV for some time. Stations worked were all on CW, as: ZP5NW, ZP6AQ, 5H3VT, PYOMAG, PY0APS, H18- LC. CP5EZ, ZL3GQ over the S. Pole, ZL2GH ditto, ZL1NG not for the Pole for a change, K5VT/SV5 in Rhodes, YV5GHL, VQ9MR, VP2- VEZ, YN1U, 6W8AA, OE6XG/A, U2L2HO, VU2SV, YV0AA (just about everybody seems to have made it to Aves), CX2AQ, HK3QO, HK7UL, TI2LA, OX3MD, VK1PG, 9V1TL, VK6NDJ, VK4NJO, AX6- NCD, VP2SAH, 9K2DR, VR6H1 (the Pitcairn expedition), 9Y4VU, VE8AW, VP2MBJ, KL7MF, and assortment of small fry from UAO, LU/PY, JA and so forth. Gotaways included VK1FT, VP2PSZ, VO7TC, VP1MT, VR3AH on QRP, and PZ1AP who didn't seem to be replying.

Ten CW was an unusual variation for G2HKU, who used it for QSOs with LU9VC, RA4AKC, UF6VAI, and UA0BCI.

In G3NOF's first letter we note SSB QSOs with CE3RC, CE6EZ, C7XBN, G4HHIL/MM in the S. Atlantic, HL9TT, HM0UJ, JA7GB, PZ9JS, UM8MAQ, VK4NJC, VK4- NOF, VK4NQ1, VK8NDX, VS5- OQ, VU2EA, WA7GPD (Idaho), WB7UF0 (Idaho), YBOADW, YBZ 0WR, SNOAS, and 9M2FR. The second letter came at a time when summer conditions were in full swing, with the propagation tending to be more N-S, few WS and those around 1800z.

Top Band

It's been a long time since we heard of anything much doing on this band, other than the winter DX-chasing. Now we have a letter from G3OUC (Newbury) who is one of a group of Top Band /M enthusiasts who have arranged a string of meets. It is just too late for the one at Avebury, but in August they intend to have one on Monday 27th at Crofton Beam Engine near Great Bedwyn which lies just off the A338 near Burbage, and is on the Kennet & Avon Canal. Later there's September 23, when there will be a meeting in Savernake Forest, with a barbecue for you to deal with your own bangers. Talk-in will be by G3WEF/G4DR. In general, a sked will be held at 1015 local time to confirm last details, such as the weather(!) and talk-in will start around 1450, the favoured frequency being 1-920 MHz. Suffice it to say we wish this initiative every success and we ourselves hope to get to at least one of these events.

HF Convention

The RSGB HF Committee have organised an HF Convention to be held on September 15th, at the Pavilion Suite Complex, Warwickshire County Cricket Ground, Edgbaston, Birmingham. It promises to be an interesting and informative occasion, and applications for tickets should be sent to G4CNY, QTHR.

Finis

Which is the end of the tale once again. The dates for your material are all as shown in the 'box', and the address is "CDXN", SHORT WAVE MAGAZINE, 34 High Street, Welwyn, Herts. AL6 9EQ. Till next time, au 'voir."

PRICES: (a) £1.95 (£2.19) ; (b) £2.32 (£2.61) ; (c) £2.80 (£3.15) ; (d) and (e) £3.92 (£4.41).

AVAILABILITY: (a), (b), (c) and (d) stock items, normally available by return (we have over 5000 items in stock), (e) four weeks normally but it is quite possible we could be able to supply any stock items within 24 hours.

ORDERING: When ordering please quote (1) Channel; (2) CRYSTAL frequency (3) HOLDER (4) Circuit conditions (load in pf).

JAPANESE AND AMERICAN EQUIPMENT

We can supply crystals for YAESU (FT2, FT2 Auo, FT244), most of the ICOM range and the TRIO-KENWOOD range. We can also supply from stock crystals for the HEATHKIT HW202 and HW17A.

YAESU FT231 CRYSTALS NOW IN STOCK, ALL AT £2.80 (£3.15). All popular channels—For repeater use advise extra frequencies required as earlier models have different shift factors to later FT231/R. We can also supply the crystal to give normal "Tune to TX" working (as FT231/R).

MODULAR COMMUNICATION SYSTEMS

For the RTTY enthusiast we can recommend and supply the "MCS" range of products. This includes terminal units, AFS keys, magnet drivers for TELX interface, telegraph distortion measuring adaptor, RTTY audio processor, power units, etc., etc. For the CW man we have the "MCS" CW filter which give three stages of active filtering. Please send a S.A.E. for full details of the "MCS" range.

MICROCOMPUTER DIVISION

We are now suppliers of popular Z80 based microcomputer systems including "8088", "Z8088" and "8088" and offer a full range of VDUs and line printers. We can supply either as basic units or complete working systems with software for the small business user.

Beat VAT with VAO (Value Added Offers) from G3CED

Although we have had to increase our VAT (15%) and carriage paid (and insured) inclusive prices, we've come up with Value Added deals on both existing lines AND on the larger range of equipment we can supply.

**TRANSCEIVERS**

Here's our 10-1 VAO — send us just 4 9p stamps (£0.36) for the latest YAESU fully illustrated catalogue and this comes to you with our VAO CREDIT VOUCHER worth £13.60 for your eventual TRANSCEIVER purchase. Or a couple of stamps brings you the FT102, Atlas or Swan leaflets.

Here's a short list of transceiver equipment now available — prices on request:

- ATLAS RX III
- ATLAS RX 110
- ATLAS TX 110L
- FT901DM
- FT901D
- FT901DE
- FT1012
- FT101ZD
- FT7D
- FT202R
- FT7B
- LINEAR FL2100B
- QTR24
- SWAN ASTRO 150
- FT225R
- FT225RD
- FT227RB

**RECEIVERS — PACKAGE DEALS**

VAT is up but we've increased savings on packages from £114.15 to £121.45! Complete Radio Stations, all cables, head-phones, Joystick System A antenna — ON THE AIR IN SECONDS!

**SUPER PACKAGE R.1 Features**

- FRG7 RX

£240.80

**SUPER PACKAGE R.2 Features the "ROLLS" FRG 7000 £409.00

**RECEIVERS ONLY**

- FRG7 £204.40
- FRG 7000 £372.60

**JOYSTICK ANTENNA SYSTEMS**

**SYSTEM “A”**

- 150w. p.e.p. or for the SWL £48.55

**SYSTEM “J”**

- 500w. p.e.p. Improved Q on receive £54.00

JUST TELEPHONE YOUR CARD NUMBER — 0843 635 635 (ext. 4) or 62839 (after office hours) or write for details as described in the Value Added Offers or 9p for general literature. Prices correct as at press.

4, Partridge House, Prospects Road, Broadstairs, CT10 1LD. (Callers by appointment.)

**VHF COMMUNICATIONS**

**NOW AVAILABLE!**

The SPRING 1979 edition which includes articles on:

- 2m FM Hand-held Transceiver (Part II)
- 23cm Linear Amplifier
- 13cm Mixer & Linear Amplifier
- 2m FM Transceiver (Part I)
- 9-15V 25amp Power Supply

Send £1.40 for a copy of this new Spring Edition or £5.30 for COMPLETE 1979 VOLUME

**VHF COMMUNICATIONS** is the English language edition of the German publication UKW-BERICHTE, a quarterly amateur radio magazine especially catering for vhf/uhf/shf technology. It is published in spring, summer, autumn and winter.

All special components required for the construction of the described equipment, such as printed circuit boards, coil formers, semiconductors and crystals, as well as complete kits, are available for despatch direct from Germany. Many of the printed circuit boards, in addition to a few selected kits, are stocked in the U.K. A price list of kits and materials is available — send sae for your copy.

Orders and enquiries should be sent to either:

VHF COMMUNICATIONS, Dept. 918, 20, Wallington Square, Wallington, Surrey SM6 8RG

OR

SOTA COMMUNICATION SYSTEMS LTD., 25 Childwall Lane, Bowring Park, Liverpool L14 6TX

**VIDEO DISPLAY UNIT**

**MODEL CD300**

especialy designed for the RTTY ENTHUSIAST!

The video display unit is designed to be an all-electronic replacement for a Teleprinter, and therefore does NOT suffer the disadvantages of bulk, unreliability and noise.

The basic function is to take Murray Code — either from a Terminal Unit (on receive) or from a Keyboard — and produce a complete TV signal. This signal may be fed into a monitor or modulated and fed into the aerial of an ordinary domestic TV set. The resulting display is a page of 16 lines of up to 64 characters.

- 16 lines per page.
- 64 characters per line.
- Standard TTL compatible input.
- Standard IV video output.
- Flashing cursor.
- Auto-scroll at end of page.
- Front panel controls for:
  - Letter shift.
  - Figure shift.
  - Page reset.
  - Carriage return.
  - Line feed.

Built-in mains P.S.U.

Styled to match Catronics CT100 Terminal Unit. Cabinet size 9” x 2½” x 7½” approx.

Catronics price £160 incl. VAT (Add £4.00 for Securicor Delivery)

SAMSON ETM-3C

C-MOS KEYER

1 µA battery drain—Why switch off?

- Self-completing dots/dashes/spaces.
- Can be used either as normal electronic keyer or as a lactic mode squeeze keyer.
- 8-50 wpm.
- Connects to dash-dot ratio. 6 & C-MOS ICs and 4 transistors.
- Plug-in PCB.
- Long battery life—typically 1 µA drain when idling—Built-in battery holder for 4 x 1.5v. batteries (batt will work over 3-10v. range).
- PCB has both a relay (20v., 60 amp.) and a switching transistor (300v., 30 mA max.)—either keying method can be used.
- Has the well-known fully-adjustable Samson precision twin keying lever assembly.
- Operate/Tune button.
- Sideset oscillator.
- Grey case.
- Built-in battery holder for 4 x 1.5v. batteries (batt will work over 3-10v. range).
- PCB has both a relay (20v., 60 amp.) and a switching transistor (300v., 30 mA max.)—either keying method can be used.
- Has the well-known fully-adjustable Samson precision twin keying lever assembly.
- Operate/Tune button.
- Sideset oscillator.
- Grey case.
- Built-in battery holder for 4 x 1.5v. batteries (batt will work over 3-10v. range).
- PCB has both a relay (20v., 60 amp.) and a switching transistor (300v., 30 mA max.)—either keying method can be used.

MORSE MADE EASY BY THE RHYTHM METHOD!
FACT NOT FICTION NO, TAPE WON'T WORK AS WELL
If you start RIGHT you will be reading amateur and commercial
Morse within a month. (Most students take about three weeks).
That's why after 25 YEARS we still use three scientifically prepared
3-speed records with which you cannot fail to learn the MORSE
RHYTHM automatically, it’s as easy as learning a tune. 18 w.p.m. in
4 weeks guaranteed. Complete course comprising 3 x 12” + 1 x 7”
3-speed records + books. £5.50 inc.p.p. (overseas + £1). Either only s.a.e.
or ring 01-680 2896. SNOOPER radar detectors, 4 year gtee. £74
(Box 10) 45 GREEN LANE, PURLEY, SURREY

SITUATION

Owing to continued expansion, London Car Telephones
are looking for bright engineers to maintain VHF and
UHF mobile radio systems in well-equipped modern
workshops in Croydon, with work in the field. Preference
given to job ability rather than found qualifications.
Good basic salary, with bonuses linked to profitability;
vehicle provided, or allowance in lieu. Other fringe
benefits. Capable persons only need apply.—Ring J.
Clark, 01-680 1010.

TRADE

Fibreglass Quad Spreaders, top quality. Very rigid poles,
13-ft. 7-in. long, weighing 2lb each, set of 8, £62. Boomless
spider, £18. All including carriage. S.A.E. for details.—
G3ZHC, QTHR. Tel: Walsall (0922) 26659.

Radio Amateur Examination City & Guilds. Pass this
important Examination and obtain your G8 Licence
with an RRC Home-Study Course. For details of this
and other Courses (GCE, professional examinations,
etc.) write or phone: The Rapid Results College, Dept.
JV/1, Tuition House, London SW19 4DS. Careers
Advisory Service, 01-947 7272 or ring 01-946 1120 for
Prospectus. (24-hr. Recordacall.)

Valves, new and boxed: 6146B, 6J6M, 6HF5, 6J6/J/C,
6JB6/A, 6KD6, 6LQ6, 6ES, 8950 and many other types.
S.A.E. for list.—Wilson, 20 Croft Gate, Harwood, Bolton,
Lancs. (Tel: Bolton 54165.)

Good second-hand equipment always wanted. Come to
AMATEUR RADIO EXCHANGE
for the best deal.—2 Northfield Road, Ealing, London W13 9SY. (Tel:
01-579 5311.)

QSL cards. Sample pack and price list forwarded on
receipt of 20p stamp.—Derwent Press, 69 Langstone
House, London SW19 4DS.

Better than FT-101E? Upgrade older FT-101's. FM with
RPT shift? RF clipper with Rx boost? Valves, drives,
etc., s.a.e. for list. On demonstration: FT-101Z, FT-7,
FRG-7, FRG-7000, Multi-700E, G-Whips, Europa,
FT-202R, etc. Super CW filters for FT-101, FT-301,
TS-520, TS-820, 8-pole 250 Hz., £28.50. Access/Barclay-
card.—Holdings of Blackburn Ltd., 39/41 Mincing Lane,
Blackburn BB2 2AF. (Tel: 0254-59595/6.)

Coax cables at trade prices: UR43, UR67, UR76, UR57
and UR70. Also mains and multicores. S.A.E. for slits.
—W. H. Westlake, Clawton, Holsworthy, Devon.

THE SHORT WAVE MAGAZINE  
August, 1979

For sale: Collins 75S-3C receiver ('round dot'), £600. —Ring West, Upper Warlingham 3522.

Selling: Collins TCS transmitter, £50. FM tuner unit, £10; Racal/BCC Type 715 VHFR receiver, £25. Marine band crystals: 9-13125, 9-12500, 9-30625, 9-30937 MHz, £2 each. Type VCR-139A 3-in. CRT, £5. Bench oscilloscope, £60. Transistor/diode tester, £25. Type 51 waveform generator, £10. UHF radio/transmitter tester, £10. Carriage extra, s.a.e. with enquiries.—Hayward, Sunnyfields, Lighthouse Road, St. Margaret’s Bay, Dover, Kent.

Selling: FL-200B Tx, SS/CA/AM, £70. Eddystone EC-10, £60. Exchange for good CW Tx considered.—Farley, Badgers, The Dean, Alresford, Hants. SO24 9BH. (Tel: Alresford 3816, evenings only).

Wanted: Will swap large Cossor valved oscilloscope (or cash) for any of the following ex-military radio equipment: Wireless Set 62, Wireless Set 19, Wireless Set 38, R.209 receiver, Wireless Set 22, or any other equipment of this type.—Ring Dudley, Letchworth 5301 after 6 p.m.

For sale: AR88D in nice condition, surplus to requirements. Offers around £60 please.—Hurst, 31 Avondale Road, Fleet (5831), Hants.

Sale: Yaesu FR-DX400 2m. and 4m. converters, £120. Microwave Modules 432/144R transverter. 432 MHz 19-ele array, £14. National RS-772 stereo tape recorder, 2 or 4 track, 3-speed, plus hours of pre-recorded tapes, £100 or near offer.—Spencer, G3ILO, 49 Rosebery Road, Dursley, Glos. GL11 4PT.

Selling: Eddystone 770R, 19-165 MHz, £110. Burndedpe BE-201 Tx/Rx, 4-channel xtal VHF, 100-156 MHz, with original 12v. PSU and cables, £22. R.1974 VHF Rx (similar to R.1392), xtal 100-156 MHz, with mains PSU, £20.—Ring Allinson, Aspatria 20243.

Sale: FRG-7, mint condition, with phone and original packing, £120.—Davies, 37 Nicholls Avenue, Porthcawl, Glam.

Selling: Drake TR-7 transceiver with DR-7 GC/digital board and extra 1-8 kHz filter; AUX-7 range prog. board; PS-7 PSU; RV-7 remote VFO; MN-2700 high-power matching network; MS-7 speaker; 7077 desk mic.; DL-1000 dummy load with fan; Datong ASP RF speech processor. All only a few months old, as brand new and boxed, genuine reason for sale. Offers?—Ring Hufton, 0602-54047.

Sale: Grundig 2001 ‘Satellit’ 21-band receiver, with BFO unit, in perfect condition (today’s price £282), £150.—Ring Turner, Newtown (0686) 27108, Powys.
Selling: FT-202R, hand-held, 2 months old, 5 channels, with charger and nicads (save nearly £30 on new price), £100.—Ring Trevett, G4GKX, 0202-696929 (Dorset).

Wanted: Good general coverage receiver for new SWL.—Ring Oxb, 0532-675489 (Leeds).

For sale: AR88D Rx, with spares and manual, £55. PR-40 preselector, £6. Sentinel 2m pre-amp., £8. Sentinel 2m converter, £5. Or £70 the lot. Buyers collect.—Ring Swan, Redhill 63017 evenings/weekends.

Sale: Sony CRF-230 ‘World Zone’ receiver, battery/mains, FM/SW/LW/MW, 23 bands, 48 transistors, 34 diodes, excellent condition, £250.—Ring Lilley, Medway 251853, Kent.

Selling: Western Electronics Alu-mast, 30-ft. aluminium lattice tower, complete with base, rotor plate and top plate; Hy-Gain TH-2 Mk.III beam; BN-86 balun; CD-44 rotator and cable. Only a few months old, all as new and boxed. Offers.—Ring Hufton, 0602-54047.

Selling: Drake MN-4 ATU/SWR/wattmeter, 200 watts continuous, with manual, £80 plus carriage.—Addie, G8LT, Spring Hill, Wappenham, Towcester, Northants.

Sell or exchange: KW-201 with spare set of valves, good condition, £100 or near offer. Or exchange for linear amp., 3-30 MHz.—Jones, 113 Springwell Road, Heston, Middx.

Sale: FDK Multi-U11, 70cm. FM transceiver, 9 channel, fitted, 1w/12w. RF output, hi/low dev., 4-ch. auto-scan, auto tone burst, 28 channel capability, mobile/base rigs fitted 9 months old, all as new and boxed. Offers.—Ring Hufton, 0602-54047.

September issue: Due to appear September 7th. Single copies at 50p post paid will be sent by first-class mail for orders received by Wednesday, September 5th, as available.—Circulation Dept., Short Wave Magazine Ltd., 34 High Street, Welwyn, Herts. AL6 9EQ.

Sale: KT-230 communications receiver, 0-55-30 MHz, bandspread 10-80m., with handbook and 8 spare valves, £25. Morse key, £2. VFO unit, 9v., 160m., £4. Carriage extra.—Livermore, Village Farm Cottage, Market Street, Diss, Norfolk.

R.A.E. ** TUITION ** R.A.E.

A five day course, leading from basic principles to preparation for the Radio Amateurs Examination, is available in the Georgian City of Bath. The tuition is given by G3UWJ lecturer and private tutor in Amateur Radio who, for ten years, has prepared numerous students from the ages of 15 to 70+ who are now licensed amateurs. The classes are essentially small so that each student receives the required amount of personal tuition to ensure that the syllabus is completed in five days. For further details please write, enclosing a S.A.E., to:

PETER BUBB — tuition
58 Greenacres, Bath, Avon, BA1 4NR.

UK FT101 USERS ONLY

To get you talking and export sales up a very special offer G3LLL NBFM UNIT for FT101 Mk. 1-E inc. EXPORT PRICE £11. UK PRICE WITH FREE RPT SHIFT £49 and we pay VAT. Don’t trust us? Send postdated cheque and try it for 3 weeks. Simple to fit. Super TX and RX audio quality, also special deal on RF Clipper and DIY clipper kit. Remember we’ve been handling FT.101s and accessories for 8 years — we know the problems. Over 1,000 G3LLL RF Clippers on the air. Access/Barclay Card. SAE full details and fitting instructions plus other FT.101 accessories. Holdings Photo Audio Centre, 39/41 Mincing Lane, Blackburn. Tel: 0254-59595/6.

LOSING DX?

ANTENNA FAULTY? Get a STRONGER SIGNAL, measure resonance and radiation resistance FAST with an Antenna Noise Bridge, just connect your antenna and receiver, accurate answers directly, 2-1000 ohms 1-30MHz. 200-2000 ohms 30-150MHz, IDEAL for mobile whips, still only £9.80. V.L.F.? EXPLORE 10-150KHz, Receiver £10.70.

CAN’T FIND RARE DX? Get on their frequency with a Crystal Calibrator, between your antenna and rx, switched 1MHz. 100, 2kHz markers to 150MHz, only £18.80. Each quick-build kit includes all parts, printed circuit, case, postage, etc., money back assurance so SEND off NOW.

CAMBRIDGE KITS 45 (SV) Old School Lane, Milton, Cambridge

G2DYM ANTI-TVI AERIALS

Shortwave listener indoor models £11.50 & £19.55.

Radio Amateur Prefix-Country-Zone-List

Published by GEOFF WATTS
Editor of "DX News-Sheet" since 1962
The List you have always needed, the list that gives you everything, and all on one line! For each country:
a) its DXCC "status" 
b) the normal prefix 
c) the special prefixes 
d) the ITU callign block allocation 
e) the continent
f) the ITU Zone No.
g) the ITU Zone No.

Full information on Antarctic stations, USSR Kubstations, obsolete prefixes used during the past 5 years, and much more, and the List can be kept always up-to-date because ample space has been provided for adding every new prefix, the new ITU allocation prefix, and the ITU allocation for professional heavy duty.

Everything arranged alphabetically and numerically in order of prefix.
Ideal for Contest operators and SWL's.

Send to the ITU -2100B linear amplifier. Both absolutely mint condition.
For each country:
a) its DXCC "status" 
b) the normal prefix 
c) the special prefixes 
d) the ITU callign block allocation 
e) the continent
f) the ITU Zone No.
g) the ITU Zone No.

See you at the Torbay/Telford Rallies and at Blackwood.

KW-2000B with power supply, good condition, £195. —Ring Bruder, 0202-35311.

For sale: R.C.A. 88 with manual; Creed 7B teleprinter; Ex-Naval AN/SGC-1A (MSA) radio-teletype terminal; Visual indicator for ATMA teletype unit ('scope); B.62 and B.40 Rø's; Marconi 'Oceanspan' transmitter. Offers? —Ring Watson, 0272-38822 after 6 p.m. (weekdays only).

For sale: G.E.C./Marconi R.411R, transistor circuiting, coverage 15 kHz-31 MHz in 31 bands, digital display, fully synthesised, notch filter, noise limiter etc. (list price £1500), £400 or near offer. Carriage and packing extra. —Chapham, Lloyd Court, High Street, Deal (65021), Kent.

Surplus to requirements: Collins 75A-4 amateur bands receiver with three mechanical filters, and Yaesu FL-2100B linear amplifier. Both absolutely mint condition. Phone for details, sane offers only please. —Ring Bruder, 0209-35311.

WANTED: Manual for B.40 (or photostat), good price paid. —Ring Hastings (Sussex) 440340, reverse charges.

WANTED: HF transceivers and/or separates; also VHF transceivers. —Ring Hall, Bolton 592929 after 6 p.m.
RADIO AMATEUR HANDBOOK
(ARRL 1978)
55th Edition
This HANDBOOK, the most widely used manual of communications theory, design, and construction, contains descriptions of the latest solid-state devices and their application. The construction projects included cover the entire field of Amateur Radio interest. Written in a no-nonsense style, the HANDBOOK appeals to beginners and advanced amateurs alike. This new edition contains nearly 700 pages, including index. Priced at £6.50.

WORLD RADIO/TV HANDBOOK 1979
The World's only complete reference guide to International Radio & Television Broadcasting Stations. It includes: Frequencies, time schedules, announcements, personnel, slogans, interval signals and much more besides of value to the listener.
Lists all International short-wave stations, including frequencies, for each country; foreign broadcasts, long and medium wave stations (AM broadcast Band); TV stations and domestic programmes. Long recognised as the established authority by broadcasters and listeners. It is the only publication that enables you to identify BC stations quickly and easily. Enables you to fill more pages in your log book on the SW BC bands and helps you add more BC-station QSL cards to your collection.

£9.15

NEW TITLE!
SHORTWAVE LISTENER’S HANDBOOK
by NORMAN FALLON
If you've wanted to listen to the world, but didn't quite know how to go about it—this book will answer your questions; even if you are an experienced listener or DX-er you'll find many valuable tips. This convenient all-points guide covers choosing a receiver and antenna, coping with listening conditions, logging stations, hunting weak signals, and how to build simple projects to improve your equipment's effectiveness; it also explains how to get getting reception reports, station schedules, etc. There's a list of the world's major broadcast stations and a glossary of SWL terms.

SOLID STATE BASICS
for the Radio Amateur
Published by the A.R.R.L., this book contains a complete beginner's course in solid-state theory, with simple projects to build, and backed by excellent diagrams and illustrations. There are sections to cover, amongst others, transmitters, receivers and linear IC's. Clearly written, this title is a 'must' for all those who want a thorough grounding in the subject. Complete with index.

CREATE YOUR OWN REFERENCE LIBRARY

The “EASIBINDER” is designed to bind 12 copies of the Magazine as you receive them month by month, eventually providing a handsomely bound volume for the bookshelf.

No need to wait until twelve copies are assembled. As each copy is received, it is quickly and simply inserted into the binder. Whether partially or completely filled, the binder is equally effective, giving the appearance of a book, with each page opening flat.

Strongly made with stiff covers and attractively bound in maroon Rexalon and Milskin, the binders have only the title gold-blocked on the spine and the date frame.

Price £2.50 (incl. P & P)

SIMPLE, LOW-COST
WIRE ANTENNAS
by William Orr, W6SAI

This excellent and thoroughly recommended handbook, is the publication on the practical approach to building aerials. After starting with aerial fundamentals there are discussions and descriptions of ground-plane, end-fed, DX dipole, vertical and wire beam antennas, plus coverage on a universal HF antenna system and working DX with an “invisible aerial”; the SWR meter and coaxial cable also have chapters to themselves.

The whole book is presented in an authoritative, immensely clear, readable and enjoyable manner with the emphasis on the practical throughout—to the extent that even the chap who can hardly strip a piece of co-ax need not feel at all left out! Just as practical for the SWL, too!

BETTER SHORT WAVE RECEPTION
by William I. Orr W6SAI and Stuart D. Cowan W2LX
New 4th Edition

In the latest edition of this excellent work for all those who own (or intend to own) a radio receiver, these two well-known and respected writers have produced chapters covering: the radio spectrum and what you can actually hear world-wide; the tuning of a shortwave receiver; the business of buying a receiver, both new and secondhand; a description of the SW Rx in non-technical terms, together with receiver adjustment and alignment; DX-ing above 30 MHz; a description of the VHF receiver; building and adjusting efficient aerials; reception techniques.

Thoroughly readable and “digestible,” this book is without doubt a very valuable addition to the bookshelf of any SWL.
